DEDICATION AND ACKNOWLEDGMENTS

This book is dedicated to the pioneering first generation of Japanese miso makers in the USA (1907-1919) and to the first generation of Caucasian miso makers (1978-1982)

Part of the enjoyment of writing a book lies in meeting people from around the world who share a common interest, and in learning from them what is often the knowledge or skills acquired during a lifetime of devoted research or practice. We wish to give deepest thanks...

Of the many libraries and librarians who have been of great help to our research over the years, several stand out:

University of California at Berkeley: John Creaser, Lois Farrell, Norma Kobzina, Ingrid Radkey.

Northern Regional Library Facility (NRLF), Richmond, California: Martha Lucero, Jutta Wiemhoff, Scott Miller, Virginia Moon, Kay Loughman.

Stanford University: Molly Molloy, who has been of special help on Slavic-language documents.

National Agricultural Library: Susan Chapman, Carol Ditzler, John Forbes, Winnifred Gelenter, Henry Gilbert, Kim Hicks, Patricia Krug, Veronica Lefebvre, Julie Mangin, Ellen Mann, Josephine McDowell, Wayne Olson, Mike Thompson, Tanner Wray.

Library of Congress: Ronald Jackson, Ronald Roache.

Lane Medical Library at Stanford University.

Contra Costa County Central Library and Lafayette Library: Carole Barksdale, Kristen Wick, Barbara Furgason, Sherry Cartmill, Linda Barbero.

Harvard University's Five Botanical Libraries (especially Arnold Arboretum Library): Jill Gelmers Thomas.

French translation: Martine Liguori of Lafayette, California, for ongoing, generous, and outstanding help since the early 1980s.

Japanese translation: Akiko Aoyagi Shurtleff.

We would also like to thank our co-workers and friends at Soyinfo Center who, since 1984, have played a major role in collecting the documents, building the library, and producing the SoyaScan database from which this book is printed:

Irene Yen, Tony Jenkins, Sarah Chang, Laurie Wilmore, Alice Whealey, Simon Beaven, Elinor McCoy, Patricia McKelvey, Claire Wickens, Ron Perry, Walter Lin, Dana Scott, Jeremy Longinotti, John Edelen, Alex Lerman, Lydia Lam, Gretchen Muller, Joyce Mao, Luna Oxenberg, Joelle Bouchard, Justine Lam, Joey Shurtleff, Justin Hildebrandt, Michelle Chun, Olga Kochan, Loren Clive, Marina Li, Rowyn McDonald, Casey Brodsky, Hannah Woodman, Elizabeth Hawkins.

Special thanks to Tom and Linda Wolfe of Berwyn Park, Maryland.

Finally our deepest thanks to Tony Cooper of Alamo, California, who has kept our computers up and running since Sept. 1983.

This book, now doubt and alas, has its share of errors. These, of course, are solely the responsibility of William Shurtleff.

INTRODUCTION

Brief Chronology of Miso, Soybean Jiang (China), Jang (Korea), and Tauco / Taotjo (Indonesia)

Miso, or “fermented soybean paste,” is one of East Asia’s most important soyfoods. Miso is an all-purpose high-protein seasoning, which has no counterpart among Western foods or seasonings. Made from soybeans, rice or barley, and salt, its smooth or chunky texture resembles that of soft peanut butter. It comes in a wide range of warm, earthy colors ranging from light yellows to rusty reds, rich chocolate browns, or loamy blacks. Each miso has its own distinctive flavor and aroma, which for the darker, more traditional varieties is savory, and sometimes almost meaty, while for the lighter-colored types is subtly sweet and delicately refreshing. Miso’s range of flavors and colors, textures and aromas, is at least as varied as that of the world’s fine wines or cheeses.

Today miso is made by a small number of companies in the United States, Canada, and Europe, and (as miso or miso products) is widely available at supermarkets, natural- and health food stores, and Asian stores.

200 B.C. (approx.) - Soybean jiang is first mentioned in China in the *Wushi'er Bing Fang [Prescriptions for Fifty-Two Ailments]*.

544 A.D. - The *Qimin Yaoshu (W.-G. Ch'i Min Yao Shu)*, by Jia Sixie in China gives the first detailed descriptions of making soybean jiang - and other soyfoods.

701 - Soybean hishio, miso, and soy nuggets start to be made in Japan by the *Hishio Tsukasa*, a government bureau. Reference to this is found in documents published between 730 and 748.

901-08 - The modern word for *miso* first appears in Japan in the *Sandai Jitsuroku*.

927 - The *Engi Shiki* gives the first details about the production of soybean hishio/miso in Japan.

1597 - Miso is first mentioned by a Westerner, the Florentine Francesco Carletti; he calls it *misol*.

1712 - Englebert Kaempfer, a German who lived in Japan, is the first European to give detailed descriptions of how miso and shoyu are made in Japan. Also mentions koji.

1727 - Miso is first mentioned in an English-language publication, *The History of Japan*, by E. Kaempfer. He

spells it “*Midsu*, a mealy Pap, which they dress their Victuals withal, as we do butter.”

1779 - The word “miso” (“that is used as butter”) first appears in an English-language publication, the *Encyclopaedia Britannica*.

1847 - The word “miso” first appears in print in the United States, in a letter from T.W.H. of Cambridge, Massachusetts, to the *Farmers' Cabinet and Herd Book*.

1907 - Miso is first made commercially in the continental United States by Yamane Miso, Sakana Sho in Sacramento, California. The next four commercial miso makers in the continental USA all started in California, owned and operated by Japanese: 1908 - Sanyo Shokai, in Melrose (near Alameda); 1913 – Marumi Miso Seizo-sho, in Los Angeles; 1917 – Fujimoto Co., in San Francisco (Brand: Kanemasa Miso). 1919 – Norio Co., in San Francisco (Type: Shiro miso = Sweet white miso).

1908 - Miso is first made commercially in Hawaii by the Hawaiian Yamajo Soy Company of Honolulu.

1921 - The term “bean paste” is first used to refer to miso by J.L. North of England in the *Illustrated London News*.

1929 - Amano Brothers, Canada’s first commercial miso maker, starts in Vancouver, British Columbia. Founder: Mr. Teiichi Amano.

1960 - Dr. C.W. Hesseltine and K. Shibasaki, of the Northern Regional Research Laboratory in Peoria, Illinois, publish the first of many important scientific articles on miso.

1963 - Michio and Aveline Kushi, teachers of Macrobiotics in Boston, start to teach Americans about miso.

1966 April - Aveline Kushi (with Evan Root) starts Erewhon, a pioneering retailer in Boston, that soon starts selling miso.

1968 - Erewhon expands to become an importer and distributor of natural and macrobiotic foods. Their first two misos, Mugi Miso and Hacho Miso, are imported from Japan.

1976 June - Miyako Oriental Foods, a division of Yamajirushi Miso Co. in Japan, starts making miso in Los Angeles. Owned by Noritoshi Kanai. Brands: Yamajirushi, Kanemasa, Yamaizumi.

1976 Sept. - *The Book of Miso*, by Shurtleff and Aoyagi, is published by Autumn Press of Hayama, Japan. This is the first book about miso in the Western world. In Aug. 1977 its companion book, *Miso Production*, is published by New-Age Foods Study Center (Lafayette, California) for those who want to make miso commercially.

1978 Oct. - The Ohio Miso Co., the first Caucasian-run miso company in the Western world, is founded by Thom Leonard and Richard Kluding. They begin miso production on 13 March 1979.

1978 Nov. - Joel Dee of Edward & Sons (New Jersey) launches Natural Instant Miso Cup, an instant miso soup made with freeze-dried miso from Japan.

1978 Dec. - Miyako Oriental Foods of Los Angeles introduces Cold Mountain Firm Granular Rice Koji, the first koji sold commercially in the USA. In 1979 they start selling Cold Mountain Miso, the first miso with an American-style brand.

1979 Oct. - John and Jan Belleme arrive in Japan to study traditional miso- and koji-making with the Onozaki family in Yaita, Japan. They are the first Caucasians to do this, and then to return to the West to start making miso commercially. From 1981 on they write many superb articles about miso, published in America.

1979 April - Shin-Mei-Do Miso is founded by Lulu and Yasuo Yoshihara in British Columbia, Canada.

1981 April - John Troy of Elf Works, Ltd. in Chapel Hill, North Carolina, launches Hot Stuff, an early and very successful American miso product. He first learned about miso from Joel Dee.

1981 Aug. - John and Jan Belleme begin full-time, large-scale production of miso and koji at Erewhon Miso Co. in Rutherfordton, North Carolina. By early 1982 their company is renamed American Miso Co. with Barry Evans as the new owner.

1982 Oct. 25 - Christian and Gaella Elwell start making miso and koji at South River Miso Co. in Conway, Mass. Earlier that year they purchased The Ohio Miso Co.

ABOUT THIS BOOK

This is the most comprehensive book ever published about miso, soybean jiang, etc. It has been compiled, one record at a time over a period of 33 years, in an attempt to document the history of soybeans and soyfoods. It is also the single most current and useful source of information on this subject.

This is one of more than 50 books compiled by William Shurtleff and Akiko Aoyagi, and published by the Soyinfo Center. It is based on historical principles, listing all known documents and commercial products in chronological order. It features detailed information on:

- 69 different document types, both published and unpublished.
- 3,641 published documents - extensively annotated bibliography. Every known publication on the subject in every language.
- 377 original Soyinfo Center interviews and overviews never before published.
- 508 unpublished archival documents
- 418 commercial soy products.

Thus, it is a powerful tool for understanding the development of this subject from its earliest beginnings to the present.

Each bibliographic record in this book contains (in addition to the typical author, date, title, volume and pages information) the author's address, number of references cited, original title of all non-English language publications together with an English translation of the title, month and issue of publication, and the first author's first name (if given). For most books, we state if it is illustrated, whether or not it has an index, and the height in centimeters.

For commercial soy products (CSP), each record includes (if possible) the product name, date of introduction, manufacturer's name, address and phone number, and (in many cases) ingredients, weight, packaging and price, storage requirements, nutritional composition, and a description of the label. Sources of additional information on each product (such as advertisements, articles, patents, etc.) are also given.

A complete subject/geographical index is also included.

ABBREVIATIONS USED IN THIS BOOK

A&M = Agricultural and Mechanical	ml = milliliter(s)
Agric. = Agricultural or Agriculture	mm = millimeter(s)
Agric. Exp. Station = Agricultural Experiment Station	N. = North
ARS = Agricultural Research Service	No. = number or North
ASA = American Soybean Association	Nov. = November
Assoc. = Association, Associate	Oct. = October
Asst. = Assistant	oz = ounce(s)
Aug. = August	p. = page(s)
Ave. = Avenue	P.O. Box = Post Office Box
Bld. = Boulevard	Prof. = Professor
bu = bushel(s)	psi = pounds per square inch
ca. = about (circa)	R&D = Research and Development
cc = cubic centimeter(s)	Rd. = Road
Chap. = Chapter	Rev. = Revised
cm = centimeter(s)	RPM = revolutions per minute
Co. = company	S. = South
Corp. = Corporation	SANA = Soyfoods Association of North America
Dec. = December	Sept. = September
Dep. or Dept. = Department	St. = Street
Depts. = Departments	tonnes = metric tons
Div. = Division	trans. = translator(s)
Dr. = Drive	Univ. = University
E. = East	USB = United Soybean Board
ed. = edition or editor	USDA = United States Department of Agriculture
e.g. = for example	Vol. = volume
Exp. = Experiment	V.P. = Vice President
Feb. = February	vs. = versus
fl oz = fluid ounce(s)	W. = West
ft = foot or feet	°C = degrees Celsius (Centigrade)
gm = gram(s)	°F = degrees Fahrenheit
ha = hectare(s)	> = greater than, more than
i.e. = in other words	< = less than
Inc. = Incorporated	
incl. = including	
Illust. = Illustrated or Illustration(s)	
Inst. = Institute	
J. = Journal	
J. of the American Oil Chemists' Soc. = Journal of the American Oil Chemists' Society	
Jan. = January	
kg = kilogram(s)	
km = kilometer(s)	
Lab. = Laboratory	
Labs. = Laboratories	
lb = pound(s)	
Ltd. = Limited	
mcg = microgram(s)	
mg = milligram(s)	

HOW TO MAKE THE BEST USE OF THIS BOOK

Here are a few tips to help you get the most out of the information contained in this book.

Chronological Order: The publications and products in this book are listed with the earliest first and the most recent last. Within each year, references are sorted alphabetically by author. If you are interested in only current information, you might want to start reading at the back, just before the indexes.

A Reference Book: Search It with Adobe Acrobat: Like an encyclopedia or any other reference book, this work is meant to be searched - to find exactly the information you are looking for - more than to be read.

At the small "Find" box (top center) click the down arrow. Click "Open full Acrobat search." In the box "What word or phrase would you like to search for?" type in your word or phrase. Then click search. The results will appear below. Try clicking the first one - to see how it works.

How to Use the Index: A subject and country index is located at the back of this book. It will help you to go directly to the specific information that interests you. Browse through it briefly to familiarize yourself with its contents and format.

Each record in the book has been assigned a sequential number, starting with 1 for the first/earliest reference. It is this number, not the page number, to which the indexes refer. A publication will typically be listed in each index in more than one place, and major documents may have 30-40 subject index entries. Thus a publication about the nutritional value of tofu and soymilk in India would be indexed under at least four headings in the subject and country index: Nutrition, Tofu, Soymilk, and Asia, South: India.

Note the extensive use of cross references to help you: e.g. "Bean curd. See Tofu."

Countries and States/Provinces: Every record contains a country keyword. Most USA and Canadian records also contain a state or province keyword, indexed at "U.S. States" or "Canadian Provinces and Territories" respectively. All countries are listed under their region or continent. Thus for Egypt, look under Africa: Egypt, and not under Egypt. For Brazil, see the entry at Latin America, South America: Brazil. For India, see Asia, South: India. For Australia see Oceania: Australia.

Most Important Documents: Look in the Index under "Important Documents -."

Organizations: Many of the larger, more innovative, or pioneering soy-related companies appear in the subject index - companies like ADM / Archer Daniels Midland Co., AGP, Cargill, Dupont, Kikkoman, Monsanto, Tofutti, etc. Worldwide, we index many major soybean crushers, tofu makers, soymilk and soymilk equipment manufacturers, soyfoods companies with various products, Seventh-day Adventist food companies, soy protein makers (including pioneers), soy sauce manufacturers, soy ice cream, tempeh, soynut, soy flour companies, etc.

Other key organizations include Society for Acclimatization (from 1855 in France), American Soybean Association, National Oilseed/Soybean Processors Association, Research & Development Centers (Peoria, Cornell), Meals for Millions Foundation, and International Soybean Programs (INTSOY, AVRDC, IITA, International Inst. of Agriculture, and United Nations). Pioneer soy protein companies include Borden, Drackett, Glidden, Griffith Labs., Gunther, Laucks, Protein Technologies International, and Rich Products.

Soyfoods: Look under the most common name: Tofu, Miso, Soymilk, Soy Ice Cream, Soy Cheese, Soy Yogurt, Soy Flour, Green Vegetable Soybeans, or Whole Dry Soybeans. But note: Soy Proteins: Isolates, Soy Proteins: Textured Products, etc.

Industrial (Non-Food) Uses of Soybeans. Look under "Industrial Uses ..." for more 17 subject headings.

Pioneers - Individuals: Laszlo Berczeller, Henry Ford, Friedrich Haberlandt, A.A. Horvath, Englebert Kaempfer, Mildred Lager, William Morse, etc. **Soy-Related Movements:** Soyfoods Movement, Vegetarianism, Health and Dietary Reform Movements (esp. 1830-1930s), Health Foods Movement (1920s-1960s), Animal Welfare/ Rights. These are indexed under the person's last name or movement name.

Nutrition: All subjects related to soybean nutrition (protein quality, minerals, antinutritional factors, etc.) are indexed under Nutrition, in one or more of 14 subcategories.

Soybean Production: All subjects related to growing, marketing, and trading soybeans are listed under Soybean Production. E.g. Soybean Production: Nitrogen Fixation, or

Soybean Production: Plant Protection, or Soybean Production: Variety Development.

Other Special Index Headings: Browsing through the subject index will show you many more interesting subject headings, such as Industry and Market Statistics, Information (incl. computers, databases, libraries), Standards, Bibliographies (works containing more than 50 references), and History (soy related).

Commercial Soy Products: All Soyinfo Center sourcebooks that focus on a specific soyfood (tofu, soymilk, tempeh, miso, etc.) or geographical area (Africa, Japan) contain extensive information about every known commercial soyfood product - a unique feature. We list the product name, manufacturer's name, address, and phone number, year and month of introduction, ingredients, weight-packaging-price, how stored, nutritional analysis, and documentation on sources of additional information on that product.

SoyaScan Notes: This is a term we have created exclusively for use with this database. A SoyaScan Notes Interview contains all the important material in short interviews conducted and transcribed by William Shurtleff. This material has not been published in any other source. Longer interviews are designated as such, and listed as unpublished manuscripts. A transcript of each can be ordered from Soyinfo Center Library. A SoyaScan Notes Summary is a summary by William Shurtleff of existing information on one subject.

"Note:" When this term is used in a record's summary, it indicates that the information which follows it has been added by the producer of this database.

Asterisks at End of Individual References.

1. An asterisk (*) at the end of a record means that Soyinfo Center does not own that document. Lack of an asterisk means that Soyinfo Center owns all or part of the document.
2. An asterisk after eng (eng*) means that Soyinfo Center has done a partial or complete translation into English of that document.
3. An asterisk in a listing of the number of references [23* ref] means that most of these references are **not** about soybeans or soyfoods.

Documents Owned by Soyinfo Center. Lack of an * at the end of a reference indicates that the Soyinfo Center Library owns all or part of that document. We own roughly three fourths of the documents listed. Photocopies of hard-to-find documents or those without copyright protection can be ordered for a fee. Please contact us for details.

Document Types: The SoyaScan database contains 51 different types of documents, both published (books, journal articles, patents, annual reports, theses, catalogs, news releases, videos, etc.) and unpublished (interviews, unpublished manuscripts, letters, summaries, etc.).

Customized Database Searches: This book was printed from SoyaScan, a large computerized database produced by the Soyinfo Center. Customized/ personalized reports are "The Perfect Book," containing exactly the information you need on any subject you can define, and they are now just a phone call away. For example: Current statistics on tofu and soymilk production and sales in England, France, and Germany. Or soybean varietal development and genetic research in Third World countries before 1970. Or details on all tofu cheesecakes and dressings ever made. You name it, we've got it. For fast results, call us now!

BIBLIO: The software program used to produce this book and the SoyaScan database, and to computerize the Soyinfo Center Library is named BIBLIO. Based on Advanced Revelation, it was developed by Soyinfo Center, Tony Cooper and John Ladd.

History of Soybeans and Soyfoods: This book has a corresponding chapter in our forthcoming scholarly work titled History of Soybeans and Soyfoods (4 volumes). Manuscript chapters from that book are now available on our website, www.soyinfocenter.com.

About the Soyinfo Center. An overview of our publications, computerized databases, services, and history is given on our website.

SOYINFO CENTER

HISTORY OF MISO AND SOYBEAN JIANG

1. *Shijing* [The book of odes]. 1000? B.C. China. Passage on soy reprinted in C.N. Li 1958 #1, p. 13-18. Undated. [Chi]

• **Summary:** Wade-Giles reference: *Shih Ching*. Zhou dynasty (1045-256 BC). This is the first of the Five Classics, containing 305 folk songs and poems by unknown writers. They were collected from about the 11th century BC to about the 7th century BC. But they may have been sung, spoken, and in circulation for hundreds of years before they were actually written down. “The anthology in something like its present form was certainly in existence at the time of Confucius (551-479 B.C.), for Confucius advocates its study and cites frequently from ‘The Songs’” (Dobson 1968, p. xix). The ancient character *shu*, generally thought by early commentators to mean “soybeans,” appears in six of these odes. The odes, each of which had a name, were arranged in the order that has been handed down to us by Mao Hêng, one of the early commentators; in about 200 BC, he arranged the Odes according to categories: (1) *Feng*, folksongs from the principalities, (2) *Ya*, court music, further divided into *Da Ya* and *Xiao Ya* (greater and lesser), and (3) *Song*, ceremonial odes. The odes were first numbered by Western scholars. B. Karlgren (in his translations, 1944-1950) kept Mao Hêng’s order, but gave each ode a sequential number so that it could then be referred to or cited by its number rather than by its more cumbersome Chinese title and category. Arthur Waley (1937) rearranged the odes by subject then gave them his own numbers. The following numbers are those of Karlgren, whereas the dates come from the 1966 book by W.A.C.H. Dobson, *The language of the Book of Songs*. Note that the songs are in reverse chronological order; the most recent come first.

Ode 154 (titled “Ode to the Seventh Month” (*Qiyue*); 8th to 7th century BC): In the sixth month we eat wild plums and grapes. / In the seventh month we boil mallows and soybeans (*shu*)... In the ninth month we make ready the stackyards [a field or yard containing grain or straw in stacks]. In the tenth month we bring in the harvest, which includes glutinous millet for wine, panicked millet for cooking, paddy (*ho*) and hemp, soybeans (*shu*) and wheat (Huang 2000, p. 18). This grouping of soybeans with other cultivated grains suggests that the soybean itself was a cultivated plant (H.T. Huang 2008, p. 45). Wilkinson (2000, p. 626) adds that this ode is a rhyming seasonal calendar in verse form, which gives the various farming and household tasks, and seasonal sights and sounds.

Ode 196 (9th to 8th century BC): Soybeans (*shu*) grow in the middle of the plain. The common people gather them.

Ode 207 (9th to 8th century BC): The year is drawing to a close. Reap the soybeans.

Ode 222 (9th to 8th century BC): We gather the soybeans. We gather the soybeans. We put them in square baskets and in round ones. Note 1. Zheng Xuan (W.-G. Chêng Hsüan), the most important commentator of the 2nd century AD, confirms that *shu* refers to the soybean and that soybean leaves are called *huo*. The leaves are paired (cooked or eaten) with beef and eaten in soup (C.N. Li, 1958, p. 13). Note 2. This is the earliest document seen (March 2003) that mentions soybean leaves or the use of soybean leaves as food.

Ode 245 (10th to 9th century BC): The one who first bore our people was lady Yuan of Jiang (W.-G. Yüan of Kiang). Her first child was a son—Prince Millet (*Hou Ji*; W.-G. *Hou Tsi*). His voice grew loud, then he crawled, and soon was able to stride and to stand firmly. So he sought food for his mouth. He planted the soil with soybeans; they were like streamers, rankly waving. The grain had plenty of ears. The hemp and the wheat grew thickly. He then grew many kinds of millet, and he initiated sacrifices.

Ode 300 (11th to 10th century BC): Prince Millet (*Hou Ji*) “sent down to the people a hundred blessings, the glutinous millet and the panicked millet, the grain that ripened quickly and that which ripened slowly, the grain that was planted early and that which was sown late, the soybean, and the wheat.”

Talk with H.T. Huang, PhD. 2001. July 28. Odes 297-300 are considered to be from the state of *Lu*, an ancient state located on what is today the Shandong peninsula in northeast China, about 300 miles southeast of Beijing. It was the home of Confucius.

Ode 186 “White colt” (*Baiju*) (9th to 8th century BC) mentions soybean leaves (*huo*). Unsullied / bright is the white colt. He eats the young shoots (*miao*) of my vegetable garden... Unsullied / bright is the white colt. He eats the soybean leaves (*huo*) of my vegetable garden. (Translated by H.T. Huang, PhD, July 2001). Dr. Huang adds: The text of the *Shijing* that has survived to this day is the one compiled by Mao Hêng in the early Han dynasty. Individual odes / poems are identified by number according to their sequence in Mao’s compilation.

Note 3. This is the earliest document seen (July 2002) concerning soybeans in China, in East Asia, or in the world, or the cultivation of soybeans in China, or in East Asia, or in the world. This document contains the earliest date seen for soybeans in China, or in East Asia, or in the world, or the cultivation of soybeans in China, or in East Asia, or in the world (11th century BC). The source of these soybeans was probably wild soybeans from China that were gradually

domesticated over the centuries. It states: “Gather soybeans. Fill the baskets.” Year: -10 to -7 century.

Talk with H.T. Huang, PhD, 2001. July 14. Most of this book is dated from about 1100 to 700 BC. Shortly before the Former Han dynasty, China was unified by the first emperor *Ch'in Ssu Huang Ti*. In 213 BC, he is said to have commanded his prime minister Li Ssu, to destroy “undesirable” books. This has come to be known as the “Burning of the Books.” But many were hidden away by scholars and others. Later, the Han emperor wanted to revive Confucius’ teaching. Old books appeared and scholars had to study and interpret their meaning. We are very much indebted to their interpretations. That is what Zheng Xuan is doing here. Some English translators, such as Waley (1937) and Karlgren (1950) translate the character *shu* as “beans” or “pulse.” However the earliest pulse known in China was the soybean, and early commentators agree that the character *shu* refers to soybeans. For details see Bray (1984, p. 511-15).

Huang (2000, p. 333, 380). Concerning early forms of *jiang* made from meat, fish, etc. without the use of soybeans: Ode 246 (10th to 9th century BC), celebrating a clan feast, states: “Sauces (*tan*) and pickles (*hai*) are brought / For the roast meat, for the broiled,…” The words *tan* and *hai* are no longer in use.” What did they mean? According to Zheng Xuan’s commentary: “*hai* is *jiang* made from meat. When the *jiang* is thin, it is called *hai tan*, and *tan* is the juice from *hai*.” Note 4. This is the earliest document seen (Dec. 2002) concerning early non-soy *jiang*, made with meat or fish.

The beginnings of aquaculture in China are suggested in the *Shijing* by poems which describe the spreading of fish nets, and of fish traps set at the openings of dams or dikes. Eight species of carp are mentioned. One poem titled “Magic Tower” says that the King visited the Magic Park where fish jumped in the Magic Pond by the Magic Tower. This pond might be a prototype of one for raising fish (Huang 2000, p. 62-63). If aquaculture was practiced, this would be the earliest document seen (March 2003) in connection with aquaculture—although soy was not used as a feed.

Wilkinson (2000). The odes in the *Shijing* were created over a 500-year period, then recorded in the standard cultivated language of northern China (p. 24). The *Shijing* is the oldest of the five Confucian classics selected by Han Wudi (140-88 BC); its short name is *Shi* (p. 475). It contains 305 folk songs / poems and ritual odes that are used as primary sources for studying the popular beliefs and customs of the Zhou period (1045-256 BC) (p. 619). It “mentions at least 44 definite or probable food plants and 260 of the common domestic and wild animals, birds, fishes, and insects found in the north during the first millennium BC” (p. 638).

2. *Shijing* [The book of odes]. 1000? B.C. China. Passage on soy reprinted in C.N. Li 1958 #1, p. 13-18. Undated. Translations by Legge (1871, 1960), Waley (1937), and Karlgren (1944, 1945, 1950). [Chi]

• **Summary:** Wade-Giles reference: *Shih Ching*. Continued: Earlier references to this book: Letter from Dr. H.T. Huang, expert on the history of Chinese food and agriculture. 1994. May 10. In China, before the Han dynasty (206 B.C. to 220 A.D.) there was a food in China named *Li* (probably pronounced *lai* in Cantonese) which seems to be very similar to today’s amazake in Japan. The earliest known reference to *li* is found in *Shih Ching* (*The Book of Odes*), which is a collection of love songs and ceremonial odes which date from about 1,000 B.C. to 600 B.C. The best known translation is that by Arthur Waley who titled it “The Book of Songs” (Grove Press, New York, 1978). *Li* is mentioned in Poem No. 279 (In Waley’s translation No. 156, p. 161). Waley translates it as “sweet liquor” as follows: “We make wine, make sweet liquor / We offer it to ancestor to ancestress.” It is also mentioned in Poem No. 180 (In Waley’s translation No. 262, p. 289). This time, for some strange reason, Waley translates it is “heavy wine” as follows: “So that we have something to offer, for guest, for stranger / To go with the heavy wine.”

Harlan (1992) states in *Crops and Man* 2nd ed. (p. 198): “Among the earliest compilations of Chinese literature is the *Book of Odes* (*Shih Ching*) assembled from bits and fragments from the 11th century to the middle of the 6th century BC. Botanically, it is the most informative of early literatures and mentions about 150 plants as compared to 55 in Egyptian literature, 83 in the Bible, and 63 in Homer (Ho, 1969). In the *Odes*, *Panicum* millet is mentioned 27 times, the mulberry 20 times, and *Artemisia* is mentioned 19 times with some 10 varieties. The soybean is first mentioned in 664 BC in connection with tribute paid to the Chou by the Shan-Jung (Mountain Jung) tribe.”

Note 4. This is the earliest document seen (Jan. 2004) that mentions hemp.

Wittwer et al. (1987): “Soybeans were first called ‘Shu’ and the word ‘Shu’ appears repeatedly in *Shijing* [the Book of Songs], which is one of the five Chinese classics dating from 1100–771 B.C. In [the song] ‘Xiao Ya’ from *Shijing* it is mentioned that ‘... in Central China there was the soybean and farmers collected it.’ Another Song, ‘Guofen’ (1,000 B.C.) states that ‘... in October rice and soybeans are collected.’”

Bray (1984:629): *Book of Odes* [ancient folk songs]. From Chou, -11th to -7th centuries (Dobson’s dating). Writers and compilers unknown. Translated by Legge (1871), Waley (1937), and Karlgren (1950). Page 533 states that both the hemp plant (*Cannabis sativa*; *ma*) and the cloth made from it are mentioned many times in the classical texts, including the *Shih Ching*, *Chou Li* and *Li Chi*.

Bo (1982): “This book, called *Shikyo* in Japanese, book mentions *hai*, a type of sauce made from animal flesh without bones.” This was a forerunner of Chinese *jiang*.

Hymowitz (1970) writing “On the Domestication of the Soybean” (*Economic Botany* 24(4):408-21) notes: It is the opinion of T.C. Hu (Pinyin: Hu Daojing) (1963) that the *shu* pictograph can be traced back to approximately the 11th century B.C. “The Book of Odes spans the period from the 11th century to 7th century B.C. during the reign of the royal house of Chou. The geographical area covered by the Book of Odes is essentially the winter wheat-kaoliang and winter wheat-millet regions... The character *shu* appears in odes 154 (8th–7th century B.C.), 196, 207, 222 (9th–8th century B.C.), and 245 (10th–9th century B.C.), and 300 and was found in bronze inscriptions dating from [the 10th–9th century B.C.].

“It is quite evident that the three lines of evidence presented point to the emergence of the soybeans as a domesticate during the Chou Dynasty [1027–221 B.C.]... However, emergence of a domesticate carries with it the connotation of a trial and error process. This process for soybeans probably took place during the Shang Dynasty or earlier.”

“Conclusions. Historical and geographical evidence developed in this paper point to the eastern half of North China, what is essentially today’s winter wheat-kaoliang region, as the area where the soybean first emerged as a domesticate around the 11th century B.C. During the Chou Dynasty, the winter wheat-kaoliang region was probably the gene center.”

Karlgren, Bernhard. 1950. *The Book of Odes: Chinese Text, Transcription and Translation*. Stockholm, Sweden: The Museum of Far Eastern Antiquities. 270 p. See p. 257–61.

Hagerty (1917). Sections on soy: Da Ya (W.-G. Ta Ya) book (Greater Eulogiums, in the Shêng Ming or “Birth of the People” section), Xiao Ya (W.-G. Hsiao Ya) (Lesser Eulogiums).

3. *Shu ching* or *Shang shu* [Classic of documents. Also called the Book of history]. 700 B.C. China. [Chi]*

• **Summary:** The book: Reischauer and Fairbank (1960, p. 65–68) notes that this is the second of the Five Classics and of the Thirteen Classics. “It contains semi-historical documents and speeches dating from the early centuries of the Chou period, but a large part of the text is known to consist of later forgeries. Forging, or, as it has often appeared to the forgers themselves, the imaginative reconstruction of lost texts has always been one form of scholarly activity in China. The development of two different versions of the *Shu Ching* in the second century B.C. and the problem of the forged portions of the work have led to endless philosophical and philological controversy during the past 2,000 years.”

Yokotsuka (1986, p. 198) states that the *Shu-Ching* was published in 700 B.C. and contains the earliest known Chinese references to *ch’ü* (mold-cultured cereals) and *Chiang* (a mixture of *ch’ü*, the flesh of fish, birds or meat, and salt).

4. Kongzi. 475? B.C. *Lunyu* [Analects of Confucius]. China. Undated. [Chi]*

• **Summary:** Wade-Giles reference: *Lun Yü*, by K’ung Fu-tzu. The author: Chinese philosopher and sage Confucius (lived 551–479 BC). He wrote no surviving works, but many are traditionally attributed to him, and a great many more are called Confucian Classics. Official name: K’ung Ch’iu. Literary name: Chung-ni. Called Kung Fu-tzu, i.e., Master Kung. Latinized as Confucius. The book (called *Rongo*, by Koshi, in Japanese) was probably compiled by the disciples of Confucius’ disciples. It contains answers to his questions. There were two original versions of the work, and there is probably a lot of later material in the one now extant.

Huang (2000, p. 334–35): When Confucius said he would not eat a food without its proper *jiang* (sauce) (See Book 10, chapter 8, verse 3) we can assume that he was talking about “a sort of liquid or colloidal containing bits of finely digested meat or other edible products. These types of *jiang* sauces were the principal savoury condiments of pre-Han China... but their culinary importance was soon overtaken by savoury fermented condiments processed from the soybean, namely fermented beans (*shi*), fermented paste (*jiang*), and soy sauce (*shiyu* or *jiangyu*).

Huang (2000, p. 19–21): This is the earliest document seen (Jan. 2004) that uses the term “five grains” (*wugu*; W.-G. *wu ku*) to refer to China’s five staple grains; the soybean was traditionally considered one of these staple grains. Although the text does not give the names of the “five grains,” Bray (1984, p. 432) says that the term “five grains,” an expression commonly found in the classical texts, was understood to comprise setaria millet (*ji*), panicum millet (*shu*), rice (*dao*), wheat and barley (*mai*), and legumes [mainly soy] (*shu*); some commentators substituted hemp (*ma*) for rice.

Talk with H.T. Huang, PhD, expert on the history of Chinese food and agriculture. 1995. Dec. 28. The early *jiang* in China was made from meat or fish. The *jiang* used by Confucius was almost surely made from meat or fish. Many of the ancient books were annotated during the Han dynasty in an attempt to explain the meaning of certain words and passages. A very eminent scholar in the late Han dynasty (about 100 A.D.), talking about events in roughly 500 B.C., said that the *jiang* used by Confucius was made from meat and fish.

Bo (1982): In the Kyoto-hen section it says: “If I don’t have *jiang*, I don’t eat.” In those days, *chiang* was considered an indispensable seasoning. Sato (1963, p. 8), in

his book titled “Documents on Soy Nuggets, Chiang, Miso, and Shoyu,” cites this work as the earliest Chinese document seen on the subject. It is written entirely in Chinese characters (*Kanbun*).

According to Karlgren (1950), there is a reference to *chiang* in the *Analec*s; it means “minced food in brine.”

5. Yili [The book of ceremony and ritual]. ed. 450? B.C. China. Passage on soy reprinted in C.N. Li 1958 #3, p. 28. Undated. And in Morohashi 1955, transl. p. 23. [Chi]

• **Summary:** Wade-Giles reference: *I Li*. *I* means bearing or attitude. *Li* means ritual or rites. C.N. Li (1958) estimates the compilation date as about 5th century BC. Chapter 25, “Rituals of the public banquet officials,” states: A sacrificial caldron of green vegetables (*xingmao*) and [a dish / stew of] beef with soybean leaves (*niuhuo*). The commentary by Zheng Xuan in the 2nd century AD, explains that *huo* refers to soybean leaves (*dou ye*). (Translated by H.T. Huang, PhD, Aug. 2001). Dr. Huang adds: The character *huo* refers only to soybean leaves; it is not used for any other kind of leaf. This is another indication of the unique place of soybeans in the life of the Chinese people.

Jiang is mentioned at least three times in this chapter, but we have no evidence that it contained soybeans: (1) Mustard *jiang* (*jiejiang*). (2) *Jiang* soup (*jiangqi*). And (3) the phrase “take grain and *jiang*.”

Call from Dr. H.T. Huang, expert on the history of Chinese food and agriculture. 1997. Jan. 24. He has found the place in this book where *jiang* soup is mentioned. He uses the standard Chinese-language version, with annotations by a great scholar named Zheng Xuan of the later Han; he had many of the great Chinese classics edited and re-published after the famous book burning by the first emperor of China (lived 221 to 206 B.C.). Some additional notes were added by another scholar in the T’ang dynasty. The actual edition Dr. Huang uses was published by Classics Press (Shanghai) in 1990. There are two references to “*jiang* soup” in chapter 25 (“Rituals of the public banquet officials”) on pages 303 and 306. In ancient times the word *to* had two meanings: (1) bean, and (2) a receptacle with a long pedestal (that extended straight down to the ground) for serving food and for use in sacrifices. One can usually determine the correct translation from the context.

Bo (1982): Mentions *hai*, a type of sauce made from animal flesh without bones.

Morohashi (1955, at “*jiang* liquid”) states: “The Rituals of the Public Banquet Officials” chapter says: When offerings of wine and beans are made, salted fish and *jiang* liquid [soy sauce] are not offered.

6. Zhouli [Rites of the Zhou dynasty]. 300? B.C. China. Passage on soy reprinted in C.N. Li 1958 #2, p. 18, 21-22,

26. Undated. And in Morohashi 1955, p. 11, 26, 28. See also translation by Biot 1851. [Chi]

• **Summary:** Continued: Letter from Dr. H.T. Huang, expert on the history of Chinese food and agriculture. 1994. May 10. There is a reference to *li* (the Chinese forerunner of Japanese amazake) in this work, which was probably compiled during the Western Han (202 BC to 9 AD) from late Chou material. In chapter 5, the paragraph on the Wine Superintendent (*Chiu Chêng*) states that there were five types of ceremonial wine known as *ch’i*. Actually they represent different stages in the fermentation of wine. The second *ch’i* is called *li*. Chêng Hsüan’s commentary (c. 127-20 AD) explains that *li* is a week, cloudy wine prepared by using large amounts of “cooked rice” and a small amount of *ch’ü* (i.e. koji), and allowing the mixture to ferment overnight. It tastes slightly sweet.

Fukushima (1989, adapted from Bo 1982). “The first record on *chiang* can be found in the book entitled *Chou-li* (*Shurai* in Japanese) by Chou-kung (*Shuko* in Japanese), which was published around 1,000 B.C. in the Chou (*Shu* in Japanese) dynasty (1,222 BC to 249 BC). This book covers the matters on the early years of the Chou dynasty in ancient China (about 3000 years ago). According to this document, *chiang* was made by the following procedure. First, yellow aspergilli were grown on millet. (Such mold-grown cereals are called “*koji*” in Japanese.) Then the millet koji and the meat of fish, flesh, or fowl and salt were mixed with a good liquor in a bottle and kept for 100 days. Soybeans were not used in this *chiang*.”

Note: This is the earliest document seen (July 2000) that describes Chinese-style koji, although the Japanese word *koji* is (of course) not used.

Bray (1984:623): *Record of the Institutions* [lit. the Rites] of (the) Chou (Dynasty). Descriptions of all government official posts and their duties. Former Han, perhaps containing some material from late Chou. Compilers unknown. Translated by E. Biot (1). Reputedly written by Duke of Chou. Page 533 states that both the hemp plant (*Cannabis sativa*; *ma*) and the cloth made from it are mentioned many times in the classical texts, including the *Shih Ching*, *Chou Li* and *Li Chi*.

Keightley (1983): A bureaucratic utopian vision of administration in the Chou dynasty. Annotated by Chêng Hsüan, see K.C. Chang p. 393. Soybeans not mentioned directly; Author unknown. From late Warring States period.

In the offering baskets were *ch’iu* which the *Daikanwa* says are made by boiling together soybeans and rice; Flour is bean powder (*tou hsieh*). “Fasting from *chiang* in the Autumn.”

Bo (1982): The *Chou Li* mentions various types of sauces. *Hai* are made from the meat of animals, with or without bones. *Tan* are made with a lot of liquid. But *jiang* are made with various beans or with fish? In the *Chou Li*, one of the official government ritual offices was the “*hai*

jen,” in charge of sauces and mincing meat. It was said that they were in charge of the fruits of the four beans. In the notes to the book it was said: Before they make sauces from animals (*hai*) and sauces with bones in them, they always dried the meat, ground it, mixed in millet koji, salt, and sake, then fermented it in an earthen pot for 100 days. “Zenfu? was in charge of the king’s food. 120 pots of *chiang* were used... In the Taisan of Tengan section it said “Three agriculture, Plant the nine grains.” A note listed these as broomcorn millet, millet, mochi awa? rice, hemp, soybeans (*dadou*), barley, and wheat. I think that we must do more research on the question of whether the sauces mentioned in the *Chou Li* were made solely from animal ingredients. The appearance of the character *hai* shows that there must have been sauces made from meat. But the appearance of the character *jiang* indicates that there must have been non-meat or vegetable sauces. The author of the *Chou Li* used these characters in different, very clearly defined ways. He mentioned rabbit *hai*, wild goose *hai*, and fish *hai*. In none of these cases did he use the character *jiang*. There was one government office whose duty was to prepare feast foods, “various types of *chiang*,” and rare/exotic things to give as gifts. Another office, the “food physician” was in charge of the six foods, six drinks, six tables, hundred feasts, hundred *chiangs*, and light exotic foods. It is clear that the terms “various types of *chiang*” and “hundred *chiangs*” used the term *chiang* broadly, to include animal *chiangs*. There were about 120 pots for different types of *chiang* and these included bean *chiangs*.

K.C. Chang (1977, p. 50): In the “Chih Fang” chapter of the *Chou li* the major crops of the Nine Provinces (*Chiu Chou*) of the late Chou and early Han are listed. In Yü Chou (Honan and the Huai valley) the Five Crops are grown: Panicum millet, Setaria millet of the *germanica* variety, soybean, wheat, and rice, according to K’ang-ch’eng’s annotation. Lu and Needham (1977, p. 86): “The existence of a knowledge of dietary treatment of various diseases in China can be traced back as early as the time of the Warring States [403-221 B.C.]. The *Chou Li*, or *Record of the Rites of the Chou dynasty*, which was probably put together between the 4th and 1st century B.C., includes in the list of the four imperial medical officers a Shih I, i.e. an Imperial Dietitian, as well as an Imperial Physician, an Imperial Surgeon, and a Regius Professor of Medicine (see E. Biot’s translation, vol. 1, p. 8, 93).”

Reischauer and Fairbank (1960, p. 67): A “somewhat fanciful reconstruction in the Confucian tradition of the governmental structure of Chou times.” A source of much misinformation and much information.

7. Zhouli [Rites of the Zhou dynasty]. 300? B.C. China. Passage on soy reprinted in C.N. Li 1958 #2, p. 18, 21-22, 26. Undated. And in Morohashi 1955, p. 11, 26, 28. See also translation by Biot 1851. [Chi]

• **Summary:** Wade-Giles reference: *Chou Li*. Former / Western Han dynasty, with some material from the Late Eastern Zhou. C.N. Li (1958) estimates the compilation date as about 3rd century BC or late Warring States. This book, which describes all institutions, and official government posts and duties, does not mention soybeans as such. However, In the chapter on the Heavenly Officials, Part I refers to the Nine Grains. The commentary by Zheng Xuan, in the 2nd century AD, says that the Nine Grains are three millets, paddy rice, hemp, large and small beans (*daxiaodou*), barley, and wheat. The large and small beans are soybeans and azuki beans, respectively. Commentators in the 7th and 8th century repeat the names of these crops. Note: This is the earliest document seen (March 2006) that clearly mentions azuki beans. It is also the earliest Chinese-language document seen (Jan. 2005) that uses the word *xiaodou* to refer to azuki beans, or that uses the word *daxiaodou* to refer to “soybeans and azuki beans.”

In Part II of the Heavenly Officials chapter, the section on the duties of the Director of Regions (*Zhifangshi*; W.-G. *Chih Fang Shih*) lists the nine provinces of China and the staple grains and livestock of each. An excellent table (Huang 2000, p. 21) shows all this information plus the location of each province. For two provinces the Five Grains (*wugu*; W.-G. *wu ku*) are given as the staple grains. These two are Yuzhou (W.-G. *Yü-chou*), probably located in today’s Henan / Honan & Huai valley, and Bingzhou (W.-G. *Ping-chou*), located in today’s northern Shanxi / Shansi and Northern Hebei / Hopei. Zheng Xuan says in his commentary that these Five Grains are hemp, panicum millet, setaria millet, wheat, and beans (*dou*). Scholars assume that *dou* refers to soybeans.

In the chapter on the Summer Officials, Part II, there is a section on duties of the *Zhi Fang Shi* (Director of Regions; W.-G. *Chih Fang Shih*), which mentions the Five Grains. Again, Zheng Xuan explains that the Five Grains are panicum millet, setaria millet, soybeans (*shu*), wheat, and rice. (Translated by H.T. Huang, PhD, Aug. 2001). Dr. Huang adds: At the time the *Zhouli* was compiled, most Chinese knew what the Nine Grains and the Five Grains were. Today’s scholars are very grateful to Zheng Xuan for commenting on almost all the classics, and for helping us to understand what the ancient words meant at that time. The meaning of many words later changed. Although Zheng Xuan used three different terms to refer to soybeans, this was not uncommon among ancient writers. The *Zhouli* also refers to the six food animals for slaughter (*liusheng*); these have traditionally been considered to be cattle, sheep, swine, dogs, geese, and fish.

H.T. Huang (2000, p. 333-34). Concerning early types of *jiang* made without soybeans: In the *Zhouli* is a section titled “Superintendent of meat sauces” (*Hairen*). Zheng Hsuan, in his commentary on this section says: “To make *hai*, cut meat in thin slices, dry them in the sun, slice them

in thin strips, mix them with salt and mould ferment (*qu*) in a jar and soak the mixture in fine wine. After a hundred days *hai* is formed.” “The same passage in the *Zhouli* mentions *hai* prepared from venison, snail, oyster, ant’s eggs, fish, rabbit, and goose, as well as *haitan*. The *Zhouli* further states that the *Shanfu* (Chief Steward) stores 120 jars of *jiang* in the royal household and that the *Shiyi* (Grand Dietician) is responsible for upholding the quality of 100 types of *jiang* needed by the King.”

Note: This is the earliest document seen (Nov. 2002) that uses the word *qu* (“mold ferment”). The invention of *qu* is a milestone in Chinese food technology, for it provides the conceptual framework for the three major soyfood fermentations (See Huang 2000, p. 335).

This book also suggests a primitive form of aquaculture practiced by the Zhou community. The “Fishery Superintendent” (*yuren*, W.-G. *Yü Jên*) is head of a staff of 14 assistants, 30 clerks, and 300 laborers, who maintain basket traps along dykes to supply fish in season. In the spring, he supplies the swordbill sturgeon (*wei*) and other kinds of fresh or dried fish for the King’s table, for ceremonial offerings, for entertaining guests, and for funerary sacrifices. He administers official laws regulating fishing and collects taxes for the King’s treasure from people who fish. In addition, the “Shellfish Keeper” (*pieren*, W.-G. *Pieh Jên*) was responsible for providing the King’s kitchen with tortoises, turtles, clams, oysters, snails, and ant eggs (Huang 2000, p. 63-64).

8. Wushi’er bing fang [Prescriptions for fifty-two ailments]. 200? B.C. China. Undated. [Chi]

• **Summary:** Wade-Giles reference: *Wu Shih Er Ping Fang*. Date estimated as 200 B.C. Former / Western Han dynasty. Huang (2000, p. 346), in his section titled “Fermented soy paste, *jiang*,” states that *jiang* is one of the foods found in pottery jars and listed on bamboo strips discovered in Han Tomb No. 1 at Mawangdui (W.-G. Ma-huang-tui). The word *jiang* also appears in this silk manuscript, discovered in Han Tomb No. 3 at Mawangdui. Recipe no. 143 states that the dregs from *shujiang* (soybean *jiang*) are used as a salve to treat hemorrhoids.

Note: This is the earliest document seen (Jan. 2009) that mentions *jiang* made from soybeans. Dr. Huang adds (June 2003): “Soybean *jiang* is already being made by the Han dynasty (202 BC to AD 220).”

Wilkinson (2000, p. 659), in his chapter on “Medicine” states that the “earliest surviving Chinese medicinal texts are those found written on three silk scrolls in an early Han tomb at Mawangdui in Hunan (see 19.1.3). They reflect a more this-worldly, body-centered approach to medicine than that of the Shang.” This is one of 13 medical manuscripts from Mawangdui; Wilkinson translates the title as “Prescriptions for 52 diseases.”

9. Sealing of the Han tombs at Mawangdui near today’s Changsha, Hunan province, China (Early event). 165? B.C. Undated.

• **Summary:** In 1972 Chinese archaeologists made one of the most important discoveries in the history of such research in China (and *the most* important discovery related to early Chinese food) when they uncovered the first of three Han tombs at Mawangdui (W.-G. Ma-huang-tui; the name of a place, pronounced “ma-wang-DUI”). Two large volumes about the discovery, containing many wonderful photographs, have been published (see *Ch’ang-sha Ma-wang-tui I Hao Han Mu*. Peking: Wen Wu Press, 1973). Several photographs from this book appear in the following book: Chang, K.C. 1977. *Food in Chinese Culture*, p. 183-84.

Sealed during the same period (within a few years of each other) in the early Han dynasty (about 165 B.C.), these were the tombs of one Chinese ruling family—The Marquis and Marquise of Dai, and probably their son.

Note: These tombs are completely different from the Later / Eastern Han Tomb No. 1, at Da-hu-ting, Mixian, Henan province, China; they are located about 425 miles to the south of the latter tomb and were sealed at least several centuries earlier.

The first tomb to be excavated and reported was Han Tomb No. 1, which contains the greatest abundance of actual food remains plus the names of foods. The body of the lady buried here was so remarkably preserved that her skin, muscles, and internal organs still retained some elasticity when the coffin was opened. She was probably the wife of Li-Cang, the first Marquis of Dai (reigned 193-186 BC) and died a few years after 168 BC at about the age of fifty (Ying-Shih Yü, 1977, p. 55-57). With her were buried all the 5-6 major grains, including wheat, barley, rice, two kinds of millet, soybeans (*shu*), and hemp. Also found in the tomb were several seasonings including soybean *jiang*, *shi* (soy nuggets or ‘salted darkened beans’), and leaven (*ch’ü*) [*qu*].”

The best English-language account of soy nuggets (*shi*; soybeans fermented with salt) in these tombs is found in H.T. Huang (2000, p. 336). Soy nuggets were found in pottery jars No. 126 and 301 and listed on a bamboo slip discovered in Tomb No. 1 at Mawangdui. The character for *shi* on the bamboo slip is identical to a character which appears in the *Shuowen Jiezi* (Analytical dictionary of characters) (121 AD), where it is defined as soybeans fermented with salt (soy nuggets). There are no references to *shi* in earlier literature. Note: This bamboo slip is the earliest document seen (Jan. 2002) that mentions soy nuggets, which it calls *shi*.

The best English-language account of *jiang* in these two tombs is found in H.T. Huang (2000, p. 346-47). Apparently, by the time these tombs were sealed in the Former / Western Han, the word *jiang* had “already

undergone a subtle change from its ancient meaning. It was increasingly used specifically to denote the fermented paste made from soybeans.” Since then, it is understood that the character *jiang*, unless otherwise indicated, usually means *doujiang*, i.e., *jiang* made from soybeans. Likewise, the character *dou*, unless otherwise specified, usually means “soybean.” When the word *jiang* is applied to a specific type of fermented sauce or paste, a prefix is used to indicate the kind of raw material from which the *jiang* was made. Thus, in addition to *jiang* itself, the Mawangdui bamboo strips also list a *jujiang* (meat paste), a *quejiang* (sparrow paste), and a *majiang* (a kind of fish paste), as well as a *tan* (probably horse meat *jiang*) and a fish *tan*.” The types of *jiang* made from animal parts are addressed separately in the chapter on “Food processing and preservation” (p. 379-415).

Huang (2000, p. 165-66) also states that records of both ferments (*qu*, a grain-based mold ferment like Japanese *koji*) and grain-based wines were found among the burial remains at Mawangdui. The Inventory lists two sacks of ferment (*qu*) and 8 jars of wine of various types. One, named *baijiu* (white wine {Jap. white saké}), is described as mature, muddy wine. That would make it like Japanese *doboroku*.

10. Sima Qian. 90? B.C. *Shiji* [Records of the historian]. China. Passage on soy reprinted in C.N. Li 1958 #28, p. 48-49. Undated. [Chi]

• **Summary:** Wade-Giles reference: *Shih Chi*, by Ssuma Ch’ien. This is the earliest known history of China, written during the early Han dynasty, and the most famous of all Chinese historical works. It is also the earliest Chinese work whose date of appearance is fairly well known; he presented it to the emperor ca. 90 BC.

Chapter 6 (*Qin Shihuangdi*), which is about the first emperor of China, notes that soybeans (*shu*) were transported [as a commodity]. Chapter 7 (*Xian Yu*), which is about a general contending for power, states that soldiers eat taro/yam (*yu*) and soybeans (*shu*). Chapter 10, about Zhang Yi (who was probably another general) states that people in a mountainous region of China (perhaps near today’s Korea) grow lots of wheat but eat mostly cooked soybeans and soup made from soybean leaves (*huo*). Chapter 27, about Li Si (a top government official) mentions soup made from soybean leaves.

Chapter 69, titled “Economic affairs” (*Huo zhi liezhuan*, a famous chapter) refers to one thousand earthenware vessels of mold-fermented cereal grains and salty fermented soybeans (soy nuggets) (*niequ yanshi qianhe*), as articles of commerce. (Translated by H.T. Huang, PhD, Dec. 2001). Dr. Huang adds: Chapter 69 shows that soybeans and soy nuggets had now clearly become major commodities in the Chinese economy (See Huang 2000, p. 336). The term *niequ* probably refers to two separate entities. *Nie* is a

general term for sprouted grain; it should not be translated as “malt,” since in English “malt” generally refers to malted barley. *Qu* (which is the same character pronounced “*koji*” in Japanese) refers to molded grain used in a fermentation, but we cannot say what type of cereal grain (such as wheat, rice, barley, millet, etc.) was used. Note 1. The Japanese almost surely learned both the method and the character from the Chinese. Since this book was written in northern China, the *qu* was probably either molded wheat, barley, or millet. The earliest method describing how *qu* was made appears in the *Qimin Yaoshu* (Important arts for the people’s welfare) (544 AD); that *qu* was molded wheat.

Dr. Huang continues: Soybean leaves are still widely used in soups, in part because there were not as many types of vegetables as there are today. Much later they used only tender soybean seedlings (*doumiao*) in soups, finding the regular leaves too tough. Most of the chapter titles in this work refer to people, but some refer to early dynasties (Xia, Shang, and Zhou) or to subjects such as economics. This book gives the names of all the Shang dynasty emperors. It also lists Shennong as an early historical emperor. The “Burning of the Books” commanded by the first emperor of China some 123 years earlier, in 213 BC, had destroyed much of Chinese written history. Thus, scholars didn’t take this list seriously until inscriptions on Shang oracle bones, discovered by archaeologists in the early 20th century, showed (remarkably) that this list of emperors was quite correct, and that many of these emperors were real people.

Note 2. This is the earliest document seen (Oct. 2008) that clearly mentions soy nuggets (*shi*).

Chapter 70, about a man named *Taishi Gong* (which may be an honorific name of Sima Qian; Gong means “duke”), mentions a soup made from soybean leaves.

Huang (2000, p. 337) tells this story from the *Shiji* (Biography of the Prince of Huainan, Chap. 118): When the Prince of Huainan (the legendary inventor of tofu), was exiled for inciting rebellion (in 173 BC), against his brother the Han Emperor Wendi, he and his retinue were, nevertheless, provided with such necessities of life as “firewood, rice, salt, soy nuggets (*shi*), and cooking utensils.”

Wilkinson (2000, p. 781). Sima Qian (145-86 BC) fulfilled the request of his father, Sima Tan (80-110? BC), to complete the project for which he had begun to gather the materials, a history of China from the earliest times to the reign of Han Wudi, a period of 3,000 years. The *Shiji* is a history of China from the Yellow Emperor down to Han Wudi arranged in a manner which, with certain adaptations, was to set the form for a new way of writing history. Wilkinson gives details of its structure (p. 501-02).

Fukushima (1989, p. 7): This is the earliest known document to mention *shih*.

Needham (1986, p. 237-38): One may ask how Shen Nung entered this book. He was one of the great culture

heroes of Chinese antiquity, the second of the ‘three primordial sovereigns’ (*san huang*). Reigning as Yen Ti, he was the “technic-deity, arch-inventor and patron saint of all the biological arts—agriculture, tillage, animal husbandry, pharmacy, and medicine. This was the soil from which Chinese botany and zoology as sciences emerged.” In the *Shiji* we find the statement that Shen Nung ‘experimented with (literally tasted, experienced) the hundred herbs, and so began the use of medicaments.’

Bray (1984, p. 629): Historical Record (down to -99). Published in early Han, c. -90. By Ssuma Ch’ien, and his father Sima Tan (W.-G. Ssuma T’an). Partial translations by Chavannes (1895-1905), Pfizmaier (1858-1863), Hirth (1917), Wu Khang (1932), Swann (1950), etc. Yin-Te Index, no. 40.

Bo (1982): “Meat jiang 1,000 pots, and [soybean] jiang 1000 pots.”

K.C. Chang (1977:31): “... in all likelihood soy sauce [probably chiang] was known toward the end of the Chou period (see *Shih chi*, “Huo Ch’ih Lieh Chuan”).

Shih Shêng-han (1962), in his translation and interpretation of the *Qimin Yaoshu*,

Shih Shêng-han (1962, p. 86) notes that Sima Qian mentions soy nuggets (*shi*) as being sold commercially in the cities, so it must have been produced in large quantities in his time.

Reischauer and Fairbank (1960, p. 111-13): The greatest literary achievement of the Han period was in the field of historical writing. No people have been more interested in their past than the Chinese. This book is a history of China up to 99 BC, much greater in scope and far more advanced in scholarship than any work that had preceded it. It continued Confucius’ work on history. *Shih* means historian or history. *Chi* means record or note. Wu Ti had Ssu-ma Ch’ien castrated. The book set the pattern for later Chinese historical works. 130 chapters, 700,000 characters.

Morohashi (1955): Chiang kang (chiang crocks). “Throughout T-ai (district in Szechuan?), in one year, 1,000 fermented products and 1,000 crocks of pickles and chiang (are made). This is equivalent to a house of a thousand chariots (i.e., a dukedom).”

Hagerty (1917, p. 33-34, 79): “The *Shih chi*, or Historical Records, under the heading of Huo Chih, or Political Economy, says: ‘In the big centres and capital cities, at the harvest time, this bean product [shih, or bean relish {soy nuggets}] was on sale in the markets and was called Nieh ch’ü yen shih, and the quantity which was sold in one year, amounted to one-thousand *ta*.’” The Han shu writes the last two characters (Cc).

Bretschneider (1871, p. 7-8): “Ssu-ma-ts’ien, the Herodotus of China, in his historical work *Shi-ki* (pinyin: *Shiji*, by Sima Qian), written in the second century BC, states that the Emperor Shen-nung 2700 BC sowed the five kinds of corn [five grains, *wugu*]. In later times the Chinese

commentators agreed that here the following corns were meant:” 1. *Shu* Panicum millet (*Panicum miliaceum* L.). 2. *Tsi [Chi]* Foxtail / *Setaria* millet (*Setaria italica* Beauv.). 3. *Shu* Soja-bean (*Glycine hispida*). 4. *Mai* Wheat. 5. *Tao* Rice.

11. Huan Kuan. comp. 60 B.C. Yantielun [Discourses on salt and iron]. China. Passage on soy reprinted in C.N. Li 1958 #29, p. 49. [Chi]

• **Summary:** Wade-Giles reference: *Yen T’ieh Lun*, by Huan K’uan. Former / Western Han dynasty. This is a record of the debate held in 81 BC on state control of commerce and industry. “Afterwards the country people drank wine.” Chapter 18 says that soybeans (*shu*) and soybean leaves (*huo*) do not provide a sweet flavor. Chapter 25 states that as an ordinary person you work hard and follow the proprieties (by being respectful), by sucking soybeans and drinking water (*chuoshu yinshui*).

Chapter 29 states: “The old people sat by their raised plates with pedestals. The young people stood up to eat. Each meat dish was served with a *jiang* sauce. Everyone drank their fill.” Chapter 29 also mentions a soup made from beans (*dou*)—probably soybeans. It continues: “In ancient times the common people ate soybean leaves (*huo*);” soup is not mentioned this time. “In ancient times, the common people used fish and soybeans as an offering. In the spring and autumn they offer to their ancestors.” (Translated by H.T. Huang, PhD, Dec. 2001). Dr. Huang adds: In Chapter 53, the *jiang*, since it was not preceded by an adjective, was probably made with soybeans. The last passage is the earliest in which soybeans are mentioned with fish or for use as an offering; it shows that soybeans were considered to be valuable. They were probably placed on an altar as an offering to one’s ancestors.

12. Shi You. 40 B.C. Jijiu pian [Handy primer, or dictionary for urgent use]. China. Passage on soy reprinted in C.N. Li 1958 #33, p. 50-51, 91. [Chi]

• **Summary:** Wade-Giles reference: *Chi Chiu P’ien*, by Shih Yu. This is not a typical dictionary; it contains lists of characters and words but no definitions. There is a +7th century commentary (large characters) by Yan Shigu (a famous Tang dynasty scholar) and a +13th century supplemental commentary (small characters) by Wang Yinglin (a Southern Song scholar, lived 1223-1296).

Two passages are of interest. The first, titled *bīng er mai fan gan dou geng*, is a listing of foods: Pasta & pastry, cooked wheat granules, sweet bean soup. It is not clear exactly what the last three characters, “sweet bean (*dou*) soup,” mean and to what kind of beans the character *dou* refers. The 13th century supplemental commentary by Wang Yinglin says that *dou* refers to soybeans. Additional characters for “small bean” (*xiaodou*) probably refer to azuki beans, but this is also not clear.

The second passage, titled *wu yi yan shi xi zuo jiang*, is another listing of foods: Fetid elm seed, salty fermented soybeans (soy nuggets; *shi*), soured pickles / vinegar, and *jiang*. Concerning *shi*: The +7th century commentary states: “When you incubate beans (*dou*) you get *shi*. In the *Chuci* (Poems from the state of Chu) (-250), soy nuggets are called *daku*. Concerning *jiang*: The +7th century commentary states: “If you mix beans (*dou*) and [wheat] flour, then process it, you get *jiang*. A relative of *jiang* made from meat is called *hai*; a relative of *jiang* made from meat mixed with bones is called *ni* (Note: *Sanni* is three kinds of meat paste still mixed with bone. See Huang 2000, p. 379).

Note: This is the earliest document seen (June 2007) that describes a method for making *jiang* (Chinese-style fermented soybean paste) in which a significant amount of wheat (or wheat flour or barley) is mixed with the soybeans before fermentation begins.

The 7th century commentary continues: The character for *jiang* (the seasoning) is pronounced the same as the character for *jiang* (a general in the military). When you eat, you must have *jiang*, just as in the army you must have a general [to lead it in the right direction]. (Translated by H.T. Huang, PhD, Dec. 2001). Dr. Huang adds: This book, though not a dictionary, is a condensed compilation of information in groups, and a quick way of remembering that information. By this time, *jiang* had become a commodity.

The author, Shi You, flourished from 48 to 33 B.C. The book (called *Kyushu hun* in Japanese), written in the early Han dynasty, is a primer in rhyme on Chinese history used for teaching reading and writing to children.

Bo (1982): This work mentioned the term “chiang.”

H.T. Huang (2000, Science and civilisation in China. Vol. 6, Biology and biological technology. Part V: Fermentations and food science, p. 346-47). The earliest reference to *chiang* as a fermented soybean paste in the literature appears in this work (Handy Primer {Dictionary for Urgent Use}, ca.-40, p. 31). The commentary by Yen Shih-Ku in the 7th century A.D. states that soybeans and wheat flour are mixed to produce *chiang*. There is also a +13th century commentary by Wang Ying-Lin. This work also discusses production of a fermented vinegar named *tso* [pinyin: *zuo*] (p. 284).

Wilkinson (2000, p. 49). From the Han to the Six Dynasties the *Jiju Pian* (Quick Mastery of the Characters), by Shi You was the most popular character primer. It introduced everyday characters for basic vocabulary arranged in groups.

13. Ban Gu. 76 AD. Qian Hanshu [History of the Former Han dynasty]. China. Passage on soy reprinted in C.N. Li 1958 #36, p. 52-54. Modern rendering by Morohashi 1955, trans. p. 25. For translation see Swann 1950. Called Kansho in Japanese. [Chi]

• **Summary:** Wade-Giles reference: *Ch'ien Han Shu*, by Pan Ku. Often titled simply *Hanshu / Han Shu*, this large, important work of 100 chapters became a prototype of all later dynastic histories of China. Since Ban Gu (who lived AD 32-92) died before he could complete the work, it was finished (in AD 76) by his sister, who was a famous woman and writer in her own right. In Chapter 7, the soybean (*shu*) and millet are mentioned together twice. But the character for (*shu*) is written without the usual grass radical on top—perhaps an early way of writing it. This character (pronounced *shu*) can also mean “uncle,” however commentator Yan Shigu (7th century) states that here it refers to soybeans.

Chapter 61, titled “Record of economic affairs” states that two of the wealthiest merchants in the realm traded in soy nuggets (*shi*) (Huang 2000, p. 337). Section 4 of this same chapter mentions the “five grains” (*wugu*). The commentator, Yan Shigu, says that one of these five was soybeans (*shu*).

The chapter on the Five Elements, No. 7, middle section, Part II, mentions soybeans (*shu*, written with the grass radical) seven times.

The chapter on geography, section 8, mentions the five grains during the Zhou dynasty. The commentary states that the five grains are two kinds of millets, soybeans (*shu*), wheat, and rice.

The chapter on the biography of Xiangji, a famous Chinese general, states that his foot soldiers were running short of food; they had only half the amount of soybeans (*shu*) that they needed. Note: Soybeans are now used as a military food.

The chapter on the biography of Yang Yun, who apparently did something wrong and was punished, contains a letter he wrote to the emperor: “I have suffered for three years, and worked hard in my fields. I have hunted in the winter, cooked mutton, drank the grain wine I have made, worked close to the soil, and served the Qin family. The women of the family are skilled in the art of the drum and the flute. My female servants and concubines sing, and after they drink, they perform. After I drink grain wine, my ears feel warm and I cry out to heaven. My poem states: In my fields close to the southern hills, out of the poor earth, I have been able to cultivate and harvest soybeans (*dou*) as well as their stems (*qi*). Life has been good to me. Why do I need more riches?” Note 1. He has learned to be content even with his hard life. He probably uses the stems for fuel and mulch. Note 2. This is the earliest document seen (March 2003) that mentions soybean stems (*qi*).

The chapter on the biography of Bao Xuan, mentions four beverages and foods: juice, grain wine, soybean leaves (*huo*), and meat.

The chapter on the biography of Di Fang Jin, section 54, states: For food (*fan*), give me cooked (steamed or boiled) soybeans (*dou*).

The chapter on the biography of Wang Mang, section 69, middle part, mentions soybeans (*shu*) and millet. (Translated by H.T. Huang, PhD, Jan. 2002). Dr. Huang adds: Today, *fan* means cooked rice.

Wilkinson (2000, p. 502-03). The *Hanshu* was the second Standard History of China after the *Shiji* (Records of the Grand Historian). The most important difference between all the Standard Histories from the *Hanshu* onward and the *Shiji* was that they covered only one dynasty and made no attempt to cover the vast sweep of history (3,000 years) embraced by the *Shiji*.

Ying-shih Yü (1977, p. 76): “Under the reign of Emperor Ch’eng (32 to 7 B.C.) the prime minister Chai Fang-chin (whose courtesy name was Tzu-wei) had caused the breakdown of a major irrigation dam in Ju-nan commandery (in Honan). Agriculture in the whole region was therefore seriously affected. To register their complaint against Chai, the people of Ju-nan created a song which reads, ‘It was Chai Tzu-wei who destroyed our dam, / Now all we have for food is soybeans and yam [taro].’ As the commentary by Yen Shih-ku makes clear, the second line means that the people cooked soybeans as grain food (*fan*) and yam as *keng* (*Han shu*, 84:22a).”

Morohashi (1955): Decrying the present state of philosophical studies: “How bitter is the void! The students of today are such materialists they do not even understand the changes (*I*), so how can they comprehend the darkness. I’m afraid in the future they will use the philosophy books to cover *chiang* jars (*chiang p’ou*).” “In the morning during the first month, the wind comes from the northwest section, bringing the *Jung shu*.” Meng K’ang says this *Jung shu* is the same as *Hu tou* (foreign bean).

Hagerty (1917, p. 34): The *Han shu* says: “From the completion of the reign of Han Yüan Ti up to that of Wang Mang (a nephew of the Empress of Han Yüan Ti, who lived from BC 33–AD 23), some famous rich man of this time engaged in the business of making and selling Shih, or Bean relish, in the capital at Chang-an. One named Fan Shao-wêng incurred the ridicule of all the people because of being engaged in this business.”

14. Wang Chong. 82 AD. Lunheng [Discourses weighed in the balance]. China. Passage on soy reprinted in C.N. Li 1958 #41, p. 55. [Chi]

• **Summary:** Wade-Giles reference: *Lun Hêng*, by Wang Ch’ung. Later / Eastern Han dynasty. The chapter titled “Following one’s natural disposition” (*Shuaixing*) lists several crops including soybeans and wheat / barley (*mai*) (*doumai*).

The chapter titled “Improvement of skills” (*Yizheng*) states: The Five Grains (*wugu*) are for people to eat to alleviate their hunger. Rice and millets taste good; they are sweet and delicious. Even though soybeans and wheat / barley are coarse, they can alleviate hunger. If you eat

soybeans and wheat / barley, which are coarse and not refined, you can no longer complain that you have an empty stomach and nothing to eat [i.e., they are better than nothing].

The chapter titled “Discussion of insects: (*Shangchong*) states: Flavorful crops [such as rice and millet] are attacked by insects; wheat / barley and soybeans (*dou*) are not bothered by insects. (Translated by H.T. Huang, PhD, Jan. 2002). Dr. Huang adds: Rice and millet were the preferred cereal grains at this time. If soybeans were not bothered by insects, it was probably because they were not yet widely cultivated.

H.T. Huang (2000, p. 346-47): In the edition published by Classics Press (1990), Chapter 23, titled *Ssu Wei* (The Four Taboos) states (p. 226) that there is a taboo against making soybean *chiang* (*doujiang*) when thunder is heard, that is after the spring rains have arrived. The best time to make *jiang* is the first month, to give farmers useful employment when it is too cold to work in the fields.

Morohashi (1955): “It is bad to hear thunder when making bean *chiang* (*tou-chiang*).” Note: “Bean *chiang*” probably refers to soybean *jiang*.”

15. Liji or Xiaodai liji [The book of rites]. 100 AD. China. Passage on soy reprinted in C.N. Li 1958 #5, p. 29-30. Reiki in Japanese. [Chi]

• **Summary:** Wade-Giles reference: *Li Chi* or *Hsiao Tai Li Chi*, compiled by Tai the Younger. In Chapter 4 titled *Tangong* (a person’s name) Part II, we find the expression *chuoshu yinshui* (W.-G. *ch’o shu yin sui*) which means literally “sucking soybeans and drinking water.” Huang (2000, p. 294) notes that the ancient Chinese found that soybeans tasted better and were better tolerated [more easily digested] if they were cooked in water for a long time to make soybean congee or gruel. This food must have been extremely smooth and thin since, in pre-Han references to consumption of this gruel, the expression *choushu* is used. *Chou* is a very unusual term that refers to a way of ingesting that is half way between eating and drinking. The soybean appears to be the only grain that was prepared in this way in ancient China. The word/character *chou* is not even used for thin rice or millet congee or gruel. Rather, the *Liji* uses the word *shi* (to eat) for them.

Chapter 6, titled “Monthly Ordinances,” describes a ceremony for the “Son of Heaven” (the emperor/king), in which he is supposed to eat soybeans (*shu*) and chicken. Note: Huang (2000, p. 163-65) states that this chapter contains the earliest known description in Chinese of how wine (*jiu*; Jap. saké) was made from millet and rice. In the second month of winter, the Superintendent of Wine used *qu* (a grain-based mold ferment like Japanese koji) and *nie* (sprouted grain) to make the wines, which were used for both ritual and drink.

Chapter 12, titled “Rules for the family” (*meize*) lists soybeans (*shu*) as one of the foods to be served to a relatively high-class family.

In the chapter titled “Ceremony of pouring the pot,” item 14 states that azuki beans (*xiaodou*) are in the pot. (See Li 1958 #356). (Translated by H.T. Huang, PhD, Aug. 2001).

Huang (2000, p. 619) states that this book was compiled by Tai the Younger and is traditionally ascribed to the Former/Western Han (ca. -70 to -50), but it really first appeared in the Later/Eastern Han (ca. +80 to +105), though the earliest pieces included may date from the time of Confucius (ca. -5th century).

This book, which is about etiquette and ceremony (including eating and drinking, marriages, funerals, etc.) for the royalty and upper classes, was compiled by disciples of Confucius during the Eastern Chou period. These rites and rituals were a key element in the whole Confucian concept of social order. This is the last of the five classics.

Huang (2000, p. 334) states concerning non-soy jiang: “*Hai* made from frog, rabbit and fish are mentioned in the passage in the *Neize* [Internal Family Regulations] chapter of the *Liji*. Also mentioned are *jiang* from fish roe and *jiang* from mustard, as well as *haijiang* which presumably simply means a *hai* type of *jiang*.” Also mentions *xijiang* which “probably indicates an acid type of *jiang* possibly made by blending *jiang* with vinegar. These records indicate that *jiang* is a general term for fermented or pickled condiments prepared from finely divided food materials; *hai* is *jiang* made from animal products, and *tan* is juice drained from mature *hai*.”

Huang (2000, p. 33) states that *xiaodou* (lesser beans, *Phaseolus calcaratus*) [azuki beans] are also mentioned in the *Neize* chapter.

Wang and Fang (1987) note: “According to the Book of Rites, 20 jars of chiang were seen in the kitchen when the victory feast was being prepared for the first ruler of the Chou dynasty. Confucius (551-479 B.C.) was quoted as saying not to eat food that is not seasoned with the proper type of chiang.” In Japanese this work is called the *Reiki*. It was translated into Japanese by Yasui Shotaro in 1921. It is written entirely in Chinese characters (Kanbun).

Bray (1984) states (p. 533) that both the hemp plant (*Cannabis sativa*; *ma*) and the cloth made from it are mentioned many times in the classical texts, including the *Shih Ching*, *Chou Li* and *Li Chi*.

Bo (1982): “Called *Reiki* in Japanese, this book mentions ‘hai,’ a type of sauce made from animal flesh without bones, and *tan*?, a sauce made with a lot of liquid. It also says, ‘If you eat soybeans [shu] and drink water, you can be entirely satisfied/happy.’”

Ying-shih Yü (1977, p. 58): “What makes the Ma-wang-tui discovery doubly interesting is the amazing degree to which the food list from Tomb No. 1 agrees with the list given in the ‘*Nei tse* (‘Internal [Family] Regulations’)

chapter of *Li chi*. Virtually all the foodstuffs and prepared dishes listed above can be found in that chapter (*Li chi*, 8:19a-21b; Legge 1967, 1:493-63).”

Sato (1963, p. 8), in his book titled *Documents on Soy Nuggets, Chiang, Miso, and Shoyu*, cites this as the second earliest Chinese document seen on the subject.

Nancy L. Swann. 1950. *Food and Money in Ancient China*. On page 434 is a footnote concerning soy sauce which says: “Consult *Li-Chi* 2:23b, SBE [Sacred Books of the East], xxvii, p. 79.”

16. Xu Shen. 121 AD. *Shuowen jiezi* [Analytical dictionary of characters]. China. Passage on soy reprinted in C.N. Li 1958 #42, p. 56. [Chi]

• **Summary:** Wade-Giles reference: *Shuo Wen Chieh Tzu*, by Hsü Shên. Often abbreviated to *Shuowen*. Bray (1984, p. 630) translates the title literally as “Explanations of simple characters and analysis of composite ones.” Wilkinson (2000, p. 63) translates it as “Explaining single-component graphs and analyzing compound characters.” This is the earliest systematic or comprehensive Chinese lexicon/dictionary, and by far the most important. It succeeded the *Erh Ya*, is arranged by the structure of the characters, and lists more than 9,000 characters under 540 radicals.

Li (1958, p. 56) identifies ten ancient Chinese “seal characters” (*zhuanwen*, ornamental writing) in this dictionary that are related to soybeans (and other beans); all ten are compound / composite characters: (1) Pronounced *da* means “small soybean” (*shu*). It is composed of a grass radical over the character *he* which has a stylized roof above a mouth. (2) Pronounced *qi* means “soybean stem.” It also has a grass radical on top. (3) Pronounced *huo* means “soybean leaves.” It is the third character with a grass radical on top. (4) Pronounced *dou* and means “beans.” It is a plate with a pedestal. (5) Also pronounced *dou* means “beans,” and is an ancient way of writing No. 4. (6) Pronunciation unknown: Refers to a kind of soybeans.” At the bottom is character No. 4. (7) Pronunciation unknown: Refers to a sweet product made from soybeans. It also has character No. 4 at the bottom. (8) Pronounced *shu* means “soybeans” (*dou*). This is the main part of the early character *shu* meaning soybeans or the character *shu* meaning uncle. The character itself resembles a germinating soybean emerging from the ground—showing the horizontal line of the soil surface, roots below it, and a stem and branch above. (9 and 10) Pronounced *chi* (or *shi*) and showing two ways of writing the same character, which means “soybeans fermented with salt” or “soy nuggets.” The first has *shu* on the left while the second has *dou* on the left, each meaning “soybeans.” On the right, both have the ancient radical for “branch.” This second character is basically the same as the modern character for “soy nuggets.” (Translated by H.T. Huang, PhD, Jan. 2002).

Dr. Huang adds: These are China's oldest and most revered characters, based largely on the inscriptions found on China's ancient bronzes. Stylized and formalized, they demonstrate the beauty of ideographic language, which starts as pictures. They have no counterpart in Western European culture. These characters have been written by calligraphy specialists throughout Chinese history (until 1949), regardless of the dynasty, to announce special or weighty occasions. They are also available as a modern font. The Chinese Communist government, in their desire to break with the past, was the first to discontinue and discourage their use—although a few calligraphers keep them alive.

Huang (2000) discusses the different types of ferments (*qu*, *koji*) listed in this work and, throughout Chinese food history (p. 167, 261, 150-68), early uses of the word *fu* to mean 'decayed' or 'rotten,' "hardly a fitting appellation for a food product (p. 302). What is *jiang*? The *Shuowen* tells us that "jiang is *hai*; it is made by blending meat with wine." Fortunately other works give us "more specific information on how *hai* or meat *jiang* was made in antiquity" (p. 334). The *Shuowen* says that soy nuggets (*shi*) are prepared by incubating soybeans with salt (p. 336).

Bretschneider (1881, p. 162): The 'shuo wen' (introduction), in one chapter, explains "tou" by "ancient vessels for containing meat" but in another chapter given to it the meaning of "shu" or pulse. Some authors in the Ch'in dynasty (3-4 century AD) began to write "tou" to designate "pulse."

Hagerty (1917, p. 34): "The Shuo Wan [sic, Shuo Wen], or Ancient Dictionary, says: 'The term for bean is Lu lu huo (Cc), and this is really identical with the name Niu lu huo (Cc).'... The Shuo wên also says that the term Chüan lu huo (Cc) really is identical with Niu (Cc). The Commentary says these all refer to what we know as the Lu tou (Cc) [mung bean].

Morohashi (1955): Translated p. 9, 16 (nuggets). Listed 9,000 Chinese characters under 540 radicals.

Ho Ping-ti (1969): This was the earliest systematic Chinese lexicon, compiled shortly after 100 A.D.

Hsu (1980): Gives 4 variations for "beans" "The character shu/shih? is used to denote the salted bean.

Bo (1982): "In this, China's oldest dictionary, it is stated that the character *chiang* follows the characters for meat and (?). *Chiang* already meant meat *chiang* so it was not necessary to explain this. But if *chiang* already meant meat *chiang*, why was the character *chiang* used more widely than the other character *chiang* written in a similar way? This is conflicting and confusing. I think the author made a mistake in his interpretation, or maybe he didn't have a clear understanding of the origin of the term "chiang... The character for *shi* is described as a fermented bean using salt. For "fermented" they use the term "yu," which means that

you place things upside down, inoculate them with *koji* molds, and allow them to ferment.

Note that the soy nuggets in tomb number 1 of Mawangdui [Jap: Seikan Baotai, literally "Horse King Mound," the tomb of the prime minister of a small state (Changsha) in the Former Han] of the Former/Western Han were about 200 years before the Shuo Wen. Note: The Former/Western Han had its capital at Ch'ang-an (today's Sian or Xi'an, the capital of Shensi). It later became the capital of the Later Ch'in, Northern Chou, and T'ang dynasties. Luoyang (W.-G. Lo-yang, in today's north Honan province) was the capital of the Eastern Chou, then the Later Han, and Jin.

Bray (1984:630): Shuo Wen Chieh Tzu. Analytical Dictionary of Characters [lit. Explanation of Simple Characters and Analysis of Composite Ones]. Later Han, +121. By Hsü Shen.

Fukushima (1989, p. 7): "Shih is also described along with *chiang* in *Shuo-wen Chieh-tzu* (*Setsubun-kaiji* in Japanese) by Hsu Shen (Kyoshin in Japanese), the oldest dictionary in China published in 121 AD in the later Han dynasty. The raw material of the shih is soybeans."

Letter from Dr. H.T. Huang, expert on the history of Chinese food and agriculture. 1994. May 10. There is a reference to *li* (the Chinese forerunner of Japanese amazake) in this work which appeared in 121 AD. It explains that "*li* is wine that has only been fermented overnight."

17. Cui Shi. 160 AD. Simin yueling [Monthly ordinances for the four classes of people]. China. Passage on soy reprinted in C.N. Li 1958 #45, p. 56. [Chi]

• **Summary:** Wade-Giles reference: *Ssu Min Yüeh Ling*, by Ts'ui Shih. Later / Eastern Han. A detailed description, lunar month by month, of the activities of a well-to-do household. An early and important agricultural treatise of the late Han dynasty (2nd century A.D.). The following is based on the translation by Hsu Cho-yun (1980, p. 217-23). 1st month [February]: The first day of the first month is called the New Year. One can make various sauces (or pastes). During the first ten days of the month, roast / fry soybeans (*dou*); in the second ten days, boil soybeans. Chopped soybeans (or groats) are made into *modu* (W.-G. *mo-tu*) (a type of *jiang*—apparently fermented, salted soy paste), which, by the conjunction of the 6th and 7th month, should be used for making pickled melons, fish sauces, meat sauces, and basic [liquid / clarified] soy sauce (*qingjiang*; W.-G. *ch'ing chiang*). 2nd month: On the day of the spring equinox [March 20], thunder will be first heard. One can plant spiked millet, soybean (*dadou*), female hemp (which does not yield fiber), and sesame (*huma*; "foreign hemp"). One can sell millet, panicked millet, soybeans, hemp, and wheat seed. 3rd month: When it rains, it is time to plant hemp and sesame. When the mulberry turns red, one can plant

soybeans. 4th month: One can plant millet, spiked millet, soybeans and lesser [azuki] beans (*daxiaodou*), and sesame. 5th month: On the day of the summer solstice [June 21-22], present wheat and fish to ancestors and deceased parents; offer sacrifice and follow the procedures for food preparation, purification and cleansing. When timely rains fall, one can plant sesame and male hemp. One can prepare elm sauce and minced meat sauce. One sells [soy] beans, lesser [azuki] beans (*daxiaodou*), and sesame.

6th month: One can sell soybeans, buy oats and wheat, and collect plain white silk.

7th month: On the sixth day, the five grains (*wugu*) and the mill should be ready. One can sell lesser [azuki] beans and [soy] beans, buy wheat, and collect raw silk and white silk.

8th month: One can make *mo-tu* preserve [perhaps fermented soybean] paste and collect leaves of beans.

9th month: Soy is not mentioned.

10th month: One harvests the five grains. One should purchase spiked millet, [soy] beans and lesser [azuki] beans, and hempseed.

11th month: The winter solstice arrives. Buy spiked millet, [soy] beans, lesser [azuki] beans, and hempseed.

12th month: Soy is not mentioned. (Translated by H.T. Huang, PhD, Feb. 2002).

H.T. Huang adds: The four classes of people (in descending order of importance) referred to the scholars / government officials, farmers, artisans / laborers, and merchants. Scholars were the highest class because they ran the country. The merchants were the lowest class because it was felt they did not produce anything. This system lasted from antiquity until about 1949. Ordinances, usually issued by a high official (up to the emperor or king), were executive orders, suggestions, or exhortations as to what the people should or should not do, often in connection with food, crops, or daily living.

H.T. Huang (2000, p. 347, 359, 362-64, 371-72) argues convincingly that the *qingjiang* (clear chiang or “clarified soy sauce”) made during the 1st month is a liquid soy condiment, similar to today’s soy sauce, obtained as a by-product of *chiang*. *Mo-tu* has also been interpreted as fermented soybean paste by Miao Ch’i-Yü ed. (1981, p. 23) and Hung Kuang-Chu (1984, p. 93).

Fukushima (1989, p. 3). This document describes the first liquid soy sauce. “The liquid products which belong to the category of soy sauce did not appear in the literature before the later Han dynasty (about 25-220 A.D.). There is a description of the liquid product which was made by separating the liquid portion from the chiang in *Ssu-ming Yüeh-ling* (*Shimin-Getsurei* in Japanese), published by Ts’ui Shih (*Sai Shoku* in Japanese) in the later Han dynasty. This liquid was called *chiang ch’ing*, which means ‘clear chiang.’”

Bray (1984, p. 56, 630): Monthly Ordinances of the Four Sorts of People. Later Han, c. +160. By Ts’ui Shih. Translated by Herzer (1963, in German). Our present version of this book is based almost exclusively on passages cited in the *Qimin Yaoshu* (+544).

Bo (1982): This work states, “On New Year’s Day, make various types of chiang, meat chiang and ch’ing chiang.” The term “ching” means “refined” or “clear.” This ch’ing chiang must be today’s filtered soy sauce. In the Ch’ing dynasty (1644-1912) this same term was used to refer to soy sauce. Even today a lot of people along the Yellow River or in the countryside of eastern north China still refer to soy sauce as “ch’ing chiang.” Also, up until recently, in restaurants and hotels in Beijing, there were typically two white ceramic pots. On the one containing soy sauce was written “ch’ing chiang” and on the one with vinegar, “kao ts’u.” Also, in Korea they used to call soy sauce “ch’ing chiang.”

Bray (1981): Almanac of agricultural practice, household management, and ritual for landowning class. With planting instructions. Based on a reconstruction of the text by Shi Shenghan. Also parts appeared in the *Ch’i-min yao-shu*. The original work is lost.

Shih Shêng-han (1962), in his translation and interpretation of the *Qimin Yaoshu*, includes a lengthy analysis of the sources from which it is drawn. On pages 21-23 is a detailed discussion (with one long excerpt) of this book (*Simin Yueling*) and its author. The excerpt states that in the 5th month, one may sell soybeans and azuki beans (*daxiaodou*), and sesame, and buy barley and wheat.

Note 1. This is the earliest document seen (Sept. 2005) that refers to soy sauce, which it calls *qingjiang*. It is also the earliest document seen (Aug. 2005) that uses the term *qingjiang* to refer to soy sauce.

Note 2. This is the earliest document seen (Aug. 2006) that clearly mentions sesame seeds, which it calls *huma*. Bray (1984, p. 425) says that “sesame did come to China from the West in or just after Han times.” Address: Anhui province, China.

18. Tao Hongjing. 510 AD. Mingyi bielu [Informal records of famous physicians]. China. Passage on soy reprinted in C.N. Li 1958 #293, p. 215-16. [Chi]

• **Summary:** Wade-Giles reference: *Ming I Pieh Lu*, by T’ao Hung-Ching. Northern and Southern Dynasties. This is a typical pharmacopoeia entry. Raw soybeans (*sheng dadou*) have a flavor that is sweet and neutral [i.e., their energy *qi* is neutral; it is not heating or cooling]. They grow in the area of Tai Shan [a famous, sacred mountain in Shandong, near Confucius’ birthplace] and in the plains [of north China; the Yellow River basin]. They are harvested in the ninth month.

Black soybeans (*heidadou*) are used to make sprouts (*nie* or “sprouted grains;” the same character means both

“sprouts” and “malt”). When the sprout is five inches (*cun*) long, you dry it; it is called “yellow curls” (*huangjuan*). After you cook it, it can be eaten. Note 1. This is the earliest document seen (Feb. 2007) that uses the term *heidadou* to refer to black soybeans.

The leaves can be used to feed livestock. The pods can be used to feed cattle and horses. The stems can be used as fuel to cook food (from *Sannongji*, 1760).

Note 2. This is the earliest document seen (July 2006) stating that soybean pods can be used as livestock feed. Dr. Huang adds: The passage concerning the sprouts is very interesting. Usually in the pharmacopoeia, the sprout is very short, typically less than an inch, when it is used to make “yellow curls.” The sprouts here are much longer. Moreover, it is unusual at this early date to see soy sprouts used as food, as well as the traditional medicine. The word *nie* may suggest food use. When the sprout has reached five inches, very little bean will be left; the ratio of sprout to bean will have increased greatly. This indicates that it was probably used by some people as food, but not yet used this way popularly. Note 3. This is the earliest document seen (March 2003) that recommends letting soybean sprouts grow to a length of five inches.

The first entry for hyacinth bean (*biandou*; *Lablab purpureus*, formerly *Dolichos lablab*) states: The flavor is sweet and the nature is slightly warm. It dispels / alleviates the middle and lower gases [in the human digestive tract]. The second entry notes: Plant hyacinth beans by the fence [because it’s a climber]. Steam the pods. They are good to eat. (See Li 1958 #535). Note 4. This is the earliest document seen (June 2008) that mentions the hyacinth bean together with the soybean. (Translated by H.T. Huang, PhD, Jan. 2003).

Huang (2000, p. 296) states that “soybean sprouts” (*dadou huangjuan* or “yellow curls”) are mentioned in this standard pharmacopoeia. Soy nuggets (*shi*) are listed as a middle-class drug; they are “bitter in taste, cold, and non-toxic” (p. 337). Jiang is listed as a lower-class drug, which is “salty, sour, and cold. It dispels heat, restrains anxiety, and counteracts the toxic side-effects of drugs, heated soups, and fire.” Malt sugar (*yitang*) is first mentioned in this book (p. 460). Two types of sea vegetables are given as cures for goiter (p. 575). Note 5. This is the earliest document seen (Jan. 2005) that mentions sea vegetables.

Hagerty (1917, p. 4) says that the *Pieh lu* (*Ming i pieh lu*, a Materia medica by Tao Hung-ching, AD 452-536) states: “The Shêng ta tou [gives Chinese characters], or Fresh soy bean, is useful as a remedy for the following diseases: Dropsical affections, gastric fever, paralysis, difficulty in passing urine, bladder trouble, improper circulation of the blood, catarrh or improper flowing of the fluids of the vital organs, heart, liver, kidneys, stomach and bowels, chills, and poisoning from eating Aconite [a dried tuberous root of the monkshood, *Aconitum napellus*,

formerly used as a sedative and anodyne]. If the Pai ta tou [Baidadou; white soy bean] is eaten for a long period it will cause the body to become heavy. When cooked in a powder or meal-like form, it tastes good and sweet and is a good remedy for the following diseases: gastritis, fever, tumorous swellings, paralysis, inability to digest grain foods, and abdominal dropsy. This bean is grown in the level marshy land in the vicinity of Tai-shan mountain, and is harvested in the ninth month.”

Note 6. This is the earliest document seen (March 2004) concerning whole soy flour (yellow soybeans “cooked in a powder or meal-like form”).

Note 7. Tai Shan mountain (5,048 feet high) in Shandong province, is 32 miles south of Jinan (W.-G. Tsinan). Considered as sacred for several thousand years, it was formerly an important place of pilgrimage. Many temples are along the road up and on the top.

Note 8. Talk with H.T. Huang, PhD, expert on the history of Chinese foods. 2001. July 3. Looking at the Chinese-language edition of this book, he is fairly sure (but not certain) that the Chinese characters *sheng dadou* refer here to raw, uncooked mature soybeans and not to green vegetable soybeans or to “Fresh soy beans” (as Hagerty translates the term). This is clear because they are listed under and as a subset of soybean sprouts (“yellow curls”), which is the main item. These raw soybeans are called *sheng dadou* rather than simply *dadou* (“soybeans”) to more clearly differentiate them from soybean sprouts. It is understood that these raw soybeans must be cooked for a long time before they can be eaten or used medicinally.

Hagerty (1917, p. 9): “It [the white {yellow} soy bean] is not poisonous and is a specific remedy for improper functioning of the heart, liver, kidneys, stomach and bowels. It is also used as a remedy for constipation, as a stimulant for the lungs, eradication of poison, improving the complexion by cleaning the skin of various impurities, and stimulating the growth and appearance of the hair.”

Hagerty (1917, p. 29): T’ao Shih, in giving directions for his medical prescriptions, says: “If using the Hu tou bean, use two ‘Ta ma chun,’ or measures, of beans, while if using the Hsiao tou, or Small bean [azuki bean] use three ‘Ta ma chun,’ The Hu tou, or Foreign bean, which compared with the Hsiao tou is very small, is identical with the Yeh wan tou, or Wild wan tou, and the stem of the Yeh wan tou is called Wei [character].

Hagerty (1917, p. 76-77): “Shih: The Shih [character], or Bean relish [soy nuggets] has an acrid bitter taste, and a cold effect upon the system, but it is not poisonous. It is used as a remedy for the following diseases: Injury from cold, headaches, chills and fever, malaria, serious poisoning, and other diseases. T’ao Yin-chü says that the Shih, or Bean relish, can be made a constant article of diet. But in the spring and summer season, when the weather is disagreeable, it is to be boiled or fried, and only that which

has been steeped in wine should be used. This is extremely good.” The following is according to Kang Po’s method: “Use vinegar and wine and steeped bean relish, boil until the beans are dry and parched, mix together with some ‘Ma yu,’ or hemp seed oil, and again boil, cooking three times in all. Add some ground pepper and dried ginger. When all are mixed together it is ready to serve and is very good. At the present time this is given the name of Oily bean relish. People having foot disease frequently take this and steep it in wine and use the dregs to apply to the feet, which will be cured. The good quality, being fragrant, mellow, and of rich strong decoction, is found in the Hsiang-yang district, in a town called Ch’ien-t’ang. That which is in the middle part of the vessel has a stronger effect.”

Hagerty (1917, p. 81): “Chiang [character], or Soy Sauce [Chinese miso]: The Chiang has a salty sour taste, and has a cold effect upon the human system. It is a remedy for the following diseases:” [Hagerty omits the medical text].

Bretschneider (1881, p. III:2): Enlargement of the *Shen Nung Pên Ts’ao Ching*, adding 365 more drugs used during Han and Wei periods. An independent treatise. T’ao, a T’ang dynasty Buddhist monk, lived 452-536 AD.

Note 9. This is the earliest document seen (May 2001) that mentions hemp seed oil.

19. *Shijing* [Food canon (#1)]. 530? AD. China. Passage on soy reprinted in C.N. Li 1958 #294, p. 216. Undated. [Chi] • **Summary:** Wade-Giles reference: *Shih Ching*. Northern Wei. There are several early Chinese books with this title. The original work has been lost, but its contents are partly preserved in the fermentation and food processing / food and drink chapters of the *Qimin Yaoshu* (QMYS). The author and date of this one are uncertain. The date was probably before that of the QMYS (+544); the date +530 is proposed here by Li. Authorship has been attributed to Cui Hao (W.-G. Ts’ui Hao), to his mother, or to Ma Wan—but these are just theories. One *Shijing* (Food canon), attributed to Cui Hao, in 9 volumes, is listed in the *Weishu* (History of the Northern Wei dynasty) (+554), in which only the preface remains. This preface, which has been translated in Huang (2000, p. 125), strongly implies that most of the *Shijing* was actually written by Cui Hao’s mother. During a famine that lasted more than ten years, she realized “how ignorant the younger generation had become” in matters related to food preparation and the culinary arts. “The result is nine chapters of elegant and systematic descriptions that form this book.” In his later years, Cui Hao unfortunately had a falling out with the Wei emperor; in +450 he and his entire family were put to death for high treason, and he was regarded as a traitor for the last 100 years of the Northern Wei dynasty. This was probably why his name is never mentioned in the CMYS and though many passages from the *Shijing* are quoted and the source cited, the CMYS

never says *whose Shijing*. The author of the QMYS was a government official when Cui Hao was remembered as a traitor.

The section titled “How to make soybean (*dadou*) thousand year bitter wine (*kujiu*)” (preserved in Chapter 71, titled “Vinegar” in the QMYS) says: Take one pint (*dou*) of soybeans (*dadou*). Wash until very clean, soak until soft, then steam until cooked through. Dry in the sun. Then repeatedly pour wine (*jiu*) over the soybeans—so they impart their flavor to the final vinegar and aid the oxidation process. This section also describes other ways of making other kinds of vinegar—each with a unique flavor.

The section titled “How to make soy nuggets (*shi*)” (preserved in Book 8, chapter 72 of the QMYS) describes three methods for making *shi*. The main method (the one described first in the QMYS and considered to be most important by the author) is for unsalted / bland soy nuggets (*danshi*). The method for making salty soy nuggets (based on the translation by Shih Shêng-han 1962, p. 86-87, and H.T. Huang 2000, p. 338-39) is as follows: Soy nuggets are usually made in the summer, from the 5th to 8th month; this is the best time. Take one *dan* (about 40 liters; later pronounced *shih*) of soybeans, wash / scour well, and soak overnight. The next morning, drain off the water then steam until the hulls / seed coats will slip off when you rub the beans. Spread on the ground (or on a mat if the ground is bad) to a depth of about 2 inches (*cun*). Wait until the beans are completely cool, then cover with a layer of rushes about 2 inches thick. After 3 days, inspect the beans to see if they are covered with a yellow coating [or mycelium, probably of *Aspergillus* mold]. If so, remove the rushes and spread the soybeans to form a thinner layer. Make grooves with the fingers in this layer and shape into “plots.” Mix again. After several hours, mix and make into “plots” again. Repeat this mixing and plot-making process 3 times a day for 3 more days.

Meanwhile, cook another batch of soybeans to get a thick, syrupy decoction. Make some glutinous rice koji (*nuqu*; W.-G. *nü ch’ü*). Mix 5 *sheng* (1 *sheng* = about 400 ml) of the glutinous rice koji and 5 *sheng* of good table salt into the yellow molded soybeans, then sprinkle with the syrupy decoction (soybean cooking liquid). Knead with both hands until some juice begins to run out between your fingers. Then place the mixture into an earthenware / pottery jar (*ping*) with a neck until full—but do not compress or pack. If the jar is not full, fill to the brim with wild mulberry leaves. Seal mouth of jar tightly with mud (*ni*). Leave jar in middle of courtyard for 27 days. Then pour out the jar’s contents [probably onto a mat], spread, and dry in the sun. Steam it again, then sprinkle with a decoction of mulberry leaves. Steam it again for as long as is steaming raw soybeans, then spread it again and dry in the sun. After steaming and sun-drying three times, the soy nuggets will be ready.

Note 1. This is the earliest document seen (Jan. 2005) that mentions unsalted / bland soy nuggets (*danshi*). However the document no longer exists.

Bo (1982): Mentions wheat chiang and mustard chiang.

The *Ch'i-min yao-shu* states that this work contains a recipe for "one thousand year bitter soy wine," which was apparently made by soaking soy nuggets in a grain-based alcoholic beverage or medicinal tincture.

Fukushima (1979, p. 3, 8-9, adapted from Bo 1982).

"The manufacturing process of wheat chiang, appearing in *Chi-ching* (*Shokkei* in Japanese) by Hsieh Fêng (Sha Fu in Japanese), published in the Han dynasty (206 BC to 220 AD). Shi-ching has not survived to the present day, but the original Shi-ching process for making wheat chiang is cited in the *Ch'i-min Yao-shu*." In the process wheat is soaked, steamed, and spontaneously molded to make koji. The wheat koji is mixed with cooked wheat and salt water to make a firm mash. This is insulated and aged to make wheat chiang.

The work also describes how to make *shih* (soy nuggets): Soybeans are washed, soaked, drained, and steamed. The cooked soybeans are cooled, then spread, furrowed, and piled. The last 3 steps are repeated 3 times a day for 3 days until the beans have become spontaneously molded. The resulting soybean koji is mixed with soybean cooking liquid, barley koji, and salt, put into an earthen pot, sealed, and insulated. It is then dried in the shade, mixed with a mulberry leaf extract, and steamed. The last 3 steps are repeated 3 times, resulting in salted soybean shih.

Note 2. This is the earliest document seen (March 2009) that mentions soybean koji; in this case it is used to make soy nuggets (*shi*, *shih*).

Shih Shêng-han (1962), in his translation and interpretation of the *Qimin Yaoshu*, includes a lengthy analysis of the sources from which it is drawn. On pages 27-28 is a detailed discussion (with one excerpt) of this book (*Shijing*), whose title he translates as "Catering Guide or Nutrition Manual." He states that 33 quotations from the *Shijing* are mentioned in the *Qimin Yaoshu*. The Records of Classics and Other Writings in the *Suei Shu* mentioned nine books (all lost now) titled *Shijing*. One of these, written by the mother of Cui Hao (lived ?-450), the Prime Minister to the first Emperor of the later Wei dynasty, is definitely previous to the *Qimin Yaoshu*.

20. Yen-shih chia-hsun [Essays]. 531-591 AD. China. [Chi]*

• **Summary:** "How dare I gaze upon your excellency's clear dust? Yet what is the use of the 'Great Darkness' now? It is only fit to cover chiang jars (*chiang p'ou*)."

21. Jia Sixie. 544 AD. *Qimin yaoshu* [Important arts for the people's welfare]. China. Passage on soy reprinted in C.N.

Li 1958 #66, p. 66-67, and #295, p. 216-20. Translated by Shih Sheng-han 1958, 1962. [Chi]

• **Summary:** Wade-Giles reference: *Ch'i Min Yao Shu* (QMYS) by Chia Ssu-hsieh. Northern dynasties-Northern Wei (AD 386-534; established by nomadic people from the northern steppes). This is the world's earliest encyclopedia of agriculture. H.T. Huang (2002) adds: "This is the most important book on agriculture or food technology ever published in China. At a remarkably early date it gives both general information and great detail about agriculture and food processing." The QMYS is divided into 10 books / fascicles (*juan*), and subdivided into more than 91 consecutive parts.

In his Preface, Jia Sixie states that the material in his book comes from four sources: (1) The Chinese classics; (2) Contemporary books, proverbs, and folk songs; (3) Information gathered from experts; and (4) His personal experience ("original material").

A partial English-language translation of the "original material" and commentary by Shih Shêng-han was published in 1958 (2nd ed. 1962). The numbered text below is based on the 1962 translation titled "A preliminary survey of the book *Ch'i Min Yao Shu: An agricultural encyclopaedia of the 6th century*." 2nd ed. Peking, China: Science (Kexue) Press. x + 107 p.

Book 2. General comments. The best time to plant soybeans (*dadou*) and oilseed hemp (*youma*) depends on the climate and soil condition. "Realization of the importance of proper choice of season and soil." These two factors are the key to agricultural success. A table (p. 33) shows: Best, medium, and latest time for various operations: Planting spring soybeans: Best time-First ten days of the 2nd month. Medium-First ten days of the 3rd month. Latest time-First ten days of the 4th month. Also gives such times for azuki beans, male and female hemp, and sesame seeds. For making jiang: Best time-12th and 1st month. Medium-2nd month. Latest-3rd month. Making *shi* (soy nuggets): Best-4th and 5th month. Medium-20th day of 7th month until 8th month. Latest-None. In addition: Large dark-red beans (*da chidou*) should be planted in the 3rd lunar month, and harvested in the 6th month (See Li 1958 #385). Note 1. The scientific- and common name of dark-red beans is unclear; it may well be another name for azuki beans.

Chapter 4. Millets. It is best to plant millets on new fields (without a previous crop), or on a field where the previous crop was soybeans. Best, medium, and least suitable soil / ground for planting various crops. Spiked millet: Least suitable-Following turnips or soybeans. Panicked millets-Medium soil-Following soybeans. 1.3 Amount of seeds to be sown at different seasons: Soybeans: Best time-8 *sheng/mou* (= 220 ml/508 square meters). Medium time-10. Latest time-12.

Chapter 6, "Soybeans" (*dadou*): Note 2. The first third (approximately) of this section is quotations from four early

Chinese works and commentaries on them: (1) The *Erya* (Literary expositor) (ca. 150 BC) says: “*rongshu* is the same as *renshu*.” Sun Yan’s commentary on the *Erya* explains that *rongshu* is the soybean (*dadou*).

(2) According to the *Guangya* by Zhang Yi (Ancient dictionary: Enlargement of the *Erya*) (230 AD), soybeans (*dadou*) are called *shu*; azuki beans (*xiaodou*) are also called *da*. *Hudou* is *jiangdou*. Dr. Huang adds: The true identity of *hudou* is unknown.

(3) The *Guangzhi* by Guo Yigong (Extensive records of remarkable things) (+390) says: When you plant the azuki bean (*xiaodou*), you can get three crops a year. The flavor is good. *Baidou* (“white bean”) is coarse, large, and edible. *Cidou* (“prickly bean”) is also edible. *Judou* (“millet bean”) has a seedling which is like that of the azuki bean (*xiaodou*). The flowers are purple. It can be used for flour (*mian*). It is grown in a place called Zhuti within Jianin (in today’s Sichuan). Of soybeans (*dadou*), we have the yellow *luodou* (“drop bean”), the *yudou* (“imperial bean,” in which the bean is elongated), the *yangdou* (“poplar bean”), whose leaves are edible, and the *hudou* (“foreign bean”), which comes in green (*qingdou*) and yellow (*huangdou*) varieties.

(4) According to the *Bencao* (probably *Shennong Bencao Jing*; *Benjing*) (Classical pharmacopoeia of Shennong, the Heavenly Husbandman) (100 AD), when Zhang Qian (W.-G. Chang Ch’ien) traveled to foreign lands, he brought *hudou* (“foreign bean”) seeds back to China. Note 3. Zhang went west along what is now called the Silk Road during the Former / Western Han dynasty, was gone for 11 years, and returned to China in 126 BC. The *hudou* is now generally thought not to be a soybean.

The *Qimin Yaoshu* then begins: So now (i.e., Later Wei), we have two kinds of soybeans (*dadou*), black and white, as well as *changshao* (“long tip”) and *niujian* (“cow path”) varieties. There are three kinds of azuki beans (*xiaodou*): The green (*ludou*), the red (*chixiaodou*), and the white (*baixiaodou*) varieties. There are also the yellow Korean bean (*huang gaolidou*), the black Korean bean (*hei gaolidou*), the *yandou* (“swallow bean”) and the *bidou*; all are varieties of soybeans (*dadou*). Then there are *wandou*, *jiangdou*, and *laodou*; all are varieties of azuki beans (*xiaodou*). Note 4. This is the earliest document seen (Sept. 2005) that mentions Korea in connection with soybeans. Note 5. This is the earliest Chinese-language document seen (Jan. 2005) that uses the word *baixiaodou* to refer to white azuki beans.

Spring soybeans (*dadou*): Plant them at the same time as the early grains; the middle of the 2nd lunar month is best. Use 8 *sheng* of seeds per *mou*. The second best planting time is the first third of the 3rd lunar month; use 10 *sheng* per *mou*. The latest you can plant them is the first third of the 4th lunar month; use 12 *sheng* per *mou*. If you meet with late germinating weather, you can plant in the 5th or 6th

lunar month, but you must increase the amount of seed used.

The soil should not be overly fertile. After land has been harvested in the previous autumn, it can be planted sparsely. If the soil is too rich, you may get luxuriant growth but fewer pods. Harvest the crop late. The pods do not drop. If you harvest too early, the seeds will not be full. Use a drill to plant, so the seeds will be placed deep in the soil. The seedlings will be sturdy and have deep roots to reach the moisture in the soil. Pierce (?) once, plow once, and hoe several times.

Mow / cut when all the leaves have fallen. When some leaves are left, it is harder to cut the stems. After mowing, quickly plow stubs under the soil. The soybean stubs dry out easily. If you do not plow them under, the soil will not retain moisture.

To produce [soybeans] for animal feed (*jiao*), use a wheat field as a base, and plant 3 *sheng* of seeds per *mou*. Broadcast the seeds and use a plow to form a narrow and shallow channel; level it plane. If the weather is dry, the stems will be coarse and sturdy, and the leaves sparse. If there are too few seeds, the seedlings will not grow tall; if the seeds are placed too deep, the seedlings will not be able to emerge from the soil.

If the soil is too damp, first plow deeply, then broadcast the seeds away from the plowed furrows and level the soil. Do not do this if the soil is not too damp.

In the 9th month, if you see leaves close to the ground turning yellow and about to fall, immediately harvest the crop. Even if the leaves do not turn yellow, they can easily start to rot. If you do not harvest, the wind will quickly strip the leaves, and the rain will rot the stem. The crop will be ruined.

Book 2, “Cultivating cereal grains.” The best way to improve the soil is to plow under green beans (*liudou*, probably *Dolichos* species rather than mung beans or green gram). Azuki beans or sesame seeds (*huma*) are next (Note 6. Sesame seeds are not a legume and do not enrich the soil). It’s best to broadcast these densely in the 5th or 6th month, then plow them under [as green manure] in the 7th or 8th or eighth month. In the yield of spiked millet planted the next spring should be 10 *sheng* per *mou*. The effect is as good as adding the excreta of silk worms or well-rotted compost. Varieties of crops. The Chinese and English names of 7 cereal crops and the number of varieties of each recorded in the QMYS are given; soybeans are not in this list. Fertilizing the ground: Succession of crops. This table is similar to a previous one but: For soybeans: Most favorable forerunner–Spiked millet. For azuki beans the best forerunner is spiked millet or wheat. The QMYS was the first book to state that using green manure is “the best thing to do.” The best preceding crops for plowing under as green manure are *Dolichos* beans (*liudou*) or azuki beans. The next best crops are hemp, foxtail millet (*su*; *Setaria*

italica), or sesame seeds. The least desirable are rapeseed / colza (*wujing*) or soybeans (*dadou*). Note 7. This is the earliest document seen (Jan. 2008) worldwide that mentions rapeseed.

Harvesting and storing crops. Soybeans: In the 9th month, when the lower leaves become yellow and fall, reap quickly. Different harvest dates are given for azuki beans and sesame seeds.

Chapter 8 (Li 1958, p. 217)–Hemp: Be careful not to plant soybeans (*dadou*) mixed with hemp.

Chapter 10–Barley or wheat: Upland (high) fields are good for cultivating cereal grains or beans.

22. Jia Sixie. 544 AD. *Qimin yaoshu* [Important arts for the people's welfare (Continued)]. China. Passage on soy reprinted in C.N. Li 1958 #66, p. 66-67, and #295, p. 216-20. Translated by Shih Sheng-han 1958, 1962. [Chi]

• **Summary:** Continued: Book 3, "Culinary vegetables." Chapter 14 (3.2.31 Li 1958, p. 217)–To plant melons, make a pit as big as a bowl. Place 4 melon seeds and 3 soybean seeds in the sunny side of the pit. After several leaves have expanded on the melon vine, pinch off the soybean seedlings. (Melon seedlings are too weak to break through the ground, so one should take advantage of the pushing force of germinating beans. Yet if the soybeans were allowed to grow, they would shadow the melon vine to disadvantage. Bean stalks when pinched give off a sap that moistens the soil. Never pull out the bean stalks, lest the ground become loosened and dry).

Method #2 for growing melons (from Li 1958 #66): Use the raised fields method with raised rows. After the rains in the 6th month (July), plant *Dolichos* beans. In the 8th month, plow them under. Plow again in the 10th month, then start to plant melons. Every two steps, make a small pit the size of a plate with a mouth about 5 inches in diameter and a flat bottom. Then plant melon and soybean (*dadou*) seeds, ten seeds each, in the pit. Add manure and soil, and cover it gently. Tamp it down with your feet. Pull out the beans and thin the melons as usual. When the spring grasses appear, the melons will come up and the leaves will grow quickly. In the 5th month (June) the melons will be ripe and their leaves luxuriant. They are not harmed by drought. Note: We are not told when to pull out the soybeans.

3.4 Preservation of garden vegetables. 3.4.2. Perishable vegetables can be half-dried then conserved in *jiang*; they are called *jiangcai*. The QMYS recommends 6 vegetables to be preserved in this way.

6.1 Fiber crops. The only plant discussed is hemp. Female hemp plants are cultivated mainly for their oil-rich seeds, are cropped for both their fiber and their function in pollination. Use of wild kuzu (*Pueraria*) is mentioned in passing. 6.2 Tinctorial plants include indigo. Note 1. This is the earliest document seen (Jan. 2006) that mentions kuzu / kudzu.

Book 7, "Animal husbandry," discusses domesticated animals including horses, cattle, donkeys, mules, sheep, goats, pigs, geese, Chinese ducks, and other fowl.

Chapter 45–On mulberry: Mentions azuki beans.

Chapter 58 (7.3)–On rearing baby pigs: For feeding baby pigs, nursing is the best. If you must feed them some other way, using artificial feeds, they may not grow fat, so leave the baby pig with its mother in the same pen. Using foxtail millet (*su*) and soybeans (*dou*) may not be sufficient. Bury some cartwheels (vertically) in the pen to form a feeding enclosure, enabling you to separate the baby pig from its mother. Scatter foxtail millet (*su*) and soybeans (*dou*) therein. The piglets will be able to go in and out freely and get enough to eat, so they will grow quickly. But the mother pig will not be able to reach the feed. Note 2. This is the earliest document seen (Jan. 2003) concerning the feeding of soybeans or soybean products to pigs.

Note 3. This is the earliest document seen (April 2003) that mentions *lüdou*. Chapter 17, titled "Planting mallows," advises to plant *lüdou* in the 5th or 6th month, and to plow it under [for use as a green manure] in the 7th or 8th month. Chapter 21, titled "Planting onions" (*cong*) recommends planting plant *lüdou* in spring and plowing it under in the 5th month. (See Li 1958, #416).

Chapter 57–Raising sheep. If you raise 1,000 sheep, within 3-4 months you should plant a batch beans [to help feed them].

Chapter 60–Raising geese and ducks: Take the female ducks (hens) and do not mix them with the males (drakes). Feed the female ducks with foxtail millet (*su*) and soybeans (*dou*) until they are satiated. You should get 100 eggs from each female duck. Dr. Huang notes: They are raising the ducks for the eggs, not the meat. Note 4. This is the earliest document seen (Aug. 2002) which mentions that ducks (or geese) are fed or eat soybeans.

23. Jia Sixie. 544 AD. *Qimin yaoshu* [Important arts for the people's welfare (Continued)]. China. Passage on soy reprinted in C.N. Li 1958 #66, p. 66-67, and #295, p. 216-20. Translated by Shih Sheng-han 1958, 1962, and H.T. Huang 2000. [Chi]

• **Summary:** Wade-Giles reference: *Ch'i Min Yao Shu* (QMYS) by Chia Ssu-hsieh. Chapter 70–*Jiang*. The following translation is based on Huang (2000, p. 347-49); he notes that this is the first document that gives a detailed description of the method for making soybean *jiang*. The process is related to that for making soy nuggets (*shi*), in which limited amounts of wheat flour were mixed with the soybeans to enhance the growth of microorganisms. When making *jiang*, larger amounts of wheat flour may be added and microbial growth may be further hastened by inoculating the mash with various prepared mold starter cultures such as *huangyi*, *huangzheng*, or *nüqu* (W.-G. *huang i*, *huang chêng*, or *nü ch'ü*).

Chapter 70—How to make jiang: The best time is in the 12th month or the first month, followed by the 2nd month, but not later than the 3rd month. Use waterproof earthenware vessels. If water leaks from the vessel (*weng*), the jiang will spoil. Avoid vessels that have previously been used for making vinegar or pickled vegetables. Place the vessels in the sun; if necessary raise them on a stone block. During the summer rains, do not let the bottom of the vessels stand in water.

Note 1. This earthenware vessel (*weng*) has a small mouth (to prevent evaporation) and a larger middle, tapering to a smaller bottom. The vessel (*gang*) used today for making soy sauce has a wide mouth to facilitate evaporation, to produce a good concentrated liquid.

With one's back towards the *sui sha...* direction, place a rusted iron nail under the stone supporting the vessel. Thus, even if the jiang is eaten by a pregnant woman, it will not spoil.

Use black soybeans (*wudou*) planted in the spring; they are small but uniform in size, whereas those planted later are larger but not uniform. Steam the dry beans in a steamer for half a day. Remove from steamer, then repack them so that those which were on top are placed in the bottom, and vice versa. Unless this is done, they will not be steamed evenly. Continue until all beans are well steamed. Note 2. A commentary by Miao Qiyou (1982) says that *wudou* means *heidadou* (black soybeans).

Cover fire with ashes and let it smoulder all night without being extinguished. Dried cow dung is the best fuel. Pile the dung, leaving the empty; it will burn as well as charcoal. Collect an adequate supply if possible, and use it for cooking. Since there is no dust, the fire will not be too strong. Dung is much better than dried straw.

Bite a bean; it should be dark and cooked through. If it is, collect the beans and dry them in the sun. At night, heap them in a pile and cover; they must not get wet. When you are ready to remove the hulls, place the beans in a steamer and steam them vigorously. Then dry them in the sun for a day. Next morning, clean the beans by winnowing (*bo*). Select enough good beans to fill a mortar. Pound them but do not crack them. If they had not been steamed twice, the pounding would probably crack them, and they would be difficult to clean.

Winnow beans to remove broken pieces, then soak in a large basin of hot water. After a while, wash them to remove black seed coats... Drain off water, then steam the beans again.

Add water as needed but do not change the wash water lest some of the bean flavor be lost and the quality of the jiang be lowered... Use wash water to boil broken pieces until all water has evaporated, then process the residue to make a side batch of jiang for immediate consumption. Do not use the wash water for the main batch.

Steam beans for same length of time as when cooking rice to make *fan*. Remove beans from steamer, spread them out on a scrupulously clean mat, and allow them to cool.

Meanwhile, take white table salt, yellow mould culture (*huangzheng*), *ju* leaves, and wheat koji (*benqu*) and dry them thoroughly in the sun. If the salt has a yellowish color [from nigari], the jiang will be slightly bitter. If the salt is not dry, the jiang will spoil easily. Use of the 'yellow mould culture' will add a red tinge to the jiang and improve its flavor. Grind the 'yellow mold culture' and common koji to a powder, then sift through a screen made of horse tail hair. Note 3. It is unusual to see salt used in this first fermentation, since it would slow the process. Its use is not called for at this stage in subsequent documents.

The approximate proportions of ingredients are: three *dou* of dehulled, cooked beans, one *dou* of ground common koji, one *dou* of ground 'yellow mould culture,' five *sheng* of white salt, and as much *ju* leaves as can be picked up with three fingers. If less salt is used, the jiang will turn sour; adding the salt later will not help. If superior koji (*shenqu*) is used, one *sheng* of it can replace four *sheng* of common koji, because of its greater hydrolytic / digestive power. Note 4. One *dou* (about 1 pint) equals 10 *sheng*.

Note 5. This is the earliest document seen (Nov. 2002) that uses the term *huangzheng* (yellow mold culture) or the term *benqu* (wheat koji = common koji), or the term *shenqu* (superior koji).

When measuring out the beans, heap them liberally above mouth of container; do not level the top. By contrast, pack the salt and cultures loosely in the measuring container, and level the top flat. Mix the measured ingredients strenuously by hand in a large basin, until everything, including the moisture, is evenly distributed. Face the planet Jupiter while mixing, to insure that no grubs will form.

Place mixture in an earthenware vessel (*weng*) and pack contents tight. The vessel should be full; if only half full, the product will not ripen properly. Cover vessel and seal mouth with mud, so vessel is airtight.

When the fermentation is finished (after about 35 days in the 12th month, 28 days in the 1st and 2nd months, or 21 days in the 3rd month), remove cover to open vessel. The fermented mash will show large cracks, and shrinkage away from wall of vessel. A yellow coat (of spores and mycelium) will be visible everywhere. Remove all chunks and break them into pieces. Divide the jiang substrate from 2 vessels into 3 parts—to fill 3 vessels for the next stage.

Before sunrise, get water from a well. Dissolve three *dou* of salt in one *tan* (ten *dou*) of water. Stir well, allow to settle, then decant off clear solution for use. Soak some yellow mould culture (*huangzheng*) in the clear salt solution in a bowl. Rub the pieces until a thick yellow suspension [of spores and mycelium] is obtained. Discard the residue, add more salt solution, and pour the suspension into a vessel.

For example, for 100 *dou* of moulded bean substrate, provide 3 *dou* of *huangzheng* and varying amounts of salt solution. The important point is to achieve a mixture having the consistency of thin congee (*bozhou*), since the fermented beans in the mixture can absorb a considerable quantity of water.

Allow the vessel to stand in the sun with the mouth open. [As a proverb says, ‘Drooping mallow and sun dried jiang’ are both excellent products.] For the first 10 days stir contents from top to bottom several times a day. Then stir once a day until the 13th day. Be sure to cover mouth of vessel when it rains; do not let any water get in lest it promote the emergence of grubs. Stir thoroughly after each rain. The jiang will be ready for use in 20 days, but it will take 100 days for the full flavor to be developed.

The author comments: If a pregnant woman who might spoil the jiang is present, place leaves of jujubes, *Ziziphus spinosus*, in the vessel and the jiang will recover. Some people use ‘filial stick’ (*xiaozhang*) to stir the material, or roast the vessel. The jiang is saved, but the foetus may be lost. Note 6. No commentator on this work explains the meaning of “filial stick.” The word for “roast” (*ji*) is like barbecue, indicating a high temperature. This seems to be a puzzling superstition.

24. Jia Sixie. 544 AD. *Qimin yaoshu* [Important arts for the people’s welfare (Continued)]. China. Passage on soy reprinted in C.N. Li 1958 #66, p. 66-67. Translated by Shih Sheng-han 1958, 1962, and H.T. Huang 2000. [Chi]
 • **Summary:** Continued: Wade-Giles reference: *Ch’i Min Yao Shu*, by Chia Ssu-hsieh.

Huang (2000, p. 349) adds: We see from this description that the process is divided into three stages: (a) Preparation of the soybeans to make them receptive to fungal growth. Steaming the soybeans three times before removing the seed coats by pounding is neither effective nor efficient. (b) First fermentation. The moulded soybeans were later given the name *jiang huang* (yellow jiang ferment); they are analogous to the *huangzi* (yellow seed ferment [soybean koji]) produced in the first stage of the process for making soy nuggets (*shi*). Inoculation with two kinds of ferments should greatly hasten microbial growth. Likewise, the wheat flour present in the two *qu* inoculants would enhance the nutrients available to support microbial growth. (c) Second fermentation. The fungal enzymes from the first fermentation hydrolyse the proteins and carbohydrates present to give a savoury, pasty product. A flow diagram of the three stages is shown on p. 350. Huang then compares this process with the process for making soy nuggets (*shi*, p. 338-41), and shows that there are several unnecessary steps in the jiang process. “It is natural that later work would be aimed at correcting the major deficiencies noted above” (p. 351). Note: Of course, enzymes were not known to exist at this time.

Talk with H.T. Huang. 2002. Oct. 19. The method for making jiang in the *Qimin Yaoshu* described above, based on the method for making soy nuggets, is unnecessarily complicated, so it was later simplified several times. Huang (2000, p. 123) lists the complete table of contents of this book, in 10 books and 92 chapters.

Wilkinson (2000). Jia Sixie placed a table of contents (*mulu*) at the head of each *juan* (book, volume, or chapter); he apologized, since this was an unusual practice at the time (p. 289). The author was born at the end of the 5th century in Shandong. This is the earliest extant comprehensive agricultural treatise. Although half of the book consists of quotations from previous works (which have thereby been preserved) the rest is based on the author’s experience of farming in Shandong. He also gives detailed information on the eating and drinking habits of the Northern Wei (386-584, when northern China was inhabited by nomadic people from the northern steppes). His descriptions of the different methods of preparing everyday food are the first such descriptions to survive and can be used as recipes (p. 629). Wilkinson conducted a 3-month experiment in Beijing during the winter of 1999; he asked his chef to prepare dishes based on the cooking methods, ingredients, and occasional recipes found in the QMYS. Some of the ingredients, such as grasses and fibrous plants, are difficult to find today, but “not unpleasant to anyone fond of vegetarian cooking. The fermentation of many of the ingredients or their dousing in fermented bean sauce [*jiang?*] becomes an acquired taste. The absence of sugar, vegetable cooking oil, chili, and tomatoes is hardly missed, and the use of boiling, roasting, or baking is a relief from the oily monotony conferred by stir frying. However I noticed that most of my Chinese guests felt that what they were eating was foreign, not Chinese” (p. 636). The earliest known record of everyday cooking in China is in the QMYS, which is also the main primary source on food and cooking methods in northern China during the Northern Wei of the Northern dynasties. (p. 639, 641).

25. Jia Sixie. 544 AD. *Qimin yaoshu* [Important arts for the people’s welfare (Continued)]. China. Translated by Shih Sheng-han 1958, 1962. [Chi]

• **Summary:** Continued: Wade-Giles reference: *Ch’i Min Yao Shu*, by Chia Ssu-hsieh. This is the world’s earliest encyclopedia of agriculture.

Letter from Dr. H.T. Huang, 1991. Aug. 4. In the inestimable classic of the 6th century A.D., the *Ch’i Min Yao Shu*, which describes the making of every conceivable type of processed food (even the making of yogurt) that was of importance, tofu is not mentioned at all. This indicates that tofu had not yet gained the stature of one of the “useful arts” for the people’s welfare by the 6th century AD (See also Huang 2000, p. 313-14).

Fukushima (1989, p. 2-3). “The first document in which soybeans appeared as a substitute for meat in chiang was the *Ch’i-min Yao-shu* (*Saimin-Yojutsu* in Japanese) by Chia Ssu-hsieh (Ka Shikyo in Japanese), the world’s oldest encyclopedia of agriculture, published in 535 AD in China.” (Note: The above statement is not true; as of Nov. 2002, five Chinese documents, from 166 B.C., mention soybean jiang before the *Ch’i-min Yao-shu*.) Two processes for making shih (soy nuggets) are described in the *Ch’i-min Yao-shu*. One is the process described earlier in the *Shi-ching* by Hsieh Feng (which survives only in the *Ch’i-min Yao-shu*). In the second process, first described in the *Ch’i-min Yao-shu*, soybeans are winnowed, cooked, drained, and cooled. They are piled, the temperature is measured, and then they are stirred. The last 3 steps are repeated 3 times until they are spontaneously molded. They are then spread and furrowed to make soybean koji. This is winnowed, washed, drained, dried, moistened, piled, fermented, and dried to give unsalted soybean shih (p. 8).

Yu (1987, p. 25): Discusses skills of farming, crop rotation, plowing, care of livestock, fish culture, and food processing in the middle and lower reaches of the Yellow River. Note: This is the earliest document seen (Nov. 2002) that discusses fish culture (fish farming, aquaculture); however soybeans were not used as fish feed.

Wang and Fang (1986): In this 6th century book on Chinese technology, the product chiang-ching was mentioned. The characters show that the product was related to chiang and was probably the origin of chiang-yu (soy sauce). But the method of preparing soy sauce was first described in the 16th century *Pen-ts’ao kang-mu* by Li Shih-chen. (Note: For an excellent discussion of the much earlier origins of soy sauce in China, see Huang, 2000, p. 358-74.) Also in this book more than 20 methods of preparing *tsu* (Chinese-style vinegar made from grains such as millet, rice, or sorghum) are discussed. The grain is cooked, mixed with *ch’ü* (koji), packed in a sealed container, and allowed to ferment for 3 weeks.

Yokotsuka (1986, p. 198) cites this as the earliest document seen that mentions a liquid soy sauce. He states that the *Chi-Min Yao-Shu* (532-549) discussed *ch’ü* (mold-cultured cereals made from crushed wheat or wheat flour made into balls or cakes, or cooked rice), Chiang (made from soybeans or wheat), Shi (mold-cultured soybeans with or without salt), and Shi-tche (the saltwater extract of shi).

26. Jia Sixie. 544 AD. Qimin yaoshu [Important arts for the people’s welfare (Continued)]. China. Translated by Shih Sheng-han 1958, 1962. [Chi]

• **Summary:** Continued: Wade-Giles reference: *Ch’i Min Yao Shu* (QMYS), by Chia Ssu-hsieh. Francesca Bray (1984) in her superb book on agriculture in China (*Science and civilisation in China. Vol. 6, Biology and biological technology. Part II: Agriculture. Joseph Needham series*)

offers many important insights into the QMYS. She cites it as: Essential Techniques for the Peasantry. Northern Wei, c. +535. By Chia Ssu-Hsieh. Textual references are to the 1957 ed. of Shih Sheng-Han. Bray devotes a long section (p. 55-59) to discussing this work and its context in detail. It is the “earliest Chinese agricultural treatise to have survived in its entirety. It is a long and impressive work, logical and systematic in its arrangement, comprehensive and detailed in its treatment, and a model for all subsequent Chinese agronomists.” She translates the introduction. A long work, it is divided into ten books comprising 92 chapters and over 100,000 characters. It quotes from more than 160 other works, sometimes at great length. Our present versions of the *Fan Shengzhi Shu* [The book of Fan Shengzhi (on agriculture)] (10 BC) and the *Simin Yueling* [Monthly ordinances for the four classes of people] (160 AD) are based almost exclusively on passages cited in the *Qimin Yaoshu*. “Almost half of the book consists of quotations, but the main body of the text is from” Jia Sixie’s own hand. “Little is known about the author except that he served as a middle-ranking official; however it is generally assumed that his agricultural experience was based on conditions in the Shantung area.” The work describes in depth “the practical details of running an agricultural estate, cultivating both subsistence and commercial crops and directing a number of household manufactures and culinary preparations.” The book also gives a detailed description of hemp cultivation (Bray, p. 535).

Adzuki beans are also referred to frequently, especially in connection with cultivation of green manures. With the development of printing in China in the early Song dynasty, it was one of the first agricultural works to be printed by imperial order (Bray, p. 53).

Concerning soybeans (Bray, p. 514-15): “The soybean was probably the most important legume grown in China, but it was by no means the only one. ‘Lesser beans’ (*hsiao tou* or *ta*) came, according to the *Ch’i Min Yao Shu*, in three varieties, red, green and white (Fig. 239). The term *hsiao tou* can probably be identified with the adzuki bean, *Phaseolus angularis* (Willd.) Wight, which is native to China and Japan.”

Note: This is the earliest document seen that clearly mentions the azuki bean.

Bray (1981): Northern Chinese agricultural methods and crops, with extended sections on preserving, brewing, exotic plants, etc. With the Nongshu perhaps the most fundamental work. This document, which arrived in Japan during the late 700s, was a key link in the transmission from China to Japan of food preparation techniques. It described how to make soy nuggets. Lists varieties of soybeans and how to grow them. Says Chang Chien brought soybeans to China.

27. Jia Sixie. 544 AD. *Qimin yaoshu* [Important arts for the people's welfare (Continued)]. China. Translated by Shih Sheng-han 1958, 1962. [Chi]

• **Summary:** Continued: Wade-Giles reference: *Ch'i Min Yao Shu* (QMYS), by Chia Ssu-hsieh. Bo (1982): This is the world's earliest document describing techniques for processing agricultural products. The production methods for soybean chiang and shih (soy nuggets) are described in detail. In these descriptions, the author frequently used the terms "tou-chiang-ch'ing" (literally "soybean chiang refined") and "chiang ch'ing" (literally "chiang refined"), but unfortunately he didn't describe how these products were made. These terms are almost surely related to the term "ch'ing chiang" used in the *Ssu Min Yüeh Ling* by Ts'ui Shih of the Later Han. Shih was made from soybean koji. Using only soybeans (instead of soybeans and wheat, as for chiang) hydrolyzes the protein more efficiently, and was thus well suited for making soy nugget sauce (*kuki-jiru*). Thus this book contains about 70 recipes for using soy nugget sauce, many more than for soy sauce. Yet the book does not explain how to make soy nugget sauce.

The *Ch'i-min yao-shu* quotes from an even earlier non-extant work, the *Shih ching* (*The Classic of Food*; date and authorship unknown), giving the *Shih ching's* recipe for making "one thousand year bitter soy wine."

Sato (1963, p. 9), in his book titled "Documents on Soy Nuggets, Chiang, Miso, and Shoyu," cites this as the third earliest Chinese document seen on the subject. Called the *Seimin Yojutsu* in Japanese, it was translated into Japanese in 1959 by Nishiyama Kakekazu and Kumadai Yukio. It is written entirely in Chinese characters (*Kanbun*).

Shih Sheng-han (1958). The first English-language (partial) translation of this book; revised 2nd ed. in 1962. For details see these two works. The section titled "Fish-pond" (1958 and 1962, p. 72) states: "There is a whole chapter (62) on fish-pond management... But the source and the calculations of the quotation are dubious. Anyhow we can infer from this chapter that fish-pond management was started in China earlier than the 6th century."

28. Jia Sixie. 544 AD. *Qimin yaoshu* [Important arts for the people's welfare (Continued)]. China. [Chi]

• **Summary:** Continued: This record concerns information on soy sauce, based on the research and writing of H.T. Huang (2000). The section titled "Fermented soy sauce, jiangyou" (p. 358-78) contains an excellent, detailed discussion of this subject. In its food processing chapters, the *Qimin Yaoshu* (QMYS) mentions 3 seasoning agents that have been considered the ancestors of soy sauce: *jiangqing* (W.-G. *chiang ch'ing*), *shizhi* (W.-G. *shih chih*), and *shiqing* (W.-G. *shih ch'ing*). *Jiangqing* (which is "clarified jiang," is *qingjiang* with the two characters in reverse order and probably means the same thing) is used as a condiment in five recipes—in chapters 70, 76, 77, and 87.

Much more popular is *shizhi* (aqueous extract of soy nuggets / fermented soybeans) which is used in at least 26 recipes—in chapters 76, 77, 80, 82, 87, and 88. Finally there is *shiqing* (clarified soy nuggets / fermented soybeans), which is used in 3 recipes—in chapters 76 and 77.

Unfortunately the QMYS gives no indication of how *jiangqing* or *shiqing* were prepared, although in the recipe for a fish and vegetable stew this is, luckily for us, a brief statement on how *shizhi* was obtained by boiling soy nuggets (*shi*) in water. In Chapter 76 (p. 465) we read:

Shizhi: Cook [soy nuggets] in a separate pot of water. Let it boil once. Strain off the soy nuggets, and after the soup settles, decant the clear solution. Do not stir the water during cooking, lest you muddy the decoction so that it will not clarify after straining. When cooking *shizhi*, stop the process as soon as the water reaches the light brown color of amber. Do not allow it to become too dark lest the juice be bitter (Huang, p. 359).

In examining the recipes in the QMYS it is easy to get the impression that these 3 types of soy sauce are used interchangeably. Is it possible that they were simply different names for the same product? The answer is no. There are two cases in which both *jiangqing* and *shiqing* are used in the same recipe, and another case in which *shizhi* and *shiqing* are used to cook the same dish. These examples leave no doubt that these are the names of three different types of soy sauce.

A full-page table (Huang, p. 372) shows the "Usage of soy condiments in food recipes from the Han to the Qing dynasties." The seasonings based on jiang (fermented soybean paste) are used in 7 recipes: Jiang itself in 2, and soy sauce made from jiang (*jiangqing*) in 5 recipes. However the seasonings based on soy nuggets (*shi*) were used in 48 recipes (far more): Soy nuggets in 20 recipes, soy nugget sauce named *shizhi* in 26, and soy nugget sauce named *shiqing* in 2.

Note: This is the earliest document seen (Aug. 2005) that mentions the soy condiments or seasonings *jiangqing* or *shiqing*.

29. Mao Heng. comp. 642 AD. *Maoshi zhengyi* [Elucidation of the *Book of Odes*]. China. [Chi]*

• **Summary:** Wade-Giles reference: *Mao Shih Chêng I*, compiled by Mao Hêng (W.-G. Mao Hêng, Former / Western Han, 2nd century BC), annotated by Zheng Xuan (W.-G. Chêng Hsüan, Later / Eastern Han, 2nd century AD), and commented on by Kong Yingda (W.-G. K'ung Ying-Ta; 642 AD; he lived 574-648). Tang dynasty. Zheng Xuan's commentary states that *hai* is jiang made from meat. When the jiang is thin it is called *haitan*; thus *tan* is the juice from *hai*.

Huang (2000) translates this title as "The Standard *Book of Odes*" (p. 619-20) and as "Elucidation of the *Book of Odes*" (p. 333n).

30. Su Jing (=Su Gong); et al. comps. 659 AD. Tang bencao [Tang dynasty pharmacopoeia]. China. [Chi]

• **Summary:** Wade-Giles reference: *T'ang Pên Ts'ao*, compiled by Su Ching (=Su Kung), et al. Tang dynasty. This book has been lost. See: Su Jing, ed. +659. *Xinxiu Bencao* [Newly improved pharmacopoeia].

31. Su Jing (=Su Gong); et al. comps. 659 AD. Xinxiu bencao [Newly improved pharmacopoeia]. China. Passage on soy reprinted in H.T. Huang 2000. [Chi]

• **Summary:** Wade-Giles reference: *Hsin Hsiu Pên Ts'ao*, compiled by Su Ching (=Su Kung), et al. Tang dynasty. The text of this book is identical to that of the *Tang Bencao*, which has been lost. Huang (2000). It mentions that dried young soybean sprouts (*dadou huangjuan* or “yellow curls”) have medicinal properties (p. 296). It states that soy nuggets (*shi*) are widely used as food. In the spring and summer when the weather is unsettled, soy nuggets are either steamed or pan-fried then soaked in wine, to make an especially good relish (p. 341). Its also states: Jiang is usually made from soybeans. Smaller amounts are made from wheat. Some types are also made from meat and fish; these are named *hai* and are not used medicinally (p. 354). Also mentions malt sugar (*yitang*).

Huang (2000, p. 134-36, 616) adds: Date: +659, Tang. Title: The Newly Improved Pharmacopoeia. Edited by Su Jing (= So Gong) and a commission of 22 collaborators. This work was afterwards commonly but incorrectly known as the *Tang Bencao* (W.-G. *T'ang Pên Ts'ao*). It was lost in China, apart from manuscript fragments at Dunhuang (W.-G. Tun-huang), but copied in +731 by Tanabe Fubito (a Japanese physician or medical student) and preserved, though incompletely, in Japan (at Ninnaji).

Note: Talk with H.T. Huang. 2003. May 3. The *Tang Bencao* has been lost. But the exact same work (the entire text is identical) was rediscovered under the name *Xinxiu Bencao*; therefore the latter work is usually cited. The *Tang Bencaozhu* is a later commentary on the *Tang Bencao*, published within the *Zhenglei Bencao* (1082 AD), a Song dynasty work.

This was the first official pharmacopoeia in any country worldwide, the first compiled by imperial decree, the first to be richly illustrated. The unusual history of this great work has been told by Needham (1986, p. 265-74, 570, 587). The illustrations in the original editions are all lost. However the table of contents and significant parts of the text have been preserved in chapters 2 to 4 of the *Qianjin Yifang* (Supplement to *A Thousand Golden Remedies*) (+660). All this made it possible for the complete ancient text to be published in 1981.

Letter from Dr. H.T. Huang, expert on the history of Chinese food and agriculture. 1996. Sept. 29. “The earliest document with an illustration of the soybean is probably the

illustrated *Hsin Hsiu Pên Ts'ao* (Newly Improved Pharmacopoeia) (+659). Illustrations to this work are now lost, but some are preserved in the *T'u Ching Pên Ts'ao* of +1061 and later in the *Ch'ung Hsiu Cheng-Ho Ching-Shih Cheng-Lei Pei-Yung Pên Ts'ao*, generally known as *Cheng Lei Pên Ts'ao* (CLPT), +1249 (final version), which remains available today. The entry on soybean (*Dadou*) in the CLPT includes a picture of the plant. A copy is attached.”

Note: This is the earliest document seen (Oct. 2005) that contains an illustration of a soybean.

Needham (1986, p. 174): The *Tang Bencao*, compiled in c. +660 under the chairmanship of Su Jing (W.-G. Su Ching), was the first Chinese work to mention the castor-oil plant (ma, *Ricinus communis*); how long the plant had been known in China before that time is unknown.

Needham (1986, p. 264-74): This was the first national pharmacopoeia, issued by royal decree, in any civilisation. Nearly 1,000 years would pass before a similar work was produced in Europe under government authority; that was the *Pharmacorum... Dispensatorium*, by Valerius Cordus, published in 1536 by the Municipality of Nuremberg [in today's Germany]. Yet though it was also officinal, it was not national, and for that we have to wait for the first *London Pharmacopoeia* of 1616, issued by royal proclamation for the whole country of England. Emperor Kao Tsung (Li Chih) came to the throne in +650 and in the following year he commissioned Li Chi (a famous general) and Yü Chih-Ning (a high civil official) to superintend the preparation of a new pharmaceutical natural history, radically revised and improved. Published in +659, this work “was a landmark of natural history at least as much as a treatise on *materia medica*. It was, so far as we know, the first of the pandects to be richly illustrated.” The illustrations were of plants, animals, and minerals. Note: A pandect is a treatise covering an entire subject. “Although existing manuscripts do not all show it, we know that [this book]... fully maintained the red and black colour system of the T'ao Hung-Ching.” Unlike most later pandects “there is almost no quotation of authorities or differences of opinion; the information is set forth as if it were from the pen of one man... The result is a singularly fresh approach, as if everything had been written down anew.” The book had a rather sad history. Although so great a work, it was produced a couple of centuries before the beginning of printing in China, and must therefore have circulated only in manuscript form on the flimsy medium of paper.” By the year +970 it had certainly become rare. The work is now accessible only through quotations and fragments. “Putting all of the pieces together one can say that we still possess the greater part of 12 out of the 20 text chapters” and its table of contents. The book had a close connection with the development of medical and scientific education in China

and spread of medical-scientific culture to Japan. In +731 in Japan, Tanabe Fubito was copying this work.

Bo (1982): This T'ang dynasty work states: "The majority of chiang varieties are made from soybeans, and very rarely use wheat or barley (mugi)."

32. Meng Shen. 670 AD. *Shiliao bencao* [Compendium of diet therapy (Materia dietetica)]. China. Passages on soy reprinted in H.T. Huang 2000. [Chi]

• **Summary:** Wade-Giles reference: *Shih Liao Pên Ts'ao*, by Mêng Shên. Tang dynasty.

Huang (2000) notes that this book emphasizes the relationship between nutrition and health, and the medicinal properties of foods. It was the first of the *Bencao* compilations devoted to diet therapy (p. 116, 135-36). It mentions that dried young soybean sprouts (*dadou huangjuan*) have medicinal properties (p. 296). It gives a recipe for cooking soy nuggets (*shi*) similar to that from the *Xinxiu Bencao* (Newly improved pharmacopoeia) (+650) (p. 341). It also discusses soy nugget sauce (*shizhi*; W.-G. *shih chih*), noting that an excellent product comes from Shan prefecture and describing briefly how it is made: The soy nugget sauce (*shizhi*) from Shan prefecture is better than ordinary soy nuggets (*shi*). To make it, allow cooked soybeans to ferment to the yellow mold stage of soybean koji. For each *tou* (pint) [of soybean koji], add 4 pints of salt and 4 ounces of pepper. [Note: Some water was probably also added]. It will be half done after 3 days in spring, two days in summer, and 5 days in winter. Add 5 ounces of raw ginger to give it a clean, delicate flavor (p. 360-61). This work also mentions mung beans (p. 298) and malt sugar (*yitang*, p. 460).

Hagerty (1917, p. 4) states: "The *Shih liao pên ts'ao* (Materia Medica, by Mêng Shen of the T'ang Dynasty, second half of the 7th century), says: 'The *Ta tou* [soybean] has a cold effect upon the human system. When mixed with rice and pounded into a powder, it may be used as a remedy for reducing all kinds of inflammatory swellings. It is used as a remedy for swellings or inflammation in the region of the reproductive organs of both male and female. This remedy is prepared in the form of a poultice made by wrapping the bean paste in cotton cloth and applying to the diseased part. It is also a specific for poison from eating certain herbs. According to this work, if these beans are boiled into a liquid form, and the mixture taken, it will eradicate all poison from the system and cure gastric fever, paralysis, pains, difficulty in passage of urine and other bladder troubles. It is also good for improper circulation of the blood, improper functioning of the heart, liver, kidneys, stomach, and bowels, and also a remedy for chills. When mixed together with the ashes of burned mulberry twigs and water, and boiled, it is used as a remedy for dropsy and swelling of the bowels. The yellow bean is a specific for paralysis, pains in thighs, improper functioning of the heart,

liver, kidneys, stomach, and bowels, and constipation. It is also used to increase the lung power (?), make the body plump, and beautify the complexion. These beans are also cooked until they are of an oily consistency, mixed with hog's fat, and taken in the form of pills in order to fatten and increase the strength of the body. This may also be used as a remedy to cure hoarseness.

"To prepare a remedy, take one "Shêng" (Chinese pint) of fresh *Ta tou* beans, forty-nine green bamboo sprouts about four inches (Chinese) long, and one "fen" (one-tenth of an inch) wide. Boil thoroughly in water, and take two doses, one during the day and the other at night—and also after each meal. Another method of utilizing these beans consists of washing them thoroughly, and grinding into a meal and combining with chicken's eggs. This is eaten as a food and will cause man to live a long life. When first eaten they will cause the body to become heavy, but after eating constantly for one year, they will cause the body to become light and also increase the power of the male reproductive organs."

Hagerty continues his translation on p. 78 concerning soy nuggets (See also Bretschneider, *Botanicon Sinicum* 1:45): "The *Shen-chou-fu*, Liquid bean relish, is very much better than the ordinary bean relish and gives the following directions for its manufacture: Take some *Ta tou* beans [soybeans] and steam until yellow, to each *tou* or peck, add four *sheng* or pints of salt, four *liang* or ounces of pepper. If made in the spring, let it stand for three days; if made in the summer let it stand for two days; if made in the winter let it stand five days, when it is half ripe. Now add five *liang* or ounces of fresh ginger and let it stand in order to clarify. The best method is to bury the vessel containing this mass in horse manure. When *Ta tou* [soybeans] cannot be obtained, the good bean relish can be used as a substitute."

Note: This is the earliest document seen (Nov. 2005) that mentions cotton cloth.

33. Emperor Monmu. 701 AD. *Taihô ritsuryô* [The Taiho Law Codes]. Japan. [Jap]*

• **Summary:** This is the earliest document seen (July 2000) concerning soybeans, soybean products, or miso in Japan. Although it does not specifically mention soybean cultivation, the soybeans used to make the various fermented soy products described below must have been grown in Japan. This document also contains the earliest date seen for soybeans in Japan, or (by inference) the cultivation of soybeans in Japan (A.D. 701).

Shurtleff and Aoyagi (1976. *The Book of Miso*, p. 216; 1983. *The Book of Miso*, 2nd ed., p. 219): One of Japan's earliest constitutions, the *Taihô Ritsuryô* established the *Hishio Tsukasa*, or Bureau for the Regulation of Hishio Production, Trade, and Taxation in A.D. 701; it went into effect in 702. The *Hishio Tsukasa*, located in the Imperial Palace, was an annex of the emperor's kitchen (*kunaicho*

daizenshoku), where hishio was made. Using methods very similar to those developed in China, it transformed soybeans into high- and low-quality *hishio* (which resembled Chinese *chiang*), soy nuggets (*kuki* or *shi*), and *misho* (an ancestor of miso; the term “miso” had not yet been coined). These foods and seasonings were consumed at the Imperial Household. Note: This is the earliest document seen (Oct. 2008) that mentions *kuki*, an early type of Japanese soy nuggets / salted, fermented soybeans.

Yokotsuka (1986, p. 198) states that the “Taiho-Law (701) mentioned soybean-hishio, miso, *kuki* (same as *shi*), tare-miso, usu-dare, and miso-damari.” But in a letter (June 1988) to William Shurtleff, who questioned the correctness of this, he stated, “This was a serious mistake. I am fully aware that there is no description of filtered soy sauce in the Taiho Ritsuryo. I should have written:

“Taiho-Law (701): Sho-shi and miso

“Tare-miso, usudare, miso-damari (1300–1500)

“Ekirinbon-setsuyoshu (1598): Shoyu.”

Usudaré and *miso-damari* were apparently liquid soy sauces. *Usu-daré* means a thin taré, where *taré* is a typically thick seasoning sauce. *Miso-damari* is the liquid that separates or is separated from miso, often forming a pool in the upper surface of the vat.

Reischauer and Fairbank (1960, p. 481-82) notes: “The Law Codes. The details of the administrative system which the Japanese borrowed from China can best be learned from the law codes they compiled on the basis of the Chinese models... The very concept of law was a new idea. Hitherto the Japanese had had only the unwritten precepts of the Shinto religion... The first code seems to have been compiled under Tenchi, but the most famous was the Taiho Code of 701.”

34. Fujiwara, Fuhito. 718 AD. *Yōryō ritsuryō* [Yoryo ritsuryo]. Japan. [Jap]*

• **Summary:** According to Ichiyama (1968) an early reference to hishio, perhaps a soy-based product, appeared in this book. It mentioned various types of *chiang* and soy nuggets, plus *misho*, the second character of which was *chiang*. Address: Japan.

35. *Nihon shoki* (or *Nihonshoki*, or *Nihongi*) [*Nihon shoki: Chronicles of early Japan*]. 720 AD. Japan. [Jap]

• **Summary:** The second version of the mythical story of the origin of the soybean in Japan, following that told in the *Kojiki* (A.D. 712) is as follows, from a note in Philippi’s 1968 translation of the *Kojiki* (p. 404-05): “Ama-terasu-opo-mi-kami [also called Amaterasu-omikami, the Shinto Sun Goddess], hearing that a deity called Uke-moti-no-kami [a food deity] dwelt in the Central Land of the Reed Plains, sent Tuku-yomi-no-mikoto [the moon god] to inquire after her.

“When Tuku-yomi-no-mikoto arrived there, Uke-moti-no-kami took rice, fish, and meat from her mouth, and, placing them on tables, offered them to him. At this he became angry and killed her, then returned and reported this matter.

“Then Ama-terasu-opo-mi-kami rebuked the moon deity and vowed never to set eyes on him again. For ever after she dwelt one day and one night apart from him. [A mythological explanation for the rotation of sun and moon.]

“When Ama-terasu-opo-mi-kami sent a messenger to see, in the dead Uke-moti-no-kami’s head there had come into being cattle and horses, on her forehead millet, on her eyebrows silk-worms, in her eyes Deccan grass [MJ *hie*; also panic grass], in her belly rice, and in her genitals wheat, soy beans, and red beans [probably azuki].

“When these were taken and presented to Ama-terasu-opo-mi-kami, she rejoiced and caused these things to be used by mortal men for their livelihood. [Asahi ed., I, 86-87; Aston, I, 32-33.]”

For a background on this book, see *Kojiki* (A.D. 712). For other English translations see Aston (1896, 1972; p. 32-33).

36. *Tōdaiji shōsōin monjo* [Documents in the Shosoin imperial treasury at Todaiji temple in Nara]. 730-748 AD. Japan. [Jap]*

• **Summary:** Sato (1963, p. 27), in his book titled “Documents on Soy Nuggets, Chiang, Miso, and Shoyu,” cites this as the earliest Japanese document seen on the subject. He gives the date as Tenpyo 2 (730 A.D.). It is written entirely in Chinese characters (*Kanbun*).

Ichiyama (1968) says this is a collection of documents, not just one. “In 730 AD taxes were being paid on miso and *hishio*, in 731 on *kuki*, *arabishio*, and *richio*.”

Shinryū Sekine, in his book *A Study on Eating Habits in the Nara Period* (1969, 1974) quotes from the *Shosoin-monjo*, a document preserved in the Shosoin, the storehouse at the Todai-ji temple in Nara. From the phrase “... to obtain liquid out of brewed or fermented soybeans...” in the document, Sekine says: It is clear in those days that *sho* in those days was liquid.

Shurtleff and Aoyagi (1983. *The Book of Miso*, 2nd ed., p. 219): “The most detailed information to date on the early relatives of miso and the first clear reference to a soybean hishio appeared in the Todaiji Shosoin documents, written between 730 and 748, and still preserved in excellent condition in the Imperial Treasury of the Shosoin, connected with Nara’s Todaiji temple. It records that in 730 taxes were being paid on hishio and on *misho* (a variety of hishio and an early relative of miso). A document from the next year mentions the same foods again. A document written prior to 748 clearly referred to soybean hishio (Ichiyama 1968).”

37. Manyōshū [Man'yōshū: Collection of Japan's earliest songs and poems]. 760 AD. Japan. For translations see Pierson 1929 and Honda 1967. [Jap]*

• **Summary:** The earliest poems in this extraordinary work were written in AD 315. In most poems Japanese words are elaborately spelled out with Chinese characters used phonetically.

Sato (1963, p. 29), in his book titled “Documents on Soy Nuggets, Chiang, Miso, and Shoyu,” cites this as the second earliest Japanese document seen on the subject. It was published in year 3 of Tenpyō Hoji (760 A.D.) and the pertinent information is in Volume (Kan) 16. It is written entirely in Chinese characters (Kanbun).

Shurtleff and Aoyagi (1983. *The Book of Miso*, 2nd ed., p. 219): “One of the first references to this hishio appears in the *Man'yōshū*, an extraordinary collection of thousands of Japan's earliest songs and poems recorded from as early as the year 315 A.D. and compiled circa 760. In most of the poems, the Japanese words are elaborately spelled out with Chinese characters used phonetically. The character for hishio (chiang) appears in scroll 16 in a poem by Imiki Okimaru (686-707), a humorous bard who improvised at banquets for the court nobility. We and Pierson (1929) translate this as:

“I want to eat red snapper (*tai*)

“With a dressing of minced garlic and vinegar-hishio

“So do not offer me a leek soup.

“Another poem describes two comic crabs happily making themselves into crab hishio seasoned with pounded elm bark. Mention is also made of hishio containing wild game and deer meat. Unfortunately we are not told exactly what type of product this hishio was nor how it differed from miso and chiang, yet it is now generally believed that all of these products were well known at this period among the nobility and, to a lesser extent, the common people.”

Yokotsuka (1986, p. 198) states that the *Manyōshū* (350-759 A.D.) mentioned Koji (mold-cultured cereals) and Hishio (same as chiang, made from fish, meat, or soybeans). That would make this the earliest Japanese document seen that refers to koji.

38. Omi, Mifune. 785 AD. ZZZ T'ang ta he shang tung cheng chuan [Biography of the great monk from the T'ang dynasty who traveled to the East]. China. [Chi]*

• **Summary:** Tang dynasty. Williams (1988): The monk discussed is Chien Chên (Jap. Ganjin, who lived A.D. 688-763), who was blinded while traveling to Japan to teach Buddhism. The author, Omi, lived A.D. 722-785 in Japan, wrote this work in Classical Chinese, probably between A.D. 763 and 783. New editions of the work have been published in 1936 and 1979.

Concerning Ganjin, Shurtleff and Aoyagi write in *The Book of Miso* (1976, p. 216): “One of the most colorful chapters in the history of miso concerns the great Chinese

Buddhist master Ganjin. The founder of the Japanese Ritsu or ‘precepts’ sect and of the well-known Toshodaiji temple in Nara, Ganjin spent over 11 years trying to reach Japan. After being blocked by pirates, shipwrecks, and storms, and having lost his eyesight during one of his 6 attempted crossings, he finally succeeded in 754 at the age of 66. The records of his ship's cargo show that in addition to 185 monks, sailors, and craftsmen, he brought 100,000 gallons of ‘sweet kuki.’ Later records show that this same fermented soybean food was prepared at his temple, carried by foot to Kyoto, and peddled there in the streets.

“Although Ganjin's sweet kuki was related to miso, it was probably more a preserved food than a seasoning, similar to today's Daitokuji natto. Nevertheless, Ganjin is often said to have brought the first prototype of Japanese miso from China, and if we take this sweet kuki to be the original Japanese miso, then he was clearly its transmitter. But records show that something called ‘miso’ was already being sold in Nara's markets more than 20 years before Ganjin's arrival. Hence, some scholars have concluded that the popular ‘Ganjin theory’ probably reflects more of a desire on the part of early miso makers and Buddhist priests to link their new product to Ganjin's lofty reputation than to historical fact.”

H.T. Huang (2000, p. 317). There are two popular theories about how tofu was transmitted from China to Japan. The first theory holds that it was brought from China by the delegation of Buddhist monks headed by the master Kanshin (Jianzhen; W.-G. Chien Chên), who arrived in A.D. 754. While this view is certainly plausible, there is as yet no documentary evidence to support it.

Note 1. This is the earliest document seen (March 2003) concerning an early foreign traveler in Japan (Chien Chên; Jap. Ganjin) in connection with soybeans.

Note 2. This is the earliest document seen (April 2001) that is a biography of a person involved with soyfoods (soy nuggets) or soybeans.

39. Kiyohara Natsuno. 834 AD. Reigekai or Ryōgekai [Reigekai or Ryōgekai]. Japan. [Jap]*

• **Summary:** Sato (1963, p. 8), in his book titled “Documents on Soy Nuggets, Chiang, Miso, and Shoyu,” cites this as the fifth earliest Japanese document seen on the subject. The pertinent information is in volume 1 (Teninrei). It was completed in the 10th year of the Tencho era (834 A.D.). It is written entirely in Chinese characters (Kanbun).

40. Endo Hoju. 843 AD. Zoku Nihon kōki [Continuation of the Nihon Kōki]. Japan. July. [Jap]*

• **Summary:** Sato (1963, p. 29), in his book titled “Documents on Soy Nuggets, Chiang, Miso, and Shoyu,” cites this as the fourth earliest Japanese document seen on the subject. It was published in the 7th month of the 9th

year of the Jowa era (July of 843 A.D.). It is written entirely in Chinese characters (Kanbun).

41. Koji dan [Stories about ancient things]. 886 AD. Japan. [Jap]*

• **Summary:** Sato (1963, p. 8), in his book titled “Documents on Soy Nuggets, Chiang, Miso, and Shoyu,” cites this as the seventh earliest Japanese document seen on the subject. It was published in the second year of the Ninna era (886 A.D.). It is written entirely in Chinese characters (Kanbun). Not clear are 2 shinsetsu. 49 Koko. Mitsutaka.

42. Nichinichi Ju (Monk). 893 AD. Shinsen jikyô [Newly selected character mirror dictionary]. Japan. [Jap]*

• **Summary:** Sato (1963, p. 31), in his book titled “Documents on Soy Nuggets, Chiang, Miso, and Shoyu,” cites this as the eighth earliest Japanese document seen on the subject. It was published in the 4th year of Kampyo. It is written entirely in Chinese characters (Kanbun).

43. Sagawaka Doshin (Michimasa?). 893 AD. Ruiju Kokushi [Ruiju Kokushi]. Japan. [Jap]*

• **Summary:** Sato (1963, p. 29), in his book titled “Documents on Soy Nuggets, Chiang, Miso, and Shoyu,” cites this as the third earliest Japanese document seen on the subject. It was published in Kanpyo 4 (173 saii, Nen soshin). It is written entirely in Chinese characters (Kanbun).

44. Han E. 900 AD. Sishi zuanyao [Important rules for the four seasons]. China. Passage on soy reprinted in H.T. Huang 2000, p. 351. [Chi]

• **Summary:** Wade-Giles reference: *Ssu Shih Tsuan Yao*, by Han O. Date of publication: Late Tang dynasty. Huang (2000, p. 351) notes that the method for making jiang described in this book represents a significant improvement over that from the *Qimin Yaoshu* (+544). A method for making jiang in ten days is given:

“Jiang substrate: Take one *dou* of yellow soybeans, clean three times (to remove extraneous matter), drain off water, steam thoroughly until the beans are tender (*lan*) and collect on a flat surface. Mix the beans with two *dou* and five *sheng* [10 *sheng* = 1 *dou*] of wheat flour. Be sure all the beans are individually coated with the flour. Steam again until the flour is cooked. Spread and allow to cool to human body temperature. Cover the ground evenly with cereal leaves. Spread the beans on top, and cover them with another layer of leaves. Incubate for three to four days, until the beans are covered with a dense yellow coat. Dry them in the sun and store the finished jiang substrate.

“Chiang incubation: When it is time to make jiang, get ready one *dou* of water for every *dou* of jiang substrate used. Dissolve five *sheng* of table salt in water at body temperature. Mix the salt solution with the jiang ferment in

a jar. Seal tightly. After seven days stir the contents. Place three ounces of Han pepper in a cloth bag, and hang the bag in the jar. Add one catty of cold, cooked [edible] oil and ten catties of wine. After ten days the jiang will be ready.”

Huang then comments on this improved process (p. 351-52). “Although the description is rather sketchy, we can see that the process has been simplified and streamlined. It now follows the same general scheme that had been developed for the brewing of *jiu* (wine) and the making of *shi* (fermented soybeans) [soy nuggets]. As is the case with the *jiu* and *shi* processes, the first stage involves an aerobic surface culture, and the second, a mildly anaerobic submerged incubation. These changes should make the process more efficient. Even without the use of preformed inoculum, the first stage now takes only four days, instead of thirty days. The second fermentation takes only ten days whereas the old method requires more than twenty days. Although there is no indication that the beans are dehulled before use, the text says that they are steamed until *lan*, i.e. soft, ripe and tender. This means the internal structure of the beans is already damaged; they are thus rendered easily susceptible to invasion by proliferating fungal myceliae.”

45. Ogura Yoshiyuki. 901-908 AD. Sandai jitsuroku [Three generations of real records]. Japan. Widely circulated in manuscript form by 886 A.D. [Jap]*

• **Summary:** Note: This is the earliest document seen, and the earliest Japanese-language document seen, (March 2009) that contains the modern word miso. This is also the earliest document seen (Jan. 2009) concerning the etymology of miso. It portrays miso as a truly Japanese food, rather than a Chinese import. Ichiyama (1968), however, shows that the modern characters for miso are not in it, but in *Fuso Ryakuki*. Sato (1963, p. 30), in his book titled “Documents on Soy Nuggets, Chiang, Miso, and Shoyu,” cites this as the sixth earliest Japanese document seen on the subject. It comes from the *Shoin Zashin Kobai Shinko*, published in the first year of Teikan, by Daizen Tenzashin. It is written entirely in Chinese characters (Kanbun).

Shurtleff & Aoyagi (1983. *The Book of Miso*, 2nd ed., p. 220): “At the beginning of the Heian period, the word ‘miso’ suddenly began to be written with a new combination of characters, which is used to this day. The character for ‘mi’ meant ‘flavor’ and the one for ‘so’ meant ‘throat.’ The second character was, itself, a Japanese invention and is presently used in no other words. It first appeared in an official Japanese document in 806 in connection with a food called *enso*, a salt seasoning... We may well inquire why the Japanese of this period deliberately invented a new character to replace the character *chiang* (*hishio*) that had been used during the previous two centuries, and why they introduced the character meaning ‘flavor’ into the combination. It seems likely that by this time the Japanese

had so thoroughly transformed *chiang* into a food suited to their own culture and tastes, that they felt it deserved a uniquely Japanese name. In fact, the *Sandai Jitsuroku* portrays miso as a truly Japanese food rather than as simply a Chinese import. But there were broader cultural changes too behind the change in characters. In 894, at the beginning of the Heian period, Japan essentially cut off contact with the outside world, and began an extended period of assimilating and transforming Chinese cultural imports. During this period, Japan also developed the *hiragana* and *katakana* writing styles, which were completed in the 10th century. It was as part of this larger cultural transformation that the change in miso and its characters took place.”

Saito (1985, p. 13): “The Chinese character *so* in the present word *miso* appeared for the first time in the *Sandai Jitsuroku* (858-887).

Fukushima (1989, p. 9): “The first appearance of the present word ‘miso’ was in the *Nihon-Sandai- Jitsuroku*, a history book by M. Sugiwara, Y. Minamoto, T. Fujiwara, and Y. Okura, published in 901 AD in Japan.”

46. Minamoto no Shitagau. 923 AD. *Wamyō ruijūshō* (*Wamyōshō*) [General encyclopaedic dictionary. 10 vols.]. Japan. [Jap]*

• **Summary:** Heian period. This is a collection of Japanese names, by subject.

Needham (1986, p. 590) cites this as: Minamoto no Shitagau. +934. *General Encyclopaedic Dictionary*.

Shurtleff & Aoyagi (1983. *The Book of Miso*, 2nd ed., p. 221): “Some scholars believe that the pronunciation ‘miso’ originated in the *Wamyosho* (also called *Wamyō Ruijusho*), the earliest dictionary of the Japanese language, encyclopedic in scale and written between 903 and 938 by Minamoto no Shitagau. It was modeled after Chinese dictionaries and listed many types of *hishio* including ones pronounced *miso*, *misho*, and *kara hishio*. It also mentioned soy nuggets.”

J.R. Wang and Y.H. Lee (1976) in “Traditional soybean foods in Korea” state that: “Since an old Japanese literature [document], *Hwameyruitsuroku* [*Wamyō Ruijusho*; Collections of Japanese Names, by Subject], of Heian [Heian] records that ‘Maljang (Meju) is a Korean soy sauce and paste’ and a record on Maljang was also observed in the ruins of Nara, it is evident that soy sauce and paste were introduced from Korea to Japan during the Nara period (645-793 A.D.).”

Sato (1963, p. 33), in his book titled “Documents on Soy Nuggets, Chiang, Miso, and Shoyu,” cites this as the tenth earliest Japanese document seen on the subject. See section 16 (Shoume/Anbai). The selections were made during the Encho period then published more than 700 years later in about 1615, during the Genwa era. It is written entirely in Chinese characters (*Kanbun*).

Note: This is the earliest document seen concerning soybeans or soybean products in Korea. It seems very likely that soybeans were also being grown in Korea by this time, but this is not stated.

47. Fujiwara, Tadahira; et al. comp. 927 AD. *Engi shiki* [Law codes of the Engi period]. Japan. 50 volumes. See vols. 23, 33, 39, 42. Japanese summary by Kawakami 1978, p. 207-08. [Jap]

• **Summary:** Compilation of this book started in 905 and was completed in 927. Containing the earliest known information on production of *hishio* and *miso* in Japan, it lists 10 types of *miso* and *hishio*. The word *miso* is written in 5 different ways. Sato (1963, p. 31), in his book titled “Documents on Soy Nuggets, Chiang, Miso, and Shoyu,” cites this as the ninth earliest Japanese document seen on the subject. It was published in the 7th year of the Engi era. It is written entirely in Chinese characters (*Kanbun*).

Shurtleff & Aoyagi (1983. *The Book of Miso*, 2nd ed., p. 221): “The earliest Japanese document to contain information about the production of *miso* and *hishio* was the *Engi Shiki*, an elaboration of old law codes, compiled in about 927 by Fujiwara Tokihira and others. In it we are told that *miso* was a fermented food with soybeans as its main ingredient, but it also contained rice, rice koji, wheat, salt, and saké. The *Engi Shiki* gave detailed information about the *Hishio Tsukasa* government bureau, stated that *hishio* was given to the Emperor’s civil and military officials as part of their annual wage, and listed at least ten different types of *miso* and *hishio*. Among these, the word ‘miso’ was written using at least five different character combinations, all of which were pronounced ‘miso,’ or perhaps occasionally ‘mishio.’

“It is not always clear whether each of these names refers to a different food, or whether the name of a single variety was simply being written with different character combinations. The book gives the amounts of basic raw materials used in preparing numerous different types of *miso* and *hishio*, but most of the quantities appear quite inaccurate and cannot be used experimentally to make the products they describe.

“Although notebooks dating from as early as the 8th century reveal that *miso* was bought and sold in the marketplaces of the former capital at Nara, the first shops specializing in its sale are said to have originated in about 925 in the new capital at Kyoto. The *Engi Shiki* records the presence of a *miso* retail shop in Kyoto’s western market and a *hishio* outlet in the eastern market. Moreover, 50 other shops are reported to have carried *hishio*, and 32 *miso*, as one among numerous other foods. Thus by the middle of the 10th century, it seems that *hishio* and *miso* were becoming basic staples.”

Gotoh (1984, p. 136) states: “*Engishiki* (completed 927 AD) which described in detail the regulations on crop

products (for example, exchange rates of soybeans with bundles of rice and barley for yearly tribute), stated that the Kinki, Chugoku, and Shikoku districts [all located in southwest Japan, from Kyoto to just north of Kyushu] were the main soybean production areas.” He gives a good map of Japan showing these three regions.

Lumpkin and Konovsky (1991, p. 121, citing Igata 1977) state that “*Aomame* [meaning “green soybeans”] is mentioned in the *Engishiki*, a guide to the conduct of government and religious affairs, published in 927 A.D.” [Heian period].

Iino (1999, p. 14): “The *Engishiki*, the legal code of the Heian era, which provides details on the implementation of ancient laws, offers examples on the use and provision of *sho* / *hishio*. It seems that *sho* was a daily necessity up to this period. Iino adds: “The Chinese character *sho* was pronounced *hishio* in Japanese and meant fermented soybeans... No clue as to the original recipe for *sho* can be found, with one exception in ‘General Instructions and Recipes,’ part of the *Daizen-ge* in the *Engishiki*. This recipe states that *sho* made to present to the emperor consists of soybeans, malted rice [koji?], glutinous rice, wheat, liquor and salt. It tells us the proportions of ingredients and the amount of the resulting *sho* but provides no further details.”

There is a debate among scholars as to whether *sho* was a liquid or more like a mash (*moromi*). One part of the *Engishiki* mentions ‘*sho* dregs.’ It seems likely that the dregs remained after the liquid was filtered off. “In the *Engishiki*, liquid *sho* and *sho* dregs were used for pickling gourds, wax gourds, turnips, and eggplant. The *Engishiki* also refers to some foods that are very likely *sho*-pickled fish, such as crucian carp, blowfish, and sardines.” Many kinds of *sho*-pickles were available during this era.

“Mash-style *sho*: When used as a seasoning for processed food, *sho* was probably prepared in mash-like form, not as a liquid. It is not very difficult to prepare liquid *sho*: all you have to do is filter out or extract the mash-like *sho*. Doing so, however, severely reduces the efficiency of the process. The *Engishiki* states that the amount of liquid *sho* produced was less than a third of the total amount of ingredients used. The *Daizen* and *Naizen* in the *Engishiki* also indicate that large quantities of *sho* were used for provisions, workers’ meals and feasts, as well as for many kinds of pickles. It is impossible to think that all this *sho* was of the labor-consuming, wasteful liquid type. Besides, *sho* dregs without liquid after filtering lack the taste and quality that are necessary.”

Note: This is the earliest document seen (July 2007) that mentions sake in Japan.

48. Liu Xu. 945 AD. Jiu Tangshu [Old history of the Tang dynasty (+618-906)]. China. Passage on soy reprinted in C.N. Li 1958 #87, p. 74-75. [Chi]

• **Summary:** Wade-Giles reference: *Chiu T’ang Shu*, by Liu Hsü. Published during the Five Dynasties period (North China). The Biography of Peixu states that during a drought, he saw farmers who were worried because they could not plant soybeans (*shu*) and setaria millet (*su*).

The Biography of Li Yuanliang states that there was an abundant harvest of soybeans (*shu*) and setaria millet (*su*), totaling ten thousand bushels (*hu*). (Translated by H.T. Huang, PhD, July 2002). Dr. Huang adds: In both passages we find soybeans and setaria millet (which seems to have been the major millet of the time) mentioned together; they may have been planted at about the same time.

Wilkinson (2000, p. 504, 736, 819) states that this standard history was written/compiled by Liu Xu (lived 887-946). It was compiled during the years 940-945 (during the Five Dynasties and Ten Kingdoms, *Wudai Shiguo*) and presented/printed in +945. This book covers the entire period of the Tang dynasty, +618-906. Non-Han foreigners mentioned: Xiyu, Nanman Beidi, Dongyi.

Morohashi (1955) says: “In the department of the controller of pickles are 23 jiang craftsmen, 12 vinegar craftsmen, and 12 shi craftsmen.”

49. Tao Ku. 965 AD. Qing yilu [Anecdotes, simple and exotic]. China. Passage on soy reprinted in C.N. Li 1958 #90, p. 75. [Chi]

• **Summary:** Wade-Giles reference: *Ch’ing I Lu*, by T’ao Ku. The section titled *Xiaozaiyang* states: “When Shi Ji was the magistrate of Qing Yang, he emphasized the virtue of frugality among the people, and discouraged the consumption of meat. Instead he promoted the sale of tofu (*doufu*), which gained the sobriquet, ‘mock lamb chops’ or ‘the vice mayor’s mutton.’ (Translated by H.T. Huang, PhD, July 2002).

Note 1. This is the earliest document seen (Feb. 2009) that mentions tofu. Note 2. This is the earliest Chinese-language document seen (July 2002) that uses the term *doufu* to refer to tofu.

Note 3. This is the earliest document seen that advocates both vegetarianism and soyfoods, and that recommends the use of soyfoods (tofu) as a replacement for meat.

Dr. Huang adds: The title of this section can have a double meaning. *Xiao* means “little.” *Zai* can mean either “ruler / minister / mayor” or “sacrificial / slaughtered.” And *Yang* means “mutton” or “lamb.” The intended meaning is clearly “mock (meatless) lamb chops” or “lamb chops for the people.” The story implies that tofu was produced and marketed commercially by the latter part of the Tang dynasty, and that it was less expensive than mutton.

In March 1894, Schlegel and Cordier wrote an article in the European periodical *T’oung Pao* (published in France) titled “The Chinese bean-curd and soy and the soya-bread of Mr. Lecerf. I. Tofu” in which they discussed in detail the story from the *Qing yilu* but without actually citing that

early Chinese book. Instead they cited the *Shuwu yiming shu* (ca. 1644, late Ming dynasty).

In 1968, in a Japanese-language article on the origin of tofu, the well-known Japanese food historian and sinologist Shinoda Osamu showed that this book (called *Seiiroku* in Japanese) was the world's earliest known *document* to mention tofu (Huang 2000, p. 300).

Then, in the 1980s, Chinese researchers found a tomb mural incised on a stone slab from the Eastern / Later Han dynasty (A.D. 25-220) that clearly shows tofu (or a prototype of tofu) being made (Chen, Wenhua 1990).

Huang (2000) gives a good explanation and translation of this passage and notes that during the Song dynasty, there was a dramatic increase in the number of times that the term “tofu” appeared in Chinese literature (p. 300-01). He adds (p. 126-27) that this food canon of late medieval China is “a compilation of anecdotes of little known facts and unusual events associated with a wide range of topics current in the Sui, Tang and Five Dynasties era. The entire book consists of 648 anecdotes, of which 238 deal with matters relating to food and drink.” In addition (p. 354) this book states: Jiang (soybean paste) “is the host of the eight delicacies (*bazhen*), while vinegar (*chu*) is their manager.” Thus it places “the value of *jiang* as a condiment higher than that of vinegar.”

A second passage in this book, titled *Hutuofan* states that Guang Wu (a person or ruler) is at a place named Hutuo. Someone named Gong Sun recommended soybean congee (*douzhou*) to him. Until now, all through the northwestern prefectures and counties, people call soybean congee as *Hutuofan*. Note 4. *Fan* means “cooked grains.” (Translated by H.T. Huang, PhD, July 2002).

50. Huang Chien. 1027. *ZZZ T'an yuan* [A collection of conversations]. China. Modern rendering by Morohashi 1955, trans. p. 25. [Chi]*

• **Summary:** Northern Song dynasty. Someone asked if the people and officials of Hsui-shui and Ch'ing-te were clear (i.e. honest). He replied: “They are the color of Chiang water (Chiang shui)—not clear and not thick (i.e. corrupt).” Address: China.

51. Konjaku monogatari-shû [Tales of today and yesterday. A compilation of popular and funny Buddhist and historical stories from India, China, and Tibet]. 1050-1185. Japan. Japanese summary by Kawakami 1978, p. 215-16. [Jap]

52. Su Song; et al. 1061. *Bencao tujing* [Illustrated pharmacopoeia: Or, Illustrated treatise of pharmaceutical natural history]. China. Passage on soy reprinted in C.N. Li 1958 #299, p. 220-21, and #331, p. 234. [Chi]

• **Summary:** Wade-Giles reference: *Pên Ts'ao T'u Jing*, by *Su Sung, et al.* Song dynasty. Li (1958, p. 220-21) cites this as *Tujing Bencao* (+1061) however Needham (1986) has convinced us to cite it as shown above. This is a noteworthy

work, however the original has been lost. The following passage has come down to us in the *Zhenglei Bencao* (Reorganized pharmacopoeia) (+1082), Chapter 25. Dried soybean sprouts (*dadou huangjuan*; “yellow curls”) and mature raw soybeans (*sheng dadou*). They grow in the plains near Taishan (the famous mountain near the birthplace of Confucius). You find them everywhere. Dried soybean sprouts are derived from the fresh soy sprouts. After it has sprouted, you dry it and use it. Alchemical treatises call it “yellow curls” (*huangjuan*). There are two kinds of soybeans: Black and white. The black ones are used in medicine, the white ones are not. The very small ones are the male beans (*dou*); they are particularly good for medical use.

The young plants (*doumiao*) grow to a height of 1-2 feet. The leaves are round with a pointed tip. The color is green. They are slightly hairy. The stem divides into branches. In the fall, they bear small, white or purple flowers in clusters. They form pods (*jia*) more than one inch (*cun*) long, which may contain 3-4 seeds / beans. Small pods may contain only 1-2 seeds / beans. The seeds fill the pods. When the leaves and the stems are full, then the beans are ready for harvest. There are early, medium, and late varieties. The shapes are large, small, round, or flat. The colors are yellow, white, red, black, spotted / speckled / striped (*ban*), and dark brown. Soybeans are used to make *jiang*, soy nuggets (*shi*), tofu (*fu*), or soy sprouts (*ya*). They can be pressed to give soy oil (*you*), or they can be parched / fried (*chao*, with or without oil, probably without in this case) to give soy nuts (*guo*, literally “fruit”). They can also be used to make soy flour candy (*tangmo*). So the soybean has many uses. The pods are called *jia*, the leaves are called *huo*, the stems are called *qi*, and the seeds are called *dou*.

Note 1. This is the earliest document seen (Sept. 2004) that mentions brown or dark brown soybeans.

Note 2. This is the earliest document seen (March 2005) that mentions soybean oil for what appears (from the context) to be food or therapeutic use. It is also the earliest Chinese-language document seen that mentions soy oil, which it calls *you* (a general term for all oil).

Red azuki beans (*chixiaodou*) are also mentioned in this book. (See Li 1958 #387).

And there is an entire section titled “Cowpeas” (*jiangdou*, *Vigna sinensis*) which says that it was widely cultivated in the northwestern provinces of China. (See Li 1958 #476).

And a section titled “Hyacinth beans” (*biandou*) with a long description. (See Li 1958 #537).

There is also a section titled “Broad beans” (*candou*, *Vicia faba*) with six lines of description, including the statements that it can be boiled, stir-fried, or made into flour (*fen*). When these beans are fed to cows or horses, the animals grow well. The seedlings fertilize the fields. The stems can be used for fuel, and the leaves used for feed. The

pods are shaped like silkworms—which is why they are called “silkworm beans” (*candou*). (See Li 1958 #641). Note 3. This is the earliest document seen (Jan. 2005) that mentions broad beans (*candou*; *Vicia faba*) together with soybeans. (Translated by H.T. Huang, PhD, Jan. and May 2003). Note 4. The above text now exists only in the *Sannongji* (Records of the three departments of agriculture) (1760), by Zhang Zongfa.

Needham (1986, p. 581, 281n) cites this as shown above noting: “Now preserved only in numerous quotations in the later pandects of pharmaceutical natural history.” On p. 588 Needham has a second explanatory reference for: “*T’u Ching* (*Pên Ts’ao*). Illustrated Treatise (of Pharmaceutical Natural History). See *Pên Ts’ao T’u Ching*. He explains that the term *T’u Ching* originally applied to one of the two illustrated parts (the other one was a *Yao T’u*) of the *Hsiu Pên Ts’ao* of +659. But by the middle of the +11th century these had become lost, so the *Pên Ts’ao T’u Ching*, by Su Sung was prepared as a replacement. The title “*T’u Ching Pên Ts’ao* was often later applied to Su Sung’s work, but wrongly—according to evidence in the *Sung Shih* bibliographies. Needham (1986) states that this was the first document to mention flax in China (p. 174). Su Sung, also called Su Tzu-Jung, was a statesman and outstanding scientific thinker (p. 252, 281).

Note 5. This is the earliest document seen (Sept. 2004) that mentions soybeans whose color is spotted / speckled / mottled / striped (*ban*).

Note 6. This is the earliest document seen (June 2003) that mentions flax.

53. Tôji ruiki [Toji ruiki]. 1080. Japan. [Jap]*

• **Summary:** Mentions many types of chiang (Ichiyama 1968).

54. Tang Shenwei. comp. 1082. Zhenglei bencao [Reorganized pharmacopoeia]. China. Passage on soy reprinted in C.N. Li 1958 #299, p. 220-221. [Chi]

• **Summary:** Wade-Giles reference: *Chêng Lei Pên Ts’ao*, compiled by T’ang Shên-Wei. Song dynasty. Needham (1986, p. 561) says that the full title of this work (in W.-G.) is *Ching-Shih Chêng Lei Pei-Chi Pên Ts’ao*. This important work discusses the medicinal properties of foods. Chapter 25 states that the soybean (*dadou*) can be used to make sprouts. When these sprouts are dried, they are called “yellow curls” (*huangjuan*). You can also use the [undried] sprouts as food.

Chapter 25 also contains a long passage from the *Bencao Tujing* (Illustrated pharmacopoeia) (+1061) on dried soybean sprouts (“yellow curls”), fresh soybean sprouts, and mature dry soybeans (which see).

Chapter 25 states that soy nugget sauce (*shizhi*; W.-G. *shih chih*) from Shan or Shanzhou (same as today’s Shaanxi province) can be kept for years without deterioration. Note

1. This passage suggests that this type of *shizhi* was a fermented product which would keep as long as today’s soy sauce. If this is true, then *shizhi* would be a precursor of the soy sauce (*jiangyou*) that originated in China in the late Song dynasty (Huang 2000, p. 361).

The next passage appears in a much later book titled *Sannongji*, by Zhang Zongfa (W.-G. *San Nung Chi*, by Chang Tsung-Fa) (Records of the three departments of agriculture) (+1760). Young soybean plants (*doumiao*) grow to a height of 1-2 feet (*chi*). (Note 2. This is the earliest document seen {Jan. 2003} stating that *doumiao* grow to a height of several feet. Previously the term *doumiao* was used to refer to long soy sprouts which were typically much smaller and more tender). The leaves are round with a pointed tip; their color is green (*qing*) and they have hairs (*mao*) on the surface. One stem divides into branches. In the fall, white flowers appear; they are white or purple, and grouped together. The pods (*jia*) are more than an inch (*cun*) long, and they typically contain 3-4 seeds, or at least 1-2 seeds. The seeds fill the pods. The pods grow separately from the leaves. The varieties are early, middle, and late. The pods are either large or small, round or flat. The colors of the seeds are yellow, white, red (*chi*), black, spotted / speckled (*ban*), or dark brown. You can [use the seeds to] make jiang or soy nuggets (*shi*), tofu (*fu*) or sprouts (*ya*). You can press them to give yield oil (*you*). You can roast / fry (*chao*) them to give nuts (*guo*; soynuts). You can make candy from grain sweetener (*tangmo*). It has many uses. The pods are called *jia*. The leaves are called *huo*. The stems are called *qi*. The seeds are called *dou*. (Translated by H.T. Huang, PhD, Jan. 2003).

Note 3. This is the earliest document seen (Feb. 2003) that mentions red (*chi*) soybeans.

Also mentions malt sugar (*yitang*) and gluten (Chap. 25). (See Huang 2000, p. 296, 460 {malt sugar}, 498 {gluten}, 611). This work was enlarged in +1116 and retitled *Chêng-Ho Hsin-Hsiu Ching-Shih Chêng-Lei Pei Yung* (New revision of the classified and consolidated armamentarium pharmacopoeia of the Chêng-Ho reign period). It was then re-edited +1204 in Jurchen Chin, and definitively republished +1249 in Yuan; later reprinted many times. See also Hummel (1941).

55. Tang Shenwei. comp. 1082. Jingshi zhenglei beiji bencao [The classified and consolidated armamentarium of pharmaceutical natural history]. China. Passage on soy reprinted in C.N. Li 1958 #299, p. 220-221. [Chi]

• **Summary:** Wade-Giles reference: *Ching-Shih Chêng Lei Pei-Chi Pên Ts’ao*, compiled by T’ang Shên-Wei. Song dynasty. See *Zhenglei Bencao* (1082).

56. Kou Tsung-shih. 1115? ZZZ T’u-ching yen-i pen-ts’ao [Sung dynasty pharmacopoeia]. China. Undated. [Chi]*

• **Summary:** Northern Song dynasty. Address: China.

57. Lin Hong. 1200? *Shanjia qinggong* [Basic needs for rustic living]. China. Passage on soy reprinted in C.N. Li 1958 #303, p. 221-22. Undated. [Chi]

• **Summary:** Wade-Giles reference: *Shan Chia Ch'ing Kung*, by Lin Hung. Southern Song dynasty. An important work. The section titled “Swanlike yellow bean sprouts” states (see Huang 2000, p. 296): Several days before the 15th day of the 7th moon, people soak black soybeans (*heidou*) in water then allow them to sprout as follows: Spread grain chaff on a tray, top the layer with sand, plant the beans in the medium, then press surface with a wooden board. When beans are sprouted [remove board and] cover tray with an [inverted] pail. Remove pail each morning so that sprouts are exposed briefly to the sun. This will enable sprouts to grow evenly and be protected from sun and wind. On the 15th day, display tray in front of the ancestral tablet. After three days, remove tray and wash sprouts clean. Grill sprouts with oil, salt, vinegar and spices to give a savory dish. They are especially good when rolled in a sesame pancake. Because the sprouts are light yellow, and are shaped like the neck of a swan [goose], they are called “swanlike yellow bean sprouts” (*Ehuang dousheng*). Huang (2000, p. 296) notes that this is the “earliest documentation we have on the preparation and use of soybean sprouts as a food” is in this book. A footnote (Huang, p. 296) states: “The 15th day of the 7th month is the Summer Festival *Zhongyuan* when offerings are made to the ancestral spirits. A long soybean sprout with a yellow tip may resemble the neck of a swan with a yellow beak, hence the name Swanlike bean sprout. Except for the step of exposing the germinating beans to sunlight, this recipe is basically similar to those given in later works, in which the beans are always kept in the dark to prevent the generation of chlorophyll and the emergence of a bitter taste.”

Note 1. This is the earliest document seen (Feb. 2007) that uses the term *heidou* to refer to black soybeans.

Huang (2000, p. 301) states that this work describes two dishes containing tofu: One, named Snow and Red Cloud Soup, is prepared by cooking tofu with hibiscus flowers; the other, Tofu à la *Su Dongpo* [named after the great Song dynasty poet (W.-G. Su Tung-P'o), who lived 1036-1101] is made from yew nuts, scallions, oil and soy sauce.

Huang (2000, p. 354) says that this work contains at least nine recipes in which *jiang* is used, including the celebrated Tofu à la *Su Dongpo* mentioned above.

Huang (2000, p. 358) notes that the earliest references to the term *jiangyou* [soy sauce] occur in two works of the late Song dynasty. This work gives four recipes in which *jiangyou* is used to flavor various vegetables and seafood. A footnote summarizes the recipes, with page numbers from the 1985 modern Chinese version: Soy sauce, ginger threads, and a little vinegar are used as a dressing for lightly cooked young chives (p. 34). A stir fry of spring bamboo

shoots, bracken leaves and fish or shrimp is seasoned with soy sauce, sesame oil, salt and pepper (p. 47). Soy sauce is used with sesame oil, pepper and salt to flavour young bamboo shoots, mushrooms and Chinese wolfberry seeds (p. 66). Soy sauce and vinegar are used to season blanched shoots of the daylily [day lily; genus *Hemerocallis*].

Huang continues (p. 358): Neither work tells us how the *jiangyou* was prepared. This does not necessarily mean that soy sauce first originated during the Song. Rather, it means rather that by the time of the Song, *jiangyou* had become the accepted name for the liquid seasoning derived from *shi* or *jiang*. Most scholars agree that soy sauce is almost as old as soy *jiang*, but opinions differ as to what it was called before it became known as *jiangyou* during the Song. A footnote (p. 358) cites three Chinese-language works from the 1980s that discuss this issue.

A full-page table (Huang, p. 372) shows the “Usage of soy condiments in food recipes from the Han to the Qing dynasties.” *Jiang* itself is used in 9 recipes, soy sauce called *jiangyou* in 3 recipes, and soy sauce called *jiangzhi* (W.-G. *chiang chih*) in 1 recipe. Note 2. This is the earliest Chinese-language document seen (Aug. 2005) that uses the word *jiangyou* (one of two documents) or the word *jiangzhi* to refer to soy sauce.

It is surprising that the sauce made from *jiang* should have been called *jiangyou* at all. Throughout the history of the Chinese language *you* has always meant the oily (or greasy), water insoluble substance derived from animal, vegetable, or mineral sources, for example, *zhuyou* (lard), *niuyou* (butter), *chaiyou* (rapeseed oil), *xiangyou* (sesame oil), *tongyou* (tung oil), *shiyou* (petroleum) etc. *Jiangyou* (or *shiyou*) is the one, notable exception. It is an aqueous solution (or suspension) of a variety of substances and by no stretch of the imagination can it be construed as a *yu* (oil). Nevertheless, the term *jiangyou* (soy sauce) gained acceptance in the Song dynasty and is now firmly ensconced in the language, perhaps as an indication of its very special role in the daily life of the Chinese. Thus, we have a surprising situation in which an English translation, ‘soy sauce’ (sauce prepared from the soybean) is a more rational name for the product than its Chinese original, *jiangyou* (oil derived from *jiang*) (p. 358).

Note 3. This is the earliest document seen (Aug. 2007) that mentions sesame oil, which it calls *xiangyou*.

Question: If soy sauce were made from whole soybeans (which contain about 16-20% oil), why wouldn't that oil rise to the top of the soy sauce, whence it would have to be skimmed off before the soy sauce could be used? Dr. Huang answers (Oct. 2002): There should have been a lot of oil on top of the soy sauce. However in the early Chinese literature, some of which goes into great detail about the process, there is no mention of any oil atop the soy sauce. In the old process, which used mixed cultures of microorganisms, I suspect much of the oil is simply

hydrolyzed by lipase enzymes. The oil may have started to appear in modern times when they began to use pure cultures.

Fukushima (1989, p. 4): “The first appearance of the name of *chiang-yu* was in *Shan-chia Ch'ing-kung* (*Sanya-Seikyo* in Japanese) by Lin Hung (*Rin Ko* in Japanese) in the Sung dynasty (960-1127 AD).”

Bo (1982): It was recently discovered that the term “*chiang-yu*,” written with the same characters as the Japanese term “*shoyu*,” and both meaning soy sauce, was used for the first time in China (or the world) in this work, written during the Sung dynasty. *Shoyu* was used either in recipes that didn't contain meat, or in side dishes. It was an important seasoning to be sprinkled on foods.

58. Lin Hong. 1200? *Wushi zhongkuilu* [Madam Wu's recipe book]. China. Passage on soy reprinted in H.T. Huang 2000, p. 358. Undated. [Chi]

• **Summary:** Wade-Giles reference: *Wu Shih Chung Khuei Lu*. Also known as *Chung Khuei Lu*. Author unknown; reputed to be Madam Wu. Southern Song dynasty. Huang (2000, p. 358) notes that the earliest references to the term *jiangyou* [soy sauce] occur in two works of the late Song dynasty. This work describes the use of *jiangyou* in cooking meat, crab, and vegetables. A footnote summarizes the recipes, with page numbers from the 1987 modern Chinese version: Soy sauce is used to marinate sliced raw meat before stir-frying (p. 8). Crab is cooked in wine, soy sauce, vinegar, wine fermentation lees and sesame oil (p. 10). Soy sauce, sesame oil, vinegar and pepper are mixed as a dressing for various vegetables (p. 21).

A full-page table (Huang, p. 372) shows the “Usage of soy condiments in food recipes from the Han to the Qing dynasties.” Only seasonings based on *jiang* (fermented soybean paste) are used in this book; none are based on soy nuggets (*shi*). *Jiang* itself is used in 5 recipes, and soy sauce made from *jiang* (*jiangqing*) in 3 recipes.

Note: This is the earliest Chinese-language document seen (March 2004) that uses the word *jiangyou* to refer to soy sauce (one of two documents).

59. Buddhist monk Kakushin returns to Japan Sung dynasty from China having learned how to make Kinzanji miso (Early event). 1228.

• **Summary:** In *The Book of Miso*, by Shurtleff and Aoyagi (1976, p. 219-20) we read: “The origins of modern *shoyu* can be traced more clearly to the mid 1200s when the Japanese priest Kakushin [1207-1298] returned from China, having learned there the technique for preparing Kinzanji miso. Establishing himself at Kokoku-ji temple near the town of Yuasa (in today's Wakayama prefecture, just south of Osaka), he began to teach the local people both Buddhist meditation and the method for preparing his miso specialty. According to non-documented oral tradition, he soon

discovered that the liquid which settled to the bottom of the miso kegs made an excellent seasoning, so he decided to alter the process slightly by increasing the proportion of water in the basic mixture. After the regular fermentation period, the excess liquid was ladled off and briefly heated to stop fermentation... Kakushin's creation, too, came to be known as *tamari*, deriving its name from the verb *tamaru*, meaning ‘to accumulate,’ as ‘water accumulates into ponds,’ and by 1260 it was being produced for home consumption in the nearby towns of Yusa and Hiromachi... By 1290, the first Yuasa *tamari* was said to have been sold commercially, and soon even poets began to sing the praises of this new delicacy, calling it *murasaki* or ‘deep purple,’ ...”

In “Chronology of Soybeans,” by Akio Saito (1985. *Daizu Geppo* (*Soybean Monthly News*). Jan. p. 12-14—in Japanese) we read: 1228—The Buddhist monk Kakushin returned from Sung dynasty China having learned the method for making fermented Kinzanji miso. While fermenting the miso, he discovers that the liquid which gathers on the bottom of the vats can be used as a tasty seasoning. This *tamari* is considered the first soy sauce in Japan. Kinzanji miso is a type of *namémiso* (Finger Lickin' Miso) made from roasted soybeans and barley koji. To these are added eggplant, white melon (*shiro uri*), etc., and the mixture is fermented.

60. Yuwen Maozhao. 1250? *Jin guozhi* [History of the Jin dynasty {1115-1234}]. China. Passage on soy reprinted in C.N. Li 1958 #120, p. 85. Undated. [Chi]

• **Summary:** Wade-Giles reference: *Chin Kuo Chih*, by Yü Wên Mao Chao. Since his name contains four characters, he may have been a Mongol who lived during the Yuan (Mongol) dynasty. Date estimated as about 13th century. Covers the years 1115-1234; this minor dynasty, which caused the partition of the Song dynasty, existed in northern China at about the same time as the Southern Song in southern China. The section on food and drink states that the Jin people make *jiang* from soybeans. (Translated by H.T. Huang, PhD, Sept. 2002). Dr. Huang adds: This is one of the dynastic histories.

61. Zhao Xigu. 1250? *Tiaoxie leibian* [Compilation of harmonious variations]. China. Passage on soy reprinted in C.N. Li 1958 #117, p. 85. Undated. [Chi]

• **Summary:** Wade-Giles reference: *T'iao Hsieh Lei Pien*, by Chao Hsi-ku. Date is estimated as 13th century—probably Southern Song dynasty. The section titled “Grain foods” states: The soybean (*dadou*) is black, white, green (*qing*), yellow, dark brown, and spotted / speckled (*ban*) in color. Its nature is neutral [not warming or cooling]. If you fry it, its nature becomes hot. If you boil it, its nature becomes cool. If you use make a soup of it, its nature becomes very cold. If you ferment it to make *jiang* [a thick, chunky sauce], its nature becomes neutral. When cattle eat it, it is

warming. But when horses eat it, it is cooling. So even though it is one food, it has different effects. It contradicts the five kinds of *seng* (ginseng is one type of *seng*) and the dragon's spleen (*lungdan*). (Translated by H.T. Huang, PhD, Aug. 2002). Dr. Huang adds: The meaning of the last sentence is not clear.

Note: This is the earliest document seen (Feb. 2003) that mentions green (*qing*) mature soybeans.

62. Wu Zimu. 1275. *Mengliang lu* [Dreams of the former capital]. China. Passage on soy reprinted in C.N. Li 1958 #121, p. 86. [Chi]

• **Summary:** Wade-Giles reference: *Mêng Liang Lu*, by Wu Tzu-Mu. This important work is a description of Huangzhou, the capital, towards the end of the Southern Song dynasty. The “Different bureaus” section states that they have fields of rice, wheat, and soybeans (*dou*) used [perhaps as forage] mainly to feed horses belonging to the various government agencies.

The “Street vendors on mats” section describes foods they are selling in Hangzhou—capital of the Southern Song dynasty, including bean-flavored water (*douershui*) and sweet soybean soup (*gandoutang*), honeyed jujubes, fruits, and cooked meats.

The “Market that sells things at dawn” section states that in the summer they sell various things including young soybean congee (*douzizhou*). Note: Young soybeans might refer to green vegetable soybeans.

The “Miscellaneous products” section states that children are selling different kinds of foods, including two unknown varieties of soybeans (*qidou* and *fadou*, “law + bean”), brownish-green soybeans (*geqingdou*), salted young soybeans (*yandouer*, maybe green vegetable soybeans), and sugared yellow young soybeans (*douer huangtang*), and cooked soybeans ground to make a cake (*doutuan*).

The section on “Noodle shops” says that these shops sell different kinds of soups and dishes, including pan-fried tofu (*doufu*), fried fish, cooked vegetables, fried eggplant. These are shops where the common people get an inexpensive meal.

The section on “Produce” mentions grains but concentrates on beans, starting with soybeans of different colors: black (*doudahei*), purple (*dazi*), white (*dabai*), yellow (*dahuang*), and green (*daqing*). Also mentions various non-soy beans including white (flat) beans, black (flat) beans, white azuki beans (*baixiao*), red azuki beans (*chixiao*), mung beans (*liudou*), and many others. (Translated by H.T. Huang, PhD, Sept. 2002). Dr. Huang adds: The word “former” in the title indicates that author apparently moved away from Southern Song territory, perhaps northward into that controlled by the Yuan (Mongol) dynasty, which began in 1260. Note 1. This is the earliest document seen (Sept. 2004) that uses the term *doudahei*

(“bean large black”) to refer to black soybeans, or the term *dabai* (“large white”) to refer to white soybeans.

Huang (2000): In Lin An (present-day Hangzhou, capital of the Southern Song dynasty), “tofu soup and grilled tofu were sold in a wine shop, and a food stall specializing in vegetarian stews also sold grilled tofu” (p. 301). Soy nuggets (*shi*) are mentioned (p. 341). A full-page table (Huang, p. 372) shows the “Usage of soy condiments in food recipes from the Han to the Qing dynasties.” Jiang (fermented soybean paste) is used in two recipes and soy nugget sauce (*shizhi*) is used in one recipe.

This book also “states that ‘things that people cannot do without every day are firewood, rice, oil, salt, soybean paste (*jiang*), vinegar, and tea.’ It is clear that by the time of the Song, edible oil had advanced to the position as one of the proverbial ‘seven necessities’ of life” (Huang p. 436). Vegetable “oil pressing establishments were seen in the southern capital of Hangzhou” (p. 441). Northerners loved to use hemp oil for frying food. Wheat gluten (*fu*) was widely served during the Southern Song; names of four dishes served in a pasta restaurant are given (p. 500).

Wilkinson (2000, p. 854) cites this as *Record of the splendors of the capital city*, by Wu Zimu (no date given). These are reminiscences of the Southern Song capital of Lin’an (Huangzhou) modeled after *Menghualu*.

Talk with H.T. Huang. 1995. Dec. 28. The *chiang* mentioned by this work would definitely have been soybean *chiang*; that is what the word meant, starting a century or two before the beginning of the Christian era.

Letter from H.T. Huang. 1994 April 12, followed by talk of 1995 Dec. 28. The “seven necessities” of life are first mentioned in this book, in chapter 16, p. 136 in the 1982 edition. They are: firewood, rice, oil, salt, *chiang*, vinegar, and tea.” Yet according to another respected source, the original version of the book mentioned eight necessities, the eighth being wine, which was widely used both for drinking and as a condiment in cooking. Today, however, all the modern editions of this book include only seven necessities, omitting wine. Later the list was standardized seven (see Chai Hao 1771), and the term “seven necessities of life” became popular in China during the Yuan dynasty (1279-1368). In the Yuan dynasty there were several famous dramas; this period saw the start of Chinese dramatic literature. The words were put together in rhymes of seven characters, and at least one of these mentioned the “seven necessities.” They couldn’t accommodate eight necessities in the rhyme, so since the Yuan it has always been standardized at seven.

Letter from H.T. Huang, PhD, expert on the history of Chinese food and agriculture. 1993. June 5. This book (1982 edition, p. 136) lists *fu* (gluten) with lamb casserole, dragon (shrimp) *fu*, parched *fu* in five flavors, and grilled *fu*. At this time, *fu* (gluten), used as a synonym for *mien chin*, seems to be widespread in the Southern Song, China.

Note: This work was re-issued in 1982 by Commerce Publishers, Beijing. It is part of a series titled “Culinary Classics of Ancient China.”

63. Chen Yuanjing. 1280? *Shilin guangji* [Record of miscellanies]. China. Passage on soy reprinted in H.T. Huang 2000, p. 353. Undated. [Chi]

• **Summary:** Wade-Giles reference: *Shih Lin Kuang Chi*, by Ch'ên Yuan-Ching. Yuan (Mongol) dynasty. Huang (2000) states that this book contains a method for making soybean jiang, quite similar to that found in earlier works (p. 353). It also contains a recipes for making jiang from wheat flour (*mien*) (p. 355). A full-page table (Huang, p. 372) shows the “Usage of soy condiments in food recipes from the Han to the Qing dynasties.” Jiang (fermented soybean paste) is used in one recipe and soy nuggets (*shi*) are used in one recipe.

64. Tamari-style shoyu is sold commercially from Yuasa in the Kishu area of Japan (in today's Wakayama prefecture) (Early event). 1290.

• **Summary:** *The Book of Miso*, by Shurtleff and Aoyagi (1976, p. 219-20) states that when the Japanese priest Kakushin returned from China [in 1228], he established himself at Kokoku-ji temple, near the town of Yuasa. By 1260 tamari “was being produced for home consumption in the nearby towns of Yuasa and Hiromachi... By 1290, the first Yuasa tamari was said to have been sold commercially, and soon even poets began to sing the praises of this new delicacy, calling it *murasaki* or ‘deep purple,’ a synonym for the finest shoyu, used to this day.” A nine-line poem about tamari follows.

In “Chronology of Soybeans,” by Akio Saito (1985. *Daizu Geppo* (*Soybean Monthly News*). Jan. p. 12-14—in Japanese) we read: 1228—The Buddhist monk Kakushin returns to Japan from Sung dynasty China having learned the method for making fermented Kinzanji miso. While fermenting the miso in Japan, he discovers that the liquid which gathers on the bottom of the vats can be used as a tasty seasoning. This tamari is considered the first soy sauce in Japan...

1288-1292—Tamari-style shoyu is sold from Yuasa in the Kishu area (in today's Wakayama prefecture).

65. Saito, Akio. 1292. [Chronology of soybeans, 122 B.C. to A.D. 1292] (Document part). In: Akio Saito. 1985. *Daizu Geppo* (*Soybean Monthly News*). Jan. p. 12-14. [Jap; eng+]

• **Summary:** 122 B.C.—It is said that Lord Liu An of Huainan (*Wainan O Ryuan*) invented tofu. Therefore is sometimes called “Wainan.”

300 A.D.—By this time in Japan people are using fermented foods such as kuki, sake, vinegar, sushi, and hishio made from herbs (*kusa-bishio*) and grains (*koku-*

bishio). Kuki is a bean-based product related to miso, natto, or tamari.

630 A.D.—Igunami no Otasuki is sent as a student from Japan to T'ang dynasty China (*Kentoshi*). It is thought that foods like tofu were brought back to Japan by such student monks when they returned [but there are no records of this].

701 A.D.—The Taiho Law Codes (*Taiho Ritsuryo*) are established, and they call for the establishment of the Hishio Tsukasa (Bureau for the Regulation of Production, Trade, and Taxation of Hishio and Misho), located in the Imperial Palace as an annex to the emperor's kitchen (*daizenshoku*). Soybeans were definitely used to make these fermented foods and seasonings such as hishio (like Chinese chiang), soy nuggets (*shi, kuki*), and misho (a forerunner of miso; the term “miso” had not yet been coined).

741 A.D.—Two new temples are added to each feudal domain (*kuni*): Kokubunji is for monks and Kokubuniji is for nuns. It is said that from this time, soy nuggets (*tera nattô*, or *shiokara nattô*) spread throughout Japan. They are made from soybean koji, which is soaked in salted water and dried.

794—The capital of Japan is relocated to Kyoto from Nara. The Heian period (794-857) begins.

794-1190—Salted pickles (*shio-zuke*), hishio pickles (*hishio-zuke*), miso pickles (*miso-zuke*), and sake lees pickles (*kasu-zuke*) are eaten. The pickles were made by various methods. But only during and after the Muromachi period (1338-1573) were the various pickles made often.

802—Sakanoue no Tamuramaro (758-811) recommends that farmers in Tanzawa grow soybeans as an emergency food.

840—Each feudal domain (*kuni*) is encouraged to plant millet, barnyard millet, barley, wheat, soybeans, azuki beans, and sesame seeds.

901—The Chinese character *so* in the present word *miso* appears for the first time in the *Sandai Jitsuroku*.

927—The *Engishiki* is completed by Fujiwara no Tokihira (871-811) and others. In this book it is written: “In the feudal domain of Omi 60 koku of soybeans [1 koku = 47.6 gallons or 180 liters], in the domain of Tanba 30 koku, in the domain of Harima 20 koku, in the domain of Misa 10 koku, and in the domain of Iyo 10 koku are recommended (*susumu*). It seems that the soybean was an important crop in those days. Soybeans, rice, wheat, sake, and salt are given as the raw materials for making misho (a product resembling miso). The places famous for making misho are Omi, Hida, Yamato, etc. There are 27 misho shops in the Nishi no Kyo area of Kyoto. It is stated in the *Engishiki* that in order to make 1.5 koku of hishio you need 3 koku of soybeans, 1.5 koku of salt, 0.15 koku each of rice, wheat, and sake, and 0.043 koku of nonglutinous rice (*uruchi-mai*). Hishio at that time would seem to resemble today's kidamari; it would seem to have been very salty.

1068?—Salty natto (*shiokara nattô*; probably soy nuggets) appears for the first time in the book *Shin Sarugakki*, by Fujiwara no Akihira (lived 989-1066). In this book the lifestyle, manners, and customs of the time are described.

1083—Stringy natto (*itohiki nattô*) is discovered accidentally in Oshu (northeast Japan) during the conquest of Oshu by Minamoto (Hachimantaro) Yoshiie (lived 1041-1108). It is said that the natto was made when cooked soybeans were placed in a sack strapped over the back of a horse. The warmth of the horse caused the fermentation. There are so many legends like this on in the northeast prefectures (*Tohoku Chiho*) of Japan that it seems possible that natto was originally made there.

1183—Tofu is first mentioned in a document from the Great Kasuga Shrine (*Kasuga Taisha*) in Nara. The characters used to write the word tofu then were different from the characters used today. It seems that this tofu was very hard.

1192—The Kamakura period and shogunate begins as Minamoto no Yoritomo (1147-1199) becomes the first head shogun.

1228—The Buddhist monk Kakushin returns to Japan from Sung dynasty China having learned the method for making fermented Kinzanji miso. While fermenting the miso in Japan, he discovers that the liquid which gathers on the bottom of the vats can be used as a tasty seasoning. This tamari is considered the first soy sauce in Japan. Kinzanji miso is a type of *namémiso* (Finger Lickin' Miso) made from roasted soybeans and barley koji. To these are added eggplant, white melon (*shiro uri*), etc., and the mixture is fermented.

1288-1292—Tamari-style shoyu is sold from Yuasa in the Kishu area (in today's Wakayama prefecture).

Note 1. This document contains the earliest clear date seen for the cultivation of soybeans in Japan (A.D. 802, and 840), and for the appearance of the term “tamari” in Japan (1228).

Note 2. This is the earliest document seen (Sept. 2000) that mentions sesame seeds (802 A.D.). Address: Norin Suisansho, Tokei Johobu, Norin Tokeika Kacho Hosa.

66. Jujia biyong shilei quanji [Essential arts for family living (encyclopedia)]. 1301. China. Passage on soy reprinted in H.T. Huang 2000, p. 352. Undated. [Chi] • **Summary:** Wade-Giles reference: *Chü Chia Pi Yung Shih Lei Ch'üan Chi*, author probably unknown or maybe by Hsiung Tsung-Li (pinyin Xiong Zongli). Late Yuan (Mongol) dynasty.

Huang (2000, p. 352) states that this book “presents two methods for making jiang from soybeans, one for *shu huang jiang* (ripe yellow soy paste) and the other for *sheng huang jiang* (raw yellow soy paste). The names are actually misleading since the ‘ripe’ and the ‘raw’ refer to the manner

in which the beans are treated before mixing with wheat flour for the first fermentation and do not refer to the quality of the final product. In the *shu* or ‘ripe’ case, the beans are roasted and ground into flour; in the *sheng* or ‘raw’ case the beans are soaked overnight and boiled until soft and tender. The product from the first fermentation is called *huangzi* [‘yellow child,’ soybean koji] and well as *jianghuang* [‘jiang yellow’].”

Huang (2000, p. 355-56) gives an interesting full-page table which compares the processes for making the following types of jiang: Soybean (*dou*), wheat (*mien*), sweet flour (*tianmien*), azuki bean (*xiaodou*), jack bean, barley (*damai*), and elmnut (*yuren*). Each of the processes except one is based on the *Jujia Biyong* (ca. 1350); the process for making sweet flour jiang is based on the *Bencao Gangmu* (The great pharmacopoeia) (+1596).

A full-page table (Huang, p. 372) shows the “Usage of soy condiments in food recipes from the Han to the Qing dynasties.” Only seasonings based on jiang (fermented soybean paste) are used in this book; none are based on soy nuggets (*shi*). Jiang itself is used in 17 recipes, and soy sauce made from jiang (*jiangqing*) in 1 recipe.

Huang (2000, p. 297) notes that this is the earliest document seen to use the term *douya*, which, in English, is the modern term—“bean sprouts.” Mung beans (*lüdou*) are the preferred beans for making such sprouts. A long quotation describes the process in detail and gives a recipe.

Huang (2000, p. 255) quotes a passage describing the process for making *jufu* (also known as *jubing*), from dairy milk curds. Its says to coagulate cow’s milk by adding vinegar, just as when making tofu (*doufu*). When the dairy curds are fully formed, drain in a silk bag and press with a stone. Add salt and store in a jar.

Letter from Dr. H.T. Huang. 1996. Sept. 29. “I am glad you brought up the question of when vegetarian mock meat dishes were first prepared in China; it is one that requires further research. The earliest examples of mock meat dishes I have found so far were made with *mien-chin* (wheat gluten).” Gluten is used “in a recipe for mock lung sausage and one for mock eel.” The book contains 4 vegetarian recipes using *mien chien* (wheat gluten), found on pages 132-34. These are vegetarian versions of grilled liver, barbecued liver, mock fermented beans (*doushi* = soy nuggets), and mock fish.

Note 1. This is the earliest document seen (Dec. 2005) concerning roasted soy flour.

Note 2. This is the earliest document seen (Aug. 2002) concerning a meatless sausage.

Huang (2000, p. 194-95) notes that this book contains probably the earliest account of the process for making red fermented rice and a red wine.

Bray (1984, p. 623): Translates the title as “Collection of certain sorts of techniques necessary for households (encyclopedia).” Published in Yuan, +1301. Probably by

Hsiung Tsung-Li. Ed. Ming, +1560, T'ien Ju-Ch'eng. Partly reprinted in Shinoda & Tanaka (1973), "A Collection of Chinese Dietary Classics." Also discusses hemp oil, which was widely used in traditional China, was considered to have an offensive smell, and was rated lowest of all the cooking oils, but it was a good lamp oil as it did not smoke or hurt the eyes" (p. 51).

Bo (1982): This book mentions wheat chiang. It also gives a detailed description of the method for making soy nugget sauce: Two months after September, heat clear sesame oil, stir in 3 *tou* [unit of measure] of good soy nuggets (*shi*), mix, steam, and cool. Sun dry then steam again. After repeating this process 3 times, mix in 1 *tou* of white salt and put everything in a large cauldron with 3-4 *tou* of hot water. Add 1 *ry* each of three spices, 5 *kin* each of white onion and (?). Simmer down to two-thirds the volume and store in a container. From this it is clear that soy nugget sauce was a kind of soy sauce with flavorings and spices.

67. Lu Mingshan. ed. 1314. *Nongsang yishi cuoyao* [Selected essentials of agriculture, sericulture, clothing and food]. China. Passage on soy reprinted in C.N. Li 1958 #132, p. 93, and #308, p. 223. [Chi]

• **Summary:** Wade-Giles reference: *Nung Sang I Shih Ts'o Yao*, by Lu Ming-Shan. Title sometimes shortened to *Nongsang Cuoyao*. Yuan (Mongol) dynasty. The section titled "In the third month plant soybeans" (*dadou*) states: When apricot tree flowers bloom profusely, its a good time to plant soybeans. Plant sparsely in fertile soil and densely in poor soil. Note: This is the earliest document seen (Feb. 2003) that contains the planting advice given in the previous sentence. It will be repeated often in later documents.

The section titled "In the ninth month collect soybean stems" (*dougan*) says: In the winter, use them to feed cattle and horses.

The section titled "Planting black soybeans" states: When you plant black soybeans (*heidou*), the plowed land should be ripe (*shu*) and level. Hold the seeds in one hand; each time you take a step, broadcast the seeds. The beans (*dou*) will be good for making jiang, or for feeding horses. The stems can be used as fuel. (Translated by H.T. Huang, PhD, Oct. 2002; Jan. 2003).

Huang (2000). Red ferment (Red fermented rice; Jap: *Beni-koji*), made with a species of the red *Monascus* mold, is cited as an ingredient in the preparation of rice vinegar (p. 194). In the first stage of the process for making *shi* (soy nuggets), cooked soybeans are usually incubated (without additives) in the air, however in some cases they are mixed with wheat flour. The earliest description of the use of wheat flour is found in this book (see Huang 2000, p. 342): Clean black soybeans and cooked thoroughly. Drain the beans, mix evenly with some flour, and spread on a mat until cool. Then cover with paper mulberry leaves to make *huangzi* (yellow molded seeds [soybean koji]). When beans

are completely covered with a yellow coat [mycelium], dried them in the sun. The second stage of the fermentation takes place in the sixth month as follows: Take 2 catties of sliced melon and eggplant. For each catty of vegetables, add 1 oz of clean salt and suitable amounts of finely cut ginger, orange skin, perilla, cumin, pepper, and licorice. Mix them together and allow to stand overnight. The next day, winnow molded beans to remove free mycelium. Mix beans and vegetables in an urn and blend in any free vegetable juice. Top with a layer of bamboo leaves. Press with a brick or stone. Seal mouth of vessel with paper and mud, and allow to stand in the sun for a month. Then remove beans, melon and eggplant from vessel, and expose to the sun until dry. Collect and store.

Note: This is the earliest document seen (June 2004) that mentions fermented red rice.

Huang also reports (p. 352) that the *Nongsang Yishi Cuoyao* contains a detailed recipe for making jiang; the following is based on his complete translation: Starting with one *tan* (100 catties) of soybeans, stir-fry (*chao*) until cooked. Mill to remove hulls, boil until soft, and drain off water. While beans are still hot, mix them evenly with 60 catties of white wheat flour. Completely line a low table with bamboo leaves. Spread bean-flour mixture on leaves to a height equivalent to the thickness of two fingers. When cool, cover with mulberry leaves or cocklebur. Wait until a yellow coat [mycelium] forms around the particles. Remove leaves and cool for a day. The next day sun the material [*jiang* substrate] until dry. Break up any chunks and winnow until clean.

Blend [*jiang* substrate] with about 40 catties of salt and 2 *tan* of rain water. If mash is too thin, stir-fry some white wheat flour, cool, and add an appropriate amount (to attain desired consistency). On the night of a 'fire' day, load ingredients (in an urn) for incubation with the aid of light from a lamp. This will discourage the development of grubs. Add cumin, anise, licorice, scallion and pepper. The product will be fragrant and rich in flavour.

Huang then comments (p. 352) on the above: We may note several of innovations introduced in this process. First, the beans are stir-fried and milled to remove the hulls. This should facilitate microbial growth during the first fermentation. Second, spices are added to the second fermentation to enhance the flavor of the finished *jiang*. But the author gives no detailed instructions on how the second fermentation should be carried out. We can only surmise that the conditions are similar to those described in the *Qimin Yaoshu* and the *Sishi Zuanyao* cited earlier. Based on these assumptions, we can construct a flow diagram of the process as shown (See p. 353, Fig. 79).

Wilkinson (2000, p. 630). The *Essentials of Agriculture, Sericulture, Clothing, and Food* was "compiled by a Uighur official, Liu Mingshan. Important because written as an

actual handbook for magistrates in their role as agricultural instructors. Arranged in agricultural calendar style.”

Bray (1984, p. 628): Title. Yuan, c. +1314. Ed. Lu Ming-Shan (Uighur).

Bo (1982): Mentions a type of chiang.

Fukushima (1979, p. 4-5): “The first record indicating use of all the raw materials to prepare koji for soybean chiang appeared in the *Nung-sung I-shin Ts'o-yao* (*Noso-Ishoku-Satsuyo* in Japanese) by Lu Ming-Shan (Ro Meizen in Japanese), published in the Yuan (Gen in Japanese) dynasty (1271-1368 AD). The flow sheet of this soybean chiang is shown in Fig. 3.” In this process, soybeans are roasted, dehulled, cooked, then mixed with wheat flour and spontaneously molded to form koji. The koji is dried in the shade, winnowed, and pounded, then mixed with spices and salt water to form a mash, which is insulated and aged to make the soybean chiang.

68. Hu Sihui. 1330. *Yinshan zhengyao* [Principles of correct diet]. China. Passage on soy reprinted in Buell and Anderson 1999, p. 515-17. [Chi]

• **Summary:** Wade-Giles reference: *Yin Shan Chêng Yao*, by Hu Ssu-Hui. Yuan. Reissued in +1456 by imperial order. Huang (2000) shows that this celebrated Yuan nutritional treatise is a rich source of information about Chinese food and drink. One of China’s two best known and most important medieval and premodern works on diet therapy materia medica, it contains food prescriptions and was the official nutritional guide for the royal household. The author was the dietician at the Yuan (Mongol) court. Fortunately modern editions are available. (p. 135, 137-38). Huang (2000) notes that this work mentions soy nuggets (*shi*) (p. 341), and says that in countering the toxicity of foods, soybean jiang (*doujiang*) is superior to fermented wheat jiang (*mien jiang*) (p. 357). It also discusses: Red fermented rice (p. 196; also called red ferment, *hongqu* in pinyin, or *hung ch’ü* in Wade-Giles; it is made with the Mold *Monascus purpureus* Went, and used as a natural red coloring agent). Distilled wine (p. 227). Five types of dairy products (p. 256). Malt sugar (*tang*) (p. 460). Pasta-making, including steamed buns (*mantou*) and wheat flour noodles (*mian*, *miantiao*) (p. 476, 484). Sea vegetables (*haicai*) are mentioned as a cure for goiter (p. 576). Three recipes for curing beri-beri (*jiaoqi*, W.-G. *chiao-chhi*) are given (p. 581). Wilkinson (2000, p. 649) states that after the Han dynasty, recipe books were called *shijing* (“food treatises”), and after the Tang, *shipu* (“recipe manuals”) or *shidan* in the later empire. Most have been lost. One that survives, a treatise on diet written for the khan by the Muslim court doctor, the Mongolian Hoshi (Husihui), titled *Yingshan Zhengyao* (Essentials of eating and drinking)” has been translated into English.

English translation: Buell, Paul D.; Anderson, Eugene N., trans. 1999. *A soup for the Qan: Chinese dietary*

medicine of the Mongol era as seen in Hu Szu-hui’s Yinshan Chêng-yao. London: Kegan Paul International. 715 p.

Section 3 (p. 515-17) states: “Soybeans are sweetish in flavor and neutral and lack poison. They decrease demon *qi*, control pain, and drive out water. They expel heat of the stomach, bring down blood stasis, and counteract the poisons of various drugs. They are made into tofu. Tofu is cooling and moves the *qi*.”

Needham (1984, p. 592) says this book is mainly about deficiency diseases, with the aphorism “many diseases can be cured by diet alone.”

Lu, Gwei-Djen; Needham, Joseph. 1951. “A contribution to the history of Chinese dietetics.” *Isis—History of Science Journal* 42:13-20. April. The *Yinshan Zhengyao* discusses early Chinese treatments for beri-beri.

69. Ni Zan. 1360. *Yunlintang Yinshi Zhidu Shi* [Dietary system of the Cloud Forest Studio]. China. [Chi]

• **Summary:** Wade-Giles reference: *Yün Lin T’ang Yin-shih Chih-tu Chih*, by Ni Tsan. Yuan dynasty. Huang (2000) states that this book mentions only one dairy product, milk curds (*rufu*; W.-G. *jufu*), a name that would later be used to refer to fermented tofu (p. 256).

Concerning the history of soy sauce, Huang observes (P. 362): The role of soy nuggets as a precursor to soy sauce is further emphasized in the very first specific reference we have to the making of *jiangyou* (soy sauce). Found in this book written by the famous Yuan painter Ni Zan, it says: “For every official peck of yellow soybean koji (*huangzi*), have ready 10 catties of salt and 20 catties of water. On a *fu* day, mix them [in a jar] and incubate.” Note 1. *Huangzi* is soybeans covered with a mycelium of *Aspergillus* mold used as a substrate for making soy nuggets (*shi*). A *fu* day is one of the 3 *geng* days during the summer, based on the calendrical system according to ‘celestial stems’ and ‘earthly branches.’ Essentially, it means that the operation should be carried out when the weather is warm.

A full-page table (Huang, p. 372) shows the “Usage of soy condiments in food recipes from the Han to the Qing dynasties.” Only seasonings based on jiang (fermented soybean paste) are used in this book; none are based on soy nuggets (*shi*). Jiang itself is used in 3 recipes, soy sauce made from jiang (*jiangyou*) is used in 1, and another type of soy sauce made from jiang (*jiangshui*) is used in 2 recipes. Note 2. This is the earliest document seen (Aug. 2005) that uses the word *jiangshui* to refer to a type of soy sauce.

Also discusses mantou and cooked noodles (p. 476, 484n). Address: China.

70. Liu Ji. 1370. *Doneng pishi* [Routine chores made easy]. China. [Chi]

• **Summary:** Wade-Giles reference: *To Nêng P’i Shih* by Liu Chi. Ming dynasty. Huang (2000) states: This is the earliest of at least 13 food canons and recipe books in premodern

China. “Premodern” refers to the period from the start of the Ming to the end of the Qing dynasty (1368-1912). The author was a distinguished official of the early Ming (p. 129-130). The book contains a brief recipe for making soy nuggets (p. 340) and for making jiang (p. 353, 357).

A full-page table (Huang, p. 372) shows the “Usage of soy condiments in food recipes from the Han to the Qing dynasties.” Jiang (fermented soybean paste) is used in 5 recipes, and soy nugget sauce (*shizhi*) in 1 recipe.

The book also mentions preparation of meat and fish pastes (*jiang*) including those made from five kinds of fish, yellow sparrow, pork, lamb, mutton, and shrimp. Many of these recipes were copied verbatim from two earlier works (p. 386, 387n). Also mentions the use of soybean jiang to preserve meat or fish (p. 414n). Address: China.

71. Shijō ryōri-sho [Cookbook of the Shijo School]. 1384. Japan. [Jap]*

• **Summary:** This book mentioned “tare-miso,” “usu-tare,” and “tare usu,” which are soy sauces similar to tamari.

72. Tajimi Teiken. 1489. Shijōryū hōchōgaki [Cookbook of the Shijo school?]. Japan. [Jap]*

• **Summary:** This famous cookbook mentioned “tare miso,” “usu tare,” and “surimiso.”

73. Kuang Fan. ed. 1502. Bianmin tuzuan [Everyman’s handy illustrated compendium (or the Farmstead manual)]. China. Passage on soy reprinted in C.N. Li 1958 #310, p. 224. [Chi]

• **Summary:** Wade-Giles reference: *Pien Min T’u Tsuan*, edited by Kuang Fan. Ming dynasty. The section titled “Planting soybeans” (*dadou*) states: Prepare rows, dig holes, and plant. Plant the early varieties in the 2nd month; they will be ready for eating in the 4th month (Note: Only if they are eaten as green vegetable soybeans). These are called “plum beans” (*meidou*). Plant other varieties in the 3rd and 4th months. The ground should not be fertile, and any grass that exists should be cut / eliminated.

The section titled “Planting black soybeans” (*heidou*) says: Plant them in the 3rd and 4th month. The beans (*dou*) can be used to make jiang, or as feed (*liao*) for horses. (Translated by H.T. Huang, PhD, Jan. 2003).

Huang (2000) states: One of the food canons and recipe books in premodern China, this work, although usually classified as an agricultural treatise, is also a rich source of information on food processing (p. 129-30). It mentions red ferment (*hungqu*, p. 126 [Jap. *beni-koji*]), crabs preserved in *zao* (W.-G. *tsao*; wine residues, which are also mentioned in other works for making fermented tofu or *doufuru*, p. 413), and crabs preserved in jiang (p. 414n). This work was reprinted in +1552 and +1593.

74. Oogusaden yori soden no kikigaki [The Oogusaden and Soden cookbook?]. 1504. Japan. [Jap]*

75. ōkusa-ke ryōri-sho [The house of okusa cookbook]. 1532. Japan. [Jap]*

• **Summary:** The word *shoyu*, written with the characters used today, was first used in a cooking book in this work. The next major event with shoyu in Japan was when a brewer in Noda sent tamari to Kawanakajima.

This book also contains a detailed recipe for making Natto Miso Soup (*nattō-jiru*, a special type of miso soup that contains diced natto), which became popular during this period. Note: This is the earliest document seen (Feb. 2001) that mentions *nattō-jiru*.

Letter (e-mail) from Naomichi Ishige, Japanese natto expert. 2007. March 20. The title of this book is *ōkusa-ke ryōri-sho*. The “nattō” used to make *nattō-jiru* (natto miso soup) is actually *kuki*, or soy nuggets (*shiokara natto*, *tera natto*); it is not *itohiki nattō*. This cookbook was reprinted in a modern version in 1932 (Dec. 15) in Tokyo by Zokugunsho-ruie Ju Kanseikai (Ohta Yoshimara [person]).

Note: This is the earliest document seen (Dec. 2008) that mentions *nattō-jiru* [Natto Miso Soup] or miso soup of any type.

76. Iida Ichirobei of Shimōsa makes tamari shoyu and sends it to the Takeda family in Kosshu. This is the beginning of Noda Shoyu (Early event). 1558.

• **Summary:** In *The Book of Miso*, by Shurtleff and Aoyagi (1976, p. 221-22), in the section titled “The development of shoyu,” we read: “The area of Shimōsa, about 30 miles northwest of Tokyo and already famous as a center of miso production, was to become the birthplace of the product now known as shoyu. In 1561, in the town of Noda, Iida Ichiro Heibe made a new variety of tamari-shoyu from hishio and presented it to the samurai Takeda Shingen, already known for his interest in miso. The flavorful product soon became known by its elegant name: Kawanakajima Goyo Tamari-Shoyu. It was first produced commercially in Shimōsa in 1574.”

In “Chronology of Soybeans,” by Akio Saito (1985. *Daizu Geppo* (*Soybean Monthly News*)). Jan. p. 12-14—in Japanese we read:

1558–Iida Ichirobei of the feudal domain of Shimōsa (*Shimōsa no kuni*; today’s Noda city in Chiba prefecture) makes tamari shoyu, called Kawanaka-jima Goyo Tamari, and sends it to the Takeda family in Kosshu. This is the beginning of Noda Shoyu. It is said that the taste of shoyu gave a great boost to the energy of Takeda’s army. At about this same time Takeda Shingen (lived 1521-1573) starts to use dried-frozen tofu (*kori-dofu*) for his army in Kawanakajima after tasting the delicious *kori-dofu* from Sahtobei?

77. Hôchô kikigaki [Transcribed instructions for cooking]. 1560-1580. Published in the *Gunsho Ruiju*. Japanese summary by Kawakami, p. 136. [Jap]

• **Summary:** A *hôchô* is a Japanese kitchen knife; *kikigaki* means “listening and writing.” According to Kawakami and Kimura (1985) the term *shiokara nattô* (“salty natto”) appears in the work titled *Gunsho Ruiju* (Katsuji-hon, page 344, lower section, line 5). The authors think that this is the earliest document seen that mentions *tera nattô* or non-stringy natto [soy nuggets]. But after that time, the same food appears to be called *ko no daizu* or *kaori no daizu* (“fragrant soybeans”), and that term first appeared in the *Hôchô Kikigaki*, a cookbook that was published about 1560-1580 and that is part of the *Gunsho Ruiju* (Katsuji-hon, page 800, upper section, line 6).

This book also gives recipes using *tare miso*, made by mixing miso and water. Mentions *chiang*. Also contains a very early possible footnote reference to soy sprouts, *Moyashitaru mame*.

78. Matsuya Hisamasa. 1561. Nattô-jiru [Natto miso soup]. In: Matsuya Hisamatsu chakai-ki [Three-generation diary of the Matsuya family’s tea ceremonies]. Sept. 5. Compiled by Hisashige Kaiki. Japanese summary by Kawakami 1978, p. 261. [Jap]*

• **Summary:** Concerning *natto-jiru* (natto soup): Kawakami and Kimura (1985) state that in the olden days in Japan, people used natto in a soup (*nattô-jiru*), which was quite popular. However these two authors think that the *natto* used in this soup was probably soy nuggets (*kuki*, *shiokara natto*, *tera natto*) rather than *itohiki natto*. This is the 2nd earliest document seen (Feb. 2007) that mentions *nattô-jiru*. It is mentioned in the entry for 5 Sept. 1561. Mr. Matsuya was a rich merchant in the Nara area. His family kept their diary for three generations. Address: Japan.

79. A feudal lord who controls the port of Nagasaki in Kyushu is converted to Christianity. As a gift of thanks, he cedes Nagasaki to the Jesuits (Early event). 1580.

• **Summary:** Alessandro Valignano (1539-1606) was an Italian Jesuit missionary who was a leader in the introduction of Catholicism to East Asia, especially Japan. In 1584 he wrote “*Historia del Principo y Progreso de la Compania de Jesus en las Indias Orientales (1542-64)*” which states: In 1580 the daimyo who controlled the port of Nagasaki was converted to Christianity. As a gift, he ceded the port to the Society of Jesus (Jesuits). Under Jesuit control, Nagasaki would grow from a small fishing village with one street to an international trading port rivaling Goa or Macao in influence.

80. Konko chômi-shû [Present and old cooking collections]. 1580. Publisher unknown. 276 p. Handwritten. Japanese summary by Kawakami 1978, p. 46. [Jap]

• **Summary:** The year 1580 was the year the book was copied. The actual year it was written is unknown. It is a sort of encyclopedia of cooking, and includes 17 varieties of sake, 3 varieties each of hishio and miso, plus a tofu section... and much more.

81. Allesandro Valignano, a Jesuit, later says he bought miso in Japan (Early event). 1583.

• **Summary:** Valignano (1539-1606) was an Italian Jesuit missionary who was a leader in the introduction of Catholicism to East Asia, especially Japan. He first visited Japan from 1579 to 1582, when he developed a strategy for the introduction of Christianity. His luxurious life and authoritarian attitudes were criticized by members of the mendicant orders such as the Franciscans and Dominicans. He emphasized study of the Japanese language and culture, and required that all new missionaries spend at least two years in a language course and do their best to learn Japanese customs and manners. He was a great admirer of the Japanese people and envisioned a future when Japan would be one of the leading Christian countries in the world. He famously wrote that the Japanese “excel not only all the other Oriental peoples, they surpass the Europeans as well” (Alessandro Valignano, 1584, “*Historia del Principo y Progreso de la Compania de Jesus en las Indias Orientales (1542-64)*”).

In order to finance the Jesuit seminaries, schools, and printing presses, the missions needed money. The local daimyo curried favor with the Jesuit administration in hopes of having Portuguese trading ships visit their local port more often. In 1580 the daimyo who controlled the port of Nagasaki was converted to Christianity. As a gift, he ceded the port to the Society of Jesus (Jesuits). Under Jesuit control, Nagasaki would grow from a small fishing village with one street to an international trading port rivaling Goa or Macao in influence. In all, Valignano made three visits to Japan: 1579-1582, 1590-1592, and 1598-1603.

In 1954 his *Sumario de las cosas de Japón (1583)*. *Adiciones del Sumario de Japón (1592)*. *Editados por José Luis Alvarez-Taladriz* [Summary of the things of Japan (1583). Additions to the Summary of Japan (1592), edited by José Luis Alvarez-Taladriz], was published.

In the 1st book, on page 93, the author mentions that he bought the necessary provisions, rice, miso, dried fish, etc. Footnote 240 gives a long definition of *misso* (sic, miso) in Italian from *Saverio Orientale*, by Bernardino Ginnaro (1641, Naples).

82. Gao Lian. 1591. Yinzhuan fushijian [Compendium of food and drink]. China. Passage on soy reprinted in H.T. Huang 2000, p. 297, 324, 340, 373. [Chi]

• **Summary:** Wade-Giles reference: *Yin Chuan Fu Shih Chien*, by Kao Lien (who lived 1574-1624). Ming dynasty. Huang (2000) discusses: Processes for making sprouts from

yellow soybeans (*dahuangdou*) and broad beans (*handou*) (p. 297; Footnote: The identity of *handou* is uncertain; it could be either broad beans (*candou*, *Vicia faba*) or peas (*wandou*, *Pisum sativum*)). Mention of tofu (p. 324). Brief recipe for making soy nuggets (*shi*, p. 340).

A full-page table (Huang, p. 372) shows the “Usage of soy condiments in food recipes from the Han to the Qing dynasties.” Seasonings based on jiang (fermented soybean paste) are used in 27 recipes: jiang itself in 20, soy sauce made from jiang (*jiangyou*) in 5 recipes, soy sauce named *jiangzhi* in one recipe, and soy sauce named *jiangshui* in one recipe. Seasonings based on soy nuggets (*shi*) are used in only 5 recipes: Soy nuggets (*shi*) in 4 recipes, and soy nugget sauce named *shizhi* in 1.

Huang adds (p. 373): Soy sauce (*jiangyou*) started to rival jiang in importance during the Ming [1368-1644], and by the early years of the Qing [1644-1912] had surpassed it in culinary usage. This book is the last Ming entry in the table. Huang also discusses: Use of red ferment (*hongqu*) to make red rice wine (p. 196).

Huang (personal communication, 5 June 1993), gives the date of this document as +1591, and notes that pages 148-49 mention *fu cha* (tossed gluten salad) and *chien fu* (pan-fried gluten slices). This information is repeated from an earlier book by Han I written ca. +1350.

Bo (1982): This Ming dynasty book contains many recipes that use soy sauce. Partly reprinted in Shinoda & Tanaka (1973), “A Collection of Chinese Dietary Classics.”

83. Li Shizhen. comp. 1596. *Bencao gangmu* [The great pharmacopoeia]. China. Passage on soy reprinted in C.N. Li 1958 #311, p. 224-26. [Chi]

• **Summary:** Wade-Giles reference: *Pên Ts'ao Kang Mu*, by Li Shih-Chên (lived 1518-1593). Ming dynasty. This classic work was completed in 1578, but not published until 1596. It describes almost 2,000 animal, vegetable, and mineral drugs and gives over 8,000 prescriptions. A rich source of information, it is still very useful. All foods mentioned are considered as medicines, based on the ancient Chinese saying: “Food and medicine have the same origin.” The title might also be translated as “Collected essentials of herbs and trees. Illustrated compendium of materia medica with commentaries.”

Soybeans and soyfoods are discussed in two chapters of this book. Chapter 24 contains sections on soybeans, soybean sprouts, and yellow soybeans, in that order. Chapter 25 has sections on soy nuggets, yellow molded soybeans (Jap. soybean koji), tofu and yuba (*doufu pi*), jiang, and soy sauce. Concerning yuba, we learn that a skin is formed on the surface of soymilk when it is heated in the process of making tofu. This skin can be lifted off and dried to give yuba (*doufu pi*).

Note. This is the earliest China-language document seen (Oct. 2008) that mentions yuba, which it calls *doufu pi*

(Huang 2000, p. 303, 323)

The first part of each section is titled “Explanation of names”; when these simply repeat material we have translated from earlier Chinese documents, we will not retranslate it. Another part of each section explains each food / medicine in terms of its “nature” or “vital energy” (*qi*, hot, warm, neutral, cool, and cold) and “flavor” (*wei*, bitter, sour, sweet, pungent, salty).

The section titled “Soybeans” (*dadou*) begins by stating that soybeans are considered a “middle class drug / medicine” according to the *Shennong Bencao Jing* (*Benjing*) (Classical pharmacopoeia of Shennong, the Heavenly Husbandman) (+100). This section has four parts: (1) “Explanation of names.” The soybean is *shu*. The pods are called *jia*. The leaves are called *huo*. The stems are called *qi*. (2) “Explanation of uses.” After quoting information from earlier Chinese sources, he states: The different soybean varieties are black, white, yellow, spotted / speckled (*ban*), green, and striped. The black ones are also called *wudou*. They are used for both medicine and food, and for making soy nuggets (*shi*). The yellow ones are good for making tofu (*fu*), for pressing to obtain oil, or for making jiang. But the other soybean varieties can also be used to make tofu and can be cooked for food. They are usually planted before summer. The young plants (*miao*) grow to a height of 3-4 feet. The leaves are pointed. In the fall they have small white flowers which come in clumps about one inch across. The plants wither in the frost.

According to the *Lüshi Chunqiu* (Master Lü’s spring and autumn annals) (239 B.C.), when soybeans are in season, the stems are long and the branches are short. The pods come in groups of 27. The more branches there are, the more nodes. The large soybeans (*shu*) are round; the small soybeans (*shu*) are oval. The early varieties tend to grow like vines. The leaves float. The nodes are further apart. The pods are smaller and not solid. The later varieties have fewer nodes, less space between nodes, and they are less solid. According to the *Fan Shengzhi Shu* (The book of Fan Shengzhi {on agriculture}) (10 B.C.), if you plant soybeans in early summer, you should not plant them deep because the flowers do not like too much sun; they will rot and the roots will be scorched. One should adjust the depth of planting according to the variety. [After harvesting] store soybean seeds in a level, shady place in a bag. Take them out 15 days after winter begins; then you can use them for planting. Soybeans can be stored quite easily for one full year, so they can be kept in preparation for a famine year.

(3) Black soybeans—nature and flavor (*heidadou qiwei*): They are sweet, neutral, and nontoxic. Prolonged ingestion will make you / your internal organs feel heavy. When raw, they are warm. When cooked, they become cold—according to *Zhibo* (a person) cited in the *Huangdi Neijing Suwen* (Yellow Emperor’s classic of internal medicine: Questions and answers) (200 B.C.). Chang Qi (another person) says:

When soybeans are raw they are neutral, but when they are roasted they become hot, and when they are boiled they become cool (*han*). When made into soy nuggets they become cold (*leng*). When used to make jiang or soy sprouts (“raw yellow curls”) they are neutral. When cattle eat them, they are warm [i.e. they have a warming effect on the cattle]. When horses eat them, they are cold. So even though it is one substance, when it is eaten in different ways, it has different effects.

(4) “Inventions” (*faming*): Explains the complex pharmacology and medicinal effects of soybeans on the five internal organs—such as the kidney, liver, etc.

The section titled “Soybean sprouts” (*dadou huangjuan* or “soybean yellow curls”) has two parts: (1) “Explanation of names.” These are sprouted [soy] beans (*dounie*). Allow the black soybean to sprout until it is 5 inches (*cun*) long. Then dry it; this is called *huangjuan* (“yellow curls”). It becomes very small when dried. (2) Nature and flavor (*qiwei*): Sweet, neutral, nontoxic. Note 1. This is the earliest document seen (April 2003) that uses the term *dounie* to refer to “sprouted soybeans.”

The section titled “Yellow soybeans” (*huang dadou*)—explanation of food uses—is divided into three parts: (1) “Explanation of names.” Similar to the passage above stating that yellow soybeans are good for making tofu (*fu*), for pressing to obtain oil, for making jiang, etc. (2) Nature and flavor (*qiwei*): Sweet, warm, nontoxic. (3) Soybean oil (*douyou quiwei*) nature and flavor: Pungent, sweet, and hot (*re*); slightly toxic. Note 2. This is the earliest document seen (Feb. 2003) that uses the term *huang dadou* to refer to yellow soybeans.

Note 3. This is the earliest Chinese-language document seen (Sept. 2006) that uses the term *douyou* to refer to soybean oil.

Red azuki beans (*chixiaodou*) are also mentioned in this book; a listing of alternative names, with commentaries, is given. (See Li 1958 #393).

White beans (*baidou*) are also mentioned as follows: White beans (*baidou*) are mentioned in the Song dynasty. They are also called *fandou*. The seedlings can be used as a vegetable. They are good eaten raw. In eastern Zhejiang the flavor is especially good. They can be used to make jiang and tofu (*fu*). In the north, the watery white beans (*shui baidou*) are similar but is not as good. White beans are also called *fandou*. They can be used to complement congee / gruel (*zhou*) and cooked rice served as a main dish (*fan*). According to the author (Li Shizhen) *fandou* is the same as white azuki beans. Some white beans have a yellow color. The beans are about the size of mung beans (*liudou*). Plant them in the 4th or 5th month. The leaves of the seedlings are like those of red azuki beans (*chixiaodou*) and can be eaten. The pods are like those of azuki beans (*xiaodou*). One kind of pod comes with leaves like those of the soybean (*dadou*). They can be cooked like rice and used to make tofu (*fu*).

They are of the same category. Nature and flavor (*qiwei*): It is sweet, neutral, and nontoxic. (See Li 1958 #467). (Translated by H.T. Huang, PhD, May 2003). Dr. Huang adds: The white bean (*baidou*) could well be the white azuki bean.

84. Li Shizhen. comp. 1596. *Bencao gangmu* [The great pharmacopoeia]. China. Passages on soy reprinted in C.N. Li 1958 #140, p. 95-96, and #311, p. 224-26. [Chi]

• **Summary:** Continued: Wade-Giles reference: *Pên Ts'ao Kang Mu*, by Li Shih-Chên (lived 1518-1593). The following information on soybeans and soyfoods appears in Chapter 25 of the *Bencao Gangmu*.

The section titled “Soy nuggets” (*dadou shi*) is divided into four parts: (1) “Explanation of names.” The word *shi* (different character but same pronunciation) also means something delectable and highly desirable. According to the *Shuowen Jiezi* (Analytical dictionary of characters) (+121), you get soy nuggets by adjusting salt and incubating soybeans (*shu*). (2) “Explanation of uses” gives a long, detailed description of how to make soy nuggets. See Huang 2000, p. 340-41. *Shi* can be made from various types of soybeans. When made from black soybeans, they make good medicine. There are two kinds of *shi* [both made by a mold fermentation]: unsalted / bland soy nuggets (*danshi*), and salted / savory soy nuggets (*yanshi*).

To make unsalted / bland soy nuggets (*danshi*): In the 6th month, take 2-3 *dou* (20-30 liters) of black soybeans. Winnow until clean then soak overnight in water. Steam the beans thoroughly then spread on a mat. When almost cool, cover beans with artemisia leaves. Examine them every 3 days. When they are covered, but not luxuriantly, with a yellow coating [of mold], dry them in the sun, then winnow until clean. Add enough water to wet the soybeans, so that when scooped by hand, there will be wetness between the fingers. Place them in an earthenware jar (*weng*) and pack them down tightly. Cover with a 3-inch layer of mulberry leaves. Seal mouth of jar with mud, then let stand in the sun for 7 days. Remove beans from jar and dry them in the sun for an hour. Wet them again and put them back in the jar. Repeat this process [from wetting and sunning] 7 times. Finally, steam the beans, cool, dry, and store in the jar.

To make salted / savory soy nuggets (*yanshi*): Take 1 *dou* (10 liters) of soybeans, soak in water for 3 days, steam thoroughly and spread on a mat (as before). When the beans are covered with a yellow coating [of mold], winnow, soak in water, drain off the water, and dry in the sun. For every 4 catties of beans (1 catty weighs about 1.33 pounds), mix in 1 catty of salt, plus half a catty of finely-cut strips of ginger. Place mixture in an earthenware jar. Season with pepper (*jiao*), orange peel, perilla, fennel, and almonds. Add water until it is one inch (*cun*) above surface of mixture. Top contents with leaves, then seal the mouth. Sun the jar for a month; then the savory soy nuggets will be ready.

Huang (2000, p. 341) notes that the process described above is identical in principal to that in the *Qimin Yaoshu* (Important arts for the people's welfare) (+544), reiterated about 350 years later in the *Sishi Zuanyao* (Important rules for the four seasons) (+900).

(3) Unsalted / bland soy nuggets nature and flavor (*danshi qiwei*): Bitter (*ku*), cold (*han*) and nontoxic. (4) Puzhou soy nuggets (*Puzhou shi*) nature and flavor: Salty (*yan*), cold (*han*), nontoxic. Note: Puzhou is a place in Shanxi province, China, noted for its distinctive soy nuggets. This is the earliest document seen (Feb. 2003) that mentions *Puzhou shi*.

The section titled "Yellow soybean koji" (*douhuang*, "bean yellow") describes the soybeans covered with yellow mold; they are the first step in making salty soy nuggets and are not a consumer food product. This section is divided into two parts: (1) "Explanation of names." Describes how to make *douhuang*. According to Li Shizhen (the author of this book): Take one *dou* (bushel) of black soybeans. Steam until cooked through. Spread on a mat and cover with rushes—as if you were making *jiang*. Allow the soybeans to mold until they have a yellow coating. Dry, then grind. (2) Nature and flavor (*qiwei*): Sweet, warm, nontoxic.

Dr. Huang offers a comparison of *danshi* and *douhuang* (Feb. 2003 Feb): Unsalted / bland soy nuggets (*danshi*) is an end product, which is largely free of molds when it is sold; it was traditionally used in Chinese medicine. Dr. Huang has never seen or tasted *danshi*, never heard of it being used in food, and never seen it for sale in the USA. *Danshi* is made by a two-stage fermentation. In the first stage, after the soybeans are covered with a yellow coat of mold, they are winnowed, soaked in water, rinsed to remove most of the white mold and its yellow spores, then sun dried. In the second stage, the beans are packed tightly into a container and incubated for 10-15 days depending on the season. This stage enables the enzymes to act on the soybeans, digesting some—but not all—of the soy proteins. If the incubation is too long, some of the excessive peptides resulting from digestion of soy proteins may give the *danshi* a bitter taste. By comparison, yellow soybean koji (*douhuang*) is an intermediate stage of soybean processing not normally sold, but used to make *jiang*.

(C) The section titled "Tofu": The first clear recipe for making tofu in China appears in chapter 25 of this book (Huang 2000, p. 303). Li says that the process for making tofu (*doufu*) originated with the Prince of Huai-Nan, Liu An. Black [soy] beans, soybeans, white [soy] beans, mud beans, peas, mung beans, etc. can all be used. There are six steps: 1. Soak the soybeans [in water]. 2. Grind the beans [to give a slurry]. 3. Filter the milk [to remove the insoluble residue {okara}]. 4. Cook the milk [for an adequate time]. 5. Add nigari / bittern (*yen lu*), leaf of the mountain alum tree (*shan fan*), or vinegar to coagulate the milk. 6. Collect the curds.

Li Shizhen continues: One can also obtain curds by mixing the hot milk in a container with gypsum powder. Various salty, bitter, sour, or pungent materials can also be used to coagulate the soymilk. If a film forms on the surface of the soymilk, it should be collected and dried to give yuba (*doufupi* or 'tofu skin'), which is itself a delicious food ingredient. Note 1. This is the earliest document seen (Oct. 2002) that mentions nigari or yuba. Li (1958) adds: "Vital energy and flavor (*chiwei*, of tofu): Sweet, salty, cold / cooling, slightly toxic." Huang adds (p. 303) that although Li gives no details about the tofu-making process, we can surmise that the procedure used in his time is very similar to that used today in the Chinese countryside. Huang (p. 304-05) reprints line drawings (from Hung Kuang-Chu 1984, p. 58-60) of the traditional process for making tofu still used in China, and notes that the same curdling agents or coagulants listed by Li Shizhen (bittern, mountain alum, vinegar, and gypsum) are still in use today.

85. Li Shizhen. comp. 1596. *Bencao gangmu* [The great pharmacopoeia (Continued)]. China. Passages on soy reprinted in C.N. Li 1958 #140, p. 95-96, and #311, p. 224-26. [Chi]

• **Summary:** Continued: Wade-Giles reference: *Pên Ts'ao Kang Mu*, by Li Shih-Chên (lived 1518-1593). The following information on soybeans and soyfoods appears in Chapter 25 of the *Bencao Gangmu*.

The section titled *jiang*, Li (1958, p. 95-96) states: Explanation of the name: According to the *Shiming* by Liu Xi (+150), *jiang* is like a military general (*jiang*) who directs and can control the poison in food. It is just like a general controlling the evil elements in the population. Explanation of the method: [Li] Shizhen says there are different varieties of *mianjiang* (which is sweet); it can be made from barley, wheat, sweet *jiang* (*tianjiang*), or bran *jiang* (*fujiang*). Bean *jiang* (*doujiang*) also comes in different varieties such as that made from soybeans (*dadou*), azuki beans (*xiaodou*), or peas (*wandou*, *Pisum sativum* L.) and soy sauce (*douyou*, literally "bean oil)." Note: Soy sauce is classified here as a subcategory of bean *jiang*. This is the earliest document seen (Aug. 2005) that uses the word *douyou* to refer to soy sauce.

To make soy sauce (*douyou*), take 3 *dou* of soybeans (1 *dou* is about 1 pint, so 3 pints of dry soybeans weigh about 2.43 pounds). Boil in water until soft. Mix with 24 catties of wheat flour (1 catty = about 1.33 pounds, so 24 catties weigh about 31.92 pounds). Allow them to become molded. For every 10 catties, add 8 catties of salt and 40 catties of well water. Blend to a slurry. Then collect the sauce [which separates].

Note: This is the earliest document seen (June 2007) that describes a method for making Chinese-style soy sauce in which a significant amount of wheat (or wheat flour or barley) is mixed with the soybeans before fermentation

begins. The ratio by weight of wheat to soybeans in this early Chinese soy sauce is about 13 to 1, whereas the ratio in modern (early 21st century) Japanese soy sauce is about 1 to 1. How could the early Chinese make so much wheat flour stick to such a relatively small amount of boiled soy beans? Maybe the soybeans were mashed, mixed with the wheat flour and shaped into cakes before letting the cakes become molded (See Wang and Fang 1987).

To make soybean jiang (*dadou jiang*), dry-roast soybeans (*dou*) then grind to a flour. For every *dou* (pint) add 3 *dou* of flour. Blend well and shape into cakes. Allow it to stand until it becomes moldy. For every 10 catties, add 5 catties of salt. Then cover it with well water [in a container], and sun it and collect it.

Concerning the use of soybeans in wine, Chapter 25 contains a section on “wine” (*jiu*) which refers to a type of soy wine called *doulinjiu* (W.-G. *tou-lin chiu*; “bean soak wine”) which is made by percolating regular Chinese wine (fermented from cereal grains) through roasted black soybeans. A recipe is given and it is stated that the *Congshu Jicheng Chubian* (Collected collecteana) (+1473), having 3,467 volumes, says that it cures post-partum white sickness, apparently an affliction suffered after the birth of a child.

Also describes how to make jiang from azuki beans (*xiaodou*) or from barley (*damai*).

Vital energy and flavor (*qiwei*, of jiang): Salty, cold / cooling, nontoxic. *Mienjiang* [made with wheat and soybeans] is salty. Bean jiang (*doujiang*), sweet jiang (*tianjiang*), soy sauce (*douyou*), barley jiang (*damaijiang*), and bran jiang (*fujiang*) are all salty and sweet [because they are made with wheat, which is hydrolyzed to sugars].

Huang (2000, p. 357) states that this book is the first to introduce the process for making sweet wheat-flour jiang (*tianmian jiang*). The process for making soybean jiang described in the *Bencao Gangmu* is very similar to that described in the *Jujia Biyong* (Essential arts for family living) (ca. +1350).

Huang (2000, p. 363) gives the process for making soy sauce, which appears in the *Bencao Gangmu* as an appendage to the section on jiang, titled “soybean oil” (*douyou*) which was obviously a synonym for soy sauce (*jiangyou*). Take 3 *dou* (1 *dou* = about 10 liters) of soybeans; boil in water until soft. Blend in 24 catties of wheat flour. Incubate until the mixture is covered with yellow mold. Mix 10 catties of the yellow jiang substrate with 8 catties of salt and 40 catties of well water. Ferment in an earthenware jar in the sun until the product is ready. Huang comments that although the passage does not explain how the soy sauce is separated from the fermented mash, it is absolutely clear that we have here a process based on jiang and the product can rightfully be called soy sauce (*jiangyou*).

Concerning the use of soybeans in wine, Chapter 25 contains a section on “wine” (*jiu*) which refers to a type of soy wine called *doulinjiu* (W.-G. *tou-lin chiu*; “bean soak wine”) which is made by percolating regular Chinese wine (fermented from cereal grains) through roasted black soybeans. A recipe is given and it is stated that the *Congshu Jicheng Chubian* (Collected collecteana) (+1473), having 3,467 volumes, says that it cures post-partum white sickness, apparently an affliction suffered after the birth of a child.

Huang also discusses from the *Bencao Gangmu*: Koji (*qu*) for making rice wine (*jiu*, p. 158). Malt sugar (*i*, p. 158). Red ferment (p. 196, 200-02). Malt sugar (*i t'ang*, p. 460).

Huang (2000) cites this (p. 621) as *The Great Pharmacopoeia* [or *Pandects of Natural History*]. Ming, +1596. Paraphrased and abridged translation: Bernard E. Read and associates (1-7). Textual references are to the 1975 edition published by Renmin Weisheng, Peking. It mentions dried young soybean sprouts (*dadou huangjuan* or “yellow curls”) as having medicinal properties.

Wilkinson (2000, p. 662) translates the title as *Collection of Materia Medica*, gives the publication date as 1602, and notes that Li lived 1518-1593.

86. Li Shizhen. comp. 1596. *Bencao gangmu* [The great pharmacopoeia]. China. See p. 360-71. 1965 ed., reprint of 1885 edition, Peking. Also reprinted in 1916 by Shanghai Hong Pao Chai Book Co., Shanghai. [Chi]

• **Summary:** Wade-Giles reference: *Pên Ts'ao Kang Mu*, by Li Shih-Chen (lived 1518-1593). The author: Bretschneider (1882, in *Botanicon Sinicum*, p. 54-55) notes: “Li was born at K'i Chou in Hu pei probably in the first quarter of the 16th century, and died toward the close of the same century. His literary name was *Tung pi*. He wrote under the pseudonym *Pin hu*. As was the case with the majority of early Chinese physicians of note, Li Shi chen was not a professional medical man, but a civil functionary and a magistrate of the district of P'eng k'i (T'ung ch'uan fu, Sz' ch'uan [Szechuan]). Besides this, his principal work, Li left several medical treatises. “Li began compilation of this work in 1552, and after 26 years' labour he completed it in 1578. He wrote out the manuscript three times before he was satisfied to give it out as complete. The author died before it was published, and his son, Li Kien yüan, presented the manuscript to the Emperor, in 1596, who ordered it to be printed.”

The work: Called *Honso Komoku* in Japanese, this is the most famous of the many Chinese herbals, and the most important Chinese work on materia medica and natural history. Also called a botanical encyclopedia, it is the first treatise of its kind in which the material is treated critically. Bretschneider (1882, p. 55) adds: “Several editions have been successively issued. The earliest now extant is, it

seems, that of Shun chi 15 (A.D. 1658). All editions which I have had an opportunity of examining are printed on indifferent paper and are full of misprints, which make the book very inconvenient for reference... The preface is followed by a general index of the 52 books (chapters) of the work, enumerating the 16 divisions and the 62 classes under which the whole matter is arranged... It begins with a critical review of the 42 capital works on *Materia media* published” previously.

Concerning the year of publication: Huang (2000, p. 621) says 1596. Yokotsuka (1986, p. 198) says 1590 and cites this as the earliest Chinese work to mention *chiang-yu* and *tao-yu* (the liquid separated from soybean *chiang*). Wai (1964) says 1596. Reischauer and Fairbank (1960, p. 308) say it was completed in 1578. Li (1958) says 1578. Merrill & Walker (1938) say 1590. Bretschneider (1881) says: Completed in 1578 but published in 1596 or 1597.

Talk with H.T. Huang. 1992. March 23. The most current, and one of the best, editions of this work was published in 1982 in Beijing by The People’s Health Press (2,977 pages). It is edited and extensively annotated by Liu Heng-ju. He compared several of the most important extant versions, and where they differ (e.g. where a word is written differently in different versions), he explains these differences in footnotes, and explains why he chose the word or text that he did for his basic text. There is no English translation of the *Pen-ts’ao kang-mu*, one of the great scientific works in China (and worldwide) because: (1) It is a huge book which would take a lifetime to translate; (2) A vast amount of research would be required for an accurate translation; and (3) The cost of the translation and publication, and the relatively limited demand for the finished work would probably make the venture unprofitable for a commercial publisher. Perhaps the Chinese Academy of Traditional Medicine would be able to undertake such a translation, working jointly with English-speaking Western scholars.

In the section on soybeans, this work refers to a type of soy wine called *tou-lin chiu* (“bean soak wine”) which is described as a sake-like fermented alcoholic beverage made from black soybeans. A recipe is given and it is stated that the *Ts’ung-shu chi-ch’eng ch’u-p’ien* (1473) said that it cures post-partum white sickness, apparently an affliction suffered after the birth of a child.

Wang and Fang (1987) write: The method of preparing *chiang-yu* (soy sauce) was first described in this work. Cooked soybeans were mixed with wheat flour, pressed into cakes, and left in the room until the cakes were covered with yellow mold growth. The molded cakes, or *ch’ü*, were mixed with salt and water and aged in the sun. After pressing, the liquid was known as *chiang-yu*. Li also described how to make a similar sauce (*shi-tche*) by boiling soy nuggets.

Needham (Botany, 1986, p. 318g): “The soya-bean, *Glycine Soja, ta tou*, was considered an antidote for indigestion and poisoned conditions of the intestinal tract, but Li Shih-Chen found that this never had any effect unless *kan ts’ao* (*Glycyrrhiza glabra*) was given with it (chap. 24, p. 4a).”

Fukushima (1979, p. 5-6): “The *chiang-yu* described in *Pen-ts’ao Kang-mu* (*Honso-Komoku* in Japanese), published in 1590 by Li Shih-chen (*Ri Jichin* in Japanese) in the Ming (*Min* in Japanese) dynasty, was also made with *koji* [*ch’ü*] manufactured by using soybeans and cereals (Fig. 4). (In this process soybeans were cooked in water, mixed with wheat, and spontaneously molded to form *koji*. Salt water was mixed in with a paddle, then the mash was insulated and aged. Finally it was filtered to make *chiang-yu*). The ratio of soybeans to wheat in the *koji* making was 3:2. This ratio is very close to that used in making regular Japanese *shoyu*, which is made by using equal amounts of soybeans and wheat.”

Wai (1964) notes that this book infers that soybean curd [tofu] was invented by Liu An.

Sato (1963, p. 20), in his book titled “Documents on Soy Nuggets, *Chiang*, Miso, and *Shoyu*,” cites this as the fourth earliest Chinese document seen on the subject. It was translated into Japanese by Suzuki Shintai.

Morohashi (1955) translated parts of the *Bencao* related to [soy] bean oil (*douyu*), bean sprouts (*douya*, *dounieh*), soy nuggets (*doushi*), tofu (*doufu*), [soy] bean flour (*doufen*), bean soak wine (*doulinjiu*), soybeans (*dadou*—production; there are black, white, yellow, dark brown, green, and speckled soybeans).

87. Francesco Carletti of Florence later says he saw miso in Japan (Early event). 1597.

• **Summary:** Carletti, a 16th century Florentine merchant (lived 1573-1636), set out from Seville, Spain with his father in 1594, on what was intended to be a relatively brief slave trading voyage but eventually became a circumambulation of the globe. In June 1597 he arrived in Nagasaki, Japan, where he saw miso soup—and crucified Christians. After losing most of the wealth he had accumulated by astute trading, he finally returned to Florence, Italy in July 1606. There he was welcomed at the court of Ferdinando de’ Medici [lived 1549-1609], Grand Duke of Tuscany, to whom he made the first verbal reports of his experiences, which later were written down as the *Ragionamente* (Chronicles). Thus, he didn’t actually write about miso until after July 1606. Scholars generally agree that the best copy is a 17th century manuscript titled *I Viaggi di Francesco Carletti* in the Biblioteca Angelica in Rome (Codice 1331; T.3.22). A much-polished and heavily edited version was published in 1701.

In 1964 Herbert Weinstock’s English-language translation of the Roman version was published as *My*

Voyage Around the World. On page 110 Carletti says the following about the rice miso (he calls it “*misol*”) which he saw in Japan in 1597.

“They prepare various sorts of dishes from fish, which they flavor with a certain sauce of theirs which they call *misol*. It is made of a sort of bean that abounds in various localities, and which—cooked and mashed and mixed with a little of that rice from which they make the wine already mentioned [saké, p. 100-01], and then left to stand as packed into a tub—turns sour and all but decays, taking on a very sharp, piquant flavor. Using a little at a time, they give flavor to their foods, and they call *shiro* [sic, probably *shiru* but possibly shoyu] what we would call a potage [soup] or gravy. They make this as I have said, of vegetables and fruit and fish all mixed together, and even some game, and they eat it with rice, which serves them as bread and is cooked simply in water and served in certain wooden bowls lacquered with red lacquer, eating it very cleanly and never touching it with their hands. For they eat everything by using two small sticks...”

Note: This is the earliest document seen concerning soy in connection with (but not yet in) Italy.

88. *Ekirinbon setsuyôshû* [Early Japanese dictionary]. 1597. Japan. [Jap]*

• **Summary:** This dictionary contains the earliest known published reference to shoyu (soy sauce) in Japan, written with the characters used today. Prior to this, other characters were used: Hishio/chiang, mame-bishio, etc. Written by a Japanese priest between 1469 and 1503, it was widely circulated in manuscript form and used by the common people. Modern rendering by Kawakami 1978, p. 220. It also mentions amazake and ko (the early term for amazake). Note: This is the earliest Japanese-language document seen that mentions amazake, which it calls “amazake” and “ko.” This is also the earliest document seen (March 2001) concerning the etymology of amazake.

Yokotsuka (1986, p. 198) gives the title and date as “*Ekirinbon-Setsuyoshu* (1598)” and notes that the term shoyu was written with the same Chinese characters as chiang-yu.

Fukushima (1989, p. 9): “The word ‘shoyu’ first appeared in *Ekirinbon-Setsuyoshu*, a Japanese dictionary published in 1597 during the Muromachi period.”

89. Saito, Akio. 1599. [Chronology of soybeans in Japan, 1336 to 1599, the Ashikaga/Muromachi period] (Document part). In: Akio Saito. 1985. *Daizu Geppo* (Soybean Monthly News). Jan. p. 14. [Jap; eng+]

• **Summary:** 1350—Dengaku (Oden) is mentioned in the records of the Gion shrine in Kyoto.

1444 June—The present characters for “tofu” appear in the *Kagakushu* encyclopedia.

1450—The suribachi (a serrated earthenware grinding bowl or mortar) becomes popular among the common people, therefore miso soup becomes popular.

1469—In the feudal domain of Sanuki (*Sanuki no kuni*) the Sakade Salt Farm (*Sakade Enden*) starts operation.

1500—In the published collection of Japanese poems and songs titled *Shichijû-ichiban shokunin-zukushi uta awase*, there is a drawing of a lady in a black kimono and white headband sitting cross legged on a low platform on a street and selling large and small pieces of cut tofu.

1521—The present characters for the word “shoyu appear for the first time in the book *Ekirinbon Setsuyoshu*.

1526—In a memorandum by Munenaga is written: “Late in the night, sitting by the fireplace together, and eating many Dengaku tofu” (*Yo mo fuke, irori-be ni hiza o narabe, Dengaku tofu o do kasanari.*) It seems that at the end of the Muromachi period, people spread miso on tofu, grilled it over a fire, then ate it.

1535—In Kishu (today’s Wakayama prefecture), Akagiri Umataro? (Zenuemon/Yoshuemon?) starts selling Yuasa Shoyu, which is derived from Kinzanji miso.

1558—Iida Ichirobei of the feudal domain of Shimôsa (*Shimôsa no kuni*; today’s Noda city in Chiba prefecture) makes tamari shoyu, called Kawanaka-jima Goyo Tamari, and sends it to the Takeda family in Koshu. This is the beginning of Noda Shoyu. It is said that the taste of shoyu gave a great boost to the energy of Takeda’s army. At about this same time Takeda Shingen (lived 1521-1573) starts to use dried-frozen tofu (*kori-dofu*) for his army in Kawanaka-jima after tasting the delicious kori-dofu from Sahtobei?

1559—The book *Tokitsugu Kyoki* by Yamashina Tokitsugu (lived 1507-1579) states that Tokitsugu sent a small keg of shoyu to Nagahaki kyoku. It seems that at the end of the Muromachi period, shoyu is becoming popular.

1560 May—Oda Nobunaga (who lived 1434-1582) wins the war over Imagawa Yoshimoto (1519-1560) in Okehazama. At about this time people start use the technique of frying to prepare the side dishes to their meals (*fukushoku-hin*) for the first time.

1573-91—Shoyu making starts on the island of Shodo-shima.

1574—Tanaka Chobei of the feudal domain of Shimousa (today’s Chiba prefecture) Ichikawa starts making shoyu.

1587—Maruo Magouemon of Hanshu Tatsuno makes shoyu using Mikazuki soybeans.

1591—Akagiri Saburobei of Yuasa in Kishu-han (today’s Wakayama prefecture) starts to use Shoyu Kaisen, a ship of at least 200 koku [9,520 gallons] capacity to transport his shoyu to other feudal domains (*kuni*) for sale.

1594—The term *koma-dofu* appears in the Rokuon Diary of Ginkakuji. “Rokuon” means “deer garden.” *Koma-dofu* is a very firm tofu which originated in Korea. Address: Norin Suisansho, Tokei Johobu, Norin Tokeika Kacho Hosa.

90. Companhia de Iesus [Society of Jesus (Jesuit)]. 1603. Vocabulario da lingua de Iapam, com a declaração em Portugues, feito por alguns padres, eirmaos da Companhia de Iesu [Vocabulary of the language of Japan, with definitions in Portuguese, produced by some fathers and brothers of the Society of Jesus]. Nagasaki, Japan. 403 p. [Por; Jap]

• **Summary:** At the bottom of the title page is written: “Com licença do ordinario, & Superiores em Nangasaqui no Collegio de Iapam da Companhia de Iesus. Anno M.D. CIII.” The “Licença” or license by Francisco Pasio is dated 2 Jan. 1603. A romanized version of each Japanese word is given, followed by a brief explanation in Portuguese. In Japanese, this book is known as *Nippo Jisho, Nagasaki-ban*. In 1960, Iwanami Shoten published a facsimile edition in Japan, titled *Nippo Jisho: Vocabulario da lingua de Iapam*, compiled by Tadao Doi (822 p., 22 cm), then in 1980 they published a Japanese translation (xxxiv + 862 p., 27 cm). Kawakami (1978) has summarized some soy-related portions. Iwai (1953, p. 11) notes that this dictionary was compiled by Joao Rodrigues—but this is controversial.

Soy-related terms in this dictionary, and a translation of their definitions from Portuguese, through Japanese, into English, are as follows:

Abura ague. 1. Abura agueno mono. Abura-agé [deep-fried tofu] or abura-agé mono. Things which are deep-fried in oil. Note 1. This is the earliest document seen (April 2001) that mentions fried tofu.

Aburidôfu. Slice tofu, which is made from beans like raw cheese, broil in a fire.

Amazaqe [Amazake], a still-bubbling fermented liquid that has not yet completely become sake; or sweet sake. Note 2. This is the earliest Portuguese-language document seen that mentions amazake, which it calls “Amazaque.”

Azzuqi or azzuqui [azuki beans]. “*Hus feijoes pequenos como lentilhas*” means “Beans that resemble green peas (endo). Azzuqigai is rice porridge (o-kayu) that contains azuki beans. Azzukimochi is mochi that contains azuki beans. Note 3. This is the earliest European-language document or Portuguese-language document seen (Jan. 2005) that mentions azuki beans, which it calls *Azzuqi* or *Azzuqui*.

Cabe [Kabe]. Same as tofu. A type of food which is made from ground beans. This is a woman’s word. Note 4. This is the earliest document seen (Feb. 2004) that uses the word “cabe” (or “kabe”) to refer to tofu.

Côji [Koji], a yeast used in Japan to make sake, or mixed with other things. Note 5. This is the earliest European-language document seen (July 2000) that mentions the word for koji.

Daizzu [Daizu]. Mame. Graos, ou feijoes de Iapao [grain, seed, kernel, or Japanese beans].

Dengacu [Dengaku]. Dancing monks (Bôzos). Or tofu which is skewered, and on top of each slice is spread miso;

then it is broiled.

Fanben [Hanben]. A type of food which is made by broiling tofu and simmering it with miso.

Ichchô. A way of counting some types of food, such as tofu.

Miso. A kind of mixture which is made with *graos* [grains, seeds, kernels], rice, and salt to season Japanese soups.

Note 6. This is the earliest European-language (or Portuguese-language) document seen (March 2009) that mentions miso, which it calls *Miso*.

Misocoxi [*Misokoshi*], a bamboo strainer used for straining miso. Note 7. This is the earliest document seen (Jan. 2009) that mentions a *misokoshi*.

Misoya, a shop that sells miso.

Misoyaqijiru [*Miso-yaki-jiru*], a type of soup (*Xiru*) made with tofu and finely sliced daikon radish. Note that the word tofu was written as “Tofus” in the dictionary but should be written “Tôfus.”

Misôzzu, which should properly be called Zosui, is a healing food made from vegetables, rice, miso, etc. and served to those who are old, weak, or sick. Another meaning of this term is a type of porridge [*kayu*] containing a mixture of rice, vegetables, and other things.

Nattô, a type of food made by a brief boiling of grains / seeds [*graos* is the word used, but soybeans are actually employed], which are then put into an incubation chamber (muro).

Nattôjiru, a soup (*Xiru*) made from natto. Note 8. This is the earliest Portuguese-language document seen (Feb. 2004) that mentions *natto* or *Nattôjiru*.

Saqe (sake, saké).

Tamari, a very savory liquid taken from miso which can be used for seasoning foods [when cooking] or at table. Note 9. This is the earliest document seen (Feb. 2005) that mentions tamari.

Tôfu*–Taufu. A type of food. It is made into the shape of a cheese by crushing soybeans. * Note: The sound of the Japanese character for bean (mame) is “tou.” But at that time “taufu” was the typical pronunciation. In other documents it is the same, for example the *Iitsugu Kyoki* (Iitsugu Diary) written during the Tensho period (1573–1586), with entries in 1588, 1591, and 1600. Sometimes they used the characters for “T’ang” (as T’ang dynasty in China) and “cloth,” although they were also pronounced as “taufu.” In this 1603 Portuguese dictionary there appear a number of tofu terms written in the “open sound form” (kaionke): Cabe [Kabe = wall], Dengacu [Dengaku], Fanben, Ichchô [One cho or cake of tofu], Vdondôfu, and Yudofu. One exception is the term Aburidôfu.

Tôfuya–Taufuya, a shop which makes and sells that cheese-like thing (tofu), which is made by grinding soybeans that have been soaked in water until they are soft.

Vdondôfu [Udon-dôfu]. Tofu which is made like udon (Japanese-style wheat noodles) and cooked.

Xôyu [Shoyu, or soy sauce], a liquid which corresponds to vinegar except that it is salty. It is used for seasoning foods. It is also called *sutate*. The character *su* means “bamboo mat” [as in “sudare”] and the character *taté* means “to stand up.” Note 10. This is the earliest Portuguese-language document seen (July 2006) that mentions shoyu or soy sauce, which it calls Xôyu.

Yudôfu–Yudaufu: A food made from thinly sliced tofu, served next to a *kakejiru*-type sauce [which is then poured over the top].

The following terms are not mentioned: Agé (but *aburagé* is), Daitokuji natto, Edamame (or Eda mame or Yeda mame), Fu (or gluten or wheat gluten), Hamanatto or Hamana-natto, Hiya-yakko, Kinako, Koya-dofu (or Kori-dofu), Okara, Soi*, Soj*, Shoyu, Tonyu, Unohana, Yaki-dofu, Yuba, Zoy*.

Note 11. This is the earliest dictionary of the Japanese language compiled by Europeans. It is also the earliest document seen (Feb. 2001) concerning soybeans or soybean products in connection with (but not yet in) Europe or Portugal, and the first such document to mention miso or natto.

Note 12. This is the earliest European-language (or Portuguese-language) document seen that mentions tofu, which it calls *Cabe*, *Tôfu*, or *Taufu*.

Michael Cooper (1974, p. 222-23), in his excellent biography of Rodrigues, states that in the preface to this celebrated work, the “compilers promised to produce shortly a supplement containing additional terms and words inadvertently admitted from the dictionary. The supplement appeared the following year, and the Bodelain Library, Oxford, possesses a copy of both the *Vocabulario* and its supplement bound together in one volume. The dictionary runs a formidable total of 330 folios, while the supplement extends to 71 more folios, each page carrying two columns of text. The value of this great dictionary, containing a total of 32,798 entries, is considerable.” “Whether or not Joao Rodrigues had a hand in the compilation of the *Vocabulario* is still a debatable point... Thus until further evidence appears, the identity of the principal European collaborators must remain conjectural.” Address: Nagasaki College of Japan.

91. Heo Jun [Jo, Dyun]. comp. 1613. Donguibogam [Dongui Bogam (RR), Tongui Pogam (MR)]. 25 vols. Korea: Nae-uwon. 787 p. 26 cm. Facsimile edition reprinted in 1975 by Namsandang (Seoul, Korea). [Kor]*
 • **Summary:** This is an early, important and widely known book in traditional Korean medicine. In it, the medicinal functions of doenjang are first described. It describes herbs that can be found on the Korean Peninsula. Embodying a

systematic approach, its basic theory is based on the Naegyong.

The compiler, Heo Jun, started working on the Dongui bogam in the 29th year of King Seonjo’s reign (1596) as requested by the king. The book was completed in the 2nd year of King Gwanhaegun’s reign (1610) and was published by Nae-uwon (“royal hospital”). The *Dongui Bogam* consists of 25 volumes. It was started by Heo Jun by the king’s request but was stopped because of the second Japanese invasion of Korea in 1597. After the war, the king once more ordered Heo Jun to complete the book and this time, the King allowed about 500 books kept in the national library to serve as sources of information. Heo Jun kept writing the book, but before it was completed, the king died. It was completed in the second year of his successor’s reign as the fruit of 15 years of hard work.

92. Wang Xiangjin. ed. 1621. Qunfang pu [The assembly of perfumes, or Monographs on cultivated plants]. China. Passage on soy reprinted in C.N. Li 1958 #154, p. 99, and #315, p. 227-28. [Chi]

• **Summary:** Wade-Giles reference: *Ch’iin Fang P’u*, by Wang Hsiang-Chin. Li (1958) and Bray (1984) give the date as 1621; Needham (1986) and Huang (2000) give the date as 1630. Ming dynasty. “Heavenly perfumes:” During the 8th month rains, it rained soybean flowers (*douhua*).

In the part titled “Assembly of cereals,” section No. 1 is about fertilizing the soil. Green beans are the best; azuki beans and sesame seeds are next best. It is advantageous to plant them before planting cereals. In the 7th or 8th month, plow them under. They are as effective as the droppings of silk worms or fresh manure, and are especially good for planting wheat. Note: This passage describing green manuring is found in the *Nongsang Cuoyao* (Selected essentials of agriculture, sericulture, clothing and food) (1314), and even earlier in the *Qimin Yaoshu* (Essential techniques for the subsistence of common people) (+544).

Section No. 3 titled “Black soybeans” (*heidou*) states: *Dou* is the general name for beans in the pod. The large ones are called *shu*. The little ones are called *ta*. The leaves are called *huo*.

Third lunar month: Plant black soybeans (*heidou*) and regular soybeans (*dadou*). Fifth lunar month: Plant the late varieties of regular soybeans, black soybeans, and yellow soybeans (*huangdou*). Ninth lunar month: Harvest the various mature soybeans.

Black soybeans (*heidou*): They are widely grown and the young plants (*miao*) grow to a height of 3-4 feet. The pods are several inches long, and may contain 5 or 6 beans. Some pods contain only 1-2 beans. They mature by the time of the first frost. The smaller ones are used medicinally. The larger ones can be eaten; they are used for making soy nuggets (*doushi*) or feeding animals. The flavor is raw (*sheng*) and neutral. When fried, it is considered to be a

“hot” (*re*, or “heating”) food, but when boiled it is considered to be a “cold” (*han*, or “cooling”) food. It can be used several ways. Children 10 years old or younger should not eat the fried beans together with pork; they might suffocate and die. Do not eat hemp seeds together with fried black soybeans. The leaves are called *huo* [and can be eaten]. Planting: A good time to plant soybeans is when the locust trees are free from insects. Plant sparsely in fertile soil and densely in poor soil.

Yellow soybeans: There are two varieties—large and small. You can harvest the seedlings (*miao*), the leaves, and the pods—just like the black soybeans mentioned above. The leaves are slightly lighter in color and the pods are a little fatter than those of black soybeans. The beans can be eaten as whole soybeans (*dou*), or they can be made into jiang (fermented soybean paste), soy nuggets (*doushi*), soy oil (*douyou*), or tofu (*doufu*). The residue (*zhi*, Jap: okara) from the tofu can be used to feed pigs. In times of famine, people also eat the okara. The presscake (*zhi*, “residue”) that remains after pressing out the oil (*you*) can be used as a fertilizer. The stems can be burned for fuel. The leaves are called *huo*, and when these leaves are young, they can be eaten. (Translated by H.T. Huang, PhD, Nov. 2002).

Note 1. This is the earliest document seen (Sept. 2001) concerning the use of soybean presscake (or cake—the residue from pressing out soy oil) as a fertilizer.

Note 2. This is the earliest document seen (Oct. 2001) concerning the use of okara (residue from tofu) as a feed for pigs or other animals.

Talk with H.T. Huang, PhD, expert on the history of Chinese food and agriculture. 2001. July 10. What is the difference between eating (*doumiao*) and (*huo*)? In antiquity in China, soybean leaves (*hou*) were sometimes used to make soup. These leaves were typically picked when the plant was still green but fairly large and mature; the plant was probably not uprooted, but continued to grow. On the other hand, the soybean seedlings (*doumiao*) were uprooted when they were still quite young, and the leaves were more tender. These tender leaves were prepared differently and eaten as a succulent vegetable. (*Doumiao*) is served today as a dish in Chinese restaurants, yet Dr. Huang has never seen it mentioned for use as a vegetable the early Chinese food literature—say before the year 1500. By contrast, Dr. Huang has never seen soybean leaves (*huo*) served as a dish in Chinese restaurants but they are mentioned in the earliest Chinese literature (*Book of Odes / Shih Ching*, 7th to 10th century B.C.).

H.T. Huang (2000, p. 456n) states that the sunflower (*xiangri kui*) originated in North America and was introduced to Europe in about 1510. In China, it first appeared in this 1621 book.

Wang Lianzheng (1987, p. 246) states that the sunflower is first mentioned in China in this book, where it is called *wenju* (“gentle chrysanthemum”) and *ying yang hua*

(“facing sunlight flower”). Today, sunflowers are an important oil crop in northern China.

93. Song Yingxing. 1637. *Tiangong kaiwu* [Exploitation of the works of nature]. China. Passage on soy reprinted in C.N. Li 1958 #160, p. 103-08. [Chi]

• **Summary:** Wade-Giles reference: *T'ien Kung K'ai Wu*, by Sung Ying-Hsing. Ming dynasty. For English-language translations of the entire book see: (1) E.-Z. Sun and S.-C. Sun (1966), and (2) Li Chiao-P'ing et al. (1980).

In the section titled “General names” the soybean (*shu*) is mentioned as one of the “five grains.”

The long section titled “legumes” (*shu*) notes that one of the many types of Chinese legumes is the soybean (*dadou*) of which there are two colors: black (*heidou*) and yellow (*huangdou*). Different varieties, their time of planting and harvest, and uses are discussed. North of the Huai River, black soybeans are fed to horses and mules that are used on long journeys. All types of jiang, sauce, and curds [tofu] made from beans are made from the soybean.

The chapter on “Vegetable oils and fats” notes that the oil of yellow soybeans is one of the best for eating; from each *tan* of yellow soybeans, 9 catties of oil is obtained. In Jiangsu (W.-G. Kiangsu) soybean oil is used as food for humans, and the meal cakes are fed to pigs. For more details, see the two English-language translations cited above.

Huang (2000, p. 444-45, 447, 450-52) cites and quotes from this book. See also Bray (1984, p. 513n, 518, 631, 707).

Letter from H.T. Huang, PhD, expert on the history of Chinese food and agriculture. 1994. May 10. This famous work on Chinese technology is one of the few post-Han Chinese documents that contains information about *Li*, the early Chinese forerunner of Japanese amazake. It states in Chapter 17: “In ancient times, *qu* (rice koji) was used for making wine (*jiu*) and *nie* (malt) for making sweet wine (*li*). In later times the manufacture of sweet wine was discontinued because its flavor was thought to be too weak, and the art of using malt [to make *li*] was consequently lost.” (Dr. Huang’s translation).

Note 1. This is the earliest document seen (Aug. 2002) that mentions soybean cake or meal.

Perkins (1969) says in a footnote on p. 71: “Beancake is not mentioned in the *Nung shu* (1313 ed.). The first reference of which I am aware is referred to in the Ch'en Tsu-kuei (1958, p. 99). It is also mentioned in Hsu Kuang-ch'i, 1628, and in the *T'ien-kung k'ai-wu*, both seventeenth-century publications.”

E.-Z. Sun and S.-C. Sun, trans. and ed. (1966). *T'ien-Kung K'ai-Wu, Chinese Technology in the Seventeenth Century*. University Park & London: Pennsylvania State University Press. Chapter 12, titled “Vegetable oils and fats” states (p. 215-16): “For eating, the oils of sesame seeds,

turnip seeds, yellow soy beans, and cabbage... seeds are the best.” Next in quality come perilla and rape-seed oil. The yield of oil (in catties per *tan*) is given for many Chinese oilseeds. The two oilseeds with the lowest / worst yields of oil are: cotton seeds 7, and yellow soy beans 9. By contrast, sesame, castor, and camphor seeds yield 40 and rape seeds yield 30-40.

Platt (1956, p. 835) notes: The second volume of this 1637 work “is devoted to oils and fats. From this work it may be deduced (according to information supplied by Dr. G.D. Lu) that the soya bean was grown for its oil as early as the third century A.D. The yield of oil reported at this time was 9 catties per picul of oil seeds; since a picul is a hundred catties it means that, using a simple press, 9% of oil was extracted. [Note 2. 1 picul = 133.3 pounds weight. This is about as much as one man with a yoke can carry]. It may be of interest to those concerned with animal nutrition that the press cake at that time was fed to pigs, or used as fertilizer... The fighting horses and donkeys had to be fed with the black soya bean in order to increase their endurance and muscular power.”

Hagerty (1917): This 17th century work on Chinese technology contains extensive information on soybeans, translated by Hagerty.

Note 3. This is the earliest document seen (Nov. 2005) that mentions cotton seed oil.

Note 4. This is the earliest document seen (March 2005) that mentions both rapeseed (or rapeseed oil, *chaiyou*) and soybean oil. See also Huang 2000 (p. 447-53, 456).

94. Yangming yueyi [Monthly activities to nurture the people]. 1640? China. Passage on soy reprinted in C.N. Li 1958 #321, p. 229-30. Undated. [Chi]

• **Summary:** Wade-Giles reference: *Yang Ming Yüeh I*. Author unknown. Probably late Ming dynasty. Some of the information on soybeans is quite similar to that in the *Yangyu Yueling* (Monthly ordinances for superabundance) (1640); it is not clear which appeared first.

The section titled “Third lunar month planting soybeans” states: Plant early in the third month, when the apricot (*xing*) flowers are in bloom and the mulberry leaves are just starting to turn red. You can plant until the 20th day of summer. Plant sparsely in fertile soil and densely in poor soil. Remove weeds as soon as the seedlings emerge. When the pods (*jia*) turn red [reddish-brown at maturity] and the stems are white, then its time to harvest. Plant the soybeans when there are no insects on the locust trees. Avoid planting on *shen* days; plant on *mou* days. Note: *Shen* and *mou* are days in the Chinese calendar following the 10 Celestial Stems and 12 Earthly Branches System.

The section titled “Planting black soybeans” (*heidou*). Plant in fertile, well-plowed soil. Take a handful of seeds, then broadcast one handful as you take each step. When the seedlings emerge, remove weeds. It’s best if there are no

weeds. You can also plant black soybeans in the fourth lunar month. The beans can be used for making jiang and as feed for horses. The stems can be burned for fuel. The beans can be sold by the company named *Guo* in the city. (Translated by H.T. Huang, PhD, Feb. 2003). Dr. Huang adds (half jokingly): The scholar who wrote this book is probably related to or employed by the owners of the *Guo* company. We are not told in what city this company exists.

Note: This is the earliest document seen (Feb. 2003) that mentions a commercial outlet for whole soybeans (used as a cash crop) or that gives the name of a company which resells soybeans.

95. Ginnaro, Bernardino. 1641. Saverio Orientale, o vero Istorie de Cristiani [Oriental Xavier, or the true history of Christianity]. Naples, Italy. With engraved title page and folded map. [Ita]*

• **Summary:** In Book 1, Chapter 13, p. 49, is a description of miso and miso soup (*shiru*). “*Misso: che è una pasta ammassata ri riso, faivoli, o vero ceci corrotti, con frumento cotto, e notabile quantità di sale, che per lungo tempo si conserva, e ridotta poscia in polvere, rende el brodo ove si mescola simile alla salamoia, da cui vene sluzzicato P appetito di mangiare il riso.*”

Note: This is the earliest Italian-language document seen (March 2009) that mentions miso, which it calls *Misso*.

96. Ryōri monogatari [The story of cooking]. 1643. Japan. [Jap]*

• **Summary:** This famous printed book by an unknown author is the earliest Japanese book that specialized in cooking. Therefore it was widely quoted in many subsequent cookbooks. Recipes include miso soup and taremiso. The names of the volumes include *Ryori Taikan*, *Nihon Ryori Taikan*, *Zokugun Shoruiju Inshokubu*, *Shokumotsu Koza*.

Note: This is the earliest document seen worldwide, and the earliest Japanese-language document seen (Jan. 2008) that mentions dried-frozen tofu or frozen tofu, which it calls *kōri-dōfu*. Miyashita, who cited this early reference, gave the book’s date as 1624.

In the section on “Foods, Sake,” is a section on “Quick preparation of amazake. Wash 1 *sho* (1.8 liters) of cooked and dried glutinous rice (*domyoji*) in hot water and drain. Mix in 1 *sho* of koji and 1.5 *sho* of water; grind in a suribachi very well. Strain in a strainer (*suino*), then simmer in a pot, while stirring. It will become good amazake. Adding white sugar is good.”

In the section titled “Man Kiki Gaki” is a description of “How to make Shirokawa Amazake. Crack by grinding 3 *sho* white rice, steam well and cool. Mix in 5 *sho* of koji, 5 *sho* of water, and knead well. Strain in a strainer (*suino*). Discard the pulp and keep the liquid to make amazake. Mix

it occasionally. In summer it takes 3 days and in winter 5 days until it is ready.”

97. **Product Name:** [Hatcho Miso].

Foreign Name: Hatchô Miso.

Manufacturer's Name: Hayakawa Kyuemon Shoten (Also called Hatcho Miso Kakkyu Goshi-kaisha).

Manufacturer's Address: Aza, Okan-dori 69, Hatcho-cho, Okazaki-shi, Aichi-ken 444, Japan.

Date of Introduction: 1645.

New Product–Documentation: Kaneko. 1972. Hatcho Miso; Shurtleff & Aoyagi. 1983. *The Book of Miso*. 2nd ed. p. 223, 256. The company claims that it was established in 1362, but other evidence indicates that it was established in the late 1500s or 1600s.

Letter from Tsuneo Hayakawa. 1992. March 17. He is studying the company's early history. Most early documents, written during the Edo period (1868-1912) state that the company was established in 1645. A death register, which had been kept in the Buddhist temple where his ancestors' tombs stand, supports this view.

Note: This is the earliest known commercial soy product (with a brand name) made in Japan (Jan. 2007; one of two products).

98. Yorozu kikigaki hidden [Secrets of things heard and written]. 1650. Japan: Publisher unknown. 102 p. 2 volumes. Japanese summary by Kawakami 1978, p. 158. [Jap]

• **Summary:** Within the 54 sections, 34 sections concern food preparation, preservation, etc. Includes how to make shoyu, natto, dried-frozen tofu (kori-dofu), and miso. Between 1650-1673, nine printings were made. Each successive publication became more compact and more popular.

99. Nattô monogatari [The story of natto]. 1650? Japan. [Jap]*

• **Summary:** Contains a recipe for Natto Miso Soup (*Nattô Jiru*).

100. Keijser, Jacob; Grevenraet, Joannes; Brummel, Luder; Baron, Henrick. 1652. [Re: Request for provisions for the settlement]. Letter to Adriaen van der Burch, director of commerce at the Deshima factory [Nagasaki, Kyushu, southern Japan], Aug. 14. p. 93-100. See p. 98-99. Handwritten, with signature. [Dut]

• **Summary:** This request includes: 80 to 90 kegs of good sake (*balijen goede sackij*). 50 piculs of wheat meal. 150 bales of white rice for the settlement and the ships. 70 bales of little beans (*boontjens*) for the settlement and the ships. 40 bales of peanuts (*cadjangh*) for the settlement and the ships. 10 bales of barley for the settlement and the ships. 16 pots of round rusk. 4 pots with sugarloaf. 25 piculs of

smoked hams. 2 kegs of mustard seed. 4 kegs of miso (*misio*). preserved with pickled vegetables (*connemonne [kô-no-mono]*). 15 kegs soy [sauce] (*soije*) and 16 pieces of dried katsuo (*caetchio [katsuobushi]*). 2 pots with various Japanese candied fruits to treat native leaders. As much rice as they need before they are back in Japan, because wheat is expensive in Tonkin.

Bibliographic reference in Dutch: NA, NFJ 285, ontvangen brieven (14-8-1652) 93-100. On microfilm.

Location: Nationaal Archief, Den Haag, De Archieven van de Nederlandse Factorij Japan (NFJ); toegangsnummer 1.04.21; inventaris nummer 285 [National Archives, Prins Wilhem Alexanderhof 20, The Hague. www.nationaalarchief.nl. The Archives of the Dutch Factory in Japan (NFJ); access number 1.04.21; record number 284].

Note 1. Henrick Creijers = Hendrick Craijers. Note 2. 1 picul is about 125 pounds, the amount a man can carry with a yoke.

Note 3. This is the earliest Dutch-language document seen (March 2009) that mentions miso, which it calls “misio.” Address: Written on the ship Taiwan moored on the river of Tonkin [in today's north Vietnam] before the bar.

101. Caesar, Cornelius. 1654. [Re: Order for provisions]. Letter to Honourable Hapart at the Deshima factory [Nagasaki, Kyushu, southern Japan], July 18. p. 46-56. See p. 53. Handwritten, with signature. [Dut]

• **Summary:** This order for provisions includes: 25 smoked hams, 4 kegs of miso (*4 balies miso*), 4 kegs of soy [sauce] (*4 ditos soijo*), 6 large kegs of the very finest pickled vegetables (*connemon van de alderbeste*), 25 bales of white stamped rice.

Note: This is the earliest Dutch-language document seen (March 2009) that uses the word “miso” to refer to miso.

Bibliographic reference in Dutch: NA, NFJ 286, ontvangen brieven (16-7-1654). On microfilm.

Location: Nationaal Archief, Den Haag, De Archieven van de Nederlandse Factorij Japan (NFJ); toegangsnummer 1.04.21; inventaris nummer 286 [National Archives, Prins Wilhem Alexanderhof 20, The Hague. www.nationaalarchief.nl. The Archives of the Dutch Factory in Japan (NFJ); access number 1.04.21; record number 286].

Note: About the sender: In *Pieter van Dam's Beschryvinghe van de Oostindische Compagnie*, by F.W. Stapel is an entry for Cornelius Ceasar. In 1609 he was born in Goes, a commune in Zeeland province, southwest Netherlands. By 1635 he was already a merchant in the VOC service. In 1636 and 1637 he was a merchant in Quinam [Cochin China]. Then he was a merchant in Taiwan and in Japan. In 1641 he became supreme merchant. From 1646-1651 he was back in Holland. In 1651 he became Council of Justice in Batavia. From 1653 to 1656 he was

Governor of Formosa. In 1657 he died in Batavia. This letter is a contemporary handwritten copy, in a letter-book for the administration on Deshima. Address: Governor of Taiwan and the Council of Formosa.

102. Coijett, Fredrick; Schedel, Fredrick; Dammans, R.; Alphen, Pieter van; Pedel, Thomas. 1655. [Re: List of provisions ordered]. Letter to Honourable Leonard Winnix on Deshima (Nagasaki, Japan), Aug. 3. p. 1-13. See p. 8. Handwritten, with signature. [Dut]

• **Summary:** In this letter (p. 8) is an order for provisions: 12 Japanese hams. 25 bales of white stamped rice. 6 kegs of good pickled vegetables (*connemon [kô-no-mono]*). 4 kegs of miso (*Balijen Miso*). 4 kegs of soy [sauce] (*Soija*). 4 bales of buckwheat. 8 Japanese room-mats (*camermatten*). 5 to 6 ordinary tea kettles.

Bibliographic reference in Dutch: NA, NFJ 287, ontvangen brieven (3-8-1655) 1-13. On microfilm.

Location: Nationaal Archief, Den Haag, De Archieven van de Nederlandse Factorij Japan (NFJ); toegangsnummer 1.04.21; inventaris nummer 287 [National Archives, Prins Wilhem Alexanderhof 20, The Hague. www.nationaalarchief.nl. The Archives of the Dutch Factory in Japan (NFJ); access number 1.04.21; record number 287].

Note: This is the earliest Dutch-language document seen (June 2007) that uses the word “Soija” to refer to soy sauce. This soon became by far the most widely used spelling of the word in Dutch. “Soije” was a distant second. Address: Fort Zeeland (Casteel Zeelandia) on Taiwan.

103. Coijett, Fredrick; Schedel, Fredrick; Dammans, Reijnier; Pedel, Thomas; Valentijn, Jacobus. 1657. [Re: List of provisions ordered]. Letter to [illegible] on Deshima (Nagasaki, Japan), Aug. 3. p. 1-5. See p. 4. Handwritten, with signature. [Dut]

• **Summary:** In this letter (p. 8) is an order for provisions: With the return ships, you must send for the use of this settlement and otherwise the following: 10 to 12,000 bales of new rice. 500 bales of wheat. 800 pairs of cotton dress coats for the for the slaves of the factory based on the model / pattern sent with the skipper of the *Domburgh / Domburg*; they must be more suitable than the last ones. 150 piculs [1 picul = about 125 lb] of good Japanese tobacco, to fill all cargo space available. 20 bales of white stamped rice. 8 hams. 6 kegs of pickled vegetables (*connemonne [kô-no-mono]*). 6 kegs of good sake (*sackie*). 3 kegs of miso (*missouw*). 3 kegs of soy [sauce] (*soija*). 2 pairs of scales [for weighing] with their accessories.

Note: This is the earliest Dutch-language document seen (March 2009) that uses the word “missouw” to refer to miso.

Bibliographic reference in Dutch: NA, NFJ 288, ontvangen brieven (8-7-1657) 1-5. On microfilm. Received

19 July 1657. Sent with the ship *Domburgh / Domburg*.

[National Archives, Prins Wilhem Alexanderhof 20, The Hague. www.nationaalarchief.nl. The Archives of the Dutch Factory in Japan (NFJ); access number 1.04.02; record number 1270].

About the sender: In *Pieter van Dam's Beschryvinghe van de Oostindische Compagnie*, by F.W. Stapel is an entry for Anthonio Paviljoen. From 1659 to 1665 he was commander of Jaffanapatnam in Ceylon. From 1665 to 1676 he was governor (head) of the VOC's settlements on the Coromandel Coast, along the east coast of southern India. From 1668 he was extraordinary councillor and from 1676 to 1678 ordinary councillor of the Council of the Indies (*Heren Raden van Indië*). In 1678 he was fired by the Heren XVII.

Nagapatnam (Now {2007} usually spelled Nagapattinam, formerly Negapatnam, Nagappattinam), which was one of these settlements on the Coromandel Coast, in today's southeast Tamil Nadu, 160 miles (275 km) south of Madras. It was occupied by the Dutch from 1660 to 1781.

About the recipient: In 1635 Joan Maetsuyker was appointed pensionary (*pensionaris*) to the Council of Justice of Batavia, in 1646 councillor of the Council of the Indies, from 1646 to 1650 governor of Ceylon and from 1653 to 1678 governor-general.

Note 3. Paliacatta (also spelled Paliacatte; today's Pulicat), long the chief Dutch settlement and headquarters of the VOC factories on the Coromandel Coast, was a Dutch post from 1610. Pulicat was a small walled town on the coast. At its center was the Dutch Fort Geldria, with its permanent garrison of soldiers, and its cannon and armory to protect the various Company trading posts along the Coromandel Coast. Inside the fortress was the governor's two-story residence, magnificent and solidly constructed. Pulicat became British in 1825. It is located in today's Tamil Nadu, at the south end of Pulicat Lake.

This letter has been collated into Casteel Geldria (Fort Geldria) in Palliacatta on 1 Nov. 1670 by Joannes Huijsman, the secretary. Address: Fort Geldria, Palliacatta / Paliacatta [in today's southern India].

109. Pavilioen, Anthonio; Meersche, Jacob van der; Welsingh, Isaac; Exbusier, Jacob; Buijtendijck, Reijnier van; Hervendoncq, Joris. 1670. [Re: Order for goods from Batavia for use by the Honorable Dutch East India Company in Nagapatnam]. Letter to Governor-General Joan Maatsuijcker [Maetsuyker] and the Councillors of the Indies [Heren Raden van Indië] in Batavia [Dutch East Indies],

Feb. 13. p. 550r to 574r. See p. 572r. Handwritten, with signatures. [Dut]

• **Summary:** On p. 572r (the recto {front} of folio {page} 572) we read: “Our order for commodities and other items for the use of the Honorable Company. Gold from Japan and from other places with which Coromandel has commerce each year. A list of merchandise: 8 little pints (*pintjes*) of fine oil of cloves, cinnamon, mace, etc. 12 *leggers* (a legger is a large keg of 400 liters capacity) of Spanish wine. 20 kegs of Mum. 2 kegs of good Dutch butter. 20 *leggers* of wine-vinegar. 9 aums (an aum is a keg of 153.6 liters capacity) of good olive oil. 30 kegs of sake (*Zakkij*) from Japan. 12 kegs of soy [sauce] (*baliën Soija*) from Japan. 6 kegs of miso (*missoe*) from Japan.

Bibliographic reference in Dutch: NA, VOC 1274, BBP (13-7-1670) 550r-574r. On microfilm.

This letter has been collated into Casteel Geldria (Fort Geldria, the headquarters of the VOC factories on the Coromandel Coast) in Palliacatta on 1 Nov. 1670 by Joannes Huijsman, the secretary. The letter is part of a thick bundle of correspondence in the series *Overgekomen Brieven en Papieren* (Letters and papers sent from Batavia and other factories to the headquarters of the VOC in the Netherlands).

This long letter is about management and commerce. The first three folios discuss ships that have arrived. Two folios deal with a political question in the area around Masulipatnam. Folios 552 to 562 discuss merchandise supplied from several districts to Nagapatnam by ship and from the interior, and commerce problems in some districts. Folio 563 is about the weight of the coin used in Pulicat. Folio 565 is about timber. Etc.

Location: Nationaal Archief, Den Haag, De Archieven van de Verenigde Oost-Indische Compagnie (VOC); toegangsnummer 1.04.02: inventaris nummer 1274, folios 550-574 [National Archives, Prins Wilhem Alexanderhof 20, The Hague. www.nationaalarchief.nl. The Archives of the Dutch East India Company (VOC); inventory number 1.04.02: record number 1274, folios / pages 550-574]. Address: Fortified town of Nagapatnam [in today’s southern India].

110. Hoorn, J. van. 1676. [Re: Order for provisions]. Letter to the Deshima factory [Nagasaki, Kyushu, southern Japan], June 30. Unpaginated Handwritten, with signature. [Dut]

• **Summary:** “General request for merchandise and necessities, which are required from Japan this year for several settlements in Asia as for the fatherland (*vaderlandt* / *patria*).

For Batavia: 100 kegs of several provisions such as: 40 kegs sake (*sackij*), 20 kegs soy [sauce] (*Soija*), 15 kegs pickled vegetables (*connemon* [*konmono*]), 10 kegs salted, pickled plums (*meboos* [*umeboshi*]), 10 kegs miso (*missauw*).

For Ceylon (*Chijlon*): 48 kegs of provisions as follows: 20 kegs of good sake, 12 kegs soy [sauce] (*Soija*), 8 kegs pickled vegetables, 4 kegs salted, pickled plums [*umeboshi*], 4 kegs *ameneranskij*.

For Coromandel (*Choromandel*): As many kegs of Japanese provisions as is specified hereafter for Bengal.

For Bengal: 17 kegs of provisions as: 6 kegs sake, 4 kegs soy [sauce], 3 kegs pickled vegetables, 2 kegs *Ameneranskij*, 2 kegs salted, pickled plums [*umeboshi*].

For Malacca: Provisions: 2 kegs each of Soy (*Soija*), pickled vegetables, miso (*missouw*), salted, pickled plums [*umeboshi*], and *ameneranskij*.

For Surat (*Zuratta*): 9 kegs of provisions such as sake, pickled vegetables, and soy [sauce] (*Soija*).

Bibliographic reference in Dutch: NA, NFJ 307, ontvangen brieven (30-6-1676). On microfilm.

Location: Nationaal Archief, Den Haag, De Archieven van de Nederlandse Factorij Japan (NFJ); toegangsnummer 1.04.21; inventaris nummer 355 [National Archives, Prins Wilhem Alexanderhof 20, The Hague. www.nationaalarchief.nl. The Archives of the Dutch Factory in Japan (NFJ); access number 1.04.21; record number 355. The pages are not numbered]. This letter is written in a letter-book for the administration on Deshima.

Note 1. It seems that soy [sauce] is always mentioned in lists of provisions for the table of VOC governors or directors, and their guests; this was written in one letter (see Coijet 1659, Aug. 7).

Note 2. This is a special letter. Part of it contains information from a letter written in the Netherlands by the directors in Holland (Heren XVII). The rest of the information comes from settlements in Asia and was collected and written in Batavia, then sent to Japan. Address: Batavia castle (Batavia in’t Kasteel) [today’s Jakarta, Indonesia].

111. Goens, R. van; Speelman, Cornelius; Both, Balthasar; Hurrt, Anth.; Blom, Dirk; Outhoorn, W. van; Camphuijs, Joan. 1680. [Re: Sending sake and soy sauce in casks and pots]. Letter to the Deshima factory [Nagasaki, Kyushu, southern Japan], June 30. Unpaginated. Handwritten, with signature. [Dut]

• **Summary:** Van Goens etc. request that the sake (*sakij*) and soy [sauce] (*soije*) be poured into well-made casks before shipping. They advise for sake and soy [sauce] as well as for pickled vegetables (*konnemon* [*kô-no-mono*]), *umeboshi* (*mebos*, [salt pickled plums]), etc. to send them in pots (*potten*). Every pot must be placed in a keg and the space between the pot and the keg must be filled up with straw, so there is no danger of the pots breaking in the kegs.

Van Goens etc. will send pots made in the Netherlands for the shipping of the sake and soy [sauce]. At Coromandel [on the coast of southeast India] the merchants are annoyed

at the bad quality of the sake in the kegs; this is caused by the native wood of which the kegs are made.

Another summary (by Cynthia Viallé): “Batavia informs Deshima that it is sending Dutch tubs to hold the sake and soy [sauce]. The tubs should be cleaned first and prepared to contain the sake and soy.”

An appendix to this letter: For Batavia: Four aums of Soy [sauce] in aums and half aums [Note: 1 aum is a measure of capacity (a barrel) of about 177 liters]. Twenty pots put in kegs with pickled vegetables (*konnemon*) and miso (*missou*). Twelve pots of umeboshi as before with fruits. If possible we want them as good as the Japanese send to their friends who live in Batavia, because those are better than the fruits they usually send to us.

For Coromandel: 6 quarter kegs of miso (*missouw*). 10 kegs of Soy [sauce] (*Zoija*). 10 kegs of pickled vegetables. 12 double kegs of saké (*Zackij*). 10 kegs of *omenaranski* [meaning unclear], 4 kegs of umeboshi.

For Ceylon [today's Sri Lanka]: 15 single kegs of Soy [sauce]. 6 double kegs of saké (*sackij*). 12 kegs of pickled vegetables. 20 kegs of umeboshi. 12 kegs *omenaranski* [meaning unclear], 6 kegs of miso (*missouw*).

Bibliographic reference in Dutch: NA, NFJ 311, ontvangen brieven (30-6-1680). On microfilm. The first page of this letter is torn off.

About the sender: Rijckloff van Goens lived 1619-1682. In 1631 he began his service (as a boy) in the VOC (Dutch East India Company). In 1655 he returned home to the Netherlands. In 1656 he was appointed to the extraordinary Council of India (the Dutch East Indies). From 1660 he was governor of Ceylon. From 1675-1678 he was director-general in Batavia, and after that until 1681 he was governor-general. He died in Nov. 1682 at home in the Netherlands.

Location: Nationaal Archief, Den Haag, De Archieven van de Nederlandse Factorij Japan (NFJ); inventaris nummer 311 [National Archives, Prins Wilhem Alexanderhof 20, The Hague. www.nationaalarchief.nl. The Archives of the Dutch Factory in Japan (NFJ); record number 311]. Address: In the castle (*kasteel*) Batavia [today's Jakarta, Indonesia].

112. Shixian hongmi [Guide to the mysteries of cuisine]. 1680. China. Passage on soy reprinted in H.T. Huang 2000, p. 325-27. [Chi]

• **Summary:** Wade-Giles reference: *Shih Hsien Hung Mi*. H.T. Huang (2000, p. 623) states that this book is attributed to Wang Shizhen (Wade-Giles: Wang Shih-Chên) but more probably was written by Zhu Yizun (W-G: Chu I-Tsun).

Huang states (p. 324) that frozen tofu (*dong doufu*; W.-G. *tung toufu*) is first mentioned in Chinese in this work. The section titled “Frozen tofu” states: In the depths of winter, place a cake of tofu (*doufu*) outdoors in a basin of water overnight. The water will freeze even though the tofu

itself may not. However the beany flavor will be lost in the water, leaving the flavor of the tofu much improved. Another way is to freeze the tofu itself without the water. When thawed, it will look like a little beehive. Wash it well. Heat it in a soup base or fry it in oil. It will be an unusual dish regardless of how it is cooked. Huang adds that this same description of the process is repeated in the *Yang Xiaolu* (1698). Note: Dr. Huang states (March 2004) that the term *dong doufu* almost always refers to tofu that has been frozen, then thawed and dried. However he has never seen an early description of how it was thawed and dried. In addition, he has never heard the term *bing doufu* (“ice tofu”), meaning “frozen tofu.”

Huang (2000) states (p. 325) that pressed tofu (*doufugan*, “tofu + dry”) is first mentioned indirectly in this work in connection with the preparation of smoked tofu (*xun doufu*; W.-G. *hsiün toufu*), which is first mentioned in Chinese in this 1680 book. The section titled “Smoked tofu” states: Press tofu until it is as dry as possible. Soak it in brine, wash well, then dry it in the sun [to give *doufugan*]. Spread sesame oil over the surface, then smoke it. Another method is to soak tofu in brine, wash well, then dry it in the sun. Boil it in soup stock, then smoke it.

When William Shurtleff saw pressed tofu (*doufugan*) prepared in Taiwan and China during the 1970s, it was always pressed using either a hand-turned screw press or a lever-press with huge stones. He never saw it being dried in the sun. Perhaps the efficiency of the screw press in removing moisture from the tofu made the sun-drying unnecessary. Note that sun-drying takes extra time and exposes the warm tofu to unwanted microorganisms.

Huang (2000, p. 326) translates the earliest known account of making fermented tofu*: To make Fujian (W.-G. Fukien) style fermented tofu (*doufuru*, W.-G. *tou fu ju*), press tofu until it contains a little moisture as possible or wrap it in fine cotton paper and desiccate it in fresh ashes. Cut cake into thick square pieces and place them in rows on a bamboo steamer pad. After all steamer tiers are filled, cover steamer. [The best time to make it] is in the 2nd or 3rd month in spring or 9th or 10th month in autumn. Place steamer in an airy place. After 5 or 6 days, surfaces [of tofu] will be covered with a hairy growth, which may gradually turn black or greenish red. Wipe hair off tofu squares with a piece of paper. Save it, making sure not to damage the skin. For [the tofu from] each *dou* of beans, prepare 3 catties of soy sauce and 1 catty of fried salt. (If soy sauce is not available, use 5 catties of salt.) Grind 8 ounces of fresh red ferment spiced with clean peppercorn, fennel and licorice, then mix powder with salt and wine. Place tofu in a jar, add wine sauce mixture, then seal mouth of urn with clay. Allow urn to stand for 6 months; an excellent flavour will result.”

(Footnote: *The original passage is interspersed with notes that describe a variation of the process as it was practiced in Zhejiang (W.-G. Chekiang). These notes make

the text somewhat confusing to read, so they were left out in the translation. However, from these notes we can reconstruct the Zhejiang process follows: After the steamer is filled with tofu squares, steamed them. Place steamer, while still hot, on a bed of rice straw and cover completely with rice husks—in a place with little air movement. Remove tofu squares after 5-6 days. Press down and flatten the hairy growth. [This will help to keep the product fresh.] Then layer the squares in a jar. Sprinkle a pinch of salt on each piece of tofu until all surfaces are evenly salted. For each layer of tofu there should be a layer of salt. When salt is dissolved, each piece is heated in the sun by day and marinated in sauce mixture [as indicated in the Fujian process]. Continue sunning and marinating until all sauce is used up. Soak layered tofu in a jar with wine. Then seal mouth of urn with clay. Allow the urn to stand for 6 months and an excellent flavour will result).

Note: This is the earliest document seen (Feb. 2007) that mentions fermented tofu, which it calls *doufuru*.

Huang (2000, p. 326) continues by noting: Two other passages in the *Shixian Hongmi* are also of interest in this connection. One describes a method for making *zao rufu* (W.-G. *tsao ju fu*), i.e. fermented tofu (*furu*) aged with a fermented mash [rice wine dregs]: Transfer ripened *rufu* or samples that are too salty in layers to a new vessel. Line fermented mash or residue between layers and allow material to age. A product with a unique flavor is obtained. The other deals with the making of *doufu fu* (W.-G. *tou fu fu*), a deep fried ‘stinky’ dewatered tofu: Take good quality [pieces of] tofu and grill in oil. Then cover with a cloth screen to keep out flies and other insects. When a “stinky” odour is developed, fry the pieces again in hot “boiling” oil. The flavor is excellent.

Huang (2000, p. 326-27) comments further: Two interesting points emerge from these passages. First, by the time that the *Shixian Hongmi* (+1680) was published, *furu* and *rufu* had apparently become synonyms for fermented tofu. The word *fu* could now mean a gel or custard made from any edible suspension or emulsion of food material, and *ru* any type of dairy or soy milk derived product. Second, although the word *zha* (W.-G. *cha*) was not used, there is no question that the frying in “boiling oil” shown in the second passage indicates that deep frying was a common method of cookery during the Ming dynasty.

Huang (2000, p. 341) states that this book contains an interesting recipe in which soy nuggets (*shi*) are stewed with pieces of pressed tofu (*doufugan*) and bamboo shoots.

A full-page table (Huang, p. 372) shows the “Usage of soy condiments in food recipes from the Han to the Qing dynasties.” Seasonings based on *jiang* (fermented soybean paste) are used in 49 recipes: *jiang* itself in only 8, soy sauce made from *jiang* named *qingjiang* in 1 recipe, soy sauce named *jiangyou* in a whopping 37 recipes, soy sauce named *jiangzhi* in 2 recipes, and soy sauce named *jiangshui*

in one recipe. Seasonings based on soy nuggets (*shi*) are used in only 6 recipes: Soy nuggets (*shi*) in 4 recipes, and soy nugget sauce named *shizhi* in 2.

Talk with H.T. Huang. 2001. Feb. 20. This 1680 book contains a recipe titled Soy Sauce Pressed Tofu (*Jiangyou Fugan*) which states: Cut pressed tofu (*doufugan*) into pieces. Mix 1 catty of soy sauce with 2 catties of water. Filter the liquid mixture then boil it. Filter it again to remove any remaining residue. Now add to the liquid: mushrooms and 4 different spices (*dingxiang*, *baiqi*, *dahuixiang*, and *guipi* {cassia bark, *Cinnamomum cassia*}), and tofu. Boil for several minutes. Remove from heat and allow to stand for half a day. The color still will not be very dark. Remove tofu from liquid and dry it. After 1 night, repeat the process of boiling and soaking several times. Note: This yields a highly seasoned tofu with a long shelf life at room temperature.

Note: This is the earliest document seen (Feb. 2004) that recommends adding mushrooms or spices / seasonings to soy sauce to enhance its flavor.

113. [Manifest (cargo-list) of goods imported to Batavia in 1681 by two Chinese junks]. 1681. Colombo. p. 860r-61r. See p. 860r. Feb. 7 and 28. Unpublished manuscript. [Dut] • **Summary:** Two Chinese trading junks had arrived from Japan in 1681. On Feb. 7, the junk of captain Quanjock arrived with: 22 straw Calmus (Sweet flag) roots... 1 wicker basket (*canasser*) of medicine and one of tea, 681 kegs and pots containing pickled vegetables (*connemon [kô-no-mono]*), soy [sauce] (*soij*) and miso (*missoij*).

Note: This is the earliest Dutch-language document seen (March 2009) that uses the word “missoij” to refer to miso.

On Feb. 28 the junk of captain Lunsincqua arrived with: 40 little bureaus. 5 double kegs and 6 single kegs of camphor. 200 kegs and pots containing chestnuts (*carthanjen*), soy [sauce] (*Zoija*), and pickled vegetables (*connemon [kô-no-mono]*).

Bibliographic reference in Dutch: NA, VOC 1354, OBP (7 and 28-2-1681) 860r-861r. On microfilm. This letter is part of the correspondence in the series *Overgekomen Brieven en Papieren* (OBP)—letters and papers sent from Batavia and other factories to the headquarters of the VOC in the Netherlands. This is an important and voluminous part of the VOC archive.

Location: Nationaal Archief, Den Haag, De Archieven van de Verenigde Oost-Indische Compagnie (VOC); inventaris nummer 1354, folio 860 [National Archives, Prins Wilhem Alexanderhof 20, The Hague. www.nationaalarchief.nl. The Archives of the Dutch East India Company (VOC); record number 1354, folio / page 860]. On microfilm. Address: Colombo [in today’s Sri Lanka].

114. Schinne, Isaac van; Cansius, Hendrik; Jonge, Constantin Ranst de; Buijtenhem, Hendrik van; Sweers, Balthasar; Dijck, Pieter van. 1681. [Re: Sending provisions]. Letter to the Governor-General and the Council in Batavia [today's Jakarta, Indonesia], Oct. 31.

Handwritten, with signature. [Dut]

• **Summary:** The Deshima factory is sending 1,000 pairs of cotton stockings, all the porcelain, also the soy [sauce] (*Soija*), saké (*Sackij*), miso (*Misou*), pickled vegetables (*Konnemon [Kô-no-mono]*), and umeboshi (*Mebos* [salt pickled plums]), all of the best quality we can get, just as you ordered.

Note: This is the earliest Dutch-language document seen (March 2009) that uses the word “Misou” to refer to miso.

Location: Nationaal Archief, Den Haag, De Archieven van de Nederlandse Factorij Japan (NFJ); toegangsnummer 1.04.21; inventaris nummer 312 [National Archives, Prins Wilhem Alexanderhof 20, The Hague. www.nationaalarchief.nl. The Archives of the Dutch Factory in Japan (NFJ); access number 1.04.21; record number 312]. Address: Deshima factory, Nagasaki [Japan].

115. Chen Qiyuan. 1682. Maoshi jigubian [Examination of Mao's ancient *Book of Odes*]. China. Passage on soy reprinted in C.N. Li 1958 #177, p. 115-16. [Chi]

• **Summary:** Wade-Giles reference: *Mao Shih Chi Ku Pien*, by Ch'ên Ch'i Yüan. Qing dynasty. The section titled “Ode to the seventh month,” which refers to Ode 154 in the *Shijing* (The Book of Odes); summarizes earlier knowledge of soybeans (*shu, dadou*), azuki beans (*xiaodou*), and other beans. Soybeans come in various colors, including black, white, yellow, dark brown (*he*), green (*qing*), and spotted / speckled (*ban*). They are used to make soy nuggets (*shi*), jiang, tofu (*fu*) and oil (*you*). Black soybeans are used as medicine. (Translated by H.T. Huang, PhD, Dec. 2002). Dr. Huang adds: The *Shijing* (Book of Odes) is a compilation which is considered to be the oldest of the five Confucian classics. In ancient times, there were several versions of this compilation. The version compiled by Mao Hêng in the early Han dynasty (2nd century BC) is the one that has been handed down to us and is considered the most trustworthy. When people cite or refer to the *Shijing*, they actually mean Mao's compilation.

116. Kurokawa Michisuke. 1684. *Yôshû fushi* [Topography of Yamashiro near Kyoto, based on *Yoshu* in ancient China]. 10 volumes. Japanese summary by Kawakami 1978, p. 266. [Jap]

• **Summary:** Describes shoyu making. Fukushima (1989, p. 9) states that the *Yoshu-Fushi* (Kurokawa, 1682) describes miso and shoyu.

Iino (2003, p. 8) quotes from this 1684 book: “... though *Sakai-joyu* (Sakai soy sauce) was once available only from liquor shops in Izumi (modern-day Osaka) and remains very

popular, soy sauce is now made by liquor shops in Kyoto, as well as made by hand at home making the purchase of *Sakai-joyu* unnecessary.” “In the first half of the Edo Period (17th century), soy sauce was made in all regions of Japan and could be purchased anywhere. In addition, soy sauce was made by hand in the large majority of houses”—This is made clear by this references in this book. “The method for making soy sauce is first recorded in the *Yôshu Fushi*. The method described calls for a malt to be made from boiled soybeans and roasted barley. Salt and water are added to the malt and the entire mixture placed in a large barrel. The mixture is to be stirred two or three times a day with a pole resembling an oar. After a minimum of 70 days, the *moromi* (dregs [mash]) is to be placed in a sack cloth. A stone is to be placed on top of the sack and the liquid squeezed out. This liquid can then be boiled with other ingredients to create a variety of dishes.” Iino then comments: “This explanation shows us that the method for producing soy sauce varied little from the way it is made today, though rather than wheat, barley was used and heat was not applied to the extracted liquid.”

117. Rakka Yajin Danshoken. 1686. *Shogei shokan: Ryôri no bu* [A small sample of various skills: Cookery section]. Japan: Nakamura Magobei in Kyoto, Honya Kiyobei in Edo (Tokyo), and Okada Saburo in Osaka. 66 p. Japanese summary by Kawakami 1978. [Jap]

• **Summary:** Pronunciation of the author's name is not clear. This book contains many interesting recipes but almost all were copied from the *Ryori Monogatari* (1643) and the *Edo Ryori-shu*. It describes methods for making Maruyama Hishio and tamari, plus a rich miso soup recipe. It is not clear whether or not he copied these recipes.

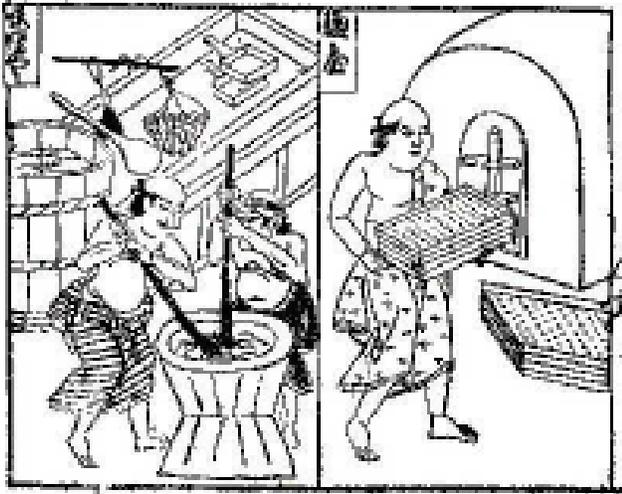

118. Jinrin kinmô zui [Illustrated encyclopedia of life in the Edo period]. 1690. Kyoto, Japan. Reprinted in 1990 by Heibonsha (Tokyo); edited by Asakura, Haruhiko. [Jap]

• **Summary:** The following page numbers refer to the 1990 reprint edition published in Tokyo by Heibonsha. The compiler of this remarkable work is unknown. At the bottom of almost every page (up to p. 293) are one or two half-page illustrations. Pages 317-31 are footnotes, followed by a syllabary index (a e u e o, ka ki ku ke ko).

The original edition was divided into seven volumes, including: 2. Noh drama. 3. Producers (farmers, woodcutters, fishermen, etc.). 4. Merchants (sellers). 5. Craftspeople. 6. Various and other jobs. 7. Entertainers. At the end is a long section of footnotes and annotations.

Page 121. The illustration is titled *Kuzune-hori* (Digging kuzu root). Yoshino kuzu is the best known in Japan.

Page 142. Shoyu is a famous product of Sakai. Produced in Osaka and Sakai, it is shipped to various places (no illustration).

Page 144. The right illustration is titled *Koji-shi* (Koji maker). Miso makers, manju (steamed bun) makers, and many others use koji. The illustration shows a man carrying four koji trays (*koji-bune*) filled with koji; he is about to put them into the incubation room (*muro*, which has a rounded top) where the koji will ferment. The text mentions a “thin board” (*usuita*), which may be a second type of koji trays, shown on the ground at right, lacking either one or both ends. The volume of koji is measured by the standardized size of the koji tray.

Page 144. The left illustration is titled *Miso-ya* (Miso shop). It shows two men mixing or pounding something (either koji, cooked soybeans and water before fermentation, or miso after fermentation) in a wooden mortar (*usu*, *suribachi*) using long wooden spatulas or pestles. They use a wooden spatula (*sekkai*) as their store sign. Behind the men to the left is a vat of fermenting miso with stones on top for pressure. Two wooden scoops in a rectangular wooden “boat” are used for scooping and measuring koji, cooked soybeans, and/or salt. The text says: “Miso makes a good seasoning and helps keep people healthy. A day cannot go by without it.”

Page 152. The illustration, titled *Kome-ya* (Rice shop), shows a man unloading a bale of rice (wrapped in rice straw) from the back of his horse. Nearby is a rice merchant, standing on a low platform near two other bales of rice. The text notes that the shop sells the “five grains” (*go-koku*), which include soybeans (*daizu*).

Page 160. The left illustration, titled *Yakidofu-shi* (Grilled tofu man), shows a man making grilled tofu over a rectangular brazier. In his right hand is a fan, with which he fans the coals beneath several cakes of tofu. In his left hand is a skewer with two prongs that pierce a cake of tofu. In front of his brazier is a wooden pail, which may be used to store cakes of tofu in water. At the front left is a sloping tray on which slices of tofu are drained. The maker of grilled

tofu can found in market places, temple gatherings, festivals, and wherever people gather around.

Page 162. The illustration, titled *Ko-ya* (Flour shop), shows three people turning a large hand-turned stone mill in which various types of flour (including soy flour) are ground. Ropes from the ceiling hold up the t-shaped end of a push-pull device used to help turn the heavy upper stone.

Page 166. The right half of the illustration is titled *Tataki natto*. To make this natto, dice stringy (*itohiki*) natto finely, then shape into a thin, flat square. Mix in finely chopped greens and tofu. It is an inexpensive, fast food. It is sold by walking street vendors from the end of September until February, especially at Tomikoji-dori, Shijo-agaru machi (probably in Kyoto). The illustration shows two men in front of a shop. Each is carrying a shoulder pole on one shoulder; from each end are suspended containers used to hold food. Each is also wearing straw sandals (*waraji*). The man on the right carries containers that are shaped like boxes with the long edges oriented vertically. A sliding panel may be used to open each box. Inside are either utensils and the ingredients for making tataki-natto, or bowls of tataki-natto ready to eat.

Page 166. The left half of the illustration is titled *Horo miso*, which is a kind of miso. The character for *Ho* means “law” or “dharma.” The man on the left has cylindrical wooden containers (*magemono*, shaped like traditional Japanese steamers) suspended from each end of his shoulder pole. Atop each is a bamboo mat (*sudaré*). The text states: This miso is made with black soybeans (*kuro mame*). The men who sell it all wear orange robes dyed with persimmons. They never put down the merchandise. Its container was covered and they carried it using a shoulder pole to keep it clean. When they had to put it down, they placed it with one side leaning against something. If anyone stepped over it, the seller demanded that that person buy it.

To make *horo miso*, cook black soybeans, then drain off and squeeze out the liquid. The result is a very firm miso with a low water content. Originally it was used in temples, but later it came to be used by the common people.

Note: Naomichi Ishige, a scholar of and expert on Japanese food history, writes (personal communication, March 2008): “To make *horo miso*, mix miso, minced walnut, sesame, and Japanese *sansho* pepper, then saute the mixture with vegetable oil in a pan. People eat *horo miso* with rice, or have it as a relish when they drink sake.

“In the *Jinrin kinmo zui*, the reason tatakhi natto is thin and formed is because people thought that type of natto could be easily dissolved in miso soup. However, its rectangular shape does not relate to the way of cooking.

“I am not sure how the peddler in the picture put his goods in a box that he carried. I only imagine that he wrapped a rectangular tatakhi-natto in a bamboo sheath and stored it in the box.

“When peddlers began to sell granulated itohiki natto, they put the itohiki-natto into a bamboo basket. They ladled up the quantity needed by a rice scoop (*shamoji*) and sold it. Or, they wrapped the itohiki-natto in a straw parcel and sold the parcel.” See also letter about natto history from Ishige sensei to Shurtleff, dated 16 March 2008.

Page 225. The right illustration is titled *Tofu-shi* (Tofu maker). The text states: Among the craftsmen, tofu makers rise the earliest each morning. Some sell deep fried tofu pouches (*aburaagé*). The book *Kuni Hana Manyoki* mentions the places named Maruyama and Reizan where the craftsmen lived. There may have been a lot of tofu makers who lived in this area. The illustration shows a tofu maker in his shop, sitting at the end of a firm pole used as a lever press to press the soymilk out of the okara in the pressing sack (which is placed on a rack) into the wooden vat below. It will then be curdled to make tofu. Also visible in the tofu shop are a wooden tofu forming box with 3 holes in each side, and four hanging *noren* curtains.

Page 291. The illustration is titled *Yaku-harai* (Driving out bad luck). The text mentions *setsubun* (the evening of the last day of winter, just before the first day of spring, also celebrated by some as New Year’s Eve—according to the old lunar calendar) and roasted soybeans (*iri-mamé*). On the evening of *setsubun*, Japanese wished to be cleaned of all bad spirits and bad luck. So they scattered roasted soybeans (with coins?) and cried out a slogan wishing for long life. This kept them very busy. Note: New Year’s Eve and Day are not traditional Japanese concepts; they were imported from China and the West during the 20th century. Address: Japan.

119. Yaoya-shû [Collection of various things]. 1693. Japan: Publisher unknown. Volumes 1-3 have 54, 48, and 46 pages respectively. Japanese summary by Kawakami 1978, p. 152. [Jap]

• **Summary:** The three parts of the book discuss (1) processing foods, (2) cooking, and (3) mochi and confectionery (*kashi*). This is mostly a copy of Gorui Nichiyo Ryori Shinan-sho, but the sequence of the material and the wording has been changed. Some new things have been added. Includes discussions of Nara Horin Miso, quick production of shoyu, and quick preparation of amazake, and Ukeire Tofu. It is not known what the latter is.

120. Hitomi, Hitsudai? 1695. [Honcho shokkan. See Pen chao shih chien]. [Chi]*

• **Summary:** “Our country’s food model?” Yokotsuka (1986, p. 198) cites this as Honcho Shokukan (1962) but apparently does not cite it in his bibliography.

121. Hitomi, Hitsudai. 1695. Pen chao shih chien [A mirror of food in this dynasty. 12 vols.]. Osaka?: Hiranoya Katsuzemon. 22 cm. Widely referred to as *Honchô Shokkan* in Japanese. Modern rendering by Morohashi 1955, trans. p. 13. Complete modern translation into Japanese by Isao Shimada (1976; Tokyo: Heibonsha). [Chi]*

• **Summary:** This book, written by a Japanese man in Japan, yet entirely in Chinese, contains early references to yuba, frozen tofu, natto, shoyu, and miso. When the Japanese read the Chinese characters for yuba, *doufu-lao*, they pronounced them *tôfu no uba*. *Lao* or *uba* means “old woman” or “wet nurse.”

The book states that the word “natto” is derived from *nassho*, meaning “temple kitchen” or literally “place of offering, perhaps because the food was offered to Buddha before being offered to the monks.” It also contains the earliest known written mention of natto’s medicinal or healing effects, together with recipes for preparing natto miso soup (*natto-jiru*).

Saito (1985, p. 15-16) notes: “In 1695 Dr. Hitomi Hitsudai, a Japanese physician, age 74, writes the *Honcho Shokkan* and talks about the good and bad points of daily foods from his medical viewpoint. The 12 volume book is written entirely in Chinese. He writes: ‘Soybean: Makes one feel calm, relaxes the stomach, and is good for the intestines. Miso: One should not be without it. Natto: Makes one feel calm, conditions the stomach, enhances a good appetite, and detoxifies poisons. Tofu: Nowadays tofu in Edo is pretty good. Among the various types, Nishiki-dofu and Kezo-in-dofu are famous... But it cannot compete with the tofu make in Kyoto. Shoyu: Inactivates any poisoning from eating food, drinking alcohol, or taking medicine.’ The above is taken from the translation into Japanese by Shimada Isao.”

Needham (1986, p. 581) cites this as *Pên Ts’ao Shih Chien* (Materia Medica in Tasteful Verse, by Chu Lun). Ch’ing dynasty. 1739. Partly translated by Swingle. But Needham does not discuss its content.

Fukushima (1989, p. 9) states that the *Honcho-Shokkan* (Hitomi, 1695) describes miso and shoyu.

Iino (2003, p. 8) states: “In the first half of the Edo Period (17th century), soy sauce was made in all regions of Japan and could be purchased anywhere. In addition, soy sauce was made by hand in the large majority of houses” – This is made clear by this references in this 1695 book, which also mentions the shoyu production process, noting that barley was used in place of wheat. On p. 9 Iino adds that detailed instructions for making *niban shoyu* (soy sauce from a second pressing of the moromi with salt water) are also described in this book. Iino then comments: “It is clear that with the beginning of soy sauce production, use was also made of the dregs [shoyu presscake] to make *niban shoyu*.”

122. Liu Xianting. 1695. *Guangyang zaji* [Miscellaneous notes about Guangyang]. China. Passage on soy reprinted in C.N. Li 1958 #185, p. 119-20. Undated. [Chi]

• **Summary:** Wade-Giles reference: *Kuang Yang Tsa Chi*, by Liu Hsien-T'ing. Qing dynasty. According to the *Liji* (Book of Rites, +100) there are different kinds of *haijiang* (Note: *hai* is jiang made from animal products), including *ruanjiang* (made of eggs), *jiejiang* (made of mustard), and *doujiang* (made of soybeans). Each is to be used with its appropriate dish. So the sages require the right kind of jiang to go with the right dish. So today in *Jiangnan* (the area south of the Yangtze River), soybean jiang (*doujiang*) is the most popular. But in the north, *mianjiang* (which contains both wheat flour and soybeans) is also used. (Translated by H.T. Huang, PhD, Dec. 2002).

Huang (2000, p. 618) translates the title as “Miscellanies about Kuang-Yang” and gives the date as +1695.

123. Gu Zhong. 1698. *Yang xiaolu* [Guide to nurturing life]. China. [Chi]

• **Summary:** Wade-Giles reference: *Yang Hsiao Lu*, by Ku Chung. H.T. Huang (2000, p. 627) gives the date of this document as +1698. In the section titled “Products associated with tou fu,” Huang states: (1) (p. 324) A recipe for making frozen tofu, first mentioned in the *Shixian Hongmi* (Guide to the Mysteries of Cuisine) (+1680), is repeated in this book. (2) (p. 325) that both pressed tofu (*doufugan*) and smoked tofu (*xun doufu*) are mentioned in this book.

In the section titled “Fermented soybeans (*shi*),” Huang states that wheat flour is used as an ingredient in a recipe for making soy nuggets (*shi*).

In the section titled “Fermented soy sauce, *chiang yu*,” Huang states (p. 363): About 100 years after the *Bencao Gangmu* (The great pharmacopoeia) (+1596), the next description of the process for making soy sauce (*jiangyou*) appears in this book, in the form of three sketchy recipes, one of which states: Cook yellow soybeans (*huangdou*) or

black soybeans (*heidou*) until soft. Mix the soybeans and their cooking water with white [wheat] flour and knead to form a dough. Shape into flat or convex cakes. Cover with artemisia leaves until a good growth of yellow mold appears; then grind these cakes. Incubate the meal in a jar with brine. Warm in the sun to give [a thin] soybean jiang (*doujiang*). Filter through a tightly-woven bamboo sieve placed over a wide-mouthed vat. The jiang (soy paste) stays in the sieve while the soy sauce (*jiangyou*) is collected below.

A full-page table (Huang, p. 372) shows the “Usage of soy condiments in food recipes from the Han to the Qing dynasties.” Seasonings based on jiang (fermented soybean paste) are used in 25 recipes: jiang itself in 14, and soy sauce made from jiang named *jiangyou* in 11 recipes. Seasonings based on soy nuggets (*shi*) are used in only 1 recipe, which uses soy nuggets itself.

Huang adds (p. 373): During the Ming dynasty, soy sauce (*jiangyou*) started to rival soy sauce in importance; by the early years of the Qing dynasty, soy sauce had surpassed jiang in culinary usage.

Huang notes (personal communication, 5 June 1993) that page 21 contains recipes for deep-fried gluten and smoked gluten.

Bo (1982): Describes the method for making *chiang-yu* (soy sauce).

124. Saito, Akio. 1699. [Chronology of soybeans in Japan, 1600 to 1699, the early Tokugawa/Edo period] (Document part). In: Akio Saito. 1985. *Daizu Geppo* (Soybean Monthly News). Jan. p. 14-16. [Jap; eng+]

• **Summary:** 1600–Komakabe?, the name of a type of tofu, appears in the *Diary of Oyudono no Kami* (*Oyudono Kami no Nikki*). The very firm tofu called *kata-dofu* that is presently sold in Kochi prefecture (on the southern part of the island of Shikoku) originated from Komakabe.

1601–Daté Masamune (DAH-tay Mah-sah-MU-nay; lived 1567-1636) of Sendai establishes the Goenso-gura and starts making miso. This is the first time that an organized method has ever been used to make miso in Japan. The purpose of this is to make miso for the army and to store salt. According to some theories, the date was 1645 rather than 1601.

1603–In *Nippo Jisho*, a Japanese-Portuguese dictionary, tofu (called “taufu”) is mentioned. It says that tofu is a food that is made from powdered / ground beans and that looks like freshly made cheese.

1605–Tokugawa Ieyasu commands the monks at Daifukuji temple to make Hamana Natto.

1616–Tanaka Genba of Kamiusa no Kuni is advised to make tamari shoyu as a side business by Sanagi Kyurouemon of Settsu. The latter runs a sake factory and has a wholesale seafood products shop in Edo. This is the beginning Choshi Shoyu and Higeta Shoyu.

1619—At about this time shoyu in quantity is brought from the Kyoto-Osaka area (*Kansai*) to Edo by Taru Kaisen and Hishigaki Kaisen. Note: A “Kaisen” is a ship that has a carrying capacity of at least 200 koku (= 9,520 gallons or 36,000 liters). That shoyu is regarded as the best quality and it soon takes over the entire Edo shoyu market.

1624-1644—Konpura Nakama (The union of merchants who go to Dejima / Deshima, an island in Nagasaki Bay) starts to export shoyu through the Dutch East India Company (*Higashi Indo Gaisha*) to Europe and Southeast Asia. It is said that in Europe this shoyu even reached the dining table of Louis XIV. Note: This document contains the earliest date seen for soybean products (shoyu) in Europe and Southeast Asia (probably India, 1644); soybeans as such had not yet been reported by that date. [Question: What is the source of these two dates?]

1626—Sendai Han (*daimyo* domain) starts to monopolize the selling of salt for the first time in the history of Japan. Because of this, all other Hans start to do likewise. Makabeya Ichibei of Kokubunji-cho in Sendai starts to sell Sendai Miso. He continues to sell his miso to the Han government for several generations.

1642—Because of famines in various provinces (*kuni*), the people were advised to eat coarse grains (*zakkoku*) and banned from eating rice. The sale of tofu, udon (wheat noodles), soba (buckwheat noodles), and *manju* (steamed glutinous rice cakes with a sweet azuki-jam filling) were also prohibited.

1645—The Ako Han starts a salt farm. Hatcho miso starts to be made in Mikawa, Okazaki. Hamaguchi Gihei of Hiromura in Kishu goes to Choshi and starts making shoyu. This is the beginning of Yamasa Shoyu.

1649 Feb.—The Tokugawa government (*bakufu*) passes a law to control the lives of farmers. Called Kanno Jorei (*Keian no Ofuregaki*), it states that farmers must plant soybeans and azuki beans between their rice fields and farms. Azé-mame (soybeans grown on the raised footpaths between rice fields) may have started from this forceful edict.

1652 May—Various farmers in Waksa, Kohama-han, Enshiki-gun? protest the heavy soybean tax increase. The farmland tax is often paid with soybeans. The leaders of the protest are killed.

1657 Jan. 18-19—A large fire (called *Sodefuri Kaji*) burned Edo (today’s Tokyo). Laborers came from throughout Japan to reconstruct the city. To feed them, many sellers of pre-cooked, ready-to-eat food sprung up in Edo.

1666—Maruo Magouemon? Chotoku? of Hanshu Tatsuno makes Usukuchi Shoyu (light-colored soy sauce). After this, Tatsuno Shoyu’s main product becomes Usukuchi Shoyu.

1681—The government bans the withholding or monopolizing of crops (such as rice, barley, or soybeans)

following a year with a bad harvest.

1695—Dr. Hitomi Hitsudai, a Japanese physician, age 74, writes the *Honcho Skokkan* and talks about the good and bad points of daily foods from his medical viewpoint. The 12 volume book is written entirely in Chinese. He praises the therapeutic virtues of soybeans, miso, natto, tofu, and shoyu. A translation into Japanese was later made by Shimada Isao.

1695—At about this time, tofu is sold by vendors sitting by the road. We do not know for sure when tofu was first sold by walking street vendors, but it is guessed that this may have taken place in about 1837-1853 when the book *Morisada Manko* was written by Kitagawa Morisada.

1696—There is famine throughout Japan. In eastern Japan, especially in Tsugaru Han, half of the population dies of starvation.

1696—One of the greatest scholars of agriculture during the Edo period, Miyazaki Yasusada (1623-1697), write *Nôgyo Zensho* (Encyclopedia of Agriculture). In it he described the many different colors, sizes, and shapes of soybeans cultivated at that time.

1697—Koikuchi shoyu, similar to the type made today, starts to be made from tamari shoyu in Choshi.

1698—After a big fire in Edo, sellers of Dengaku (skewered grilled tofu with a sweet miso topping) start to appear. Address: Norin Suisansho, Tokei Johobu, Norin Tokeika Kacho Hosa.

125. Carletti, Francesco. 1701. *Ragionamenti di Francesco Carletti Fiorentino sopra le cose da lui vedute ne’suoi viaggi si dell’Indie Occidentali, e Orientali come d’altri paesi...*, 1594-1606 [Chronicles of his voyage around the world]. Florence, Italy: Stamperia di Giuseppe Manni, per il Carlieri. 395 p. See Part II, p. 26. 18 cm. [Ita]

• **Summary:** Carletti lived 1573?-1636. This is a much-polished and heavily edited version of his original *Chronicles*. This book is divided into two main parts. Part I is titled “First account: The West Indies” (p. 1-166). In Part II, titled “Second account: The East Indies,” the pagination starts over again at page 1, and miso is mentioned on page 26. More specifically: In the chapter titled “First chronicle of the East Indies,” Carletti states that he arrived in Japan in June 1597 at Nagasaki. On page 26 he discusses rice miso, which he calls “*misol*.”

In Italian, the sentence reads: “*Di questo Pesce ne fanno ancora molt’ altre sorte di vivande, le quali assaporano con una certa lor salsa, che chiamano Misol, fatta d’ una sorta di Fagioli, de quali abbondano;*” For details see the 1606 entry for Francesco Carletti.

Note: This is the earliest Italian-language document seen (March 2009) that uses the word “*misol*” to refer to miso. Address: Florence, Italy.

126. Terashima Ryoan. comp. 1711. *Wakan sansai zue* [Collection of Japanese and Chinese diagrams and drawings of all things]. Japan. 40 books, 106 sections. Japanese summary by Kawakami 1978, p. 269. Translation into modern Japanese titled *Wakan Sansai Zukai* published by Heibonsha in Toyo Pocket Library series. [Jap; eng+]

• **Summary:** This is Japan's oldest encyclopedia, written in *kanbun*, the Japanese transcription of Chinese writing. It is a Japanese compilation, which originated in Japan and is not a Japanese translation of a Chinese work. When cited in Chinese, the title in pinyin is: *Hehan sanchai tuihui* (W.-G. *Ho Han San Ch'ai T'u Hui*). The author's nickname (*aza*) is Shojun; his artist's name (*go*) is Kyorindo. The work contains many illustrations, although they were generally primitive and not very accurate.

In volume 105 (*Jozorui*), which is about brewing and fermented foods, a clear distinction is made between miso, shoyu, and tamari.

The section on yuba states: "Tofu film is made on the surface while making tofu. It looks like yellow paper. If you stir too much, the film will not form properly. If you wish to obtain the film, add coagulant and boil the milk. The wrinkled look of the film resembles (the skin of) an old woman. If you remove too much film, the yield of tofu decreases and the tofu becomes hard to eat." Yuba is referred to as *doufu-p'i*, the present Chinese term. When the text notes that yuba "resembles (the skin of) an old woman," it seems to imply that the earlier term *lao* or *uba* was used because of the similarity of yuba and an old woman's face.

Fukushima (1989, p. 9) states that the *Wakan Sansai Zue* (Narushima, 1712) describes miso and shoyu.

Ebine (1989, p. 91-93) gives the date of this work as 1712, and states that volume 105 describes the preparation of "tama-misho" using broad beans (*Vicia faba*; Japanese: *soramame*), and a "whitish misho" using soybeans. For each of these Ebine gives a flowchart. Rice or barley are soaked in water, steamed, and fermented to make rice koji, which is mixed with salt, and then the salted koji is mixed with broad beans that have been cooked and dehulled. The mixture is formed into balls, which are wrapped with rice straw, hung under the rafters over a fireside for several weeks, crushed in a mortar, then mixed with water to make tama-misho. To make whitish misho from soybeans and rice: 10 parts of soybeans are soaked in water, dehulled by brushing, and cooked. The hulls are first removed from the cooker, then the cooked beans are removed, formed into balls, and the balls are sliced. Meanwhile, about 14 parts of rice are polished, soaked in water, steamed, cooled, and allowed to mold spontaneously to yield 16 parts of rice koji. The rice koji, sliced soybean balls, and 1.3 parts of salt are mixed, pounded, packed into vats, and fermented for 10 days to yield the whitish misho.

C.N. Li (1958): *Making Fermented Products, Soy nugget sauce (shizhi; W.-G. shih chih)*. Note: Shih is often used at meals to harmonize the five flavors. People used to use it during this dynasty. Nowadays, if people do not use chiang, they do not use shih; they use soy sauce (*chiang-yu*), not soy nugget sauce (*shizhi*).

Modern rendering by Morohashi (1955). He translated p. 5 (roasted flour), p. 17 (soy nugget sauce). Confection of soy flour and *ame* = *Ame chimaki*. In "Making Fermented Foods." Morohashi (1955) translated p. 5. *tou i (mame ame)*. In: vol. 10, p. 63.

Iino (2003, p. 8) notes that this 1712 book "states that soy sauce made from wheat is suitable for the public and soy sauce made from barley is of low quality." Iino comments (p. 8-9): "Put simply, the soy sauce sold in shops was made from wheat because that made from barley was inferior."

On the same page, Iino shows a full page reproduction of the page titled "shoyu" in this book. It gives: "An explanation of soy sauce production with an illustration of the proper sort of barrel to be used." Iino notes (p. 9): "Another method for producing soy sauce requires a heating process. The *Wakan Sansai Zue* states: '... Squeeze the *moromi* to extract the oil [sic, liquid]. If the color is light, the flavor will not be good. Boil the oil [liquid], place it in a pail and leave it over night to darken the color and improve the flavor. Mix the dregs [presscake] again with salt water and extract the oil [liquid]. This [second pressing] is called *niban shoyu* (second soy sauce), and the flavor is very much inferior.'"

127. Kaempfer, Engelbert. 1712. *Amoenitatum exoticarum politico-physico-mediarum, fasculi v.* [Exotic novelties, political, physical, medical. Vol. 5]. Lemgoviae, Germany: W.W. Meyerei. See p. 834-35, 837-40. Illust. p. 838. Reprint of original edition published in 1983 by Steiner (Wiesbaden). [Lat]

• **Summary:** This is Kaempfer's first major work, his most famous, and his first to mention the soybean. Kaempfer was born on 16 September 1651 at Lemgo, Germany. [Lemgo is presently a city in North Rhine-Westphalia, 44 miles southwest of Hannover.] He traveled in Japan from 23 September 1690 to November 1692 and made many interesting observations. This book, written in Latin, was published in Lemgo in 1712, some 16 years after his homecoming.

The fifth fascicle of the 900 page book, which contains a description of the plants of Japan, includes a full-page illustration (drawing; p. 838), by Kaempfer, of a soybean plant with details of the flower parts and their names. This is the earliest illustration of a soybean plant published in the Western world. Also contains a description of the plant, and descriptions of how to make miso and shoyu. He called the soybean "Daidsu" and wrote the Chinese characters before the romanized name in the sequence "zu" "dai" from left to right. The actual Japanese spelling is "daizu." Note 1. This is the earliest document seen (June 2001) written by a European or Westerner in which Chinese characters are used to write the name of the soybean or related products.

Kaempfer's description of the soybean in Latin (p. 837-40) begins: "Daidsu, vulgo & literatis; & ob excellentiam *Mame*, i.e. legumen, dictus. Phaseolus erectus, siliquis Lupini, fructu pisi majoris candido..."

Translated into English, this reads: "Daidsu—as people and scientists call it, is also called 'mame' for its excellence. An upright bean, a leguminous plant like the lupin, with whitish fruit somewhat larger than peas. A bean, similar to the afore-mentioned, but four feet high and with more branches and leaves, with upright stem, irregular branches and with hairs. It stretches forth leaves like the garden bean, but with more pubescence on the under side of the leaf. In the month of August it bears on pedicels in the axil of the leaves several bluish white flowers with a large standard, which resemble those of lentils. These tiny blossoms are followed by pods measuring 1½ inches long, which are covered with heavy hairs (pubescence) resembling those of the yellow lupin. The pods contain two, and more rarely three seeds, similar to garden peas in size, shape and taste, but laterally somewhat compressed, and with a chestnut brown eye (hilum).

"This legume supplies to the Japanese kitchen vital elements, for they make from it the following: 1—A kind of pap that they call miso, which is added to dishes instead of butter. Butter is unknown under this strip of heaven. 2—And then the famous so-called shoyu (*Sooju*), a sauce which is poured over if not all dishes, at least over all cooked and fried meals. I add the processing methods for both.

"To produce miso, one takes one measure of mame or phaseolus Daidsu (phaseolorum *Daids*) which is cooked with water for a long time and then brayed or ground and mixed into a soft pap. Under continued braying, common

salt is added, in summer four parts, in winter three. If less salt is added, one gets the product quicker, but shelf life is shorter. After reducing has been repeated, one mixes the pap with *koos* [he probably meant koji] or dehulled rice (*Oryza*), and mixes the total by repeated braying. This rice in preparation has been boiled a little in the steam of unsalted water. One lets the mixture cool down and remain in a warm cellar one or two days and nights to ripen. This mixture, which has the texture of a pap or spread, is put into a bowl that recently contained the popular *sacki*, a rice wine. Before using, one lets the bowl stand one or two months untouched. *Koos* lends to the product an agreeable taste, and its production requires, like that of the Germans' 'polenta,' the experienced hand of the master. Those therefore who make it are held in high esteem, and they sell it ready made. Note 2. This is the earliest Latin-language document seen (March 2009) (and the earliest document published in Europe) that mentions miso, which it calls *Miso*. It is also the earliest document seen (March 2009) that compares miso to butter.

"To make shoyu (*Sooju*) one uses the same beans just as thoroughly cooked. And *muggi*, which is barley or wheat fermented (with wheat the product becomes darker) which has been coarsely ground. One mixes equal units with ordinary salt, or only one unit with half of it. The beans are blended with the prepared grain, and one lets the mixture stand in a warm place under cover a day and a night for fermentation. Then the salt is added, one stirs the mass and mixes with water, normally two units to half. When this has been done, the well covered mass is stirred once (better two or three times) the next day and each subsequent day by means of an oven rake. This work is continued for two or three months, then the mass compressed and filtered and the liquid preserved in wooden containers. The older it becomes, the clearer and better it will be. The squeezed mass is again filled up with water and newly stirred and some days after treatment pressed again.

Note 3. This is the earliest document seen (Feb. 2008) that uses the word *koos* to refer to koji, or that uses the word *Sooju* to refer to shoyu (soy sauce).

Paragraph 3 reads as follows in the original Latin: "Hoc legumen in coquina Japonicâ utramque replet paginam; Ex eo namque conficitur: tum puls *Miso* dicta, quæ ferculis pro consistentiâ & butyri loco additur, butyrum enim hęc coelę res ignota est; tum *Sooju* dictumcelebre embamma, quod nisi ferculis, certę frictis & assatis omnibus affunditur. Utriusque conficiendi modum appono:"

On page 834 Kaempfer lists the Gokoku (five chief cereal grains): *come* [*kome*], *Oryza* in genere: quinque grana Japoniis *go kokf* secundum excellentiam dicuntur: *come*, *Oryza*; *o muggi*, *Hordeum*; *ko muggi*, *Triticum*; *daidsu*, *Phaseoli facie Lupini* [*Soja hispida*]; *sjodsu* seu *adsuki*, *Phaseoli vulgaribus similes* [*Adzuki*, *azuki*, or *Phaseolus radiatus*, L.].

On page 836 are botanical descriptions, each with 1-2 Chinese characters (read from right to left), of: Broad beans (*Sora mame*), sword beans (*Natta mame [nata mame]*), peanuts (*Nankin mame or Nankino*), and cowpeas (*Sasagi [sasage], Shiro Sasangi*).

On p. 837 is a detailed botanical description (in Latin) of the azuki bean, starting with a Chinese character: “Too, vulgo Atsuki [Adzuki], *Phaseolus hirsutus...*” Note 4. This is the earliest Latin-language document seen (Jan. 2005) that mentions azuki beans, which it calls *sjodsu*, *adsuki*, or *atsuki*.

On page 840 are shorter descriptions (in Latin) of “Siuku, vulgo Kuro mame [Black soybean], i.e. *Phaseoli nigri*. *Phaseoli Daidso* species sive varietas, fructo nigro,” and “Katz, vulgo Kudsu [Kudzu], *Kudsu Kádsura*.”

Note 5. This is the earliest document seen concerning soya in connection with (but not yet in) Germany. Other early authors to cite it were Linnaeus (1747, p. 222, and 1753, p. 727), Osbeck (1771, p. 253), Linnaeus (1772, p. 171), de Candolle (1885, p. 331), Yule & Burnell (1886, p. 651), and Blasdale (1899).

Note 6. This is the earliest document seen (June 2001) by or concerning Englebert Kaempfer in connection with soybeans.

Note 7. This is the earliest document seen (Sept. 2003) that mentions lupins.

Note 8. This is the earliest document seen (May 2003) that mentions both lentils and soybeans. Address: Lemgo, Germany.

128. Chen Menglei. ed. 1726. *Tushu jicheng* [Imperial encyclopedia]. China. 10 vols. Passage on soy reprinted in C.N. Li 1958 #327, p. 233. [Chi]

• **Summary:** Wade-Giles reference: *T'u Shu Chi Ch'eng*, edited by Ch'ên Mêng-Lei. Title also cited as: *Gujin tushu jizheng* (W.-G. *Ku Chin T'u Shu Chi Chêng*). Or as: *Qinding gujin tushu jizheng* (W.-G. *Ch'in Ting Ku Chin T'u Shu Chi Chêng*). Qing dynasty.

Soybeans are discussed in detail in the lengthy section titled “Beans.” The section titled “Explanation of the name soybeans” (*dadou*) states: The word *dadou* is found in the *Shennong Bencao Jing (Benjing)* (Classical pharmacopoeia of Shennong, the Heavenly Husbandman) (+100). The simplified character *shu* [the ancient name for soybeans] is found in the *Bencao Gangmu* (The great pharmacopoeia), by Li Shizhen (+1596). The pods are called *jia*. The leaves are called *huo*. The stems are called *qi*. (Translated by H.T. Huang, PhD, March 2003). Dr. Huang adds: In this section on soybeans, there is much more information, but none of it is new; it is all from sources we have translated previously.

Huang (2000, p. 625-26) and Bray (1984, p. 631) give the date as 1726 and translate the title as “Imperial Encyclopedia. [or: Imperially Commissioned Compendium

of Literature and Illustrations, Ancient and Modern].” Index by L. Giles (1911).

Wilkinson (2000, p. 605-07, 967) has an entire section on this book, including a table of contents, which is divided into 6 main categories, 32 sections, and 10,000 subsections. He cites it as *The Imperial Encyclopedia* or “Imperially approved synthesis of books and illustrations past and present,” Chen Menglei et al., comps. 1726-1728. 10,000 *juan*. It is by far the largest [and last] of the general encyclopedias (*leishu*) to have been printed. “Modern editions are available, including on CD-ROM. The most detailed is that prepared for the 1985 Zhonghua and Ba-Shu edition.

Needham (1986) has an interesting chart (p. 184) that shows the ancestry and descent of this and other major Chinese encyclopedias and dictionaries. He tells the remarkable history of this encyclopedia and its compiler (p. 206-08).

Bray (1984, p. 76, 631): This popular encyclopedia contains sections devoted to crop plants. They “consist of quotations from the classics and from agricultural treatises, and are of little intrinsic interest here except for the illustrations, which sometimes differ slightly from those of the agricultural monographs.”

Hummel (1944, p. 93-95): Ch'en Meng-lei, born in 1651, was a scholar, native of Huo-kuan (Foochow). Caught in a rebellion, he was exiled, then in 1698 pardoned and brought back to Peking, where he served as teacher and secretary for the Emperor's son, Yin-chih. There he began to compile a classified encyclopedia consisting of extracts copied from various works. In 1701 he persuaded Yin-chih to finance the project further. Then the emperor Sheng-tsu probably became interested in the project, for he gave it the title “Synthesis of Books and Illustrations of Ancient and Modern Times.” The work seems to have become a state enterprise, for officials were appointed to help Ch'en in the compilation. It was completed in about 1722, before the death of emperor Sheng-tsu. The emperor's son, who succeeded to the throne after a bitter power struggle, disliked Ch'en and so had the work “revised” to obliterate all signs of Ch'en's connection to it. The “revision” was completed in 1726. The first edition, comprising 10,000 *chüan*, plus a table of contents in 40 *chüan* was printed in 1728. Sixty-four sets were printed. A second edition of 1,500 sets was printed in Shanghai in 1884-88, but was marred by errors. A third accurate edition/set was printed in 1895-98 in Shanghai. One set was presented to the Library of Congress in 1908. An English index to the encyclopedia, with a valuable introduction, was compiled by Lionel Giles and titled “An Alphabetical Index to the Chinese Encyclopedia Ch'in-ting Ku-chin t'u shu chi-ch'eng.” It was published in London in 1911.

W.T. Swingle (1942, p. 13): The largest single Chinese account of many plants “is contained in the *Great Chinese*

Imperial Encyclopedia, the largest encyclopedia ever printed in any country. It was compiled by order of the Manchu Emperor K'ang Hsi by Ch'êng Mêng-lei, but the work was not completed when K'ang Hsi died in 1723. His son and successor as emperor, Yung Chêng, promptly dismissed Ch'êng Mêng-lei and appointed Chiang T'ing-hsi, a scholar and statesman of some distinction, under whose care the manuscript was printed in 1726. This giant work fills 5,020 volumes, each containing two books or chapters."

W.J. Hagerty (1917) did an excellent translation (which see) of the section titled "Beans." Published by the USDA, Washington, DC. With plates. This section on beans (including soy beans) appears in the encyclopedia in Category IV—Science (*Po Wu Hui Pien*), Section 20—Vegetable Kingdom (*Ts'ao Mu Tien*), Subheading—Beans (*Tou Pu*), Book 35.

129. Kaempfer, Engelbert. 1727. *The history of Japan, ... Its metals, minerals, trees, plants, animals, birds and fishes; ... Together with a description of the Kingdom of Siam 1690-1692.* (translated by J.G. Scheuchzer from the original edition of April 1727. 2 vols.). London: Printed for the translator. See vol. I, book I, chapter IX, p. 121-22. [1 ref. Eng]

• **Summary:** In Chapter IX, "Of the fertility of the country as to plants," the section titled *Gokokf* ("five grains," p. 121-22) states: "The chief produce of the Fields, which contributes most to the sustenance of Life, is by the Japanese comprehended under the name of *Gokokf*, that is, the *five Fruits of the Fields*. 'Tis by their good or bad growth they estimate the value of the Ground, the fruitfulness of the Year, and the wealth of the Possessor. They make up the chief dishes at their meals, and make good the want there is of Flesh-meat, which Custom and Religion forbid them to eat." Note 1. This is the earliest English-language document seen (Dec. 2003) that uses the term "Flesh-meat" to refer to meat.

The five grains (*Gokokf*) are: (1) *Kome* or Rice (from which "they brew a sort of strong fat Beer, call'd *Sacki*..."). (2) *Oomugi* or Barley. "They feed their Cattle and Horses with it: Some dress their Victuals with the Flower [Flour], and make Cakes of it." (3) *Koomuggi* or Wheat. (4) *Daidso* or Daidbeans. (5) "*Adsuki* [azuki] or *Sodsu* [shôzu, shôdzu = small + bean] that is Sobean" [azuki].

Concerning soybeans: "4. *Daidso*, that is, *Daidbeans*, is a certain sort of Beans, about the bigness of Turkish Pease, growing after the manner of Lupins. They are next to the Rice in use and esteem. Of the Meal of these Beans is made what they call *Midsu*, a mealy Pap, which they dress their Victuals withal, as we do with Butter. What they call *Soeju*, is also made of it, which is a sort of an *Emamma*, as they call it, which they eat at meals to get a good stomach. This *Soeju* is exported by the Dutch, and brought even into

Holland. I have describ'd their way of making it in my *Amoenitates Exoticae*. p. 839. where the Plant it self bearing these beans is figur'd and describ'd."

Note 2. *Midsu* clearly refers to miso, and *Soeju* to shoyu. This is the earliest English-language document seen (March 2009) that mentions miso, or miso in connection with Japan. It is also the earliest English-language document seen (March 2009) that compares miso with butter. *Midsu* has almost the same pronunciation (phonetics), and the same etymology and meaning as the today's word "miso." Since spelling did not become fixed until the 18th century, this could be considered the earliest occurrence of "miso" in an English-language document.

Note 3. This is the earliest English-language document seen (Jan. 2006) that uses the word *Soeju* to refer to soy sauce. It is clearly Kaempfer's spelling of the Japanese word *shoyu*.

The author continues (p. 121-22): "5. *Adsuki* or *Sodsu*, that is Sobean. They grow likewise after the manner of Lupins, and are black, not unlike *Lentils*, or the Indian *Cajan*. The flower [flour] is bak'd with sugar into *Mansje* [*Manju*] and other Cakes."

Note 4. This is the earliest English-language document seen (March 2006) that clearly mentions azuki beans. It is also the earliest English-language document seen (March 2006) that uses the word "Adsuki" or the word "Sodsu" to refer to azuki beans. Cooked and mashed or ground dry into flour are mixed with sugar to make *an* or "sweetened azuki bean paste." This is used as a filling for the popular steamed Japanese sweet bun named *manju*.

Besides the several sorts of *Gokokf* just mentioned, the following Plants are comprehended under the same name: *Awa*, Indian Corn, (*Panicum Indicum Tabern*), *Kibi*, or *Milium vulgare nostras*, *Millet*: *Fije*, or *Panicum vulgare juba minore semine nigricante*: And in general all sorts of Corn and *Mami* [Mamé = beans], that is pease and pulse. Azuki beans, though usually red, also occasionally have black or white seedcoats.

In the Introduction to this book, the translator explains that it was first published in English, after Dr. Kæmpfer's death in 1716, thanks to Sir Hans Sloane, who purchased all of Kæmpfer's plates, drawings, and manuscript memoirs as they were about "to be disposed of." Sloane added them to his library, which the translator believes is "the completest of its kind in Europe," with an extensive collection of Books of Physik, Natural History and Travels." "This History of Japan was by the Author divided into five Books."

Note 5. Kaempfer lived 1651-1716. John Gaspar Scheuchzer lived 1702-1729. His first translation was this one, in 1727. The title page states that the original was "Written in High-Dutch by Engelberus Kaempfer, M.D., Physician to the Dutch Embassy to the Emperor's Court; and translated from his Original Manuscript, never before

printed, by J.G. Scheuchzer, F.R.S. and a member of the College of Physicians, *London*. With the Life of the Author, and an Introduction. Illustrated with many copper plates.”

Note 6. In 1986 a 3 volume edition was published in Glasgow, Scotland by James Maclehose and Sons. This book contains no mention of soybeans in Siam (Thailand).

Note 7. This is the earliest English-language document seen (Nov. 2007) that mentions Lupins (or “lupin” or “lupine” or “lupines”).

Note 8. This is the earliest English-language document seen (Dec. 2000) that mentions the *Goku-fu* or “five grains” and includes the soybean among them.

Note 9. This is the earliest English-language document seen (June 2008) that mentions lentils; it compares them with adzuki [azuki] beans. Address: M.D., Physician to the Dutch Embassy to the Emperor’s Court [in Japan].

130. Tournefort, Joseph Pitton de. 1730. The compleat herbal: or the botanical institutions of Monsr. Tournefort, Chief Botanist to the late French King... translated [by J. Martyn] from the original Latin. With large additions, from Ray, Gerard, Parkinson, and others. Vol. II. London: Printed for J. Walthoe... See p. 481. No. 81. Reproduced from John Ray 1704. [2 ref. Lat; Eng]

• **Summary:** “80. *Phaseolus Japonicus niger*. Butyri vices supplens Deysumisi boondi, *D. Sherard. Raii Supp.* 438. *Black Japanese Kidney-bean supplying the place of Butter.*”

Note 1. This citation and the one that follows were reproduced from William Sherard’s 1704 unpublished manuscript titled *Autograph observations on the first two volumes of John Ray’s Historia Plantarum* (2 volumes in 1), p. 438. But Tournefort made a small error in transcribing Ray’s text. Ray actually wrote *Deysu-Misi-boondi D. Sherard*. This text almost certainly refers to “Daizu-Miso-beans,” thus stating that black soybeans are used to make miso. Early Europeans occasionally considered miso to be a type of butter.

“81. *Phaseolus Japonicus fructo albo, ex quo Soia conficiunt Japoneses, D. Sherard. Raii Supp.* 438.” *Japanese kidney bean with a white fruit, out of which the Japanese make their Soia.*

Note 2. This is the 2nd earliest English-language document seen (Feb. 2006) that uses the term “kidney-bean” (or kidney bean) or the term “Japanese Kidney-bean” to refer to the soybean. Address: France.

131. Miyake, Yurai. 1732. *Mankin sugiwai-bukuro* [How to produce daily household necessities]. 6 volumes (satsu). Japanese summary by Kawakami 1978, p. 258. [Jap]

• **Summary:** Volume 6, which is about food and drink, emphasizes methods of production, and describes how to make shoyu, sake, vinegar, konnyaku, and many other foods. The book was also known under the title *Machikata*

Bantaku Shobai Shiho Taisei (“All houses in the town area business method collection”).

Fukushima (1989, p. 9) states that the *Mankin-Sangyotai* (Miyake, 1732) describes how to make miso and shoyu.

Iino (2003, p. 9) states that the *Mankin Sugiwai-bukuro* (1732) discusses only the soy sauce production method using wheat (not barley) and soybeans. Iino comments: “With the beginning of the 19th century, the large bulk of soy sauce seems to have been produced using wheat.” In column 2 of page 9 he adds that this books also gives a description of the method for making *kijoyu* (raw / unheated soy sauce). Iino then comments that from this description we learn that, “while *kijoyu* was very flavorful and could be kept for a long time, the high cost of production made selling *kijoyu* difficult. Therefore a blend of approximately 7-8 liters of *modoshi* [modoki = imitation?, a dilutor?] for every 18 liters of moromi was being sold.” Address: Kyoto, Japan.

132. Charlevoix, Pierre Francois Xavier de. 1736. *Histoire et description generale du Japon: Ou l’on trouvera ce qu’on a pu apprendre de la nature & des productions du pays... & l’examen de tous les auters, qui ont ecrit sur le meme sujet...* 9 v. [History and general description of Japan... Including the examination of all the authors who have written on the same subject. 9 vols.]. Paris: Chez Julien-Michel Gandouin [and 4 others]. Illust. Index. 17 cm. [Fre]*

• **Summary:** Peanut = Arachide, cacahuete. Other writers on soy: 1696–pois jaunes, pois jaunes, soui or soi / 1790–Dolic du Japon, bouillie, miso, soja, soju / 1796–Dolichos Soy, dolic bean, daidsou, feves de dolic, miso. Pierre Charlevoix lived 1682-1761. Address: Jesuit father.

133. Li Hua-Nan; Li Diao-Yuan. 1750? *Xingyuan lu* [Memoir from the garden of awareness]. China. Undated. [Chi]

• **Summary:** Wade-Giles reference: *Hsing Yüan Lu*, by Li Hua-Nan, compiled by his son Li Tiao-Yüan. Qing dynasty.

H.T. Huang (2000, p. 324), in the section on frozen tofu, states that dried frozen tofu is first mentioned in this work, which suggests: Allow a whole batch of thinly sliced frozen tofu squares to thaw slowly, then store them in a cool place so they can be used in the summer.

Huang (2000, p. 327), in the section on “Making of fermented tofu” states: “Technically the most interesting accounts of the making of *furu* are found in the *Xingyuan lu* (1750). Five recipes are presented, representing two types of methodology. One uses ground wheat *ferment* as shown in the translation given below: ‘First prepare yellow wheat *ferment* as previously described and comminute it to a fine powder. Take ten catties of fresh tofu and two catties of salt. Cut the tofu into thin rectangular pieces. Sprinkle a layer of salt over a layer of tofu. Allow the tofu to soak in the brine [that is generated]. After five or six days remove the tofu

but keep the juice for later use. Arrange the tofu pieces neatly in a steamer and steam until they are well cooked. Hang the steamer with its contents in an empty room for half a month when the tofu becomes covered with luxuriant fungal growth. After scraping off the hairy surface the pieces are air dried. Now treat the tofu with dry yellow *ferment* as follows. Decant the salty juice from the soaking step and mix in dried *ferment* to form a paste. Spread a layer of tofu over a layer of *ferment* paste and cover with a layer of fragrant (i.e., sesame) oil. Add a few whole pieces of fagara. Place the stacks in a crock and seal the mouth securely with mud. Warm the crock in the sun during the day. After a month the product will be ready for the table.”

Huang adds (p. 327): “The other methodology uses the mash left from the fermentation of wine from grains.”

Huang (2000, p. 341-42) also notes that the process for making soy nuggets (*shi*) described in the *Bencao Gangmu* (The great pharmacopoeia) (1596) is repeated in four recipes in this book. Although the first stage, the production of soybean koji (molded soybeans) remains unchanged, “a variety of additional materials such as fagara, sugar, wine, melon juice, melon meat, melon seeds, liquorice [licorice], mint, magnolia bark, fritillary corm [fritillaria; bulbous herbs of the lily family] etc. have been included in one or more recipes for the second stage incubation.” These herbs and spices gave each product its own unique fragrance and flavor. One of the four recipes calls for the use of wheat flour. Huang observes that when the amount of wheat flour is large, the process becomes very similar to that for making soybean jiang.

In addition (Huang 2000, p. 363-64) translates the detailed method for making soy sauce, which is presented as a method for making *qingjiang* (“clear jiang”): Clean and wash one *dou* of yellow soybeans. Boil beans until soft and the color has turned red. Blend beans and cooking water uniformly with 24 catties white wheat flour. Form into cakes, arrange on bamboo or willow [leaf] trays, then cover with rice straw. Place trays in a wind-free room, and incubate for 7 days or until a good growth of mycelium appears. Remove the straw. Place trays in the sun during the day; bring them indoors at night. Repeat the procedure for 14 days. If it rains during the day, trays should be placed in the sun for additional days until the total of 14 days is attained. This is how to make the yellow koji for jiang (*jianghuang*).

For each *dou* of yellow koji for jiang, measure 5 *dou* of well water into an earthenware crock. Measure exactly 15 catties of raw salt into a bamboo basket, and hang the basket in the well water [inside the crock] until all the salt dissolves in the water. Discard any residue in the basket. Mix the yellow koji into the water; let it warm in the sun for 3 days. On the morning of the 4th day, remove earthenware crock from sun and stir contents well with a wooden paddle. Two days later, remove from sun and stir again. Repeat this

procedure 3-4 times. After about 20 days, the “clear jiang” (*qingjiang*, or soy sauce) should be ready for use.

To separate the soy sauce (*qingjiang*), use a finely woven cylindrical bamboo tube that is open at both ends. People in southern China call this a “circular sieve for jiang” (*jiangchou*). It is widely available in local markets of the capital [Beijing]. The same markets also sells various sizes of covers for the crocks. When the jiang / mash is ready [it has a consistency resembling that of applesauce], push the woven bamboo tube down into its center until the bottom of the tube rests securely on the bottom of the crock. Remove the jiang inside the tube so that the bottom of the crock is clearly visible. Place a brick atop the tube to prevent it from floating upwards. Liquid soy sauce will flow from the jiang mash into the tube. The next morning the tube should be filled with liquid. Use a bowl to transfer this clear soy sauce into a clean crock. Cover the crock with a piece of cloth to prevent flies from falling in. Warm the crock in the sun for half a month. To make more soy sauce, increase the amount of raw materials. After the sauce is ready, you can also use a sieve to collect the soybeans that float to the top of the mash. When half-dried, these beans make delicious soy nuggets (*doushi*).

A full-page table (Huang, p. 372) shows the “Usage of soy condiments in food recipes from the Han to the Qing dynasties.” Seasonings based on jiang (fermented soybean paste) are used in 10 recipes: jiang itself in 4, soy sauce made from jiang named *qingjiang* in 5 recipes, and soy sauce made from jiang named *jiangyou* in 1 recipes. A seasoning named *douyou* is used in 8 recipes. Note: This is the earliest document seen (Aug. 2005) in which a soy-based seasoning named *douyou* (W.-G. *tou yu*) is mentioned. Huang states (p. 371) that *douyou* is written with the Chinese characters for bean + oil.

Wilkinson (2000, p. 646) states that this book (late 18th century) is the first Chinese collection of recipes from a regional cuisine—that of Sichuan.

Fukushima (1989, p. 6): “The general manufacturing methods of soy sauce in the Ch’ing (Shin in Japanese) dynasty are recorded in *Ch’ing-yuan Lu* (sic, *Hsing-yuan Lu*; *Seienroku* in Japanese), written by Li Hua-nan (Ri Kanan in Japanese). Cooked soybeans and uncooked wheat were the raw materials used in koji making. The resultant koji was mixed with brine. After aging, the soy sauce was collected by pressing a deep bamboo colander into the aged mash and ladling out the liquid which had accumulated.”

Bo (1982): Describes the method for making *chiang-yu* (soy sauce).

134. Zhai Hao. 1751. *Tongsu bian* [Origin of common expressions]. China. [Chi]

• **Summary:** Wade-Giles reference: *T’ung Su Pien*, by Chai Hao. Qing dynasty. (Huang 2000, p. 354n, 626). Chapter 26 of this book states that the original list of necessities of life

in the *Mengliang Lu* (Dreams of the former capital) (+1275) contained eight items: “firewood, rice, oil, salt, wine (*jiu*), jiang, vinegar, and tea.” When this list was popularized in Yuan (Mongol) dynasty (1279-1368) musical plays, whose lyrics usually allowed only seven syllables per line, the playwrights had to follow convention. They decided to eliminate wine, leaving us with only seven necessities.

Wilkinson (2000, p. 955), in the section on Qing philology, states: Cui Hao. 1751. *Tongsu bian* (Compilation of common usage). Contains more than 5,000 words, phrases, proverbs, etc. arranged in 38 subject categories.

135. Histoire générale des voyages, ou, Nouvelle collection de toutes les relations de voyages par mer et par terre [A general history of voyages: or, New collection of all the accounts of voyages by land and by sea. Vol. 11]. 1753. Paris: Didot, Libraire. 722 p. See pages 707-08. [Fre]

• **Summary:** This seems to be a French-language summary and translation of parts of *Amoenitatum exoticarum*,... by S. Kaempfer 1712 (p. 707-08). “On distingue plusieurs autres sortes de Haricots; une, entr’autres, dont les Japonnois font une espece de bouillie, qui leur tient lieu de Beurre, & dont ils font une sauce fameuse, qui se sert avec les viandes rôties. Ils nomment la bouillie *Miso*, & la sauce *Sooju*.”

Translation: They distinguish several other sorts of beans. From one of these they make a sort of pap, which takes the place of butter for them, and from which they make a famous sauce, which they serve with roasted meats. They call the pap “Miso,” & the sauce “Sooju.”

Note: This is the earliest French-language document seen (March 2009) that mentions miso, which it calls *Miso*.

136. Ryôri oboe-gaki [Writings on cookery remembrances]. 1756. Japan: Publisher unknown. 44 p. Japanese summary by Kawakami 1978, p. 161. [Jap]

• **Summary:** Mostly about snacks and confections (*kashi*). But there is an interesting description of miso-making using rice bran (*nuka*) and koji with salt. It is called *nuka miso*. This was a type of miso, and it was used in *nuka miso soup* (*nuka-miso shiru*). Today, *nuka-miso* refers to salted rice bran used as a pickling bed. It does not contain any actual miso, though it has a similar consistency.

137. Zhang Zongfa. 1760. *Sannongji* [Records of the three departments of agriculture]. China. Passage on soy reprinted in C.N. Li 1958 #299, p. 221, and #331, p. 234-35. [Chi]

• **Summary:** Wade-Giles reference: *San Nung Chi*, by Chang Tsung-Fa. Qing dynasty. Contains a passage on soybean seedlings (*doumiao*) from the *Zhenglei bencao* (Reorganized pharmacopoeia) (+1082; which see). The section titled “The spring” states: Plant black soybeans (*heidou*). Note: The last month of spring in the Chinese lunar calendar is the 3rd month, would be quite early to

plant soybeans in northern China but not so early in southern China.

The section titled “Beans” (*dou*) begins with a long quotation from the *Bencao Tujin* (Illustrated pharmacopoeia) (1061, which see).

The next section begins with a brief quotation from the *Shiming* (Expositor of names) (+150): *Shu* (the simplified character) means soybeans (*shu*, the early, more complex character). Then Zhang Zongfa (author of this book, *Sannongji*) comments: *Shu* (the complex character) is the general name for legumes (*jiagu*, “pod grain”). Note: Dr. Huang has never seen these two characters used to refer to legumes. Moreover, throughout early Chinese history, the complex character *shu* almost always referred specifically to soybeans, not to legumes in general. So this is Zhang’s new interpretation of the meaning of *shu*.

Zhang Zongfa continues: In the ancient “seal characters” (*zhuanwen*), the three strokes at the bottom in *shu* (the simplified character) looks like pods dangling from the stem. The character for *dou* (bean) looks like seeds (i.e., beans) in the pod. Note: Hu Daojing (1963) proposed that the three dots represent the nodules on the roots of the soybean plant.

According to the *Guangya* (Ancient dictionary: Enlargement of the *Erya*) (+230): Soybeans (*dadou*) were also called *shu*; azuki beans (*xiaodou*) were also called *da*.

According to the *Mingyi Bielu* (Informal records of famous physicians) (+510): The leaves can be used to feed livestock. The pods can be used to feed cattle and horses. The stems can be used as fuel to cook food.

The next paragraphs, which repeat material about soybeans from earlier documents, discuss: (2) Storage. (3) Planting. (4) Cultivation and weeding. (5) Harvesting. (6) Storage of the harvested soybeans.

The next-to-last paragraph states: Character (*benxin*) of the soybean. The flavor is sweet and the nature (*qi*) is warm. Benefits the *qi* and blends to the middle evens the temperament. Prolonged ingestion makes the body heavy. You can cook it by parching, or you can boil it. Its nature is cooling. If you make soy nuggets (*shi*), then it becomes cold. If you make jiang or raw sprouts, then its nature is neutral. When the cattle eat it, it is warming. But when the horses eat it, it is cooling. So, although it is one substance, its nature changes. If you parch the beans and eat them with pork, you may die of suffocation. Small children should avoid it, but after they are 10 years old they may eat it. If you eat hempseeds (*mazi*) or acorns? (*hobu*) you should not eat parched soybeans; if you do, you will have scars.

The section titled “sweet melon” notes: Plant sweet melon together with soybeans. After the soybean seedlings emerge to a height of 4-5 inches (*cun*), pinch them off. After several leaves appear on the melon plants, then you pinch off the soybean seedlings (*doumiao*).

The section titled “Season of spring. Agricultural time. Plant seasonal beans” (*dou*) states that the common bean (later called *caidou*; *Phaseolus vulgaris*) was called “four seasons bean” (*shijidou*). The passage describes what it looks like, explains that it is a legume (*shu*), and tells when to plant and when to harvest. Its nature (*qi*) is warm and its flavor is sweet. See Li 1958 #580. Note: The term *caidou* is not mentioned. These are the most widely used beans throughout Latin America and the American Southwest—where they are known as frijoles. However, they are not widely cultivated nor used as food in China. (Translated by H.T. Huang, PhD, Jan. 2003, May 2003).

Bray (1984, p. 451, 629): “Records of the three departments of agriculture.” Qing dynasty. Preface 1760. Citing this work from Szechuan, Bray notes that it gives the first detailed Chinese account of sorghum cultivation techniques, which are very similar to those for millets.

138. Tiaodingji [The harmonious caldron]. 1765-1860? China. Undated. [Chi]

• **Summary:** Wade-Giles reference: *T'iao Ting Chi*. Qing dynasty. This is a collection of recipes starting in about the year 1750. Huang (2000) says that this undated work was compiled during the Qing dynasty, between 1760 and 1860. Compiler unknown. The original hand-written manuscript is in the Beijing Library. First printed in a 1986 edition by Hsing Po-T'ao, published by Commerce Publishers in Beijing (p. 625). This is the most comprehensive of the pre-modern food canons. A massive tome covering 871 pages and containing 2,700 recipes, it includes about 250 entries on fermentations and food processing. Parts of it were said to be in circulation before 1765, but other parts perhaps no earlier than 1860. There is great interest in the origin of this book among Chinese food historians, since many of the recipes in it are identical to those in the *Suiyuan Shidan* [Recipes from the Sui Garden], By Yuan Mei (W.-G. *Sui Yuan Shih Tan*, by Yüan Mei). The questions arise: Which book is earlier? Who copied whom? Regardless, this is a book we cannot ignore (p. 132). This massive Qing recipe book does not mention soy sprouts (p. 297).

In Chapter 3, “Meats,” it uses jiang (fermented soybean paste) in 58 recipes, regular soy sauce called *qingjiang* (W.-G. *ch'ing chiang*) in 4 recipes, called *jiangyou* (W.-G. *chiang yu*) in 138 recipes, and called *jiangshui* (W.-G. *chiang shui*) in 2 recipes, and soy nuggets (*shi*) in 2 recipes.

In Chapter 7, “Vegetables,” it uses jiang in 33 recipes, regular soy sauce called *jiangyou* (W.-G. *chiang yu*) in 66 recipes, called *jiangzhi* (W.-G. *chiang chih*) in 1 recipe, and called *jiangshui* (W.-G. *chiang shui*) in recipe, and soy nuggets (*shi*) in 1 recipe. In this recipe book, which may be considered the summation of culinary arts in China in the 19th century, there are 212 entries for soy sauce (under various names) versus only 91 for jiang. Soy sauce had come to be the more widely used seasoning, but jiang was

still important—as it is today (p. 372-73). Fish jiang and shrimp jiang are mentioned (p. 387n). Page 86 describes various ways of preparing *mianjin* (W.-G. *mien-chin*) (wheat gluten) (Huang 2000, p. 502).

139. Encyclopaedia Britannica; or, A dictionary of arts, sciences, &c. On a plan entirely new: by which, the different sciences and arts are digested in the form of distinct treatises or systems, comprehending the history, theory, and practice of each, according to the latest discoveries and improvements... 2nd ed.: Dolichos. 1779. Edinburgh: Printed for J. Balfour and Co. 10 volumes publ. 1778-1783. See vol. 4, p. 2511-12.

• **Summary:** “Dolichos... 2. The soja is a native of Japan, where it is termed *daidsu*; and, from its excellence, *mame*; that is, ‘the legumen or pod,’ by way of eminence. It grows with an erect, slender, and hairy stalk, to our height of about four feet. The leaves are like those of the garden kidney-bean (*See *Phaseolus*). The flowers are of a bluish white, and produced from the bosom of the leaves, and succeeded by bristly hanging pods resembling those of the yellow lupine, which commonly contains two, sometimes three, large white seeds. There is a variety of this kind with a small black fruit, which is used in medicine. Kempfer [Kaempfer] affirms that the seeds of this when pounded and taken inwardly, give relief in the asthma. This legumen is doubly useful in the Japanese kitchens. It serves for the preparation of a substance named *miso*, that is used as butter; and likewise a pickle celebrated among them under the name of *sooju* or *soy*. To make the first, take a measure of mame, or the beans produced by the plant: after boiling them for a considerable time in water, and to a proper degree of softness, they beat or bray them into a softish pulse; incorporating with it, by means of repeated braying, a large quantity of common salt, four measures in summer, in winter three. The less salt that is added, the substance is more palatable; but what it gains in point of taste, is loses in durability. They then add to this mixture a certain preparation of rice, to which they give the name of *koos*; and, having formed the whole into a compost, remove it into a wooden vessel which had lately contained their common ale or beverage named *sacki*. In about two months it is fit for use. The koos give it a grateful taste; and the preparing of it, like the polenta of the Germans, requires the skilful hand of an experienced master. For this reason there are certain people who make it their sole business to prepare the koos, and who sell it ready made for the purpose of making miso: a substance which cannot fail to be greatly valued in those countries, where butter from the milk of animals is unknown. To make *sooju*, or *soy*, they take equal quantities of the same beans boiled to a certain degree of softness; of muggi, that is corn, whether barley or wheat, roughly ground; and of common salt. Having properly mixed the beans with the pounded corn, they cover up the mixture,

and keep it for a day and a night in a warm place, in order to ferment; then, putting the mass into a pot, they cover it with the salt, pouring over the whole two measures and a half of water. This compound substance they carefully stir at least once a-day, if twice or thrice the better, for two or three months: at the end of which time, they filtrate and express the mass, preserving the liquor in wooden vessels. The older it is, the better and the clearer; and if made of wheat instead of barley, greatly blacker. The first liquor being removed, they again pour water upon the remaining mass; which, after stirring for some days, as before, they express a second time, and thus obtain an inferior sort of soy.”

Note 1. The descriptions of how to make miso and soy sauce are based on those of Englebert Kaempfer, published in 1712 in Latin in his book *Amoenitatum exoticarum...* and first written in Japan in 1690-92.

Note 2. This is the earliest English-language document seen (March 2009) that contains the word *miso*. While some miso (though usually described as a paste) has a consistency like butter, and a few types have a yellow color resembling that of butter, the Japanese have never used miso like butter. Rather they use it as a base for soups, sauces, and stews. The misunderstanding that miso “is used as butter” probably comes from the following statement by Englebert Kaempfer in his book *The history of Japan...* (1727). “Of the Meal of these Beans is made what they call *Midsu*, a mealy Pap, which they dress their Victuals withal, as we do with Butter.” Concerning its etymology, the word “miso” seems to have come into English from the German *Midsu*, and into German from the Japanese *miso*.

Note 3. This is the earliest English-language document seen (April 2001) that uses the word “sooju” to refer to shoyu or soy sauce. Kaempfer used the same term (written *Sooju*) in 1712 in his book *Amoenitatum exoticarum...* which was written in Latin.

Note 4. This is also the earliest English-language document seen (Oct. 2006) that uses the term “the soja” as a singular noun to refer to the soybean.

Note 5 This is the earliest document seen (Dec. 2002) which states that soybeans can be used to give relief from asthma or other allergic conditions. Address: Edinburgh, Scotland.

140. Bryant, Charles. 1783. *Flora diætica: Or history of esculent plants, both domestic and foreign. In which they are accurately described, and reduced to their Linnæan generic and specific names. With their English names annexed, and ranged under eleven general heads.* London: B. White. 379 p. See p. 297, 300-01. [2 ref]

• **Summary:** In Chapter VII. Leguminous plants. Section I. Pods and seeds of herbaceous plants (p. 297), there is a listing for “3. *Dolichos soja*. East India Kidney Bean.” Pages 300-01 contain full details: “*Dolichos soja*. Indian Kidney Bean. Lin. Sp. pl. 1023. This is a perennial and a

native of India. It sends up an erect, slender, hairy stalk, to the height of about four feet, furnished with leaves much like those of the Common Kidney Bean, but more hairy underneath. The flowers are produced in erect racemi, at the bosoms of the leaves; they are of the pea-kind, of a bluish white color, and are succeeded by pendulous, hairy pods, resembling those of the Yellow Lupine, each containing three or four oval, white seeds, a little larger than peas.

“This plant is much cultivated in Japan, where it is called *Daidso*, and where the pods supply their kitchens for various purposes; but the two principal are with a sort of butter, termed *Miso*, and a pickle, called *Sooju* or *Soy*.”

“The Miso is made by boiling a certain quantity of the beans for a considerable time in water, till they become very soft, when they are repeatedly brayed with a large quantity of salt, till all is incorporated. To this mass they add a certain preparation of rice, named *Koos* [probably *koji*; Kaempfer introduced this term in 1712], and having well blended the whole together, it is put into a wooden vessel, where in about 2 months it becomes fit for use, and serves the purposes of butter. The manner of preparing the *Koos* is a kind of secret business, and is in the hands of some certain people only, who sell the *Koos* about the streets, to those who make Miso.

“In order to prepare *Sooju* they take equal quantities of beans, wheat, or barley-meal, and boil them to a pulp, with common salt. As soon as this mixture is properly incorporated, it is kept in a warm place for twenty-four hours to ferment; after which the mass is put into a pot, covered with salt, and a quantity of water poured over the whole. This is suffered to stand for two or three months, they never failing to stir it well at least once a day, if twice or thrice it will be the better; then the liquor is filtered from the mass, and preserved in wooden vessels, to be used as occasions require. This liquor is excellent for pickling anything in, and the older it is the better.”

Note 1. Bryant’s account is largely based on that of Engelbert Kaempfer in his book *Amoenitatum Exoticarum*, written in Japan in 1690-92, and published in 1712. Bryant’s book has an excellent, extensive index. It is the earliest English-language document seen (May 2006) that contains a detailed botanical description of the soybean.

Note 2. This is the earliest document seen (July 2006) concerning soybeans (but only wild perennial relatives of soybeans) in India; cultivated soybeans have not yet been reported.

Note 3. This is the earliest English-language document seen (March 2009) that uses the term “a sort of butter” to refer to miso.

Also discusses: Several species of edible seaweeds [sea vegetables]: “13. *Fucus saccharinus*—Sweet *Fucus* or *Sea Belts*. Lin. Sp. pl. [*Species plantarum*] 1630. *Fucus alatus sive phafnagoides*. Bauh. Pin. 364 [*Caspar Bauhin*. 1623. *Pinax Theatri Botanici*].

“14. *Fucus palmatus*—Handed *Fucus*. Lin. Sp. pl. 1630.

“15. *Fucus digitatus*—Fingered *Fucus*. Hud. Flo. Ang. 579 [William Hudson. 1762, 1798. *Flora Anglica*]. *Fucus arboreus polyschides edulis*. Bauh. Pin.

“16. *Fucus esculentus*—Edible *Fucus* Hud. Flo. Ang. 578 (p. 90-91, 100-01).

“39. *Ulva lactuca* or Green laver. Lin. Sp. pl. 1632. *Muscus marinus lactucæ similis*. Bauh. Pin. 364 (p. 117-18).

Amaranthus oleraceus or Esculent Amaranth from India (p. 119). *Arachis hypogæa* or American Ground Nut [Peanut] (p. 298-99). *Cicer arietinum* or Chick Pea [Chick Pea] (p. 299; it “grows naturally among the corn in Spain and Italy, and it is much cultivated in these places for the table... It is much cultivated in Barbary [the Mediterranean coast of north Africa], by the name of *Gravances*, and is counted one of their best sorts of pulse”). *Ervum lens* or Lentil (p. 301-02; it “is a common weed in the cornfields of France... *Lentils* are a strong, flatulent food, very hard of digestion, and therefore seldom used now but to boil in soups, in order to thicken them”). *Lotus tetragonolobus* or Square-podded Pea [Winged Bean]. *Lotus ruber*, siliqua angulosa Bauh. Pin. 332 (p. 302-03). *Lupinus albus* or White Lupine (p. 303-04). *Ceratonia siliqua* or Carob tree (St. John’s bread, p. 309-10). *Coffea Arabica* or Arabian coffee (p. 311). *Coffea occidentalis* or American coffee (p. 311-12). *Coix lacryma Jobi* or Job’s tears (p. 332). *Polygonum fagopyrum* or Buck Wheat (p. 343). Ginkgo or Maiden-hair tree (p. 377-78). Bread fruit tree (378-79). Some of these are described in detail in separate records.

Note 4. This is the earliest Western document seen (Jan. 2005) that discusses sea vegetables (p. 117-18).

Note 5. This is the earliest document seen (June 2006) that mentions *Coix lacryma Jobi* or Job’s tears.

Note 6. This is the earliest English-language document seen (June 2008) that gives a scientific name for lentils (*Ervum lens*).

Note 7. This is the earliest English-language document seen (June 2008) that mentions the chick pea (which it calls “Chick Pea”) or gives its scientific name (*Cicer arietinum*).

Near the front of the book, a section titled “Terms explained” (xiii-xvi) is a glossary that gives concise definitions of the following botanical terms: Annual, biennial, perennial, sessile, serrated, crenated, pinnated or winged, peduncle, spike, spicula, panicle, spadix, racemus, umbel, calyx, catkin, petal, glume, arista or awn, floret, germen or seed bud, pericarpum, capsule, stamina, styles, stigma, summit. Address: Norwich, England.

141. Bryant, Charles. 1785. Carl Bryant’s Verzeichniss der zur Nahrung dienenden so wohl einheimischen als ausländischen Pflanzen. 2 v. [Flora diaetetica: Or history of esculent plants, both domestic and foreign. 2 vols.]. Leipzig:

Bey Weidemanns Erben und Reich. See Vol. I, Part I (Erster Theil), p. 478-80. 21 cm. [Ger]

• **Summary:** This is a German translation of the original 1783 English edition (which see). The section titled “*Dolichos Soja*. *Indian Kidney Bean*. Linn. Spec. plant. 1023.—*Sojabohne*” (p. 478-80) discusses the soybean (also called “*Daidso*”) and various soy products, including miso, koji (*Koos*), and soy sauce (*Der Sooja*).

Note 1. This is the earliest German-language document seen (March 2009) that mentions miso, which it calls *Miso*. The actual text reads: “... *aber macht man Suppen und eine Art Butter daraus, welche Miso heisst...*”

The chapter on legumes (p. 474-75) also discusses: (1) *Arrachis Hypogaea*. American ground nut. (2) *Cicer arietinum*. The chick pea, or Garavances. French: Pois Chiche. (3) *Dolichos Soja*. East Indian kidney beans. *Sojabohne*. (4) *Ervum Lens*. Lentil. (5) *Lotus edulis*. (6) *Lotus tetragonolobus*. Square podded crimson pea. *Spargelerbsen*. *Vierecktiger Schotenklee*. (7) *Lupinus albus*. (8) *Phaseolus vulgaris*. Common kidney bean. French: *Faseole*. *Haricot commun blanc*. (9) *Pisum sativum*. (10) *Pisum Americanum*. (11) *Pisum maritimum*. 12. *Vicia Faba*. Common garden bean

Note 2. Charles Bryant died 1799. Address: Norwich.

142. Lamarck, Jean Baptiste... de. 1790. Dictionnaire encyclopédique méthodique. Botanique. Vol. 2. *Dolic du Japon*, *Dolichos soja* Lin. [Systematic and encyclopedic dictionary. Botany. Vol. 2. The Soybean, *Dolichos soja*]. Paris: Chez Laporte, Imprimeur-Libraire. 774 p. See p. 299. [1 ref. Fre]

• **Summary:** Plants are listed by French names. The author lists the soybean under *Dolic*. as follows: “28. *Dolic du Japon*, *Dolichos soja*. Lin. *Dolichos caule erecto flexuos, racemis axillaribus eredis, leguminibus pendulis hispidis subdispermis*. Lin. Thunb. Fl. Jap. 282.

“*Phaseolus erectus, siliquis Lupini, fructu pisi majoris candido*. Kæmpf. Amoen Exot. 837. t. 838. Japonicè; daidsu s. mame. *Phaseolus Japonicus*. Raj. Suppl. 438. n°. 28 [John Ray. 1704. *Historia plantarum*. Vol. 3. *Supplementum*. See p. 438].

The original French reads: “*Sa tige est droite, haute d’un pied & demi, striée ou cannelée dans sa partie supérieure, & abondamment chargée de poils rousseâtres. Ses feuilles sont composées de trois folioles ovales, obtuses, velues, molles, soutenues sur des pétioles communs velus & striés. Les fleurs font petites, purpurines, disposées dans les aisselles des feuilles sur des grappes droites, velues, & fort courtes. Les gousses sont longues d’un pouce & demi, pendantes, un peu comprimées, pointues, dispermes, & couvertes de poils rousseâtres fort abondans. Cette plante croît au Japon, dans les Indes orientales, & est cultivée au Jardin du Roi. Les Japonois préparent avec ses semences une sorte de bouillie qui leur tient lieu de beurre, & dont ils font une sauce*”

fameuse, qui se sert avec les viandes rôties; ils nomment la bouillie *miso*, & la sauce *sooja* ou *soja*.”

In English, this means: “Its stalk is straight, a foot and a half high, striped or fluted in its upper part and abundantly covered with reddish or russet hairs. Its leaves are comprised of 3 oval leaflets, obtuse (rounded at the free end), hairy, soft, several leaves are borne on petioles that are hairy and striped. The flowers are small, purplish, arranged on the axils of the leaves, in straight clusters which are hairy and very short. The pods are an inch and a half long, pendant, slightly compressed (not round), pointed, dispermous, and covered with very abundant reddish hairs. This plant grows in Japan and the East Indies, and is cultivated at the Royal Garden (*Jardin du Roi*). It is an annual, and I have seen a living plant specimen. Using its seeds, the Japanese prepare a sort of paste [*miso*], which they use in place of butter, and that is also used to make a famous sauce, which is served with roasted meats. They call the paste *miso* and the sauce *sooja* or *soja*.”

Note 1. This is the earliest document seen (Feb. 2008) that has the word “*Soja*” in the title.

Note 2. Merrill stated incorrectly that Lamarck called the soybean “*Phaseolus max*” following Linnaeus. Address: Former officer in the Regiment de Beaujolais, Royal Academy of Sciences.

143. Ryôrisho. Fu to tôfu [Cookbook on wheat gluten and tofu]. 1790. Japan. 38 p. Unpublished manuscript. Japanese summary by Kawakami 1978, p. 175. [Jap]

• **Summary:** This must be the last volume of a three volume work. This one is about Zen vegetarian cookery (*shojin ryori*). The other two were about fish and poultry. There are a lot of tofu recipes, including Suizenji Tofu, Enmeiji Tofu, Uneri Tofu, and Shiruko Tofu. A description of how to make sweet simmered miso (*neri-miso*) is also given.

144. Shokumotsu waka honzô [The book of Japanese foods?]. 1795. Japan. [Jap]*

• **Summary:** Mentions natto miso soup (*nattô-jiru*).

145. Thunberg, Charles Peter. 1795. Travels in Europe, Africa, and Asia, made between the years 1770 and 1779. In four volumes. Vol. IV. Containing travels in the empire of Japan, and in the islands of Java and Ceylon, together with the voyage home. 2nd. ed. London: Printed for F. and C. Rivington. xix + 310 p. See p. 37, 88, 107, 121-22, 177. Index. 21 cm. [Eng]

• **Summary:** In the chapter on Japanese foods, we read (p. 37): “Rice, which is here exceedingly white and well-tasted, supplies, with the Japanese, the place of bread; they eat it boiled with every kind of provisions. *Miso* soup, boiled with fish and onions, is eaten by the common people, frequently three times a day, or at each of their customary meals. *Misos* are not unlike lentils, and are small beans, gathered from the

Dolichos soja.” Note 1. The latter sentence, which is incorrect, led many subsequent early writers to believe that the seeds of the soy bean were called miso, or that miso was a type of small bean. Rather, miso is a paste made from soy beans.

In the chapter on Japanese agriculture, we read (p. 88): “Of Beans, Peas, and Lentils, many sorts are cultivated, both the larger (*Phaseoli*) and the smaller (*Dolichos*). Of *Daidso* Beans (*Dolichos Soja*) the meal is used for dressing victuals, and the expressed juice for making Soy; as is likewise the whole Bean for the soup called *Miso*, which is a daily dish with the common people. *Atsuki* [Azuki] Beans likewise (*Phaseolus radiatus*) are ground to meal, of which small cakes are made with sugar.”

Note 2. This is the 2nd earliest English-language document seen (Jan. 2005) that clearly mentions azuki beans, which it calls *Atsuki Beans*. It is also the earliest English-language document seen (March 2006) that uses the word *Atsuki* to refer to azuki beans.

Note 3. It is not clear what Thunberg means by “meal” when he says “the meal is used for dressing victuals.”

In the chapter on Commerce, after discussing the tea trade, Thunberg writes (p. 107): “The *Tea Trade* is confined entirely to the inland consumption, the quantity exported amounting to little or nothing. The traffic in *Soy* [sauce], on the other hand is more considerable; and as the tea produced in this country is reckoned inferior to that of China, so the soy is much better than that which is brewed in China. For this reason, soy is not only exported to Batavia [Jakarta], in the wooden barrels in which it is made, but likewise sold from thence to Europe and to every part of the East Indies. In some places in Japan too the soy is reckoned still better than in others; but, in order to preserve the very best sort, and prevent its undergoing a fermentation, in consequence of the heat of the climate, and thus being totally spoiled, the Dutch at the Factory [at Desima / Dezima / Dejima] boil it up in iron kettles, and afterwards draw it off into bottles, which are then well corked and sealed [by applying bitumen / coal tar to the stopper]. This mode of treatment renders it stronger and preserves it better, and makes it serviceable for all kinds of sauce. The *Silk trade* is indeed in a very flourishing state in the empire...”

In the chapter titled “Residence at Dezima [1776], Previous to my Return Home,” the author writes (p. 121-22): “Soy-sauce, which is every where and every day used throughout the whole empire, I might almost say in every dish, and which begins even to be made use of in Europe, is prepared from Soy Beans (*Dolichos Soja*) and salt, mixed with barley or wheat. For this purpose, they cultivate this species of bean in several places, although it grows in great plenty wild. Scarcely any kind of legumen [legume] is more copiously used than this. The seeds are served up in soups, once or twice a day all the year round, to people of distinction or otherwise, to the poor and to the rich. *Soy* is

prepared in the following manner: The beans are boiled till they become rather soft; afterwards an equal quantity of pounded barley or wheat is added. These ingredients being mixed together, are set in a warm place, and covered up for four and twenty hours, that they may ferment. An equal quantity of salt is then added to the mixture, and twice and a half as much water is poured upon it. After it has been mixed in this manner in an earthen vessel, it must stand well covered two or three whole months together, during which period it is necessary however at first for it to be stirred about several times in the day for several days together. The liquor is then pressed and strained off, and kept in wooden vessels. Some provinces furnish better soy than others; but exclusively of this, it grows better and clearer through age. Its colour is invariably brown, and its chief excellence consists in the agreeable salt taste which it possesses.”

While in Colombo, Ceylon, in 1777 the author stated that “the *Dolichos pruriens* grew here tolerably common, with its hairy pods, the hairs of which attaching themselves to the hands, occasion much itching, which is allayed by oil, or decoction of rice, and are celebrated as a Vermifuge.”

Note 4. This plant appears in the index as “*Dolichos Soja*.”

Note 5. This is the earliest English-language document seen (March 2009) that contains the term “Miso soup.”

Note 6. On the title page, the author’s name is given as Carl Peter Thunberg, rather than Karl Peter. Of the four volumes, only vol. IV bears a date, which is 1795. The translator’s name is not given, not even in the “Translator’s preface” nor in any record on WorldCat / OCLC online bibliographic database. The original text was written in 1776. Yule & Burnell (1886, p. 651, and 1903, p. 859) state: “1776. An elaborate account of the preparation of Soy is given in *Thunberg’s Travels*, E.T., [vol.] iv. 121-122;”

Note 7. This is the earliest English-language document seen (Feb. 2008) that contains the word “Soy Beans” (or “Soy-Beans”) (p. 121-22).

Note 8. This is the earliest English-language document seen (Jan. 2006) that contains the term “soy-sauce” (or “soy sauce”). The *Oxford English Dictionary* says (incorrectly): “1818 Todd (transl. Thunberg), Soy-sauce is prepared from soy-beans (*dolichos soja*) and salt, mixed with barley or wheat.”

Note 9. Lewis and Murakami (1923, p. 223) state: “The third English edition of Charles Peter Thunberg’s *Travels* (London 1796) contains an English-Japanese vocabulary of approximately 1,500 words; this was probably the first English-Japanese vocabulary ever published. It seems to have been unknown to our author [Ranald MacDonald] and his scholars.” Address: Prof. of Botany, Univ. of Upsal [Uppsala], Sweden.

146. Thunberg, Karl Peter. 1796. *Voyages de C.P. Thunberg*. Tome second [Voyages of C.P. Thunberg. Vol. 2]. Paris: Benoit Dandre. iv + 544 p. See p. 3, 4, 145, 266-68. [Fre]

• **Summary:** An early traveler to East Asia who mentioned soyfoods was the Swedish doctor and prof. of botany at the Univ. of Uppsala, Carl P. Thunberg. In Chapter 20 titled “Japanese Foods” he states (p. 267-68): “Three times a day, with each meal, the people eat miso soup prepared with fish and leeks. These miso [he apparently thought miso was the name of a legume; see Thunberg 1796 in English] closely resemble lentils. They are the small dolich beans of Japan (*ce sont de petites fèves de dolich du Japon*).*” (Footnote: * “*Dolichos soja*. Lam. Diction. [Lamarck 1790. Dictionary] No. 28).”

“Miso or soy sauce constitute the principal food of the Japanese. People of all levels, great or small, rich or poor, eat them several times a day year-round. Here is how they are prepared. The beans are cooked until they are just soft, then they are mixed with an equal quantity of barley or wheat, and the mixture is allowed to ferment for 24 hours in a warm place. Now an equal quantity of salt and 2½ times the amount of water. The mixture is put in an earthen pot, which is well closed and left for 2½ months; it is stirred during the initial days. After the necessary time the liquid is pressed out and stored in wooden kegs. The inhabitants of certain provinces make better ‘soya’ than those in others. Moreover, the longer it ages, the tastier and clearer it becomes. It is always brown and its principal flavor is a pleasant saltiness. The Japanese also eat fish, boiled or fried in oil” (p. 267-68).

“The tea of Japan is inferior to that of China. However, Japanese ‘soya’ [soy sauce] is preferable to that of the Chinese. It is shipped in numerous vats to Batavia [today’s Jakarta, Indonesia], India, and Europe. The Dutch have found a way of protecting it from the effects of heat and of preserving the fermentation. They boil it in an iron pot, funnel it into bottles, and seal the mouths with pitch. This liquid retains all its ‘force’ and can be mixed with all other sauces.” Note: All this took place long before Appert’s invention of canning in 1809 and Pasteur’s invention of pasteurization in 1862. In fact pasteurization had been practiced in Japan for 200 to 300 years before this time.

In Chapter 23, “The State of Agriculture in Japan,” the author notes (p. 291): The Japanese plant a great deal of rapeseed, and the seed furnishes an excellent oil for lamps. In Japanese, the plant is named *na tanne* and the oil *na tanne abra* or *na tanne no abra* (sic, *natane abura*). “Soy flour (*La farine des fèves de daidsou* (Footnote: *Dolichos soïa*)) is used in various dishes. The liquid that is pressed out is used to make soy sauce. The roots are put in a soup named *miso*, which the people use daily for nourishment. Small cakes are also made with the flour of azuki beans (*la farine de haricots d’atsouki* (Footnote: *Phaseolus radiatus*)) mixed with sugar.” Note: This is the earliest French-language document seen (Jan. 2005) that mentions azuki beans, which it calls *haricots d’atsouki*.

Pages 314-15 state: “Their soy sauce, which has been introduced by many Europe countries, is made with soybeans (*se fait avec des fèves-soya* (Footnote: *Dolichos soya*)), barley or wheat, and salt. Although these beans come spontaneously and abundantly in many places, the consumption which they make of this flour causes them to take particular care with the plant’s cultivation.” Address: France.

147. Hemmij, Gijsbert. 1797. Diary. In: Leonard Blussé, Cynthia Viallé, et al, eds. 2004. *The Deshima Diaries Marginalia, 1740-1800*. Tokyo: Japan-Netherlands Institute. xl + 898 p. See p. 707 (#27).

• **Summary:** 1797 May 12—“I summond the *rapporteurs* and handed them three kinds of Dutch cakes and three kinds of confitures in newly made boxes for the governor. They returned in the afternoon and assured me that the governor had been very pleased and he was sending me a reciprocal present of two flasks of medicinal *sake*, a couple of boxes of flour and *laxa*, and a barrel of *miso* fish” [fish pickled in miso]. Address: Opperhoofd (Chief of the Dutch factory), Deshima, Nagasaki, Japan.

148. *Encyclopaedia Britannica; or, A dictionary of arts, sciences, and miscellaneous literature...* 3rd ed... greatly improved. 18 vols. 1797. Edinburgh: Printed for A. Bell and C. Macfarquhar.

• **Summary:** In vol. 6, part 1 (D-E), the entry for *Dolichos* (p. 81) states: 2. The soja is a native of Japan, where it is termed *daidsu*; and, from its excellence, *mame*; that is, “the legumen or pod,” by way of eminence. It grows with an erect, slender, and hairy stalk, to the height of about four feet. The leaves are like those of the garden kidney-bean *. The flowers are of a bluish white, and produced from the bottom of the leaves, and succeeded by bristly hanging pods resembling those of the yellow lupine, which commonly contain two, sometimes three, large white feeds. There is a variety of this kind, with a small black fruit, which is used in medicine. Kempfer [Kaempfer] affirms, that the seeds of this when pounded and taken inwardly give relief in the asthma. This legumen is doubly useful in the Japanese kitchens. It serves for the preparation of a substance named *miso*, that is used as butter; and likewise a pickle celebrated among them under the name of *sooju* or *soy*. To make the first, they take a measure of *mame*, or the beans produced by the plant: after boiling them for a considerable time in water, and to a proper degree of softness, they beat or bray them into a softish pulse; incorporating with it, by means of repeated braying, a large, quantity of common salt, four measures in summer, in winter three. The less salt that is added, the substance is more palatable; but what it gains in point of taste, it loses in durability. They then add to this mixture a certain preparation of rice, to which they give the name of *koos* [*koji*]; and having formed the whole into a

compost, remove it into a wooden vessel which had lately contained their common ale or beverage named *sacki*. In about two months it is fit for use. The *koos* gives it a grateful taste; and the preparing of it, like the polenta of the Germans, requires the skillful hand of an experienced master. For this reason there are certain people who make it their sole business to prepare the *koos*, and who sell it ready made for the purpose of making miso: a substance which cannot fail to be greatly valued in those countries where butter from the milk of animals is unknown.

“To make *sooju* or *soy*, they take equal quantities of the same beans boiled to a certain degree of softness; of *muggi*, that is corn, whether barley or wheat, roughly ground; and of common salt. Having properly mixed the beans with the pounded corn, they cover up the mixture, and keep it for a day and a night in a warm place, in order to ferment; then putting the mass into a pot, they cover it with the salt, pouring over the whole two measures and a half of water. This compound substance they carefully stir at least once a-day, if twice or thrice the better, for two or three months: at the end of which time, they filtrate and express the mass, preserving the liquor in wooden vessels. The older it is, the better and the clearer; and if made of wheat instead of barley, greatly blacker. The first liquor being removed, they again pour water upon the remaining mass; which, after stirring for some days, as before, they express a second time, and thus obtain an inferior sort of *soy*.”

For *Sakki* (*saké*) see vol. 9, part 1 (p. 71, under Japan). Address: Edinburgh, Scotland.

149. Matsudaira, Fumai? 1800. *Yotsu no toki no hana* [Flowers of the four seasons]. Japan. Publisher unknown. 2 large volumes. Japanese summary by Kawakami 1978, p. 157. [Jap]

• **Summary:** These two volumes of writing on cookery contain information on tea ceremony cuisine (*kaiseki ryori*) menus, including grilled tofu (*yaki-dôfu*), Simmering Tofu (*Yu-dôfu*), Miso no Sashimi, Natto Miso Soup (*Natto-jiru*), and Yamabuki Shoyu. The author, Matsudaira, lived 1751-1818.

150. Thunberg, Charles Peter. 1802. *Travels in Europe, Africa, and Asia, performed between the years 1770 and 1779*. In: William Fordyce Mavor, ed. 1802. *An Historical Account of the Most Celebrated Voyages, Travels, and Discoveries, from the Time of Columbus, to the Present Period*. Philadelphia, Pennsylvania: Published by Samuel F. Bradford. Vol. 12 of 14. 299 p. See p. 217, 236, 267, 275. Series: Early American Imprints: Second series no. 2640.

• **Summary:** In writing about Japan, Thunberg states: Page 217: Shimonoseki “is situated at one extremity of Nippon, the largest of all the islands, and contains the two capitals of the kingdom. On the seashore a kind of ulva, called *AwaNori*, is found, which, when dried and roasted over the

coals, and afterwards pulverized, is eaten with boiled rice, and sometimes put into miso-soup.”

Page 236: “The Japanese eat thrice a day and their general fare is miso-soup boiled with fish and onions.”

Page 267: “Ladies do not eat with the men, but by themselves. Rice supplies the place of bread, and is boiled with every kind of provisions. Miso-soup, boiled with fish and onions, is the customary food of the common people. Misos are small beans, like lentils, the produce of the *dolichos soja*. Fish and fowls are very plentiful, and are eaten in abundance. Even the flesh of the whale is a common dish among the poorer people.

“Tea and sakki constitute the whole beverage of the Japanese. Wines and distilled liquors they can scarcely be prevailed on to taste. Hitherto they have never suffered themselves to be corrupted by European modes of living, but still retain their original temperance and frugality... Sakki is transported to Batavia as an article of commerce;...”

Page 275: “Rice is their principal corn. Wheat, barley, and rye are little used... They have many kinds of beans and peas, and also of alliaceous plants, turnips, and cabbages. From the seeds of the latter they express an oil for their lamps.” Address: M.D., Knight of the Order of Vasa, Prof. of Botany, Univ. of Upsal [Uppsala], ect. Sweden.

151. Smith, Thomas. 1803. *The wonders of nature and art; or, A concise account of whatever is most curious and remarkable in the world; Whether relating to its animal, vegetable, and mineral productions, or to the manufactures, buildings, and inventions of its inhabitants, Compiled from historical and Geographical works, of established celebrity, and illustrated with the Discoveries of modern travellers.* 12 vols. London: Printed for J. Walker. 282 p. See vol. 6, p. 277. Illust. 15 cm.

• **Summary:** An encyclopedia. In Chapter VIII, “Of Japan” (p. 230+), in the section titled “Customs, manners, &c.” the author borrows text from Thunberg (1802, p. 267) without using quotation marks (p. 259): “Ladies do not eat with the men, but by themselves. Rice supplies the place of bread, and is boiled with every kind of provisions. Fish and fowls are very plentiful, and are eaten in abundance; but miso-soup * boiled with fish and onions is the customary food of the common people.”

Footnote: *”Misos are small beans, like lentils, the produce of the *dolichos soja*.” Address: Rev. and author [England].

152. Sugino Bakuka. 1803. *Shinsen hôchô kakehashi* [Newly selected kitchen knife ladder]. Osaka Shorin: Akamatsu Kyubei and Asano Yahei. 176 p. Japanese summary by Kawakami 1978, p. 79. [Jap]

• **Summary:** Cooking know-how for family use including descriptions of how to make shoyu, vinegar, miso, etc.

Contains many illustrations of how to set the table, etc. The author wrote this more for family than for professional use.

153. **Product Name:** [Tamari, and Miso].

Foreign Name: Tamari, and Miso.

Manufacturer’s Name: Minato-ya. Renamed Sato Shinnosuke Shoten in 1909, then San-Jirushi Brewing Corp. in 1963.

Manufacturer’s Address: Ooaza Senba, Kuwana-cho, Kuwana-gun, Ise-no-kuni, Japan.

Date of Introduction: 1804.

Ingredients: Soybeans, water, salt.

Wt/Vol., Packaging, Price: Wooden kegs.

How Stored: Shelf stable.

New Product–Documentation: San Jirushi advertisements in 1980s. Talks with Steve Earle and Michael Fountain. Letter from Steve Earle. 1988. March 7. The best source seen up to this time on the early history of San Jirushi. The product was originally called tamari, not “tamari-shoyu.”

Note: This is the earliest record seen (April 2001) concerning San Jirushi of Kuwana, Japan.

154. Miller, Philip. 1807. *The gardener’s and botanist’s dictionary: Containing the best and newest methods of cultivating and improving the kitchen, fruit, and flower garden and nursery; of performing the practical parts of agriculture; of managing vineyards, and of propagating all sorts of timber trees... The whole corrected and newly arranged..., by Thomas Martyn Vol. II.* London: Printed for F.C. & J. Rivington. 2 vol. in 4. Unpaginated. 38 cm. 20 plates. [9 ref. Eng]

• **Summary:** The plants are arranged alphabetically in the book by genus, but not alphabetically within one genus by species. “33. *Dolichos Soja*: *Lin. spec.* 1023. *sys.* 659. *Reich.* 451. *fl. zeyl. n.* 534. *mat. med.* 171. *Kaempf. amoen.* t. 838. (Phaseolus). *Thunb. jap.* 282. *Lour. cochinch.* 441. *Rumph. amb.* 5. t. 140. (Cadelium). *Stems flexuose, racemes axillary, erect, legumes pendulous, hispid, containing about two seeds.*”

Three pages later, under “33.” is a description of the plant and its uses. “Stem round at bottom and smooth; above striated, very hirsute, a foot and more in height. Leaves petioled, hirsute: leaflets petioled, ovate, obtuse with a point, entire, the middle one on a longer petiole and larger, an inch in length: petiole striated, hirsute, a finger’s length. Flowers in short, erect, hirsute racemes: subsessile, from three to five together. Corollas purple, scarcely larger than the calyx.*

“Native of the East Indies, Ceylon, Japan, &c.

“The seeds, which are usually called *Miso* [sic] in Japan, are put into soups, and are the most common dish there, insomuch that the Japanese frequently eat them three times a day. The *Soja* [soy sauce] of the Japanese, which is preferred to the *Kitjap* of the Chinese, is prepared from

these seeds, and is used in almost all their dishes, instead of common salt. The Chinese also have a favourite dish made of these seeds, called *Teu hu* or *Tau hu* [tofu], which looks like curd, and though insipid in itself, yet with proper seasoning as [is] agreeable and wholesome.**”

Footnotes: “*Thunb. and Linn. **Thunb. and Loureiro.”

Glycine javanica: “*Java Glycine. Lin. spec. 1024. Reich. 453. Thunb. in Linn. trans. 2. 340. Leaves ternate; stalk villose; petioles rough-haired; bractes lanceolate minute.*

“Stem twining, as in *Phaseolus*, with yellow, reflex hairs scattered over it. Leaves of *Phaseolus*. Pedicels yellow, with close hairs. Stipules, to the petioles oval-oblong, to the peduncles lanceolate. Peduncles the length of the leaves, terminated by an ovate-oblong, close spike of nodding violet-coloured flowers, with very minute bractes between them.—Native of the East-Indies*; and near Nagasaki in Japan, where it is called *Fajo Mame*, and flowers in september and october [sic].**” Footnotes: “*Linn spec. **Thunberg.”

On the title page, the subtitle reads: “To which are now first added a complete enumeration and description of all plants hitherto known, with their generic and specific characters, places of growth, times of flowering, and uses both medicinal and economical. The whole corrected and newly arranged, with the addition of all the modern improvements in landscape gardening, and in the culture of trees, plants, and fruits, particularly in the various kinds of hot houses and forcing frames: with plates explanatory both of them, and the principles of botany. By Thomas Martyn, B.D., F.R.S. Regius Professor of Botany in the University of Cambridge.”

This elegant set of large books consists of 4 volumes, plus 2 volumes of plates. The soybean appears only in volume 2. Miller gives the most detailed botanical description of the soybean in English up to this time.

Note 1. Philip Miller was head of the famous Chelsea Physic [botanic] Garden in England. Among his many students was William Aiton, who introduced the soybean to England.

Note 2. This is the earliest English-language document seen (Oct. 2004) that uses the term “twining” to describe wild perennial ancestors of the soybean.

Note 3. This is the earliest English-language document seen (Feb. 2004) that uses the word “*Teu hu*” (or “*teu-hu*”), or the word “*Tau hu*” (or “*Tau-hu*”) to refer to Chinese-style tofu.

Note 3. This is the earliest English-language document seen (Feb. 2004) that uses the word “curd” in connection with tofu.

Note 4. This is the earliest English-language document seen (Jan. 2004) that uses the word “leaflets” (or “leaflet”) in describing the soybean plant.

Note 5. This is the earliest English-language document seen (July 2001) that uses the word “petiole” (or “petioles”

or “petioled”) in connection with the soybean plant.

Webster’s Dictionary defines petiole (derived from New Latin for little foot), a word first used in 1753, as “a slender stem that supports the blade of a foliage leaf,” i.e., the stem of a leaf.

Webster’s Dictionary defines stipule (derived from New Latin *stipula*, which is derived from the Latin word meaning “stalk”), a word first used in about 1793, as “either of a pair of appendages borne at the base of the leaf in many plants.” Address: F.R.S., Gardener to the Worshipful Company of Apothecaries at their Botanic Garden in Chelsea [England] and a Member of the Botanic Academy at Florence.

155. Ryôri no sho [The book of cooking]. 1807. Japan. 50 p. Unpublished. Japanese summary by Kawakami 1978, p. 187. [Jap]

• **Summary:** This is not the book’s true name, but a tentative name applied after it was written. It is not a recipe book but a book on how to make foods, including shoyu and miso. The author was a person who could experiment with shoyu production. A lot of old things are mentioned. The book must be a collection of writings about what the author has heard and also quotations from other books.

156. The new encyclopædia; or, universal dictionary of arts and sciences: *Dolichos soja*. 1807. London: Printed for Vernor, Hood, and Sharpe. See vol. VII. Dol. (p. 417-418). [2 ref. Eng]

• **Summary:** “3. *Dolichos Soja* is a native of Japan, where it is termed *daidsu*; and, from its excellence, *mame*; that is, the *legumen* or *pod*, by way of eminence. It grows with an erect, slender, and hairy stalk, to the height of about 4 feet. The leaves are like those of the garden kidney-bean. See *Phaseolus*. The flowers are of a bluish white; are produced from the bosom of the leaves, and succeeded by bristly hanging pods resembling those of the yellow lupine, which commonly contain two, sometimes 3, large white seeds. There is a variety with a small black fruit, which is used in medicine.

“Kempfer [Kaempfer] affirms, that the feeds when pounded and taken inwardly give relief in the asthma. This legumen [legume] is doubly useful in the Japanese kitchens. It serves for the preparation of a substance named miso, that is used as butter; and likewise of a pickle celebrated among them under the name of sooju or soy. See these articles.”

Note: This is the earliest English-language document seen (Feb. 2008) that has the word “Soja” in the title.

157. Pinkerton, John. 1811. A general collection of the best and most interesting voyages and travels in all parts of the world: Many of which are now first translated into English. Digested on a new plan. Vol. 7. London: Printed for Longman, Hurst, Rees, Orme, and Brown. 820 p. See p. 269.

• **Summary:** Each book of this 17-volume work is composed of unnumbered chapters, each describing a different voyage. One of these (p. 231-270) is “The embassy of Peter de Goyer and Jacob de Keyzer from the Dutch East India Company to the Emperor of China in 1655. By John Nieuhoff, Steward to the Ambassadors. Translated from the Dutch.”

The Introduction begins: “Although China was discovered over land by Marco Polo the Venetian, towards the end of the thirteenth century, yet it was very little known to Europeans, till the Portuguese [Portuguese] arrived there by sea towards the end of the fifteenth, and the Romish [Catholic] missionaries found admittance into the empire. In 1517, they established a trade at Quan-tong [Guangdong], commonly called Kanton [Canton]: afterwards they settled a factory also at Ning Po [Ningbo], called by them Liampo, on the eastern part of China, and drove a considerable trade along the coast, between those two famous ports, till their unsufferable [insufferable] pride and insolence brought on their destruction every where but at Ma-kau, or Makao [Macau], an island in the mouth of the river of Kanton [Pearl River], which they still hold, though under great restrictions.”

On p. 269 we read that the daily allowance of food by the two ambassadors (de Goyer and Keyzer) included “six tael of mison” (possibly miso). Note: A tael is a unit of weight equal to 1/10 of a catty, or about 50 gm.

“Their secretaries daily allowance was, one katti [catty, a measure of weight] of fresh meat, five measures of tea, one katti of meal, one measure of taufoe [tofu],... four measures of oil, four tael of mison [miso?], one katti of herbs, and one cup of arrac” [arrack, a strong distilled alcoholic beverage mainly in South- and Southeast Asia].

Note 1. Kaempfer’s History of Japan—first published in English in 1727—also appears in this book. The text is almost identical to the 1727 text. The section about soybeans and soyfoods is in Chapter 6, pages 697-98.

Note 2. Pinkerton lived 1758-1826. Address: Author.

158. Asano, Kozo? 1813. Maniawase ryôri. Sassoku hôchô. Shôjin gyorui [Makeshift, quick cooking. For Zen vegetarian and fish cookery]. Osaka, Japan: Kochiya Kashichi. Japanese summary by Kawakami 1978. [Jap]

• **Summary:** The author (who is not known for sure, by may be Asano) lists recipe names and explains briefly how to make them, including recipes using miso.

159. Chen Jing. comp. 1814. Suanqi wuchanshu [Inventory of products from Suanqi]. China. Passage on soy reprinted in C.N. Li 1958 #335, p. 237. [Chi]

• **Summary:** Wade-Giles reference: *Suan Ch’i Wu Ch’an Shu*, compiled by Ch’ên Ching. Qing dynasty. The section titled “Yellow soybeans” (*huangdou*) states: The soybean has many uses. You can make tofu (*fu*), or press out the oil

(*you*), or make soy nuggets (*shi*) or jiang—with the soybeans produced in our village or elsewhere. But we seldom consume soybeans directly. They come in various colors: black, white, yellow, dark brown, green, or spotted / speckled (*ban*). According to the pharmacopoeia (*bencao*) literature, when eaten raw it is neutral (Note: Dr. Huang has never heard of eating soybeans raw), when eaten parched or stir-fried (*chao*) it is heating, when eaten boiled it is cooling, when made into soy nuggets (*shi*) it is cold. When eaten by cattle it is warm. When eaten by horses it is cold. It is also said that if small children eat the parched beans with pork, they will suffocate. But after the age of ten years, they are out of danger; we do not know the reason. Dr Huang adds: “I wonder how that story got started.” (Translated by H.T. Huang, PhD, March 2003).

160. Morrison, Robert. 1815-1823. A dictionary of the Chinese language in three parts. 6 vols. Macao. Printed at the Honourable East India company’s press by P.P. Thomas. 30 cm. [Eng; Chi]

• **Summary:** S.W. Williams, in “A Syllabic Dictionary of the Chinese Language,” starts his preface by noting the great importance of this very early Chinese dictionary. “This work will ever remain a monument to his industry and scholarship; and its publication in six quarto volumes by the East India Company at an outlay of \$60,000 was a just appreciation of its merits. Since then, many similar works have been published, dictionaries both of the general language and its chief dialects.”

Part 1. Chinese and English arranged according to the radicals. Part 2. Chinese and English arranged alphabetically. In Part 2, Vol. 1 (published in 1819), page 739 (#9187) gives 3 characters for *she* [shih = soy nuggets], pronounced shuh. *Tow she* is a condiment made from pulse, used in cooking. *She yew* or *Tsëang yew* is soy [sauce].

Note: This is the earliest English-language document seen (Oct. 2008) that mentions soy nuggets, which it calls *she* or *Tow she*.

Page 860 (#10365) gives 2 characters for *tow* [pronounced doe]. “A generic name for pulse, beans, and so on. Page 882 (#10622) gives 2 characters for *Tseang* [chiang; like soft Japanese miso]. “A kind of pickle; certain mode of preserving meat, rice, and pulse. *Tseang yew* is soy [sauce].

Part 3. English and Chinese (published in 1822). Page 398 gives “SOI, or Soy” followed by the two characters for “tseang yew” [soy sauce]. Note 1. Illustrations show each of these characters.

Vol. 3, Part 1 (published in 1823) gives Chinese and English arranged according to the radicals. On p. 397 is the 151st radical, *Tow*. Two early original forms of the radical are shown, each resembling a vessel with a lid. “Name of an ancient vessel to contain food, and used in the rites of sacrifice; a certain measure. Grain; leguminous plants,

beans, or peas. Name of an office, of a place, and of a district. A surname." Characters containing this radical are shown on pages 397-98: *she*—"A sort of pulpy substance made of pulse [shih; soy nuggets]. *wan*—"A substance expressed from pulse; soy. Also read Yuh."

Note 2. The author, Rev. Robert Morrison (lived 1782-1834), a minister, was the first Protestant missionary in China. He was a Scotchman, though born at Morpeth in Northumberland, England. In 1807 he was sent by the London Mission to try to start a mission in China. But the British East India Company opposed missionary activity. So he traveled via the USA and reached Canton in 1808. Once there, the Company was glad to enlist his great linguistic talents, and he was appointed translator to their factory at Canton. Thus, it was at their expense (£15,000) that his great Chinese dictionary was published in 1822. He had previously published complete translations of the New and Old Testaments. A condensed (2 volumes in 1) edition was published in 1865 in London. He also established the Anglo-Chinese College at Malacca for English and Chinese literature, with a view to the propagation of Christianity. He died in 1834 at Canton, but he was buried at Macao in the Christian cemetery.

Note 3. This is the earliest English-language document seen (March 2001) that mentions soy nuggets, which it calls *tow she*.

Note 4. *Webster's New Geographical Dictionary* (1988) defines Macao (Portuguese Macau) as a Portuguese overseas territory consisting of the Macao peninsula (located at the mouth of the Pearl River just south of Canton and about 40 miles west of Hong Kong) and the two small islands of Taipa and Colôane. It was settled by the Portuguese in 1557; from 1717 until the 1800s, Macao and Canton were the only Chinese ports open to European trade. Its independence was declared by Portuguese in 1849 but not recognized by Chinese as Portuguese territory until 1887. It was for many years a haven for missionaries and traders. Portugal agreed in 1987 to return Macao to Chinese sovereignty in 1999. Address: D.D.

161. *Encyclopaedia Britannica*; or, A dictionary of arts, sciences, and miscellaneous literature. 5th ed. Illustrated with nearly six hundred engravings. Enlarged and greatly improved. 20 vols. 1817. Edinburgh: Printed at the Encyclopaedia Press for Archibald Constable. Illust. 28 cm. *

Address: Edinburgh, Scotland.

162. Golownin, Capt. Vasili Mikhailovich [Golovnin, Mikhaiforich]. 1818. Narrative of my captivity in Japan, during the years 1811, 1812 & 1813; with observations on the country and the people. To which is added an account of voyages to the coast of Japan, and of negotiations with the Japanese, for the release of the author and his companions,

by Captain Rikord. Vol. II. London: Printed for Henry Colburn. 348 p. See p. 58, 66. No index. 22 cm.

• **Summary:** The author, a Russian, was confined to a prison. Page 58: "... our cages were cleaned out, and our coverlets and night-dresses aired in the sun during our absence. Food was brought to us every morning, noon, and evening. At each meal we received thick boiled rice instead of bread. It was dealt out to us in portions which were more than sufficient for Mr. Chlebnikoff and me;... In addition to the rice, we were served with soup made of sea-cabbage and other wild plants, such as sweet cabbage, wild garlic, and water angelica; to which, for the sake of rendering it savoury, pickled beans (Japanese *misso* [miso]) and some pieces of whale fat were added."

Page 66: "We were now supplied with better food: we were frequently treated with a kind of pudding, which the Japanese call tufa [tofu]; fine beans were boiled with our rice, forming a dish which is considered a great delicacy in Japan;..."

Page 198: "Our food in Matsmai [Matsumae] was incomparably better than it had been in Chakodate [Hakodate]... The fish were fried in oil of poppies, and were seasoned with grated radish [daikon] and soy [sauce]."

Note: This is the earliest document seen (Feb. 2001) concerning soya in connection with (but not yet in) Russia or Eastern Europe.

163. *Encyclopaedia Britannica*; or, A dictionary of arts, sciences, and miscellaneous literature. 6th ed... enlarged and improved. 20 vols. 1823. Edinburgh: Printed for A. Constable. Illust. (582 plates). 28 cm. *
Address: Edinburgh, Scotland.

164. Titsing, Isaac. 1824. Bereiding van de Soija [Preparation of soy sauce]. *Verhandelingen van het Bataviaasch Genootschap van Kunsten en Wetenschappen* 3:159-60. Published in Batavia. [Dut]

• **Summary:** "The preparation of soy sauce (*soija*) is simple, and is performed in the following way:

"One takes a *gantang* (a local Malay unit of measure equivalent to 3.125 kg of rice, or about a gallon) of boiled miso-beans (*gestoofde miso-boonen*). A *gantang* of boiled wheat or barley groats (*gestoofde tarw of gort*), and as many roasted and ground (*gebrande en gemalen*) wheat or barley groats as one deems to be sufficient to give it the necessary color. One then mixes these three together and encloses the mixture in a cupboard to let it mold, for which 8 days are required. After this mixture has become completely green from the mold, it is taken out of the cupboard and allowed to dry in the sun for one full day.

"Next one takes 2½ *gantang* of boiled water and one *gantang* of pure salt, which one dissolves in the water completely; after this it is allowed to stand for 24 hours, until the dirt from the salt has sunk and the water has turned

cold. The pure water is then strained off, followed by the addition of the above-mentioned molded substance, which is then stirred with a shovel for 14 days.

“One uses wheat or barley groats for this. The difference is that when the soy sauce (*soija*) is made out of barley groats, it will be much thinner, whereas that made from wheat will be much thicker, have more body, and look like ink.

“The soy sauce (*soija*), which the Chinese call *ketjap* is used like a very delicious and tasty salt with roasted flesh foods, both in Batavia [Jakarta] and in the Netherlands.”

Mr. Titsingh [Titsing] lived 1744-1812. He wrote a lot about the Dutch East Indies and Japan. Note that in 1880, Mr. A. Paillieux, in the appendix to his long and excellent article on the soybean in *Bulletin de la Societe d'Acclimatation* (Oct. p. 594-95), gives a French translation of this article but cites the original year of publication as 1781, Vol. III. We believe the date should be 1824 instead.

Note 2. This is the earliest Dutch-language document seen (April 2001) that mentions soy sauce, which it calls *de Soija*. The resulting product is more like Chinese-style soy sauce [*kecap asin*] than Indonesian-style soy sauce (*kecap manis*), which typically includes sugar plus various herbs and spices. It is very interesting that Titsingh chooses to use the word *soija* (based on the Japanese word *shoyu* = soy sauce) rather than the local Malay word *ketjap* to describe how *ketjap* is made. Address: Netherlands.

165. Siebold, Philipp Franz von. 1830. Synopsis plantarum oeconomiarum universi regni Japonici [Synopsis of the economic plants from the entire empire of Japan]. *Verhandeligen van het Bataviaasch Genootschap van Kunsten en Wetenschappen* 12:1-74. See p. 54-57. Also first table at end. [Lat; Dut]

• **Summary:** The English translation of this periodical title is: “Transactions of the Batavian Society of Arts and Sciences.” Batavia roughly corresponds to today’s Jakarta on the island of Java, Indonesia. This work lists 447 economic plants, including the soybean. The section on Leguminaceæ [sic, Leguminosæ] (p. 54+), mentions plants of the genera *Dolichos* (incl. *D. hirsutus* or Kudzu / Kudzu), *Sooja*, *Phaseolus*, *Pisum*, *Vicia*, *Medicago*, *Arachis*, *Glycyrrhiza*, and *Mimosa*. There are two species of soybeans: *Sooja Japonica*, the cultivated soybean, and *Sooja nomame*, the wild soybean. The genus and its species and varieties are described as follows (p. 56):

“CLXXVIII. *Sooja*, Moench. Sieb. (*Sooja du Japon*).

296 *S. Japonica*, Sieb. *Sooju* vernacular *Daisu*, Japan.

Varieties, grouped by color: a. White seeds. *Daisu*, Japan. b. White fuscis seeds. *Tobimame*, Japan. c. Fuscis seeds. *Sinsjumame*, Japan. d. Black round seeds. *Kuromame*, Japan. a. Black flattened seeds. *Kurotokorosun*, Japan. a. Greenish seeds. *Awomame*, Japan.

Uses: To make *Sooju*, *Miso*, *Toafu* (shoyu, miso, and tofu).

297 *S. nomame*, Sieb. *Nomame ac Jawaraketsmai*, Japan (v.v.). [vidi vivam = I have seen a living plant specimen.] *Plantae sponte crescentis folia adhuc tenera pro potu Thea colliguntur*.

At the end of this article are two large fold-out tables, each 30 by 18 inches, and each titled “Synoptic Table of Plant Uses.” Each table contains six vertical double columns. References to soy appear only in table I. At the bottom right corner of the first is written in Latin: “*Dabam in Insula Dezima mensi Novembris 1827, Dr. von Siebold.*” This translates as: “Given [as a letter for delivery] from the island of Dezima [Deshima], November 1827, Dr. von Siebold.” The plants are divided into categories by type of use. For example: I. Simple foods: A. Cereal grains. B. Legumes. C. Fruits, etc. Under each category is a numbered list of the scientific names of the Japanese plants in that category, followed by its name written in both katakana and Chinese characters. Soy-based uses include: IA. Simple foods (*Alimenta simplicia*) (columns 1-4): Legumes (Legumina). 1. *Sooja Japonica*, Sieb. Daizu, “Yellow + Bean.”

Note 1. This is the second earliest document seen (June 1999) written by a European or Westerner in which Chinese characters are used to write the name of the soybean or related products.

II. Composite foods (*Alimenta composita*) (columns 4-5). B. For the sauce “Sooju.” Shoyu. *Sooja Japonica*, Sieb.

C. For the paste (*pulto*) “Miso.” Miso. *Sooja Japonica*, Sieb. plus rice and barley

D. For the cake (*placenta*) “Toofu.” Tōfu. *Sooja Japonica*, Sieb. Note 2. This is the earliest Latin-language or Dutch-language document seen (Feb. 2004) that uses the word “Taofu” or “Toofu” or “Tōfu” to refer to tofu.

P. For the sprouts (*germinatione artifaali*) “Mogasi.” Moyashi. *Soja Japonica*, Sieb.

Note 3. This is the earliest document seen by Siebold in which the soybean is mentioned. This document also contains the earliest date connected with Siebold and soybeans (Nov. 1827). His name on the title page is written “De. de Siebold.”

Note 4. Siebold was born on 17 Feb. 1796 in Würzburg [Bavaria, Germany]. In 1821, as a young ship’s doctor, he arrived in Japan, where he worked as a doctor at Deshima near Nagasaki for the Dutch colony.

Also discusses: Column 1 of table 1 also mentions: 13. *Coix lachryma*, P.S., *suudama* [Job’s tears]. 2. *Phaseolus atzuki*, Japan, Azuki. “Red + Small + Bean.” 12. *Arachis hypogaea*, L.E. Rakkasei [peanut]. “Fall + Flower + Bean.” Column 2 mentions *Sesamum Orientale*, P.S., *goma* [sesame seeds]. Column 3 mentions the wild soybean (*Sooja nomame*), *Amaranthus oleraceus*, *A. Japonicus*, and *A. bicolor*. Column 4 also includes sea vegetables (*kaiso*).

Column 5 mentions *ame* [grain syrup], *fu* [wheat gluten cakes], *soba*, *somen* [wheat noodles], *mochi*, *konnyaku*, *kudzu*, and *tokoroten*. III. Medicinal foods (*Medicamina*) (columns 5-6).

166. Don, George. 1832. A general system of gardening and botany: Containing a complete enumeration and description of all plants hitherto known; ...Founded upon Miller's Gardener's Dictionary, and arranged according to the natural system. Vol. 2. London: C.J.G. and F. Rivington. 875 p. See p. 356-57 (Soja), 220-21 (Glycine). Index at front. 27 cm. [3 ref]

• **Summary:** This work was published in 4 volumes between 1831 and 1838. It was "caused to be prepared" by the proprietors of *Miller's Gardener's and Botanist's Dictionary*. The alphabetical arrangement of genera used by Miller was discarded. "It only remained, therefore, to choose between the Linnæan artificial method, and the Natural System of Jussieu; but the numerous advantages of the latter, particularly in an extensive work like the present, were too apparent to leave any doubt in the mind of the Editor as to which he ought to adopt... In the Linnæan artificial method, it often happens, that genera, intimately related, are separated far apart into different classes and orders, merely on account of the difference in the number of their stamens and pistils; a circumstance now found in many instances scarcely to be of sufficient importance, even to separate species, still less genera... The plan of the present work is founded on that of M. de Candolle, in his invaluable works entitled *Regni Vegetabilis Systems Naturale* and *Prodromus*, with such alterations as were rendered necessary by the rapid increase of science, and with numerous additions of new genera and species..." Like Miller, Don classifies soybeans in the genus *Soja*.

"CXC. SOJA (*sooja* is the name of a sauce prepared from the seeds by the Japanese). Moench. meth. 153. Savi, diss. 1824. p. 16. D.C. legum. mem. ix. prod. 2. p. 396.

Note 1. This is the earliest English-language document seen (April 2009) that uses the term "sooja" to refer to soy sauce.

"Lin. Syst. *Diadelphia*, *Decándria*. Calyx bibracteolate at the base, 5-cleft, the 3 lower segments straight and acute, but the 2 upper ones are joined together beyond the middle. Corolla with an ovate vexillum, which stands on a short stipe, and with an oblong straight keel." Note 2. *A Dictionary of Botany*, by Little and Jones (1980) defines vexillum (plural: vexilla) as "See Banner." Banner is defined as "The broad uppermost petal of a papilionaceous corolla as in the irregular flowers of certain members of the pea family, Fabaceae. Synonym: Standard or vexillum."

"Stamens diadelphous, the tenth one approximate, but certainly distinct. Stipe of ovary not surrounded by a sheath at the base. Style short. Legume oblong, 2-5 seeded, membranous; the seeds intercepted by cellular dissepiments.

Seeds ovate, compressed.—A hispid erect herb, with pinnately-trifoliate leaves, and with the flowers either aggregate in the axils of the leaves on short pedicels, or disposed in short pedunculate racemes.

"1 *S. hispida* (Moench. l. c.) Annual. Hardy. Native of Japan, East Indies, and the Moluccas. *Dólichos Soja*, Li. spec. 1621. Jacq. icon. rar. t. 145. *Soja Japónica*, Savi, diss. l. c. Kæmpf. amoen. 837 and 838, with a figure. Corolla violaceous, hardly longer than the calyx.

"The seeds, which are usually called *Miso* [sic, error based on Miller 1807] in Japan, are put into soups, and are the most common dish there, insomuch that the Japanese frequently eat them three times a day. The *Soja* of the Japanese, which is preferred to the *Kitjap* of the Chinese, is prepared from the seeds, and is used in almost all their dishes instead of common salt. The Chinese also have a favourite dish made of these seeds, called *ten-hu* [sic, *teu-hu*, i.e. tofu] or *tau-hu*, which looks like curd, and though insipid in itself, yet with proper seasoning is agreeable and wholesome.

"*Var. β, pállida* (D.C. prod 2. p. 396.) flowers yellow; seeds white. Roxb. [Roxburgh] hort. beng. p. 55.

"*Hispid Soja*. Fl. [Flowering] July, Aug. Clt. [Cultivated since] 1790. Pl. [Plant] 1½ foot.

"*Cult* [Culture and propagation]. The seeds of this plant only require to be sown in a warm sheltered situation in the month of May."

Under *Phaseolus*, Don lists a species named *Phaseolus max*, following Linnaeus and Rumphius, but he apparently did not confuse this with the soybean (listed on the same page under *Soja hispida*), since he noted that the species was not sufficiently known, the seeds were black, about the size of coriander-seeds, and that *Max* is the Spanish name of the plant.

On p. 220 we read: "XCV. *Pueraria* (in honour of M.N.N. Puerari, a professor at Copenhagen [Denmark]). D.C. ann. sc. nat. 1825. jan. p. 29. Leg. mem. vi. prod. 2. p. 240. Lin. syst. *Monadélphia*, *Decándria*." Species: *P. tuberosa*, *P. Wallichii*.

George Don, son of George Don (1764-1814), was a British plant collector and nurseryman, born in Scotland, and lived 1798-1856. He collected plants on various expeditions for the Horticultural Society of London in Brazil, West Indies, and Sierra Leone. One of the most indefatigable and accurate botanists. Philip Miller lived 1691-1771. Note the similarity of the section on food uses of soybean seeds to that of Miller (1807). Address: England.

167. Yang Shitai. 1833. *Bencao shugou yuan* [Essentials extracted from the *Explanations of Materia Medica*]. China. Passage on soy reprinted in C.N. Li 1958 #336, p. 237. [Chi]

• **Summary:** Wade-Giles reference: *Pên Ts'ao Shu Kou Yüan*, by Yang Shih-T'ai. Qing dynasty. It has three sections

titled: (1) Soybeans (*dadou*). Yellow soybeans can be used for making tofu (*fu*), soybean oil (*you*), and jiang. The other kinds of soybeans can be used for making tofu (*fu*) and they can be parched / fried (*chao*) for eating. (2) Black soybeans (*heidadou*). (3) Soybean sprouts (*dadou huangjuan* or “soybean yellow curls”). The text of each is a reiteration of information about soybeans from earlier documents. (Translated by H.T. Huang, PhD, March 2003).

168. Titsingh, Isaac. trans. 1834. *Nipon o daï itsi ran: ou, Annales des empereurs du Japon*, tr. par M. Isaac Titsingh [Annals of the Japanese emperors. Translated by Isaac Titsingh, edited by and Julius H. Klaproth]. Paris: Printed for the Oriental translation fund of Great Britain and Ireland. 3 + xxxvi + 460 p. See p. 345. 31 cm. [Fre]
 • **Summary:** Page 343 states that 1444 was the first year of the Bunnan (*Boun an*) era. In the third month of this year, there fell from the sky-blue vault the beans called *miso** and the red beans (*des fèves rouges*) [azuki]. (Footnote: *In Chinese *Ta teou*, *Dolichos soya*. [Klaproth] The two Chinese characters for soybean are shown).

(1) 大豆

Note 1. This is the third earliest document seen (June 1999) written by a European or Westerner in which Chinese characters are used to write the name of the soybean or related products.

Note 2. The meaning of this entry is not clear. Isaac Titsingh [Titsing] lived 1744-1812. Julius Heinrich Klaproth lived 1783-1835. The title pages states that this work was translated by M. Isaac Titsingh with the aid of several interpreters attached to the Dutch factory or settlement at Nagasaki. The work includes a glance at the mythological history of Japan by Mr. J. Klaproth.

169. Burnett, Gilbert Thomas. 1835. *Outlines of botany: Including a general history of the vegetable kingdom,...* Vol. 1. London: John Churchill. viii + 1190 p. See p. 666.
 • **Summary:** “(2145.) *Sooja* is the name of a Japanese sauce, prepared from the seeds of a species of *Dolichos*, now made into a distinct genus, and called *Soja hispida*. The *Soja* of Japan is preferred as a sauce to the *Kitjap* of China; both, however, are imported into England in large quantities, and are here known *Soy*. In bond it is worth about 6s. a gallon; but, after it has been adulterated, it is sold at 3s. and upwards a pint. The Japanese make a soup of the seeds,

called *Miso*, which is one of their most favorite and common dishes, the natives eating of it three times a day. The Chinese also have a popular dish made of these seeds, called *Teu-hu* or *Tau-hu* [tofu], which looks like curd; and, though insipid in itself, yet with proper seasoning is rendered agreeable and wholesome.” Address: F.L.S., Prof. of Botany in King’s College, London.

170. Graham, John. 1839. *A catalogue of the plants growing in Bombay and its vicinity; spontaneous, cultivated or introduced, as far as they have been ascertained.* Bombay: Printed at the Government Press. ix + 254 p. See p. 52. 22 cm. [5 ref]

• **Summary:** “205. *Soja*. W. & A. [Wight & Arnott 1834] *Diadelphia Decandria*. *Sooja*—name of a Chinese sauce prepared from the seeds.

“405. *S*. [*Soja*] *Hispida* W. & A. 762. *Dolichos soja*. Rox. [Roxburgh] *Flora*. 3. p. 314. Jacq. [Jacquin] *Ic. Rar. t*. 145. An annual, hairy plant; flowers small, of a reddish purple; in gardens. In Japan the seeds are called *Miso* [sic, error based on Miller 1807], and are commonly eaten in soups (Don. [1832])

“206. *Dolichos*. L. *Diadelphia Decandria*. *Greek*, for long, -tedious: (Odys.) name given in allusion to the habit of the plants, sending forth long shoots. Gaert. *t*. 150. Lam. *t*. 610.” The author then gives brief descriptions of *Dolichos uniflorus*, *D. falcatus*, and *D. sinensis*.

The title page reads: “Published under the auspices, and for the use of the Agri-Horticultural Society of Western India. To be continued and completed Printed by special permission, at the Government Press, Bombay.” A quote from Linnaeus is on the title page. The author, John Graham, lived 1805-1839. Voigt (1845) notes that Dr. J. Graham was a professor of Botany at Edinburgh, Scotland. Contains a preface giving a short account of the author and a manuscript index of native names. Address: Deputy Post-Master General of Bombay.

171. Oken, Lorenz. 1841. *Allgemeine Naturgeschichte fuer aller Staende. Dritten Bandes dritte Abtheilung* [General natural history for all places. Vol. 3. Part 3]. Stuttgart, Germany: Hoffmann’sche Verlags-Buchhandlung. 2135 p. See p. 1661-62, *Die Soju-Bohne* (*P. hispida*). [3 ref. Ger]

• **Summary:** This seems to be the second translation of Kaempfer’s description of miso and soy sauce into German; the first was by Bryant in 1785. He cites Kaempfer, Jacquin, and Plenck. Address: Germany.

172. Penny cyclopaedia of the Society for the Diffusion of Useful Knowledge: *Soja hispida*. 1841. London: Charles Knight & Co. See vol. 22, p. 193-94. [2 ref]

• **Summary:** “*Soja Hispida* (Moench), *Soja Japonica* (Savi), the *Dolichos Soja* (Linn), a leguminous plant, native of Japan and the Moluccas, and abundant in the peninsula of

India, though probably introduced there. The seeds resemble those of the haricot, French or kidney bean, and are used by the Chinese to ‘form a favourite dish, called *ten-hu*, or *tau-hu* which looks like curd, and which, though insipid in itself, yet with proper seasoning is agreeable and wholesome’ (Don’s *Dictionary*). The Japanese call the seeds *Miso* [sic, error based on Miller 1807] and put them into soup, of which they sometimes partake three times a day. They likewise prepare with them the sauce termed *Sooja* which has been corrupted into *Soy*.

“The beans are boiled until all the water is nearly evaporated, and they begin to burn, when they are taken from the fire, and placed in large wide-mouthed jars, exposed to the sun and air; water and a certain proportion of molasses or very brown sugar are added. These jars are stirred well every day, until the liquor and beans are completely mixed and fermented; the material is then strained, salted, and boiled, and skimmed until clarified, and will after this process become of a very deep brown colour, and keep any length of time. It has been stated that the gravy or juice of meat was used in preparing this condiment, but it appears to be entirely made from vegetable materials. There are two or three qualities of soy. To make the best requires much care and attention. Japanese soy is much esteemed in China on account of the superior manner in which it is made. Shopkeepers at Canton who sell soy have large platforms on the roofs of their houses, where the jars for preparing soy are arranged and exposed to the sun; for the consumption of soy is enormous. Neither rich nor poor can breakfast, dine, or sup without it; it is the sauce for all kinds of food; gives a zest to every dish, and may be said to be indispensable at a Chinese repast.’ (Dobell’s *Kamschatka*.) Soy is only sparingly used as a sauce in this country. It has the character of being a useful stomachic, but not more so than any of the other condiments when used with moderation.”

Note: This is the earliest document seen (May 2004) that uses the word “stomachic” in connection with soy sauce. *Merriam-Webster’s Collegiate Dictionary* (1998) defines stomachic (first used as a noun in 1735) as “a stimulant or tonic for the stomach.” Address: London, England.

173. T.W.H. 1847. The soy bean (Letter to the editor). *Farmers’ Cabinet and American Herd-Book* 12(3):78-79. Oct. 15. Letter from Cambridge, Massachusetts, dated 18 Sept. 1847.

• **Summary:** “It is a native of Japan and of the Molucca Islands. It thrives well in New England, having been successfully raised in the Botanic Garden, at Cambridge, and elsewhere in Massachusetts... The plant is very productive. Eight of the beans, planted in Milton, Mass., in 1831, yielded a wine pint of seed, weighing eleven and a half ounces. One hundred and ten of the beans, taken promiscuously, weighed half an ounce. In this proportion,

the production of the eight beans would be 2530, or more than 316 for one. In 1829, a single bean, in the Botanic Garden in Cambridge, produced 182 pods, which, as some of them contained three beans, was more than 364 for one. Should their qualities as articles of food be found agreeable, these beans will become valuable on account of their great productiveness.

“The inhabitants of Japan, of China, and Cochin China, and of some parts of India, cultivate these beans extensively, and eat them cooked or prepared in various ways. They make a very important article in the cookery of the Japanese, who use them chiefly in two forms. The first, called *Miso*, is a rich paste, of the consistence of butter, the place of which it supplies in various dishes, and is composed of a mixture of the beans and rice stewed and highly seasoned with salt. The second, called *Sooju* by the Japanese, is the celebrated sauce, known in commerce by the name of *Soy*, and imported in large quantities from the East, the best being brought from Japan. The Japanese method of making *Soy* was described by Kaempfer, in the ‘*Amoenitates Exoticae*,’ published in Latin, in 1712. It is as follows:” An 18-line description is then given.

“Kaempfer says that the Japanese use this sauce to season every dish of fried or roasted food. For fish, beef, and mutton, it forms a very savoury as well as a harmless condiment, the flavour of which is much admired by those who have become accustomed to it; and by many it is preferred to the best Chinese catsup.”

“The making of *Soy*, as here described, seems to be a very simple process, and the experiment is worth trying. Should it prove successful, the cultivation of the plant in this country, may become profitable. The beans are said to be good when cooked, like common kidney beans; but it is doubtful whether they would ever take the place of our best varieties of them.”

First cited by Hymowitz. 1986. Bibliography of early, previously uncited publications on soybeans in the United States. 2 p. Unpublished.

Note 1. This is the earliest document seen (July 2000) published in the United States that contains the word “Miso.” Note 2. This is the earliest document seen (June 2001) that mentions the term “profitable” (or “profit” or “profits”) in connection with soybeans in the United States. Address: Cambridge, Massachusetts.

174. Biot, Edouard Constant. trans. 1851. *Le Tchéou-Li; ou Rites des Tchéou*. 3 vols. [The Chou li; or Rites of Chou. 3 vols.]. Paris. Imprimerie Nationale. Photolitho reproduction. Reprinted in 1930 by Wen-tien-ko in Peking, and in 1969 in Taipei. [Fre]*

• **Summary:** Translated for the first time from the Chinese by E. Biot. About etiquette, rights, and ceremonies in China. Address: France.

175. Watts, Talbot. 1852. *Japan and the Japanese: From the most authentic and reliable sources. With illustrations of their manners, costumes, religious ceremonies, &c.* New York, NY: J.P. Neagle. 184 p. Illust. No index.

• **Summary:** In the section titled “Customs, manners, &c.” the author borrows text from Thunberg (1802, p. 267) without using quotation marks (p. 111): “Ladies do not eat with the men, but by themselves. Rice supplies the place of bread, and is boiled with every kind of provisions. Fish and fowls are very plentiful, and are eaten in abundance; but miso-soup * boiled with fish and onions is the customary food of the common people.”

Footnote: *”Misos are small beans, like lentils, the produce of the dolichos soja.”

In the chapter titled “Empire of Japan (from Goodrich’s Pictorial Geography)” under “Towns” (p. 122) we read: “Kio, or Meaco [Kyoto, or Miako], was for a long time the Capital, and contains the most remarkable edifices... Meaco is the centre of Japanese commerce and manufactures. Silks, tissue, soy [sauce] and lacquered wares, are purchased here in their greatest perfection...”

The chapter titled “The Japanese empire (From Memoirs of a Captivity in Japan, by Captain Golownin, of the Russian Navy)” contains a long excerpt (p. 140) about the mode of making soy [sauce]. “The Japanese soy is also prepared of beans, and turned sour in casks. They say that three years are required for preparing the best soy...” Address: M.D., Late in the service of the Hon. D. E. I. [Dutch East India] Company [USA].

176. Hakura, Yokyu? 1854. *Yôshû roku* [A record of small provision]. Japan. Publisher unknown. 46 p. Written in Kanbun (Chinese). Japanese summary by Kawakami 1978, p. 156. [Jap]

• **Summary:** Mentions red miso (*aka-miso*), how to make a type of miso soup called *shi-yu* or *kuki-yu*, and tofu. Hacho miso from Mikawa was recommended as red miso.

177. Simmonds, Peter Lund. 1854. *The commercial products of the vegetable kingdom, considered in their various uses to man and their relation to the arts and manufactures; forming a practical treatise & handbook of reference for the colonist, manufacturer, merchant, and consumer...* London: T.F.A. Day. xix + 668 p. See p. 313. Index. 23 cm.

• **Summary:** In the section on “Pulse” we read (p. 313). “The well known sauce, Soy, is made in some parts of the East, from a species of the Dolichos bean (*Soja hispida*), which grows in China and Japan. In Java it is procured from the *Phaseolus radiatus*. The beans are boiled soft, with wheat or barley of equal quantities, and left for three months to ferment; salt and water are then added, when the liquor is pressed and strained. Good soy is agreeable when a few years old; the Japan soy is superior to the Chinese.

Large quantities are shipped for England and America. The Dolichos bean is much cultivated in Japan, where various culinary articles are prepared from it; but the principal are a sort of butter, termed *mico*, and a pickle called *sooja*.

“1,108 piculs of soy were shipped from Canton in 1844, for London, British India, and Singapore. 100 jars, or about 50 gallons of soy, were received at Liverpool in 1850. The price is about 6s. per gallon in the London market.”

One page earlier, the section on “Pulse” states (p. 312): Of leguminous grains there are various species cultivated and used by the Asiatics, as the *Phaseolus Mungo* [mung bean] *P. Max* [soya bean], and *P. radiatus* [probably azuki bean], which contains much alimentary matter; the earth-nut (*Arachis hypogaea*), which buries its pods under ground after flowering.”

“Captain H. Biggs [sic, Bigge], in a communication to the Agri.-Hort Soc. [Agricultural & Horticultural Society] of India, in 1845 [sic, Aug. 1844], states that of the esculents a large white pea forms the staple of the trade of Shanghae [Shanghai], or nearly so, to the astonishing amount of two and a-half millions sterling. This he gives on the authority of the Rev. Mr. Medhurst, of Shanghae, and Mr. Thoms [sic, Thom], British Consul at Ningpo. These peas are ground in a mill and then pressed, in a somewhat complicated, though, as usual in China, a most efficient press, by means of wedges driven under the outer parts of the framework with mallets. The oil is used both for eating and burning, more for the latter purpose, however, and the cake, like large Gloucester cheese, or small grindstones in circular shape, is distributed about China in every direction, both as food for pigs and buffaloes, as also for manure.”

Note 1. The “large white pea” is clearly the soybean.

Note 2. This is the earliest document seen (Aug. 2001) that uses the spelling “Shanghae.”

In the chapter titled “Oleaginous plants” we read (p. 512): “In Japan a kind of butter, called *mijo*, [sic, *miso*] is obtained from a species of the Dolichos bean (*Dolichos soja*).

Also discusses: Almonds and almond oil (p. 510, 533). Wheat gluten (221, 234, 264). Hemp and hemp oil (p. 510). Sesame or teel, sesame oil, black til, and gingelie oil (p. 511, 533-34). “The export of linseed and rapeseed cakes from Stettin” (p. 564).

Note 3. Peter L. Simmonds lived 1814-1897.

Note 4. This is the earliest English-language document seen (July 2003) that uses the words “gingelie” or “teel” to refer to “sesame.”

Note 5. This is the earliest English-language document seen (Sept. 2006) that uses the word “Oleaginous” or the term “Oleaginous plants” in connection with the soybean. Oil derived from the soybean is also mentioned. Address: England.

178. Julien, Stanislas. trans. 1855. Le pois oléagineux de Chine [The “oil peas” (soybeans) of China]. *Bulletin de la Societe d’Acclimatation* 2(4):225-26. April. [2 ref. Fre]

• **Summary:** This is a letter addressed to the president of the Zoological Society for Acclimatization, from the session of 30 March 1855. “Monsieur and dear colleague. I have the honor to offer you, at the request of my friend Émile Tastet, some information that I have found in a Chinese book on the subject of oil peas (soybeans, *Pois oléagineux*, *Yeou-teou*).

“One reads in the *Imperial Encyclopedia of Agriculture* (*Cheou-chi-thong khao*; [*Ch’in Ting Shou Shi T’ung K’ao* by Chang Ting-yu and Chiang P’u]), volume 27, fol. 8, first page (recto): ‘According to Li Shih-chen (Li-chi-tchin, author of the Great Materia Medica [Pen-ts’ao kang-mu]), the large peas (soybeans, Ta-teou) are found in the following colors: some are black (Hé-teou), white (Pe-teou), yellow (Hoang-teou), or gray (Ho-teou); and there are also some that are spotted with blue (Thsing pan-teou). The black ones are ordinarily called Ou-teou (here the word *ou* has the same meaning as *he*, black); they can be used in medicine, be eaten, and are used in the condiment called *chi* (soy nuggets, which are composed of these soybeans, of ginger, and of salt). The yellow can be used to make tofu (*Teou-fou*, a sort of fermented soybean pâté, on which the people nourish themselves habitually); oil is also drawn from them by putting them under a press; they are also used to make chiang (tsiang; Note: a sort of sauce like a soft miso that serves as a seasoning).

“The other species of large peas (soybeans) are not good for making tofu (teou-fu, fermented pâté of peas); they are eaten after having been roasted. All the species of large peas (soybeans) described hereafter are planted before and after the summer solstice (June 21). The stem attains a height of 3-4 feet. The leaves are round and terminate in a point. In autumn, the plant bears small, white flowers, which are clustered together. Then they form pods (about as long as one’s thumb), which become dry after the frost.

“One reads in the *Treatise on Agriculture* by Fan-ching [Fan Sheng-chih, written ca. 10 B.C.]: ‘At the summer solstice, the soybean (*teou*) is sown; it is not a big job. The flowers of the soybean do not like to see the sun; otherwise they turn yellow and the and the roots blacken.’

“I regret, Monsieur, to be unable to find at the moment more details on the soybean; however, the above extract largely suffices to confirm the remarkable usefulness, unknown in Europe until just now, of the soybean which M. de Montigny has sent to you. I have already called attention to this fact in a large work that I finished a year ago, in which are described all of the Chinese industrial processes that relate to chemistry. But I do not know when I will be able to publish this work.

“I am at the disposition of the Society for Acclimatization whenever you would like me to translate

Chinese texts that would be of interest.”

Note 1. This is the earliest French-language document seen (March 2001) that mentions soy nuggets, which it calls *chi*.

Note 2. This is the earliest French-language document seen (Feb. 2004) that uses the word *Teou-fu* to refer to tofu. Bretschneider (1881) calls Julien a “great sinologue.”

179. Williams, Samuel Wells. 1856. A tonic dictionary of the Chinese language in the Canton dialect. Canton, China: Printed at the office of the Chinese repository. xxxvi + 832 p. See p. 438, 511. 22 cm. [10 ref. Eng; chi]

• **Summary:** At the top of the title page, the title is written in Chinese (Cantonese) but printed in Roman letters: *Ying Wá Fan Wan Ts’üt Iu*. This book contains definitions and expansions of 7,850 characters; it focuses on those in general use. Soy-related characters include the following: Page 61–*Fu*. Corrupted, rotten; *tau fu* bean curd.

Page 438–*Shí*. Salted eatables, as beans, oysters, olives, which are afterwards dried and used as relishes; *tau shí* salted beans; *shí yau* soy [sauce]; *mín shí* salted flour and beans used in cooking; *lám shí* stoned and pickled olives; *tau shí kéung* salted beans and ginger—a relish” [like Hamanatto in Japan].

Note 1. This is the earliest English-language document seen (Oct. 2008) that uses the term “salted beans” or the term *tau shí* to refer to soy nuggets.

Note 2. Concerning the term *mín shí* (mín shí), Dr. H.T. Huang (expert on Chinese food history, June 2008 personal communication) says it is simply Cantonese for *mian shi* (pinyin; or in Wade Giles *mien shih*, characters #4503 + #5805). The characters are the same in Cantonese or in pinyin. The term is used only in Cantonese, where it often refers to “soy paste” or jiang / chiang (character #661). Dr. Huang has not seen the term used in classical texts or heard it in Mandarin or Fujian dialects.

Page 511–*Tau*. Pulse, peas, beans, legumes; *hung tau* red pulse [beans]; *ti tau* ground-nuts; *tau fu* bean curd; *tau fu fa* bean curd jelly [soymilk curds]; *tau fu kon* [pinyin: doufugan] bean curd cakes.

Page 533–*To*. A knife; a sword with one edge; *leung mín to* a bean-curd knife.

Page 708–*Yun*. Liver, yellow; *tau fu yun* yellow bean curd cakes.

In the Preface, the author refers to ten earlier Chinese or Cantonese-English dictionaries and related works by Kanghi (*Kanghi Tsz T’ien*, which have been in use throughout the empire for nearly 150 years), Morrison (1827), Medhurst (1842-43), De Guines, Gonçalves, Callery, Klapproth, Bridgman (1841), Williams (1841), and Bonney (1854).

Note 1. This is the earliest English-language document seen (Feb. 2008) that uses the term “tau fu kon” or “bean curd cakes” to refer to tofu.

Note 2. This is the earliest English-language document seen (March 2001) that mentions *shí*, *tau shí*, or soy nuggets, which it calls “salted beans.” This is also the earliest document seen (March 2001) concerning the etymology of soy nuggets. Address: Canton, China.

180. Simmonds, Peter Lund. 1858. A dictionary of trade products, commercial, manufacturing, and technical terms: with a definition of the moneys, weights, and measures of all countries, reduced to the British standard. London: G. Routledge & Co. viii + 422 p. 18 cm.

• **Summary:** Two entries are related to the soybean: “Mico, mijo [miso], a vegetable butter or solid oil, made from *Soja hispida*, in Japan.”

“Soy, a sauce or flavoring originally made in the East; and said to be produced from a species of *Dolichos* bean.” Note: the author is apparently unaware that the sauce is made from soybeans.

The Preface begins: “The present is especially a practical, commercial and industrial age: newspapers, lecturers, popular authors, all lend their efforts towards the diffusion of sound and useful knowledge among the masses; and the commercial and industrial element has become the leading feature of instruction.”

Also discusses: Almond oil, almonds, amande, arachis oil (“generally known in commerce as nut oil”), catsup (non-soy; “Catsup, Ketchup, a seasoning or sauce for meat, made of mushrooms, tomatoes, walnuts, or other vegetable substances), earth-nut (see ground-nut; in America called pea-nut), flax, flax-seed, gingelie (Indian name for *Sesamum orientale* or teal seed), gluten, glutinous, ground-nuts (from which oil is expressed), hemp (a fibre), hemp-seed (from which oil is expressed), ketchup (see catsup), lima-bean (“the *Phaseolus limensis*, an esteemed kind of pulse cultivated in the tropics; the perennial kidney-bean, *P. perennis*”), linseed, linseed-meal, linseed-oil, oil (fixed or fat oils vs. volatile or essential oils; solid fats vs. fluid fixed oils), oil-cake (“the marc or refuse after oil is pressed from flax-seed, rape-seed, coconut pulp, &c...”), pea-nut (an American name for the ground-nut), sesame (a plant from which oil is expressed; in India called Gingely, Gingelie, teal or til), siritch (Arab name for sesame oil), soya (see sherbet).

Note 1. This is the earliest English-language document seen (Jan. 2009) that gives “*Phaseolus limensis*” as the scientific name of the lima bean.

Note 2. Peter L. Simmonds lived 1814-1897. This book is dedicated to Dr. Lyon Playfair, C.B., F.R.S., President of the Chemical Society, etc. Address: F.R.G.S., F.S.S., author, 8 Winchester St., Pimlico [southwest London, England].

181. Sakato, Shi. 1859. Ryôri chôhō-ki [Records on convenience cooking]. Japan. 60 p. Unpublished

manuscript. Japanese summary by Kawakami 1978, p. 177. [Jap]

• **Summary:** Contains many recipes for tofu and miso, plus amazake and shirozake (lit. “white sake”), hishio, natto, and Kinzanji miso.

182. Chû kano sho [Rough writing/draft for the kitchen].

1863. Publisher unknown. 62 p. Handwritten. Japanese summary by Kawakami 1978, p. 101. [Jap]

• **Summary:** The Japanese title of this work, by an unknown author, may be pronounced Kuriya no Shitagaki. It contains a listing of many fish names, and mentions *Kokusho* (or *Kokushiho*), a unique and rich miso soup from the Edo period.

183. Simmonds, Peter Lund. 1863. The dictionary of trade products, commercial, manufacturing, and technical terms: with a definition of the moneys, weights, and measures of all countries, reduced to the British standard. New edition, revised and enlarged. London: Routledge, Warne & Routledge. 463 p. 17 cm.

• **Summary:** Two entries are related to the soybean: “Mico, mijo [miso], a vegetable butter or solid oil, made from *Soja hispida*, in Japan.”

“Soy, a sauce or flavoring originally made in the East; and said to be produced from a species of *Dolichos* bean, *Soja hispida*.”

Peter L. Simmonds lived 1814-1897. Address: F.R.G.S., F.S.S., author.

184. Williams, Samuel Wells. 1863. The Chinese commercial guide: Containing treaties, tariffs, regulations, tables, etc... With an appendix of sailing directions. 5th ed. Hongkong: A. Shortrede & Co. xvi + 387 + 266 p. Index. 21 cm. Facsimile edition reprinted in 1966 by Ch’eng-Wen Publishing Co., Taipei, Taiwan.

• **Summary:** In the section titled “Description of articles of export” [from China, alphabetical], Chinese characters accompany every entry. On p. 111 is an entry for “Beans and peas” (*tau*) incl. bean cake (*tau ping* or *tau shih* = “bean stones”). “The Chinese cultivate legumes to a greater extent, perhaps, than any other nation.” The manufacture of bean jam [jiang] and bean curd cakes [tofu] for food from the flour employs many people. The cakes used for manure are made by crushing the ripe peas [sic, beans] and boiling the grits soft; the mass is then pressed into cakes in iron hoops, and made solid by means of wedges driven down by heavy mallets. Peas and bean cakes are exported from Yingsz’ [Ying-k’ou, Yingkou?] and Tientsin to Amoy and Swatau [Swatow, Shantou, in Guangdong province]; they comprise one-fourth of all the produce shipped from Tientsin in 1861; and there is little else sent from Yingsz’. In 1859, about a million piculs [1 picul = 133.33 lb] of the cake were

reshipped to the south of China from Shanghai alone, chiefly for the consumption of sugar growers.”

In the same section is an entry (p. 139) for: “Soy, *shí yú* [*shiyu* = soy nugget sauce], and *tsiáng yú* [*jiangyou* = soy sauce], is a condiment made from the *Dolichos* bean, which grows in China and Japan; our name is derived from the Japanese *siyau* [*shoyu*]. To make it, the beans are slowly boiled soft, then an equal quantity of wheat or barley flour is added; after this has thoroughly fermented and become mouldy, the beans are washed, and put into jars with their weight in salt, adding some aromatics, and three times as much boiling water as the beans were at first. The whole compound is now left for a month or more, exposed to the sun, and then pressed and strained. Good soy has an agreeable taste, and if shaken in a tumbler, lines the vessel with a lively yellowish-brown froth; its color in the dish is nearly black. There are many qualities of it, and when well made all improve by age. Japan soy is considered superior to Chinese, but both are of different qualities, and are probably made of various materials, some of which may be base enough. It is most commonly sent to England, India, and Europe, to form the basis of other sauces and condiments. It is worth from \$4 to \$8 per picul and goes chiefly from Canton.”

On p. 129 is a section on “Oil” (*yú*), incl. [soy] bean oil (*tau yú*), wood oil (*tung*), cotton-seed oil, sesamum oil, olive oil, ground-nut oil, cabbage or rape oil, fish oil, etc.

In the same section (p. 149) is an entry for “Vermicelli (Chinese characters) *fun sz*, i.e. flour threads. This article, sometimes called *loksoy* [*lock soy*], manufactured from both rice and wheaten flour, is extensively used among the natives in soups. It is every way inferior to the European.”

Note 1. This is the earliest English-language document seen (Sept. 2006) that uses the term “bean oil” to refer to soybean oil, or that mentions *tau-yú* as the Chinese (Cantonese) name for soybean oil.

Note 2. This is the earliest English-language document seen (Sept. 2006) that uses the term “*Dolichos* bean” to refer to the soybean. It is also the earliest English-language document seen (Sept. 2006) that repeatedly uses the word “bean” (not preceded by the word “soy” or “soya”) to refer to the soybean.

Note 3. This is the earliest English-language document seen (Feb. 2004) that uses the term “bean-cakes” to refer to tofu.

Note 4. This is the earliest English-language document seen (May 2005) that uses the “grits” to refer to coarsely ground soybean flour or pieces.

Note 5. This is the earliest English-language document seen (Sept. 2003) that contains the term “cotton-seed” or term “cotton-seed oil” (each spelled with a hyphen).

Note 6. This is the earliest English-language document seen (Oct. 2006) that that uses the term “crushing” (or “crush,” “crushes,” “crushed” or “crushings”) in connection

with soybeans to refer to the process of pressing the beans to yield oil and cake.

This section also discusses (alphabetically): Almonds (but not almond oil), ground-nuts (*hwa sang* characters, ground-nut cake characters *hwa sang ping*; the “oil is the chief article of export”), gypsum (*shih kau*, used especially in making bean-cakes and curd [tofu], sometimes called bean-macaroni), manure cakes or poudrette (*kang sha*, made from night soil mixed with earth for exportation. “The refuse of ground-nuts, sesamum, rape-seed, and other oleaceous seeds, is prepared for manure and for feeding swine and sheep, and sent from one part of the country to another”), salt, seaweed, sesamum seed, and silk.

A table titled “Rates of freight in steamers to Canton” states (p. 228): “Soy, per tub of 1 picul—\$0.75.”

In the section on “Foreign commerce with Japan” we read (p. 254): “Camphor, sulphur, porcelain, copper, nut-galls, vegetable wax, cassia, soy, and verdigris, have been furnished at rates and quantities sufficient to export to Europe.”

Other sections discuss Chinese, Japanese, and British weights and measures, numerals, coins and currency.

Samuel Wells Williams lived 1812-1884. Address: LL.D., Hongkong.

185. Lindley, John; Moore, Thomas. eds. 1866. The treasury of botany: A popular dictionary of the vegetable kingdom; with which is incorporated a glossary of botanical terms. 2 vols. (Parts I and II). London: Longmans, Green, and Co. xx + 1254 p. See Part I. p. 131, 536-37, 747. Part II. p. 1068, 1075. Illust. 17 cm.

• **Summary:** Bean (Part I, p. 131) “*Sahuea* bean, *Soja hispida*.

Glycine (Part I, p. 536-37) “A small genus of *Leguminosae*, all, excepting one, being slender decumbent [reclining along the ground, but with ascending apex or extremity] or twining herbs, with alternate stalked leaves made up of three to seven leaflets varying much in form, and bearing axillary racemes or fascicles of small yellow or violet pea-flowers. The genus belongs to the tribe *Phaseoleae*, and is most nearly allied to *Teramnus*, from which it is distinguished by its pods being destitute of the hardened hooked style seen in the latter, and by the ten stamens, which are united into a tube, being all, instead of the alternate ones only, anther-bearing. The species are pretty equally distributed through tropical Asia, Africa, and Australia, where a few inhabit extratropical regions.

“The *Sooja* of the Japanese, *G. Soja*, the only erect species of the genus, a dwarf annual hairy plant, a good deal like the common dwarf kidney or French bean (*Phaseolus vulgaris*), has small violet or yellow flowers, borne in short axillary racemes, and succeeded by oblong two to five-seeded hairy pods.

“The seeds, like kidney beans in form but smaller, are called Miso [sic, error based on Miller 1807] by the Japanese and are made into a sauce which they call Sooja or Soy. The manner of making it is said to be by boiling the beans with equal quantities of barley or wheat, and leaving it for three months to ferment, after which salt and water is added, and the liquid strained. The sauce is used by them in many of their dishes, and they use the beans in soups. The Chinese cook the beans also in various ways, and the plant is cultivated for the sake of them in various parts of India and its Archipelago.

“Mr. Bentham groups the species in three sections, which some regard as genera: *Soja*, with flowers fascicled on the racemes, and falcate pods with depressions but not transverse lines between the seeds; *Johnia*, with flowers similarly arranged, and straight pods with transverse lines between the seeds; and *Leptocyanus*, with solitary flowers on the racemes, and straight pods. The Glycine or *Wistaria* of gardens is now referred to *Millettia*.

Miso (Part II, p. 747). “A fatty substance obtained from *Soja hispida*.

Soja (or *Soya*) *hispida* (Part II, p. 1068) is the only representative of a genus of *Leguminosae* of the tribe *Papilionaceae*, and much cultivated in tropical Asia on account of its beans, which are used for preparing a well-known brown and slightly salt sauce (Soy), used both in Asia and Europe for flavouring certain dishes, especially beef, and supposed to favour digestion. Of late it has been cultivated as an oil-plant. *S. hispida* is an erect hairy herb, with trifoliate leaves, and axillary racemose flowers, which have a five-cleft calyx, a papilionaceous corolla, ten diadelphous stamens, and an oblong pod which contains from two to five ovate compressed seeds. Modern botanists generally refer the plant to *Glycine*: which see.”

Soy (Part II, p. 1075) “A sauce originally prepared in the East, and said to be produced from the beans of *Soja hispida*.

Note 1. This is the earliest document seen (April 2003) in which the soybean is classified under *Papilionaceae*.

Note 2. This is the earliest English-language document seen (April 2003) that uses the term “oil-plant” to describe the soybean.

Also discusses (in alphabetical order): Agar-agar. Alfalfa. Algæ. Almond. Amande de terre (French, *Cyperus esculentus*). Amaranthus. Arachis [peanuts]. Aspergillus. Bean, under-ground kidney = *Arachis hypogaea*. Cannabis. Chenopodium [Common Goosefoot]. Coix [lachryma, Job’s tears]. Cyperus. Earth-nut (*Arachis hypogaea*). Flax. Gingelly oil. Hemp.

Part II: Job’s tears. Legume. Leguminosæ. Linseed. Linum. Lupinus (incl. *Lupinus albus*, *L. luteus*). Nut, bambarra ground (The seed of *Voandzeia subterranea*, p. 795). Nut, earth (*Arachis hypogaea*). Oil (incl. sesamum). Oilcake (“The residuum after expressing the oil of various

seeds, especially linseed and rape, which is used for cattle feeding, and as a manure”). Oil-plant (*Sesamum orientale*). Pindals, pindars. Psophocarpus. Pueraria. Quinoa (*Chenopodium Quinoa*). Sea-girdles (*Laminaria digitata*). Sea-hangers. Sea-wand (*Laminaria digitata*). Seaware. Seaweeds. Seawrack. Seawracks. Sesame. Sesamum. Tetragonolobus.

“Voandzeia So called from Voandzou, the name given by the natives of Madagascar to the only known representative of this genus of *Leguminosæ*, the *V. subterranea* of botanists, a creeping annual, with long-stalked leaves composed of three leaflets... It is a native of Africa, and is extensively cultivated in many parts of that continent, from Bambarra and the coast of Guinea to Natal, its esculent pods and seeds forming common articles of food among the inhabitants of those regions. Although the plant is not indigenous to the Western Hemisphere, it is commonly found in many parts of South America, such as Brazil and Surinam, whither it has been carried by the negro slaves and has now become naturalised. The pods are sometimes called Bambarra Ground-nuts; in Natal the natives call them Igiuhiuba; while in Brazil they are known by the name of Mandubi d’Angola (showing their African origin), and in Surinam by that of Gobbe.

“Voandzou. The Malagassy name of a genus of *Leguminosae*, called after it *Voandzeia*” (p. 1224).

Note 3. This is the earliest English-language document seen (Nov. 2005) that contains the word “oilcake” (or “oilcakes”). Address: 1. Ph.D., F.R.S., F.L.S., Botanic Garden, Chelsea. Late emeritus Prof. of Botany in University College, London; 2. F.L.S., Curator of the Chelsea Botanic Garden.

186. Hepburn, James C. 1867. A Japanese and English dictionary; with an English and Japanese index. Shanghai, China: American Presbyterian Mission Press. xii + 558 + 132 p. 2nd ed. 1872; Abridged ed. 1873, 1881; 3rd ed. 1886; 4th ed. 1888; 5th 1894; 7th ed. 1903. First edition was reprinted in 1966 and 1983. Index. 24 cm.

• **Summary:** This is Hepburn’s earliest Japanese-English dictionary. The words are arranged alphabetically by their romanized spelling. Each word is written in three ways. After the romanized word (main entry), written in uppercase letters with diacritical marks (which we have largely omitted below), the same word is written in katakana, then again in Chinese characters. Finally, one or more definitions are given.

Soy-related words and terms in the 1867 edition: Amazake: Sweet sake, a kind of fermented rice. Daidz [Daizu]: A kind of large white bean. *Soja hispida*. Go: Beans mashed into paste. *Mame no go*. Gokoku: The five cereals, wheat, rice, millet, beans, *kibi*. Hiriodz [Hiriodzu, Hiryoizu]: A kind of food [made of tofu fried in oil]. Ireru-

Kono mame was yoku iremash'ta: these beans are well parched. Iri-ru–Mame wo iri-ru: to parch peas

Kinako [“yellow flour”]: A kind of food made of beans.

Kiradzu: The refuse of beans left in making tofu. Koji: Malt made by fermenting rice or barley, in the process of making sake, and soy. Koji-butata: A shallow box for holding malt. Mame: Bean, pea. *Mame no ko*: bean flour. Miso: A kind of sauce made of beans. Natto: A kind of food made of beans.

Miso, 味噌, 味曾, n. A kind of sauce made of beans.

Nigari: The brine formed by the deliquescence of salt.

Sashi (verb): Shoyu wo sashi–To season with soy. Sashimi: Raw fish cut in thin slices and eaten with soy. Sh'taji [Sorted after “Shis,” Shitaji]: Soy (used only by women). Syn. Note 1. This is the earliest English-language document seen (March 2008) that uses the word “sh'taji” or shitaji” to refer to shoyu or soy sauce.

Shoyu: Soy, a kind of sauce made of fermented wheat and beans. Tofu: A kind of food made of beans. Umeboshi (*hakubai*). Dried plums. Ume-dzke [Ume-zuke]: Pickled plums. *Ume ga mada umimassen*: The plums are not yet ripe.

Yuba [hot water + leaf]: A kind of food made of beans.

Yu-dofu: Boiled tofu.

Note 2. This is the earliest English-language document seen (Oct. 2008) that contains the word “yuba.”

The English-Japanese part of this dictionary starts after p. 558 and is titled “An index; or, Japanese equivalents for the most common English words.” Separately numbered to p. 132, it includes: “Bean, Mame. Barm, Kôji, tane. Pea, saya yendo [saya-endo]. Soy, Shôyu.”

Terms NOT mentioned include Aburaage, Aburage, Atsu-age, Daitokuji natto, Edamame (or Eda mame or Yedamame), Ganmodoki, Hamanatto, Hiya-yakko, Kori-dofu, Koya-dofu, Nama-age, Okara, Tamari, Tonyu, Unohana, Yaki-dofu.

Note 3. The author apparently did not realize that the various soyfoods he defined (with the possible exception of soy sauce) were made from soybeans.

Note 4. This is the second earliest English-language document seen (June 1999) in which Chinese characters are used to write the name of the soybean or related products.

Note 5. This is the earliest English-language document seen that contains the word “tofu” (Feb. 2004), or the word “natto” (Feb. 2004), or the word “koji” (March 2001).

Note 6. This is the earliest English-language document seen (Feb. 2004) that refers to amazake, which it calls “Amazake.”

Note 7. This is the earliest English-language document seen (Jan. 2006) that uses the term “Shoyu” (or “shoyu”) to refer to soy sauce.

Note 8. This is the earliest English-language document seen (Dec. 2005) that uses the word “Kinako” to refer to roasted soy flour.

Note 9. This is the earliest English-language document seen (Dec. 2008) that uses the word “Kiradzu” to refer to what is now called “okara,” or “soy pulp.” Address: Shanghai, China.

187. Knight, Charles. ed. 1867. The English cyclopædia–Natural History. Vol. IV: Soja. London: Bradbury, Evans, & Co. 1291 p. See p. 843.

• **Summary:** “Soja, a genus of Plants belonging to the natural order *Leguminosæ*. *Soja hispida* (Moench), *S. Japonica* (Savi), the *Dolichos Soja* (Linn.), is a native of Japan and the Moluccas, and abundant in the peninsula of India, though probably introduced there. The seeds resemble those of the haricot, French or kidney bean, and are used by the Chinese to ‘form a favourite dish, called “ten-hu,” or “tau-hu,” which looks like curd, and which, though insipid in itself, yet with proper seasoning is agreeable and wholesome’ [Don 1832]. The Japanese call the seeds ‘Miso,’ and put them into soup, of which they sometimes partake three times a day. They likewise prepare with them the sauce termed ‘Sooja,’ which has been corrupted into ‘Soy.’ Soy is only sparingly used as a sauce in this country. It has the character of being a useful stomachic, but not more so than any of the other condiments when used in moderation.”

Note: The entry at “Soy” says to see ‘Soja.’

Note: Much of the information in this entry for Soja comes from the *Penny Cyclopaedia of the Society for the Diffusion of Useful Knowledge* (London, 1841. See Soja hispida).

Also in this volume: Sesamum (p. 758). Voandzeia (p. 1224).

188. Simmonds, Peter Lund. 1867. The commercial dictionary of trade products, manufacturing and technical terms:... A new edition, revised and enlarged. London and New York: George Routledge and Sons. viii + 463 p. See p. 353. 17 cm.

• **Summary:** The entry for “Soy” is two words longer (and more accurate) than that in the 1858 edition. “Soy, a sauce or flavoring originally made in the East; and said to be produced from a species of *Dolichos* bean, *Soja hispida*.”

Otherwise, the contents and page layout of this book seem to be identical to those of the 1858 edition except that a long supplement has been added to the rear, p. 423-63.

Soy-related entries in the supplement: “Midsu [sic, miso], an oily pulp made from beans in Japan, with which food is dressed instead of butter.” “Miso, a substance used in Japan as butter by boiling the soy bean (*Soja hispida*), and mixing it with rice, salt, etc.

Other interesting entries in the supplement: Agar-agar, chufas, hasheesh (Arabic word for hemp, hay; also an intoxicating drug made of hemp, which is sold in the form of sweetmeats, paste, and tobacco), mindoubi (a name in Brazil for the ground nut, *Arachis hypogaea*). Peter L. Simmonds lived 1814-1897. Address: F.R.G.S., F.S.S., author, 8 Winchester St., Pimlico [southwest London, England].

189. Sakuma, Yonekichi. 1868. Nikki [Diary]. April 25. Unpublished. [Jap]*

• **Summary:** In the first year of Meiji (1868) the author was a passenger on the ship “Scioto” (*Saioto-go*), headed for Hawaii with the first group of Japanese immigrants. He noted in his diary of April 25: “Yokohama departure. Provisions of rice, miso, shoyu.”

Note: This is the earliest document seen (June 2008) concerning soybean products (miso and shoyu) in Hawaii or Oceania. This document contains the earliest date seen for soybean products in Hawaii or Oceania (April or May 1868); soybeans as such had not yet been reported by that date.

Letter from Mr. Nihei. 1988. Oct. 23. Yonekichi SAKUMA, born on 11 July 1840, came from Chiba prefecture. He went to Hawaii as an immigrant in 1868, and died in 1927 at age 88.

Letter from Paul J. O’Pecko, Reference Librarian, Mystic Seaport Museum, Mystic, Connecticut. 1990. July 3. There were at least two three-masted sailing vessels named Scioto sailing in 1868, but there is no indication that any vessel named Scioto was ever owned by the Pacific Mail Steamship Company. It is possible they may have chartered it.

190. Chambers’s encyclopædia: A dictionary of universal knowledge for the people: Soy. 1868. London: W. and R. Chambers. See vol. IX, p. 10.

• **Summary:** “Soy is a thick and piquant sauce, made from the seeds of the Soy Bean (*Soja hispida*), a plant of the natural order *Leguminosæ*, suborder *Papilionaceæ*, so nearly allied to the genus *Dolichos* (q.v.) as to be often included in it. It is a native of China, Japan, and the Moluccas, and is much cultivated in China and Japan. It is also common in India, although, probably, not a native of that country. The seeds resemble those of the Kidney Bean, and are used in the same way. The Japanese prepare from them a substance called *Miso*, which they use as butter.

“Soy is made by mixing the beans softened by boiling with an equal quantity of wheat or barley roughly ground. The mixture is covered up, and kept for 24 hours in a warm place, to ferment. The mass is then put into a pot, and covered with salt, the salt used being in quantity about equal to each of the other ingredients. Water is poured over it; and it is stirred, at least once a day, for two months, after which

the liquor is poured off and squeezed from the mass, filtered, and preserved in wooden vessels. By long keeping, it becomes brighter and clearer. A Chinese sauce, called *Kitjap* (Ketchup), is often sold in Britain as soy, but is very inferior to the true soy.”

191. Pagés, Léon. 1868. Dictionnaire japonais-français [Japanese-French dictionary]. Paris: Firmin Didot frères, fils et cie. 933 p. See p. 597. [1 ref. Fre]

• **Summary:** This is a French translation of the Japanese-Portuguese dictionary published in 1603 in Nagasaki by the Society of Jesus [Jesuits].

Includes: Daizzou [daizu] (p. 252). (Mame), grains, ou haricots du Japon (*Soja hispida*, Moench.- Hoffm.).

Mame (p. 518). Haricots, ou pois chiches du Japon (*Soja hispida*, Moench.- Hoffm.).

Miso (p. 548): Certaine préparation de graines, de riz, et de sel, avec lequel on assaisonne le *Chirou* [*shiru*] du Japon.

Nattô (p. 597). Certain mets de grains légèrement cuits, et ensuite mis au four. Nattôjirou [nattôjiru]. *Chirou* [*shiru*] ou bouillon fair avec des grains [nattô].

Tôfou [tofu] (p. 803). Espèce d’aliment qui se fait avec des grains pulvérisés, en manière de fromage frais. Tôfouya [tofu-ya]. Maison où l’on fait ou vend des especès de fromages, faits de grains amollis dans l’eau et réduits en pâte. Address: Japan.

192. Saito, Akio. 1868. [Chronology of soybeans in Japan, 1700 to 1868, the last half of the Tokugawa/Edo period] (Document part). In: Akio Saito. 1985. Daizu Geppo (Soybean Monthly News). Jan. p. 16. Feb. p. 10-11. [Jap]

• **Summary:** 1707 May—The Tokugawa shogunate government (*bakufu*) passes a law to lower the prices of goods. Shops selling high-priced tofu are punished. But tofu makers argue that although the price of soybeans has dropped, the prices of other ingredients such as nigari and oil have risen.

1709—Kaibara Ekken (1630-1714) writes *Yamato Honso*, in which he discusses the shapes and use of the 1,362 products from Japan, China, and other countries. He notes that among the five crops (*go-koku*), soybeans are the second most widely produced after rice.

1712—Kaempfer, the German physician and naturalist who stayed in Japan during 1691-1692, writes *Nihon-shi* in the Netherlands. In the book he discusses soybeans and includes a very accurate sketch of the soybean. This draws the attention of other European scholars.

1722—Kinzanji miso becomes popular in Edo (today’s Tokyo).

1724 Feb.—The Tokugawa shogunate government commands that various goods, such as sake and shoyu [soy sauce], should be lower in price because the price of rice has decreased.

1726–The amount of shoyu imported to Edo from the Osaka-Kyoto area (*kudari shoyu*) is about 132,000 kegs (*taru*). Note: The average keg held 9 shô = 16.2 liters = 4.28 gallons (U.S.). Thus, 132,000 kegs = 564,960 gallons or 2,138,400 liters.

1730–The amount of shoyu imported to Edo from the Osaka-Kyoto area increases to 162,000 kegs.

1739–A French missionary living in China sends some soybean seeds to France for the first time. Attempts are made to grow them at the botanical garden, but the weather is not good and they fail. Later unsuccessful attempts were made to grow soybeans in Germany in 1786 and in England in 1790. There is another theory which says that the soybean went to Europe through Russia.

1748–The cookbook titled *Ryôri Kasen no Soshi* is published. It is the first cookbook which introduces the present form of tempura batter.

1753–The Swedish naturalist Linne (Linnaeus; 1707-1778) gives the soybean its first scientific name.

1770–Sugita Genpaku (lived 1733-1817) discusses the nutritional value of foods and uses the word *eiyo* (meaning “nutrition”) for the first time in Japan.

1782–The book *Tofu Hyakuchin* (One hundred rare and favorite tofu recipes) is written by Ka Hitsujun (his pen name) of Osaka. He introduces about 100 tofu recipes. The next year he publishes a supplementary volume, *Zoku Tofu Hyakuchin*. He divides tofu recipes into five different categories according to their special characteristics, like common, regular, good, very good, and fantastic (*jinjohin, tsuhin, kahin, myohin, and zepin*). In his jinjohin category, he includes 36 recipes such as *Kinome Dengaku, Kijiyaki, Dengaku*, etc.—showing that these were common recipes of the period. Over the next several years, many books with the word “Hitsujin” at the end of the title appear.

1783-1787–The terrible famine of the Tenmei period (*Tenmei no Dai Kikin*) occurs. It is worst in Oou province, where several hundred thousand people die of starvation. Many farm village are abandoned.

1788–At about this time the word *nukamiso* first appears.

1802–Takizawa Bakin (lived 1767-1848) writes *Kiryô Manroku*, a travel book, and in it he states: “Gion tofu is not as good as the Dengaku of Shinzaki, and Nanzenji tofu is not better than Awayuki in Edo. He criticizes tofu as a famous product from Kyoto (*Kyoto meibutsu tofu*) in his writing.

1804–Takahashi Fumiemon (or Bunuemon) on the island of Shodoshima starts making shoyu; he starts selling it in 1805.

1810–Choshi Shoyu receives an order from the Tokugawa Bakufu (*Gozen Goyo-rei*).

1818–There are now 10 miso manufacturers in Edo (today’s Tokyo). Yomo Hyobei’s miso shop in Shin Izumi-cho (presently Ningyo-cho 3-chome, Nihonbashi, Chuo-ku,

Tokyo) has a prosperous business. In some funny poems (*Senryu*) this shop is mentioned: “With sake and miso their name is ringing in the four directions” (“*Sake, miso de sono na mo shiho ni hibiku nari*”). And: “This shop is surrounded by nested boxes for food, and these boxes are used for red miso” (“*Jûbako ni torimakaretaru shiho-ga-mise*”). His red miso and his fine sake made with water from a waterfall (*takisui*) are very popular.

1822–Pounded natto (*tataki natto*), an instant food made of chopped natto, sells for about one-fifth the price of tofu on a weight basis. The restaurant Sasa no Yuki in the Negishi area of Edo, becomes well known for its tofu cuisine.

1832–Shoyu production in Noda reaches 23,000 koku (1 koku = 180 liters or 47.6 gallons), compared with only 17,000 koku in Choshi. Thus Noda passes Choshi in shoyu production.

1839–Shibata Kyuo (1783-1839), a follower of Shingaku, writes *Zokuzoku Kyuo Dowa* in which he pens words that later become famous: “In a place where the cuckoo can sing freely, you have to walk 3 *ri* (1 *ri* = 2.445 miles or 3.924 km) to buy your sake and 2 *ri* to buy your tofu” (*Hototogisu jiyu jizai ni naku sato wa, sakaya e san ri, tofu-ya e ni ri*). Shingaku, founded by Ishida Bangai, is a popular teaching of the time combining Shinto, Buddhism, and Confucianism (*Jugaku*). It emphasizes that “to understand heart/mind is the most important thing.”

1845–Inari-zushi becomes very popular in Edo. It originated around Hiranaga-cho (presently Sadacho 1-chome, Chiyoda-ku, Tokyo). It is made with deep-fried tofu pouches (*abura-agé*) stuffed with rice or okara and sells for 7 *mon* each.

1851–There are now 140 miso manufacturers in Edo. Half of them are in the Hongo area of Tokyo.

1853–Kitagawa Morisada (born 1810) writes *Morisada Manko*, the story of his life during the Edo period. In it he says of tofu: “In the Kyoto-Osaka area it is soft, white, and delicious, but in Edo [today’s Tokyo] it is hard, not white, and not tasty.” Of miso he says: “In the Kyoto-Osaka area many people make their own miso each winter, but in Edo people buy red miso and Inaka miso (from the countryside), and nobody makes their own miso.” Concerning the sale of natto (*natto-uri*) he says: “Cook soybeans, ferment them overnight, then sell them. In the old days, natto was sold only in the winter, but recently it has also come to be sold in the summer.”

1857–Soybean varieties brought back from Japan by the Perry Expedition are distributed to the U.S. Commissioner of Patents.

1858–Eitaro, a Japanese confectionery shop in Nihonbashi, Edo, starts selling Amanatto [sugar-sweetened red beans] made from Kintoki Sasage for the first time. Sasage is a type of cowpea [*Vigna sinensis*].

1864—For the first time shoyu made in the area around Edo (*Kanto shoyu*) is permitted to use the term “highest quality shoyu” *saijo shoyuto* describe the product.

1865—Inflation in Edo. The prices of rice, sake, miso, oil, vegetables, fish, etc. skyrocket. The Tokugawa Shogunate (*Bakufu*) orders people to lower their prices and forbids holding back or buying up goods. Address: Norin Suisansho, Tokei Johobu, Norin Tokeika Kacho Hosa.

193. Jephson, Richard Mounteney; Elmhirst, Edward Pennell. 1869. *Our life in Japan*. London: Chapman and Hall. xviii + 428 p. Illust. No index. 23 cm. Facsimile edition reprinted in 2002 by Ganesha Publishing (London) and Edition Synapse (Tokyo). Series: Japan in English, Vol. 14.

• **Summary:** This is largely a silly book, that tries to be amusing, but ends up being foolish. It’s about Englishmen riding horseback and hunting in Japan, while taking many opportunities to belittle Japanese culture and religion—although there are some parts of Japanese culture that they appreciate. The authors arrived in Japan on 9 May 1866 after having been in Hong-Kong for a year. At breakfast in Japan, one of them, “suddenly changing his tone to one of reckless indifference,... tell the cook to make some more of that grill, with no end of Cayenne pepper and Worcestershire sauce in it!” (p. 62).

“Extreme cleanliness characterises not only their dwellings, but their food, manner of cooking, serving it, &c. As an instance to show how well assured we became of this, we may mention that on more than one occasion, when returning home late at night, we have partaken of the delicate seaweed soup that is hawked about in the streets of every town, and that without any fear of either the materials of the soup itself, or the cups we drank out of, being less clean than at our own table. When you come to consider that the price of the soup rendered it accessible to the meanest coolie,...” (p. 381). Note: This may well have been miso soup with wakame.

“They consume little or no meat, except in the form of soups;...” (p. 381).

“The first Japanese dinner we ever went to, caused us more wonderment at the time, and appeared to possess more novelty, than anything we had ever seen before. This was an entertainment given at Nagasaki by some of the chief officers of Prince Satsuma to the British Admiral and his friends” [on 28 July 1866] (p. 382). Every aspect of the 40-course dinner is described in great detail. “The drink was a spirit called *saki*, which is extracted from rice.” (p. 383). It is consumed hot.

The Bill of fare, describing briefly each of the 40 courses, is given; it includes “1. Bitter Green Tea (whipped),” hot *saki*, seaweed, salted plums, “14. Soup of fish and seaweed,” and “27. Soup of Vermicelli, with ‘Soy’

[probably sauce] and Red Berries.” (p. 385-86). Address: Englishmen.

194. Martens, Georg Matthias von. 1869. *Die Gartenbohnen. Ihre Verbreitung, Cultur und Benuetzung. Zweite vermehrte Ausgabe* [Garden beans. Their distribution, culture, and utilization. 2nd expanded edition]. Ravensburg, Germany: Druck und Verlag von Eugen Ulmer. 106 p. See p. 103-05. With 12 color plates. 28 cm. [94* ref. Ger]

• **Summary:** The author discusses the soybean under the name *Soja hispida* Moench, gives a botanical description of the species, then and gives a classification of 13 varieties that he had secured from various sources, of which he apparently grew but one. He grew that one by his window in Stuttgart, having obtained it from the village of Daguiga, near the city of Aigun [or Ai-hun, in northeast Heilungkiang province] on the Amur River. He planted the seeds on May 23 and they were ripe by Sept. 24. He describes their area of distribution in East Asia, from the 50th north latitude in Siberia down to the Moluccas near the equator, but notes that their center of cultivation is Japan, where they are made into miso (a type of butter), and a sauce (named “Soja”) that stimulates the appetite. He considers these two delicacies fit for gourmets and epicures. The sauce was introduced to Europe by the English. In China, the beans are cooked to a white, thick paste (*Brei*), tofu (*Teu hu*), one of the most popular foods there.

“In Europe, with suitable care, soybeans can be made to ripen/mature as far north as 53° north latitude, near Berlin. Thus, during the last continental blockade [first, of the British, by Napoleon, based on his 1806 Berlin Decree and 1807 Milan Decree; then in 1807 the British retaliated with their own sort of blockade], which is still an infamous memory, in the lands that at that time were part of the French empire, the soybean was prized and cultivated for a while as a coffee substitute (*als Kaffeessurrogat*). Later the milk vetch (*Kaffeewicke*; *Astragalus baeticus* L.), the chufa or earth almond (*Erdmandel*; *Cyperus esculentus* L.), and other coffee substitutes were used, but they have all been long since forgotten—except for chicory” [*Cichorium intybus*; the thick roots of this perennial herb are dried, ground, and roasted, then used to flavor or adulterate coffee].

Martens divides the species into 3 subspecies based on the form of the seed, under which the varieties are named according the color and size of the seed. In this, he creates an entirely new system for classifying and naming soybeans.

1. *Soja elliptica* Martens. Seeds oval. 1. *S. elliptica nigra*. Seeds black and elongated; obtained through his son from Shanghai and Paris. 2. *S. elliptica castanea*. Seeds brown and elongated; obtained from Chefoo (China), Venice (Italy), and Berlin. 3. *S. elliptica virescens*. Seeds

greenish yellow and elongated; obtained from Shanghai and Paris. 4. *S. elliptica lutescens*. Seeds yellow; brought by Mr. Schottmueller from Chefoo as “true Chinese oilbeans.”

II. *Soja sphaerica*. Seeds globose/spherical. 5. *S. sphaerica nigra*. Seeds black, large; obtained from Yokohama and Nagasaki, Japan. 6. *S. sphaerica minor*. Seeds black, small; obtained from Japan and Sumatra. 7. *S. sphaerica virescens*. Seeds greenish; obtained through his son from Yokohama as “Ao mame” and from Shanghai. 8. *S. sphaerica lutescens*. (The *Soja pallida* of Roxburgh). Seeds pea-colored to pea-yellow, large; obtained from Dr. Schuebler in Oslo (Christiana), Norway, as “New Japan peas,” under which name they have been recommended and popularized in the United States. 9. *S. sphaerica minima*. Seeds yellow, small; obtained through his son as “Shiro mame” from Yokohama.

III. *Soja compressa*. Seeds compressed. 10. *S. compressa nigra*. Seeds black and flat, the largest of all soybeans; obtained as “Kuro Mame” from Yokohama. 11. *S. compressa parvula*. Seeds black, small; obtained via Schottmueller from Chefoo. 12. *S. compressa virescens*. Seeds greenish; obtained from Chefoo and from Berlin as *Soja ochroleuca* Bouché. 13. *S. compressa zebra*. Seeds brown banded with black like a zebra; obtained from the Berlin Botanic Garden.

Note 1. This is the earliest document seen (Aug. 2002) which states clearly that soybeans have been (or can be) used as a coffee substitute (*als Kaffeesurrogat*). It is also the earliest German-language document seen (March 2001) that mentions soy coffee.

Note 2. This is the earliest document seen concerning soybeans in Norway. It is not clear whether or not the soybeans were being grown in Norway at this time.

Note 3. This is the earliest German-language document seen that mentions tofu, which it calls *Teu hu*.

Note 4. This is the earliest document seen that (Aug. 1999) that divides the species into 3 subspecies based on the form of the seed, under which the varieties are named according the color and size of the seed. Martens is the first to use a number of such terms in connection with the soybean, such as “nigra” “castanea,” “virescens,” “lutescens,” “elliptica,” “Soja elliptica,” “Soja pallida,” etc.

Note 4. This is the earliest document seen (Feb. 2007) that uses the word “nigra” to refer to black soybeans.

Note 5. This is the earliest document seen (July 2001) in any language that contains the word “Chefoo,” a port city in Shandong province, presently named Yantai (Wade-Giles: Yen-t'ai), and long associated with soybeans and soybean cake.

Note 6. Also discusses *Psophocarpus tetragonolobus* Dec. (p. 101). Address: Doctor der Naturwissenschaften, Germany.

195. Bretschneider, Emil V. 1870. The study and value of Chinese botanical works. *Chinese Recorder and Missionary Journal (Foochow)* 3(7):172-78. Dec. Published as a 51 page book in Foochow in 1871. [15 ref]

• **Summary:** “Ssu-ma-ts’ien [Ssu-ma Ch’ien, lived c. 145–c. 185 B.C.], the Herodotus of China, in his historical work *Shi-ki* [*Shih-chi*, “Historical Memoirs”], written in the second century B.C., states that the Emperor Shen-nung [Shennong] 2700 B.C. sowed the five kinds of corn [grain]. Cf. *Shi-ki* Chap I. [Note: Chinese characters are given for most Chinese words.] In later times the Chinese commentators agreed that here the following corns were meant:” 1. *Shu* Panicum millet (*Panicum miliaceum* L.). 2. *Tsi* [*Chi*] Foxtail / Setaria millet (*Setaria italica* Beauv.). 3. *Shu* Soja-bean (*Glycine hispida*). 4. *Mai* Wheat. 5. *Tao* Rice.

In the section titled *Shu* (p. 175), the author discusses the soja bean at length, with many illustrations of Chinese characters: “*Shu*. This name occurs in the Shi-king and in the Ch’un-ts’iu (v.s.) and was related in ancient times probably to the *Soja-bean* (*Soja Glycine*) *hispida*. The Kuang-ya (4th century) says that the *Shu* and the *Ta-tou* (great bean) are the same. The Pen-ts’ao (XXIV I and 8) states that there are several kinds of *Ta-tou*, a black, a white, and a yellow (so named after the color of the seeds) and that from these beans *Tsiang* (*Soja* [*chiang*]), *Tou-fu* (Bean-curd) and *Tou-yu* (Bean-oil) are made. The drawing for *Ta-tou* in the Ch. W.I. [*Chi wu ming shi t’u k’ao*, a Chinese botany illustrated by woodcuts] represents the *Soja hispida*.*”

Footnote: *”At Peking two kinds of *Ta-tou* are cultivated, the *Huang-ta-tou* (great yellow bean) and the *Hei-ta-tou* (black great bean). The name great bean refers not to the seeds but to the whole plant, the *Soja* bean being an erect herb 3 to 4 feet high. The *Huang-ta-tou*, called also *Mao-tou* (hairy bean) is the true *Soja* bean, an erect hairy plant with trifoliate leaves, little axillare [*sic*] flowers, pendulous pods, and white yellowish seeds of the size of a great pea, but a little oblong. This is the ‘*Phaseolus japonicus erectus*, *siliquis Lupini*, *fructu pisi majoris candito*’ described in Kaempfer Amoen. exot., the *Dolichos Soja* of Thunberg.”

“The *Hei-ta-tou*, which resembles much the *Soja* bean, is also covered with red hairs the seeds are the same size as the *Huang-tou* but black. I think it is a variety of the *Soja* bean. Both the yellow and the black bean are used for the same purpose at Peking for making *Soja*, and *Bean-curd*. *Bean curd* is one of the most important articles of food in China. It is prepared by macerating the above mentioned beans in water and milling them together with water. The liquid pap is filtered. To this fluid is added gypsum in order to coagulate the Casein and also Chlormagnesium [magnesium chloride {*nigari*} is a tofu coagulant]. The coagulated Casein or *Bean-curd* is a jelly-like appearance.

“It is known that Manchuria produces a large quantity of Beans (generally in the Reports on trade called Peas) from

which by pressure *Bean-oil* or *Pea-oil* is made. Bean-oil is largely used in China for cooking and for lighting lamps. The *Bean-cakes* are exported to Swatow [pinyin: Shantou, in Guangdong Province, southern China] for purposes of manure in the Sugar plantations. New-chuang [Newchwang, later Ying-K'ou] (in Manchuria) exports chiefly Bean-oil and Bean-cakes. I have not seen the Bean used in New-chuang for this purpose, but from the description of others it must be the Soja bean. Mr. Payen (l.c. 341) has examined leguminous fruits from China, which he calls *pois oléagineux de la Chine* and states that they contain 13 per cent. oil, whilst our common leguminous seeds contain only 2 to 3 per cent. oil." End of footnote.

Note 1. This is the earliest English-language document seen (Aug. 2003) that mentions an existing industrial use for soybean oil (for lighting lamps).

Note 2. This is the earliest English-language document seen (Sept. 2006) that uses the the word "Soja-bean" (or "Soja-beans") to refer to the soybean.

Note 3. This is the earliest English-language document seen (Sept. 2006) that mentions *Tou-yu* as the Chinese name for soybean oil.

Note 4. This is the earliest English-language document seen (Aug. 2003) that uses the word "cakes" or the term "Bean-cakes" to refer to ground, defatted soybeans. It is also the earliest document seen (March 2001) concerning the etymology of soybean cake or meal.

Note 5. This is the earliest English-language document seen (Feb. 2004) that uses the term "Bean-curd" (with a space in front of the word "Bean") to refer to tofu.

Note 6. This is also one of the earliest documents seen (Aug. 2003) that clearly refers to the cultivation of soybeans in Manchuria.

Also discusses: *Coix lachryma* (Job's tears, p. 175), various millets, and buckwheat (p. 175); hemp (*Cannabis sativa*), *Kô* (kudzu, *Pachyrrhisus Thunbergianus*, p. 176), plums, and almonds (p. 176). Address: Esq., M.D., China.

196. Bretschneider, Emil V. 1871. On the study and value of Chinese botanical works, with notes on the history of plants and geographical botany from Chinese sources. Foochow, China: Rozario, Marcal & Co. 51 p. See p. 9. Illust. with 8 Chinese woodcuts. 22 cm. [61* ref. Eng]

菽 *Shu*

大豆 *Tu-tou*

醬 *Tsiung* (Soja)

豆腐 *Tou-fu*

豆油 *Tou-yu*

• **Summary:** In the following, Chinese characters in the text precede most Chinese words, such as the names of plants, foods, authors, and many books. "Ssu-ma-ts'ien, the Herodotus of China, in his historical work *Shi-ki* (pinyin: *Shiji*, by Sima Qian), written in the second century B.C., states that the Emperor Shen-nung [Shennong] 2700 B.C. sowed the five kinds of corn [five grains, *wugu*] (p. 7).

The third of these is *shu*, the soja bean, which is discussed in both the text and in a long footnote (p. 9). "Shu. This name occurs in the *Shi-king* [*Shijing*, Book of Odes, ca. 1000 BC] and in the *Ch'un-ts'iu* [*Chunqiu*, Spring and Autumn Annals, 500 BC] (v.s. [see above]) and was related in ancient times probably to the Soja-bean (Soja / *Glycine hispida*). The Kuang-ya (4th century) says that the Shu and the *Ta-tou* (great bean) are the same. The *Pên-ts'ao* (XXIV, I and 8) states that there are several kinds of Ta-tou, a black, a white, and a yellow (so named after the colour of the seeds) and that from these beans *Tsiang* (Soja) [sic, jiang], *Tou-fu* (Bean-curd), and *Tou-yu* (Bean-oil) are made.*"

The footnote states: "* At Peking, two kinds of Ta-tou are cultivated, the *Huang-ta-tou* (great yellow bean) and the *Hei-ta-tou* (black great bean). The name great bean refers not to the seeds but to the whole plant, the Soja bean, being an erect herb 3 to 4 feet high. The *Huang-ta-tou*, called also *Mao-tou* (hairy bean) is the true *Soja* bean." "Both the yellow and the black bean are used for the same purpose at Peking for making Soja [soy sauce], and Bean-curd. Bean-curd is one of the most important articles of food in China. It is prepared by macerating the above mentioned beans in water and milling them together with water. The liquid pap is filtered. To this liquid is added gypsum in order to coagulate the Casein and also Chlormagnesium [magnesium chloride, i.e., nigari]. The coagulated Casein or Bean-curd is a jelly-like appearance.

"It is known that Manchuria produces a large quantity of the Beans (generally in the Reports on the trade called Peas) from which by pressure Bean-oil or Pea-oil is made. Bean oil is largely used in China for cooking and for lighting lamps. The Bean-cakes are exported to Swatow for purposes of manure in Sugar plantations. New-chuang [Newchwang; later Yingkou] (in Manchuria) exports chiefly Bean-oil and Bean-cakes."

The Preface begins: "In presenting these pages to the learned world, I consider it my duty to confess, that I am neither a Sinologue nor Botanist, my knowledge in Chinese as well as in Botany being very limited. But living in the Chinese Metropolis five years, I was encouraged by the favourable conditions in which I found myself, to make some inquiries into Chinese plants and to venture on the publication of these notes on Chinese Botany... Although I had the advantage of having access to the splendid library of the Russian Ecclesiastical Mission at Peking, where are to be found not only all Chinese works of importance, but

also most European books relating to China,—the reader will observe the want of some special works on Botany.”

Concerning the *Pên-ts'ao k'ang-mu* (p. 4-6), Bretschneider concludes: “On the whole it can be said... that the descriptions of plants therein are very unsatisfactory.” “The *Pên-ts'ao* is often inconvenient for reference, the paper and the impression being bad and the misprints numerous.”

As a general overview of the entire subject he concludes (p. 6-7): “It is true, the Chinese possess very little talent for observation and zeal for truth, the principal conditions for the naturalist. The Chinese style is inaccurate and often ambiguous. In addition to this the Chinese have an inclination to the marvelous and their opinions are often very puerile. None of the Chinese treatises can be compared with the admirable works of the ancient Romans and Greeks, *Plinius*, *Dioscorides* (both of the first century) &c. Nevertheless the Chinese works on natural science are very interesting, not only for the sinologues, but also for our European naturalists” interested in “geographical botany, and the history of cultivated plants.”

The last section, titled “List of Chinese works quoted in the foregoing notes” (p. 48-51) gives 61 works, sorted chronologically, and grouped into dynasties. “The information regarding them has been derived from an examination of the *Ssu-k'u ts'üan-shu*, the great Catalog of the Imperial Library 1790. I hereby give only the title, the author's names and the time of publication.” The earliest grouping, “Works written before the third century B.C.” begins: “*Shen-nung pên-ts'ao-king*. Classical herbal, or *Materia medica* of the Emperor Shên-nung, 2700 B.C.” Note: This is now generally cited as: *Shennong bencao jing* (Classical pharmacopoeia of Shennong, the Heavenly Husbandman) (100 AD).

Originally published as articles in the *Chinese Recorder and Missionary Journal* (Foochow) in 1870-71 (vol. 3). In a footnote describing this original publication, in Bretschneider's article in the *Journal of the North-China Branch of the Royal Asiatic Society*, 1882, he writes, “The editor of this periodical, at that time, seems to have had little experience in proof-reading; at any rate my paper (although presented in a very clear manuscript) came to light with such a profusion of misprints and other inaccuracies, that it would have been ridiculous to append to it a complete list of *errata*. I therefore would feel quite disposed to disavow this my first scientific essay; all the more since at the time I wrote it I had not yet sufficiently mastered the subject, and many of my former statements require modification.”

Also discusses: Hemp (*Cannabis sativa*, *ma*; the male plant is called *si* while the seed-bearing female plant is called *tsü*; p. 5, 10). *Arachis hypogaea* (Ground-nut, *Lo-hua-sheng*, p. 5). Job's tears (*Coix Lachryma*, p. 9). Kudzu (p. 10). Address: M.D., Physician of the Russian Legation at Peking, China.

197. Hepburn, James C. 1872. Japanese-English and English-Japanese dictionary. 2nd ed. Shanghai: American Presbyterian Mission Press. xxxi + 632 + 201 p. 28 cm.
• **Summary:** This is Hepburn's 2nd Japanese-English dictionary. The words are arranged alphabetically by their romanized spelling. Each word is written in three ways. After the romanized word (main entry), written in uppercase letters with diacritical marks (which we have largely omitted below), the same word is written in katakana, then again in Chinese characters. Then comes an abbreviation of the part of speech (n. = noun; v. = verb, etc.). Finally, one or more definitions are given.

This 2nd edition is 162 pages longer than the original 1867 edition; the Introduction is 19 pages longer, the Japanese-English section 74 pages longer, and the English-Japanese section 69 pages longer.

We will not repeat definitions that are identical to those in the 1867 edition. For new spellings, the 1867 spelling will be shown in parentheses. No new soy-related words were found in this 1872 edition. Soy-related words and terms in the 1872 edition: Adzuki (replaces Adzki) [azuki]. Amazake. Daidzu (replaces Daidz) [Daizu]. Hiriodzu (replaces Hiriodz) [Hiryozu]: A kind of food made of *tofu* fried in oil. Kinako.

Kiradzu. Koji: Barm or yeast made by the fermentation of rice or barley, in the process of making sake and soy. Koji-buta: A shallow box for holding barm. Miso. Miso wo suru: To rub *miso* in a mortar. Natto.

Nigari. Sashi (verb). Sashimi. Shitaji (replaces Sh'taji). Note 1. This is the earliest English-language document seen (May 2008) that uses the word “shitaji” to refer to shoyu or soy sauce.

Shoyu. Tofu: A kind of food made of beans, bean curd. Umeboshi (*hakubai*).

Yuba [hot water + leaf]. Yu-dofu.

The English-Japanese part of this dictionary starts after p. 558 and is titled “An index; or, Japanese equivalents for the most common English words.” Separately numbered to p. 132, it includes: “Barm, Kôji; tane.” “Soy, Shôyu.”

Terms NOT mentioned include Abura-age, Aburage, Atsu-age, Daitokuji natto, Edamame (or Eda mame or Yedamame), Ganmodoki, Hamanatto, Hiya-yakko, Kori-dofu, Koya-dofu, Nama-age, Okara, Tamari, Tonyu, Unohana, Yaki-dofu.

Note 2. The author apparently still did not realize that the various soyfoods he defined (with the possible exception of soy sauce) were made from soybeans. Address: M.D., LL.D.

198. Syrski, S. 1872. Landwirthschaft in Japan [Agriculture in Japan]. In: Karl von Scherzer, ed. 1872. Fachmaennische Berichte ueber die oesterreichisch-ungarische Expedition nach Siam, China und Japan. (1868-1871) [Expert Reports

on the Austro-Hungarian Expedition to Siam, China, and Japan]. Stuttgart: Verlag von Julius Maier. Appendix (Anhang), p. 175-227. See p. 175, 186, 190, 207. Index. 25 cm. [Ger]

• **Summary:** Page 186 gives the prices of 1 *shô* (*schio* = 1.825 liters) of various staples. A Tempo is apparently a Japanese unit of currency and a kr. is an Austro-Hungarian unit of currency: Fava beans (*Rosssbohnen, Sora-mame*) 4 Tempo (18 kr.), azuki (*Adsuki*) 10 Tempo (45 kr.), soybeans (*Daidzu; Dolichos soja*) 6 Tempo (27 kr.), Kintoki, with red seeds 5 Tempo (22 kr.) [Note: Kintoki is an abbreviation of “kintoki azuki,” which is a large variety of red azuki beans], barley 3 Tempo (13 kr.), wheat 6 Tempo (27 kr.), sesame 10 Tempo (45 kr.). Note: This is the earliest German-language document seen (Jan. 2005) that mentions azuki beans, which it calls *Adsuki*.

Page 190 notes: “The pickled beans (*Bohnen-sulze*), called “Misso” in Japan, is prepared from Daizu, a variety of *Dolichos*, together with wheat- and barley meal/flour, plus some added salt. The seasoning “Soia” (soy sauce) is likewise made from soybeans (*Daidzu-Dolichos*) and wheat meal with the addition of salt, and sprinkled on many foods... Essentially the diet of Japanese peasants consists of rice and the above-mentioned miso, therefore of an easily digestible carbohydrate (*aus einem leicht verdaulichen Kohlenhydrate*) and a strong nitrogenous substance (*stickstoffhaltigen Substanz*, protein), which is made easily digestible through processing. Concerning the nutritional value of their most important foods, Japanese peasants believe that fish, eggs, and poultry give the most strength (*Kraft*). These are followed by miso and vermicelli made from wheat flour, then rice and potatoes. They believe that buckwheat gives but little strength.

The section titled “Legumes” notes that “A green *Dolichos* variety (*Dolichos unguiculatus* according to Thunberg, called Jaenari in Japanese) is planted in the fields of central Japan in June and harvested at the beginning of October. A *Dolichos* variety (*Dolichos soia*; called *Daidzu* in Japanese) is planted in southern Japan in April and harvested in July. In central Japan this crop is planted between rows of wheat as they near maturity in May, and harvested in September. The ground is not manured (*nicht gedüngt*); the plants make use of the fertilizer (*Düngungsmaterial*) already applied for the wheat. As a rule, 6 *shô* of seed-beans yield a crop of 120 *shô* on a field of 300 *tsubo*.”

Note: Rein (1889, p. 57) states: “According to Scherzer, six *Shô* of seed-beans of the early-ripening Shiro-mame are credited with a crop of 120 *Shô* on 300 *Tsubo* of land. This means a harvest of only 20-fold, or, taking account of the seed lost in sprouting, about 12 pods of two beans each to every plant.”

“This type of *Dolichos*, as is well known, is the main ingredient in the seasoning “Soia” (shoyu) and the aspic or

pickle (*Sulze*) miso (“Misso”).

“A black variety of *Dolichos*, called Kuro-mame in Japanese (i.e. black soybeans) is planted in the area around Nagasaki in April on land fertilized with ashes (*auf einem mit Asche gedüngten Boden*), and in central Japan in May two seeds are laid in a hole between the rows of wheat. It is harvested in August or September in southern Japan, and in October in central Japan, and used rather widely as a food.”

Note 1. Scherzer lived 1821-1903.

Note 2. This is the earliest document seen (Feb. 2005) concerning soy in connection with (but not yet in) Hungary.

Note 3. This is the earliest document seen (Oct. 1999) that mentions the use of fertilizers for growing soybeans.

Note 4. This is the earliest document seen (Aug. 2001) that mentions carbohydrates in connection with soybeans. Address: PhD.

199. Balfour, Edward. 1873. *The Cyclopaedia of India and of eastern and southern Asia, commercial, industrial, and scientific; products of mineral, vegetable, and animal kingdoms, useful arts and manufactures*. 2nd ed.: Soja, Soja hispida. Madras, India. Printed at the Scottish and Adelphi presses. See vol. 5, p. 458. 26 cm. Reprinted in 1985 by International Book Distributors, Dehra Dun, India. [2 ref]

• **Summary:** “Soja, a genus of plants belonging to the natural order Leguminosae. *Soja hispida* (*Moench*), *S. japonica* (*Savi*), the *Dolichos soja*, (*Linn.*), is a native of Japan and the Moluccas, and abundant in the peninsula of India, though probably introduced there. The seeds resemble those of the haricot, French or kidney bean, and are used by the Chinese to form a favourite dish called ‘ten-hu,’ or ‘tau-hu,’ which looks like curd, and which, though insipid in itself, yet with proper seasoning is agreeable and wholesome. The Japanese call the seeds ‘miso,’ and put them into soup, of which they sometimes partake three times a day. They likewise prepare with them the sauce termed ‘sooja,’ which has been corrupted into ‘soy.’ Soy is only sparingly used as a sauce in Great Britain. It has the character of being a useful stomachic, but not more so than any of the other condiments when used with moderation.—*Eng. Cyc.*”

“*Soja hispida*, Moench, W.&A., Grah. *S. japonica*, Savi. *Dolichos soja*, L., Roxburgh. *Garu kulay*, Bengali. Sahuca bean, English. Soy-bean, English. *Bhut*, Punjabi.

“This plant grows in the N.W. Himalaya, in Nepal, at Taong Dong, in China, Japan and the Moluccas. It is found in the Sutlej valley between Rampur and Sunnam at an elevation of 6,000 feet. It is cultivated in many parts in the north of India. This is the well-known Chinese bean, which constitutes such large article of trade between the northern and southern parts of China. Of all vegetable substances, it is richer in nitrogenous or flesh-forming matter than any yet discovered, The Sahuca bean, is the white *Soja hispida*. *India Museum.*”

Note: This is the earliest English-language document seen (Aug. 2003) that uses the word “nitrogenous” in connection with the soybean—to refer to its protein. Address: L.R.C.S.E., Inspector General of Hospitals, Madras Medical Dep. [India].

200. Douglas, Carstairs. 1873. Chinese-English dictionary of the vernacular or spoken language of Amoy, with the principal variations of the Chang-chew and Chin-chew dialects. London: Truebner & Co. xix + 613 p. 28 cm.

• **Summary:** The Preface notes that the written language of China is uniform throughout the whole of China, but it is pronounced differently when read aloud in the different parts of China. Various spoken languages of China have already been studied by Western residents in China: the Mandarin, the Hakka, the vernaculars of Canton and Amoy, etc. The Amoy vernacular is believed to be spoken by 8-10 million people. Chinese characters are not used in this dictionary.

Abbreviations (at start of parentheses): R. = Reading or literary style as to sound or meaning. C. = Chang-ebew dialect. Cn. = Chin-chew dialect.

Soy-related terms include: chiap (R. id.), (Cn. tsap; p. 46 L.2) “juice, sap, gravy, etc. kôe-chiap, brine of salt or pickled fish, &c.” kê (Amoy = kôe; p. 201 L.7) “Pickled fish or shell fish.” kê-chiap (implied; p. 46 L.2).

hû (p. 156 R.3) tâu-hû “bean-curd shaped into squares (from the pulpy ‘tâu-hoe’), but not yet pressed. See tâu.

kôe-chiap (p. 242 L.4) “Brine of pickled fish or shell fish.”

tâu (p. 480 L.3) “pease or beans, pulse.” tau-khe “bean-cake from north China used as manure.” tâu-iû “soy [sauce].” tâu-chiû “a thick sauce made from pulse.” tâu-sí “salted beans” [soy nuggets]. tâu-hoe “soft bean curd not yet pressed or shaped.” tâu-chiû or tâu-hû “bean-curd shaped but not yet pressed.” tâu-hû-phê “bean curd made into thin sheets [yuba] for wrapping around eatables.”

Note: This is the earliest English-language document seen (Oct. 2008) that uses the term *tâu-hû-phê* to refer to yuba.

te tâu-hû “to shape the pieces of ‘tâu-hoe’ into pieces of ‘tâ-hû.’” tâu-koa “bean-curd that has been pressed in a cloth.” tâu-jú “bean-curd that has been pressed in a cloth then cut into smaller pieces and salted.” tâu-kiâm or tâu-che or tâu-thâu “refuse from manufacture of bean curd” [okara].

Note 1. A new, revised edition of this work was published in 1899 in London by Presbyterian Church of England. A supplement by Douglas and Barclay was published in Shanghai in 1923. In some cases, the 1923 edition is bound at the back of the 1873 edition. The 1873 edition is dedicated to Rev. James Legge, D.D., a Christian missionary and Chinese scholar.

Note 2. This is the earliest English-language document seen (Oct. 2001) that mentions okara, which it calls “refuse

from manufacture of bean curd,” along with its Chinese vernacular names.

Note 3. This is the earliest English-language document seen (Oct. 2001) that uses the term “cake” or “bean-cake” to refer to ground, defatted soybeans.

Note 4. the earliest English-language document seen (Feb. 2004) that uses the many terms such as “tâu-hoe,” “tâu-hû-phê,” “tâu-koa,” or “tâu-jú” to refer to the many uniquely Chinese varieties of tofu.

Note 5. This is the earliest English-language document seen (Jan. 2006) that contains the terms “kôe-chiap” or (by implication) “kê-chiap” to refer to pickled fish or shell-fish. These terms are said by some to be the ancestors of the Malay word *ketjap* / *kecap* meaning soy sauce.

Note 6. Schlegel (1894, p. 143 footnote) gives the character for *Kê-tsiap* but the 1873 ed. of Douglas’ dictionary gives no Chinese characters for any of the words defined. Address: Rev., M.A., LL.D. Glasgow, Missionary of the Presbyterian Church in England.

201. Hepburn, James C. 1873. Japanese-English and English-Japanese dictionary. Abridged by the author. New York: A.D.F. Randolph & Co.; London: Trübner & Co. vi + 330 + 206 p.

• **Summary:** “Preface: In order to render the Dictionary more portable and convenient in size, the Author has thought it best to abridge the larger work and bring it out in its present form. In so doing, he has omitted the Chinese and Japanese characters, the synonyms, and the examples showing the use of the words, excepting such as contained a peculiar idiom, and which could not be included in a definition. All the native Japanese words, with the exception of those which were rarely used or obsolete [such as Yudo-fu], have been retained; as, also, all the words derived from the Chinese which are in current use.”

“The Second, or English and Japanese, Part, has not been abridged or altered from the original, except in the correction of such typographical errors as were met with.”

Note 1. New words in this edition that are not in the 1867 edition are preceded by “***.”

Soy-related terms: Adzuki: A small red bean. Amazake: Sweet sake, a kind of fermented rice. Daidzu: A large white bean. Soja hispida. Hiriodzu: A kind of food made of tofu fried in oil.

Kinako: A kind of food made of beans. Kiradzu: The refuse of beans left in making tofu. Koji: Barm or yeast. Koji-buta: A shallow box for holding barm. Miso: A kind of sauce made of beans.

** Moromi: The grounds left in making soy, used as an article of food. Natto: A kind of food made of beans. Nigari: The brine formed by the deliquescence of salt. Sashimi: Raw fish cut in thin slices and eaten with soy. Shoyu: Soy, a kind of sauce made of fermented wheat and beans. Tofu: A

kind of food made of beans. Yuba: A kind of food made of beans.

Terms NOT mentioned include Aburage, Daitokuji natto, Edamame (or Eda mame or Yedamame), Hamanatto, Hiya-yakko, Koya-dofu, Kori-dofu, Okara, Tamari, Tonyu, Unohana, Yaki-dofu.

Note 2. The author apparently did not realize that the various soyfoods he defined (with the possible exception of soy sauce) were made from soybeans. Address: M.D., LL.D.

202. Heuzé, Gustave. 1873. *Les plantes alimentaires* [Edible plants. 2 vols.]. Paris: Libraire Agricole de la Maison Rustique. Undated. See Vol. II, p. 381-82. 27 cm. [soy ref. Fre]

• **Summary:** Vol. II, Part II concerns “Leguminous plants with pods.” In Book 2, titled “Dolic or dolique” (p. 371+), Chapter II (p. 373-83) concerns “Species and varieties.” The soybean is in the second major group, “Dwarf dolics” (p. 380), as follows: Variety “15.–Japanese soybean (*Dolic du Japon*. *Dolichos soja*, Linn.; p. 381-82) states: Synonyms: *Dolic soja*. *Soja japonica*, Sav. *Dolic à café* [the coffee bean]. *Soja hispida*, Moench.”

A botanical description in French follows: “The stems, which are from 65 to 100 cm tall, are hispid / hairy, straight, straight, and rust-colored. The leaves have three cordiform folioles, equipped with stipules; flowers violet, sessile [attached directly by the base], in short clusters, straight and axillary [growing from an axil]. The pods are lightly curved, slightly pendulous, very short, bumpy, and covered with rust-colored hairs. The seeds are oval, shiny, compressed, clear nankeen (*nankin clair*; brownish yellow) in color, and almost dull.

This variety is cultivated in China, Japan, and Asia. Its flowers are white, purple, or violet, according to the variety.

The types that are most widely cultivated, after the core / main type [nankeen colored], are two: 1. The black soybean (*Le soja noir*, *Soja hispida*). 2. The yellow soybean (*Le soja jaune*, *Soja ochroleuca*).

The Japanese transform the seeds of this dolic into a paste (*miso*), with which they make a sauce (*soja*), which they use to prepare various foods.

This species is an annual; in France it has been called *pois oléagineux* (“oil peas”). It was introduced here from China by Mr. de Montigny. It is cultivated in some points in the departments of Ariège and of Haute-Garonne. It grows rapidly and is quite resistant to drought.

Also discusses: *Dolichos tetragonolobus* L. Synonyms: *Pois carré* (in Europe). *Psophocarpus tetragonolobus* DC. In India it is known as *mourou-kouavré* (p. 377). Gustave Heuzé lived 1816-1907. The book is undated, but the date usually given in catalogs is 1873 (less commonly as 1872). Address: Member of the Central Society of Agriculture of France. Adjunct inspector general of agriculture.

203. Hoffmann, J.J. 1874. Ueber die Bereitung von Schoju, Sake und Myrin [On the preparation of shoyu, saké and mirin]. *Mittheilungen der Deutschen Gesellschaft fuer Natur- und Voelkerkunde Ostasiens (Yokohama)* 1(6):8-11. Dec. [Ger]

• **Summary:** The author was the first Westerner to make a scientific study of the shoyu process, of which he gives an accurate and detailed 2-page description: “Soybean sauce (*Bohnensauce*)–shoyu–is for the Japanese almost as indispensable as rice and is used as widely as tea or tobacco. The rich man and the beggar use it in the same way, only in different quantities as the mean seasoning at their meals, and in no household, in fact at no meal may it be absent. It is made in large factories, and in countless stores in all cities and towns throughout the entire island empire, it is stocked and sold in small wooden kegs. It is made with soybeans, indeed very high protein, starch-free small soybeans (*Dolichos Soja jap*. Nagatemame), plus wheat, salt, and water in the same proportions by volume. Small kegs are used to measure the ingredients. The beans and grains are used in the same condition of dryness.

Note 1. The date on the title page is Nov. 1876, but Hoffmann’s paper was not presented until 1878. This is the earliest document seen (Oct. 2001) that is a study of several fermented foods, including one made from soybeans–*shoyu*. Address: Prof., School of Medicine, Tokyo Univ., Japan.

204. Williams, Samuel Wells. 1874. A syllabic dictionary of the Chinese language; arranged according to the Wu-Fang Yuen Yin, with the pronunciation of the characters as heard in Peking, Canton, Amoy, and Shanghai. Shanghai, China: American Presbyterian Mission Press. lxxxiv + 1252 p. 28 x 22 cm. [8 ref. Eng; chi]

• **Summary:** In this dictionary, the Chinese characters are arranged alphabetically. Each main character, written large, has the pronunciation written below it, and the meaning written in English to the right. Below these are numerous compound words in which the character appears, followed by a definition of each. No pronunciation is given for compounds or combinations of several characters, such as teu-fu [dofu], which makes the dictionary hard to use. The main radical relating to soya is no. 151, Teu, 7 strokes, referring to pulses and sacrificial vessels (p. 874).

Page 145, under fu (rotten, corrupt, spoiled), lists the characters (teu-fu) for “bean curd; low policeman and underlings are named teu-fu-kwan because they live on and are no better than this curd; and also the teachers in low government schools.”

Page 764, under shi, lists the characters for “salted beans” [soy nuggets], “salted beans and flour,” “soy [soy sauce; shi yu in Chinese or shoyu in Japanese], an English word probably derived from this name.”

Pages 874-75, under teu, list the characters for “legumes of every kind, pea, beans,” “bean-curd jelly” [tofu].

Page 968, under tsiang [ch'iang], lists the characters for "a relish made of salt mixed with bean or other kinds of flour, and water, and allowed to remain until cured; it is used as a condiment; relishes, sauces, condiments; salted preparations," "a dry relish," "a shop for sale of oilman's stores, and condiments," "bean sauce, this is the basis of most of the Chinese relishes," "vegetables seasoned in soy."

On page 839, under ta (big), there is no listing for ta-teu, the soybean. On page 252, under hwang (yellow), there is no listing for hwang-teu, the yellow soybean. On page 580, under mao (hair), there is no listing for mao-teu (fresh green soybeans). Thus it seems that the compiler of this dictionary was unaware of the soybean.

Page 1111, under yiu, lists the character for oil in various combinations. When preceded by the character for "fragrant" it refers to "sesamum, gingilie, or benne oil," made from the seeds of *Sesamum orientale*. Soybean oil is not specifically mentioned.

Note: This is the earliest English-language document seen (Feb. 2005) that uses the word "benne" to refer to sesame seeds. Address: United States Legation, Peking.

205. Imperial Japanese Commission to the International Exhibition at Philadelphia (1876). 1876. Official catalogue of the Japanese section: And descriptive notes on the industry and agriculture of Japan. Philadelphia, Pennsylvania: Published by the Japanese Commission. 130 p. 24 cm.

• **Summary:** The Preface (p. 3) begins: "Never until the year 1873, had Japan participated to any great extent in the various European International Exhibitions. Up to that time she had been merely represented by some of the provincial governments, acting independently of the central Government. However, the Government determined to be worthily represented at the Vienna International Exhibition of 1873,..." But Japan was well prepared for the Philadelphia Centennial Exhibition.

Under classes of "Agricultural products" (p. 32, 34): Class 621—Peas, beans, etc. (incl. Soya, adzuki). Class 650—Sea weeds (incl. Vegetable isinglass [agar, kanten]). Class 657—Flour and starch (incl. Kudzu [*Pueraria thunbergiana*]). Class 659—Wines and other kinds of drinks (incl. Sake, Soy {a kind of sauce}).

Page 71 discusses relief painting in lacquer: "The lacquer can even be carved, and, finally, the artisan can incrustate mother-of-pearl shell, ivory, thin metal, or anything he likes into the lacquer. By mixing a sort of paste made of [soy] bean powder, or the white of eggs, with the lacquer, he can thicken it to such an extent as to give it a kind of plasticity, admitting the possibility of making impressions which remain visible after hardening."

In the long chapter titled "Descriptive notes on the industry and agriculture of Japan (p. 37-117) is section on "Agricultural products. Classes 620-21—Cereals, vegetables,

etc." (p. 104-06). Beans, generally referring to soy beans, are mentioned many times. "Manures of a mineral nature consist of marls, shells and ashes; those of vegetable origin of inferior kinds of beans and peas or their residues, of [soy bean] oil-cakes, the residues of sake-brewing,..."

"The excellent kinds of beans and peas, which are made into a kind of cheese [tofu] and a peculiar mixed dish called 'misso' [miso] afford the necessary nitrogenous substances, and to a certain extent form the substitute for meat; the Soyu [shoyu; soy sauce] also belongs to this kind of food, and is frequently mixed with other dishes. With regard to animal food, it is limited almost exclusively to fish, poultry and eggs. But a change has already been effected to a certain extent in the larger towns, where butcheries have been established. An experiment of sheep farming was commenced one or two years ago" (p. 106).

Under "Class 657, 658—Flour, starch, etc. we read (p. 110-11): "It has been mentioned above that the various kinds of beans constitute a very important element of the national diet. Some of the preparations made of beans and peas are worthy of a short notice. In preparing the 'Tofu,' white beans are soaked in water, ground between two stones, strained through a sieve and afterwards boiled. The contents of the kettle are then filtered through cotton cloth and the residue pressed out. The liquid [soymilk], which may be considered as an alkaline solution of legumine, is precipitated by successive additions of the bitter lye [nigari] which runs off from sea-salt by deliquation, and which is mostly composed of magnesium salts. The precipitate is legumine with a small percentage of legumine-composites [-composites] and a large proportion of water. The 'yuba' is also made by boiling the above-mentioned legumine solution in an open kettle, with a slight addition of ash-lye. The insoluble skins which form upon the surface of the boiling liquid, are taken off and dried. Another kind of preserved food is the 'misso' [miso]. White beans are first boiled, pounded in a mortar to form a paste, then mixed with fermenting rice and salt, whereupon the whole mixture is placed in tubs and left in some cool place; at the end of a month it is ready for use. In mentioning the various preparations made of beans, the 'Soy' or, as the Japanese call it, 'Soyu' [shoyu] should not be omitted; but as it belongs rather to the produce of fermentation, the process will be described under the head of Class 660 [Alcohol and malt liquors].

One page 112 we read: The soy, or 'soyu,' is made of a small bean, the 'Dolichos soja,' or 'Soya hispida,' to which are mixed wheat, salt and water. The beans are first boiled, and the wheat bruised and steamed; both are then mixed with a small addition of fermenting wheat, placed in flat wooden boxes and kept for several days at a fixed temperature in a special room. At the end of three days, the mass [koji] is all covered with fungi and partly with roots of germination. After having been mixed with a salt-lye, which

has been prepared hot and allowed afterwards to cool down, and to depose certain impurities, the mashings are now removed to enormous coops [vats] in which they are kept for several years. Experience has shown that the best soy is produced by mixing equal quantities of mashings of three years and five years' standing. This mixture is transferred into bags of thick cotton-cloth, placed in large boxes, and then submitted to pressure—at first only to a slight pressure, which yields the best soy, and afterwards, however, to a gradually increasing pressure, the separation of the last portions being assisted by an addition of salt water.

“The soy forms a very important condiment for all kinds of dishes, and is consumed in large quantities. In 1874 the production amounted to 1,506,402 hectolitres!

An interesting term in the Index (p. 129) is “Bean-cheese,” which refers to tofu (p. 110).

Also: Use of hemp (*asa*) for manufacture of cloth (p. 77, 113). The tea ceremony (p. 108). Sea weeds, incl. cultivated nori and Asakusa nori in Tokio bay, kanten or vegetable isinglass, and fu (that resembles carrageen [carrageenan] moss and is used in the sizing of the warp of silk goods) (p. 109). Kudzu (p. 110). Sake (p. 111). Address: Japan.

206. Satow, Ernest Mason; Masakata, Ishibashi. comps. 1876. An English-Japanese dictionary of the spoken language. London: Trübner & Co.; Yokohama, Japan: Lane, Crawford, & Co. xv + 366 p.

• **Summary:** Page 295: Soup, n. [noun] (flavored with soy) *tsuyu; sui-mono*; (made with miso) *otsuke; miso-shiru; o mi otsuke* (the last used only by women).

Soy, n. *shōyu* (c).

Note: The symbol “(c)” denotes that the word which precedes it is of Chinese origin. However, the word *shōyu* is not of Chinese origin. Address: 1. Japanese Secretary to H.M. Legation at Yedo; 2. Imperial Japanese Foreign Office.

• **Summary:** Contents: Observed facts. Discussion of the genera *Mucor*, *Aspergillus (flavus)*, *Botrytis*, *Eurotium (Oryzae)*, *Monilia flava*. Address: Japan.

209. Commission Imperiale à l'Exposition Universelle de Paris, 1878. 1878. Le Japon à l'Exposition Universelle de 1878 [Japan at the Universal Exposition of 1878]. Paris: Publiè sous la Direction de la Commission Impériale de

Japon. 2 volumes in one. 26 cm. Preface by M. Matsugata. Facsimile edition (preservation photocopy) reprinted in 1998 by BookLab, Inc. [Fre]

• **Summary:** Part I (159 p.) is about the geography and history of Japan. Part II (192 p.) is about art, education and teaching, industry, production, agriculture, and horticulture in Japan. The Preface is by M. Matsugata, Head of the Imperial Department of Agriculture and President of the Japanese Commission to the Universal Exposition of 1878.

In Part II, the section on “Fermented beverages—Condiments” contains a long section on “Shoyu” (p. 124-25). It gives a brief description and discusses the ingredients (equal parts dehulled wheat, soybeans, and salt; the best salt comes from Aho in the province of Harima), purifying the salt by dissolving then heating it in water, and stirring the mash (2 or 3 times a day from June to September), aging for 15, 20, or sometimes 30 months to obtain shoyu. The mash is then pressed in cotton sacks, and the resulting liquid is boiled, cooled, allowed to settle, then stored in small wooden tubs. The residue from the first pressing can be used to make a second-grade shoyu, which can be mixed in varying proportions into different grades of shoyu.

In the section on “Agriculture,” the subsection on “Cereal grains” (p. 133) discusses both soybeans and azuki beans (*Phaseolus radiatus*). “The soybean (*Le Mame*) or *Soja Hispida* is comprised of several varieties: The green soybean (*l’Awo mame*), the white soybean (*le Shiro mame*), the black soybean (*le Kuro-mame*), the yellow soybean (*le Ki mame*), *Konrinza mame*, *Ichia mame*, and the saddled soybean (*Kurakake mame*). Some of these different varieties are early maturing and some are late.

“The soybean finds numerous uses, for it can be eaten cooked, ground into flour, or used for the manufacture of shoyu, miso, or tofu. The bean, its seed coat, pod, leaves, and stem serve as feed for horses. Lately it has been used on a trial basis to feed sheep, and the results proved that it was the best feed that one could give to them.

“Tofu is made with two kinds of boiled soybeans: White and yellow. After being pressed and hardened, it will last for a long time. Yuba is a somewhat similar product, made with the same ingredients. Note: This is the earliest French-language document seen (March 2004) that contains the word *Tofu*.

“The black soybean speckled with white (*Gan Kui mame [Gankui]*) is one of the best varieties to eat.”

The azuki (“*L’Azuki ou Phaseolus radiatus*”) includes the early and late types, and comes in several varieties such as the *Hine no Azuki*, the *Dainagon Azuki (le Dai Nagon Azuki)*, the *White Azuki (Shiro Azuki)*, etc. Sweet azuki bean paste (*L’An*), is widely used in confectionery, is made by mixing the Azuki and sugar. One cake made from it is called *Yokan*. Azuki flour (*farine de l’Azuki*) is used to remove greasy stains from fabric / cloth. The *Yaye Nari*, a green bean (*haricot*), is used in the same ways as the azuki bean

(p. 135). Note: This is the earliest French-language document seen (Jan. 2005) that uses the word “Azuki.”

Also discusses: Sea vegetables (many individual types with both Japanese and scientific names, p. 127-29). Kudzu (*Pueraria thumbergiana* [sic, thunbergiana], starch from the roots and fodder from the leaves, p. 139; fibers used to make cloth, p. 153). Hemp seeds (p. 139). Sesame seeds and sesame oil (*Goma*, p. 145). Peanuts and peanut oil (*Tojin mame*, p. 145). Hemp as a fiber plant (p. 151). Address: Paris, France.

210. Haberlandt, Friedrich. 1878. Erste Abtheilung [Part 1, pages 10-15 (Document part)]. In: F. Haberlandt. 1878. Die Sojabohne [The Soybean]. Vienna: Carl Gerold's Sohn. ii + 119 p. [4 ref. Ger]

• **Summary:** “The value of soybeans results from their high content of the most important nutrients. The first analysis that made the composition of these seeds known in Germany was carried out by [Mr.] Senff using seeds obtained directly from Japan by Mr. [Carl] Berndt. The results of this analysis* (Footnote: *See the journal *Chemischer Ackermann* (“Chemical Farmer”) 1872, p. 123) showed that 100 parts of air-dried soybeans have the following composition:” A table (p. 11) based on two samples and their average shows: Water 6.91%, protein 38.29%, oil (*Fett*) 18.71%, nitrogen-free extract 26.20%, crude fiber 5.33%, and ash (minerals) 4.56%.

A second table (p. 11) which compares the nutritional composition of soybeans, common beans (*Fisole*), peas, lentils, fava beans (*Pferdebohne = Vicia faba* = “horse beans”) and yellow lupins, shows that soybeans have a much higher content of protein (38.29%, followed yellow lupins at 35.32%), oil (18.71% followed by yellow lupins at 4.97%), and ash (minerals, 4.56%, followed by yellow lupins at 3.78%).

“There are few statements in the pertinent literature concerning soybean utilization. But there is no doubt that, in their native countries, they have heretofore been used exclusively as foods. In *Synopsis der Pflanzenkunde* (“Synopsis of Experience with Plant Culture;” 1877, Hannover, Vol 2, p. 413), Dr. Johannes Leunis says that soybeans taste good and are also used to make a thick brown sauce, which is added to almost all foods in India, China, and Japan, and is also an article of commerce in Europe, used to improve sauces and gravies. However the sauce now available in Germany is said to be made of other ingredients rather than soybeans, namely mushrooms. From England, where this soy sauce is imported from India by the firm Grosse [sic, Crosse] & Blackwell in London, its use is spreading to the continent and is available in Vienna. Kaempfer, who describes the soybean plant so excellently in the classic work on his travels, also gives detailed information about its use as foods in Japan, which has since appeared in numerous other writings, such as Oken’s

Allgemeine Naturgeschichte aller Stande (“General Natural History of All Places”) [1841] vol. III, part 3, page 1661.”

Haberlandt then quotes in their entirety Kaempfer’s descriptions of miso and soy sauce (about 200 words each). He also indicates a vague knowledge of tofu.

“It is reported that in China a type of food is made from the oilcakes or perhaps from soybeans directly, that superficially resembles a soft cheese or Quark (a European white unfermented cheese; *nach dem weichen Käse oder dem Quark ähnliche Speise machen*) presumably the original mush is subjected to a fermentation process and then mixed with pepper and other spices. A large part of China’s population is said to use this staple food.” Note 1. This is also the earliest German-language document seen (Feb. 2004) that uses the word “Quark” in connection with tofu.

He goes on to describe the chemical composition and uses of the oil presscake in China.

Page 14: “Since the oil content (*Oelgehalt*) of the soybean is lower than that of other oilseeds, it must be assumed in advance that its application for the production of oil (*Oelgewinnung*) must be disregarded. This also became evident through a test which Mr. Carl Berndt conducted on the rest of the soybeans that hadn’t been used for agronomic trials. He was kind enough to give me the following report: ‘Although I should have expected that one could not determine the full quantity of oil from a relatively small quantity of seeds, I was still astonished that there was not more than 6%. The analysis had resulted in 16 to 18%, and therefore the mechanical quantity was estimated at 10-12%.

“Actually it was quite difficult to locate an oil miller who would clean his mill sufficiently that one received pure oil. Moreover, these people didn’t proceed with the interest and care that are necessary, since I found lots of oil in the presscakes, indicating that they had not been pressed sufficiently. In terms of quality, I am more satisfied than I had expected to be. I had someone prepared baked goods where oil was used in the recipe and I could not detect the slightest after-taste. As a cross-check, I had another part of the baked goods prepared with Provenzer oil, but I could not tell the difference between the two.

“To what extent the [soybean] oil could be used for industrial [non-food] purposes, especially as a mordant (*Beize*) for the dyeing of Turkish-red, which uses very old, spent oil (that is soluble in carbonic potassium) can only be established when a sufficient quantity of oil becomes available.”

Note 2. This is the earliest document seen (Oct. 2001) concerning special industrial uses of soybean oil as a non-drying oil, as a mordant for dyeing. Address: Hochschule fuer Bodencultur, Vienna, Austria.

211. Haberlandt, Friedrich. 1878. Vierte Abtheilung. 9. Chemische Zusammensetzung der Sojabohne,

Fuetterungsversuche mit dem Stroh und Zubereitung der Samen als Nahrungsmittel fuer den Menschen [Part 4, Section 9. Chemical composition of the soybean, feeding trials with the straw, and preparation of the seeds as human food (Document part)]. In: F. Haberlandt. 1878. *Die Sojabohne [The Soybean]*. Vienna: Carl Gerold's Sohn. ii + 119 p. See p. 87-110. [4 ref. Ger]

• **Summary:** A table (p. 95, continued from p. 84, and reproduced in part in Piper & Morse. 1923. *The Soybean*. p. 156) shows that Haberlandt planted seeds of one variety at Vienna at intervals of one week for 11 even weeks throughout the season (from March 31 to June 9) and attempted to correlate the number of days to maturity (life periods) with the number of heat units (*Wärmesumme / Wärmesummen*, in °C) required for three different stages of growth—germination, blossoming, and maturity. The life period ranged from 182 days for the seeds planted first to 138 days to the seeds planted next to last. The seeds planted first (March 31) required the most heat units to come to maturity (2,972°C) whereas those planted last (June 9) required the fewest heat units (2,322).

Note 1. This is the earliest document seen (March 2003) concerning the scientific study of soybean germination, or the relationship between heat units and germination.

In 1877 several new analyses of the soybean were conducted, to add to those from past years. One was communicated by Mr. A. Tomasek in Napagedl [in Mähren / Moravia, a region in today's central Czech Republic], the other by Dr. Eduard Mach in St. Michele [South Tirol]. The first was conducted by the sugar factory chemist, Mr. Schroeder, in Napagedl (p. 103). For air-dried reddish-brown (*rothbraun*) and yellow soybeans he found the following: Protein: 36.12% / 35.87%. Nitrogen: 5.78% / 5.74%. Fat: 17.50% / 18.25%.

Dr. Mach had his analysis conducted in the agricultural education center by his assistant C. Portele. He examined 3 varieties (yellow, reddish-brown, and black) obtained from Haberlandt and grown out in San Michele, and a fourth reddish-brown variety, which is grown in southern Tirol (Tyrol) as the Coffee Bean, has been acclimatized there for a long time, and until now has remained entirely unknown and unrecognized. The composition of the four is as follows: Water: 8.1 / 9.4 / 9.9 / 10.1%. Ash: 5.4 / 5.1 / 4.8 / 5.2%. Protein: 36.8 / 31.6 / 31.2 / 38.1%. Fat: 17.6 / 17.4 / 18.1 / 17.8%. Crude fiber: 4.8 / 4.3 / 4.2 / ?%. (p. 103-04).

Also Mr. C. Caplan (p. 104), assistant at the agricultural chemistry research station in Vienna, conducted analyses of the seeds, their pods, and the leaves and stalk. His results were published in 1878 in the *Oesterreichisches landw. Wochenblatt* (No. 3, p. 26): Water: 14.0 / 14.0 / 14.0%. Protein: 32.32 / 4.64 / 6.08%. Fat: 16.76 / 1.29 / 2.03%. Nitrogen-free extract: 26.56 / 41.87 / 37.12%. Crude fiber: 5.57 / 30.45 / 22.79%. Ash: 4.76 / 7.79 / 9.31%.

“It is unnecessary to emphasize the importance of the soybean as a food for man and his animals. Not only is there high nutritional value in the beans and straw, they also have a flavor such that eating them takes no special effort.

“A considerable number of taste experiments have been made and it can be stated that nobody's sense of taste has revolted against food uses of soybeans.

“Dr. F. Leithner complains that they are not easily cooked softly enough. ‘I tasted them with oil and vinegar, sort of baked bean style, and as a soup. In oil and vinegar they seemed to have a slightly sweet aftertaste, like sweet peas. Also as soup they reminded me of regular bean soup with a slightly sweet flavor. One of my guests liked them very much.’

“Mr. Alfred Erttel, captain of the royal-imperial army in Planta near Meran wrote: ‘Cooking experiments were highly satisfactory; the soybean is finer and has a better flavor than regular beans.’

“Director A. Baumgartner in Grotenhof had them prepared as a salad and as a vegetable. He found them to be very much like regular beans.

“Director D.E. Mach commented about the taste experiment he conducted: ‘In order to come to a valid opinion about the savoriness of the soybean and its value as a food, we tried to have them prepared in various ways. We must admit that they were very tasty cooked whole or as a puree, as well as with oil and vinegar, yes, even finer than peas or lentils. It must be mentioned however that soybeans take a long time to cook soft.’

“By adding that no negative opinion about the soybean has come to my attention, I would also like to state: I believe that the seeds of the soybean by themselves are too concentrated a food and they would be best mixed with other foods, which are less concentrated and contain mostly carbohydrates. The Chinese and Japanese have instinctively been led toward that. They add their ‘miso’ or their soy mush to most of their other dishes in a certain ratio without eating soy by itself. Kaempfer describes a way that the Chinese and Japanese prepare miso which is very complicated; the cooking takes a lot of time and money. So it would seem simplest to use soybeans in the kitchen in a finely ground form. I had soy grits of that kind added to various potato dishes, for example mashed potatoes and rice. I mixed soy grits with wheat grits, cooked with milk or water, and I had soy grits added to mashed potatoes to make a dish resembling Polenta. This might be called Sojenta. My family also experimented with adding soy meal to wheat flour to make bread, with and without the addition of milk, and in all cases we were highly pleased with the results. This opinion about the taste of soy was shared by others, who shared in the tasting.”

Note 2. This is the earliest document seen (Oct. 2001) concerning what is probably whole (full-fat) soy flour. Note 3. This is the earliest document seen (Sept. 2004) that

describes a cereal-soy blend, or the use of soy flour to make bread.

Note 4. At this point (p. 107-08) Haberlandt adds a lengthy footnote from his friend and colleague Professor W. Hecke who followed with great interest the progress of soy culture in Austria and who had conducted taste tests with soy grits. Hecke encouraged the use of soy with potatoes to make a nutritionally balanced, inexpensive, tasty, and easily accepted basic dish. One part of soy flour or grits and two parts fresh potatoes were cooked separately, then mixed into a fairly stiff mush / porridge. Salt and fried onions were added as seasonings. The milk and fat, ordinarily added to mashed potato dishes could be omitted.

Haberlandt then continues: "If used in this way, the soybean will someday play a major role in the diets of the poor. It will be more than salt for potatoes. With its fat (*Fett*, i.e., oil) it will replace lard [Note 5. Soybean oil was later used to make lard compounds, lard substitutes, and shortening] and with its protein it will supply strength. Appropriate mixtures will be easily developed according to the other ingredients used.

"As grits or fine meal (flour) it will also move into the palaces of the rich, in whose kitchens from India and China is already a common item. It will only be a question of finding suitable ways of preparing them. The flavor of half-cooked soy grits resembles that of poppy seeds or almonds, and should be suitable as an addition to the finest foods otherwise made from meals (flour).

"The soybean could be of major importance in the provisioning of forts and ships and in supplies for armies. It could justly be used as a better substitute for peas in 'Pea Sausage' [*Erbstwurst*, a cooked food containing pea meal fixed with fat pork and salt.] It will compete effectively as a coffee substitute with other plant products now used for this purpose. Soy coffee is already produced in South Tirol (Austria) and Istria (now a peninsula in Croatia and Slovenia). Mr. Franz Mark of Budapest [Hungary] pointed out the possibility of using soybeans as a chocolate substitute, for which it would undoubtedly serve better than the peanut, which, in Marseilles [port in southern France], is mixed with sugar to make an inexpensive chocolate substitute."

Note 6. This is the earliest document seen (Aug. 2002) concerning the use of soy as a meat extender (in Pea Sausage).

Note 7. This is the earliest document seen (Oct. 2004) that mentions the possibility of using soybeans as a chocolate substitute. Address: Hochschule fuer Bodencultur, Vienna, Austria.

212. Wernich, Albrecht Ludwig Agathon. 1878. *Geografisch-medicinische Studien nach den Erlebnissen einer Reise um die Erde* [Geographical-medicinal studies based on the experiences of a trip around the world]. Berlin:

Verlag von August Hirschwald. x + 423 p. See p. 85. No index. 23 cm. [3 soy ref. Ger]

• **Summary:** Chapter 5, titled "Japan—Food value and foods" contains a long discussion of the soybean (*Dolichos Soja*) and soyfoods (p. 84-87) including tofu (*Bohnenkäse oder Bohnengefaultes*) and shoyu (*Soja oder Schoju*), with two long quotations. Soybeans are rich in protein and almost free of starch. They can be roasted to taste like nuts and used in baked goods.

Endnote No. 35 (p. 411) states that miso soup (*Misoschiru*) or shoyu soup (*Schio-ü-schiru*) are part of the typical Japanese breakfast. Miso is made from beans, barley, and salt; shoyu is made from beans, wheat, and salt. The soup typically contains small amounts of vegetables (such as varieties of potatoes), beans, cabbage and mushrooms, turnips or carrots, onions, etc. weighing a total of about 170 gm. The main dish at breakfast is rice (weighing about 470 gm). Also included are fish or an egg, salt-pickled vegetables, and 100 gm of tea.

Also discusses *Pueraria Thunbergiana* (kuzu, p. 87). Total references: 162. Albrecht Wernich lived 1843-1896. Address: Docent for Special Pathology and Therapy at Berlin University.

213. *Kogyo Tokei-hyo (Census of Manufacturers)*. 1878—. Serial/periodical. Tokyo: Japanese Ministry of International Trade and Industry (MITI), Research and Statistics Dept. (Tsusho Sangyo Daijin Kanbo Chôsa Tokei-bu). Annual. [Jap]

• **Summary:** Contains statistics concerning Japan's industries and commodities. For example, in the report for the year 1987 (published in June 1989) under miso we find "124111 Miso (Including powdered or spray-dried miso). Total production in Japan: 641,337 tonnes. Value in million yen: 138,960. ??" Similar figures are given for each of Japan's 47 prefectures, listed from north to south, starting with Hokkaido and ending with Okinawa. The four largest producing prefectures are Nagano 186,316 tonnes (29% of the total), Aichi 63,294 tonnes, and Shin (?) 34,282, and Aomori 32,145 tonnes.

Note: The powerful and influential publisher, MITI, is called Tsûsan-sho in Japanese. Address: Tokyo, Japan.

214. Warrington, Robert. 1879. Agricultural chemistry in Japan. *Chemical News (The)* 40(1039):195-96. Oct. 24.

• **Summary:** "In the International Exhibition, now being held at Sydney [Australia], a collection of soils, manures, and agricultural products is shown by the Imperial College of Agriculture in Tokio, Japan. Accompanying the collection is a descriptive catalogue, compiled by Mr. Kinch, the Professor of Chemistry at the College, in which a short account is given of the various products exhibited, with chemical analyses of the majority of them. The catalogue contains in all about 80 analyses of Japanese products. The

whole of this important work has been accomplished in the laboratory of the College, under the superintendence of Mr. Kinch, and is certainly highly creditable to the Institution.”

The section titled “Soy Bean (*Glycine [Soja] hispida*)” (p. 195) mentions miso, tofu, and shoyu. Address: M.R.C.S. Eng.

215. *Bulletin de la Societe d'Acclimatation*. 1879. IV. Bibliographie. II. Journaux et revues. 1879. 3e fascicule.—*Le Soja hispida* [IV. Bibliography. II. Journals and Revues. 1879. 3rd volume of *Le Soja hispida*] (Continued). 26:666-71. Nov. [Fre]

• **Summary:** Continued (p. 670.3): “One can read in the *Imperial Encyclopedia of Agriculture (Cheou-chi-thong-Khao)*, book/volume XXVII, folio 8, recto: ‘Yellow soybeans can be used to make tofu (*teou-fou*, a sort of fermented soybean paté consumed regularly by the lower classes). Oil is removed from the beans using a press; they are also used to make jiang (*tsiang*, a sort of sauce used as a seasoning). The *Treatise on Agriculture*, by Fan-Ching states: At the summer solstice, one plants soybeans (*dou*); they don’t require heavy labor. The flowers of the soybean don’t like to see the sun, otherwise the plants will become yellow and the roots will blacken’ (Mr. Stanislas Julien, member of the Institute, this *Bulletin*, 1855, p. 225).

“Soybean oil (*L’huile de Pois oléagineux*) is very similar to our edible oils; its odor and taste are agreeable. It is equally suited to combustion [burning in oil lamps]. Exposed to freezing cold, it thickens; atmospheric oxygen makes it rapidly turn to resin. It belongs, therefore, to the class of drying oils and can, according to this report, replace linseed oil in some of its applications. Soybeans contain 18% oil and, because of the quantity and quality of the oil they contain, should provide a new food and a useful product to the industrial arts (Letter from M.E. Frémy, this *Bulletin*, 1855, p. 382).

“At 3 degrees below zero, the plants are not stressed; at 4 degrees the leaves freeze and the pods are slightly injured. If one considers that Haricot beans freeze at zero degrees, one can consider that soybeans are suited to be cultivated in our climate.” There follows a detailed botanical description of the plant. “Each plant bears 80 to 100 pods. The seed yield is excellent: each plant produces on average 183 seeds which, freshly shelled, make a tenth of liter and weigh 58 gm. A liter of soybeans contains 4,000 seeds and weighs 750 gm.

“Independently of these oleaginous qualities, soybeans make a delicious vegetable. Cooking them is very easy: just toss the fresh green seeds into boiling water. The seed coat detaches itself from each seed and floats to the surface, where they are removed. After 30 minutes, the cooking is done and furnishes a delicate dish, recalling the taste of green peas, but less sweet (Note from Mr. Lachaume, this *Bulletin*, 1858, p. 131).

“Look again at a communication from Mr. Paul Champion on the production of tofu (*fromage de Pois*), in China and Japan (this *Bulletin*, 1866, p. 562), etc.

“Let us say again that in the meeting of the Central Society of Horticulture, on Nov. 13 of this year, Mr. Duchartre read a note on the relative richness of peas, haricot beans, dry beans (*Fèves*), lentils and soya (*Soja*) in nitrogenous materials (protein) and oil. He concluded that soya is the richest of all. Up until recently, dry beans (*Fèves*) have been considered the richest, containing 30.80% protein and 70% oil; however soya contains 35% protein and 73% oil” [sic, this percentage is much too high]. Address: France.

216. *Journal de la Societe Centrale d’Horticulture de France*. 1879. Procés-Verbaux: Séance du 13 Novembre 1879 [Verbal proceedings: Meeting of 13 Nov. 1879]. 1:685-88. Nov. Third Series. See p. 686-87. [3 ref. Fre]

• **Summary:** The meeting, presided over by Mr. Hardy, began at 2:00. The correspondence read by the secretary consisted of only one letter from Mr. Blavet, President of the Society of Horticulture at Etampes, to M. Laizier, president of the committee on kitchen-garden crops (*Culture potagère*); he reported on the chemical composition of soybean seeds (*graine du Soja hispida*).

With respect to Soya (*Soja*), Dr. Baillon gave a lecture (based on a note he wrote) in order to provide information about this plant in response requests, especially from Mr. Vavin as follows: He discussed Englebert Kaempfer’s book *Amoenitatum exoticæ* (1712) (about *Daidso* and *Mame* [soybeans], soy sauce, miso, koji, and saké), Linnaeus, Moench [1794], and Savi (1824).

“At the time of Jacquin [1781, 1786], the soybean was cultivated in Austria. Proposals were made to plant it on a large scale as a oil-yielding plant (*plante oléagineuse*). Since the start of this century, it has been grown in all [sic, many of] the botanical gardens, where it bore seeds very well.”

217. Kinch, Edward. 1879. Japan: A classified and descriptive catalogue of a collection of agricultural products exhibited in the Sydney international exhibition by the Imperial College of Agriculture, Tokio, Japan. Tokyo: Agricultural Bureau (Naimushô), Home Dept. 65 p. 20 cm. [Eng]

• **Summary:** Each item that was displayed is numbered. All chemical / nutritional analyses give percentage composition unless otherwise stated. The chapter on “Manures” begins (p. 4): “The principal manures used in this country are human excrements both solid and liquid, which are collected with the greatest care and applies to the land whilst in a more or less advanced state of decomposition. The excreta are often made into a compost with dried grass.

The section titled “vegetable manures” (p. 7-13) gives analyses of rape cake (*abura kasu*), malt dust (*ame kasu*), sesame cake (*goma kasu*), rice beer residues (*sake kasu*), soy residues (*shoyu kasu*; water 16.37%, ash 4.96%, organic matter 78.67%), rice cleanings (*nuka*), and barley bran (*fusuma*).

The chapter on “Foods” begins (p. 16): “By far the most important national food is rice, *Kome*; more than one half of the cultivated land of the Empire is devoted to paddy fields, *Ta*, and besides the rice grown on this irrigated land a considerable quantity is grown on the dry fields, *Katake*.” *Mochi-gome* or glutinous rice, is specially used for making the new years’ cakes, *Mochi*.

The many kinds of leguminous plants include: Peas, field and haricot beans, vetches, lupins; soy beans *Glycine (soja) hispida*, *O-mame* or *Daidzu*; fol. lanceolata (*Midzu-kugiri*); *Phaseolus radiatus*, *Adzuki* or *Shodzu*; *P. radiatus* v. *pendula*, *Tsura-adzuki*; *P. radiatus subtriloba*, *Bundo*; Horse gram, *Dolichos uniflorus*, *Sasagi*; Gram, *Dolichos umbellatus*, *Hata-sasagi*; Overlook pea, *Canavalia incurva*, *Nata-mame*; Ground nut, *Arachis hypogaea*, *Rakkasho* or *Tojin-mame*.

“Also should be mentioned the sesamum, *Goma*, the oil of which is extensively used in cooking; *Perilla ocymoides*, *Ye-goma*; and rape, *Brassica sinensis*, *Abura-na*, which is cultivated for its seed, the oil being used for burning.” Also list (with scientific and Japanese names, p. 17-18) the principal root crops, fruits, sea weed and lichens, fungi, and starch.

Next: Chemical analyses of rice, wheat, rye, “red bean—*Adzuki-Phaseolus radiatus* (large variety and small variety).”

Note 1. This is the earliest English-language document seen (March 2006) that uses the word *Shodzu* (or *shôdzu* or *shôzu* or *shodzu* or *shozu*) or the word “red” or the term “red bean” to refer to the azuki bean, or that gives its scientific name as *Phaseolus radiatus*, or that reports the existence of large and small varieties, or that uses the word *Bundo* to refer to a variety of azuki bean.

Then (p. 22-26): “44. Beans. *O-mame*, *Daidzu*. *Glycine (soja) hispida*. White round soy bean. Miso mame. Percentage composition (table): Water 11.32, albuminoids 37.75, fat 20.89, fibre 1.50, ash 3.86, starch and soluble cellulose 24.58. Total 100.00.

“This bean is met with in several varieties of different colour and size, but they differ little in composition. It is vegetable which approaches nearest in chemical composition to animal food (meat), containing as it does one fifth of its weight of fat and often two-fifths of nitrogenous matter. It is an extremely valuable adjunct to the food of a people who subsist so largely on a purely vegetable diet, of which the bulk is rice so rich in heat producers—starch, and poor in flesh formers—albuminoids.

“*Shoyu*, *Miso*, and *Tofu*, are made from these beans, and enter largely into the food of the nation.

“45. Miso. *Shiro-miso* or white miso. From Osaka. Percentage composition: Water 50.73, fibre 12.93, ash 6.58 (containing 5.4 per cent of common salt), sugar 17.54, albuminoids 5.64, soluble carbohydrates 6.58. Total 100.00. Soluble in water 35.88 per cent.

“46. Miso. *Aka-miso* or red miso. From Osaka. Percentage composition: Water 50.40, fibre 8.25, ash 12.50 (containing 12 per cent of common salt), sugar 0.61, albuminoids 10.08, soluble carbohydrates 18.16. Total 100.00. Soluble in water 34.71 per cent.” Note 2. This is the earliest English-language document seen (March 2009) that uses the term “*Shiro-miso*” to refer to white miso (and vice versa) or “*aka-miso*” to refer to red miso (and vice versa).

“In the preparation of *Miso* the beans are boiled, pounded in a mortar into a paste and mixed with fermenting rice, *Koji* (see sake) in various proportions, and with more or less salt, and the mixture is placed in tubs and left in a cool place for about a month. It will be seen that one variety, white miso, contains much sugar, derived from the *koji*, and little salt; whilst the other variety contains very little sugar and much more salt.

“47. Tofu. Percentage composition: Water 89.29, ash 0.48, fibre 1.01, nitrogenous substances 4.87, non-nitrogenous substances 4.35 (containing 3.32% fat). Total 100.00.

“This food is made by boiling the white soy beans, *Shiro-mame*, in water after they have been soaked, ground and strained through a sieve. The solution is filtered through cotton cloth and the residue pressed; the liquid, containing legumin in solution, is precipitated by the addition of the brine which runs off from sea salt during its deliquescence in the air. The precipitate constitutes *Tofu*.”

Note 3. This is the earliest English-language document seen (Oct. 2008) that uses the word “legumin” to refer to the water soluble protein in soybeans than can be precipitated by a coagulant to make tofu.

“48. Kori tofu. Percentage composition: Water 18.75, ash 1.60, nitrogenous substances 48.80, non-nitrogenous substances, chiefly fat 30.85. Total 100.00.

“Prepared from the above [tofu] by exposing it to the air during frost, until it freezes, and afterwards thawing in the sun, by which the greater quantity of the water is removed.

“49. Soy [sauce]. *Shoyu*. Specific gravity 1.1996. Grams per litre: Total solid residue 359.888, ash 195.168 (principally common salt), sugar 31.034, albuminoids 41.000, free acid expressed as acetic acid 6.200. Note 4. This is the earliest document seen (Jan. 2008) that uses the term “specific gravity” in connection with soyfoods—in this case soy sauce.

“Manufacture of *Shoyu*. *Shoyu* is made from the soy bean, *Glycine (soja) hispida* q.v. together with wheat, salt

and water. Equal parts of beans and wheat are used. A small part of the wheat is mixed with *Koji* (see sake) and allowed to ferment. The remainder is roasted and the beans are also roasted. The roasted beans and wheat are then mixed together with the fermenting wheat, placed in shallow wooden boxes, and kept for some days, at a fixed temperature, in a warm chamber with thick walls, until the whole mass is covered with fungus. It is very important that the temperature of this chamber should be kept at the proper point. By these processes, part of the starch of the wheat is converted into dextrin and sugar, and lactic acid and acetic acid are formed. It is then mixed with salt lye, the proportion used being about 4 *go* of salt to 12 *koku* of water to extract 1 *koku* of the fermented product. The mashings are removed to large vats and there kept for at least 20 months and generally for 3 or 5 years. The better qualities of *shoyu* are kept the longer times. It is found that the best soy is produced by mixing that kept for 5 years with that kept for 3 years. After it has been kept a sufficiently long time, it is strained through thick cotton bags and the residue pressed in the same manner as in *sake* pressing. Before filtering, honey is sometimes added in the proportion of 10 *kin* to 1 *koku* of *Moromi* or mixed soy, in order to give it a sweet taste. Occasionally a sweet sake, obtained by taking 1 *koku* of *koji* to 7 *to* of water and 1 *to* of steamed rice, mixing them together and steaming for two hours, is added instead of honey. The residue obtained on pressing *moromi* is again mixed with salt and water, in the proportion of 8 *to* of salt to 1 *koku* of water and again pressed, this yields and inferior *shoyu*. Sometimes water is added to this second residue and it is again pressed. The residue first obtained is sometimes used as food, and the last residue as manure. One *koku* of the mixture, *moromi*, produces 4 *kuwamme* of residue at the first filtration and about 3.5 *kuwamme* of residue at the second and third. The *shoyu*, after pressing, is allowed to settle for two days in large tanks, and then drawn off and again filtered. *Shoyu* is a very important condiment, it is mixed with a great many kinds of food and is produced and consumed in very large quantities.

“1000 *Go* = 100 *Sho* = 10 *To* = 1 *Koku* = 4.929 Bushels. 1 *Kin* = 1.325 lbs. 1 *Kuwamme* = 8.28 lbs. Note 5. This description of how *shoyu* is made contains several major errors.

Finally, there are chapters on alcoholic liquors (with emphasis on sake or “rice beer, sometimes called rice wine”), sweet liqueurs (*mirin*, *homeishiu*, *shiro-zake*), food adjuncts (incl. salt, vinegar, spices, herbs, and perhaps *shoyu*), edible sea weeds (20 varieties, with both Japanese and scientific names, and an analysis of each), tea, tobacco, fodder, animal foods, dye stuffs, oils and waxes, and starch (incl. *kudzu*, *Pueraria thunbergiana*).

Note 6. This is the earliest document seen (July 2008) concerning soybean products (tofu, dried-frozen tofu, and *shoyu*) in connection with (but not yet in) Australia.

Note 7. This is the earliest English-language document seen (Aug. 2003) that uses the word “nitrogen” in connection with soy—and with protein.

Note 8. This is the earliest document seen (July 2008) concerning soybeans / soya in connection with (but not yet in) Australia, or Oceania.

Note 9. This is the earliest document seen (July 2008) by Edward Kinch (1848-1920) that mentions soy. Kinch was born on 18 Aug. 1848 at Henley-on-Thames, Oxfordshire, England, the 3rd child of Charles Kinch and Emma Plumbe Kinch. He was baptised there on 12 Dec. 1845 in St. Mary’s church. Kinch was a chemist, specializing in agricultural chemistry. In 1869 he became assistant professor at the Royal Agricultural College (RAC) in Cirencester (in southwestern England). From 1876 to 1881 he was a professor of agricultural chemistry at the Imperial College of Agriculture in Tokyo, Japan. Then from 1881 to 1915 he was professor of chemistry at the RAC in Cirencester. He married Edith Shirley Huntington in 1889 in Pembroke district, Pembroke, Wales. They had two children, William (born ca. 1886) and Dora Ann (born ca. 1893). He died on 6 Aug. 1920 in Haselmere, Surrey, England.

Note 10. This catalog was displayed at the Sydney International Exhibition, held in Australia in 1879. The Sydney International Exhibition was Australia’s first international exhibition, a showcase of invention and industry from around the world. An imposing Garden Palace was constructed in the Botanic Gardens as a home for the exhibition. Address: F.I.C., F.C.S., &c., Prof. of Chemistry. Imperial College of Agriculture, Komaba, Tokio, Japan.

218. Pickering, Charles. 1879. Chronological history of plants: Man’s record of his own existence illustrated through their names, uses, and companionship. Boston, Massachusetts: Little, Brown, and Co. 1222 p. See p. 763. [10 ref]

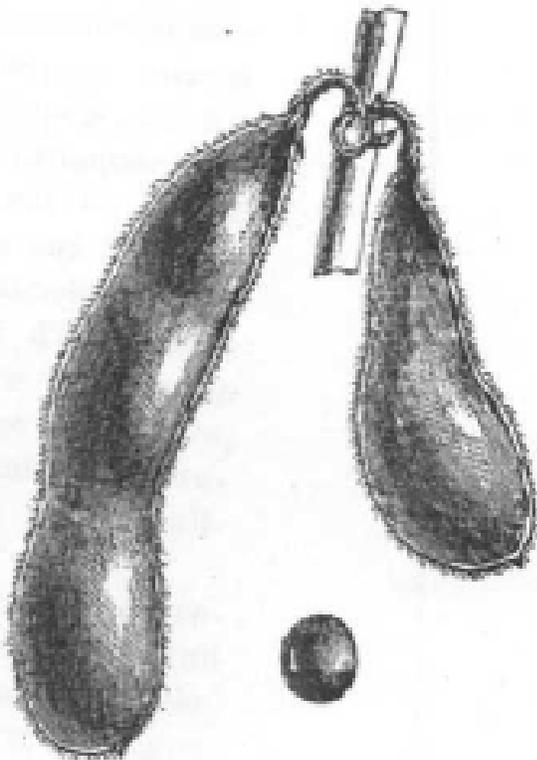

• **Summary:** In the section titled “Chronological arrangement of accompanying animals and plants,” at the year 1296 A.D. we read: “*Soja hispida* of Japan. Enumerated by the Chinese official 141 as unknown in Cambodia:—‘miso’ beans are mentioned in 1444 in the annals of the Japanese emperors (transl. Tits. [Titsingh / Titsing] and Klaproth); were observed by Kaempfer v. 837, and Thunberg, under frequent cultivation near Nagasaki and elsewhere; are known to be made into the condiment called ‘soia’ (Pers.) in English *soy*; also into a white porridge [tofu] in general use among the Chinese and called by them ‘teu hu’ or ‘tauhu’ (Loureiro). Westward, *S. hispida* was observed by Mason in Burmah; by Roxburgh, and Graham, in the gardens of Hindustan. Transported to Europe, it is described by Jacquin rar pl. 145” [*Icones plantarum rariorum*].

Note: This is the earliest document seen (Feb. 2004) concerning soybeans in Burma (later renamed Myanmar), or the cultivation of soybeans in Burma. This document contains the earliest date seen for soybeans in Burma, or the cultivation of soybeans in Burma (1879). The source of these soybeans is unknown. However, as of Nov. 1994 we have been unable to find verification for Pickering's statement about Mason in the writings of Francis Mason. Finding the earlier citation by Mason may allow us to push back this date.

Note: This is the earliest English-language document seen (Feb. 2004) that uses the word "tauhu" to refer to Chinese-style tofu. Address: M.D., Boston, Massachusetts.

219. Carrière, E.-A. 1880. Le soja hispida [The soybean (*Soja hispida*)]. *Journal d'Agriculture Pratique* 44(14):479-83. April 1. [Fre]

• **Summary:** Page 480 notes that in 1874 the *Jardin d'Acclimatation* in France received soybeans from Mexico and distributed them to various societies. Illustrations show: (1) A plant, pod, and seed of *Pois oléagineux de la Chine* (soybean; Fig. 35, by L. Rouyer). (2) A plant and pods of *Soja hispida* (soybean) with many pods clustered around the stem, and a cluster of 7 pods to the upper left of the plant (Fig. 36, by Thiebault). (3) A cluster of three leaves of *Soja hispida d'Etampes* one-fourth its natural size (Fig. 37).

(4) Two large pods and one seed of *Soja hispida d'Etampes* (full size; Fig. 38).

(5) A dry plant of *Soja hispida d'Etampes* with pods on the stems, one-ninth its natural size (Fig. 39).

A table (p. 482) compares the composition of different seeds as analyzed by various chemists. The soybean was analyzed by Levallois of *l'Institut agronomique*.

Pages 482-83: A quotation from *Amoenitatum exoticarum* by Engelbert Kaempfer (1712) mentions miso, soy sauce, koji, and sake.

Page 483 states: "Today the soybean is cultivated in Hungary and probably in Austria. One farmer, Mr. Jules-Robert of Seelowitz, in Moravia [a separate crownland of Austria, but after 1945 part of Czechoslovakia], cultivates it on a very large scale (30 hectares or more each year). He lets some of the plants ripen / mature for harvest as seeds (soybeans); he cuts the others before they mature and mixes them with corn (*maïs*), then ensiles the mixture in a semi-dry state." Note 1. This is the earliest document seen (June 2008) that mentions silage or ensilage in connection with soybeans. It is also the earliest document seen (April 2003) that mentions the use of corn and soybeans together to make silage. All of the early research on the use of soybeans in silage was done in France.

The last paragraph states: "Soybean seeds can be ordered from MM. Vilmorin et Cie, 4, quai de la Mégisserie, Paris."

Note 2. Note 2. This document contains the earliest date seen for soybeans in Mexico (1874). It is not clear whether or not these soybeans were cultivated in Mexico (they may well have been) or where they came from (they may well have come from China on a Manila galleon as part of the China trade).

Note 3. Theodore Hymowitz, Prof. of Plant Genetics, Univ. of Illinois, referring to this reference and to the reference from the year 1651 by Francisco Hernandez mentioning the mung bean, writes (8 May 1989): "The existence of soybeans or mungbeans or even the knowledge of these crops in Mexico at that time is of course no surprise to me. From about 1565 and for the next 250 years ships left Acapulco for Manila (Philippines) and returned. All sorts of goods were moved West to the East and vice versa across the Pacific Ocean. Hernán Cortés [Cortes] (1485-1547, the Spanish explorer and conqueror of the Aztec empire in Mexico) started a plant introduction garden in Mexico City in 1621 and requested that seed be sent to him." Hymowitz added by phone (27 May 1989): "There is no log of what was grown in that garden, but there is the account of Cortés' friend, which is at the University of Illinois rare book room. It is in old Spanish, handwritten."

Note 4. The illustrations in this article were reproduced in many later books and articles by other authors. Address: France.

220. Carrière, E.-A. 1880. Soja hispida [The soybean (*Soja hispida*)]. *Revue Horticole: Journal d'Horticulture Pratique (Paris)* 52:153-57. April 16. Excerpted from *Journal d'Agriculture Pratique*, 1 April 1880. [2 ref. Fre]

• **Summary:** This is a reprint of an article by the same author first published on 1 April 1880 in *Journal d'Agriculture Pratique* 44(14):479-83. All the five illustrations (line drawings) and one table in the original article are reproduced here. Address: France.

221. Greev, Edward. 1880. What the Japanese eat. *Frank Leslie's Popular Monthly (The American Magazine)* 10(2):164-74. Aug.

• **Summary:** A very interesting article with many large illustrations. On page 171 we read: "We quitted the dealer in vermicelli, etc., and entered a shop devoted to the manufacture of *tofu* (bean-curd, or cheese), a national dish. It is semi-gelatinous, white, delicious and wholesome. Yuba is another sort of paste food, made from white beans. Misso [miso] is a white bean paste, mixed with fermented rice and salt. It requires a Japanese-trained stomach to digest this.

Note: This is the earliest English-language document seen (March 2009) that uses the term "bean paste" (not preceded by the word "soy" or "soya") to refer to miso.

"Soyu [shoyu] (soy), a sauce made with boiled beans and wheat, was also sold at this establishment. The mess is fermented until it is a mass of fungi, then cooled and salted with hot lye. It is next transferred to enormous vats, in which it is kept for several years, then pressed in bags made of thick cotton cloth. The brown juice that runs from the horrible mass is soyu, and is not only palatable, but wholesome. The Japanese flavor dishes with it, and use it as we do vinegar, for pickling. It tastes like mushroom catsup.

"I had seen the process of soy-making, therefore declined to visit one of those establishments; whereupon my guide took me to a candy factory. As a nation, the Japanese are not large consumers of sugar."

Mentions many other Japanese foods and beverages including saké (rice-wine or rice-beer); he describes how it is made. Illustrations: (1) Seven Japanese men and women seated on tatami mats around a low table having a meal; in the background is a large painted wall. (2) A Japanese butcher's shop, as seen from outside. (3) A salt vender and house servant, carry goods at both ends of a shoulder pole. (4) The Pelor japonicum—a curious Japanese fish. (5) A dealer in dried fish with a man carrying goods on a shoulder pole. (6) Japanese entertaining European guests, seated in chairs at a raised table. (7) A rice warehouse near Tokyo. (8) A saké shop at New Year's with a large crowd of men. (9) A Japanese tea house.

222. Paillieux, Auguste. 1880. Le soya, sa composition chimique, ses variétés, sa culture et ses usages [The soybean, its chemical composition, varieties, culture, and

uses]. *Bulletin de la Societe d'Acclimatation* 27:414-71. Sept.; 27:538-96. Oct. 28 cm. [73 ref. Fre]

• **Summary:** One of the most important and original of the early publications on soya in Europe. Its in-text bibliography on soya was the largest of any published up to that time.

Contents: Part I: Introduction and extracts on soybeans and soyfoods from 30 articles published previously in the *Bulletin of the Society for Acclimatization* from 1855 to 1880 (pages 414-430). 1. Soybean botany (p. 430-31). 2. The soybean in Japan (p. 431-42): Engelbert Kaempfer and his writings on miso and shoyu, information on soya from a document titled *Japan at the World Exposition of 1878 (Le Japon á l'Exposition universelle de 1878)*, written in French by a Japanese, p. 29-33), recipe for making shoyu in France, tofu. 3. Soya in Cochinchine (French Indochina, p. 442-46): Black soybeans. 4. Soya in China (p. 446-51): Soy oil (*Huile de Soya*), tofu (*le fromage de soya, teou-fou*), soy sauce (*tsiang-yeou*; In London, England, it is sold under the name of "India Soy" at Cross & Blackwell, Soho-Square {p. 451}). 5. Soya in Austria-Hungary (p. 452-71): Starting with soybeans at the World Exposition of Vienna in 1873, includes a long, in-depth discussion (with many excerpts) of Prof. F. Haberlandt's book *Le Soja*, published in Vienna in 1878.

Tables in Part I show: (1) The chemical composition (in both their normal and dry states) of Chinese soybeans (*pois de Chine*), tofu (*fromage de pois*), and tofu curds (p. 427). (2) The yield of tofu. 120 gm of soybeans yields 184 gm of tofu (p. 427). (3) The weight and nitrogen content of the different components when tofu is made from soybeans (p. 428). (4) The Japanese names of 23 soybean (*mame*) varieties and a very brief description of their characteristics (p. 435-36; e.g., 1. *Go-guwatsu no mame* {5th month bean}. 2. *Use mame [sic, Wase mame]* {early}. 3. *Nakate mame* {half season}. 3a. *Okute mame* {late}. 4. *Maru mame* {round}. 5. *Shiro teppo mame* {white, like a pistol bullet} 6. *Kuro mame* {black}. 7. *Kuro teppo mame* {black, like a pistol bullet} 8. *Koishi mame* {small stone}. 9. *Awo mame* {Ao, green}. 10. *Kage mame* {shade, shadow}. 11-15. *Aka mame* {red; 1 of same species, two of different species}. 16-18. *Tsya mame* {Cha, tea colored}. 19. *Kuro Kura Kake mame* {black saddled}. 20. *Aka Kura Kake mame* {red saddled}. 21-23. *Fu iri mame* {striped, variegated, mottled; see *Uzura mame* = speckled like quail eggs}). This nomenclature was taken from a Japanese work titled: "Explanation, with figures, of trees and plants recently determined / identified."

(5) The romanized Chinese names of six types of soybeans and a French translation of each (e.g., *Houang-teou = Soya jaune*) (p. 447). (6) Two analyses of soybean seeds, reprinted from *Chemischer Ackersmann*, 1872 (p. 458). (7) The chemical composition of three soybean varieties, including Yellow of Mongolia, Yellow of China,

and Reddish-Brown of China; the composition of the original seeds and the first generation seed is given for each type (p. 460-61). (8) The chemical composition of reddish-brown, yellow, and black varieties of soybeans (p. 469-70; data from M. Schroeder, Mach, and Caplan, published by F. Haberlandt). (9) Weight of 1,000 seeds for four generations grown out in Vienna. Original seeds: 81.5 to 105 gm. First generation: 110.5 to 154.5 gm. Second generation: 141.8 to 163.6 gm. Third generation: 116.0 to 151.0 gm.

Contents (continued), Part II. 6. The Soybean, by Count Heinrich Attems (p. 538-60): Soybean culture and harvest, uses, and preparation of whole soybeans. Practical soybean culture trials on a grand scale, in the domain of the archduke Albert, an extract from a booklet by Edmond de Blaskovics titled "The Soybean, Its Culture, Use, and Value as Forage" (Vienna, 1880). Excerpts of six articles on soya from the *Wiener Landwirthschaftliche Zeitung (Viennese Agricultural Journal)* (Jan. 1879 to June 1880) (p. 548-54). Excerpts of ten articles on soya from the *Oesterreichisches Landwirthschaftliches Wochenblatt (Austrian Agricultural Weekly)* (March 1879 to Feb. 1880) (p. 554-59).

7. The soybean in France (p. 561-76): History (starting with Buffon, who became director of the *Jardin des Plantes* [Royal Garden, also called *Jardin du Roi*] in 1739), varieties grown, cultivation, utilization (mainly as forage plant for livestock and as an oilseed for oil and meal), accessory uses (miso, Japanese-style soy sauce [*shoyu*], Chinese-style soy sauce [*tsiang-yeou*], Japanese-style tofu [*tô-fu*], Chinese-style tofu [*téou-fou*], soy nuggets [*téou-che*], and soy coffee [*café de Soja*], white fermented tofu [*fromage blanc*], red fermented tofu [*fromage rouge*], green vegetable soybeans [*des graines fraîches, écossées encores vertes, comme le Haricot flageolet*], whole dry soybeans [*les graines sèches comme le Haricot blanc ordinaire*]).

8. Conclusion and tables showing French analyses of soybeans (p. 576-78). Appendixes (p. 579-96): Summaries of letters to the Society describing 27 cultural experiments with soybeans conducted during late 1880 at various locations in France, Switzerland and Algeria. (Note: Though the publication date of this appendix is given as Oct. 1880, some of the letters are dated as late as 21 Nov. 1880). Reprint of a 2-page letter from Eugene Simon, former French consul in China, on soybean farming in China (p. 591-93). Reprint of a description by Eugene Simon, based on the description of a Chinese, of how tofu is made in China (p. 593-94). A French translation of a 1781 article by Isaac Titsingh on preparation of soy sauce in Indonesia (p. 594-95). And some information about soybeans from the ancient Chinese herbal *Pên Ts'ao Kang Mu* (p. 595). Reprints of 2 letters from Eugene Simon in China, on soya and tofu in China. French translation of a 1781 article by Isaac Titsingh on preparation of soy sauce.

Note 1. We find it surprising that this superb work contains no illustrations of a soybean plant, or of any part of

the plant, or of any foods made from soybeans; the only illustration (p. 569) is a cross section of an empty pit into which one could put a mixed silage that contained 20% soybean plants.

Note 2. This is the earliest French-language document seen (Dec. 1999) that uses the term *Huile de Soya* to refer to soybean oil.

Note 3. This is the earliest document seen (March 2001) that has a bibliography of more than 50 references concerning soybeans.

Note 4. This is the earliest European-language document seen (Sept. 2004) that mentions the Japanese soybean types *Nakata-mame* or *Okute mame*. Address: France.

223. Kinch, Edward. 1880. Contributions to the agricultural chemistry of Japan. *Transactions of the Asiatic Society of Japan* 8(Part 3):369-415. Oct. See p. 392-93, 398-401, 413-15. Reprinted in March 1907 as a monograph. [29 ref]

• **Summary:** "Of vegetable manure the principal are seaweed, the residues from different manufactures, e.g. rape cake, sesamum cake, cotton cake and other oil residues, as from camellia seeds, the residues from the manufacture of *shôyu*, *ame* [rice syrup], *sake*, *shôchu*, indigo etc." (p. 392). [Note that soybean cake is not mentioned].

"The oil cakes, *ame kasu* (malt dust, the residue from the manufacture of *ame* from rice, millet and malt of wheat or barley) and *shoyu kasu* [The residue from the manufacture of *shoyu*] are the most valuable. These manures should not be applied in quantity at the seed time in an unmixed state, owing to their fermenting and also attracting and harbouring insects, which attack the seeds and young plants." Rape cake (*Abura kasu*) and Sesamum cake (*Goma kasu*) are also mentioned.

There are original analyses of 6 samples of "Soy residues, *Shôyu kasu* (p. 393). Residue from the manufacture of *Shôyu* from beans and wheat." These vary over an extremely wide range. Nitrogen content ranges from 1.27% to 5.20%, and ash is 0.57% to 11.53%.

"Soy bean, sometimes called Japan pea, *Glycine hispida* (Moench) also known as *Soja hispida*: of this many varieties of different colour and size, etc. are met with, but as far as is known, they differ but little in composition. They are known collectively as *Daidzu* or *O-mame*; a common white round variety is known as *Miso-mame* and *Shiro-mame*; other names of varieties are *Awo-mame*, *Kuro-mame*, *Ki-mame*, *Ichiya-mame*, *Kurakake-mame* and *Korinza* (p. 398).

Note 1. This is the earliest English-language document seen (March 2008) which states clearly that the present scientific name of the Japan pea is *Glycine hispida* (Moench)—that is, the soybean. Actually, however, the correct scientific name since 1873 had been *Glycine hispida* (Maxim.)

“This bean approaches more nearly in its proximate chemical composition to animal food than any other vegetable known. It contains about one-fifth of its weight of fat and nearly two-fifths of nitrogenous matter. It is extensively cultivated in the north of China and also grows in the Himalayas. In China it is compressed for the sake of its oil, and the residual cake is used for food and also extensively as a manure. In Japan it is used in the preparation of *Shōyu*, *Tōfu*, *Miso* and also of *Yuba*, and in these various forms enters to a considerable extent into the food of the nation, to which it is a most valuable contribution, supplying as it does the alimentary principles—albuminoids and fat—in which the staple food, rice, is deficient: it also contains a much larger percentage of the necessary mineral matters than does rice. Of late years this bean has been grown experimentally in different parts of Germany, with success. The haulm and leaves which furnish a valuable fodder, and a variety is cultivated specially for that purpose and known as *Kari-mame*.

“The composition of a sample of the white round variety known as *Miso-mame* was found to be: Water 11.32%, ash 3.86%, fat 20.89%, albuminoids 37.75%, fibre 2.00%, starch etc. 24.08%. Total: 100%” (p. 398). Note 2. This and each of the following nutritional analyses appear to be original, not cited from earlier sources.

A table then contains an analysis of each of the following 4 products: Shiro-miso from Osaka, aka-miso from Osaka, to-fu [tofu], and kori to-fu [tofu]. The composition of aka-miso was found to be: Water 50.40%, ash 12.50% (incl. 11.00% common salt), sugar 0.61%, nitrogenous matter 10.08%, fibre 8.25%, soluble carbohydrates 18.16%. Total: 100%.

The composition of to-fu was found to be: Water 89.29%, ash 0.48%, fat 3.32%, nitrogenous matter 4.87%, fibre -, soluble carbohydrates 2.04%. Total: 100%.

The composition of kori to-fu was found to be: Water 18.75%, ash 1.60%, fat 28.80%, nitrogenous matter 48.80%, fibre -, soluble carbohydrates 2.05%. Total: 100%.

There follows a 3-page discussion of the foods that can be made the soy bean (miso, *kōji*, *tōfu*, *kōri-dōfu*, and *shōyu* or soy), and a description of how each is made. “*Miso* is made by mixing the boiled beans with *Kōji* (rice ferment used in *sake* brewing) in various proportions, and with more or less salt, and keeping the mixture in tubs in a cool place for about a month. It will be noticed [from the table above] that one variety contains much sugar, derived from the *Kōji*, and little salt, and the other much salt and little sugar.

“*Tōfu* is made by pounding the soy beans after soaking in water, then straining through a sieve and boiling in water. The solution is filtered through cotton cloth and the residue pressed; the strained liquor, containing vegetable casein or legumin, is precipitated by brine. *Nigari*, formed by the deliquescence of common salt. The precipitate pressed and cut into cakes is *tōfu*.”

Note 3. This is one of the earliest English-language documents seen (Jan. 2004) that uses the word “tofu.” This is *the* earliest document seen (Jan. 2004) that uses the word “cakes” in connection with tofu.

Note 4. This is the earliest English-language document seen (Oct. 2008) that mentions “vegetable casein” in connection with soybeans or tofu, or that equates “vegetable casein” with “legumin” (the word Kinch used in 1979), the water soluble protein in soybeans that can be precipitated to make tofu.

“*Kōri-dōfu* is prepared from the above by freezing it and afterwards exposing to the sun, when, in the process of thawing, the greater quantity of the water is removed, leaving a horny spongy residue.

Note 5. This is the earliest English-language document seen (Feb. 2004) that mentions dried-frozen tofu, which it calls “kori-tofu.”

“An example of *shōyu* or soy was found to have a specific gravity of 1.199 and to contain per litre: Total solid residue 359.88 grms., ash 195.16 grms., sugar 31.03 grms., nitrogenous matters 41.00 grms., free acid, expressed as acetic acid 6.20 grms. The ash is chiefly common salt, but contains a quantity of phosphates derived from the mineral matter of the beans and kept in solution by the acetic acid formed.”

“The [shoyu] mashings are removed to large vats and there kept for many months, usually twenty, and frequently for 3 or 5 years. The better qualities of *shoyu* are kept the longer times. It is found that the best soy is produced by mixing that kept for five years with that kept for three years. After it has been kept a sufficiently long time, it is strained through thick cotton bags and the residue pressed. Before filtering, honey is sometimes added in the proportion of 10 *kin* to 1 *koku* of *moromi* or crude soy, in order to give it a sweet taste. Occasionally a sweet sake, *ama-sake*, prepared by taking, 1 *koku* of *koji* to 7 *to* of water and 1 *to* of steamed rice, mixing them together and steaming for two hours is added instead of honey. The residue obtained on pressing *moromi* is usually again mixed with salt and water, and pressed; this yields an inferior *shoyu*. Sometimes water is added to this second residue and it is again pressed. The residue first obtained is sometimes used as food and the last residue as manure.

“The *Shoyu* after straining is allow[ed] to settle for two days in large tanks, then drawn off and filtered; before sale it is heated to incipient ebullition, otherwise it quickly goes bad.

“The quantity of nitrogenous matter in solution in *shoyu* appears to increase with the length of time elapsing before filtering the *moromi*.”

Note 6. *Webster's Dictionary* defines ebullition as “the act, process, or state of boiling or bubbling up.”

Also contains detailed information on and chemical composition of adzuki beans or *shōdzū* (*Phaseolus*

radiatus), daikon, sea-weeds (incl. three types of Asakusa nori (*Porphyra vulgaris*), kobu (*Laminaria saccharina*) [konbu, which Thunberg and Kaempfer also discussed], wakame, arame or kokusai, awo-nori or ohashi-nori, hijiki, Irish moss or carrageen, tokoroten-gusa or agar agar, kanten or tokoroten, and funori), and sake.

At the end of the article is the summary of a discussion. Professor Atkinson made some remarks about shōyu. He said that Mr. Isono, a graduate of the University of Tōkiyō, had made analyses of *shōyu moromi* at various periods (after 3, 10, and 20 months), which are printed in full, together with an analysis of Kikkoman shoyu. "It was interesting to observe the disappearance of the glucose, and the gradual increase of the soluble nitrogen from the first sample to the last. The greatest change took place between the third and the tenth months. but, after the removal of the greater part of the glucose and dextrin, converted into alcohol and lost by evaporation, very little alteration occurred, except in the color of the liquid, which became darker."

Note 7. This is one of the earliest English-language documents seen (May 1999) that contains an accurate description of miso; it also contains very early information on the composition of different types of miso.

Note 8. This is the earliest English-language document seen (Dec. 2000) that uses the term "chemical composition" in connection with the soy bean.

Note 9. This is the earliest English-language document seen (Nov. 2003) that uses the term "sesamum cake" to refer to sesame cake.

Note 10. This is the earliest English-language document seen (April 2001) that uses the term "shōyu" to refer to soy sauce.

Note 11. This is the earliest English-language document seen (July 2001) that contains the word "fibre" in connection with soy beans. The fibre content of one variety of soy bean and one miso variety are given.

Note 12. This is the earliest English-language document seen (July 2003) that uses the Japanese word "Goma" to refer to "sesame."

Note 13. This is the earliest English-language document seen (Nov. 2005) that contains the term "cotton cake."

Note 14. This is the earliest English-language document seen (Sep. 2008) that contains the word "Kikkoman." Address: Prof. of Chemistry, Imperial College of Agriculture, Komaba, Tōkiyō.

224. Mene, Édouard. 1880. Des productions végétales du Japon [The vegetable products of Japan]. *Bulletin de la Societe d'Acclimatation* 27:644-66. Nov. [3 soy ref. Fre]

• **Summary:** This is part of a longer article, published in several issues, which is an excellent review of earlier publications and work. This part begins with a section on legumes. Among the legumes discussed are *Vicia Faba*

(*sora mame*, *otafuku mame*, *okakura mame*), *Dolichos unguiculatus* (*sasaghe* [*sasage*, present name: *Vigna unguiculata* (L.) Walp. subsp. *unguiculata*], incl. *Jin-roku Sasaghe*, *Yuhuté Sasaghe*, *Heritori-yu-roku-Sasaghe*), *Canavalia* (*nata-mame* = *C. incurva* [*sword bean*], *shiro-nata mame* = *C. lineata*), *Haricot* (*Phaseolus vulgaris*, incl. *Ingen mame* and *azuki* [*Phaseolus radiatus* var. *subtrilobata*]), sesame, etc. The author saw samples on display at the Japanese Ministry of Agriculture and at the Exposition at Champ-de-Mars in France.

"Soy sauce (*Le Shoyu*) (p. 648-49): This condiment, so appreciated by the Japanese, had samples displayed is the class of fermented beverages. It is often made with wheat flour and beans (*haricots*), but more often with boiled soybeans (*pois*).

"Chinese *Soye* or *Soya* is the same condiment, but more especially made with red beans (*haricots rouges*). Note: Clearly the author did not realize that soy sauce is made from soybeans (not from haricot beans or peas, nor from azuki beans).

"In Canton, it is made in the following way: the red beans are cooked in water for one hour; thrown in a sieve and drained; next the beans are sprinkled with wheat flour and carefully spread out on a wood plank that is put in a warm and humid place that favors the development of considerable mold; after four or five days the mold is taken off and the beans, after having been dried in the sun for 24 or 48 hours, are washed in cold water; salt and water are added, and the mixture is exposed to the sun for two weeks. It is then boiled for half an hour, adding for flavor a bit of star anise, regular anise, and orange peel; the mixture is then filtered through a basket and finally bottled as *Soya*."

There follows a short section titled "Peas" (*Pois*, *Pisum sativum*), including *Endo mame*. Next comes a detailed but somewhat confused discussion of soybeans (*Pois oléagineux*, *Soja hispida*) and a listing (often repetitive) of many different types and colors, as follows: "There was also a variety of soybeans (*Pois oléagineux*, *Soja hispida*), an early soybean (*mamé*), one with large hanging pods covered with red hairs, and one with large, yellowish-white seeds.

"The principal varieties of *Soja* and *Soja hispida* indicated in the watercolors of the Tokyo Bureau of agriculture were: 1. *Soja* with white flowers, a yellowish-white bean of medium size with white pods. 2. Early green *Soja*, a large yellowish-white bean with large pods covered with red hairs. 3. *Soja blanc*, with large yellowish-white seeds. 4. *Grand Soja blanc*, a large, yellowish-white bean with rather long greenish pods. 5. Green *Soja*, a yellowish-white bean of medium size with little green pods and the stem scattered with brown hairs. 6. *Kinoshita-mame*, a small yellow bean with little hairy pods. 7. Red *Soja*, a red bean of medium size with green, velvety leaves and red flowers. 8. Black *Soja*, a black medium-sized bean. 9. *Kouro-hiro mame*, a large black oval bean [*kouro* = *kuro* = black].

There are also varieties called: 10. *Awo-mame*, a large, greenish-white bean [*awo* = *ao* = green]. 11. *Shiro-mame*, *Kuro-mame*, *Kuro-kake mame*, *Kinname* (*Glycine soja*), *Kouringa*, and *Ichia-mame*.

“In the collection of beans at the Exposition of Champ de Mars the following soybeans were found: 12. *Daizu* (*Soja hispida*), a round yellowish bean of medium size. 13. *Shiro-daizu*, a large yellowish bean [*shiro* = white]. 14. *Oshiro-daizu*, a very large yellowish bean, twice the size of *Shiro-daizu*. 15. *Akayendo*, a medium-sized yellowish bean. 16. *Awo-mame*, a large, greenish-white bean (variety of *Glycine*). 17. *Aokuro-daizu*, a large greenish bean speckled with black. 18. *Thya-iro-mame*, a large, reddish-brown bean (variety of *Glycine*) [*Thya-iro* = *cha-iro* = brown]. 19. *Shiro-mame*, a white bean speckled with grey (variety of *Glycine*). 20. *Aka-daizu*, a large red bean [*aka* = red]... 21. *Kouro-daizu*, a large black bean.”

Near the end of this subsection we read (p. 651): “In China, an oil is extracted (*on extrait*) from soybeans (*pois oléagineux*, literally ‘oil peas’); it is used for both cooking and illumination. The green or black peas are often used to color rice wine. Mixed with beans (*haricots*) and wheat, they form the base for the manufacture of soy sauce and of tofu (this latter condiment is composed of two species of boiled beans). With soybean seeds (*Avec les graines de Soja*) the Japanese also prepare a sort of pap (*bouillie*) which for them takes the place of butter and which they call *Miso*. The leaves and branches of the soybean serve to nourish goats and sheep.” Address: France.

225. Bishop, Isabella Lucy (Bird). 1880. Unbeaten tracks in Japan: An account of travels on horseback in the interior, including visits to the aborigines of Yezo [Hokkaido] and the shrines of Nikkô and Isé, by Isabella L. Bird. 2 vols. New York, NY: G.P. Putnam’s Sons. See vol. I, p. 232, 237-38.

• **Summary:** The section titled “Notes on food and cookery” (p. 232-40) states: “Some fish are fried in the oil of the *Sesamum Orientale*, which produces an odour which makes one fly from its proximity. Eels and other dainties are served with soy (*shô-yu*), the great Japanese sauce, of a dark brown colour, made from fermented wheat and beans with salt and vinegar [sic], and with a dash of *saké* added to give it a higher flavour” (p. 232).

Buddhist teachings on the sacredness of life have, in some parts of Japan, been effaced by contact with foreigners. There some people eat wild birds and fowl. “Seaweed is a common article of diet and is dried and carried everywhere into the interior. I have scarcely seen a coolie make a meal of which it was not a part, either boiled, fried, pickled, raw, or in soup” (p. 234). *Brinjal* or egg-plant are among the many vegetables pickled. Confections consist of sugar-coated [azuki] beans, and *yokan*—made from

seaweed. Mochi is a small round cake of unbaked rice dough.

“The common people are also fond of ‘a pot-boil of birds’ in which a little soy and *mirinshu* are added to the water” (p. 237).

“The chief kinds of soup used by the middle classes are bean soup [miso soup], egg soup, and clear soup. The latter is of two kinds, one water and salt, the other water and soy” [sauce]. Among the lower classes there are many kinds, most of which taste like dirty water with a pinch of salt, and contain cubes of bean curd, strips of dried fish, cuttlefish, etc... Carp is used with bean soup only...” (p. 237-38).

In formal entertainments, the highest of the three classes is *san no zen* in which three small tables of eatables are provided to each guest. The first table includes rice, and “bean soup with carp.” Each table contains from 8 to 12 bowls or dishes (p. 238).

Note 1. The author, Mr. J.F. Bishop, lived 1831-1904.

Note 2. Yezo (also spelled Yezzo, Yeso) refers to Hokkaido, Japan’s northernmost main island. Address: Author [England].

226. Wein, Ernst. 1881. Die Sojabohne als Feldfrucht [The soybean as a crop]. *Journal fuer Landwirtschaft* 29:563-613. Supplement (*Ergänzungsheft*). A 50-page supplement at the end of volume 29. Apparently also published as a monograph in 1887 in Berlin. [7 ref. Ger]

• **Summary:** This work, which draws heavily on the research of Prof. Friedrich Haberlandt, contains practical instructions for the farmer who wants to grow soybeans and offers a compilation of current research findings.

Contents: 1. Characteristics of the soybean (*Soja*) and its varieties (p. 3-5). 2. General suggestions for the cultivation, growth, care, harvest etc. of the soybeans (*Sojabohnen*) (p. 5-9). Tables show (for yellow soybeans): Emergence of 100 soybeans at various dates in May and June based on depth of planting (p. 7). Depth of planting, weight of the seeds of 100 plants, weight of the straw of 100 plants, and weight of 100 seeds (p. 7).

3. Chemical composition of the soybean plant. Tables give the composition, including maximum and minimum values, of the following varieties, based in part on earlier published sources: (1) *Soja hispida tumida*, Var. *pallida*, yellow soybean (16 sources). (2) *Soja hispida tumida*, Var. *castanea*, brown soybean (8 sources). (3) *Soja hispida tumida*, Var. *atrosperma*, black round soybean (2 sources). (4) *Soja hispida platycarpa*, Var. *melanosperma*, black oblong soybean (2 sources). Also: (5) Composition of five legumes: peas, beans, lupine, yellow soybean, brown soybean. (6) Composition of straw (5 sources, incl. Schwachöfer of Vienna, Caplan of Vienna, Weiske of Proskau). (7) Composition of soybean hulls (*Hülsen*) (4 sources). (8) Comparison of the composition of soybean hulls and straw with the composition of wheat hay, pea

straw, bean straw, and lupine straw based on data from E. Wolff's tables. (9) Composition of the ash of soybean straw based on data from Schwachöfer of Vienna.

4. What yields can be expected from the soybean and which varieties (yellow, brown, or black) are suited to cultivation? Weight of 100 seeds (those planted and those harvested): *Soja pallida* (15.37 gm / 16.39 gm). *Soja castanea* (13.81 gm / 13.78 gm). *Soja atrosperma* (12.26 gm / 11.44 gm). *Soja melanosperma* (9.19 gm / 7.93 gm). 5. How do soybean yields compare with those of other legumes? 6. What fixed position or rank does the soybean claim in the achievement of maximum yield, and how does one obtain the best seedstock (as for next year's planting). 7. Soil and manuring (*Düngung*, including fertilizer trials with Chili saltpetre / saltpeter [nitrate of soda or sodium nitrate from Chile] [*Chilisalpeter*] and sulphate of ammonia / ammonium sulfate [*schwefelsaures Ammoniak*]). 8. Animals and parasites that harm the soybean. Note: Regular saltpeter is potassium nitrate. 9. Is the cultivation of soybeans in Germany to be recommended? 10. Utilization of soya. 11. Summary of the main results and closing words.

Soya is a superior fodder material. Haberlandt organized field trials in all parts of the Austro-Hungarian empire and many surrounding countries. It should be noted that the introduction of this fodder plant to Germany, primarily in Bavaria, was undertaken by Professors Braungart in Weihenstephan and Lehmann in Munich. Unfortunately, there was bad weather during the early years of attempted introduction.

Concerning harvesting: If you can pull out the plants easily by hand, which is possible when the soil is soft, this is the best way to harvest them. If that is not possible, you can take them out with instruments / tools (*Instrumenten*), which enable you to cut the plants close to the ground, since soybeans have very low pods (*Früchte*)—7-9 cm above the ground. For this reason you should not use mowing machines (*Mähmaschinen*), based on the experience they have had in Hungarian-Altenburg with large-scale cultivation.

The author gives original analyses of the nutritional composition of various soybeans, including oblong black soybeans grown in Munich, Germany, and at the Agronomic Institute in Paris, France.

Section headings include: Is the soybean recommended for cultivation in Germany? Use of the soybean. Miso paste and a brew, the soju. Preparation of shoyu taken from Haberlandt.

Professor Hecke of Vienna gave the following recipe for the preparation of a puree: Take 1 part soy meal [probably whole soy flour] or soya schrot and 2 parts fresh potatoes. Cook each separately, then mix to form stiff paste. Add salt and braised (*geschmorte*) onions. The addition of fat and milk is unnecessary since the soybeans contain lots of fat and protein. This dish tastes excellent, like Hecke said

(Wein 1881). Franz Mark of Budapest proposed the use of soybean as a coffee substitute. Blaskovics was a soy bean pioneer in Europe (Wein 1888).

Note 1. This material was also published as a book in 1881 by Verlag Paul Parey in Berlin. Ted Hymowitz got a copy from Prof. Dietrich Werner, a German interested in soybean history.

Note 2. The author uses two words, *Soja* and *Sojabohne*, to refer to the soybean. Address: Munich, Germany.

227. Organov, N. 1881. Soia ili maslichnyi gorokh (*Soja hispida* *) [Soybean or oil-bearing plant (*Soja hispida* *)]. *Trudy Imperatorskago Vol'nago Ekonomicheskago Obshchestva, St. Petersburg (Transactions of the Imperial Free Economic Society)* 1(2):184-198. Feb. [3 ref. Rus] • **Summary:** The asterisk in the title refers to a footnote (p. 184) which states: Some call this plant "Chinese beans"; in Austria they call them "Haberlandt's beans." Haberlandt is responsible for the successful cultivation of such useful soybeans in Germany. Thanks to Haberlandt, soybeans also became known in Russia. In 1877, Haberlandt sent about 50 soybeans to I.G. Podoba; from these soybeans we have already (1881) obtained 15 pounds of soybeans. This article is based on a brochure by Haberlandt [his superb book, *Die Sojabohne*, 1878], plus the scarce information from the Russian agricultural literature.

The origin of the soybean is in Asia (India, China, Japan, Mongolia). Large quantities of numerous varieties are cultivated there. Soybeans are also grown in the Caucasus, Tunisia, and Algeria, as well as in southern and central Europe. Many attempts have been made to cultivate soybeans in Europe, but more were unsuccessful. Attempts were made in: Hohenheim [Germany]—unsuccessful. Bamberg [southern Germany], by Dr. A. Rauch, who obtained the seeds from their native country—unsuccessful. Germany, by Carl Berndt, using seeds from Shanghai—unsuccessful. France, where soybeans are more commonly known as *pois oleagineux*. 1872—During the Franco-Prussian War [1870-1872, France lost], Sergeant Otto Wehrman found soybeans in the botanical garden of Montigny near Metz and brought them to Germany, where in 1875 attempts to cultivate them were again made.

In 1877 Prof. Haberlandt (Austria) cultivated soybeans received from Capodistria in Istria [Istria or Istrian Peninsula; as of 2003 divided between Croatia and, at its base, Slovenia]. In Istria, soybeans were used to make coffee. They were also cultivated in Dalmatia [as of 2003 largely in Croatia] and southern Italy.

Such methods of cultivation resembled experimental gardening of horticultural and hothouse plants rather than scientific research on the acclimatization and growing capabilities of soybean plants.

The soybean plant has been well known and well documented by botanists and travelers since the last [18th]

century. Kaempfer called the soybean *Daidzu* or *Mame*. Linnaeus called it *Glycine soja*. Jacquin–*Dolichos soja*. Dr. von Siebold and Zuccarini *Soja Japonica*, Sav. and *Soja hispida*, Mönch. Each name represents a different variety of soybeans [sic].

A footnote (p. 181) states: The famous essay by Kaempfer, titled *Amoenitatum exoticarum politico-physico-mediciarum*, describes his travels in Persia and Central Asia in 1712. The essay includes descriptions and uses of soybeans in Japan, China, India, and other places.

Knowledge of and interest in soybeans in Europe expanded during and after the 1873 Vienna World Exhibition. Twenty varieties of soybeans were obtained by Haberlandt, who planted them in 1875 in the Vienna Botanical Garden.

A description of Haberlandt's studies (p. 186) includes favorable growing conditions, a description of planting, and identification of different soybean varieties. In 1876, there were only 7 interested people or organizations who wanted to continue Haberlandt's research on soybean cultivation. However by 1877 Haberlandt's successful results interested more people (up to 160). These people received samples of soybeans from Haberlandt and reported their results back to him. Footnote (p. 187): The results of Haberlandt's experiments and those of the colleagues to whom he sent samples were published in the 1878 brochure [sic, book] *Die Sojabohne: Ergebnisse der..*

Describes the physical appearance of soybeans.

Page 188 proposes uses for the soybean in Europe, as food for people, feed for livestock, soybean oil, coffee, and soy sauce. Quotations from Oken (p. 189-90) discuss various uses of soybeans, including a description Miso (a substitute for butter) and Shoyu (a sauce added to fried meat), and how each is made. In China, soybeans are used to prepare a soft cheese or cottage cheese (tofu). A footnote (p. 188) is a reference to a book: Oken. 1841. *Allgemeine Naturgeschichte für aller Staende*. Vol. 3, p. 1661. Page 190 continues with comments on the great nutritional value of soybeans when used as food. A quotation from Dr. F. Leithner [of Krems, lower Austria, on the Danube River, 38 miles west-northwest of Vienna] describes his positive experiences in preparing soybeans as dinner for his guests. Prof. W. Hecke recommended that soybeans be combined with potatoes to make a kind of porridge. A quotation from Dr. Eduard Mach [of St. Michele, South Tirol] describes the taste of soybeans. Other food uses of soybeans proposed by Haberlandt: a substitute for peas in pea sausages, chocolate substitute.

Three tables (p. 191) show the nutritional value / chemical composition of soybeans. (1) The first analysis of the composition of soybeans (soybean seeds) in Germany was conducted by Senff, who obtained the seeds from Japan [from Mr. Berndt]. Their average chemical composition is given. (2) Mr. A. Tomaszek / Tomasek [in Napagedl in

Mähren / Moravia, a region in today's Czech Republic] gives the following composition percentages for two types of soybeans from China, grown by him in 1876: yellow (column 1) and dark red (col. 2). (3) Further analysis by Tomaszek / Tomasek shows extremely high concentrations of fat and nitrogen [protein] for the two types of soybeans shown in table (2).

Three more tables (p. 192) give a more detailed analysis, by the Technical Laboratory in Vienna, of three soybean varieties: yellow (from Mongolia), yellow (from China), and dark red (from China). There are three columns: Original soybean sample, soybeans grown the first year, and soybeans grown the second year. For each variety, data are given for water, protein, fat, nitrogen-free extract, crude fiber, and ash.

A table (top of p. 193) shows the chemical composition of seven types of legumes: Peas, lentils, wild beans, yellow lupins, haricot beans, broad beans [*Vicia faba*], Chinese beans (soya), and soya beans. For each legume, data are given for water, protein, fat, nitrogen-free extract, crude fiber, and ash. The data for the first five legumes come from Emil T. Wolff. The data for the broad beans and Chinese beans (soya) come from J. Kuehn / Kühn. The data for the soya beans come from Zulkowski.

A quotation from Carl Berdt includes details on soybean composition, and discussion of the uses of soybean oil (including in bread). A table (p. 193-94), based on the research of Prof. Völker [Voelcker, of London] gives the percentage composition of dried soybean oil-cake (Chinese oilbean cake). A table (2 columns) by Caplan (p. 194) gives the chemical composition of soybean pods, and of the leaves and stems. Another table (p. 194-95) gives an analysis by Zulkowski of the composition soybean straw and chaff dried at two temperatures: air-dried, and dried at 100°C. A table (p. 196) shows the mineral composition of soybeans.

Pages 197-98 summarize: (1) Cultural trials and harvest information by Attems with Mongolian yellow and Chinese brownish-red soybeans. He was satisfied with the results and sees a future for soybeans. (2) Harvest results of Tomaszek. (3) Harvest results of Prof. Kulisz. Continued.

Note 1. This is the second earliest Russian-language document seen (Nov. 2002) concerning the soybean.

Note 2. This is the earliest Russian-language document seen (Sept. 2006) that mentions soy oil.

Alternate Journal Name entry: Trudy Vol'nogo-Ekonomicheskogo Obschestva (Scholarly Works of the Free Economical Society).

228. Renouard, Alfred. 1881. Sur l'introduction du soja hispida en Europe [On the introduction of the soybean to Europe]. *Association Francaise pour l'Avancement des Sciences, Comptes Rendu* 10:945-51. April. Session of 17 April 1881, Algiers. [3 ref. Fre]

• **Summary:** Contents: Introduction. History. Cultivation and harvest. Soya as a forage plant. The edible soybean [food uses]. “The *soya*, or rather the *soja hispida* is a plant that is cultivated at many locations in Europe, but whose name is not well known here, and which has only been cultivated for several years. Japan has long known the specialties of its cultivation. There it is well known under the name of *o'mamé* and from it is extracted, from the roasted seeds, the sauce called “japonaise,” which is found in the commerce of Europe, where it enjoys a good reputation.

History: At the Exposition of Vienna, in 1873, the Japanese government exhibited, for the first time, the soya as a forage and food plant. Some Austrian scholars, including Prof. Haberlandt of the Institute of Agronomy at Vienna, then studied the composition of this oilseed and perceived that it would make an excellent forage. In 1877 trials started in Austria. In 1871 the Society for Acclimatization in Paris sent several samples of soya seeds to M. Blavet, president of the Horticultural Society of Étampes. He grew the crop and sent samples to other departments and abroad. Later the seed house of Vilmorin coined the name “Soya of Etampes” (*soya d'Étampes*). But it does not seem that these laudable efforts have been crowned with success. Mr. Paillieux of the National Society for Agriculture, Mr. Saint-André, director of the Agronomic Station at Montpellier, Mr. Vavin of the Society for Acclimatization, have all worked with soya and are still working for the propagation of this useful plant.

“In the region of Nord, it is to a Frenchman, who actually lives in Moravia, that we owe the actual propagation of soybean culture: Mr. Julius Robert, who cultivates nearly 3,000 hectares at Seelowitz. Last year he made a gift of several hundred liters of soybeans to the Society of Farmers of Nord. At the instigation of Mr. Corenwinder, several farmers tried them. The results obtained by the first experimenters were, in general, satisfying, but we should not yet make a final judgment as to the plant's definite acclimatization. Nearly 30 farmers from around the town of Lille are proposing to plant soybeans again. Free samples, provided to our society by Mr. Olivier Lecq (of Templeuve), an agent for Mr. Robert and those who conducted the first trials, have been rapidly distributed. Today we can consider the soybean as definitely well tested in our department.

“Cultivation and harvest of soybeans: Mr. Yossida [Yoshida], a Japanese man from Tokyo, was sent to the town of Lille by his government to work seriously on cultivation and preparation of flax / linseed. He told us that there were at least 100 varieties of soybean in Japan. A Japanese book titled *Explanation, with Illustrations, of Trees and Plants Newly Determined*, mentioned 25 very distinct varieties of soybeans. The Chinese herbal only cited

five varieties, which seems to prove that the soybean is native to Japan.

“In France, we barely know 2 or 3 varieties: the yellow and the brown soybean for temperate climate, and the black for the warm climate. It is the yellow variety that was tried in the department of Nord, and also, by the way, the one that has been cultivated at the Museum since 1790; there we can observe that it comes up well but it does not produce seeds every year” (p. 946).

“In the department of Nord the soybean, can be harvested toward the end of September or during October. However, in warmer countries or regions, the harvest can begin in August or September.”

“The harvest ought to be done like that of the like the dwarf bean (*haricot nain*), in the department of Nord, in ripping out the stalks entirely, then suspending them from poles in an open field, the bundles of soybeans tied just above the top of the roots [hung upside down]. The plant thus dries rapidly, if the weather does not pose an obstacle to it. When the soybeans are well dried out, they can easily be stored: they are not attacked by weevils (*bruches*) that cause, as everyone knows, so much damage to beans, peas, lentils, etc.”

In 1879 in Austria trials were conducted by Mr. de Blackowicz [Edmund v. Blaskovics] under orders from the Hungarian Ministry of Agriculture. In 1879 he obtained an average yield of 1,699 liters/hectare (range: 237 to 3,262).

Mature and well dried, the soybean constitutes an excellent feed for animals in France. On this subject, comparative experiments on the nutritional value of air-dried soybean pods and dead leaves were conducted in 1879 by Messrs. Weiske, Delmel, and Schulze at the Proskau agronomic station.

In total, 1,000 gm of pods were fed to each of two sheep, from Jan. 8-15 then from Jan. 16-23. One table shows percentage of each nutrient in the pods digested by each sheep (p. 948). A second table shows the percentage of each nutrient in the dead leaves digested by each sheep (p. 949).

“Finally, the soybean has been fed to animals after having been ensiled in a mixture with various forages. The fermentation which these forage crops undergo changes the composition of each. For example, in mixing soya with maize (which contains only 4-5% protein), the protein content of the mixed silage is increased. The following analysis, made in 1879 at Loboitz (Bohemia) in the agricultural laboratory of the prince of Schwartzenberg, is of a forage composed 80% maize on the stalk and 20% soya on the branches. A table (p. 949) shows: Moisture 8.62%, fatty materials 2.33%, cellulose 43.94%, nitrogen-free extracts 27.56%, proteins 8.75%, and ash 8.80%.

On the farm of Mr. Julius Robert, the cattle being fattened were fed as follows (per head per day). A table (p. 949) shows—in February: Hay 3 kg. Soya and maize

ensilage 5 kg. Corn flour 1 kg. Beet peels 40 kg. Chopped straw 6 kg. Salt 80 gm. The amount of soy and maize silage fed in March and April were increased to 8 kg. The next table (p. 950) shows that the cattle gained (on average) 633 kg in Feb., 654 kg in March, and 690 kg in April. The increases in weight gain in March and April must be due entirely to the marked increase in the amounts of soy and maize silage fed during those two months.

The article concludes: "To make from the soybean what the Japanese and Chinese make from it is the least important part of the question; because we think that Europe will leave them with their soy butter (*mizou* [miso]), their sauce (*soyo* [shoyu]) and their cheese [tofu]. It is not surprising that people tried to make cheese; the legumine [a kind of protein] which the soybean contains in large proportion, is, as we know, analogous to casein and undergoes the same chemical reactions. By the way, all these products, except the sauce, are detestable to the European palate.

"Next year I shall give an account of the results obtained during three years of trials in the department of Nord" [in far northern France on the border with Belgium].

Contains eight tables from earlier publications by other authors. Address: The Younger (*films*), Civil engineer, manufacturer at Lille, secretary general of the Industrial Society of Nord [a department in northern France] (Ingénieur civil, Manufacturier à Lille, Secrétaire général de la Société industrielle du Nord).

229. Van Buren, Thomas Broadhead. 1881. The food of the Japanese people. Yokohama, Japan: Printed at the Japan Gazette. 19 p. No index. 24 cm.

• **Summary:** Contents: Introduction (meat eating countries vs. Japan). Cerealia (cereals). Leguminous plants. Tubers and roots. Herbaceous food-plants. Ame. Leading food plants (with Japanese name, scientific name, and parts eaten; incl. kudzu, udo, konnyaku, and daikon). Sauce.

Most civilized people are and always have been meat-eaters. "So universal has meat-eating been among the dominating races that it has become a generally received opinion that animal flesh is a necessity to a well-developed physique. The praises of beef are sung wherever Occidental civilization has penetrated. It is not only a popular belief, it is as accepted scientific opinion, that a considerable percentage of animal flesh must enter into the nourishment of any well-fed people."

"The food of Japan, with a population of 36,000,000, or about that of Great Britain and Ireland, engaged in every branch of human industry, presents a complete contrast to all this. Here they are essentially vegetarians, animal flesh being largely prohibited by religion, and its general use made impossible by reason of its comparative scarcity and consequent high price." Until a few years ago, their "isolation prevented the introduction of new food-plants adapted to their climate..."

In Japan there are little more than 1,000,000 head of cattle. Of these, only the cows (not more than 600,000) are eaten; male cattle are used only as beasts of burden. Thus in Japan there are less than 2 head to every 100 people, compared with 73 head in the United States. Of the 36,000 cattle slaughtered last year in Japan, "more than one-half were consumed by foreign residents and the foreign naval and merchant marine. The Japanese army and navy also consume considerable beef. It is therefore safe to say, as I have already intimated, that beef does not enter into the food of the mass of the people to any appreciable extent. Mutton and pork, outside of the treaty ports, are almost unknown. Of barnyard fowls, geese, and ducks there is a large variety. The wildfowl, consisting of pheasants, quail, woodcocks, grouse, ducks and geese are also abundant, but these, as well as eggs, on account of their high prices, can scarcely be said to enter into the diet of the common people at all, except upon rare occasions. Fish is more largely eaten. The variety of fish is very large... A very considerable percentage of the catch is dried." "At present it may be said that one-half the people eat fish every day, one-quarter two or three times a week, and the balance perhaps once or twice a month.

"Even with these exceptions the food of the masses is fully or even more than 90 per cent. vegetable." The Japanese exhibit "endurance of body and power of intellect to a very considerable degree, while deprived of the usual nutriment held to be essential to such developments."

The main cereals of Japan, in descending order of the quantities produced, are rice, barley, millet, rye, and Indian corn. The three main varieties of millet are extensively cultivated and used: First class is *Setaria Italica* (Italian millet). Second class is *Panicum miliaceum* (Indian millet). Third class is *Panicum frumentacum* (Called "hiye" [hie] in Japan).

"Leguminous plants. Perhaps in no country in the world are beans and pease comparatively so extensively cultivated as in Japan. There are more than 40 varieties. That known as the soy-bean is especially important, as it is rich in those nutritive properties which are wanting in rice, and is invaluable in a country where meat is almost entirely lacking in the diet. The composition of this variety, known as Miso-mame, is as follows (table): Water 11.32%. Ash 3.86%. Fat 20.89%. Nitrogenous matter 37.75%. Gluten 2%. Starch and sugar 24.08%. Its "proximate chemical composition approaches more nearly to animal food than any other known vegetable." Tables showing the composition of lean and fat beef are then given for comparison.

"I know it is held by scientists that, while these plants show a great chemical likeness to beef, the action upon the human body is not the same, being much less valuable. I can only repeat that here is a race of people of good physique, of stalwart and well proportioned, although not tall, frames,

and of cheerful dispositions, who daily perform tasks requiring great strength and endurance, who eat almost exclusively this vegetable food, and who, without any of the comforts of our western homes, and undergoing extreme exposure unknown to our people, live about the average lives of the laborers of Europe and America, with a table expenditure of about one-sixth or one-seventh that required by the latter.”

All classes of Japanese also consume many algæ and other sea plants, including many species of chondrus and Fucus-laminaria. Instead of sugar they use *ame*, “made from malted barley and rice or millet, the malt converting the starch of the rice or millet into dextrine and maltose, and producing the product varying from a thick sugar or honey up to a hard candy. The food value of this article is very great, and, as it is sold at a low price, its consumption is large. A table shows the composition of two grades of *amé*, first and second (cheaper).

Sauce enters very largely into the preparation of Japanese food for the table. The most widely-used kind is made as follows: “‘Shoyu,’ known to us as ‘soy,’ the one almost exclusively employed is made from wheat and the shoyu bean [soy bean] (ground) in equal proportions of one *sho* each (a *sho* is about 1 quart, 1 pint, and ½ gill). The materials are mixed and boiled, after which the mass is steamed in a basket or box prepared for the purpose, with a perforated bottom. When the steaming process is finished it is put in a cask and left until a green yeast is produced. The compost is then taken with salt water. After standing a good length of time the liquid is strained, and the sauce is ready for use. It has a rather pleasant flavor, and is said to be the basis of most of the renowned sauces [such as Worcestershire] prepared in England. The refuse is fed to cattle.”

The last 6 pages (p. 14-18) contain a “List of plants used for food, or from which food is obtained in Japan.” They are arranged by families. For each species is given: Botanical name, Japanese name(s), and remarks. Under Leguminocea [sic, Leguminosae], Papilionacea [Papilionaceae], we read: *Glycine soja* (S. & Z.), Tsuru mame; No mame, seeds. *Glycine hispida* (Moench) or *Soja hispida* (Miq.), Omame; daidzu, Soy bean; seeds; many varieties. *Dolichos soja* (L.), Japan pea. *Glycine hispida* f. *lanceolata*, Midzukugiri.

The section on legumes (p. 15) also discusses: (1) *Arachis hypogea* (L.), Rakkasho, Tojinmame, Ground-nut; earth-nut; fruit. (2) *Vicia faba* (L.), Sora mame, Broad beans; seeds = *Faba vulgaris*. (3) *Pisum sativum* (L.), Yendo [Endo], Pea; seeds; two main varieties; midori yendo [endo] and saya yendo [endo], the latter eaten for the pod. (4) *Pueraria thunbergiana* (Benth.), Kudzu, root, starch = *Dolichos hirsutus* (Th.). (5) *Canavalia incurva* (D.C.), Nata mame, seeds = *Dolichos incurvus* (Th.). (6) *Phaseolus radiatus* (L.), Adzuki-Shôdzu, seeds. *Phaseolus radiatus* var. *pendulus* (Savatier), Tsuru-adzuki, seeds. *Phaseolus*

radiatus var. *subtrilobatus* (Sav.), Bundo-Yayenari, seeds. (7) *Dolichos umbellatus* (Th.), Sasage, Adzuki-sasage, seeds. (8) *Atylosia subthombea* (Miq.), No-adzuki; Hime-kudzu, seeds.

Note 1. This is the earliest English-language document seen (Jan. 2005) that uses the term “broad beans” (or “broad bean”) to refer to *Vicia faba*.

Note 2. This is the earliest English-language document seen (March 2006) that uses the word “Yayenari” (or “Yayenari” or “Yaenari” or “Yae-nari”) to refer to a variety of azuki beans. Address: United States Consul General of Japan, Kanagawa.

230. *Oesterreichische Monatsschrift fuer den Orient (Vienna)*. 1881. Die japanische Sojabohne als Nahrungsmittel [The Japanese soybean as a source of food]. 7(12):204-05. Dec. 15. [1 ref. Ger]

• **Summary:** In the July issue of this periodical was information on the preparation of miso from soybeans. Additional information was sent by Dr. G. Wagener, our correspondent in Tokyo.

Contains a detailed description of how to make miso (miszo). Soybeans are soaked for 12 hours until soft. The water is poured off and the beans are then cooked for 5 hours in fresh water. The thick, viscous, sweet-tasting cooking liquid is filtered off (using a basket) and the beans are mashed underfoot. To each 1.8 liters of beans are added 5.4 liters of koji (made by the fermentation of rice), 5.4 liters of salt, and 1.8 liters of the cooking liquid. The combination is mixed and filled into vats, which are then covered with oiled-paper (*Oelpapier*). This koji miso or white miso is ready after 10 days.

A very delicious red (aka) miso is made without koji. In the countryside, miso is prepared in other ways and can be kept for 7-8 years.

231. Paillieux, Auguste. 1881. Le soya, sa composition chimique, sa culture et ses usages [The soybean, its chemical composition, culture, and uses]. Paris: Librairie Agricole de la Maison Rustique (26 Rue Jacob). 126 p. 28 cm. [42 ref. Fre]

• **Summary:** This is largely a reprint in book form of Paillieux’s excellent article by the same title published in the September and October 1880 issues of the *Bulletin de la Societe d’Acclimatation*. The arrangement of text on the pages is somewhat different from (and clearer than) the earlier publication, and it contains small amounts of new information—as on p. 87-88.

Note: This is the second book on the soybean published in the western world; the first was by Haberlandt in 1878. This book contains only one unimportant illustration, the same one found in the preceding articles. Address: Membre de la Societe d’Acclimatation, France.

232. Phares, David Lewis. 1881. Farmer's book of grasses and other forage plants, for the southern United States. Starkville, Mississippi: Published by the author. J.C. Hill, printer. 148 p. See p. 19. 22 cm.

• **Summary:** "Glycine hispida Japan pea: This bean (it is not a pea) came under my observation some twenty-five years ago [i.e. in about 1856], as the Japan Pea. It was then cultivated to a limited extent for a few years; but ceased to attract attention till the close of our civil war; when it was again widely sold as the Southern Relief Pea. The catalogues name it Soja hispida. Though not a climber, it may be the Dolichos Soja, or Soy bean of China and Japan.

"In this country, this bean is probably not esteemed so highly as it should be either for the table or for forage. Few people bring it to the table more than once; for when prepared as other beans it is inedible and disgusting. But when the ripe seeds are soaked from twelve to twenty-four hours they may be cooked so as to afford a most delicious and nutritious dish. The soaking changes the shape of the bean from globose to oblong."

"This is probably the Sooja or Miso of Japan so much used in soups in that country. The soy or sauce made from these seeds is used three times a day, as salt with us, in nearly all dishes. The favorite Chinese curd-like dish, *Teu hu*, also is made of these beans."

Phares lived 1817-1892. He resided in Mississippi in 1881, and says that he observed soybeans being cultivated in about 1856, but it is not clear that they were being cultivated in Mississippi, either in about 1856 or at the time this letter was written. Later documents (Riley 1909) prove that soybeans were grown in Mississippi as early as 1857.

Note 1. This is the earliest American document seen that uses the term "Glycine hispida" to refer to the soybean.

Note 2. This is the earliest document seen (April 2008) that mentions the soybean in connection with the U.S. Civil War. Address: A.M., M.D., Prof. of Biology, A&M College of Mississippi, Sanitary Commissioner for the State at large of Mississippi.

233. Wein, Ernst. 1881. Die Sojabohne als Feldfrucht: Zusammenstellung der vorliegenden Cultur- und Duengungsversuche fuer den praktischen Landwirth [The soybean as a crop: Compilation of the existing cultivation and fertilizer trials for the practical farmer]. Berlin: Verlag von Paul Parey. 50 p. [7 ref. Ger]

• **Summary:** This book is identical in content to a 50-page article also published in 1881 in *Journal für Landwirtschaft* (29:563-613)—which see for table for contents and details. However a dedication page states that the book is dedicated to the director of the Bavarian agricultural research station, Dr. Julius Lehmann. A forward notes that it was written in Munich, i.e., South Germany. Address: Munich, Germany.

234. Kraevskii, -. ed. 1882. Peterburskago sobranii sel'skikh khoziaev: 16-go fevralia 1882 goda [St. Petersburg meeting of agriculturists: 16 Feb. 1882]. *Golos* ("Voice") (*St. Petersburg, Russia; Newspaper*) No. 72. March 18. p. 5. [Rus]

• **Summary:** This full-page article begins: Head of the meeting: "Our colleague, K.A. Skachkov, who is well acquainted with China and its agriculture, will present his report about the soybean and its use in Chinese agriculture."

K.A. Skachkov: He notes the previous mention of soybeans by A.V. Sovetov. Soybeans are considered "new" only in Europe; they have existed for centuries in China and Japan, where they are well documented in monographs on soybeans. He discusses soybeans in northern China (methods of cultivation, climate, yield) and uses of soybeans in China and Japan such as soy sauce (*tsiap yu*), jiang (after processing soybeans to make jiang, which is fermented, the jiang is used to pickle the roots of vegetables which, being well salted, are eaten between meals and called *jiang-tsai*), soybean prices in Russia, and various types of tofu (*age-dofu*, *yaki-dofu*, etc.). He notes that in China soybeans are not sold in raw form (?), but can be obtained from factories.

After the talk, the head of the meeting asks if there are any questions or comments; various Russian participants (not only Skachkov) answer the questions. First, K.A. Skachkov comments on the preparation of tofu; the "60-day" soybean is best planted during the latter half of June in Russia.

E.I. Ragozin, asks: "What are the practical uses of the soybean for us [in Russia]? How can it be used in our agriculture? Can it be used only as feed for livestock or can it play a more important role? It is very interesting to discuss the theoretical possibilities of soybeans, but in my opinion it would be better to put them to use." A.V. Sovetov replies that, as he has discussed in a previous report, the soybean can be used as both livestock feed and human food. "It is of high nutritional value and contains twice as much nitrogen as meat, but only 18% fat. The answer to the question of how soybeans can be assimilated into Russian agriculture (and how successfully it can be bred here) lies in numerous experiments and trials of actually growing this plant here. Podoba has already proven that it can be grown in the far southern region of Russia (Tavricheskaia), as has Chernoglazov in the Poltavaskaia region and Levanda in the Kiev region. However, I do not know how far north soybeans can be grown, although I have heard of trials in the Voronezhkaia region."

A.S. Ermolov: "My cultivation of soybeans in the Voronezhkaia region was not successful. I know that they are not acclimatized to withstand frost." Again A.V. Sovetov replies that soybeans can handle a light spring frost, but an early fall frost kills soybean plants just as it does pea plants. As Podoba reports, it can survive temperatures 2-3°C below

zero. Discusses successful times and temperatures for soybean cultivation.

A.S. Ermolov: “Nevertheless, the soybean plant is fairly easily acclimatized. I talked about this matter with Friedrich Haberlandt, who agrees with me. It is just a matter of obtaining the right varieties.”

Head of the meeting: “I would like to add that with time and patience, plants can be gradually acclimatized to almost any environment.” A.V. Sovetov, in agreement, adds: Cucumbers and pumpkins, which are warm-weather plants, have been acclimatized to the colder climates of northern Russia. Likewise with beans. E.I. Ragozin adds that he cultivates beans here in the St. Petersburg region.

A.S. Ermolov concludes that soybeans can be cultivated perfectly well in at least southern Russia. However, he still questions how soybeans can be used in Russia. None of the other agriculturists at this meeting have told the society how they use the soybeans they grow, so Ermolov suggests listening to the ideas Sovetov has and will present.

A.V. Sovetov: Soybeans can be used to make: Soybean broth, a substitute for beans or peas, soybean potato cakes, a mixture with rice or corn. Soybeans have a very high nutritional value. They can also be used as a feed for livestock, or as food for the army or navy.

Head of the meeting: Difficulties in cultivating this plant should not prevent us from trying.

E.I. Ragozin: Would it be possible for me to obtain and attempt to cultivate the 60-day bean plant? A.V. Sovetov: Of course, but this 60-day bean plant is not a soybean plant, so the previous statements may not apply to it. Head of meeting: Closing remarks.

235. D’Utra, Gustavo. 1882. Soja [Soya]. *Jornal do Agricultor (Brazil)* 4(7):185-88. Sept. 16. [Por]

• **Summary:** The name of this plant comes from the Japanese. The soybean was cultivated at the Bahia School of Agriculture in 1882. He notes that Soja and Daidso are Japanese names, that the Japanese use soybeans to make a paste called miso, which can be used as a substitute for butter, and a sauce called sooia or soja, which can be used to season meat. Kitjap is a sauce made in Indonesia. Sr. Dias da Silva Junior (the editor of this journal) has distributed soybean seeds free of charge.

Note: This is the earliest document seen (Jan. 2001) concerning soybeans in Brazil or South America, or the cultivation of soybeans in Brazil or South America or Latin America. This document contains the earliest date seen for soybeans in Brazil or South America or Latin America, or the cultivation of soybeans in Brazil or South America or Latin America (1882). The source of these soybeans is unknown. Address: Engenheiro-Agronomo, Rio de Janeiro, Brazil.

236. Mene, Édouard. 1882. Des productions végétales du Japon [The vegetable products of Japan]. *Bulletin de la Societe d’Acclimatation* 29:466-90. Sept. See p. 477-90. [40 soy ref. Fre]

• **Summary:** This excellent review of earlier publications and work, which is largely about the soybean, contains 40 references to earlier publications, many of them from the *Journal of the Society for Acclimatization* and from early European botanists. Much of the information is taken from earlier issues of this periodical and from the book *Le Japon a l’Exposition universelle de 1878*.

Contents: The soybean (*Soja hispida*, *O mame*: *Daizu*, p. 477). The wild soybean (*Glycine hispida*, *Soja hispida*, p. 477; it is found in the wild in the coastal regions of the island of Kyūshū. Called *Tsuru-mame* and *Nô-mame* by Franchet and Savatier. Soybeans in the catalog of the Japanese Universal Exposition of 1878: No. 24–The black soybean (*Kuro-mame*), No. 25–The white soybean (*Shiro-mame*), No. 26–The green soybean (*Ao-mame*), No. 37–The black soybean speckled with white (*Gankui-mame*). Where the soybean is cultivated: Not only on the island of Japan, but also in India, on the island of Ceylon, on the Malacca peninsula (i.e. Malay Peninsula), on the Philippine islands, in Borneo, Java, in the Kingdom of Siam, in Cochin China, at Tong-King, and throughout China, but mainly in Mongolia and in the provinces of Honan, Shengking [Liaoning], Shantung, and Shansi.

The Chinese exposition (class 73) contains samples of all the varieties of soya cultivated in the provinces of the empire: No. 2991 and 3000–Green, white, black, yellow, striped / streaked / variegated (*panachés*), and red soybeans. Source: Chinese customs at Newchwang. No. 3014-3016–Yellow, black, and green soybeans. Source: Customs at Tientsin [Tianjin]. No. 3058 to 3061–Yellow, green and black soybeans., from the customs at Chefoo [Yantai]. No. 3091. Yellow soybeans, from the customs at Chinkiang [Zhenjiang]. No. 3103 to 3109–White, red, black, and yellow soybeans from the customs at Shanghai. No. 2135 to 3128–White, black, red, and green soybeans from the customs at Wenchow [Wenzhou]. No. 3152 to 3156–White, green, and black soybeans from the customs at Takow [Kao-Hsiung].

At the Japanese exposition (class 74, condiments and stimulants) are samples of miso and shoyu from Tokyo and the province of Hizen, especially the town of Nagasaki.

The Chinese exposition also contains in class 74 (condiments and stimulants) samples of soy sauce [*soye*, *soya*] called *Tsiang-yeou* from the Chinese customs at Chefoo, Ning-po, Wenchow, and Canton. The Chinese often add aroma in the form of star anise, green anise, and orange rind. Chinese soy sauce is made with yellow soybeans called *Houang-téou*.

Descriptions of how to make shoyu, miso, tofu, and soybean oil based on earlier European publications (p. 479-

83).

In France, Mr. Vilmorin and Dr. Adrien Sicard (of Marseilles), both of whom are involved with soybean cultivation, have prepared soy cheese (*fromage de Soja*) numerous times. Dr. Sicard has made both the white cheese and the red cheese; the latter is rolled in a powder made by grinding red sandalwood (*santal*; *Pterocarpus santalinus*), mace, and cinnamon (p. 482).

In China, quite a few soy oil factories are found at Calfond in Henan, at Tsinan in Shantung, and at Tayeurn in Shanxi. But the center of soy oil production in China is Ning-po in Zhejiang / Chekiang. From the port of Ning-po and from a port on the island of *Tcheou-chan* [*Zhoushan?*] a large number of junks, carrying only soy oil, depart. Two other manufacturing centers are Newchwang and Chefoo (p. 483).

There follows a long section on the introduction and acclimatization of the soybean in Europe (p. 484-89) based on earlier European documents.

The next section, about kudzu (*Pueraria Thunbergiana*, p. 489-90) cites 9 early references, including *Le Japon a l'Exposition universelle de 1878*, vol. II, p. 153). Address: France.

237. Giliaranskii, V.P. 1882. Monografiya Kitaiskago maslichnago gorokha "Soja hispida" [Monograph on Chinese oil-bearing pea plant *Soja hispida*]. *Trudy Imperatorskago Vol'nago Ekonomicheskago Obshchestva, St. Petersburg (Transactions of the Imperial Free Economic Society)* 3(3):269-71. Nov.; 3(4):435-50. Dec. [10 ref. Rus]
 • **Summary:** Part I (Nov.): Soybeans were introduced to Russia to increase the country's food production. Discusses the nutritional value of soybeans. Haberlandt introduced the cultivation of soybeans to Europe, and his trials proved that soybeans could be successfully grown in various European countries. However Podoba was the first who practically / experimentally proved the success of soybean in Europe. Podoba also installed a laboratory partner named Fein in southern Russia. The first popularizer was A.V. Sovetov, who initiated further projects and data collection.

Giliaranskii began his work in 1881 when he received 5 soybean seeds from his director, Nikolai Pavlovich Ill'inu, who also allowed Giliaranskii to use his equipment and laboratory. In 1880 the Asian Department of Foreign Ministry (of Russia) obtained soybean samples by demand. In the same year, crop information about soybeans was received from the Consulate.

In the text, Giliaranskii then cites five documents that were helpful to him in compiling this article: (1) Organov, N. 1881. *Soia ili maslichnyi gorokh (Soja hispida *)* [Soybean or oil-bearing plant (*Soja hispida* *)]. *Trudy Imperatorskago Vol'nago Ekonomicheskago Obshchestva, St. Petersburg (Scholarly Works of the Imperial Free Economical Society* 1(2):184-198. Feb.; 1(3):304-325.

March). (2) The publications of Dr. Bretschneider, who was on a mission to Peking. (3) *La Planta Soja hispida*, by Geerts, a report from a mission to Japan. Chapters 3 and 4 from Part 1; Chapters 4 and 5 from Part 2 (translation from French), including much information about soy sauce and miso. (4) The famous book: Haberlandt, Friedrich. 1878. *Die Sojabohne: Ergebnisse der Studien und Versuche ueber die Anbauwuerdigkeit dieser neu einzufuehrenden Culturpflanze* [The soybean: Results of studies and trials on the potential for growing this newly introduced crop plant]. Vienna, Austria-Hungary: Carl Gerold's Sohn. ii + 119 p. (5) *Oesterreichische Monatsschrift für den Orient* (Vienna). 1881. *Die japanische Sojabohne als Nahrungsmittel* [The Japanese soybean as a source of food]. 7(12):204-05. Dec. 15.

Part II (Dec.): Chapter 1. Oil of soybean seeds (*Maslo semian soi*). Bretschneider discusses the taste and use of soybeans in Russia. Karl Brendt is mentioned again. Giliaranskii states: "My yield included 40 *zlotnik* (1 *zlotnik* = 4.26 gm) of oil, produced from the variety of seeds received from Mr. Podoba. The oil was extracted using sulfuric ether. I had about 4 lb of soybeans, which I ground in a coffee mill. Then I immersed the flour in ether in a test tube for 4-5 days. Almost all of the oil was extracted. I also extracted the oil using carbon bisulphide, but the yield was 1.5% less than with sulfuric ether.

"I also tried to extract the oil using petroleum ether, but again the yield was unsatisfactory. In addition, the petroleum ether dissociates from the soybean oil, thus changing the latter's smell and taste. The product known as *rigolen*, which has a boiling point of 35°C, would be the best solvent of all, it is impossible to obtain in St. Petersburg.

"The oil I extracted using sulfuric ether had a clear, heavy yellow color, similar to olive oil in color and viscosity... however as time passes, under certain conditions, it becomes black in color." Through his experiments, Giliaranskii proved that soybean oil contains nitrogen. Sato and his experiments are mentioned (p. 436-37).

A table (p. 437-38) gives the percentage composition of soybean cake (water, protein, fat, nitrogen-free extract, cellulose, ash), with two columns based on the research of Völcker (1872) and J. Kühn (see Pott 1889, p. 490). Soybean oil cakes, known in English as "bean-cakes," are an important export from the port of Newchwang to southern China, especially to Syamou (?). Discusses the price of soybeans.

Chapter 2. Uses of soy sauce (in China, as well as Europe). Methods of preparing soy sauce are described in numerous Chinese and Japanese publications, but also in European publications such as: (1) *Etude pratique du commerce d'exportation de la Chine*, by N. Rondot (1848, Renard, p. 188). (2) *Chinese Commercial Guide*, by W.

Williams (1863, Hong Kong, p. 139). (3) Newspaper article by K.A. Skachkov in *Golos* [Voice] (No. 72, 1882). The main ingredients used in making soy sauce are yellow soybeans (*Soja hispida*, Shiro-daizu or Teppo-mamé or Shoyu-mamé), wheat koji, salt, and water. A detailed description of the process is given. Amazake is sometimes added to soy sauce to give variation in the flavor. Kinch's analysis of Geerts' data (p. 443) gives the relative density of soy sauce as 1.199. The density of soy sauce solids is 359.88 gm/liter. A table (p. 443) gives the density (in gm/liter) of soy sauce constituents as follows: Ash 195.16. Sugars 31.03. Albumen 41.00. Acids 6.20.

Chapter 3. Sauce *miso* or *dai-dzu-ko*. Describes seven different types of Japanese miso and how each is made: 1. Original miso or *shiro miso*—white with little salt. 2. *Chu-miso*—very salty. 3. *Aka-miso*—red, prepared with koji. 4. *Nagoya-miso*. 5. *Kinzanji-miso*—made with soybeans, eggplant and gingerroot. 6. *Mugi-miso*—made with barley and soybeans. 7. *Kogane-miso*—a type of *aka-miso*. A table (p. 445) compares the nutritional composition of *shiro-miso* and *aka-miso*.

Chapter 4. Tofu. Chinese name: doufu. English name: bean-curd. Japanese name: tofu. Yellow soybean varieties (*Gogwatsu-mamé*, *Wase-mamé*, and *Natsu-mamé*) are widely used in Japan to make tofu. A table (p. 447-48) gives the percentage composition of tofu, with two columns based on the research of Kinch (1880) and Geerts (1876). Tofu is seen as an excellent alternative for dairy cheeses.

Chapter 5. Preparation and composition of dried-frozen tofu (kori-tofu) and other types of tofu (dried cheeses). A table gives the nutritional composition of kori-tofu (based on Kinch 1880). Also discusses *agé-tofu*, *abura-tofu*, and yuba. Describes the method for preparing yuba, which is eaten in soups in Japan. Several tables were summarized by Nikitin in Russian (1900) and German (1901). Address: USSR.

238. Kinch, Edward. 1882. Die Sojabohne [The soybean]. *Biedermann's Central-Blatt fuer Agrikulturchemie* 11:753-55. Nov. [Ger]

• **Summary:** According to Watt (1890, p. 511): "In 1882, Professor Kinch urged the advisability of renewed efforts [to grow soya] in the Himalayan tracts, and, as a consequence, the government of India directed the attention of local officials to the subject. Seed obtained from the Government Gardens, Saharanpur, were distributed to Madras, the Panjab, Bengal, Bombay, Hyderabad, and Burma, for experimental cultivation. It appears to have been grown from seed obtained from China with a fair amount of success at the Saidapet Experimental Farm in 1882."

"The chemical composition of the bean, according to Professor Kinch, places it above all other pulses as an albuminous food, while that of the straw also surpasses in nitrogen value that of wheat, lentils, and even hay."

Table 1 gives original analyses of the nutritional composition of various soybeans, including: from Japan, pale/colorless from China, yellow from Germany, from India, brown, round black, and oblong black soybeans.

"The average composition of the straw, the pods, and of a type of soybean straw from Japan, which are used as very tasty feeds for horses, cows, and sheep" are given in table 2.

Table 3 gives the nutritional analyses of various soybean products: White miso, red miso, Tofu or *Bohnenkäse*, frozen tofu (*gefrorener Bohnenkäse*), and soybean cake (*Sojabohnenkuchen*) which remains after pressing out the oil (*Abpressen des Oels*).

Table 4 shows the percentage composition of nine different mineral salts in the ash of soybean seeds and straw.

Note 1. This is the second earliest document seen (Jan. 2001) concerning soybeans in Burma. It seems likely that soybeans were cultivated in Burma at that time, but that is not certain. This document contains the second earliest date seen for soybeans in Burma (1882).

Note 2. This may be the second earliest document seen (July 2006) concerning soybeans in Pakistan, however that is not certain. The nation of Pakistan was created out of British India in 1947. In 1882 Panjab (Punjab) was a province in British India. It was divided in Aug. 1947 into East Punjab, India (with about 1/3 the area and 1/2 the population of the original province), and West Punjab, Pakistan. West Punjab was renamed simply Punjab and is now one of Pakistan's four provinces; its capital is Lahore.

Note 3. This may be the earliest document seen concerning soybeans in Bangladesh. If so, this document contains the earliest date seen for soybeans in Bangladesh (1882). The source of these soybeans is unknown. The province of Bengal in British India was divided on 15 Aug. 1947 into East Bengal (now Bangladesh) and West Bengal (part of India). It is not clear to which part of Bengal these soybeans were distributed.

Note 4. This is the earliest German-language document seen (Feb. 2004) that mentions dried-frozen tofu, which it calls "gefrorener Bohnenkäse." Address: Professor, Cirencester, England.

239. *Indian Agriculturist (The) (Calcutta)*. 1882. The Japan Pea in India. Dec. 1. p. 454-55. [2 ref]

• **Summary:** "If all accounts of this vegetable be true, it is a most important addition to the stock of Indian food, and fodder plants." An American paper writes of it: -

"The Japan Pea is the most productive as well as good food for all kinds of stock; horses, cattle, sheep, and hogs will eat the peas, stems, and leaves, if harvested before fully matured, and cured like all other hay, with as much relish as they do corn. Then, there is no pea for the table—it is soaked in water the night before cooking—that has a more exquisite flavour. They grow on a stout bushy stalk from two to three feet high, somewhat resembling the cotton plant. The main

stalk, as well as the branches of the limbs, are literally loaded with small pea-pods, filled with little yellow peas, similar in colour, size, and flavour, to the English garden pea. The way to get the greatest yield is to plant in hills two and-a-half feet each way, allowing but one stalk to the hill to remain after the first working. That will give you 6,960 stalks to the acre, and on ordinary land, cultivated the same as corn, will average at the lowest estimate a pint of shelled peas to the stalk, or a fraction over 108 3/4 bushels per acre. With high cultivation and good soil, it would be an easy matter to double that yield: besides, there is no other crop that will yield more hay to the acre. It is a sure cropper, neither wet nor dry weather materially interferes with the quantity or quality of the yield.'

'In a paper on the Soy bean, as the Japan pea is sometimes called, Mr. Kinch, Professor of Chemistry at the Royal Agricultural College, Cirencester, says, that it is worth more than a passing notice, as it is the vegetable which approximates most nearly, in its chemical composition, to animal food:

'The Soy bean is extensively cultivated in the north of China, whence it is exported to the southern provinces; it is here pressed for the sake of its oil, and the residual cake largely used as food for man and beast, and also as manure. In Japan it is known by names signifying the bean, and from it are made not only *soy* but a paste, known as *miso*, which is in constant request at nearly every meal, *tofu* or bean cheese, and other foods used to a less extent. This bean cheese is also well known in China, and is obtained by extracting the legumin from the beans with water, and precipitating it with brine. These foods are most valuable additions to the dietary of the Oriental nations, and especially of the Japanese, who use so little animal food; they tend to supply the deficiencies of the staple food, rice, nitrogenous matter, fat, and also in mineral constituents. The Buddhist priests, who are strictly forbidden the use of animal food, consume considerable quantities of these beans, principally in the form of *miso*. The soy bean first attracted attention in Europe in the year 1873, when specimens from Japan, from China, and from India were shown at the Vienna International Exhibition. Dr. Forbes Watson, Reporter on the products of India, called attention to it in the catalogue of the exhibits of the India Museum. Since then, numerous experiments have been made on the European continent on its growth, and also feeding experiments with the bean and its straw, on different kinds of animals, have been prosecuted. Such experiments have been carried on by Woolling and Wein at Munich; by Haberlandt, Lehman, Harz, Stahel, Zimmerman, Siewert, Wieske, and others, at various stations in Germany, Austria, and Hungary; and experiments have also been made in France and in Italy... The kinds most suited for cultivation there are the yellow, brown, round black, and long black varieties, especially the first three named.'

'Taking into account the great richness of these beans in valuable food constituents, their easy digestibility, the value of the straw, and the great probability of some variety being able to be acclimatized without great trouble, this *soja hispida* is worth consideration. The bean would form an exceedingly useful addition to the food of the poorer classes, as a substitute for a portion of the animal food which in the kitchens of the labouring classes is so wastefully cooked. One use it has already found, not altogether to be recommended, viz., after roasting, as an adulterant of, and substitute for, coffee.'

Note: This is the earliest English-language document seen (Feb. 2004) that uses the term "bean cheese" by itself (with a space before the word "bean," and where it is not preceded by the words "soy," "soya," "soja," etc.) to refer to tofu. Address: India.

240. Bretschneider, Emil V. 1882. *Botanicon sinicum. Notes on Chinese botany from native and Western sources. I. J. of the Royal Asiatic Society, North China Branch. Series 2.* 16:18-230. For the year 1881. [1882* ref. Eng]

• **Summary:** The single most important early work on Chinese botany written by a Westerner. Bretschneider, an M.D., lived 1833-1901. Contents: Preliminary Notices (p. 18-22). 1. Contribution towards a history of the development of botanical knowledge among eastern Asiatic nations: Chinese literature on materia medica and botany (p. 22-75, incl. the *Materia Medica* of Shen Nung, p. 26-32), Chinese works on agriculture (p. 75-86). Chinese geographical works containing botanical information (p. 86-92). Early acquaintance of the Chinese with Indian and Western Asiatic plants (p. 92-95). History of materia medica and botany in Japan (p. 96-101). On the botanical knowledge of Coreans [Koreans], Manchoos [Manchus], Mongols, and Tibetans (p. 101-05).

2. On the scientific determination of the plants mentioned in Chinese books (p. 105+, incl. Cleyer, Siebold, and Kaempfer, p. 124-27). 3. Alphabetical list of Chinese works (p. 131-216). Index of Chinese authors (p. 217-22). Celebrated mountains of China (p. 223-28).

Concerning Shen nung, "Chinese works on agriculture" (p. 75) states: "The primeval Emperor *Shen nung*, whom the Chinese believe to have composed the first treatise on *Materia medica*, is also credited with having laid the foundation of Chinese Husbandry. His name implies this tradition, for *Shen nung* means: the Divine Husbandman. It is related in the early records that the people of his age were rude and wholly unacquainted with the advantages of agriculture. They subsisted on fruit, vegetables, and the flesh of birds and beasts. *Shen nung* examined first the quality of the soil, fashioned timber into ploughs and taught the people how to till the ground and raise grain. On a previous page I referred to the mountain in Shan si, where tradition makes him first teach his people the fundamental

processes of agriculture. Sz' ma Ts'ien [Ssu-ma Ch'ien] (B.C. 163-85) records in the *Shi ki* [*Shih chi; Historical records*] (book 1) that Shen nung sowed the five kinds [of cereals].”

In the section on the work of early Europeans who studied the flora of East Asia, the following researchers are discussed in detail: Cleyer (p. 124), Kaempfer (p. 125-26), Thunberg (p. 126), Siebold (p. 126-27), Miquel and Zuccarini (p. 127), Hoffman and Schultes (p. 127-28), Dan. Hanbury (p. 128), O. Debeaux (p. 128), Dr. Fr. Porter Smith (p. 128-29), and P. Perny (p. 130; very critical). Address: China.

241. Bretschneider, Emil V. 1882. *Botanicon sinicum. Notes on Chinese botany from native and Western sources* [Part I]. London: Trübner & Co. 228 p. No index. 28 cm. [1882* ref. Eng]

• **Summary:** The contents of this book was first published in 1882 as an article in the *Journal of the Royal Asiatic Society, North China Branch*. (Vol. XVI, 1881; Article III). Series 2. The contents and pagination of this book is the same as the original article (which see). Address: M.D., Physician of the Russian Legation at Peking, China.

242. Hanausek, T.F. 1882. Die Sojabohne [The soybean]. *Irmischia Botanische Monatschrift. II* No. 7. p. 44-45. [13 ref. Ger]

• **Summary:** In 1867 11,493 gallons of soy sauce were imported to England, and England then exported 2,166 gallons. Address: Dr., Germany.

243. Spon, Edward N.; Spon, Francis N. 1882. *Spons' encyclopaedia of the industrial arts, manufactures, and commercial products. Vol. 4: Bean-oil*. London and New York: E. & F.N. Spon. p. 1153-1536. See p. 1378. Edited by Charles G. Warnford Lock.

• **Summary:** The section titled “Oils and fatty substances” begins (p. 1360) by noting that in everyday language the word “oil” is often “made to embrace three distinct classes of bodies:—(a) ‘fixed’ or ‘fatty’ oils, (b) ‘volatile’ and ‘essential’ oils, and (c) ‘petroleum’ and other ‘mineral’ oils... The term ‘fat’ is applied to these oils when they are in a solid state; thus the same product may be an ‘oil’ in one climate, and a ‘fat’ in another.”

In the section on “Vegetable oils and fats [A. Fatty or fixed]” we read (p. 1377-78): “Bean oil.—The seeds of the Chinese oil-bean, the *sooja* or *miso* of the Japanese (*Glycine Soja* [*Soja hispida*]) afford 17-18 per cent. of a fatty oil. The plant is shrubby, attaining a height of 3-4 ft., and resembling the common dwarf kidney or French bean. The seeds are somewhat smaller than French beans, and vary in colour, from white to yellow and green. The plant is chiefly cultivated in the north of China, especially in the province of Shantung. The Chinese usually obtain 17 per cent. of oil

from the seeds by simple pressure. The oil bears a general analogy to the ordinary edible oils of commerce, possessing an agreeable flavour and odour. It is useful for burning; exposed to a low temperature it becomes pasty, and oxidizes rapidly on exposure to the air. As a drying oil, it might replace linseed for some purposes. As an illuminator, it is being rapidly replaced by American petroleum, but is still extensively used for food. The oil, the cake left after expression of the oil, and the beans themselves, are important articles of Chinese commerce.

“The exports from Chefoo in 1878 were 2468½ *piculs* (of 133.3 lb each) of bean-oil, 994,188 of bean-cake, and 160,549 1/3 of beans; in 1870, the exports of the oil from this port were 44,530 *piculs*; in 1877 only 327 *piculs*; and in 1879, 1491 *piculs*. The exports of bean-oil from Newchwang were 4947 *piculs* in 1877, 3287¼ in 1878, and 11,630 in 1879; of beans, in the same years, 1,439,062, 2,156,064, and 1,835,444 *piculs* respectively; and of bean-cake, 792,166, 1,924,968, and 1,800,523 *piculs*. Chinkiang exported 69,090 *piculs* of beans in 1877, and 43,784 in 1879. Hankow imported 21,077 3/4 *piculs* of native bean-oil, value 15,624l. [British pounds sterling], in 1879. Kiukiang, in 1879, imported 17,675 *piculs*. Shanghai, in 1879, imported 282¼ *piculs* from native ports, and exported 33,940 *piculs* (besides 372 re-exports) to native ports. Wuhu imports quantities of the oil from Hohang, via Hankow, also from Hochow, Luchowfu, and some other places north of the river; the figures were, 659½ *piculs* in 1877, 13,574¼ in 1878, and 5284 in 1879. The cake is used for human and cattle food, and as manure. (See also Spices–Soy.) The plant is cultivated for its beans in many parts of India and the Archipelago; and has been successfully introduced into Austro-Hungary and N. Germany.”

Note 1. This is the earliest English-language document seen (Nov. 1999) with any term referring to the oil of the soybean in the title.

Note 2. This is the earliest document seen (Oct. 2001) containing industry or market statistics on soybean crushing, including production and trade of soybean oil, meal or cake.

Note 3. This is the earliest document seen (Oct. 2001) containing industry or market statistics on production or trade of soybeans.

Vol. 4 also discusses: Under narcotics–Hemp (bhanga, charas, ganja, hashish; p. 1305-07). Under “Oils and fatty substances: Vegetable oils and fats”—Almond oil (p. 1377). Hempseed oil (p. 1391). Linseed oil (p. 1393-94). Miscellaneous and unenumerated oils—*Cyperus esculentus* (p. 1413-14). Under animal oils and fats—Butterine, bosch, oleomargarine, or artificial butter (p. 1362-63, 1464-66). Bibliography of oils (p. 1483-84). Address: England.

244. Chernoglazov, L.A. 1883. K voprosu o Kitaiskom maslichnom gorokhe [On the question of the Chinese oil-

bearing pea plant]. *Trudy Imperatorskago Vol'nago Ekonomicheskago Obschestva, St. Petersburg (Scholarly Works of the Imperial Free Society)* 1(3):305-09. March. [Rus]

• **Summary:** Contents: Soybeans are successful in Russia. Success in Penza, Russia. Appropriate climate. Soybeans noted for excellent acclimatization ability. Appropriate soil for soybeans. Author's method of cultivating soybeans. Planting soybeans and their growth. Harvesting soybeans. Uses of soybeans: Food, chaff, straw, enrichment of soil. Preparation of foods from soybeans: Soy sauce, miso, soup, flour, bread, potato pancakes. The writer prepared these foods from soybeans, then fed them to his co-workers. Note: He also sent these foods to this periodical to have them analyzed for their nutritional value. However, before the analyses could be conducted, the expiration date had passed. Conclusion: Incl. use of soybeans as a food for the army.

Note: Alternate Journal Name entry: Trudy Vol'nogo Ekonomicheskogo Obschestva (Scholarly Works of the Free Economical Society). Address: Butenkovskaya Station, Poltavskaya region [Ukraine].

245. Geerts, A.J.C. 1883. Observations on Kinch's list of plants used for food. *Transactions of the Asiatic Society of Japan* 11(Part 1):31-35. April. [3 ref. Eng]

• **Summary:** Note 1. Geerts is referring to the article by Kinch titled "List of plants used for food or from which foods are obtained in Japan," on pages 1-30 of this issue of this periodical.

"Prof. Kinch seems not to have been acquainted with the list of 447 economical plants, published in 1826 by Ph. Fr. von Siebold in the *Transactions of the Batavian Society of Arts and Sciences [Verhandelingen van het Bataviaasch Genootschap van Kunsten en Wetenschappen]*, Vol. XII, under the title of 'Synopsis plantarum oeconomiarum universi regni Japonici,' for Mr. Kinch mentions only the more imperfect list given by Thunberg in his *Flora Japonica*. Further, several articles written on the subject of economic Japanese plants, published by von Siebold in the *Journal of the Royal Dutch Society for the Advancement of Horticulture*, during the years 1844-45-46, etc., might be perused with advantage by those who wish to study the practical side of Japanese economic plants.

"In Karl von Scherzer's work, *Fachmaenische Berichte ueber die oesterreichisch-ungarische Expedition nach Siam, China und Japan*, Stuttgart, 1872, there is an extensive article by Dr. S. Syrski, on Japanese horticulture and economic cultivated plants, pp. 175-220. Several interesting observations on the mode of culture, time of sowing, planting, and harvesting, will be found there."

"As a preliminary catalogue Mr. Kinch's list may be useful for those persons who do not possess the botanical literature on the Japanese flora, but as a practical indication

for horticulturists the list is deficient. Note 2. Chinese characters (or katakana) are given for each for the following Japanese terms.

"For instance the plant *Dai-dzu* or *O-mame*, the *Soja hispida*, Moench, has in Japan five distinct cultivated varieties and eleven or perhaps more sub-varieties, viz:

"I. White or slightly yellow beans, *Haku-dai-dzu*. 1. Very early variety with very small bean. Harvest in July. *Goguwatsu-mame* 2. Early variety with small white bean, *Wase-mame* or *Natsu-mame*. These [first] two varieties are also called *Bai-to* or *Tofu-mame* and serve especially for preparing *To-fu* [tofu]. 3. Middle early variety with somewhat larger round beans, *Nakate-mame*. Much used for preparing miso. 4. Late variety with round and hard beans, *Okute-mame*. 5. Late variety, with smaller, perfectly round and hard beans, *Maru-mame*. Can be kept a very long time and is much used as food for horses. 6. Late variety, with large, perfectly round, and very hard beans, *Teppo-mame* or *Aki-mame*. Is much valued for the preparation of *Shoyu* [soy sauce].

II. "Black beans, *Koku-dai-dzu* or *Kuro-mame*. 1. Middle late variety, with round, small, hard, black beans, *Kuro-mame*. 2. Middle late variety, with round, large black beans, *Kuro-teppo-mame*. 3. Late variety, with flat, elliptic, black beans, *Go-ishi-mame* or *Kuro-torokusun* or *Hachi-bu-name* or *Tamba-kuro-mame*. These kinds [in category II.] are eaten in a boiled mixed with sugar as *entremets*.

"III. Brown beans, *Katsu-dai-dzu*. 1. Round reddish brown beans, *Aka-mame*. According to the size the Japanese distinguish even six subvarieties of this brownish Soya-bean. The reddish kinds are far less cultivated than the white and black varieties. 2. Light brownish-red and round beans, *Cha-mame*. According to the more or less intense colour the Japanese distinguish three sub-varieties of *Cha-mame*. They are rarely cultivated. [Both these types] are eaten with sugar in a boiled state" (p. 34).

Note 3. This is the earliest English-language document seen (Oct. 2004) that mentions red or reddish soybeans (actually brownish-red).

Note 4. This is the earliest English-language document seen (Feb. 2007) that contains the word "Soya-bean" or ("Soya-beans").

"IV. Greenish or blue-greenish beans, *Sei-dai-dzu* or *Aö-mame*. 1. Round, middle-sized greenish beans, *Aö-mame*. The Japanese distinguish two sub-varieties, viz., α . *Sei-hi-to* with the epidermis only of a green colour, but white inside [and] β . *Nikuri-Sei*, which are outside and inside of a greenish colour. 2. Light green round beans, *Kagemame*. [All] are only cultivated in the provinces of Ise, Iyo, Harima, Idzumo [Izumo], Omi. Eaten with sugar in a boiled state. Note 5. This is the earliest English-language document seen (Oct. 2004) that uses the term "light green" to describe the color of a soybean.

“V. Spotted beans, *Han-dai-dzu* or *Fu-iri-mame*. 1. Greenish, flat, oblong beans with a black spot at the navel. *Kuro-kurakake-mame*. Relatively rare and only cultivated in Nagato [an old province on the southwest tip of Honshu, Japan; as of 2003 part of Yamaguchi prefecture], Idzumo [Izumo] and the environs of Kiyoto [Kyoto]. 2. Yellowish-green, flat, and slightly oblong beans, with a dark brown spot at the navel. *Aka-kura-kake-mame*. Rare. 3. Yellowish-green beans with many dark spots. *Furi-mame* or *Udzura-mame*. Rare. Cultivated in Harima province.”

Note 6. This is the earliest English-language document seen (Oct. 2004) that uses the term “Yellowish-green” to describe the color of a soybean.

Note 7. This is the earliest English-language document seen (Sept. 2004) that uses the word “spots” (or “spotted” or “spotting”) or the term “reddish brown” to describe the color of soybean seeds.

Note 8. This is an excellent, original article, which gives the names of many Japanese soybean varieties for the first time in English or any other European language. That information is largely derived from Inuma (1861 and/or 1874).

246. Kenny, W.J. 1883. Account of a secret trip to the interior of Korea [in 1875]. *Transactions of the Asiatic Society of Japan* 11(Part II):141-47. Sept. [Eng]

• **Summary:** Translated from the Japanese. Page 142: 19 March 1875 near Pusan. “The food was rough and coarse, and assailed my nose with such a stench that indicated that it was putrid. One glance at it was quite sufficient to create a bitter taste in the mouth. To give a specimen or two of the dishes—one was herrings and shrimps pickled in salt (the latter cut in small pieces), exceedingly offensive to the smell. The soup or broth, made of bean sauce (Daidzu [soybeans] {a large French bean [sic]} and wheat are boiled, then mixed together, pounded and made into lumps; these are piled up, with straw between, for several weeks, after which they are again taken out, and, when dried, are ready for use), is thick like mud. With the exception, perhaps, of the pickled shrimps, I could not bring myself to eat any of these dishes.” Note: This bean sauce may have been Korean-style miso, *doenjang*, however it does not typically contain wheat as an ingredient.

Page 144-45: March 27... “In this house I stopped about a fortnight. Their food was rice or pulse, sometimes mixed, half and half, with wheat; and as to vegetables (they rarely used cultivated vegetables, but generally picked young shoots of wild herbs), they steam them, dip them into vinegar and soy, and then use them. During the fortnight or so I remained at this house I never saw them eating meat once. It is ‘said that even the middle and higher classes find it difficult to eat meat, and can only eat salt fish. The articles of food are for the most part rancid in smell. They make no particular change in their garments for inside and outside

wear. Their bodies and limbs are impregnated with filth; their clothing is a nest of vermin.”

Zweite sehr vermehrte und verbesserte Auflage [The chemistry of human foods and food adjuncts (stimulants / enjoyables). Vol. 2. 2nd ed.]. Berlin: Verlag von Julius Springer. xviii + 816 p. See p. 371-72, 387. Illust. Index. 25 cm. [5 ref. Ger]

• **Summary:** In the section on “Legumes” is a subsection titled “Soybeans” (*Sojabohne*) (p. 371-72) which begins with short summaries of Haberlandt (1878) and Wein (1881). The first table, based on calculations by Wein, shows that, on a per hectare basis, soybeans yield about 1/3 more protein and about ten times as much vegetable oil as common beans or peas. The second table gives the average chemical composition of 43 soybean varieties analyzed by König, and first published in detail in Vol. 1, p. 103-04. The range: Protein 26.5 to 40.0%. Oil 14 to 19%. The third table gives the average analysis of the ash found by Edward Kinch in 1882. The soybean is unique among legumes in its combination of a high oil content with an even higher protein content. Moreover, its straw makes a nutritious fodder for cattle. “The soybean is therefore highly recommended for cultivation in Germany, and efforts should be made to find ways of producing good-tasting foods from it.”

In China and Japan, soybeans have long been used to make human foods such as miso (*Misobrei*), shoyu (*Soohu*), and tofu (*Tofu*). The fourth table gives the nutritional composition of five soy products as determined by Edward Kinch: White miso, red miso, fresh tofu, frozen tofu, and soybean cake. While some of these products may not be suited to German tastes, E. Wein has used soybeans to prepare a tasty German dishes, including a soup like that

made from beans and peas, a salad like that made from garden beans, or by cooking soybeans with potatoes or rice, a purée, which resembles Italian “Polenta” and has been called “Sojenta” by Haberlandt (1878). The taste of dishes made from soybeans reminds one of somewhat of almonds or chestnuts, but even more of garden beans. A soybean flour (*Mehl*), similar to the flour made from beans and peas, has already been made for kitchen use from soybeans (see p. 387).

The section titled “Legume flours” (*Leguminosenmehle*) (p. 387) contains a table that gives the nutritional composition of such commercial flours: Bean flour (*Bohnenmehl*), pea flour (*Erbsenmehl*), lentil flour (*Linsenmehl*), and soybean flour (*Sojabohnenmehl*). The latter contains: Water 10.23%, protein 25.69%, oil / fat 18.83%, carbohydrate 38.12%, cellulose (*Holzfaser*) 2.75%, ash 4.36%. On a moisture-free basis: Nitrogen 4.58%, carbohydrate 42.45%.

Also discusses: Lecithin in egg yolks (not in soy, p. 223, 233). Composition of vegetable oils, incl. olive, linseed, poppyseed, hempseed, rapeseed, white sesame, black sesame, cottonseed, peanut, palm kernel, coconut (p. 325). Lupins (yellow or blue, p. 373-75). Almonds (p. 495, 497). Agar-Agar (p. 496-97). Peanuts (p. 495, 497). Coffee substitutes (not incl. soy, p. 607). Address: Head, Agricultural-Chemical Experiment Station, Muenster in Westphalia, Germany (Vorsteher der Agric.-Chem. Versuchsstation Muenster in Westphalia).

249. Pogson, Frederick. 1883. Manual of agriculture for India. Calcutta, British India: Thacker, Spink and Co. 296 p. See p. 280-81. Index. [1 ref]

• **Summary:** Chapter 14, “Field pea crops, including the Japan pea” states (p. 184): “The Japan pea assumes the form of a bush from two to three feet in height. In the plains it should be sown after the rains cease. Drills should be made three feet apart, and a single seed should be sown at every three feet; the spot where the seed is sown being manured as for beans. The botanical name of the Japan pea is *Soya Hispida*. It is half pea and half bean in appearance, with singular leaves, and pods somewhat like the pods of the *Cajanus sativa* or *Urhur Dall [Dahl]* of the next chapter.”

In the Appendix (p. 267+) is a section titled “Japan pea” which states (p. 280-81): “A small supply of this pea-bean was received by the writer in the spring of 1882. It was freely distributed in Dehra, but failed entirely as a hot-weather crop. A few seeds sown at Mussoorie grew to the height of two feet, and bore pods very much resembling those of the *Urhur Dall (Cajanus sativa)*. At the writer’s request a supply of the seed was sent to Simla, and the result is given beneath.

“The Government of India has decided on the cultivation of the Japan pea being extended in this country, and with this view it has suggested that further experiments

should be made in suitable places. This bean or pea has its natural habitat in China and Japan, it also grows in Mongolia, and in India in the Himalayas, and within the last few years it has been cultivated experimentally in several European countries, under the name of the Soy bean. It is a vegetable, which approaches most nearly in its proximate chemical composition to animal food. The Soy bean first attracted attention in Europe in the year 1873, when specimens from Japan, from China, and from India were shown at the Vienna International Exhibition. Dr. Forbes Watson, reporter on the products of India, called attention to it in the catalogue of the exhibits of the India Museum. Since then numerous experiments have been made on the European continent on its growth, and also feeding experiments with the bean and its straw on different kinds of animals have been prosecuted. Such experiments have been carried on by Woolling and Wein at Munich; by Haberlandt, Lehman, Harz, Stahel, Zimmerman, Siewert, Wieske, and others at various stations in Germany, Austria, and Hungary; and experiments have also been made in France and in Italy.

“In Japan it is known by names signifying THE bean, and from it are made not only soy [sauce] but a paste, known as *miso*, which is in constant request at nearly every meal, *tofu* or bean cheese, and other foods used to a less extent. This bean cheese is also well known in China, and is obtained by extracting the legumin from the beans with water and precipitating it with brine. These foods are most valuable additions to the dietary of the Oriental nations, and especially the Japanese, who use so little animal food. They tend to supply the deficiencies of the staple food, rice, in nitrogenous matter [protein], fat, and also in mineral constituents. The Buddhist priests, who are strictly forbidden the use of animal food, consume considerable quantities of these beans, principally in the form of *miso*.’—*Vide ‘Simla Argus,’ 18th November, 1882.*”

Note: Simla was a hill station in British India. The *Argus* was a periodical published at Simla, a hill station in British India in the 1880s. The Simla Argus Press published a few books at the same place and time. Address: Lieutenant, Her Majesty’s Bengal Army, Dehra Doon; Honorary Member Agri-Horticultural Society of India.

250. Scheube, Botho. 1883. Die Nahrung der Japaner [The food of the Japanese]. *Archiv fuer Hygiene* p. 352-83. [3 soy ref. Ger]

• **Summary:** In the Japanese diet, rice plays the most important role. From a special type of glutinous rice, the Japanese prepare their beloved rice cakes, called *mochi*, which are found in every house during the New Years festival. The Japanese bake no bread, yet *Fu* (made from wheat gluten) could be considered a kind of bread. The process for making it is described.

Legumes, beans and peas, also are important in the Japanese diet. Countless types are cultivated, but the most important is the remarkable soybean (*Sojabohne*–*Glycine hispida*), on account of its richness in nitrogen [protein] and fat, and its relatively low starch content. The most important foods made from soybeans are tofu, miso, and shoyu; a detailed description is given of the process by which each is made. Two analyses of shoyu, by Ogata and by Kinch, give its composition. Beans and peas are also eaten as vegetables by the Japanese, and bean meal [probably kinako] is used in the preparation of many kinds of cakes.

On pages 361-67 are many tables containing descriptions of the diets consumed by various individual Japanese persons, usually for three days or three meals. For each is given: The age and approximate weight of the person, the foods consumed, and the weight (in grams) of each food consumed each day. Tofu (*Bohnenkäse*), miso soup (*Miso-Suppe*), and wheat gluten cakes (*fu*) appear with rice (and/or sushi or mochi) and tea in most diets. The word *Bohnensauce* (p. 362) appears to refer to shoyu (soy sauce).

Botho Scheube lived 1853-1923. Address: Docent, Univ. of Leipzig, Germany.

251. *Times (London)*. 1884. Japan at the health exhibition. Aug. 28. p. 2, cols. 4-5.

• **Summary:** “The last foreign court completed at the International Health Exhibition [in London] is that of Japan.” In a few days, a Japanese restaurant will be opened. “Two Japanese cooks have accompanied the Commissioners, and here the visitor will be able to make the acquaintance of some of the dishes which find a place on the *menus* of the Parisians of the East. Sweet-tasting bamboo sprouts, sweetmeats and confectionary of fanciful appearance; *saké*, ‘the wine of the country,’ a fermented drink made of rice and containing 11 to 12 per cent. of alcohol, the nutritious *miso* made from soy beans and fermenting rice [koji], frozen tōfu [sic, dried frozen tofu] or bean curds, tangle [kombu], salted mushrooms, dried shrimps, cured bonito, laver [nori], various edible seaweeds, orange vinegar, and several soys [soy sauces], are among the good things which those who are adventurous in dietary may enjoy.”

252. *Times (London)*. 1884. The Health Exhibition Japanese restaurant. Sept. 17. p. 4, col. 6.

• **Summary:** The Nippon Rioriya, modeled after the eating houses in Tōkyō, is hard to find at the exhibition. “Taking advantage of the concession to European prejudices the Commissioners have made in providing spoons, instead of obliging him to drink his soup like tea from the bowl, the adventurous diner-out will find that he has before him a savoury compound called on the card *misoshiru* [miso soup]. This is made, as the root word denotes, from *miso*, a fermented mixture of soy beans, wheat, and salt.” He may

also enjoy “a piece of plump sole stewed in soy” [sauce], the “brown soy-coloured beans and strips of *kikurage*, or ear-shaped mushrooms,” the *wanmori* which includes “pieces of a soaked *fu*, a kind of biscuit made from the glutinous part of wheat flour. The gravy in which these *pièces de résistance* are floating is thickened with a transparent starchy substance, obtained from the root of a climbing plant (*Pueraria Thunbergiana*), called by the Japanese *kuzu*.”

“One other relish must be noticed, the sliced root of the burdock, salted and preserved in *miso*.”

253. International Health Exhibition, London. 1884. The Health Exhibition Literature. Vol. XVII. London: William Clowes and Sons, Ltd. 749 p.

• **Summary:** Also cited as: (1) “Catalogue of the exhibits of Japanese Food Products at the International Health and Education Exhibition, held in London, 1884.” (2) “Japan. International Health Exhibition A. Descriptive catalogue...” (3) “London, International Health Exhibition, London. 1884. The Health Exhibition Literature. Vol. XVII.”

A map of the “International Health Exhibition, London, 1884” (p. 537-38), which was held at the Royal Albert Hall in South Kensington, on Exhibition Road near the High St. Kensington Station; gives an overview of the hall and surrounding roads and railway stations. The title of the section related to food is “Japan. A descriptive catalogue of the exhibits sent by the sanitary bureau of the Japanese Home Department,” prepared under the direction of K. Nagai, Commissioner, and J. Murai, Assistant Commissioner. There follows a 2-page Introduction by Kiuichiro Nagai, dated Sept. 1884. Then a table of contents of five groups; Group I is food. Then a table of Japanese weights and measures. Pages 545-71 begin: the “Descriptive catalogue.” Group I—Food. Detailed information and / or chemical analyses are given of the following: are given: (7) Soy bean (*Glycine hispida*) *O-mame*. (7A) *Phaseolus radiatus*. Adzuki. (192) Dried fruit of *Lagenaria vulgaris*–*Kan-pio* [*kanpyo*], cook with soy sauce. Mushroom (*Agaricus campestris*). *Shii-take* [*Shiitake*], cook with soy sauce. Kanten, vegetable isinglass, cook with soy sauce. Frozen konniaku [konnyaku]. Minoboshi daikon, cook with soy sauce. Fu, nama-fu, yaki-fu (roasted) (Wheat gluten). Kuzu starch. Buckwheat soba, cook with soy sauce. (203) Hijiki sea weed (*Cystoseira* species), cook with soy sauce. (204) Ogo sea weed (*Gigartina* sp.), cook with soy sauce. (205) Wakame sea weed (*Alaria pinnatifida*), cook with soy sauce. (206) Agar-agar (*Gelidium corneum*. Tengusa). Use to make tokoroten or kanten. (207) Tangle (*Laminaria japonica*). Kombu [konbu]. (208) Laver, dried (*Porphyra tenera*). *Asakusa-nori*. (209) Awonori, dried (*Enteromorpha compressa*).

(210) Frozen bean-curd. *Kōri-tōfu*. Dried bean curd. Refuse of bean curd–*kiradzu* [*kirazu*], *unohana*. (211) Yuba

(Skin of bean curd; “Yuba is made during the process of making bean curd, and is a thin, yellow, transparent substance).”

Note: This is the earliest English-language document seen (Oct. 2008) that uses the term “Skin of bean curd” to refer to yuba.

(213) Somen (Vermicelli), cook with *shioyu* (soy sauce). (228) Umeboshi (Salted and dried plums). (229) Miso (a fermented substance made from soy beans and yeast [koji]). *Miso-ai*, *Sansho-miso*, *shoga-miso*, *wasabi-miso*, *togarishi-miso*, *goma-miso*, *keshi-miso*, *katsuwo-miso*. (229a) *Konomono* [*Kô-no-mono*] (Vegetables pickled in fermenting mixture of bran and salt (incl. Nukamiso-dzuke (pickled in salt and bran), Takuwan-dzuke (radishes pickled in salt and bran), Shiwodzuke (salted), Shio-oshi (salted and pressed), Kasudzuke (pickled in sake residue), Misodzuke (pickled in miso), &c.)). Takuwandzuke [Takuan pickles]. (229b) Kasu-zuke (mentions miso soup). (230-35) Shoyu (Soy) and how it is made [p. 21 of section]. Chemical analysis of Kikkoman shoyu. Eight chief brands of shoyu. (236) Mirin (a kind of sweet liquor), with koji. Sembei [senbei], with miso. (242) Yokan, three varieties. (246) Midzu-ame [mizuame]. Frozen mochi.

Class III—Prepared animal substances. Dried cod fish, cooked with soy [sauce]. Beef tsukudani, cooked with soy [sauce].

Class IV. Beverages. Sake (wine), made with koji (yeast). “Koji (yeast) is used for brewing Sake in Japan, almost like malt used for brewing beer in western countries,…”

Class VI. Cookery practically demonstrated. Nippon Ryoriya (Japanese restaurant), incl. misoshiru (miso soup), and *konomono*. Address: England.

254. International Health Exhibition, London. 1884. (229) Miso (a fermented substance made from Soy Beans) (Document part). In: International Health Exhibition, London. 1884. *The Health Exhibition Literature*. Vol. XVII. London: William Clowes and Sons, Ltd. 749 p. See p. 563-65.

• **Summary:** “Preparation.—There are many ways of making miso, they do not differ much from each other, and the kind containing the largest quantity of yeast [koji] is considered the best. The usual mode is, after soaking soy beans in water for about two hours, to put them into a suitable vessel and steam them; then, after mixing them with salt and yeast (the proportions are one *to* of beans to three *sho* of best salt and one *to* of yeast) [10 *sho* = 1 *to* = 18 liters = 4.76 gallons], they are removed to wooden plates; the next step is to evenly mix the ingredients. The liquid is then put into casks, and is then left untouched for upwards of a year.

“Another method.—Three *to* of yellow soy beans are soaked in water for a night; then they are boiled in a large kettle, and as soon as the water in the kettle has evaporated

and the beans show a reddish yellow colour, they are removed to a mortar and pounded; they are then placed on mats. When they are thoroughly cooled, they are shaped into balls, as large as hand balls, cut with a knife into flat pieces about an eighth of an inch thick, and placed on mats shaped like scales of fish. As soon as mould appears upon them, they are taken, crushed into small pieces, and exposed to the rays of the sun for a day or two. When nearly dry, one and a fifth *to* of salt and a suitable quantity of water are added to them, and the whole is pounded in a mortar. After preserving in a cask for twenty or thirty days, it is again pounded thoroughly, and then left in a cask for a month or two, and sometimes longer, when the preceding process will be repeated. Finally, if it is sealed up in casks, it will never deteriorate. It is in prime condition when three years old.

“Use.—In Japan miso is one of the most necessary articles of food, and has been used from time immemorial, both by nobles and men of inferior rank. It is made into a soup, and is one of the courses served up as a principal article of every day diet. The mode of making it into soup is, in the first place, to rub it around an earthenware bowl [suribachi], into which a suitable quantity of water has been poured; it is then filtered through a sieve called *misokoshi*, and vegetables according to taste are added to it; the whole is then boiled and served up. The quantity of water to be used depends on the taste of those who have to eat it. Miso is used to give an agreeable flavour by mixing it with other food, and is then called *Miso-ai* [Miso-ae]. There are many other preparations of miso mixed with various condiments, namely, *Sansho-miso* (miso and Japanese pepper), *Shogamiso* (miso with ginger), *Wasabimiso*, *Tagarashimiso*, *Gomamiso* (miso with horseradish, chillies, and sesame), *Keshi-miso* (miso with poppy seeds), *Katsuwo-miso* (miso with Katsuwo [Katsuo is oceanic bonito]), &c.

The uses of miso are innumerable, and it is most nutritious food.

Analysis, by Komaba Agricultural College:—Red Miso, from Osaka—Water 50.40%, fibre 8.25%, ashes [ash] (containing nearly 12 per cent. of common salt) 12.50%, sugar 0.61%, albumen 10.08%, soluble carbohydrates 18.16%. Total 100.00%.

Note: This is the earliest English-language document seen (Dec. 2008) that contains the word *misokoshi*. Address: England.

255. Cohn, Ferdinand. 1884. Ueber Schimmelpilze als Gaehrungserreger [On molds as instigators of fermentation]. *Jahres-Bericht der Schlesischen Gesellschaft fuer Vaterlaendische Cultur (Breslau/Wroclaw)* 61:226-30. For the year 1883. [Ger]

• **Summary:** In this lecture, presented on 31 May 1883, Prof. Cohn named the species *Aspergillus oryzae*. A synonym is *Eurotium oryzae* Ahlburg. Thom and Raper (1945, p. 261) note that “The name *E. oryzae* with an

incomplete description for the saké organism was published by Korschelt, in Dingler's Polytechnisches Journal 230:330. 1878, as taken from a letter from 'Herr Ahlburg.'"

On page 227 Cohn notes: "In the winter of 1883 I obtained some grains of tane kosi [sic, tané koji] (the so-called mother-yeast of the Japanese rice wine, saké) from Shinkizi [Shinkiji] Nagai, a native of Tokyo who was staying in Breslau as a student of agriculture. I prevailed upon this intelligent and industrious young man, under my supervision, to make sake using the tané koji and methods he had learned in Japan. After a number of unsuccessful trials, we met with excellent success. The Japanese methods are, although used for hundreds of years, so rational, that they can hardly be improved based on a scientific understanding of the process. Tane Kosi are grains of rice which are overgrown with the mycelium and spore bodies (*Fruchttraegern*) of *Aspergillus oryzae*, the splendid rice mold with its greenish-yellow conidia."

"Another fermentation product made by *Aspergillus oryzae* is the well-known soy sauce (*Sojasauce*). This was also prepared at our institute by Mr. Shinkizi Nagai using the Japanese method. This soy sauce was prepared from soybeans (*Sojabohne, Dolichos Soja*) that have recently been cultivated here. Soybeans are different from our typical beans in that they have a very low content of starch and are very rich in fat and 'Cheese-stuff' (literally *Kaesestoff*, Legumin, vegetable casein) [i.e. protein]. Because of this fact, the soybean is used to make cheese [tofu] in Japan."

A detailed description of the process for making soy sauce is then given.

Breslau is the German name for Wroclaw, a city in southwest Poland. Address: Prof., Dr.

256. Hanausek, Thomas Franz. 1884. Die Nahrungs- und Genussmittel aus dem Pflanzenreiche: Nach den Grundsätzen der wissenschaftlichen Waarenkunde fuer die Praxis und zum Studium [Foods and food adjuncts (stimulants / enjoyables) from the vegetable kingdom: On the principles of scientific study of food products in practice and theory]. Kassel: Verlag von Theodor Fischer. xiv + 485 p. See p. 99. Incl. 100 illust. and tables. 19 cm. Vol. 5 in the series *Allgemeine Waarenkunde und Rohstofflehre*. [8 soy ref. Ger]

• **Summary:** This book describes how to analyze commercial products (chemically, microscopically, etc.) to determine their composition and to detect adulteration. Chapter III (p. 75-105) is titled "The legumes and their starches" ("*Die Huelsenfruechte und ihre Stärke*"). Section 8 (p. 99-103) within that chapter is titled "The soybean" ("*Die Sojabohne*"). The author discusses soy sauce and how to tell when it is adulterated, miso and how it is made in Japan, and the use of the soybean as a coffee substitute. He gives the weight of seeds according to data from

Haberlandt, lists different varieties according to a classification by Harz (1880, 1885), describes the shape and structure of the seeds, gives a microscopic analysis of the shape of the cells in a cross-section of the seed coat. An illustration (line drawing of a microscopic image, p. 101) shows a "Cross section through the soybean," with the following cell types labeled: pa = palisade cells (*Pallisadenzellen* {*Palisadenzellen*}), s = hour-glass cells (*Säulenzellen*), p and p' = outer and inner parenchyma layer (*Aeusserer und innere Parenchymschicht*), h = hyalin stria (*hyaline Streifen*), gew = seed tissue (*Samengewebe*). Starch-bodies are missing.

Note 1. This is the earliest document seen (Feb. 2002) that describes use of a microscope to examine soybean cells or that contains an illustration of those microscopic cells.

The author presents a chemical analysis and description of the seeds. He notes that no trace of starch can be found in soybeans, a characteristic shared by lupins, one of the infallible criteria for detecting both, and an indication of the high nutritional value of the soybean. Peanut seeds are also discussed on p. 103.

On pages 417-31 Hanausek gives a detailed analysis of coffee substitutes. On page 424, in the subsection on "Coffee substitutes made from the seeds of legumes," he notes that this type is rarely found any more, but that the soybean may be used.

Note 2. Under the term "Genussmittel" (food adjuncts {stimulants / enjoyables}), Hanausek includes: Tobacco, tea, cocoa, coffee, kola nuts, cacao, Guarana* (paste from the seeds of the shrub or bush *Paullinia sorbilis* Mart. (*P. Cupana* Kth.) used in north Brazil), Tschan (Chan)* (made from the fruits of a type of sage plant in Guatemala), betel nuts, opium, and hashish. (* = not in a German dictionary).

Hanausek lived 1852-1918. Address: Krems an der Donau (Krems on the Danube), Austria.

257. *Gardeners' Chronicle* (London). 1885. Japanese food vegetable products. 23:51. Jan. 10. New Series.

• **Summary:** This is the conclusion of an article begun in the 20 Dec. 1884 issue. "Soy. Two preparations from the Soy Bean (*Glycine soja*), besides that already referred to, deserve mentioning—namely, miso, a fermented substance; and shoyu, or soy itself. The first is a curious preparation, described as follows:—There are many ways of making miso, differing very little from each other; the kind containing the largest quantity of yeast is considered the best. The usual mode is after soaking Soy Beans in water for about two hours to put them into a suitable vessel and steam them; then, after mixing them with salt and yeast, they are removed to wooden plates; then the ingredients are very evenly mixed, the liquid is put into casks, and is then left untouched for upwards of a year. Another method is to soak a quantity of yellow Soy Beans in water for a night, then boil them in a large kettle, and as soon as the water in

the kettle has evaporated, and the beans show a reddish-yellow colour, they are removed to a mortar and pounded, after which they are placed on mats. When they are thoroughly cooled they are shaped into balls as large as hand-balls, cut with a knife into flat pieces about an eighth of an inch thick, and placed on mats shaped like scales of fish. As soon as mould appears upon them they are taken, crushed into small pieces, and exposed to the rays of the sun for a day or two. When nearly dry, salt and water are added to them, and the whole is pounded in a mortar and then left in a cask for a month or two, and sometimes longer, when the preceding process will be repeated. Finally, if it is sealed up in casks it will never deteriorate. It is in prime condition when three years old. It forms one of the most necessary articles of food in Japan, and has been used from time immemorial, both by nobles and men of inferior rank. It is made into a soup, and is one of the courses served up as a principal article of everyday diet. The mode of preparing the soup is to rub the miso around an earthen bowl, into which a suitable quantity of water has been poured. It is then filtered through a sieve, and vegetables added according to taste; the whole is then boiled and served up. Miso is also used to give an agreeable flavour by mixing it with other food, and it is likewise mixed with condiments, as Japanese Pepper, Ginger, Horse-Radish, Chillies, Sesame, Poppy seeds, &c.

“Soy or *Shoyu*, is perhaps the chief product of the Soy Bean. It consists of a mixture of these Beans, Wheat, salt, and water. The mode of preparing it is to thoroughly boil, after washing in a cask with water, fifty parts of Beans, and to parch about fifty parts of Wheat in a pan for a little while and thoroughly boil it, after grinding on a stone mill: when these two substances are mixed together and kept in a warm room for about four days, the substances are converted into a yellow flour-like matter: this is yeast. This yeast is then thrown into a mixture of salt and water, and afterwards thoroughly cooled, then boiled in a large kettle, and stirred with a Bamboo instrument twice a day in summer, and once a day in winter. After the lapse of three years, the sediment is poured into a bag then put into a small tub and submitted to strong pressure by means of a bar at the end of which hangs a heavy weight. The fluid expressed is poured into a kettle and submitted to a heat of not more than 80°; it is again removed to a large tub and set away for a night, when it becomes a deep black colour, and acquires a very delicious taste.

“Soy is one of the most valuable foods, and is in daily use; mixed with several kinds of food it imparts to them a delicious flavour. It is universally liked, and is really indispensable in the Japanese kitchen. The quantity annually consumed in Japan is extremely large, and of late years the article has been exported.”

258. *Tropical Agriculturist (Ceylon)*. 1885. Japanese vegetable food products. 4:695-96. March 2. [1 ref]

• **Summary:** This is a reprint of a two-part article originally published in *Gardeners' Chronicle* (London; 20 Dec. 1884 and 10 Jan. 1885). It describes: Fruit of the maidenhair tree (*Ginkgo biloba*), *Langenaria vulgaris* or kau-pio [kanpyo, kampo?], *Agaricus campestris* or Shii-take [shiitake] mushrooms, agar-agar or kanten, frozen kouniakou [konnyaku], katakuri starch, kuzu starch, warabi starch, umiboshi [umeboshi]: salted and dried plums, kasadyuke (kasuzuke, made from white melons), and two preparations from the Soy Bean: miso, and shoyu or soy itself. For details, see the original articles. Address: London.

259. Schumacher-Kopp, E. 1885. Leguminose Maggi [Leguminous Maggi]. *Chemiker-Zeitung* 9(27):487. April 1. [Ger]

• **Summary:** After 18 months of research, four professors (Schuler, Miescher, Schulze, and Barbieri) and Maggi & Co., owner of several large commercial mills in Kempthal and Zurich, Switzerland, have succeeded in making a flour from legumes. It is nutritious, tasty, can be prepared quickly, and is inexpensive. Dr. Schuler has written a very interesting report on the subject. “The countless investigations have resulted in 9 varieties of the product. The flavor of these varies greatly. They sometimes contain the mucilage from lentils (*Linsen*), chick-peas (*Kichererbsen*), barley, or oats, or of meat extract.

A table shows the composition (percentage protein, carbohydrate, and fat) of nine different varieties of legume flour. The first 3 varieties contain 1.22 to 1.75% fat and 17.17 to 23.21% protein; the last 3 contain 12.63 to 14.28% fat and 20.21 to 25.90% protein.

Soy is not mentioned in the article. However E. Schulze, who is listed in this article as a Professor of Chemistry in Zurich, published 8 studies on soybeans between 1889 and 1910. And Maggi & Co. is known to have done early research on soybeans. In 1907 it was reported: “Recently the firm of Jul. Maggi in Kempthal [Switzerland] has begun to make and market a type of miso.” Address: Dr., Lucerne, Switzerland.

260. Lipskii, A.A. 1885. Kitaiskii bob soya (*Soja hispida*) i ego pishchevoe znachenie [The soja bean (*Soja hispida*) and its nutritional value, or effect on digestion]. *Vrach (Doctor) (St. Petersburg, Russia)* 6(40):657-59. Oct. 3. [5 ref. Rus]

• **Summary:** Extensive literature has been published about the agricultural science of soybeans (by Haberlandt, Sovetov, Skachkov, Organov, Giliarianskii, Podoba, Chernoglazov, Iankovskii, etc.). In Russia, Podoba was the first person to work with soybeans; he received the seeds from Haberlandt of Vienna.

A.V. Sovetov, professor of agriculture at the University of St. Petersburg, wrote extensively about the economic and nutritional importance of soybeans, including in the journal *Vol'no Ekonomicheskago Obschestva*. He also sent out

samples of soybean seeds. In 1883 V.P. Giliaranskii, influenced by Il'in, wrote a monograph [48 pages] on the soybean. It seems that P.A. [L.A.?] Chernoglazov was the first person in Russia to prepare bread and sauces from soybeans, then to feed them to his co-workers. Theoretical yield measurements by Podoba agree with those of Haberlandt. Podoba states that soybean plants, when used as green forage for livestock, exceed the nutritional value of other plants, including clover and alfalfa.

In the laboratory of A.P. Dobroslavin, Lipskii formulated experiments to test the nutritional value of soybeans. In 1881 Lipskii received soybeans for analysis from I.G. Podoba. Lipskii then gives background information on the soybean plant (mostly structure, varieties, etc.—no history) and methods of preparing foods from soybeans. Chernoglazov then outlines the preparation of miso.

A table (p. 659) shows that two people (a doctor and a lab worker) were fed various foods and liquids. In the upper half, the left column shows the foods or nutrients consumed (soy flour, dry flour, nitrogen, fats, ash, water, tea or broth of bilberries / whortleberries); the right column shows the amount of each consumed. The lower half of the table the “output” of the two people (urine, specific gravity of urine, nitrogen in urine, sulfur in excrement, dry mass of excrement, nitrogen in excrement, percentage of nitrogen in dry excrement, fat in excrement, percentage of ash in dry excrement). The last two lines are contents that were not digested: Nitrogen, fat.

Footnote 5 (p. 658) mentions exhibitions of dried plants, including soybeans and other beans, at a museum in St. Petersburg, Russia.

Footnote 7 (p. 658) states that the label on a container of coffee, made in Russia, fails to reveal that this coffee is actually made from soybeans.

Nikitin (1900) states that Lipskii found, in his investigations on the digestibility of soybeans, that in a diet consisting exclusively of mashed soybeans, 19.5% of the nitrogen and 19.2% of the fat remained undigested.

Horvath (1927) says that “Lipsky” mentioned use of baking soda for cooking whole dry soybeans. Address: USSR.

261. Dammer, Otto. 1885. *Illustriertes Lexikon der Verfaelschungen und Verunreinigungen der Nahrungs- und Genussmittel... Unter Mitwirkung von Fachgelehrten und Sachsverstaendigen herausgegeben* [Illustrated lexicon of adulterations and contaminations of foods and food adjuncts (stimulants / enjoyables)... Published with the assistance of specialists and experts]. Leipzig, Germany: Verlagsbuchhandlung von J.J. Weber. 1208 p. Illust. 25 cm. [Ger]

• **Summary:** The section on “Coffee” states (p. 396) that the soybean (*die Sojabohne, Dolichos Soya, Soya hispida*) is presently a coffee substitute that is not unimportant, and

according to Count Attems, it is the only type of coffee served to the workers on many estates in Austria. Soybean seeds are yellow, brown, black, shiny, 8-10 mm long, 5-6 mm wide, and they generally contain aleurone grains, among which are also small starches and rather much fat. The *Saulen / Spulen* cells are elongated, with the top and bottom the same except a little thickened. Additional microscopic details of the cells are given. On a dry-weight basis, the soybean contains 31.26 to 33.26% protein, and 16.21 to 18.25% fat. In its homeland (Japan, China, and India) the soybean is widely used as food and in salty seasonings. A Japanese preparation is called Miszo [sic, miso].

Also discusses: Oilseed meals and cakes with many illustrations (p. 671-85): Linseed meal, rapeseed meal, Leindotter meal (camelina, cameline), poppyseed meal, hempseed meal, beech-nut cake. Ground-nut cake, cottonseed cake, sesame cake, palm kernel cake, coconut cake, sunflowerseed cake, Madia cake, Niger cake, candlenut cake. Soy is not mentioned at oilseeds, cakes or meals. Sesame oil (p. 830, 672).

Note 1. Otto Dammer lived 1839-1916.

Note 2. Moeller (1905, p. xiii) says: Vol. 1 is 1885. Vol. II, with five color plates and 734 in-text illustrations, is 1887. Address: Germany.

262. Mene, Édouard. 1885. *Des productions végétales du Japon* [The vegetable products of Japan]. Paris: Au Siège de la Société Nationale d'Acclimatation. 592 p. Index. 24 cm. [34 soy ref. Fre]

• **Summary:** The title page states in small letters: *Extrait du Bulletin de la Société Nationale d'Acclimatation*, indicating that much of the material in this book is based on articles previously published in this French-language Bulletin. However many other early books on Japanese agriculture have also been consulted and are carefully cited.

In the Introduction, the author explains that he was appointed by the Society for Acclimatization to prepare this report on the vegetable products of Japan which had been exhibited at the Universal Exposition of Paris in 1878—in two parts. Those displayed by the Japanese firm Trocadero, and those displayed in the galleries of the palace at Champ-de-Mars. The author and many others were deeply impressed by this exhibition.

Grains (class 69, p. 31): Wheat or rice are mixed with beans or peas and fermented to make shoyu and miso. Shoyu is one of the most widely used condiments in Japanese cuisine. The method of production is described briefly. Among the condiments displayed in class 74 were a number of flasks of shoyu from Tokyo.

Legumes (p. 40-47): Discusses soybeans, tofu, azuki beans (*Phaseolus radiatus* var. *subtrilobata*, p. 42-44; incl. yayanari, red, white, black, and yellowish azuki, Dainagon azuki, azuki flour, an, yokan), shoyu, soybeans (*Pois*

oléagineux, Soja hispida, p. 45-46; incl. Kuro-mame {Black soybeans}, various colors and shapes of dry soybeans {green, yellowish, large yellowish, greenish black, brownish red, white, large red}).

There is also a special, long section on soybeans (*Soja hispida*. *O mame: Daizu*; p. 270-83) and soyfoods. In the Japanese exposition, the display of useful products (*tableau des productions utiles*) designates: No. 24. *Kuro-mame*. Black-seeded soybeans, the size of an average sized haricot bean. No. 25. *Shiro-mame*. White-seeded soybeans, spotted / flecked / speckled / mottled (*tachetées*) with gray. No. 26. *Ao-mame*. Greenish-seeded soybeans. No. 34. *Gankui-mame*. Black-seeded soybeans, flecked with white.

The soybean (*Le Soja*) is cultivated in Japan, India, Ceylon, the Malacca peninsula [today's Malaysia], the Philippine islands, Borneo, Java, the kingdom of Siam, Cochin China, Tongkin (*Tong-King*), and throughout China, primarily in Mongolia and in the provinces of Henan / Honan, Liaoning (*Shenking*), Shandong / Shantung, and Shanxi / Shansi (*Chan-si*).

Note 1. This is the earliest document seen concerning soybeans in Malaysia, or the cultivation of soybeans in Malaysia. This document contains the earliest date seen for soybeans in Malaysia, or the cultivation of soybeans in Malaysia (1885). The source of these soybeans is unknown.

Note 2. This is the earliest document seen concerning soybeans in the Philippines, or the cultivation of soybeans in the Philippines. This document contains the earliest date seen for soybeans in the Philippines, or the cultivation of soybeans in the Philippines (1885). The source of these soybeans is unknown.

Note 3. This is the earliest document seen concerning soybeans in Siam (renamed Thailand in 1938), or the cultivation of soybeans in Siam. This document contains the earliest date seen for soybeans in Siam, or the cultivation of soybeans in Siam (1885). The source of these soybeans is unknown.

The Chinese exposition (class 73) contained samples of all the varieties of soya cultivated in all the provinces of the empire. Nos. 2991 to 3000. Green, white, black, yellow, striped or variegated, and reddish soybeans, provided by the Chinese customs office at Newchwang. Nos. 3014-16. Yellow, black, and green soybeans from the customs office at Tientsin. Nos. 3058-61. Yellow, green, and black soybeans from customs at Yantai / Chefoo. No. 3091. Yellow soybean from customs at Chinkiang. Nos. 3013-19. White, red, black, and yellow soybeans from customs at Shanghai. Nos. 3125-28. White, black, red, and green soybeans from customs at Wenzhou / Wenchow. Nos. 3152-56. White, green, and black soybeans from customs at Kao-hsiung (*Takow*).

The soybean is one of the plants most widely used in Japan and China for both food and industrial purposes. As indicated previously, shoyu, miso, and tofu are

indispensable to the Japanese diet. Samples of these products were displayed in the Japanese exhibit in class 74 (condiments and stimulants); they came from Tokyo and from the province of Hizen, mainly from the town of Nagasaki. In the Chinese exhibit, also in class 74, were samples of (*soye*) or (*soya*) which are similar to Japanese shoyu but are called *Chiang-yu* (*Tsiang-yeou*) in China. They were provided by the customs offices at Yantai / Chefoo, Ning-po, Wenzhou / Wenchow, and Canton. For aroma, the Chinese often add star anise, green anise, and orange peel. Chinese soy sauce is made from yellow soybeans (*Houang-téou*).

Note 4. This is the earliest document seen (Jan. 2006) describing a soy sauce made with star anise, green anise, orange peel or other spices or herbs outside of Indonesia.

A detailed description of the method for making Japanese shoyu is given, excerpted from the book *Le Japon à l'Exposition universelle de 1878* [Japan at the Universal Exposition of 1878] (1878, vol. II, p. 124). Additional excerpts concerning shoyu, miso, and tofu are taken from: Simon 1862, Kaempfer 1712, *Bulletin of the Society for Acclimatization* 1880 (p. 248), and Champoin 1866.

In France, Mr. Vilmorin and Dr. Adrien Sicard (of Marseilles), who are both involved with soybean cultivation, have prepared soy cheese (*fromage de Soja*) numerous times. Dr. Sicard has made both the white cheese and the red cheese; the latter is rolled in a powder made by grinding red sandalwood (*santal; Pterocarpus santalinus*), mace, and cinnamon (p. 276).

One of the most important soy products is the oil, which is obtained from the seeds—especially the large yellow soybeans that the Chinese call *Houang-téou*. The Japanese do not make soy oil (*huile de Soja*) but in China manufacture of this product gives rise to considerable commerce. Fremy (1855) found that soybean seeds contain 18% oil. The oil is a drying oil, yellow in color and with a special odor and a taste of dried legumes, similar to that of peas. It is used in cooking and illumination. In China, quite a few soy oil factories are found at Calfond in Henan, at Tsinan in Shantung, and at Tayeurn in Shanxi. But the center of soy oil production in China is Ning-po in Zhejiang / Chekiang. From the port of Ning-po and from a port on the island of *Tcheou-chan* [*Zhoushan?*] a large number of junks, carrying only soy oil, depart. Two other manufacturing centers are Newchwang and Chefoo. There follows a detailed description (p. 276-77) of how soy oil is obtained from soybeans.

Another common use is as soy nuggets (*Chi*) which (according to Stanislas Julien) contain soybeans mixed with ginger and salt. Kiu-tsee is a fermented soy product made in Canton; it contains red rice, soybeans, and the leaves of *Glycosmis citrifolia*. The Chinese also make a pasta and a sort of vermicelli from soybean seeds named *Hou-mi-téou*.

The stems and leaves make excellent forage. Black soybean seeds are often mixed with chopped soybean hay and fed to horses and mules in northern China and Manchuria.

In Japanese and Chinese medicine, black soybean seeds, ground and made into a decoction, are used to combat asthma attacks.

There follows a long history (p. 277-83) of the introduction of the soybean to Europe (starting at the Jardin des Plantes in Paris, in 1740 or 1779) and its acclimatization, based largely on articles from the *Bulletin of the Society for Acclimatization*. It includes a summary of the work of Prof. Haberlandt in central Europe.

Also discusses: Japanese plum trees (*Prunus mume*) and umeboshi salt plums (p. 52-54, 466-67). Sesame seeds and sesame oil (p. 54-55). Amaranths (p. 63-64). Job's tears (*Coix lacryma*; p. 214-15). Kudzu, kuzu powder, and kuzu cloth (*Pueraria Thunbergiana*; p. 283-85). Peanuts and peanut oil (*Arachis hypogaea*, *Tojin-mame*; p. 286-87). Sesame seeds and sesame oil (*Sesamum indicum*, *Goma*; p. 518-20). Hemp and hemp oil (*Cannabis sativa*, *Asa*; p. 558-59). Address: Médecin de la Maison de Santé de Saint-John de Dieu [Paris, France].

263. Welch, Adonijah Strong. 1885. Report on the organization and management of seven agricultural schools in Germany, Belgium, and England. Washington, DC: Government Printing Office. 107 p. See p. 73-77. Made to Hon. George B. Loring, U.S. Commissioner of Agriculture. • **Summary:** The last section is titled "The Royal Agricultural College at Cirencester, England," where the author visited on 8 Feb. 1884. The subsection titled "Work of the laboratory" (p. 73) describes seven types of current original research, including: "7. On the soy bean (*Soja hispida*), its chemical composition and value as a food.

"The following is a detailed account of Prof. Edward Kinch's description and analyses of the soy bean of China. I append his entire report of the results of this interesting investigation, because it not only shows the character of the work done in his laboratory, but indicates that this bean may be profitably grown in some parts of the Western States. Indeed, the same bean was grown on the experimental grounds of the Iowa Agricultural College last year, and showed a very large yield."

Prof. Kinch's report, titled "The Soy bean," states: "This bean, sometimes known as the Japan pea and China bean, is the seed of the *Soja hispida*, Miquel (*Glycine hispida*, Moench; *Dolichos Soja*, Linné; *Glycine Soja*, Jaquin), a plant of the natural order Leguminosae,..." suborder Papilionaceae, and tribe Phaseolæ. Its natural habitat appears to be China and Japan; it also grows in Mongolia and in India, in the Himalayas, and within the last few years it has been cultivated experimentally in several European countries. This bean is worth more than a passing notice, as

it is the vegetable which approaches most nearly in its proximate chemical composition to animal food. This will be seen later on. There are a great number of varieties of the soy bean known, which differ to some extent in the shape, size, and especially in the color of the seed, and in a few minor particulars, but which seem to vary comparatively little in chemical composition. Dr. C.O. Harz has classified the principal varieties as follows:

"Group I.—*S. hispida platycarpa*. 1. *olivacea*. 2. *punctata*. 3. *melanosperma* (a. *vulgans*. b. *nigra*. c. *renisperma*. d. *rubro-cincta*). 4. *platysperma*. 5. *parvula*.

"Group II.—*S. hispida tumida*. 6. *pallida* (Roxburgh). 7. *castanea*. 8. *atrosperma*.

"These names sufficiently indicate the nature of the variety as far as the seed is concerned. The soy bean is extensively cultivated in the north of China, whence it is exported, to the southern provinces; it is here pressed for the sake of its oil and the residual cake largely used as a food for man and beast, and also as a manure.

"In Japan it is known by names signifying the bean, and from it are made not only soy [sauce] but a paste known as *miso*, which is in constant request at nearly every meal, *tofu*, or bean cheese, and other foods used to a less extent. This bean cheese is also well known in China, and is obtained by extracting the legumin from the beans with water and precipitating it with brine. An analysis of it is given below.

"These foods are most valuable additions to the dietary of the Oriental nations, and especially of the Japanese, who use so little animal food; they tend to supply the deficiencies of the staple food, rice, in nitrogenous matter, fat, and also in mineral constituents.

"The Buddhist priests, who are strictly forbidden to use animal food, consume considerable quantities of these beans, principally in the form of *miso*. The soy bean first attracted attention in Europe in 1873, when specimens from Japan, from China, and from India were shown at the Vienna International Exhibition. Dr. Forbes Watson, reporter on the products of India, called attention to it in the Catalogue of the Exhibits of the Indian Museum. Since then numerous experiments have been made on the European Continent on its growth, and also feeding experiments with the bean and its straw on different kinds of domestic animals have been prosecuted. Such experiments have been carried on by Wolling and Wein, at Munich; by Haberlandt, Lehman, Harz, Stahel, Zimmerman, Siewert, Wieski, and others, at various stations in Germany, Austria, and Hungary, and experiments have also been made in France and in Italy.

"The proximate chemical composition of some of the different varieties, grown in different places, is now given and compared with some other foods of vegetable and animal origin."

Table 1, titled "Percentage composition of the soy bean," gives the percentage of six constituents (water, nitrogenous

matter [protein], fat, carbohydrates, fiber, and ash) in seven different types of soy beans: Pale yellow (from Japan, China, Germany &c., India), brown, round black, and long black.

“It has been shown by Levallois (*Comptes-Rendus*) that the soybean contains a special variety of sugar, many of its properties resembling mellitose; this constitutes about 10 per cent, of the soluble carbohydrates. Of the nitrogenous matters nearly all is in the form of albumenoids; a small quantity, about 1 per cent., appears as a peptone-like body, and about one-tenth to two-tenths per cent. is non-albuminoid.”

Table 2, titled “Percentage composition,” compares the percentage content of the six constituents listed above for six foodstuffs: Peas, [common] beans, lupins, lentils, lean beef, and fat mutton.

“These analyses show the greater richness of the soy beans in nitrogenous matter and in fat than the common bean and pea, and that, when the water is equalized, it more nearly approaches meat in proximate composition. The only leguminous seed of common occurrence, which contains more oil than this bean, is the earth-nut or ground-nut, *Arachis hypogaea*, which is now so largely cultivated abroad for its oil and its cake. In order to compare the soy bean straw with hay and with other straws of like nature, the following average analyses are given:

Table 3 (untitled) compares the percentage content of the six constituents listed above for six feeds: Meadow hay, bean straw, pea straw, lentil straw, soy bean straw, soy bean hulls.

“A special variety of *Soja hispida* is cultivated in some parts of Japan as a fodder crop and cut just as the pods are fully formed. The hay made from this is much relished by horses, cattle, and sheep. A sample of a crop grown on the Imperial College of Agriculture Farm, Komaba, Tokiyo, gave on analysis: Water 15.0%, nitrogenous matter 19.8%, fiber 35.9%, ash 6.8%, carbohydrates and fat 22.5%. Total 100.0%.

“It will be seen that this hay exceeds even lentil straw in the amount of nitrogenous matter it contains.” Continued. Address: LL.D., Ames, Iowa.

264. Welch, Adonijah Strong. 1885. Report on the organization and management of seven agricultural schools in Germany, Belgium, and England (Continued—Document part II). Washington, DC: Government Printing Office. 107 p. See p. 73-77. Made to Hon. George B. Loring, U.S. Commissioner of Agriculture.

• **Summary:** Continued from page 76: “The following are means of various analyses made in Japan of food products obtained from the soy bean, and which are largely consumed there:”

Table 4, titled “Percentage composition,” shows the percentage content of the six constituents listed above in

four Japanese food products: White miso, red miso, bean cheese [tofu], and frozen bean cheese [dried frozen tofu].

“The ash of miso consists mainly of common salt, which is added in the process of manufacture.

“The ash of the soy bean was found, as a mean of several samples, to have the following percentage composition. The composition of that of the straw is also given: Table 5 (untitled) lists the percentage composition of each of the following constituents in soy bean ash and soy bean straw ash: Potash, soda, lime, magnesia, ferric oxide, chlorine, phosphoric pentoxide, sulphur trioxide, and silica.

“The crop takes from the soil a large amount of valuable mineral constituents, phosphoric acid and potash, as well as a large amount of nitrogen.

“The results of the German and Austrian experiments show that where temperature is not too low, the result of the harvest as compared with that of ordinary beans or peas is exceedingly satisfactory.

“The kinds most suited for cultivation there are the yellow, brown, round black, and long black varieties, i. e., *pallida*, *castanea*, *atroserma*, and *melanosperma*, especially the first three named. They require a vegetation time of about one hundred and fifty days, during which the average temperature must be about 58° F. (14.3 C.), and number of heat units (the average temperature multiplied by the number of days) [*Wärmesummen*] about 2,100 C. They may be sown the beginning of May and harvested the end of September or even the beginning of October.

“The seeds should not be sown deeply, not more than 1 to 1½ inches deep, and about eighteen plants to the square yard may be left after weeding and thinning out. The plants grow to a small bush about 2½ feet high, and produce pods with two to five seeds. The most suitable soil is a peaty soil, or one containing a good deal of organic matter, and the next most favorable is a calcareous soil. Nitrate of soda has been found to be a good manure for the crop in Germany and also potash salts, especially potassium sulphate. Ammonium sulphate did not give as good a return as the same amount of nitrogen in the form of nitrate; on soils poor in organic matter it would probably be better to supply the nitrogen in some organic combination, such as rape-cake, shoddy, and the like. Phosphoric acid, especially as a dicalcic phosphate was a help on some soils.

“Field experiments made by myself on this crop in Japan showed that wood ashes had a good effect, and that anything like an excess of nitrogen was very harmful to the yield of grain. In that country the plants are often sown on the dividing ridges between the plots of paddy and without any manure. The yield of seed and straw in the German experiments compares very favorably with that of peas and beans grown under the same conditions; from 2,000 to 3,000 pounds of seed and from 5,000 to 10,000 pounds of straw per acre have been obtained.

“Feeding experiments with the produce have been made with pigs, sheep, oxen, and milch cows, and with very good results. The bean is a most excellent addition to other foods, especially such as are deficient in nitrogenous matter and fat. The digestion co-efficients of the nitrogenous matters of the fat and of the non-nitrogenous matter of the soy bean, and also in the cake left after its pressure for oil, closely approximate to 90 in each case. As a mean of two direct experiments with soy bean straw, the digestion coefficients were found to be as follows: Nitrogenous matter 60.8, fat 6.2, fiber 33.6, and non-nitrogenous extractive matters 69.0. The hulls are rather less digestible.

“The albuminoid ratio in the bean is about 1 to 2.3, in the straw 1 to 8.1, in the hulls about 1 to 20, and in the cake 1 to 1.3. An analysis of the cake shows: Water 13.4%, nitrogenous matter 40.3%, fiber 5.5%, carbohydrates 28.1%, fat 7.5%, ash 5.2%. Total: 100.0%.

“In good condition it would be a valuable addition to our feeding cakes, but it is too highly valued in the East to enable it to be imported to any extent at a profit.

“The soy bean plant has considerable power of resisting unfavorable climatic influences, as cold, drought, and wet; and appears to be particularly free from insect attacks, and, indeed, from all parasites; this last, if it continues, is by no means a slight advantage. The soy beans are eagerly bought by the natives of Southern Italy, an almost vegetarian race; that they are easily digested I can speak from experience, having frequently used them on my table, cooked after the manner of haricots. Taking into account the great richness of these beans in valuable food constituents, their easy digestibility, the value of the straw, and the great probability of some variety being able to be acclimatized without great trouble, this *Soja hispida* is worth consideration. The bean would form an exceedingly useful addition to the food of the poorer classes, as a substitute for a portion of the animal food which in the kitchens of the laboring classes is so wastefully cooked. One use it has already found, not altogether to be commended, viz., after roasting, as an adulterant of and substitute for coffee.

“We have procured seeds of several varieties direct from Japan, and of one variety from Germany, and these are now being cultivated in the botanic garden. They were sown rather late, and the month of June has not been favorable to their growth, but some of the varieties promise fairly.”

Address: LL.D., Ames, Iowa.

Index. 27 cm. 35 plates, with Fig. 26 being of the soybean. South Kensington Museum science handbooks. With 23-page supplement, 1901. Reprinted in New Delhi, India in 1983 by Ajay Book Service. [17 ref]

• **Summary:** “The soy-bean. *Glycine Soja*, Sieb. and Zucc. *Synonyms*—*Soja hispida* (Moench.); *Dolichos Soja* (Linn.); *Soja angustifolia* (Miq.). *Hind.* [Hindi]—Bhat, Bhatwan. *Punjab* [Panjabi]—Bhút. *Beng.* [Bengali]—Gari-kulay. *Naga*—Tsu-dza.

“This important bean is the seed of *Glycine Soja*, a small, sub-erect, trifoliate, hairy annual, with pods generally 3 to 4-seeded. It belongs to the natural order Leguminosae, sub-order Papilionaceae, tribe Phaseoleae, and sub-tribe Glycineae; 5 genera are included in this sub-tribe. *Glycine* contains about 12 species, chiefly Australian, but 3 are Indian, namely *G. javanica*, *G. pentaphylla*, and our present species.

“The soy-bean forms a considerable article of food in China and Japan. Since 1873 it has been successfully grown, as an experiment, in some of the warmer parts of Europe. It is widely spread in the outer Himalaya, and tropical regions from Kumaun to Sikkim, and the Khasir, and the Naga Hills to Upper Burma. It is often cultivated, rather largely in Busti and Gorakhpur [in today’s Uttar Pradesh], Patna, and Purniah [Purnea] Districts [both in today’s northeast India].

“This crop is generally grown by itself; the seeds are sown from June to September; the harvesting takes place between November and January. It is consequently a kharif crop. The seeds should be placed at a depth not exceeding 1 to 1½ inch; 18 plants may be left, after weeding and thinning, to the square yard. A peaty soil, or one rich in organic matter, suits the plants best; a calcareous soil is also favourable to its growth. Sulphate of potash is a good manure, nitrogen may be supplied either as nitrate of soda or, in the case of soils poor in organic matter, in the form of rape or mustard cake, but it is rarely needed, while large applications of nitrogenous manure exert a distinctly injurious effect upon the yield of beans. So far as we know, this very important, vigorous, and productive pulse is not attacked by any insect or parasitic fungus.”

A full-page illustration (p. 141) shows the upper part of a soy-bean plant, with flowers and a lengthwise cross section of one of the pods.

“Very few vegetable products are so rich as this bean at once in albuminoids and in fat and oil, the former constituent amounting to 35 per cent., and the latter to 19. The cultivation of the pale large-seeded varieties should be extended.”

A table titled “Composition of soy-beans” (p. 143) shows that the seeds contain 35.3% protein, 18.9% fat, 4.6% ash, 11.0% moisture. “The nutrient-ratio is here about 1:2, while the nutrient-value is 105. Potash forms nearly one-half, and phosphorus-pentoxide one-third of the ash of the soy-bean. Ripe soy-beans require long soaking, preferably in warm water, in order to render them soft.

“In China and Japan three preparations are extensively made from the soy-bean. Soy sauce is the best known of these, but more important are the soy or bean cheeses, and a kind of paste. The beans are sometimes pressed for the sake of the oil they yield; the residual cake forms an extremely rich cattle food, containing as it does 40 per cent. of flesh-formers and 7 per cent. of oil. The soy-bean may also be grown as a fodder plant. If cut just when the pods are fully formed it makes an excellent hay, superior to that of the lentil.”

Note 1. This is the earliest English-language document seen (Feb. 2004) that uses the word “cheeses” or the term “bean cheeses” or (by implication) “soy cheeses” to refer to tofu.

Note 2. This is the earliest document seen (Feb. 2004) concerning soybeans in Bengal (and therefore probably in today’s Bangladesh). *Webster’s New Geographical Dictionary* (1988) defines Bengal (earlier Bengal Presidency) as a former province in northeast British India, and now a region encompassing West Bengal, India, and Bangladesh. The capital was Calcutta, located on the Hooghly River about 90 miles from its mouth. Calcutta is now the capital of West Bengal, India. Dhaka (Dacca) is the capital of Bangladesh. Bangladesh was formerly East Bengal (part of India, 1700s-1947), then East Pakistan, 1947-1971. It became Bangladesh in 1971.

This one of the earliest document seen (March 2001) that clearly refers to soybeans growing in Burma, but it is not clear whether these are cultivated or wild soybeans.

Page 127 discusses “The Pea-Nut. *Arachis hypogaea*, L.” Six local vernacular names are given. “This plant is probably of American origin, although it has long been cultivated in India, on the West Coast of Africa, and in many other tropical countries. There is a similar plant, *Voandzeia subterranea* [Bambara groundnut], allied to *Vigna*, which grows under the same conditions.” The composition of pea-nuts (in 100 parts and in 1 pound) is given. “Half the weight of pea-nuts is oil... Pea-nuts, after the greater part of the oil has been extracted by pressure, yield a cake well adapted for feeding cattle.” An excellent full-page illustration (line drawing, p. 126) shows the pea-

nut plant with seeds growing under ground and details of flowers and seeds.

Note 3. This is the earliest document seen (March 2001) that mentions *Voandzeia subterranea*. *Webster’s Third New International Dictionary* has an entry for “voandzeia: [NL, from Malagasy *voandzou*]. A genus of tropical creeping herbs (family Leguminosae) with trifoliolate leaves and small axillary flowers.” We later learn that one species, *Voandzeia subterranea* (L.) Thouras, is called the Bambara groundnut. The Bambara are a Negroid people of Upper Niger.

Note 4. This is the earliest English-language document seen (Oct. 1999) that contains the term “nitrate of soda” (as a fertilizer) in connection with soy-beans. It was later renamed “sodium nitrate.”

This is the earliest document seen (Oct. 2002) that uses the word “kharif” to refer to the rainy season in South Asia. Address: Prof. of Chemistry, Royal Academy of Arts, London.

266. Hepburn, James Curtis. 1886. A Japanese-English and English-Japanese dictionary. 3rd ed. Tokyo: Z.P. Maruya & Co., Limited. Yokohama, Shanghai, Hongkong & Singapore: Kelly & Walsh, Limited. London: Trübner & Co. 962 p. 22 cm.

• **Summary:** “During the fourteen years which have elapsed since the publication of the last edition of this Dictionary [in 1867], the Author has kept it constantly before him, correcting errors, improving and enlarging the definitions, and adding new words and illustrations, according as his time and other important engagements allowed him. But owing to the amazing changes and rapid advancement of the Japanese in every department, he has found it difficult to keep pace with the corresponding advance of the language in the increase of its vocabulary. He has endeavored, however, to collect these words, examine, classify and define them. Many, no doubt, have escaped his notice. Still there is an addition of more than ten thousand words to the Japanese and English part.”

New soy-related definitions in this edition, not found in or changed from the 1867 edition: Aburage: Anything fried in oil or grease, especially fried *tofu*. Amazake: Sweet *sake*, a kind of drink made of fermented rice.

Azuki: A small red bean, *Phaseolus radiatus*. Daizu: A kind of large white bean, *Soja hispida*.

Hiriôzu: A kind of food made of *tôfu* fried in oil.

Kinako: A flour made of beans.

Kirazu: The refuse of beans left in making *tofu* [okara].

Koji: Barm or yeast made by the fermentation of rice or barley in the process of making *sake* or *soy*.

Miso: A kind of sauce made of beans, wheat and salt.

Miso wo suru: To rub miso in a mortar.

Sake: A fermented liquor brewed from rice. Sake wo kamosu: To brew sake. Sake ni yô: To be drunk. Sake no

uye ga warui hito: One who behaves disorderly because of drink. Sake ni oboreru: To be addicted to drink [alcohol].

Shoyu: Soy, a kind of sauce made of fermented wheat and beans. Syn. [Synonym]: Shitaji.

Tamari: Soy, shōyu. Tofu: A kind of food made of beans, bean curd.

Unohana: The *Deutzia scabra*; also refuse of beans from making tofu. Yuba: A kind of food made of beans, the skin of bean curd.

Terms listed unchanged from the 1867 edition include Natto, and Yu-dofu.

No listing is given for: Daitokuji natto, Edamame [Yedamame], Hamanatto, or Okara.

The “English and Japanese dictionary,” which starts on page 771-73, contains the most important English words with numerous examples. Included are: Bean: Mame. Spec. Azuki, sora-mame, daizu, endo, ingen, sasage. Bean pod: Mame no saya. Bean curd: Tōfu.

Soy: Shōyu.

Note 1. This is the earliest English-language document seen (Oct. 2001) that uses the word *Unohana* to refer to okara. Address: M.D., LL.D., Yokohama, Japan.

267. Rein, Johann Justus. 1886. Japan: Nach Reisen und Studien, im Auftrage der Koeniglich Preussischen Regierung dargestellt [Japan: Travels and researches undertaken at the cost of the Prussian government. Vol. II.]. Leipzig, Germany: Verlag von Wilhelm Engelmann. 679 p. See p. 5, 65-70, 123-27, 185, 649. Illust. Indexes (1 German and Latin, 1 Japanese). 2nd ed. 1905. [9 ref. Ger]

• **Summary:** A superb book, showing the high German art of studying other cultures. The many illustrations are either beautiful wood engravings (*Holzschnitte*), real photographs, or actual samples of paper or textiles (glued in). In the chapter on “Food plants” (*Nährpflanzen*), the following is a partial contents of the section on “Pulse or leguminous plants” (*Hülsenfrüchte oder Leguminosen*, p. 65-71):

Introduction to crops cultivated in Japan. 1. The ground-nut and ground-nut oil. 2. The soybean: “Among the pulse of Japan (and not the less of China), the soy-bean ranks first in extent, variety of use, and value; and chemical analyses prove the empirical judgment is well founded. In point of nutriment, the soy-bean is of all vegetables the nearest to meat. It contains nearly two-fifths of its weight in legumin rich in nitrogen, and nearly one-sixth in fat. The soy-bean is to the inhabitants of Japan what their *garbanzos* (chick-peas) are to the Spanish, and their *feijao preto* (black beans) to the Brazilians. The author then describes the characteristics of the soy-bean, the work of Haberlandt with soy-beans in Austria, and the yields that he and his co-workers obtained.

“In Japan the varieties of soy-bean are distinguished—according to colour, as white (more properly yellowish), black, brownish red, green, and spotted; according to

duration of growth [maturity] as early-ripening, middle-ripening, and late-ripening; according to form, as spherical, ellipsoidal, kidney-shaped, and compressed laterally; and according to use, as to those which serve primarily in making Shōyu (soy), Tōfu (bean-cheese), and Miso (a sort of sauce), and those eaten in any plain shape.”

Soy-bean varieties in Japan include: 1. “White (pea-yellow) soy-beans, Japanese Shiro-mame or Haku-daidzu. To this division belongs an early-ripening sort with very small seeds, called Goguwatsu-mame [Go-gatsu], or ‘five-months-kind,’ because it ripens in the fifth month of the old Japanese calendar, our July; also another small-seeded, early-ripening variety, the Wase-mame or Natsu-mame, that is, early and summer-bean. These two are also called Tōfu-mame, because they are used chiefly in making Tōfu.

Another sort serves to produce Miso. It is called Nakate-mame, ‘middle-late bean,’ its time of maturity occurring half-way between that of the early and late kinds. Its seeds are round and somewhat larger. The late ripening varieties, Okute-mame (late-bean), Maru-mame (bullet-bean), and Teppō-mame (gun-bean), or Aki-mame (autumn-bean) have, as their names indicate, mostly bullet-shaped seeds, which become harder and larger than the early ones. The variety last named is used in making Shōyu, while Maru-mame is valuable as horse-feed.

2. Black soy-beans, Japanese Kuro-mame or Koku-daidzu. These are eaten boiled with sugar, as an entrée, or as a relish to rice. There is a middle-late sub-species, with round, elliptical seeds, Kuro-mame, in short, and another like it with big, bullet-shaped beans is called Kuro-teppō-mame. And again there is a late-ripening sort with flat, elliptical seeds under several names.

3. Brown soy-beans, Japanese Katsu-daizu (thirsty soy-bean) are much less grown than the white and black sub-species, and are used like the latter. They are distinguished as Aka-mame, red soy-beans, round, reddish-brown in colour, in different varieties, and Cha-mame, tea beans, three light-brown sorts of small extent and significance.

4. Greenish or bluish green soy-beans, Japanese Ao-mame or Sei-daizu, are eaten mostly boiled and with sugar, like the black and brown-red varieties. And, with the brownish sorts, they are much less widely grown than the black and yellowish. The Japanese distinguish the following sub-species of Aō-mame [sic, Ao-mame]:—(a) Sei-hito,—epidermis green, inside a whitish yellow. (b) Nikuri-sei,—greenish throughout. Both sub-varieties run from roundish-ellipsoidal to a bullet roundness, are of medium size, and remind one of green peas. (c) Kage-mame, with pale green, round beans. 5. Speckled soy-beans, Japanese Fui-ri-mame or Han-daidzu. This group is not important. Its cultivation is confined to a small area, in a few provinces. Its sub-varieties are known as:—(a) Kuro-kura-kake-mame, with a black spot on the saddle (eye), otherwise greenish; flat and with the outline of an egg. (b) Aka-kura-kake-mame, with a

brown spot on the saddle (eye), otherwise yellowish-green, flat and drawn out long. (c) Furi-mame or Udzura-mame, speckled or spotted soy-bean, yellowish-green with many dark flecks. A rare variety, grown only in a few places, especially in Harima.

“Early-ripening soy-beans are sown as early as April in Southern Japan, in Central Japan during May. Those that ripen in autumn need much more warmth, and are sown, as a rule, one month later... Late-ripening Daidzu is also a favourite for planting along the edge of fields and on the new-built dykes of rice-fields.”

“At the end of his above-mentioned treatise, Haberlandt summed up in five noteworthy propositions, the results of his experiments with the soy-bean and of its chemical analysis. His conclusions are as follows:

“(a) The acclimatization of the early-ripening sorts, particularly those with yellow and reddish brown seeds, appeared to have fully succeeded in Central Europe.

“(b) The seeds obtained were larger, heavier, and handsomer than those from Eastern Asia, the chemical composition, however, remaining unchanged.

“(c) The soy-plant resists light spring frosts better than our young beans, and endures greater dryness in summer than most leguminous plants, though otherwise much like other kinds of beans.

“(d) It is distinguished by heavy crops, besides furnishing, in its stems and leaves, either green or dried, a nourishing feed, of which cattle are very fond.

“(e) In their high percentage of protein and fat, they far excel all other pulse in nutritive quality; and when properly prepared are second to none in flavour.

“After such favourable judgments, it might have been expected that the soy-bean, at least in the warmer regions of the Austro-Hungarian monarchy, would soon become popular and generally cultivated. The result, however, was quite otherwise. The hopes which he had aroused in behalf of this plant seem to have disappeared with Haberlandt, who died in 1878.

3. Azuki beans (many varieties are named and described).

Two tables (p. 73-74) show the following: (1) Analysis of 10 different numbered samples of soybeans, empty pods, and straw and leaves. Eight are from Haberlandt's book *Die Sojabohne* [The Soybean] (1878), two are from Caplan, and one each from Mach, Senff, Levallois, and Kinch. (2) Comparative composition of 9 different legumes, including soybeans, azuki beans, common peas, broad beans / faba beans, lentils, yellow lupins, and peanuts. The soybean has by far the most crude protein, is second in fat (after peanuts), and is average in (minerals).

Foods made from soybeans (p. 123-27): Shoyu (*Shôyû*, *die japanische Bohnensauce*, *auch Soja*). Miso (made with rice koji). Tofu (*Tôfu*, *Bohnenkäse*), incl. dried-frozen tofu (*Kori-tôfu*, *gefrorener oder Eis-Tôfu*).

“Kori-tôfu, frozen or ice-Tôfu, is the spongy, horn-like substance that remains when common Tôfu is allowed to freeze and then thawed and dried in the sun, thus getting rid of most of its water. By Yuba [Yuba] is meant a third preparation, consisting of brownish, tough skins (*Häuten*), made by boiling the dissolved legumine of the Tôfu-process, with the addition of some wood-ashes, and then taking away in succession the skins that rise” (p. 126-27; see Rein 1889).

Note 1. This is the earliest German-language document seen (Oct. 2008) that contains the word Yuba.

The section on “Oil plants and their products” (p. 176-89) gives details on 13 plants and the oil obtained from them, including: 1. Rapeseed oil. 2. Mustard oil. 3. Camellia oil. 4. Cottonseed oil. 5. Peanut oil. 6. Sesame oil. 7. Perilla oil (*Perilla ocymoides*). 11. Hempseed oil. Soybean oil is not one of these. However a table (p. 185) gives the average composition of various Japanese oilseeds (Source: E. Wolff et al.; Ollech 1884): Rapeseed, peanuts, cottonseed, sesame (brown and white), hemp seeds, shelled beech-nuts, and soybeans.

Note 2. Volume 1 was published in 1881. The title of volume 2 is Land-und Forstwirtschaft, Industrie und Handel. Johann Justus Rein lived 1835-1918.

Note 3. This is the earliest German-language document seen (Feb. 2004) that uses the term “kori-tôfu,” or “gefrorener Tôfu,” or “Eis Tôfu” to refer to dried-frozen tofu.

Note 4. Also discusses: Ame, midzu-ame, and barley malt syrup (p. 121-22). Fu, or baked wheat gluten cakes. Hemp, hempseed, and hempseed oil (p. 88, 177, 184-85). Kudzu (p. 75, 199, 217). Peanuts and peanut oil (p. 176-81, 185). Sea-weeds—especially marine algae (p. 93-96). Sesame seeds and oil (p. 88, 176-78, 181-82, 185). Address: Prof. of Geography, Univ. of Bonn, Germany.

268. Kellner, O.J.; Mori, Y[ôtârô]. 1887. Beitrage zur Kenntnis der Ernaehrung der Japaner [Contributions to an understanding of the nutrition of Japanese]. *Mittheilungen der Deutschen Gesellschaft fuer Natur- und Voelkerkunde Ostasiens in Tokio (Yokohama)* 4(37):305-21. Aug. [37 ref. Ger]

• **Summary:** *Vegetarian Messenger* (May 1888, p. 127-28) states that the staple diet of the Japanese “is almost wholly Vegetarian... As to beef, however (there is no mutton in Japan), there can be no question that its consumption is very small. In 1882, only 36,288 beasts were slaughtered, or about one kilogramme of meat per head of population, and it must be borne in mind that a large consumption takes place at the open ports amongst Europeans, and in the proximity of vessels... It would appear that the flesh of mammals is almost entirely excluded from that diet.” Address: Tokyo.

269. Kellner, O.J. 1887. Zusammensetzung Japanischer landwirtschaftlicher und technischer Producte und Materialien [Composition of Japanese agricultural and technical products and materials]. *Mittheilungen der Deutschen Gesellschaft fuer Natur- und Voelkerkunde Ostasiens in Tokio (Yokohama)* 4(35):205-22. Sept. See p. 205, 208-09. [Ger]

• **Summary:** The introduction (p. 1) contains a list of publications on agricultural chemistry and chemical nutritional physiology published by this laboratory under Dr. Kellner's direction. These include investigations of seeds, hay, straw, manures, and technical products (alcoholic drinks and shoyu).

A large table (p. 8, probably based on Kellner's research) gives the German name, botanical name, Japanese name, and nutritional composition of 12 leguminous seeds and oilseeds (on a dry-weight basis, plus their ash), including soybeans (*Sojabohne*, *Soja hispida*, *daizu*), shelled peanuts (*Erdnuss*, *Arachis hypogaea*, *Nankin mame*), and sesame seeds (*Sesam*, *Sesamum orientale*, *goma*).

A discussion of the soybean (p. 209) notes that it is widely cultivated in Japan and also used to make a variety of other products that resemble those made from milk. Soybeans are not often consumed directly, but are used in the preparation of tofu (*Bohnenkäse*), miso, and shoyu sauce. A small table gives the nutritional composition of three additional soybean varieties that are used for shoyu production. They all contain less protein and more fat than the soybean from the previous large table.

Another large table (p. 215) gives the German name, botanical name, Japanese name, and nutritional composition of 12 plants purchased at a market in Tokyo, including: kuzu (-, *Pueraria Thunbergiana*, *kudzu*), peanuts (*Erdnuss*, *Arachis hypogaea*, *Tojin-mame*), and soybeans (*Sojabohne*, *Soja hispida*, *kari mame*). The soybeans contain 13.67% water. Their dry matter contains 18.11% raw protein, 3.07% ether extract [crude oil], 39.16% crude fiber, etc.

Other large tables gives the composition of kudzu (p. 217), kombu (*Laminaria japonica*, p. 219), okara (*Tofukuchen*, *Tofurückstände*, p. 221), and various alcoholic beverages (p. 221, including sake {made from koji}, mirin, shirosake (white sake), white Kofu wine, and Sakurada beer brewed in Tokyo). A small table (p. 221) gives a nutritional analysis of three samples of shoyu, including the specific gravity (density relative to water), dry matter, organic matter, ash, and acid (as acetic acid). Address: PhD, Tokyo.

270. Tawara, R. 1887. Nihon shoku no chôsa (Zen kôno tsuzuki). Shoku sen chôsa [Investigation of Japanese foods. Part II]. *Tokyo Kagaku Kaishi (J. of the Tokyo Chemical Society)* 8:53-76, 77-101. [Jap]

• **Summary:** Discusses miso, natto, tofu, and yuba.

271. Hepburn, James C. 1887. A Japanese-English and English-Japanese dictionary. Abridged by the author. Second edition. Revised and enlarged. Tokyo: Z.P. Maruya & Co., Limited. Yokohama: Kelly & Walsh, Limited. London: Truebner & Co. vi + 330 + 962 p. 16 cm.

• **Summary:** James Curtis Hepburn lived 1815-1911. Address: M.D., LL.D., Tokyo, Japan.

272. Smithsonian Institution Board of Regents. 1887. Annual report of the Board of Regents of the Smithsonian Institution. Part II. Washington, DC: The Institution. xviii + 771 p. See p. 73-74. Illust. Index.

• **Summary:** Part II is "United States National Museum." Otis T. Mason is curator of this museum (p. 63). Under "Report of the Department of Ethnology," accessions are listed by country. Under "Japan," is a list of 304 "Japanese articles used chiefly in the former times. (Following mainly Dr. Klemm's classification, Smithsonian Report, 1873.)." Both the Japanese name of these items and a translation of that name are enumerated. These include various kitchen utensils:

"113. Saji, wooden spoon... 125. Suribachi, a bowl for rubbing Miso, (fermented mixture of soy beans, wheat, and salt)... Misokoshi, a [bamboo] sieve for filtering miso. 154. Misoshiru wan, Miso soup bowl. 155. Hira, flat wooden bowl for fish and vegetables... 167. Shoyutsugi, Shoyu pourer... 182. Misoshiruwan (see No. 154)." Address: Rev. and author [England].

273. Kellner, O.J. 1888. Researches on the composition and digestibility of Japanese feeding stuffs. *Bulletin of the College of Agriculture, Tokyo Imperial University* 1(2):1-45. July. See p. 25-29, 39-45. [3 ref. Eng]

• **Summary:** Section "V. Hay of soy beans (karimame)" (p. 25-29) describes experiments feeding soy bean hay to sheep (rams). "This hay is considered the best coarse fodder in this country. It is usually cured, when the pods have developed their normal size but the leaves are still green. A specimen of such hay was examined in 1883 by Mr. *M. Ota*."

In part "II. Soy bean (daizu)" (p. 39-45), Kellner notes: "Although the soy beans are somewhat expensive owing to their principal utilization as human food (tofu, miso and shoyu), it may happen that small proportions of them are resorted to in the feeding of the live-stock, for the purpose of supplementing the protein of a ration otherwise too poor in that nutrient." Soy beans, apparently raw, were fed to sheep. Feces ejected, water drunk, and live weights were measured. The article concluded: "The specimen of soy beans examined by us contains the following proportions of digestible nutrients, percent of the dry matter: Crude protein 34.30, fat 18.25, fiber 9.09; nitrogen-free extract 19.65; the last 2 total 28.74.

“Of all raw vegetable products, earth nuts perhaps excepted, the soy beans are the richest in the most valuable nutrients, protein and fat, and contain them in a highly digestible form.”

Note 1. This is the earliest English-language document seen (April 2008) that uses the term “human food” in connection with soy beans.

Note 2. This is the earliest English-language document seen (Aug. 2003) that contains the term “crude protein” (or “crude-protein” or “crude proteins”) (one of two documents). Address: Dr., Prof. of Agricultural Chemistry, Imperial College of Agriculture and Dendrology, Komaba, Tokyo, Japan.

274. Tsuboi, Jirô. 1888. Miso no gan chitsubutsu [Nitrogenous matter of miso]. *Tokyo Igakkai Zasshi (J. of the Tokyo Medical Society)* 2(18):952-54. Sept. [Jap]*

• **Summary:** The author took 2,508 gm of miso powder (*miso-ko*), added 50 cc of 80% alcohol, and boiled it for 3-2 minutes. He put on a wooden lid or stopper and kept it in a warm water bath at 60°C for several hours. Then he filtered it, added 25 cc of water to the remaining solids, extracted the liquid, and made that extract more concentrated by putting it in a warm water bath. He added oxalic acid (*shû-san*) and evaporated it dry. He then removed the dark brown substances remaining, measured the nitrogen. He calculated the nitrogen extract (*ekisu-sei chisso*) and found that it was 0.204%, while the total nitrogen was 1.158%. Therefore the nitrogen in miso is found mostly in the protein and the amount of nitrogen in the extract (*ekisu-bun*) is very small. The *ekisu-sei chisso* is 17.616% of the total nitrogen. (Tô I Kai 2, 952-954 [Sugi]).

275. Egasse, M. 1888. Le soja et ses applications économiques et thérapeutiques: Matière médicale et thérapeutique [Soja and its economic and therapeutic applications: Medical and therapeutic subject-matter]. *Bulletin General de Therapeutique Medicale, Chirurgicale, Obstetricale et Pharmaceutique* 115:433-48. [28 ref. Fre]

• **Summary:** This is a review of the literature, especially the use of soy in diabetic diets. The author was one of the first Westerners to suggest the therapeutic use of soybeans in diabetic diets. Illustrations show: (1) A soy bean plant (from Vilmorin 1883, p. 434). (2) Two views of a soy bean and a cross section of soy bean seed (both from Blondel, p. 435). Discusses (with 11 tables) the work of Haberlandt in Austria-Hungary, Steuff in Germany, Schroeder (a chemist) in Napagedl [in Mähren / Moravia, a region in today's central Czech Republic], Capan [sic, Caplan] in Vienna, Pellet in France, P. Muntz, A. Levallois, Stingl and Morawski, E. Kaempfer, Eug. Simon, Champion, L'hôte and Champion, Mr. Lecerf, Mr. Dujardin-Beaumetz and Mr. Bourdin at Reims (soy bread), and Mr. Lailleux in Algeria.

Blondel (1888) reports the absence of starch in all parts of the soybean seed (p. 435).

“Soybeans are used above all to prepare foods: in Japan, miso and shoyu (*le soojû*), in China an imitation of milk (*une imitation du lait* [soymilk]) and a cheese (*un fromage* [tofu]) greatly appreciated by the common people” (p. 441).

“Throughout China, soybeans (*les graines du soja*) are also used to prepare a milklike / lacteal emulsion (*une émulsion leiteuse*) which replaces milk and which is obtained by crushing the seeds, soaking them in water, and simply passing the liquid through a fine sieve. The [soy] milk, this liquor (*liqueur*), only looks like [dairy] milk, but since [dairy] milk is extremely rare, this liquor supplements the milk [i.e., soymilk supplements dairy milk] from the alimentary point of view” (p. 443). Note: This is the earliest French-language document seen (Oct. 2003) that uses the term *une imitation du lait* or *une émulsion leiteuse* to refer to soymilk.

“The applications of soybean seeds for the feeding of diabetics is not numerous. Yet we know, via an oral communication from Mr. Lailleux, former intern at the hospital in Algiers, that a certain number of diabetic Arabs under treatment at the hospital of Dey, in Algiers, have seen, under the influence of a dietary regimen based on soybean pap, that not only did the content of sugar in their urine diminish by a considerable proportion, but also the condition of their sores was improved, a condition which like all of its type had resisted other treatments employed. If this fact can be verified again, either with soy pap or soy bread, the therapy would have found in soybeans an aid of great utility in the ordinary treatment of diabetes mellitus, which is so difficult for most patients to stand, especially because they must abstain from starches for which they generally show such a strong appetite” (p. 447). Address: France.

276. Kellner, O.J.; Mori, Y.; Nagaoka, M. 1889. Researches on the manufacture, composition, and properties of “koji.” *Bulletin of the College of Agriculture, Tokyo Imperial University* 1(5):9-33. July. [10 ref. Eng]

• **Summary:** A detailed analysis. “*Koji* i.e. steamed rice or barley upon which is developed the mycelium of special fungus plays an essential part in various manufacturing processes peculiar to Japan and China. It is used as a saccharifying substance in the preparation of rice wine (*sake*) and alcohol (*shochiu*) and seems likewise to be the chief active ingredient which brings about the slow fermentation as well in the manufacture of *miso*, a food adjunct very common in Japan, as in the preparation of *shoyu*, a peculiar sauce also largely consumed in the country.

“... we prepared koji from rice and barley in the following way, which is generally adopted in the koji works, and which has already been described by O.

Korschelt (1878), and R.W. Atkinson (1881).” Address: Dr., Prof. of Agricultural Chemistry, Imperial College of Agriculture and Dendrology, Komaba, Tokyo, Japan.

277. Kellner, O. [Oskar Johann]; Nagaoka, M.; Kurashima, Y. 1889. Researches on the manufacture and composition of “miso.” *Bulletin of the College of Agriculture, Tokyo Imperial University* 1(6):1-24. Dec. [12 ref. Eng]

• **Summary:** Contents: Introduction. Raw material and preparation of miso: Soy beans, koji from rice or barley, common salt. The chemical processes during the ripening of miso (incl. chemical composition of fresh substance and dry matter, which include nitrogenous substances or albuminoids, ether extract [crude fat], carbohydrates, crude fibre, ash, solubility, water). Varieties, composition, and nutritive properties of miso: (1) “Shiro miso, white miso, is characterized not only by its white colour but also by its low content of salt and by the short time it will keep good”—no longer than 10 days; 4 days fermentation time. (2) “Yedo miso, so called from the former name of the metropolis” [Yedo/Edo, now Tokyo]; 20 days. (3) “Inaka miso, country miso, is the richest in salt and is prepared with the help of barley koji”; 11-12 months. (4) “Sendai miso derives its name from the city of Sendai in Miyagi prefecture where it is widely prepared, but is frequently also termed *Aka miso* (red miso)”; 8-15 months. (5) Other sorts of miso which are only of local importance. Four are consumed mostly in miso soup: Sano miso, Nagaseyama miso, Mikawa or Sanshiu miso [Sanshu miso]. Four others can be consumed uncooked and used as condiments: Kinzanji miso (“named after a Buddhist temple and prepared by fermenting a mixture of soy beans, barley koji, salt, starch-sugar [*amé*], slices of egg plant [*Solanum melongena*], and ginger roots”), Sakura miso (“quite similar to the preceding, but sweeter on account of an admixture of large quantities of starch-sugar or raw cane sugar”), Tetsuka miso [Tekka miso] (“is common miso with the addition of sesamum oil, roasted soy beans, and slices of the roots of burdock [*Arctium Lappa*]”), Kogo miso (“is prepared like common miso but with an addition of rice bran”).

The introduction begins: “Miso, e.g. a food prepared from a mixture of soy beans, rice or barley, common salt, and water, by slow fermentation, seems to have been known in Japan since remote times. Its manufacture, like so many other useful processes, appears to have been taught to the Japanese by Chinese or Koreans. At least the *Sandai jitsu roku*, tells us, that a Chinese priest named *Jingo* transmitted more than 1000 years ago a small quantity of miso to the then Emperor of Japan, and the name ‘*Korei shiwo*’ sometimes, though not frequently used instead of the word ‘miso,’ points to its introduction from Korea, where indeed, as well as in China, miso is still a favorite food.

“In Japan miso is very widely consumed, especially by the lower classes, who enjoy it as a sort of food adjunct to

the vegetables of which their daily diet consists. Although it is eaten throughout the whole country, it seems to be especially favoured in the north-eastern provinces. Statistics on its consumption do not exist at present and may also be difficult to compile, as in the countryside it is made by families themselves [at home], and only in large communities are special miso works [factories] established. Assuming, however, 10 monme (37.5 grms.) to be the lowest quantity daily consumed per head, and 20 millions out of the 39 [million] of the whole population to eat miso every day, a yearly amount of nearly 30 million kilograms of miso is arrived at, for the preparation of which more than half the yearly produce of soy beans (2.3 million koku [335,000 tonnes] in 1883) is needed. Although these figures are certainly too low, they surely indicate the importance of this food in the nutrition of the Japanese people.”

Tables show: (1) The composition of three different types of soy beans that make good shoyu and good miso, and the weight of 1000 grains/seeds of each (p. 3). (2) The composition of four different types of sea salt: Ajino from Bizen, Ako from Harima, Mitajiri from Suwo, and Giotoku from Shimosa [Shimōsa] (p. 4). (3) The composition of soy beans and of barley, and amount of each used in making miso (p. 6). (4) The composition of the fermenting miso after 50, 85, 120, and 150 days, on a fresh (as-is) basis (p. 7) and a dry-matter basis (p. 8). (5) Changes in nutrients in the soy beans and in the barley during fermentation (p. 11). (6) Changes in the miso during fermentation (p. 13). (7) Temperature of the original mixture and length of fermentation for four types of miso: Shiro miso, Yedo miso, Inaka miso, and Sendai miso (p. 15). (8) Composition of five types of miso (p. 19). (9) Proportion of raw materials, age, temperature of the beans when mixing them with the other ingredients, and price per *kin* (=0.601 kg) of the same four types of miso.

Note 1. Dr. Kellner published three subsequent articles in this journal but none concerned soybeans: (1) “Manuring experiments with paddy rice” (Bulletin No. 8, June 1890); (2) “Manuring experiments with paddy rice. (Third year)” (Bulletin No. 11, July 1892); (3) “Comparative experiments on the effects of various phosphatic fertilizers on upland soil, and analysis of rice grain” (Bulletin No. 12, March 1893).

Note 2. This is the earliest English-language document seen (Sept. 2002) that contains statistics on the production or consumption of soyfoods (in this case miso), in Japan.

Note 3. This is the earliest document seen (Sept. 2002) that contains statistics on miso by geographical area.

Note 4. This is the earliest English-language document seen (Aug. 2001) that mentions the word “nutrition” in connection with soy.

Note 5. This is the earliest document seen (March 2009) that mentions “Inaka miso” [made at home in the countryside], or “Tetsuka miso” [Tekka miso], or “Yedo

miso" [Edo miso], or "Sendai miso" [a dark rice miso made in and around the city of Sendai], or "Kinzanji miso," or "Sanshu miso" [Sanshu miso, a soybean miso made in central Japan].

Note 6. The parallel Japanese title of this English-language periodical is *Tôkyô Nôrin Gakkô. Gakujutsu hôkoku*. Address: Dr., Prof. of Agricultural Chemistry, Imperial College of Agriculture and Dendrology, Komaba, Tokyo, Japan.

• **Summary:** The Japanese practice a near-vegetarian diet and consume very little meat. In 1882 only 36,288 cattle were slaughtered and the 37 million inhabitants consumed less than 1 kg per capita each year. The authors found that rice constitutes about 50% of the total vegetable food of the Japanese, followed by barley and wheat (27%), other small grains such as millet and buckwheat (13.9%), with green vegetables, roots, tubers, etc. making up the remainder. Soybeans, which are rich in protein and fat, are not widely consumed as such directly, but are made into other unique foods such as tofu and miso, and a tasty sauce, shoyu. Miso is made in almost every household in Japan. The process for making miso, tofu (*Bohnenkäese*), and shoyu is described (p. 103-04).

A table (p. 121) gives the chemical composition of various Japanese foods (on a moisture-free basis), including soybeans cooked with shoyu, and tofu (*Bohnenkäese*). Address: Tokyo, Japan.

279. Koenig, Franz Joseph. ed. 1889. *Chemische Zusammensetzung der menschlichen Nahrungs- und Genussmittel*. Vol 1. *Chemische Zusammensetzung...* Ed. 3 [Chemical composition of human foods and food adjuncts (stimulants / enjoyables). Vol. 1. Chemical composition... 3d ed.]. Berlin: Verlag von Julius Springer. 1161 p. See p. 241-42, 595-600, 625, 631-32, 1041. See also Vol. 2, 1893. [21 ref. Ger]

• **Summary:** Summaries of early studies on chemical composition of soybean seed and of miso. The long and interesting section titled "Commercial sauces and food seasonings" (p. 241) is discussed in a separate record.

A table (p. 389) gives numerical data on the oil from various oilseeds, including the soybean: Melting point, saponification number, neutral fat (*neutralfett*), free fatty acids, total fatty acids, molecular weight of the fatty acids, lecithin, stearic acid from lecithin, phosphorus, unsaponifiable components.

Pages 486-90 give a good review of the literature on soybeans, discussing the various types, composition, shoyu or soy sauce, koji, Japanese miso, and tofu. A table (p. 489)

gives the composition of 5 soy products analyzed by Edward Kinch: White miso, red miso, fresh tofu, frozen tofu, and soybean cake. König notes that some of these foods are not suited for the German palate, however E. Wein makes several good-tasting dishes from soybeans, used in a soup like beans or peas, in a salad like green beans, or cooked with potatoes or rice and pureed to resemble the Italian 'Polenta'—called 'Sojenta' by Haberlandt. The taste of these soybean preparations reminds one somewhat of almonds or chestnuts. See also soy flour under "Meal" (*Mehl*) (p. 625).

Pages 595-600 give detailed nutritional analyses of soybeans based on studies by various authors: Black oblong soybeans (based on E. Wein 1881, and Edw. Kinch 1882). Yellow soybeans (Anderson, Senff, Fr. Schwackhoefer and Joh. Stua, Zulkowski, E. Mach and K. Portele [of Vers.-Stat St. Michele, original communication; harvested in Tirol, Austria, in 1877], R. Ulbricht and von Koritsánsky [Koritsansky, of Acad. Laborat. of Hungarian Altenburg, original communication; harvested in Hungarian Altenburg in 1878], E. Wildt [of Vers.-Stat. Posen, original communication; harvested in Posen], Schroeder-Napagedl, Blaskovics, Wein, Weiske, Kinch). Brown soybeans (Schwackhoefer, Zulkowski, E. Mach and K. Portele, Ulbricht, E. Wein, Schroeder, Weiske, Kinch). Black round soybeans (Senff, Mach, Wein, Kinch). Other soybeans (Caplan, Mach, Wagner, H. Pellet, Carriere, Kinch, Meissl, Kellner, Jenkins). Soybeans grown with fertilizer / manure (*Gedüngte Sojabohnen*, E. Wein).

Page 625 contains one analysis of whole soybean flour (Sojabohnenmeal) conducted in 1882 by C.H. Knorr in Heilbronn; the analyst was *v. d. Becke und Cosack*. This flour contained 10.23% water, 25.69% nitrogenous substances, and 18.83% fat, etc.

Pages 631-32 give detailed nutritional analyses of soybean products based on studies by various authors: Leguminose-Maggi (18 brands made by Jul. Maggi & Co. in Kempthal, Switzerland; sampled from 1885-1888; studies by E. Schumacher-Kopp, M. Wesener [personal communication]). Soybean preparation named "miso" (Made by Jul. Maggi & Co. in Kempthal; sampled in 1888; Study by W. Kisch [personal communication]). Miso (red or white, 1882; by Edw. Kirch [sic, Kinch]). Tofu (fresh or frozen; E. Kirch [sic, Kinch]). Address: Prof. and Head, Agricultural-Chemical Experiment Station, Muenster in Westphalia, Germany (Professor und Vorsteher der Agric.-Chem. Versuchsstation Muenster i. W., Germany).

280. Rein, Johann J. 1889. *The industries of Japan*. Together with an account of its agriculture, forestry, arts, and commerce. London: Hodder and Stoughton. xii + 570 p. See p. 6, 55-59, 62-63, 105-08, 157. Illust. Indexes (English and Latin; Japanese). 26 cm. [3 ref. Eng]

• **Summary:** This book is a translation of volume II of his superb book *Japan nach Reisen und Studien*, published in 1886. The result of many years of study, including a stay in Japan, it is based on travels and researches undertaken at the cost of the Prussian government. On page 6, the author discusses the *Gokoku* (five chief cereals) and the introduction of agriculture to Japan. “As Tokugawa Ieyasu, the founder of the last Shōgun [shogun] dynasty, emphasizes in the twelfth of his ‘Eighteen Laws,’ the introduction of agriculture into Japan is ascribed to the sun-goddess *Tenshō Daijin* (Amaterasu). She was, to the old Japanese, Janus and Ceres in one. Her temple, at Yamada, in Ise, was the great national sanctuary, which had to be cared for according to law, and built anew every twenty-one years out of consecrated Hinoki-wood (*Chamaecyparis obtusa* S. and Z.) ‘in order that the land might have peace and thrive.’ By *Gokoku* (five chief cereals) were meant rice, barley and wheat, Italian millet, other kinds of millet, and beans—in fact, the principal *Kokurui*, that is, cereals and pulse. The term *Go-koku*, however, did not mean the same thing in all ages. Thus we find in Kaempfer, *Amoenitatum exoticarum* (1712, p. 834), *Kome* (*Oryza*), *O-mugi* (*Hordeum*), *Ko-mugi* (*Triticum*), *Daidzu* (*Dolichos soja*, L.), and *Adzuki* (*Phaseolus radiatus*, L.) mentioned as *Gokoku*. Later the idea was extended farther, and included all important food-plants belonging to the group of cereals and pulse.”

“The Emperor Shinnung [Shen Nung] had introduced and spread the practice of agriculture in China, about the year 2700 B.C. For this he was deified after death, and a temple was dedicated to him in Peking. In the park-like surroundings of this temple, the emperor of China since then, at the time of the spring equinox, annually ploughs a piece of land and sows it with *go-koku*.” Note 1. This is the second earliest document seen (Dec. 2000) that gives an early date (2700 B.C.) for Shen Nung. It is the earliest document seen (Dec. 2000) that weakly links Shen Nung with soybeans, which were probably one of the *Gokoku*.

Soy-bean is described in the chapter on “Food Plants,” under “Pulse or Leguminous Plants.” “Among the pulse of Japan (and not the less of China), the soy-bean ranks first in extent, variety of use, and value; and chemical analyses prove the empirical judgment is well founded. In point of nutriment, the soy-bean is of all vegetables the nearest to meat. It contains nearly two-fifths of its weight in legumin rich in nitrogen, and nearly one-sixth in fat. The soy-bean is to the inhabitants of Japan what their *garbanzos* (chick-peas) are to the Spanish, and their *feijao preto* (black beans) to the Brazilians. The author then describes the characteristics of the soy-bean, the work of Haberlandt with soy-beans in Austria, and the yields that he and his co-workers obtained. Note 2. This is the earliest English-language document seen (June 2008) that uses the word “*garbanzos*” (or “*garbanzo*”) to refer chick peas.

“In Japan the varieties of soy-bean are distinguished—according to colour, as white (more properly yellowish), black, brownish red, green, and spotted; according to duration of growth [maturity] as early-ripening, middle-ripening, and late-ripening; according to form, as spherical, ellipsoidal, kidney-shaped, and compressed laterally; and according to use, as to those which serve primarily in making *Shōyu* (soy), *Tōfu* (bean-cheese), and *Miso* (a sort of sauce), and those eaten in any plain shape.” Soy-bean varieties in Japan include: 1. “White (pea-yellow) soy-beans, Japanese *Shiro-mame* or *Haku-daidzu*. To this division belongs an early-ripening sort with very small seeds, called *Goguwatsu-mame* [*Go-gatsu*], or ‘five-months-kind,’ because it ripens in the fifth month of the old Japanese calendar, our July; also another small-seeded, early-ripening variety, the *Wase-mame* or *Natsu-mame*, that is, early and summer-bean. These two are also called *Tōfu-mame*, because they are used chiefly in making *Tōfu*. Another sort serves to produce *Miso*. It is called *Nakate-mame*, ‘middle-late bean,’ its time of maturity occurring half-way between that of the early and late kinds. Its seeds are round and somewhat larger. The late ripening varieties, *Okute-mame* (late-bean), *Maru-mame* (bullet-bean), and *Teppō-mame* (gun-bean), or *Aki-mame* (autumn-bean) have, as their names indicate, mostly bullet-shaped seeds, which become harder and larger than the early ones. The variety last named is used in making *Shōyu*, while *Maru-mame* is valuable as horse-feed.

2. Black soy-beans, Japanese *Kuro-mame* or *Koku-daidzu*. These are eaten boiled with sugar, as an entrée, or as a relish to rice. A species like it with big, bullet-shaped beans is called *Kuro-teppō-mame*. 3. Brown soy-beans, Japanese *Katsu-daizu* (thirsty soy-bean) are much less grown than the white and black sub-species, and are used like the latter. They are distinguished as *Aka-mame*, red soy-beans, round, of red-brown colour, in different varieties, and *Cha-mame*, tea beans, three light-brown sorts of small extent and significance. 4. Greenish or bluish green soy-beans, Japanese *Ao-mame* or *Sei-daizu*, are eaten mostly boiled and with sugar, like the black and brown-red varieties. And, with the brownish sorts, they are much less widely grown than the black and yellowish. The Japanese distinguish the following sub-species of *Aō-mame*:—(a) *Sei-hito*,—epidermis green, inside a whitish yellow. (b) *Nikuri-sei*,—greenish throughout. Both sub-varieties run from roundish-ellipsoidal to a bullet roundness, are of medium size, and remind one of green peas. (c) *Kage-mame*, with pale green, round beans. 5. Speckled soy-beans, Japanese *Fuiri-mame* or *Han-daidzu*. This group is not important. Its cultivation is confined to a small area, in a few provinces. Its sub-varieties are known as:—(a) *Kuro-kura-kake-mame*, with a black spot on the saddle (eye), otherwise greenish; flat and with the outline of an egg. (b) *Aka-kura-kake-mame*, with a brown spot on the saddle (eye), otherwise

yellowish-green, flat and drawn out long. (c) Fuiiri-mame or Udzura-mame, speckled or spotted soy-bean, yellowish-green with many dark flecks. A rare variety, grown only in a few places, especially in Harima. Note 3. This is the earliest English-language document seen (Sept. 2004) that uses the word “speckled” (or “speckling” or “specks”), or the word “flecks,” or the term “light-brown” to describe the color of soybean seeds.

“Early-ripening soy-beans are sown as early as April in Southern Japan, in Central Japan during May. Those that ripen in autumn need much more warmth, and are sown, as a rule, one month later... Late-ripening Daidzu is also a favourite for planting along the edge of fields and on the new-built dykes of rice-fields.”

“At the end of his above-mentioned treatise, Haberlandt summed up in five noteworthy propositions, the results of his experiments with the soy-bean and of its chemical analysis. His conclusions are as follows:

“(a) The acclimatization of the early-ripening sorts, particularly those with yellow and reddish brown seeds, appeared to have fully succeeded in Central Europe.

“(b) The seeds obtained were larger, heavier, and handsomer than those from Eastern Asia, the chemical composition, however, remaining unchanged.

“(c) The soy-plant resists light spring frosts better than our young beans, and endures greater dryness in summer than most leguminous plants, though otherwise much like other kinds of beans.

“(d) It is distinguished by heavy crops, besides furnishing, in its stems and leaves, either green or dried, a nourishing feed, of which cattle are very fond.

“(e) In their high percentage of protein and fat, they far excel all other pulse in nutritive quality; and when properly prepared are second to none in flavour.

“After such favourable judgments, it might have been expected that the soy-bean, at least in the warmer regions of Austro-Hungary, would soon become popular and generally cultivated. The result, however, was quite otherwise. The hopes which he had aroused in behalf of this plant seem to have disappeared with Haberlandt, who died in 1878.

“As I know from a reliable source, people soon became convinced that it was possible to cultivate with certainty the early-ripening yellow sorts. The crops from these, however, are unsatisfactory. It is so difficult to boil them soft that they have no sale and cannot be turned to due account.”

The seeds of certain wild kinds of beans also serve for food, incl. Tsuru-mame or No-mame (*Glycine soja*, S. and Z.) and No-adzuki (*Atylosia subrhombica*, Miq.). (p. 62).

Tables (both based on other sources) show: (1) Analyses of soy-beans (*Glycine hispida*, Moench) (p. 62). Gives the nutritional composition of 8 varieties, plus the empty pods, and the straw and leaves. (2) Comparative “analyses of various pulse” (p. 63), including *Glycine hispida* (Daidzu—soy-beans), *Phaseolus radiatus* (adzuki), *Pisum sativum*

(Yendo—peas), *Vicia faba* (Sora-mame), lentil, yellow lupine, and ground-nut.

Pages 105-08 contain detailed discussions of shoyu, miso (which “does not spoil, and is said to be at its best when three years old”), and tofu.

A table titled “Average composition of various Japanese oil-seeds according to E. Wolff and others” (p. 157) includes the composition of ground-nut [peanut], sesame (brown, or white), hemp-seed, and soy-beans.

Also discusses: Adzuki (*Phaseolus radiatus*, p. 60, 108). Algae, marine, used as food [sea vegetables] (p. 77, 80-82). Ame, midzu-ame, and barley malt (p. 103-04). Arachis hypogaea (p. 56, 153-54). Fu (wheat gluten, p. 108). Hemp (*Cannabis sativa*, p. 75, 157, 165-66). Kudzu (p. 65, 160, 184). Sesame seeds (Benni-seed, gingeli, p. 154-55). Address: Prof. of Geography, Univ. of Bonn [Germany].

281. Kellner, O[skar Johann]; Mori, Y[ōtarō]; Nagaoka, M[uneshige]. 1890. Beitrage zur Kenntniss der invertirenden Fermente [Contributions to the knowledge of inverting enzymes]. *Hoppe-Seyler's Zeitschrift fuer Physiologische Chemie* 14(3):297-317. [13 ref. Ger]

• **Summary:** This article contains a long analysis of the role of koji and its enzymes (*Koji-Ferment*) in the fermentation process that creates rice wine (saké). The process of making koji from spores is described, as well as the quantitative changes which take place with the development of the mycelium on two substrate (rice or barley) at various temperatures. The work of Prof. Atkinson is discussed at length.

On pages 306-08 Kellner gives the results of his experiments on the effects of koji extracts on various carbohydrates: cane-sugar, milk sugar (lactose), maltose, inulin (a tasteless white polysaccharide), and starch. (Note: In chemistry, inversion, is the conversion of dextrorotary sucrose into a levorotary mixture of glucose and fructose). Before the inversion, there is 4.04% reducing sugar, expressed as dextrose (optical rotation 20.9°); after the inversion there is 7.46% (optical rotation 8.4°). Kellner summarizes these results on p. 310 as follows: “From our investigations, one can conclude that koji contains a powerful inverting ferment [enzyme], which transforms cane sugar into dextrose and levulose, maltose into dextrose, and starch into dextrin, maltose, and dextrose. However milk sugar and probably also inulin are not transformed. Therefore the koji enzyme (*Koji-Ferment*) is entirely different from the diastase of malt; it is also probably different from the invertin (*Invertin* = invertase) of beer yeasts, which easily inverts cane sugar to dextrin and maltose—according to Mr. J. Kjeldahl. Kellner then repeats the experiments on carbohydrates using yeast extracts (p. 311-13) and confirms that the latter give different results than koji extracts. He then coins the term “Invertase” (p.

313) to refer to the inverting enzyme in *Eurotium Oryzae* Ahlb. (later renamed *Aspergillus oryzae*, the koji mold).

On p. 316 Kellner explains: In addition, koji is frequently used in a mixture with considerable amounts of table salt (*Kochsalz* = NaCl), steamed soybeans, and other materials (*Stoffen*) for the preparation of miso (a food [*Nahrungsmittel*] very widely found throughout Japan) and shoyu (a sauce which is also known in Europe); it seems to be used here mainly as the carrier of a slow, often years long fermentation. "Since miso contains only 6-12% salt and shoyu contains about 150-160 grams of salt per liter, and since this salt limits the action of soluble ferments, we have investigated how the transformation of soluble starch takes place through invertase the presence of various amounts of salt." A table (p. 317) shows two experiments. The percentage of table salt in the mixture is increased from zero to 20% in five or six steps. As the percentage of salt increases, the reducing sugar (expressed as dextrose) decreases moderately, while the relative activity of the invertase decreases dramatically. Fehling's solution is used in the experiment. Address: Japan.

282. Watt, George. 1890. A dictionary of the economic products of India. Vol. 3. London: W.H. Allen & Co.; Calcutta, India: Office of the Superintendent of Government Printing. 534 p. See p. 509-11. Index (in Vol. 7). 25 cm. [14 ref]

• **Summary:** Contents related to the soy bean: *Glycine* (p. 509-10). *Glycine hispida*, Maxim. (p. 510-11): Synonyms, vernacular, references, habitat, oil, medicine, food and fodder, chemistry, the bean, oil.

Under *Glycine*: "Reference having been made to the authorities of the Calcutta Herbarium on the subject of *G. soja*, Sieb. et Zucc., being, as shown in the Flora of British India, a native of this country, Dr. Prain kindly went into the subject very carefully. He writes: 'We have not, from any part of India, any specimens of *G. soja* proper. The Khasi Hills plant is more erect, more hispid, and has larger legumes than the Himalayan, and indeed resembles *G. hispida*, Maxim., quite as much as it does the Indian cultivated "*G. soja*," which, indeed, it connects with *G. hispida*. It is, in fact, the plant most like the wild *G. soja*, S. et Z., which no one ever professes to have found wild in India, while it is also the one most like *G. hispida*, Maxim. (which has never been found wild anywhere). It is the plant collected by Dr. Watt and myself in the Naga Hills.'

"The writer noted on his Naga Hill specimens that they were found in a semiwild state, and that the plant was known to the Angami Nagas as *Tsu Dza*, a name not unlike *soja*. Throughout India, the soy bean is cultivated, black and white seeded forms being met with, which vary to some extent, but all preserve the specific characters of *G. hispida*. Plants raised at Saharanpur from Japanese seed have larger and broader leaves than the usual Indian forms. The fact

that this cultivated plant possesses, even among the aboriginal tribes, names which are original, i.e., in no way modern derivatives, points to an ancient cultivation, if, indeed, it may not be accepted as an indication of its indigenous nature. (Editor.)"

"Vern[acular]–Bhat, bhatwan, ram kurthi (Hind. [=Hindi or Hindoostanee]); Bhut (Punj. [= Panjabi]); Gari-kulay (Beng. [=Bengali]); Hendedisom horec (black-seeded), Pond disom, horec (white-seeded variety) (Santal); Tzu-dza (Naga); Bhatnas, bhatwas (Nepal); Seta, kala botmas (Parbat.); Musa, gya (Newar); Khajuwa (Eastern Terai); Bhut (Kumaun).

References: The author cites 17 early references concerning soya and, using information from these. : This brief bibliography on soya is one of the best and worst seen. Its is good in that it cites a host of previously uncited publications. It is bad in that the references are so abbreviated as to often be incomprehensible; and some of them are incomplete or incorrect.

Habitat: "Extensively cultivated throughout India and in Eastern Bengal, Khasia hills, Manipur, the Naga hills, and Burma, often found as a weed on fields or near cultivation."

Medicine: "A decoction of the root is said to possess astringent properties." Food and fodder: "The Soy-bean forms an important article of food in China and Japan. Since 1873, it has been successfully grown in the warmer parts of Europe. It is also widely spread, in a cultivated state, over a great part of the Himálaya [Himalaya] and the plains and lower hills of India. On the plains the crop is generally grown by itself, as a *kharif* crop; the seeds are sown from June to September, and the harvesting takes place from November to January.

"The bean is eaten in India in the localities where cultivated. The Rev. A. Campbell states that in Chutia Nagpur it is generally used roasted and ground as *satu*, or simply roasted in the form of *atá*. In other parts of the country it is also eaten in the form of *dal*. In China and Japan three preparations are made from the soy-bean, namely soy-sauce, soy-cheese, and a kind of paste. The last two of which are manufactured by crushing and pressing the seeds."

Note 1. An extensive "List of works consulted" (bibliography) appears in Vol. I (1889, p. xiii-xxii), followed by a list of contributors (p. xxiii-xxvi) and list of abbreviations (p. xxvii-xxxiii).

Note 2. This is one of earliest documents seen (March 2005) that clearly refers to the cultivation of soybeans in Burma.

Sir George Watt lived 1851-1930. This 7-volume work, published from 1889 to 1896, is arranged alphabetically by product. An extensive bibliography is in vol. 1, and the index comprises vol. 7. Address: M.B., C.M., C.I.E., Reporter on Economic Products with the Government of India.

283. Turner, Fred. 1891. New commercial crops for N.S. Wales: The cultivation of the soy bean (*Soja hispida*, Moench.). *Agricultural Gazette of New South Wales* 2(11):648-50. Nov.

• **Summary:** “The soy bean is indigenous in India, Japan and China. There are numerous varieties of the plant cultivated in those countries, including both tall and dwarf-growing kinds, but it is the large-seeded varieties of the latter which I would particularly recommend for cultivation in this Colony, because they are not only more easily managed, but, generally speaking, are more productive to any given area than the tall growing kinds. The dwarf soy is an annual hairy growing plant, growing about 2 feet high, with trifoliate leaves, and small flowers borne in short axillary racemes. These are succeeded by oblong three or four seeded hairy pods. As will be seen from the engraving of the plant, it is a good deal like the ordinary dwarf kidney bean in its habit of growth, but differs materially in the superior quality of the pulse which it yields. The very productive and pulse yielding plant has been cultivated in Asiatic countries probably from time immemorial, but only within the past twenty years or so has it attracted the attention of European cultivators. In the southern parts of Europe, the cultivation of the dwarf kinds have proved a great success, and in France they are said to be an important crop.

“Some of our leading seedsmen have now become aware of the value of the soy bean, and seeds are now obtainable in Sydney. The plant has already been grown in a small way in a few places in this Colony, and has proved itself well adapted to our climate, so that there is no risk in attempting its cultivation here, in suitable places, on a large scale.”

Note 1. This is the earliest document seen (July 2008) that clearly refers to soybeans in Australia or Oceania, or the cultivation of soybeans in Australia or Oceania. This document contains the earliest clear date seen for soybeans in Australia or Oceania, or the cultivation of soybeans in Australia or Oceania (Nov. 1891). The source of these soybeans unknown.

“Moreover it is not only a vigorous growing and a heavy yielding pulse plant, but it appears to keep remarkably free from both insects and fungoid pests.” Note 2. This is the earliest English-language document seen (Aug. 2007) that uses the word “fungoid” to refer to fungal.

“Having eaten the seeds of the soy bean, I can say that they are an excellent addition to the pulse yielding plants we have already under cultivation. As regards their chemical composition I cannot do better than quote the analyses of Professor Church and Dr. Forbes Watson. ‘Although there are a number of varieties of the soy bean, the chief differences between them lying in the size, shape, and colour of the seeds, yet these varieties are not distinguished by definite differences in chemical composition. That

composition entitles the soy bean to the highest place, even amongst the pulses, as a food capable of supplementing the deficiencies of rice, and of other eminently starchy grains. Very few vegetable products are so rich as the bean at once in albuminoids and in fat or oil, the former constituent amounting on the average to 35 per cent, and the latter to 19 per cent. The cultivation of the pale large seeded varieties should be extended.”

Facing this first page is a full page illustration of a soy bean plant, titled *Soja hispida*, Moench. “Soy Bean.” with an enlarged pod (A) and seed (B). It has been copied from an 1882 issue of *The Garden* (July 29, p. 93) then modified slightly.

Two tables are titled “Composition of soy bean.” The first, by Professor Church, shows the composition in 100 parts [percentage] and in 1 lb. The second by Dr. Forbes Watson, shows the composition with husk and husked.

“The nutrient ratio here is about 1.2 while the nutrient value is 105. Potash forms early one-half and phosphorus pentoxide one-third of the ash of the soy bean. The beans are sometimes pressed for the sake of the oil they yield; the residual cake forms an extremely rich cattle food, containing as it does 40 per cent. of flesh-formers [albuminoids = proteins], and 7 per cent of oil.”

“The soy bean can be grown nearly all over that portion of the Colony where late spring or early autumn frosts do not occur, and with irrigation it might prove a valuable plant to grow in the interior. A good guide to go by is to cultivate the plant in those parts where the kidney bean will flourish, and this is over an immense area of New South Wales. The soybean is rather an exhausting crop, therefore it should be an alternating one. It would do very well to follow after a root crop. To obtain the best results it should be grown on a moderately light, well drained, and well worked soil that is rich in organic matter. The plant will grow well enough on other kinds of soil provided that they are drained, and well worked, and, if not naturally fertile, some suitable manures are applied. If well rotted farm-yard manure is not available, then sulphate of potash, or nitrate of soda, might be used with advantage. If farm yard manure is applied to the land, it should be ploughed in some time previous to sowing the crop, or it might have a tendency to cause a too rank growth of the plants, at the expense of the yield of beans. Commercial manures may be used on the land when it is prepared to receive the crop.

“Sowing the seed. From the Hunter to the Tweed Rivers, it would be possible to obtain two crops in the year by sowing in October, then again in December if there is a sufficient amount of moisture in the soil. South of the Hunter River, however, it will be hardly likely that more than one crop can be harvested during the year. The seed for this should not be sown before the middle of October, or the beginning of November, according to situation. It would perhaps be as well to state that the young plants are very

susceptible to frost, 2° Fahr. being quite enough to blacken them.” Gives more details on sowing, then a paragraph on harvesting.

The last section is titled “Uses: The beans can be picked from the plants whilst green, and cooked and eaten without previous preparation. Ripe soy beans should, however, be steeped in warm water for some time before they are cooked, otherwise they will remain almost as hard as they were before cooking. In China and Japan the soy bean cheese [tofu] and a kind of paste [miso] are important articles of food. In those countries also soy sauce is made from the beans, which is not unknown to European palates. The sauce is said to be made in the following way. Boil the beans with equal quantities of wheat or barley, and leave it for three months to ferment, after which salt and water are added, and the liquid strained. Soy sauce is extensively used in Asia, and to some extent in Europe for flavouring certain dishes, especially beef, and it is supposed to favour digestion.”

284. Rathgen, Karl. 1891. *Japans Volkswirtschaft und Staatshaushalt* [Japan’s economy and national budget]. Leipzig: Duncker & Humblot. xx + 785 p. See p. 328, 331, 397, 445, 611-12. In: *Staats- und Socialwissenschaftliche Forschungen*. Vol. 10. No. 4. [2 ref. Ger]

• **Summary:** Wheat flour is an important component in the production of shoyu (p. 328).

“Production of soybeans by year was as follows. (Note 1. 1 cho = 2.45 acres and 1 koku = 180 liters or 47.6 gallons): 1878 was 414,961 cho and 1,642,183 koku. 1881 was 427,557 cho and 2,175,337 koku. 1884 was 440,647 cho and 2,323,435 koku. 1887 was 466,315 cho and 3,253,790 koku (p. 330). The large increase in numbers is due mainly to a 76% increase in yields during this 9 year period. This must be difficult since most soybeans are grown around the edges of fields, on paddy bunds and in very small plots.

“Soybeans are grown throughout Japan, but they are concentrated in Tokyo plain and the prefectures bordering on its north. In 1887 the following 12 prefectures accounted for 56% of Japan’s total production: Kanagawa, Saitama, Chiba, Ibaraki, Tochigi, Gunma, Nagano, Niigata, Yamagata, Fukushima, Miyagi, and Iwate. Note 2. This is the earliest document seen (Jan. 2005) that gives soybean production or area statistics for Japan.

“This exceptionally nutritious bean appears in all possible forms in Japanese cooking, as a vegetable, boiled in sugar, as tofu (“als Tofu (Bohnenkäse)” = bean cheese), and as the main component of fermented miso soup (*Miso-Suppe*) and of soy sauce (*Soja-Sauce*).

“During the period 1870-74, the price of soybeans averaged 3.015 yen/koku. In 1875 it was 4.46 yen and in 1886 3.98 yen, with a high of 7.11 yen/koku in 1882.”

“Since 1885, with the introduction of use taxes, new production statistics have begun to be kept on the shoyu industry. In 1887/881 some 1,180,188 koku of shoyu was taxed from 11,687 businesses, averaging 101 koku per factory. By comparison, the amount of shoyu taxed in 1888-89 was 1,304,551 koku from 10,634 businesses, averaging koku per factory. As with sake breweries, the number of plants has diminished from 13,682 in fiscal year 1885/86 to 10,634 in the fiscal year 1888/89. Although shoyu factories are found throughout Japan, there are certain regions of concentration. Chief among these is Chiba prefecture, which in 1887/88 had 689 factories and a production of 121,816 koku, averaging 177 koku/factory. The capital of the industry is the city of Choshi. Other major shoyu producing prefectures are Ehime (555 plants, 73,525 koku), Hyogo (544 plants, 73,168 koku), Okayama (580 plants, 64,389 koku), Fukuoka (381 plants, 58,022 koku), Ibaraki, Aichi, Kanagawa, and Saitama.

On p. 611-12 is a detailed discussion of Japan’s shoyu tax. Shoyu production was already being taxed in 1875. Then law 10, enacted on 8 May 1885, which went into effect of 1 July 1885, reinstated the tax. This tax is similar to the sake tax. A yearly license costing 5 yen is required and a tax of 1 yen/koku of shoyu produced is levied. Government tax revenues from shoyu grew from 640,379 yen during the partial year 1885/86 to 1,215,254 in 1889/90.

Rathgen lived 1856-1921. Address: Leipzig, Germany.

285. Wigmore, J.H. 1891. Notes on the eiraku-sen. *Transactions of the Asiatic Society of Japan* 19:501-04. See p. 502. Read 17 March 1891. [1 ref]

• **Summary:** The eiraku-sen was an important Japanese coin. “In the 10th year of Oyei (1403), says the story, the greatest typhoon ever known in Japan drove a Chinese ship [off course] to Misaki village in Izu, now Sôshû.” The people on the ship requested harbor. Mitsukane “confiscated the ship’s cargo, and after provisioning the crew with miso, salt, fuel, and rice, sent them back to China.” The author of *Denyen Jikata Kigen* gives three reasons for believing that this story is not true.

286. Giles, Herbert Allen. 1892. A Chinese-English dictionary. London: Bernard Quaritch; Shanghai, Hongkong, Yokohama & Singapore: Kelly and Walsh, Ltd. xlvi + 1416 p. 31 cm. [4 ref. Eng; chi]

• **Summary:** This massive volume, weighing almost 12 lb, contains more than 1,450 pages and 13,848 Chinese characters. Contents: Dedication (to the Honourable C.P. Chater). By the same author (17 books). Preface: Number of characters, the characters numbering, duplicate characters, phonetic arrangement, orthography, the tones, the dialects (Beneath the number attached to each character will be found its rhyme (R) as given in the *P’ei-wên-yün-fu*. The romanization of each character is given in Cantonese,

Hakka, Foochow, Wênchow, Ningpo, Peking, Mid-China, Yangchow, and Ssuch'uan {Szechwan} dialects, as well as in Korean, Japanese, and Annamese, each being distinguished by its initial letter), the definitions, the entries, etymology, grammar, difficulty of Chinese, personal. Philological essay (incl. tones, ranging from 4 to 9, in ten dialects). Table of sounds.

Examples of soy-related characters:

Chiang (p. 122, No. 1220). “A soy made by mixing salt with bean-flour. Sauce. Pickled food.” Fourteen compounds using this character are given, including: Bean sauce, soy. Pickled bean curd [fermented tofu]. Bean sauce. Soy is of two kinds, the clear and the thick. Dry relishes. Soy colour—a dark reddish drab. He won’t use money for vinegar to buy soy.

Ch’ih (p. 205, No. 1996). “Salted fruits, etc., dried and used as relishes.” Four compounds incl.: Salted beans. Soy, sauce.

Fu (p. 458, No. 3686). “Rotten; putrid; worthless.” Eleven compounds and sayings include: Bean curd, see No. 11,417. Bean curd officials—a term of contempt applied to certain of the poorer classes of official servants who are compelled to feed largely on this cheap food. Also explained as flabby or unenergetic officials. A Mongol name for cheese. A kind of milk made from beans (*rufu* = milk + fu) [Note: Probably fermented tofu, *not* soymilk].

Huang (p. 522, No. 5124). Yellow. Compounds: Yellow beans [soja].

Mao (p. 778, No. 7,679). “Hair, down, feathers.” But the word “Hairy beans” = edamame does not appear here.

Shih (p. 988, No. 9999). See No. 1996.

Ta (p. 1,036-37, No. 10,470). “Great.” But the word “Great bean” = soybean does not appear here.

Tou (p. 1,127, No. 11,417). “Beans; pulse.” See also No. 11,412. Thirty compounds, incl.: Bean-sprouts. Bean-curd. A cheap restaurant (a bean-curd restaurant). Bean-cake. Bean oil. Big bean, black bean, or yellow bean = the soja bean (*Glycine hispida*, Max.), used for making bean-curd, soy, oil, etc. Ground-nuts.

Yu (p. 1,316-17, No. 13,409). “Oil, fat, grease.” 45 compounds incl. Sesamum-seed oil. Linseed. Wood oil. An oil factory. Oil dregs. But “bean-oil” = soybean oil does not appear here.

Note 1. This is the earliest English-language document seen (Aug. 2007) that contains the term “sesamum-seed oil.” Note 2. Herbert Giles lived 1845-1935.

Note 3. Unfortunately, the pronunciation of the compounds is not given (as in Mandarin).

Note 4. This is the earliest English-language document seen (April 2001) that uses the term “Bean sauce” to refer to soy sauce.

Note 5. This is the earliest English-language document seen (Oct. 2001) that uses the term “bean-flour” to refer to soy bean flour.

Note 6. This is the earliest English-language document seen (Feb. 2007) that uses the term “pickled bean curd” to refer to fermented tofu.

Note 7. This is the earliest English-language document seen (Oct. 2002) that uses the term “Wood oil” to refer to what would later be called “China wood oil” or “tung oil,” a pale yellow drying oil obtained from the seeds of tung trees (any of several trees of the genus *Aleurites*), and used mainly in quick-drying varnishes and paints, and for waterproofing. Address: H.B.M. [Her Britannic Majesty’s] Consul at Ningpo [Zhejiang province, China].

287. Paillieux, Auguste; Bois, D. 1892. *Le potager d’un curieux: Histoire, culture et usages de 250 plantes comestibles, peu connues ou inconnues*. Deuxième édition [The inquisitive person’s kitchen garden: History, culture, and uses of 200 edible, little-known or unknown plants. 2nd ed.]. Paris: Librairie Agricole de la Maison Rustique. xii + 589 p. See p. 502-49. Illust. Index. 24 cm. [2 ref. Fre]

• **Summary:** Contents of section on soy: Introduction: Work of the Society for Acclimatization with soy, structure of this book, excerpts on soy from past issues of the *Bulletin the Society for Acclimatization*. Botany of the soybean. 1. Soy in Japan: Kaempfer’s writings, including miso and shoyu, Japan at the World’s Fair of 1878, miso, shoyu, tofu. 2. Soy in Cochin China: Black soybeans, various foods. 3. Soy in China: Soy oil, tofu and fermented tofu, soy sauce, other uses. 4. Soy in Austria-Hungary. 5. Soy in France: Historical, varieties, cultivation, utilization.

The author’s full name is Nicolas-Auguste Paillieux (lived 1812-1898; he died on 8 Feb. 1898 at age 85). An illustration (non-original line drawing; p. 503) shows a mature soybean plant bearing many pods, plus a close-up of three pods to the lower right of the plant (from an original in J.R.F. 1882). Note: Desire Bois lived 1856-1946.

Also discusses (listed alphabetically): arachide (peanuts, p. 26-28), haricot mungo (azuki, p. 201-09), kudzu or ko (p. 271-84), quinoa (p. 460-66), souchet comestible (chufa, p. 498-502, with illustration). Address: 1. Member of the Societe Nationale d’Acclimatation 2. Asst. de la Chaire de Culture, Museum d’Histoire naturelle de Paris.

288. *Natuur (De)*. 1893. Soja [Soya]. 42(20):233-34. May 13. [Dut]

• **Summary:** This Dutch-language periodical appears inside a German-language periodical titled *Die Natur* (Halle). The author of this article (whose initials “CKN” appear at the end) discusses: The soybean plant, named *Glycine Soya* or *Dolichos Soja* or (in Dutch) *de Sojaboon*, which is widely used for food in Japan (where it is called *Mame* or *Daizu*) and China. Food products made from the soybean in Japan: Miso, shoyu (soy sauce), to-fu [tofu] or “kaas van Daizu;” a brief description is given of how each is made. Soybeans in China, where it is called “Yeou-teou,” and where they make

a cheese (*Soja kaas*), oil (*eigen olie*), and milk (*melk*) which resembles cow's milk. Black soybeans (*zwarte Soja*) are widely used. Proteins in the soybean, including legumine. In Europe, by 1881, the soybean was known in Italy, Austria, Hungary, and France (especially at Etampes and Montpellier); from the seeds, people learned to obtain oil, milk, cheese, an excellent cattle feed, and a vegetable for humans—similar to the French bean but much better (*en een groente voor den mensch, gelijkende op onze spersiebonen, maar veel beter*). Soybeans are used by doctors to treat people suffering from diabetes.

In France, the seeds are roasted like coffee beans; the result is a good-tasting coffee substitute (*dure koffie, ... een even goed smakend surrogaat verkrijgen*).

A large illustration (engraving) shows a soybean plant bearing many pods. In the lower left corner is one large pod. In the lower right is written "Al Clement," which appears to be the artist's name.

Note 1. This is the earliest Dutch-language document seen (March 2001) that mentions soy coffee.

Note 2. This is the earliest Dutch-language document seen (July 2001) that mentions green vegetable soybeans, which it calls "*een groente voor den mensch, ...*"

Note 3. This is the earliest Dutch-language document seen (Oct. 2003) that mentions soymilk, which it calls *melk*.

Note 4. This is the earliest Dutch-language document seen (Oct. 2003) that mentions oil from the soybean, which it calls *olie*.

289. Bretschneider, Emil V. 1893. *Botanicon sinicum. Notes on Chinese botany from native and Western sources. II. J. of the Royal Asiatic Society, North China Branch. Series 2.* 25:i-ii, 1-468. For the year 1890-91. See pages 35-36, 137-39, 162-65. [200+* ref. Eng]

• **Summary:** The single most important early work on Chinese botany written by a Westerner. Bretschneider, an M.D., lived 1833-1901. Contents: Corrigenda and addenda to Part I. Introduction (p. 1). Notes on Chinese, Japanese and European works consulted (p. 4). Plants mentioned in the *Rh ya* (p. 20). Plants mentioned in the *Shi king*, the *Shu king*, the *Li ki*, the *Chou li* and other Chinese classical works (p. 137). General remarks by Dr. E. Faber (p. 402). Classification of Chinese names of plants (p. 411). Index of Chinese names (p. 435). Index of European names (p. 461).

Pages 35-36 state: "29.—*Jung shu* is the same as *Jen shu*.

Kuo P'o:—This is the plant called *Hu tou* (foreign bean).

"Hing Ping:—Fan Kuang as well as She Jen and Li Sün all explain the above names of the *Rh ya* by *hu tou*. But they were mistaken. As *jung* is likewise a term for foreigners [western barbarians] they concluded that *jung shu* and *hu tou* are the same. Cheng Hüan and Sun Yen identified the *jung shu* correctly with the *ta tou* or great bean. [Comp. infra, 355, *Shi king*.]

"The *ta tou* is the *Soja hispida*, Moench, or soy bean. The *hu tou*, or foreign bean, is the *Faba sativa* [sic, *Vicia faba*], or common bean [sic, broad bean], one of the cultivated plants introduced from Western Asia into China, in the second century B.C., by the famous general Chang K'ien [Chang Ch'ien, traveled 139-115 B.C.].

Chapter 2, "Plants Mentioned in the *Shi King*, the *Shu King*, the *Li Ki*, the *Chou Li* and Other Chinese Classical Works," begins with a discussion of cereals or grains (*ku*). "The term *wu ku* [*wugu*] (Cc = Chinese characters given) or five kinds of grain seems to be the oldest classification of grain. It is attributed to the Emperor Shen Nung. The ancient commentators enumerated these five kinds as follows (Cc): 1. *tao*, Rice. 2. *mai*, comprising Wheat and Barley. 3. *tsi*, *Panicum miliaceum*, the common Millet. 4. *shu*, *Panicum miliaceum*, the glutinous variety [of Millet]. 5. *shu*, the Soy bean, *Soja hispida*. Note 1. This is the earliest English-language document seen (Aug. 2002) which mentions the *wu ku* ("five grains") and states that the soy bean (*shu*) is one of them. Since the classification of the *wu ku* are attributed to Shen-Nung, it is the earliest English-language document that links him with the soy bean.

"Some commentators have *liang*, *Setaria italica*, instead of *tsi*, others substitute *ma*, hemp, *Cannabis sativa*, for *tao*, rice." Mencius and the *Li ki* both use the term *wu ku*.

“The ancient Chinese term ‘the five kinds of grain’ is also usual in Japan. We read in [Kaempfer’s] *Amoen. exot.*, 834, under *come* [rice]...” The soy bean is included. The *Chou li* mentions the six kinds of grain, or *liu ku*, which did not include the soy bean, and the nine kinds of grain, or *kiu ku*, which listed the soy bean, *ta tou*, as number six and the adzuki bean as number 7.

Pages 164-65 state: “355.—In the *Shi king* we have the term *jen shu*, which Legge translates as ‘large beans,’ 468:—Hou Tsi planted large beans [dadou = soy beans] which grew luxuriantly. Note: This is the earliest English-language document seen (June 2003) that mentions Hou Tsi in connection with soy beans.

“In the *Rh ya* [29] *jen shu* is given as a synonym of *jung shu*. Sun Yen identifies it with the *ta tou* or great bean, which latter name seems to appear first in Fang Cheng-chi’s book on husbandry [1st century B.C.] This is the soy bean, *Soja hispida*, Moench [See *Pên ts’ao kang mu*, XXIV, 1.] A good drawing of the plant is found in *Chi wu ming shi l’u k’ao*, I, 8. This bean has always been considered by the Chinese as the most important of the cultivated leguminous plants. It is grown in numerous varieties all over the Empire, especially in the north, and is much esteemed for the oil yielded by its seeds. The name great bean refers to the plant, not to the seeds, which are small, of the size of a pea.

“The soy bean is also largely cultivated in Japan. It is described and figured under the Chinese characters meaning “great bean” in *Amoen. exot.*, 838, and *So moku*, XIII, 18-21.

“The soy bean is much employed in China and Japan for preparing the so-called ‘bean-curd’ and the sauce called ‘soy.’ The first is prepared by macerating the beans in water and milling them together with the water. The liquid pap is filtered. To this fluid is added gypsum, in order to coagulate the casein, and also chloride of magnesium. The coagulated casein or bean-curd is of a jelly-like appearance. Soy is made by boiling the beans, adding water, salt and wheat, and producing fermentation by yeast.

“Bean-curd and soy were most probably known to the Chinese in the classical period, although no distinct mention is made of these condiments in the classical writings. The ancient term *tsiang*, which Legge translates by ‘sauce,’ includes, we may suppose, soy. [See *Li ki*, I, 459-461 ‘Diet of the Ancient Chinese.’] Confucius *Analects*, 96. Biot translates the *tsiang* mentioned in the *Chou li* by ‘mets delicats.’ I, 70:—Pour les mets delicats on emploie cent vingt objects differents. Compare *Pên ts’ao kang mu*, XXV, 26, on the preparation of the *tsiang*. At Peking the common name for soy is *tsiang yu* (*tsiang* oil). [S.W.] Williams [*Dictionary* (1874), 764] states that the English word soy is probably derived from *shi yu*, in Japanese *si yu*. [I should think rather from the characters pronounced *sho yu* in Japanese. See Hepburn’s *Dictionary* (1867).] The character

shi written with another radical replacing the “bean” radical to the left of the main character, in the *Shuo wen* is explained there by 5 characters, made of salt and beans [I cannot understand what the third character here is intended to mean]. See also *Pên ts’ao kang mu*, XXV, 2, under *ta tou shi*.

“As to the bean-curd, *tou fu*, it appears from the quotations in *Pên ts’ao kang mu*, XXV, 7, that this term and the mode of making bean-curd are first mentioned in the *Huai nan tsz’* [2nd century B.C.], but it was no doubt much earlier known in China.” Address: China.

290. Duthie, John F. 1893. Field and garden crops of the North-Western Provinces and Oudh, with illustrations. Part (volume) III. Roorkee: Dep. of Land Records and Agriculture, N-W. Provinces and Oudh (India). Printed at the Thomason Civil Engineering College Press. x + 65 + xix p. + unnumbered plates. See p. 3, 45 and plate LXXXV. [6 soy ref]

• **Summary:** “*Glycine hispida*, Maxim. See plate LXXXV. Soy bean or Japan pea; bhat (N.-W. Himalaya); kajuwa (Tarai); bhatnas, bhatwas (Nepal and N. Tirhoot).

“Natural order *Leguminosæ*. An annual clothed with ferruginous [rust-colored] hairs. Stems stout, suberect, or climbing. Leaves trifoliolate, on long petioles. Flowers small, reddish. Pods 2-3 seeded, axillary, linear oblong, recurved, and densely pubescent.

“The *Glycine Soja*, under which name the soy bean is described in the Flora of British India, is another species, and has been identified with *G. ussuriensis* of Regel, which grows quite wild in Manchuria [Manchuria], whereas this plant has nowhere been found as unmistakably wild...

“In these provinces its cultivation is confined to the lower slopes of the Himalaya and to a few of the neighboring plains districts. It is grown in poor soils during the rainy season, and represents a very inferior variety of the Japan pea, which under proper cultivation is a much more robust plant, with broader leaves and larger pods and seeds...

“The plant affords excellent fodder for all kinds of stock, if harvested before it is fully matured. From the seed a preparation called *miso* is largely used in China and Japan; and the green pods yield the well known sauce” [sic].

Plate LXXXV, drawn by H. Hormusii, is an excellent illustration of the cultivated soy bean plant (*Glycine hispida*, Maxim.) showing young and old leaves, flowers, and slightly hairy stems. An inset shows five different views and parts of the flower.

The author acknowledges his indebtedness to Dr. Watt’s most useful “Dictionary of the Economic Products of India” and Prof. Church’s “Food Grains of India.” Address: Director, Botanical Dep., Northern India.

291. Fesca, Max. 1893. Beitrage zur Kenntniss der japanischen Landwirtschaft. II. Spezieller theil [Contributions to an understanding of Japanese agriculture. II. Special part]. Berlin: Paul Parey. ix + 929 p. See 187-203, 872-73. Also published as vol. 2 of 2 volumes bound in one (Paul Parey, 1893). [7 ref. Ger]

• **Summary:** The chapter on the legumes (*Die Huelsenfruechte*, p. 187-203) is partly a review of the literature, with emphasis on soybeans (*Daizu, Omame, Sojabohne*). He begins by noting that for a nation like Japanese, where the people live predominantly on plant foods (*Pflanzenkost* = vegan diet), legumes are of major importance for the nutrition of the people, in that they offer a substitute for meat. They also supply important nitrogen to the soil. A table (p. 188) shows soybean production and yield in Japan from 1879 to 1887. The area increased from 441,699 *cho* to 466,315. Note: 1 *cho* = 2.45 acres. Production increased from 2,280,135 *koku* to 3,253,790. Note: 1 *koku* = 180 liters or 47.6 gallons. Yield increased from 5.1 *cho/koku* to 7.69. Soybeans like the climate of northeastern *Yezzo* [Hokkaido]. A table (p. 190) gives the date of planting, date of harvest, and days to maturity at Hakodate, Sapporo, and Nemuro (all on Hokkaido). Also discusses: Soy sauce (*Shoyusauce*; p. 190), dates for other locations, and fertilizer (*Diingung*) needs (p. 191-92, incl. phosphoric acid, potash, wood ashes, straw, and superphosphate). A table (p. 193) shows soybean area (in *cho*), production, and yield in 1887 in 6 parts of Japan (*Yezzo*, northern Japan, central Japan [which had by far the greatest planted area and production], western Japan, *Shikoku*, *Kyushu*).

Also discusses: The extraordinarily high nutritional value of the soybean (p. 196), yellow lupins (p. 196), defatted soybean cake (*Daizukasu*, p. 196), shoyu or soy sauce, *Shoyubohne*, and koji (p. 197-99), tofu, *Bohnenkaese*, and *Tofumame* (p. 199), Kori-Tofu and E. Kinch (p. 199).

His analysis of shoyu presscake (*Shoyukasu*) and okara (*Tofukasu*) showed that they contained respectively: Water 53.6 and 85.7%. Ash: 6.7 and 0.5%. Crude protein: 12.6 and 3.8%. Crude fat: 13.7 and 1.4%. Nitrogen-free extract: 6.7% and 5.4%. Crude fiber (*Rohfaser*): 6.7 and 3.2%. *Tofukasu* is a rather good livestock feed, and it is also eaten by poor people. The shoyu presscake, although richer in nutrients than okara, is used, at most, only in small amounts in feeds and then it must be cooked. Living yeast cells in the koji can easily cause stomach diseases and problems, and the presscake also has a high salt content. Note: This is the earliest German-language document seen that mentions okara (Oct. 2001), which it calls *Tofukasu*.

Miso (4 types; p. 200-02): (1) White miso (*Shiro-Miso*: Low salt content and short shelf life; keeps for 10 days); made with rice koji. Fermented for 3-4 days. (2) Edo Miso (*Yedo-Miso*): Higher salt content, shelf 5-4 months up to 1 year. Made with rice koji. Fermented for 10 days in

summer, 30 days in winter. (3) Farmhouse miso (*Inaka-Miso*): Very high salt content. Shelf life: About a year; made with barley koji. Fermented for about 11-12 months. (4) Sendai miso, also known as Red miso (*Sendai-miso: auch Aka-Miso genannt*): Red color and high salt content. Shelf life: several years. Made mostly with barley koji. Fermented for 1½ to 2 years.

Azuki (*Phaseolus radiatus*, with planted area, production and yield for 1883 and 1884, p. 203).

A table (p. 873) shows a valuation of Japan's agricultural production for about 17 major crops (Source: *Japan's Volkswirtschaft und Staatshaushalt*). For each crop, the annual production (in *koku*), the worth per unit, and the value of the total crop in yen are given. The most valuable crops are: Rice: 40 million *koku*, 200 million yen. Dehulled barley (*beschalte Gerste*): 7 million *koku*, 14 million yen. Naked barley (*nakte Gerste*): 5 million *koku*, 12.5 million yen. Soybeans (*Sojabohnen*): 3 million *koku*, 12 million yen. Wheat (*Weizen*): 3 million *koku*, 12 million yen. Address: Prof., Dr., Germany.

292. Japan, Dep. of Agriculture and Commerce, Agricultural Bureau. 1893. A descriptive catalogue of the agricultural products exhibited in the World's Columbian Exposition. Tokyo: Printed at the Seishibunsha. 115 p.

• **Summary:** Discusses 38 commercial products, with most divided into basic information and products made from the crop. Includes: Rice ("The manures applied to rice fields" include "green manures, farm yard manures, composts, ordures, fish manures, Sake kasu, Shoyu kasu, rape seed cake, and soy bean [cake] {p. 11}), barley ("It is much used as the material for making miso. Miso is prepared by pounding together boiled soy bean, salt, and the Koji {yeast}* prepared from common barley or naked barley; and is one of the most common articles of food in Japan." It is also used for making *ame* {p. 23}), wheat ("Wheat is used principally for preparing soy, vermicelli, onmen [sic, somen?], undon [sic, udon], and several kinds of confectionary" {p. 27}). It is also used for making *fu* or wheat gluten; "Roast 'fu' is used as food by boiling it with soup, soy, mirin, etc." {p. 29}), naked barley (*Hordeum nudum; hadakamugi*), Job's tears (*Coix lacryma; hatomugi*), soy bean (*Soja hispida; daidzu*), adzuki (*Phaseolus Radiatus, [azuki]*), sasage (*Dolichos Umbellatus*), haricot bean (*Phaseolus vulgaris*), peas, buckwheat ("Sobakiri" and "Kôri-soba" are both seasoned with soy sauce {p. 46}), rape seed (*Brassica chinensis, natane*) and rape seed oil (*natane abura*), sesame seeds (yellow {*kigoma*}, white {*shirogoma*}, and black {*kurogoma*} are displayed) and sesame oil (made from only yellow and white sesame), yegoma (*Perilla occimoides*), hemp, shiitake, chilli (*Capsicum Longum; tôgarashi*); "The fresh unripe fruit and leaves of certain varieties are eaten by cooking them with soy, sugar, "Katsuobushi" [katsuobushi],* etc." {p. 103}). Also

discusses: Dried daikon (p. 109-11), konjak flour (*Conophallus konjak*; *konniak-ko*, *konnyaku*; “For cooking, it is cut into small pieces and boiled with soy, soup, mirin, sugar etc.” {p. 112}), kampo (*Lagenaria vulgaris*; *kampio* [*kampyo*]; “It is used as an article of food by boiling with water, soy, sugar, mirin etc.” {p. 113}), wine.

Concerning the soy bean: In 1887, the total area of arable land devoted to soy bean cultivation is 4,633,152 *tan* (1 *tan* = 0.245 acre; thus 1,142,472.2 acres or 462,352.16 hectares). The total production of soy bean in the Empire was estimated to be 3,253,790 *koku* (1 *koku* = 180 liters, and 1 bushel = 35.2390 liters; thus 585,682,200 liters = 16,620,284 bushels).

Note: From the above figures, a yield of 14.53 bushels per acre can be calculated.

From 1887 to 1891 the price of soybeans per *koku* ranged from 4.180 yen in 1888 to 5.319 yen in 1890. Four specimens of soybeans were exhibited: Green soy bean (*awo-daidzu*). Black soy bean (*kuro-daidzu*). Common soy bean.

“Daidzu or soy bean is extensively used in Japan to prepare various kinds of foods indispensable for the daily meal, such as ‘soy’ or ‘shōyu,’ ‘tamari’ (a kind of soy), tofu, and miso. It is also largely used as a food for horses and manure [bean cake].

A analysis of the percentage composition of 3 kinds of soy beans analyzed by the Sanitary Experiment Station at Tokio is given; Green soy beans have the highest crude protein content (42.85% with 12.28% water). White soy beans (*shiro-daidzu*) have the highest ash content (5.00% with 13.46% water). Black soy beans have the highest fat content (18.26%, and the 2nd highest crude protein content 40.25%, with 11.09% water). Soy bean (*Itachi-daidzu*) from Saitama prefecture.

Although daizu is abundantly produced in Japan, since its daily consumption by all classes of people is great, it is now imported from China and Korea in large quantity. However imported soy bean is never used to make first class shoyu or soy, since the imported beans are inferior to those produced in Japan.

A table shows the quantity (in *kin*) and value (in *yen*) of soy bean exported from Japan from 1887 to 1891; 2.1 million *kin* were exported in 1889.

Four specimens of soy sauce are on display. Two brands (the trade marks are shown) are made by Mr. Mogi Shichiroemon, and two are made by Mr. Mogi Saheiji. All are made at Noda-machi, Chiba prefecture, Japan. Brands (a) and (c) are of the first quality; brands (b) and (d) are of the second quality.

A table shows the amount of shoyu made in Japan each year from 1887 to 1891; the amount ranges from 1,304,551 *koku* in 1888 to 1,157,982 *koku* in 1890. Since 1 *koku* = 180 liters, the amount made in 1888 is 234,819,180 liters. The total number of shoyu manufacturers in 1889 was 10,682. A

table shows the price (in yen) of various brands and quantities of shoyu from 1887 to 1892. A brief description of the process for making shoyu is given. The word “barm” is used instead of koji. Either barley or wheat can be used with daizu to make the barm. The “mixture is kept for about 25 months, stirring it occasionally with a paddle, say twice a day during winter and three times in summer, and when it is fermented to the required degree, soy is extracted by means of a soy press. The clear liquid thus obtained is pasteurized by heating to about 130° F. and when entirely cooled, it is transferred into casks.”

As shoyu is manufactured from daizu, wheat, etc., “it naturally contains a large quantity of albuminous matter. Shoyu is used in Japan as table salt is in Europe and America; consequently it is indispensable for daily use for cooking fish, meat, vegetables. etc. It has a remarkable merit when applying it in the place of sauces (like ‘worcestershire’) for beefsteak, fry, stew, etc. It answers better than salt when used with cold meat.

“Japanese soy or ‘Shoyu’ has long been exported to various parts of Europe where those who once taste it never fail in extolling its flavour. It is said that in Holland, Japanese soy has been used by many people from long years ago and highly esteemed by them.” A table shows the chemical composition of shoyu.

“Since the fine flavour of Japanese soy has recently become known to people abroad, several trial consignments were made both to Europe and America, and the result, though it has obtained a high reputation among them, still it has not yet become a leading article of export.” A table shows the annual amount and value of shoyu exported from Japan from 1887 to 1891. It ranges from 1,302.71 *koku* worth 11,091 in 1887 to 3,749.01 *koku* worth 41,028 yen in 1891. Thus the exports are growing rapidly.

Three specimens of tamari are on display, one dilute and one concentrated. The first two are made and sold by Mr. Ishima Mosaku. The 3rd (regular tamari) is made and sold by Mr. Morimoto Chōhachi. All are made at Yokkaichi in Miye [Mie] prefecture. Tamari is made chiefly in the prefectures of Miye, Aichi and Gifu [in central Japan]. Tamari is very similar to shoyu except that no wheat is used in manufacturing tamari.

Tofu (bean curd): “Tofu is one of the most favourite foods of Japanese and sold in all places both in towns and villages. The specimen here exhibited is called Yakidofu and is prepared by roasting partially dried ‘Tofu’ over a charcoal fire.” “As ‘Tofu,’ sometimes called bean curd, being a coagulated vegetable albumen of soy beans, it contains a large proportion of nutritious matter, most important to human life, especially, to those who subsist mainly upon vegetables.” The price of this Yakidofu is 18 yen per 10 dozen.

A specimen of Kōri-tōfu or frozen bean curd is displayed; it is made in Minami Adzumi-gun, Nagano

prefecture. “As it can be preserved for many years it is a suitable for provision for vessels undertaking long voyages.”

Concerning adzuki: There are both red adzuki and white adzuki. Early varieties are sown in the spring; late varieties {called aki-adzuki in the autumn}. “It is mostly used for preparing “An”—a pulpy mixture of boiled Adzuki flour and sugar, and in that state is largely used for making various kinds of confectionary.” It is also used to make “Sarashi-an or refined flour of ‘adzuki,” and “shiruko—a juice prepared by boiling the flour with a suitable quantity of water and adding sugar...” Note: Shiruko could be described as adzuki bean soup with mochi (rice cake).

Concerning rape seed: “Rape was formerly cultivated to a great extent but since the introduction of Kerosene Oil, the acreage of its cultivation has been much diminished, yet it is grown in nearly all parts of Japan and forms one of the important farm crops.”

293. Japan. Dep. of Agriculture and Commerce, Bureau of Commerce (Nôshômushô Shôkôkyoku). 1893. General view of commerce & industry in the empire of Japan. Tokyo: Printed by M. Onuki. ii + 491 p. See p. 22, 37, 67, 247, 324, 345, 349-51, 429-30, 440-41, 469-70, 474. Index. • **Summary:** Name of organization with diacritics is: Nôshômushô Shôkôkyoku. Pages 21-22: A list of all the 71 commodities exported from the port of Kobe in 1891 whose value exceeded ¥10,000. The largest by far was rice (5.5 million yen), followed by tea, matches, and camphor. Also: Kanten or colle vegetable [agar] 408,615. Rape seed oil 114,572. Sea weeds 22,372. Cut sea-weeds 17,765. Soy 11,483 yen.

Page 37: After the “Restoration of Meiji,” a new port was opened at Kobe, near Osaka. Its principal articles of merchandise were “rice, salt, sugar, tea, soy,...”

On pages 61-67 are tables of Japanese weights and measures and comparative tables with those of the empire of Great Britain, including both troy and avoirdupois. These show Japanese units for length (9 units; the standard is the shaku), area of land (6), capacity (5), and weight (6; the standard is the kwan). In 1885 the Government of Japan joined the Universal Metric Convention, and in 1891 established the present system of weights and measures.

Page 67: Industrial pursuits can be classified into original ones (that existed from ancient times, having first been introduced from China and Korea [Korea]) and those introduced from the West. Original industries include “salt making, sugar making, Sake brewing, soy brewing, oil producing,...”

Page 247: Exports (Class 22) include “Soy. The total value of the latest export is 41,029 yen, and chiefly exported to Hawaii.”

Page 324: A table shows imports (both weight and value) of “Oil-cake” from 1887 to 1891, from China, Korea,

and Other.

Page 345: Class II—Duty free goods includes “Oil cake.”

Page 349: Class II—Duty free goods, includes “All kinds of Mush-rooms, excepting Shiitake, Confectionaries, all kinds of Liquors, Vinegars, Soy [sauce], Oils, and Prepared Tobacco... Sea-weeds excepting Kobu [Kombu, seaweed],...”

Pages 429-30: “Table of the total quantity [weight in picul or catty] and value [in yen] of the commodities exported from Japan to the United States.” Soy [sauce] rose from 7,862 cattles worth 261 yen in 1887 to 9,744 cattles worth 1,146 in 1891.

Page 440-41: Chapter 7, “Commercial and industrial unions in Japan,” lists the 2,013 “trade unions” of businesses in the same general field. One of these, “Liquor and soy,” has 106 members.

Pages 469-70, 474: Table III lists “Industrial corporations.” One class, “Soy and miso,” has 4 members and capital of 75,500 yen. Address: Tokyo, Japan.

294. Koenig, Franz Joseph. ed. 1893. *Chemie der menschlichen Nahrungs- und Genussmittel. Zweiter Theil. Ihre Herstellung, Zusammensetzung und Beschaffenheit, ihre Verfaelschungen und deren Nachweis. Dritte Auflage* [The chemistry of human foods and food adjuncts (stimulants / enjoyables). Vol. 2. Their production, composition and properties, their falsification and proof of that. 3rd ed.]. Berlin: Verlag von Julius Springer. xvi + 1385 p. See p. 194-95, 389, 486-90, 529-30, 1044-53, 1071. Illust. Index. 24 cm. [12 ref. Ger]

• **Summary:** Summaries of early studies on the chemical composition of soybeans and various soyfoods, including some original studies. Discusses (p. 194-95) commercial sauces, including Japanese shoyu (“*Japanisch Soya oder Shoya oder Soy*”). See separate entry.

Discusses (p. 1044-51) adulteration of coffee and coffee substitutes. Under “Coffee made from legumes” (p. 1051) we read: “The soybean (compare p. 486) is also used for the preparation of a coffee substitute.” A table (p. 1053, based on Kornauth) compares the composition of 12 roasted seeds and fruits used to make coffee substitutes, including chicory, barley, figs, soybeans, white lupins, and chufa.

An illustration (p. 1071) shows different cellular layers of the soy bean sprout leaves (*Keimblättele*)—after an illustration by J. Moeller.

Also discusses: Peanuts (*Erdnusse, Arachis*, p. 322, 373, 385, 389, 494, 621, 686, 1051). Sesame seeds (p. 322, 385, 372, 389, 408, 494). Almonds (p. 322). Hemp (p. 322, 385, 493). Lupins (p. 372, 385, 389, 490-91, 1050, 1053, 1068-69). Chufa (*Erdmandel, Cyperus esculentus*, p. 1051, 1053). Address: PhD, Prof. (who teaches but does not have a faculty seat or voting rights) at the Royal Academy and Head of the Agricultural-Chemical Experiment Station at Muenster, in Westphalia, Germany (ordentlich)

Honorary professor der Koeniglichen Akademie und Vorsteher der agric.-chemischen Versuchsstation Muenster i. W.).

295. Sagot, Paul Antoine; Raoul, Edouard François Armand. 1893. *Manuel pratique des cultures tropicales et des plantations des pays chauds* [Practical manual for tropical crops]. Paris: Augustin Challamel. xxxii + 734 p. See p. 151-55. [Fre]

• **Summary:** In the chapter titled *Légumes et Culture Potagère*, there is a section on soybeans and soyfoods written by Edouard Raoul titled “Soja hispida Moench, Pois Soja, Pois oléagineux de Chine. Daïzou des Japonais.” It discusses the widespread culture of soybeans in southern Asia, China, and Japan. “The seed is very rich in oil and in casein soluble in water. Its consistency, especially before maturation, is very tender and fine. Unfortunately it does not have much taste of its own. The pod is very small and contains only 2-3 seeds. It is not easily opened. I prefer soybean seeds having a color that is clear fawn-colored or tawny (*fauve*) or greenish, to those which are black.”

“The plant must be sown from very fresh seeds. The germination (in Europe) is often very unequal, and many of the seeds don’t develop... Some seeds sent by me to French Guiana (*la Guyane*) have been cultivated by Mr. Bar au Maroni, and have borne fruit, but I don’t have precise details on their vegetation or ease of utilization.”

Brief descriptions are then given of miso, shoyu, tofou (tofu), *kouri-tofou* [dried-frozen tofu], “which is nothing but tofu dried using heat” [sic], and *uba* (yuba, “a product very rich in nitrogenous materials {proteins} and fats”), followed by a list of the names of the best-known Japanese soybean varieties, and a discussion of the difference between *Glycine hispida* Moench (*Kuro mame* [black soybeans], *no mame*, *kuzu*, *yama-daizou* [wild soybeans]), and *Glycine soja* Siebold et Zuccar. (*kiu mame* and *tsourou-mame*). Typical analyses of the stems and leaves, seeds, and entire plants are given based on research conducted by M. Joulie. A comparison of the nutritional value of soya and wheat is given based on the research of Wechler in Austria and Messrs. Fremy, Muentz, and Pellet in France. Dr. Menudier uses soy flour in diabetic diets.

Also discusses: Winged beans (p. 149-50; *Psophocarpus tetragonolobus* Dec., *Dolichos tetragonolobus* L., *Pois carré*). Peanuts (p. 150-51; *Arachide*, *Arachis hypogaea*). Bambarra groundnuts (p. 151; *Voandzou*, *Voandzeia subterranea* Dup. Th.).

Note 1. This is the earliest document seen (Jan. 2001) concerning soybeans in French Guiana, or the cultivation of soybeans in French Guiana. This document contains the earliest date seen for soybeans in French Guiana, or the cultivation of soybeans in French Guiana (1893). The source of these soybeans was Prof. E. Raoul, who was apparently in France.

Note 2. This is the earliest French-language document seen (Feb. 2004) that mentions dried-frozen tofu, which it calls “kouri-tofou.” Note 3. Sagot lived 1821-1888.

Note 4: This is the earliest document seen (Nov. 2003) concerning general information on soybean production in the tropics.

Note 5. Notice that “kuzu” is given as a name for the wild soybean in Japan. Address: 1. Docteur en Médecine, Ancien Chirurgien de la Marine, Ancien Professeur d’Histoire Naturelle a l’École Normale Speciale de Cluny; 2. Pharmacien en Chef du Corps de Santé des Colonies. Professeur du Cours de Productions et Cultures Tropicales a l’École Coloniale.

296. *Age (The) (Melbourne, Australia)*. 1894.

[Vegetarianism in Japan]. Dec. 29. p. 4. [1 ref]

• **Summary:** This untitled article begins: “Japan is moving. The *Sei-i-kwai*, a medical journal published in Tokio, has a number of original articles in the English language, and while the tone and treatment are clearly imitative, there is nevertheless evidence of a certain originality of thought. The following of an extract from an article by Dr. Ishizuka on the Natural Food of Man affords a good example of the peculiar style and treatment.” Observes that the teeth of men or closer in structure and movement to those of herbivorous, than of carnivorous animals. “Now, among the foods which are fitted to the normal teeth of men, there is nothing better than the cereals.” “It is the general opinion at present that meat and vegetables are necessary articles for animal nutrition, but it is contrary to the principal purpose of creation... Consequently Shaka, the founder of Buddhism, separated days for abstaining from meat and fish in order to regulate the use of them, and Confucius also gave an instruction against the excessive use of meat. It will be clear then that meat is not an article of daily use.”

“It is a well known fact that Buddhist monks never eat meat and fish, but they eat beans more than most people in various forms, *miso*, *natto*, etc.”

297. Cavendish, Alfred Edward John; Goold-Adams, Henry Edward. 1894. *Korea and the sacred white mountain: Being a brief account of a journey in Korea in 1891*. London: George Philip & Son. 224 p. Illust. (40 original, many color). Maps. Index.

• **Summary:** This book is an amplification of the author’s diary kept during a stay of a few weeks in Korea. Soy is mentioned as follows: Page 12: “Chefoo is the watering-place for Korea, Pekin, Tientsin, and Shanghai, but the foreign portion of it is very small, with three indifferent boarding-houses, but good pears and good bathing, if you do not mind a naked fisherman or two about. The chief exports appear to be straw plait for hats and bean-cake for manure.”

Page 33-34: Korean ponies, which carry foreign travelers and their belongings, are very small. The forage ration consists of about 2 lbs. of beans and millet boiled in water, and the whole poured hot into a trough; the average feed is two gallons of this mixture, given three times a day, and supplemented by 2 lbs. of chopped straw (rice or millet). "Other means of transport are found in donkeys, cattle, and coolies."

Page 48: Beans are becoming largely grown in Korea, for the demand for them in Japan is increasing, as they are used in the manufacture of Bean-curd, Miso, and Soy, while the Japanese are growing instead mulberries for sericulture. Wheat, barley, and rice, the latter of two kinds, one of which grows in dry soil, are also increasing, the export of these in 1890 being—barley, 5,260,533 lbs., value \$50,341; beans, 87,950,800 lbs., value \$1,004,762; wheat, 5,869,466 lbs., value \$60,381; rice, 116,622,000 lbs., value \$2,057,868." Page 54. "Besides flax, maize, and cotton, there were fields of the small millet (*Setaria italica*), substitute for porridge, and of the tall millet, Susu or Kaoliang (*Holcus Sorghum*), with stems 8 to 12 feet high and as thick as a man's thumb, turning to golden yellow or bright mahogany colour; from the latter kind the Koreans make the coarse cloth of which their rough garments are composed, when they do not use Manchester shirtings; also fields of beans, food for cattle and men, and the foundation of Japanese soy [sauce] and our Worcestershire sauce."

Pages 146-47: "He produced some samshu, a muddy fluid which smelt and tasted like Kaffir beer, with strong spirit in it; this peculiar taste is due to the bean-water [water in which soy beans have been boiled] which they mix with the spirit distilled from rice or millet. We were given a bottle of this liquor by the head-man, and the cook bought another of Chinese make, which was quite clear and less diluted with bean-water."

Pages 195-96: "Whilst waiting in the inn to-day, I had plenty of opportunities of observing the nauseous smell of the food greedily devoured by the Koreans. Five or six little dishes, containing various preparations of meat or fish, chillies, [soy] beans, cabbage, rice, &c., were ranged on a little table a foot high, and gave forth a most evil odour. A Korean likes his viands very highly seasoned, and in eating takes a little of every dish into his mouth, that he may enjoy the pleasant mingling of the different flavours." Note: At least one of these dishes probably contained Korean-style soy sauce or miso—but we cannot be sure.

Bean or beans (usually noted in passing as a crop with other crops) are mentioned on pages 66, 67, 68, 134, 138, 150, 191, 194, 199. Address: 1. Captain, F.R.G.S., 1st Argyll and Southern Highlanders, now in Edinburgh; 2. Captain, R.A..

298. Kellner, O.J. 1895. Ueber die Bereitung von Sake, Shoyu, und Miso [On the preparation of sake, shoyu, and

miso]. *Chemiker-Zeitung* 19(6):97-98; 19(7):120-21. Jan. 19. [6 ref. Ger]

• **Summary:** The first installment of this article gives details on the production of sake in Japan. The process can be divided into 4 steps: The production of a diastatic ferment (koji), the culturing of the yeast (*Hefezüchtung*), the main fermentation, and separation of the fermented liquid (sake). A detailed description is given of the preparation of both koji starter (the ash of camellia wood is used) and koji. The koji, made in koji cellars, contains a very powerful, inverting ferment (*ein sehr kräftiges, invertirendes Ferment*), whose effect goes further than the diastase of malt. The finished sake, which contains 11-14% alcohol, is consumed hot. Sake makers in Japan, like beer makers in earlier times in Germany, are very conservative and will hardly allow the introduction of a thermometer into their operations.

Shoyu or "Bohnen-Sauce" is called Soja or Shoja in Germany. About one-fourth of the wheat is finely pulverized. It is fermented in vats for various times ranging from 8 months to 5 years. Then the liquid is pressed out in cotton sacks. Finally the press-cake is mixed with salt water, and re-pressed to yield a lower quality product. The finished product consists of a mixture of soy sauces of different ages to improve the flavor and aroma. The best soy sauce is made from equal parts of 3-year and 5-year soy sauce. The press-cake is used for fertilizer.

A nutritional analysis of shoyu is given. Its relative density ranges from 1.182 to 1.193. In 1888-89 in Japan 10,634 shoyu plants produced 1.3 million koku [1 koku = 180 liters or 47.6 gallons, so 1.3 million koku = 234 million liters or 61.88 million gallons]. Per capita consumption was about 5.5 liters per year.

Concerning miso, the author discusses rice miso first, then barley miso, implying that the former is more widely used. He notes that miso can be made in only 4 days by incubating it hot. He then gives nutritional analyses of 5 types of miso that he made in 1889. "According to my estimation, at least 30 million kg, over half of the yearly soybean harvest, is used in miso production... Those soybeans that are not used for shoyu and miso production, serve largely for the production of tofu (*Bohnenkäse*)." The tofu is coagulated with a solution obtained from sea salt that is rich in magnesium chloride [i.e. nigari]. Address: Privy Councillor (Hofrath), Japan.

299. Hanausek, T.F. 1895. Correspondenz: Mittheilungen aus Japan [Correspondence: Communications from Japan. Enquiry on miso to Dr. Kellner]. *Chemiker-Zeitung* 19(11):222. Feb. 6. Letter dated 26 Jan. 1895. [Ger] Address: Vienna, Austria.

300. Kellner, O.J. 1895. Die Bereitung von Miso in Japan [The preparation of miso in Japan]. *Chemiker-Zeitung*

19(13):265. Feb. 13. [3 ref. Ger]

• **Summary:** This is an answer to questions from Dr. Hanausek to *Chemiker-Zeitung*. Kellner wrote his first major article on miso in 1893. There are 4 basic types of miso in Japan: 1. Shiro miso (white miso) is made from large-seeded soybeans (*grosskörnigen Sojabohnen*), rice koji, and salt. The ingredients are mixed at 70-90°C, and the product is ready after 3-4 days of fermentation. It will not keep longer than 10 days. Note 1. This is the earliest document seen (Oct. 2001) worldwide that mentions “large-seeded soybeans.” The next document to use that term appeared in 1936 in the USA.

2. Yedo miso (named after the early name for Tokyo) is made from the same ingredients as Shiro miso. The ingredients are mixed at 35-45°C, and a part of the salt is added in a cooled solution after the mixing. The fermentation takes about 10 days in summer, 30 days in winter. The miso will keep for 4 to 15 months at room temperature.

3. Inaka miso (countryside or peasant’s miso). Less expensive barley koji is used in place of rice koji. The soybeans are steamed for a very long time until they attain the desired reddish color. The fermentation takes 11-12 months, and the finished miso will keep for about 1 year. This type contains the most salt. To accelerate the fermentation, mix the ingredients while the soybeans are still hot.

4. Sendai miso (named after the city of Sendai) is substantially different in preparation from the other types. The cooked beans are rubbed to a paste, formed into prismatic pieces [*prismatische Stuecke*], and hung up with straw cords to dry for 1 to 1½ months. Then they are washed with lukewarm water, pulverized, sifted through a fine sieve, mixed with barley koji, salt, and cold water, and mashed in a mortar. The mass is put in the fermentation vat and roughly every 2 months reworked in the mortar. The fermentation, for which a cool room is used, is first ended after 1 to 1½ years, and the finished miso has a fine aroma, sweet taste, and reddish color. Because of the latter it is widely referred to as “red miso.”

In the production of special types of miso, the following ingredients may be added to the basic ingredients before the fermentation: Glucose or cane sugar, gingerroot, slices of eggplant, Japanese burdock, roasted soybeans (*geröstete Sojabohnen*), rice bran, sesame oil. Moreover, many families, for use in their homes, prepare a miso using the press-cake that is left over after making shoyu and that has not been washed with salt water. It is used in place of steamed soybeans, and it is permeated with a fermentation-instigating power. In place of koji, dehulled barley may be used. In commercial miso production, only rice- or barley koji is used.

Note 2. This is the earliest German-language document seen that refers to soynuts, which it calls (*geröstete*

Sojabohnen). Address: Prof., Dr., Moeckern [near Leipzig], Germany.

• **Summary:** The first detailed description of *Aspergillus oryzae*. Address: Privatdozenten an der Technischen Hochschule, Hannover.

302. Went, F.A.F.C.; Prinsen Geerligs, H.C. 1895. Beobachtungen ueber die Hefearten und zuckerbildenden Pilze der Arrakfabrikation [Observations on the yeast varieties and saccharifying fungi used in making arak, rice brandy]. *Zentralblatt fuer Bakteriologie. Series 2*. 1(13/14):501-04. July 10. Extracted from Verhandelingen der Koninklijke Akademie van Wetenschappen. II. 4(2):. [1 ref. Ger]

• **Summary:** Discusses raggi (ragi), tapej (tape, tapeh), and brem. Japanese miso and koji (as described by Kellner) are mentioned in passing. The four new species of microorganisms described are: *Monilia javanica*, *Saccharomyces Vordermanni*, *Chlamydomucor Oryzae*, and *Rhizopus Oryzae*.

303. Inouye, M. 1895. The preparation and chemical composition of tofu. *Bulletin of the College of Agriculture, Tokyo Imperial University* 2(4):209-15. Aug. [6 ref. Eng]

• **Summary:** One of the best early articles on tofu in Japan. Inouye tried to make a product resembling Swiss cheese with tofu, with moderate success.

“The efforts to prepare an easily digestible food from soya beans led to the preparation of *miso* and *natto*, two kinds of vegetable cheese, which were investigated some time ago in the laboratory of this college. (Footnote: On the preparation of *miso*, by O. Kellner, this Bulletin, Vol. 1, No. 6. On *natto*, by Yabe; Bulletin Vol. 2, No. 2).

“But the most interesting preparation is *tofu*, which consists principally of the protein-matter of the soya bean and which, according to the investigation of Prof. Osawa in Tôkyô, is as easily digestible as beef. This preparation is freshly made every day and sold in the form of tablets [cakes] about 10 c.m. broad, 2 c.m. thick, and 25 c.m. long [4 by 10 by 0.8 inches thick], is of snow-white appearance and of the consistency and taste of freshly precipitated casein of milk, but as there is no trace of bacterial action connected with its preparation, the name vegetable cheese is certainly not justified.” A table (p. 211) shows the composition of tofu as determined by Kellner.

“*Tofu* is also sold in another form called *kori-dofu* [dried-frozen tofu]. It is prepared by exposing the fresh *tofu* tablets to the action of frost, under which they shrink

considerably, lose water, and become more compact. While fresh *tofu* contains, on an average, 89.02% of water, *kori-tofu* contains only 15.32% in the air dry condition. The analysis of *kori-dofu* gave me the following results: Water 15.32%. Albuminoids 41.42%. Fat and lecithin 23.65%. Non-nitrogenous extract 15.05%. Cellulose 1.48%. Ash 3.08%.”

The author then describes the tofu manufacturing process, noting that it “is manufactured only on a small scale, by people who sell it in their own shops.” “The beans are first soaked for about twelve hours in water and then crushed between two mill-stones until a uniform pulpy mass is obtained. This is then boiled with about three times its quantity of water for about one hour, whereupon it is filtered through cloth. This liquid is white and opaque, exactly like cow’s milk; while the smell and taste remind one of fresh malt.” “I also analyzed the fresh milky liquid with the following results” for “Soya bean milk” and cow’s milk, respectively (p. 212): Water 92.53% / 86.06%. Albuminoids 3.02% / 4.00%. Fat 2.13% / 3.05% Fibre 0.03% /-. Ash 0.41% / 0.70%. Non-nitrogenous extract, including carbohydrates 1.88% /-. Milk sugar-/ 5.00%.

“The fat contained in this liquid as well as in the *tofu*-tablets was found to consist partly of lecithin. *Tofu* dried at 100° yielded 26.65% fat and 4.83 gr. of this fat yielded, after igniting with carbonate of soda and nitrate of potash in the usual way, 0.280 grm. of magnesium pyrophosphate, which, when multiplied by the lecithin-factor, 7.2703, corresponds to 2.035 grm. lecithin, amounting to 11.2% of dried *tofu*, leaving for the genuine fat 15.4% (Footnote: A portion of this lecithin was probably present in the soya bean as lecithalbumin; comp. Leo Liebermann, J.B. f. Thierchemie, 1893, p. 32, and E. Schulze, *Chemiker Zeitung*, 1894, No. 43); more of the latter, therefore, is left in the refuse than of the former.”

Note 1. This is the earliest English-language document seen (March 2001) that contains the word “lecithin” or “lecithalbumin” in connection with soy—in this case *tofu*.

“In the manufacture of *tofu*-tablets from the freshly prepared milky liquid, about 2% of concentrated brine as it is obtained as mother liquor from the preparation of sea salt, is added with constant stirring, whereupon a flocculent precipitate is soon formed which is separated by means of a cloth filter, slowly pressed, and then cut into tabular shape. I have tried to arrive at a satisfactory explanation of the nature of *tofu*, and have found that the salt-brine does not act by its chloride of sodium, but by the calcium and magnesium salts which are in it; for we can at once obtain precipitate from the milky liquid if we add a little calcium nitrate or magnesium sulphate, while we can not obtain any separation or precipitation by adding even considerable quantities of sodium chloride or sodium sulphate.”

“I have analysed a sample of the salt brine used for *tofu* making and found it to contain, besides chloride of sodium,

27.9% of chloride of magnesium and 7.0% of chloride of calcium.”

Note 2. This is the earliest English-language document seen (Oct. 2003) that contains the term “soya bean milk.”

Note 3. This is the earliest English-language document seen (Oct. 2003) that contains the word “milky” in connection with soymilk, or that uses the term “milky liquid” to refer to soymilk. It is the second earliest English-language document seen (Oct. 2003) that mentions soymilk, and the earliest that mentions it in connection with Japan.

Note 4. This is the earliest English-language document seen (March 2009) that uses the term “vegetable cheese” to refer to miso.

Note 5. This is the earliest English-language document seen (Feb. 2004) that uses the word “kori-dofu” to refer to dried-frozen *tofu*. Address: Nōgaku-shi [Prof. of Agriculture], Japan.

304. Prinsen Geerligs, H.C. 1895. Eenige Chineesche voedingsmiddelen uit Sojaboonen bereid [Some Chinese foods made from soybeans]. *Pharmaceutisch Weekblad voor Nederland* 32(33):1-2. Dec. 14. Summarized in *Teysmannia* (1897) 7:413-15. [5 ref. Dut; eng]

• **Summary:** Contents: Introduction. Tofu or bean cheese (*Tao-hoe of boonenkaas*). Chinese soja or Fao-ijoe (boonenolie; soybean oil). Japanese soya (soy sauce; In Japanese: Shoijoe; in Chinese: Sex-sze-ijve). Taucho or bean paste (*Fao toio of boonenbrei*).

In the section on *tofu*, soymilk is mentioned twice. Note 1. This is the earliest Dutch-language document seen (Oct. 2003) that uses the term *melkachtige, vette vloeistof* (“milky, fatty liquid”) or *gefiltreerde melkachtige vleistof* (“filtered milky liquid”) to refer to soymilk.

Note 2. This is the earliest document seen (March 2009) that mentions Indonesian-style miso, which it calls “Fao toio.”

At the end of the section on *tofu*, the author continues: Another widely used bean preparation is soy sauce (de Soja), of which two kinds exist: the Japanese and the Chinese Soja. The first-mentioned has already been repeatedly described, for example by König (1889, p. 241), further by J.J. Hoffman in his “Contributions to the Knowledge of the Language, Geography, and Ethnology of the Netherlands Indies” (*Bijdragen tot de Taal-, Land- en Volkenkunde van Nederl. Indië*; Vol. V, p. 192), and recently by G. Schlegel in T’oeng pao [T’oung Pao 1894] (Part 5, No. 2) and O. Kellner in *Chemiker Zeitung* (1895, p. 120). While I could not find anything in the literature about the preparation of Chinese soy sauce (*Soja*), I have copied the following from the manufacturers themselves.

Chinese Soja or Fao-ijoe (bean oil). For this, only black varieties of the *Soja hipida* [*sic, hispida*] *humida* β *atrosperma* or *Soja hipida platycarpa* β *melanosperma* have been used. Their seeds are cooked and the water poured off,

after which the beans are left in the sun for half a day to dry. Now they are cooled on big trays of woven bamboo out of the sun, then covered with leaves of a *Hibiscus* variety. On the beans there will always appear a type of mold, the *Aspergillus Oryzae* to be precise, which, at least on Java, appears every time again on moist soybeans exposed to the open air, but strangely enough does not appear on other foods. The beans are allowed to stand until the mold sporulates, which can be seen by the green color of the mold threads (hyphae), then they are dried again for some days and then put in a strong salt solution that has been cooled. This mixture is put in the sun for 8 days and afterwards it is boiled. The salt solution is then poured off from the beans and saved. The beans are boiled again and the water is added to the first salt solution. This process is repeated as many times as it takes to extract the residue completely.

“The decoction is strained through a fine sieve, boiled again, and the sugar from the areng palm, star anise (not the leaves), and some other herbs (which are available from Chinese druggists as “soya herbs”) are added. Finally, this dark brown, pleasantly aromatic liquid is boiled down until salt crystals start to appear on the surface, indicating that the liquid is completely saturated with salt. After cooling, the soy sauce (*soja*) is ready to use. It yields a spice which is used together with all different kinds of foods as a pleasant condiment, and in the Chinese, Javanese, and even the European kitchen on Java it is an irreplaceable ingredient.

Note 3. This is the earliest document seen (Jan. 2006) that describes the preparation of sweet Indonesian-style soy sauce (*kecap manis*).

“Soy sauce is sold in several quality grades, of which the best is a thick sauce with a special aroma. The lesser kinds are thinner and are made by diluting the thick soy sauce with salt water, while in the very low-grade kinds, instead of the pleasantly sweet-tasting palm sugar, the bitter, sour-smelling unassimilated molasses from sugar factories is used.

“The Chinese soy sauce appears as a black colored, thick, clear liquid in which sometimes a viscous sediment can be found. When diluted with water it turns turbid or cloudy, but after adding salt this cloudiness disappears. Here is an analysis of one of the most common varieties: Specific gravity 1.254, saccharose and glucose 15.60%, nitrogen containing substances (*stikstofhoudende stof*) soluble in alcohol 4.87%, nitrogen containing substances not soluble in alcohol 2.62%, nitrogen-free substances soluble in alcohol 0.25%, nitrogen-free substances (*stikstofrije stof*) not soluble in alcohol 0.75%, salt 17.11%, other ash components 1.65%, water 57.12%. Total 100%.

“The substances insoluble in nitrogen consist (except for peptone) mainly of legumin, which is soluble in strong salt solutions (compare Beilstein, *Handbuch Organische Chemie*, III, p. 1275) and will precipitate when diluted. This protein product (*eiwitstof*) has, by repeated precipitation

with alcohol and renewed dilution in water and salt, been cleaned and could be recognized as a legumin. The elementary analyses gave these figures: Carbon 51.6, hydrogen 7.1, nitrogen 15.9.

“Furthermore, the dilution in water was precipitated by ammonium sulfate, magnesium sulfate and sodium sulfate and not by a large quantity of sodium chloride.

“The nitrogen containing substances soluble in alcohol were leucine, tyrosine and aspartic acid, all breakdown products of legumin, plus a little ammonia. Nitrogen-free extraction substances are almost not present and consist of a little pectin and the black coloring agent from the skin of the soybeans, which gives the black color to the soya.

“Just like Kellner (*Chemiker Zeitung* 1895, p. 121) remarks, the composition of the soya is very similar to the one of meat extract, by which the big importance of this condiment in countries, where mainly vegetable type food is consumed, can be readily explained. Very peculiar moreover is the way in which during the preparation of the soya the heavily digestible protein substances, which are locked into the thick skinned cells of the soya, have been converted into an easily digestible, very delicious food.

“One lets the boiled beans mold by means of the *Aspergillus oryzae*, which above all has the quality of changing amyloextrine and starchy substances into sugars followed by carbonic acid and water breakdown. We can say that a microscopic investigation of a molded soybean shows that the mold threads (hyphae) penetrate the cell walls of the complete soybean and partly dissolve them so the contents will be more readily available. When the mold has used up all that food, as shown by its fructification, the beans are put into a strong solution of salt water so that the legumin will dissolve, producing a thick fluid liquid. At the same time, the broken down substances of the legumin will dissolve pepton [peptone], leucine, tyrosine and ammonia, next to the aromatic substance that will start to form in this stage. The continued manipulations, addition of sugar, herbs, etc., are of course of minor importance, but principally the clever way in which the mold is being used to dissolve the cell walls is highly interesting. This, like so many Chinese preparations, is completely empiric and no Chinese would have the slightest notion of what all this molding is about.”

This article describes the first attempt to identify the tempeh mold. In the section on Indonesian miso (taucho), the author notes: “In a similar way, in Java, other molds are used to make leguminous seeds into more digestible foods. Thus the presscake, which remains after making peanut oil and would be indigestible without further preparation, is subjected to the action of molds. In central and eastern Java *Chlamydomucor Oryzae* [now known as *Amylomyces rouxii*] is used, whereas in western Java an orange mold of the family Oospore (*Neurospora*) is used. In the former case, the food is called ‘bongkrek,’ and in the latter

'ontjom.' If soybeans are molded with *Chlamydomucor* the spice is called 'tempets' [sic, tempeh]. In the preparation, the seeds are boiled, spread, mixed with a little molded cake from a former batch, and left alone for a while until the mass is bound into a solid white cake.

"All the aforementioned molds have the ability to break starch and pectin substances down into sugars, by which means the cell walls are opened and the seeds made more easy to digest.

"In the case of the starch-containing peanut presscakes, the breakdown of starch into sugars, followed by the use of the resulting sugars, proceeds so rapidly that the cakes become warm and within 1 day about 5% of their weight will disappear.

Kagok Tegal 28.9.95.

Note 4. This is the earliest document seen (Feb. 2004) written only in Dutch that mentions tofu, which it calls "Tao-hoe" or "boonenkaas." Earlier documents written in Latin and Dutch also mentioned tofu.

Note 5. This is the earliest document seen written only in Dutch that mentions Indonesian miso, which it calls *Fao toio* or *boonenbrei*, and *tao tsioe*.

Note 6. This is the earliest document seen stating that Hibiscus leaves are used in Indonesia to make soyfoods—in this case soy sauce.

Note 7. This is the earliest document seen (Sept. 2003) that mentions "bongkrek"—but the explanation is incorrect. Address: Java, Indonesia.

305. Agricultural Society of Japan (*Dai Nihon Nokai*). 1895. Useful plants of Japan: Described and illustrated. Vol. 1. Tokyo: Agricultural Society of Japan. 233 p. See p. 5-6. 22 cm. [Eng]

• **Summary:** Discusses five varieties of *Glycine hispida* (p. 5-6) including: 21. Black soy-bean, Jap. *Kuro-mame*. "The beans have black skin. They are eaten either boiled or parched and also used to make *miso* (a kind of sauce with solid consistency), cakes, and *natto* (a cooked beans eaten as relish to rice)."

22. White soy bean, Jap. *Shiro-mame*. Similar to No. 21 but the beans have yellowish-white skins. "Numerous varieties as to size, form, or duration of growth occur, and all are eaten either boiled or parched. Many important services are due to this bean. They are used to make malt [koji], *miso* (a kind of sauce), *shōyū* (bean sauce), and *yuba* (a kind of food). The *mamenoko* (bean flour) [probably roasted soy flour or *kinako*] is made of the beans and is eaten with *dango*, etc. It yields a dye called *Mame-no-go*. Oil is also pressed out from these beans. They are used in many other different ways."

Note 6. This is the earliest English-language document seen (Dec. 2005) that uses the word *mamenoko* to refer to roasted soy flour.

23. Green bean, Jap. *Ao-mame*. Similar to No. 21 but with larger seeds of greenish color. "One variety with green colour both of the skin and albumen called *Konrinzai* occurs, and is used to make *Aomame-no-ko* (green bean flour).

24. Jap. *Goishi-mame*. The seed of this variety is flat and black. Eaten boiled.

25. *Gankui-mame*. "Closely allied to the preceding. The beans are larger and thinner in the middle, and eaten principally boiled."

Also discusses: Job's tears (*Coix lachryma*, Jap. *Tōmugi*, *Hatomugi*, p. 5. The grain is pounded in a mortar, cleaned, and "consumed as meal and *mochi*. An infusion of the parched and ground grains is used instead of tea, and is called *Kosen*)." Five varieties of adzuki beans (*Phaseolus radiatus*, p. 7-8). Pea-nut (*Arachis hypogaea*, Jap. *Tōjin-mame*, *Nankin-mame*, p. 9. "They are eaten parched or used in confectionery, or to extract oil. A variety with larger nuts about 3 times bigger was introduced from America in 1873"). Kudzu (*Pueraria thunbergiana*, Jap. *Kudsu*, *Makudsu*, p. 69-70, 92. "The largest roots are about 3-4 ft. and about the thickness of a man's arm. In winter they are taken, and an excellent starch is prepared from them. It is used for food or paste. The vine is used to make baskets, and its fibre is taken for cloth. The leaves are used to feed cattle"). Sesame (*Sesamum indicum*, Jap. *Goma*, p. 84. "There are three varieties, black, white, and brown colored. The latter variety is the best to take oil. The oil is principally used for dressing food. The grilled seeds are used to add to cakes, salads, etc."). Address: Tameike 1, Akasaka, Japan.

306. Atwater, W.O. 1895. Methods and results of investigations on the chemistry and economy of food. *USDA Office of Experiment Stations, Bulletin No. 21*. 222 p. See p. 193-94.

• **Summary:** In the section on "Food Consumption" a subsection titled "Japanese Dietaries" (p. 193-94) states: "The legumes are little eaten in their natural state but form the basis of a number of prepared foods and relishes, such as miso, tofu, and shoyu, all of which are made from the soja bean. The miso is prepared from cooked beans, which are rubbed to a thick paste and fermented with the ferment used in the preparation of the rice wine. Tofu, or bean cheese, is essentially the legumin of the soja bean, which is first extracted with water and then precipitated by the addition of the mother liquor (magnesium chlorid), obtained from the evaporation of sea water in the manufacture of salt. The cheese is eaten fresh. The shoyu sauce is prepared from a mixture of cooked and pulverized soja beans, roasted and pulverized wheat, wheat flour, salt, and water. The mixture is fermented with the above-mentioned rice ferment for 1½ to 5 years in casks. This sauce is used very largely by all classes."

Note: This is the earliest document seen (Jan. 2006) that uses the term “shoyu sauce.” Address: Prof. of Chemistry in Wesleyan Univ. Director of the Storrs (Connecticut) Agric. Exp. Station, and Special Agent of the U.S. Dep. of Agriculture.

307. Bretschneider, Emil V. 1895. *Botanicon sinicum*. Notes on Chinese botany from native and Western sources. III. Botanical investigations into the materia medica of the ancient Chinese. *J. of the Royal Asiatic Society, North China Branch. Series 2.* 29:1-623. See p. 9-13, 385-86, 389. [200+* ref. Eng]

• **Summary:** The single most important early work on Chinese botany written by a Westerner. Bretschneider, an M.D., lived 1833-1901. Contents: Introduction (p. 1-9). Abbreviated references to Chinese, Japanese and European books (p. 9-12). Medicinal plants of the *Shen Nung Pan Ts'ao King* [pinyin: *Shennong Bencao Jing*] and the *Pie Lu* [pinyin: *Mingyi Bielu*] (p. 13-). Pages 385-86: Section “229.–ta tou, Soy-bean, *Soja hispida*, Moench. P., XXIV, 1. T., XXXV.

“Comp. *Rh ya*, 29, *Classics*, 355.

Pen King:–*Ta tou*. The seed of the CC *hei dadou* [black soy bean] is used in medicine. Taste sweet. Nature uniform. Non-poisonous. When eaten it causes the body to become heavy.

Pie lu:–The ta tou is produced in T'ai shan [in Shan tung, App. 322] in marshes. It is gathered in the 9th month.

Su Sung [11th cent.]:–The ta tou is now generally cultivated in two varieties–the white and the black. The latter is used in medicine.

Li Shi-Chen:–There are many sorts of the ta tou–the black, white, yellow, gray, green and spotted [according to the colour of the seeds]. The black sort is used in medicine, is also a valuable food, and is employed in making CC shi (Soy [nuggets]. V. infra, 234, and Bot. sin., II, 355). From the yellow sort oil is expressed and CC tsiang [jiang] (sauces) and CC fu (beancurd [tofu]. See I.c.) are prepared. These beans are also eaten roasted. Besides the seeds of the ta tou, and the oil expressed from them, other parts of the plant are likewise officinal, viz. the CC ta tou p'i (the valves of the legume), the leaves, the carbonized straw and the flowers.

“See P. Smith, 88, *Dolichos soja*. -

“230.- CC [yellow soybean sprouts] *ta tou huang kuan*. P., XXIV, 7.

This drug is noticed in the *Pen king*. As T'ao Hung-King and Li Shi-Chen explain, this consists of the germs of the black Soy bean, produced by steeping the beans in water and causing them to germinate. These germs are used as food.

“This is still an article of food at Peking, but produced from the yellow Soy bean and called CC *huang tou ya*.

Pages 389-90: “234.–CC [soy nuggets] *ta tou shi*. P., XXV, 2. Comp. *Bot. sin.*, II, 355:–Soy. It is noticed in the *Pie lu*. Li Shi-Chen says it is prepared from the black soy bean.

“In the *Cust. Med.* the CC *tou shi* is mentioned as an article of import, p. 110 (183) Wu hu,–p. 164 (368) Shang hai,–p. 216 (89) Wen chou. It is said to come from Han kow and Ning po, and is identified there with salted black beans.–See also *Hank. Med.*, 45 [by R. Braun, 1888].

Appendixes. Chinese geographical names (p. 547). Alphabetical index of Chinese names of plants (p. 606). Alphabetical index of genus names of plants (p. 616). Address: Late physician to the Russian Legation at Peking.

308. Matsumura, Jinzô. 1895. *Shokubutsu mei-i*. Enumeration of selected scientific names of both native and foreign plants, with Romanized Japanese names, and in many cases Chinese characters. Tokyo: Z.P. Maruya (Maruzen K.K.). 8 + 26 + 17 + 321 + 62 p. See p. 134. With a 26-page European-language bibliography and a 16-page Japanese bibliography on botany. [606* ref. Eng]

• **Summary:** The author admits two species: *Glycine soja* (tsuru-mame or no-mame, indigenous) and *G. hispida* (of foreign origin).

Note: The National Union Catalog states that two similar editions of this work were published in Tokyo in 1895. The first, published by Maruya, is 321 p. The second, published by “Z.P. Maruya & Co. (Maruzen K.K.),” is 455 p. Address: Rigakuhakushi. Prof. of Botany, Tokyo Imperial Univ.

309. Yabe, Kikuji. 1895. Ueber einen vegetabilischen Kaese aus Sojabohnen [On a vegetable cheese made from soybeans]. *Landwirtschaftlichen Versuchs-Stationen* 45:438-39. [1 ref. Ger]

• **Summary:** This is a German summary of the English-language article by Yabe titled “On the vegetable cheese, natto,” which was published in 1894 in Japan in the *Bulletin of the College of Agric., Tokyo Imperial Univ.* 2(2):68-72. “The Japanese prepare from soybeans (*Sojabohnen*), which are rather rich in proteins, two types of cheese: miso and natto. Miso, made with koji, is consumed in greater quantities than natto (*Natto-Käse*; literally ‘natto cheese’).”

Note: This is the earliest German-language document seen (Feb. 2004) that uses the term *vegetabilischen Kaese* to refer to natto. Address: Japan.

310. Prinsen Geerligs, H.C. 1896. Einige chinesische Sojabohnenpraeparate [Some Chinese soybean preparations]. *Chemiker-Zeitung* 20(9):67-69. Jan. 29. (Exp. Station Record 8:72). [3 ref. Ger]

• **Summary:** This is a German translation of the author's 1895 Dutch article, but with two mistakes concerning tempeh corrected. He changed the name of the mold from *Chlamydomucor Oryzae* to *Rhizopus Oryzae* and he

changed the name of the product from “tempets” to “tempeh.” He added in conclusion that “it was finely sliced and enjoyed, mold and all.” But he continued, apparently mistakenly, to refer to tempeh as a Chinese soyfood.

He also improved his description of Chinese-style soybean paste, which he now calls *Tao-tjiung* (*Bohnenbrei*) [*doujiang*], and says has much similarity with the miso of the Japanese (p. 68 R.7).

Note 1. These two articles by Prinsen Geerligts ushered in the era of scientific research on tempeh by European microbiologists and food scientists.

Note 2. This is the earliest document seen (Dec. 1998) that contains the word “tempeh”—spelled with an “h” on the end. It is also the earliest German-language document seen that mentions tempeh, which it calls “tempeh.”

Note 3. This is the earliest German-language document seen (Oct. 2003) that uses the term *milchweisse Flüssigkeit* (“milk-white liquid”) to refer to soymilk. Address: Java, Indonesia.

311. Wehmer, Carl. 1896. *Aspergillus Wentii*, eine neue technische Pilzart Javas [Aspergillus Wentii, a new type of technical mold from Java]. *Zentralblatt fuer Bakteriologie. Series 2*. 2(5):140-51. March 27. [8 ref. Ger]

• **Summary:** Contents: General and background. The mold. 3. Physiology of the mold. 4. Comparison with similar mold varieties. 5. Diagnosis: *Aspergillus Wentii* [Wehmer] nov. spec.—a new species of mold.

This new species of mold was observed by Went in the preparation of Chinese-style soy sauce (*Tao Yu*, see vol. 1, p. 248) and Chinese-style soybean paste (*Tao-tjiung* or *Bohnenbrei*) according to the method practised in Java, and was described by Wehmer (XIX.) in 1896. It appears spontaneously on the boiled Soja beans that have been covered with *Hibiscus* leaves, and affects a loosening and disintegration of the firm tissue of the bean. Ten illustrations on p. 151 show different stages and parts of the mold.

Note: This is the earliest document seen (Feb. 2009) that contains the term *Tao-tjiung*, a term, and perhaps a product, that appears to be between *doujiang* (Chinese-style miso) and *tao-tjo* (Indonesian-style miso). Address: PhD, Privatdozenten an der Technischen Hochschule, Hannover.

312. Trimble, Henry. 1896. Recent literature on the soja bean. *American J. of Pharmacy* 68:309-13. June. [12 ref]

• **Summary:** One of the best early reviews of the literature, especially the European literature, published in the United States. Contents: Introduction. Nutritional composition of the soja bean based on analyses of 5 samples from China, Hungary, France, and Japan. Diastatic enzyme / ferment “present in the soja beans to a greater extent than in many other leguminous seeds (see Güssmann 1890). Composition of etiolated soja shoots [sprouts]. The oil [of the soja bean]. Starch content. Sugar content. Use of soybeans as food in

Japan. Miso. Natto. Tofu. Kori-dofu. Introduction of the soja bean to the United States in about 1888. Ability to obtain nitrogen from the air.

“The immediate excuse for the appearance of this paper is the fact that a number of contributions have recently appeared on the soja bean, notably from the College of Agriculture, Imperial University of Japan.”

“The oil may be extracted by pressure or by means of solvents [in the laboratory]; it is said to possess some laxative properties, is of a yellowish brown color, and has a slightly aromatic odor; it is intermediate between the drying and non-drying oils.” The following constants, based on Stingl and Morawski (*Chemiker Zeitung*, 1886, p. 140) are given: “Specific gravity at 15°C: 0.924. Point of solidification: 8-15°C. Fusing point of the fatty acids: 27-29°C. Point of solidification of fatty acids: 23-25°C. Temperature rise: 59°C. Iodine number: 121.3. Iodine number of the fatty acids: 122. Saponification number: 192.5. Note: Trimble actually got these constants from *J. of the Society of Chemical Industry*, 31 May 1893, p. 453-54, which summarised an Italian-language article by De Negriss and Fabris (1891), whose values confirmed those obtained by Stingl and Morawski.

Concerning tofu and soymilk: “A still more interesting preparation of the soja bean than either of the preceding [miso and natto] is *tofu*. This has been described and investigated by M. Inouye (*Bulletin Imp. College of Agriculture*, Vol. 2, No. 4 [1895]). The beans are first soaked for about twelve hours in water, and then crushed between two millstones until a uniform pulpy mass is obtained. This is then boiled with about three times its weight of water, and filtered through cloth. The liquid filtrate is white and opaque, very closely resembling cow’s milk, while the odor and taste remind one of fresh malt. On standing, the liquid becomes sour from the formation of lactic acid, and a coagulation of the casein takes place. The freshly boiled and filtered liquid is coagulated either by the addition of a portion of the sour liquid which has been set aside from a previous lot, or it is treated with about 2 per cent of a concentrated brine, such as is obtained as mother liquor from the preparation of sea salt.”

“Somewhere about the year 1888 the soja bean was introduced into the United States. It has been tried in a number of State Experiment Stations, and is gradually working into favor in the Southern States. In Kansas the plant has been found to withstand considerable drought... The plant is valuable for forage or soiling. The beans have been produced in South Carolina to the amount of 10 to 15 bushels per acre. On account of their richness in oil they have been used as a substitute for cotton-seed meal in feeding cattle, with very satisfactory results.

“The plant is believed to have, in common with most leguminosæ, the power of obtaining some of its nitrogen from the air, and hence, of acting as a soil renovator.”

Note 1. This is the earliest document seen (March 2002), published in the USA, that contains the word *tofu*, or *kori-dofu* [dried-frozen tofu], or that discusses soymilk.

Note 2. This is the earliest English-language document seen (March 2003), published in the USA, that uses the word “crushed” or one of its cognates (crushing, crushers, etc.) in connection with soybeans.

Note 3. This is the earliest U.S. document seen (Sept. 2002) that mentions the use of a solvent for extracting the oil from soybeans.

Note 4. This is the earliest English-language document seen (March 2008) that contains the term “iodine number” (regardless of hyphenation or capitalization).

Note 5. This is the earliest English-language document seen (March 2008) that contains the word “drying” in connection with soy oil and its iodine number, or that states that soy oil is intermediate between the drying and non-drying oils. Address: USA.

313. Yabe, Kikuji. 1896. Kaese aus sojabohnen [“Cheese from soybeans”]. *Zentralblatt fuer Bakteriologie. Series 2.* 2(23/24):769. Dec. 24. [2 ref. Ger]

• **Summary:** This is a German-language review of an article from the *Nederlandsch Landbouw Weekblad*. 1896. No. 82— from *Molkerei-Zeitung*. 1896. No 43. The Japanese prepare from the Legumin-rich soybean two types of cheese, which are named miso and natto. Address: Nôgaku-shi, Imperial Univ., College of Agriculture, Tokyo, Japan.

314. Guo Yunsheng. 1896. Jiuhuang jianyishu [Treatise on simple methods of alleviating famine]. China. Passage on soy reprinted in C.N. Li 1958 #344, p. 243-47. [Chi]

• **Summary:** Wade-Giles reference: *Chiu Huan Chien I Shu*, by Kuo Yün-Shêng. Qing dynasty. The major division titled “Monthly ordinances for famine relief” contains the following sections: In the third month, you can plant large-seeded black soybeans (*heidou*). In the third month, plant small-seeded yellow soybeans (*huangdou*): they can be used cooked as a main dish / grain (*fan*) or as a side dish / vegetable (*cai*), or they can be used for making jiang, soy nuggets (*shi*), soy oil, or tofu (*fu*). In the third month, plant large-seeded yellow soybeans (*huangdou*): they can be used in all the same ways as small-seeded yellow soybeans, described above.

In the fourth month, plant large-seeded black soybeans, small-seeded yellow soybeans, and large-seeded yellow soybeans: In the early fall, they young pods can be eaten [as green vegetable soybeans].

In the fifth month, plant the large-seeded black soybean, the small-seeded yellow soybeans, and the large-seeded yellow soybeans: everybody knows what to do with them.

The major division titled “Saving the soil when it is depleted” contains the following sections: Plant large-seeded black soybeans, small-seeded yellow soybeans, or

large-seeded yellow soybeans: Do not till the soil [which could cause erosion]. Note: Planting these legumes will help enrich the soil with nitrogen.

Plant large-seeded black soybeans, small-seeded yellow soybeans, or large-seeded yellow soybeans on land which has been infested by insects: Soybean seedlings contain no sugar, so the insects do not like to eat them.

New beans [those on land that has not been previously planted to beans] should be planted in a shady place: These new beans came from a place named Fanxian in Sichuan province. Note: This is apparently a famous soybean variety from a place where soybeans are apparently grown a lot.

Large-seeded black soybeans, small-seeded yellow soybeans, and large-seeded yellow soybeans should be planted in a shady place.

Barley can use black or yellow soybeans as green manure. Wheat can use black or yellow soybeans as green manure.

Barley can use dried black or yellow soybean leaves as manure. Wheat can use dried black or yellow soybean leaves as manure. Note: In times of famine, recycle all possible crop wastes.

In sandy places, use the dry empty pods of black soybeans or yellow soybeans as manure.

In hard soil, use dried leaves of black or yellow soybeans as manure.

Black soybeans and yellow soybeans should not follow (fears) the red flowered plant [safflower?] in rotations— according to certain old farmers. Note: Safflower has orange-red flowers, which were long used in China as a source of red dye. Southern melons (*nangua*) should not follow black or yellow soybeans in rotations. Bamboo shoot melons (*sungua*) should not follow black or yellow soybeans in rotations. False southern melons (*jianangua*) should not follow black or yellow soybeans in rotations. *Nuogua* melons should not follow black or yellow soybeans in rotations: in the midst of their growth, the melons will wilt. Black soybeans should not follow yellow soybeans in rotations, and vice versa.

The major division titled “Planting for famine relief” [plants which yield a crop quickly] contains two sections: Quick-maturing / early soybeans (*dadou*) or plum soybeans (*meidou*) can be planted any time (and staggered) from the 2nd month to the 5th month: Soybeans planted in the 2nd month will be ready to harvest in the 5th month. Small-seeded yellow soybeans whose seedlings are to be used as a vegetable (*huangdou miaocai*) can be planted for 3 months / three times [meaning unclear]: The grain changes into a vegetable; they are grown everywhere. (Translated by H.T. Huang, PhD, March 2003).

Bray (1984, p. 641): “A treatise on simple methods of alleviating famine.” 1896.

315. Nishimura, Ejuro. 1896. *Miso shōyu jōzōhen* [Miso and shoyu fermentation]. Tokyo: Hakubunkan. 316 p. See p. 18. 20 cm. Series: Tsuzoku nichiyō kagaku zensho, no. 11. [Jap]*

• **Summary:** More than 90% of the protein in soy beans is in the form of albuminoids.

Note: This is the earliest book in WorldCat / OCLC that has miso as a subject or title word.

316. Langworthy, C.F. 1897. Soy beans as food for man. *USDA Farmers' Bulletin* No. 58. p. 20-23. July 7. Revised (very slightly) in 1899. [1 ref]

• **Summary:** Describes and gives the nutritional composition of various Japanese soyfoods, including natto, miso (white, red, or Swiss), tofu, frozen tofu, yuba, shoyu.

“Tofu, or bean cheese, is prepared as follows: The beans are soaked in water for about twelve hours, and crushed between millstones until of a uniform consistency. The ground material is then boiled with about three times its bulk of water for about an hour, and filtered through cloth. The filtrate is white and opaque, having somewhat the appearance of milk. It has, however, the taste and smell of malt. This milky liquid, to some extent, resembles cow's milk in composition, as is shown by the following table:” The table, titled “Comparison of the composition of soy-bean milk and cows' milk,” shows that the two liquids (soy / cow) have the following composition: Water 92.53% / 86.08%, albuminoids 3.02% / 4.00%, fat 2.13% / 3.05%, etc.

“The protein in soy-bean milk is precipitated by adding the mother liquor obtained in the manufacture of salt from sea water, which contains considerable magnesium chloride. The precipitate is filtered off and formed into cakes with the hands. It is eaten in the fresh state or frozen. In the latter case it loses part of its water.”

“Though these soy-bean products are prepared chiefly in Japan and other eastern countries, their manufacture has been attempted to some extent in Switzerland and elsewhere...”

“Bean sausages in considerable variety are prepared in Germany, and formed part of the ration of the German soldier in the Franco-Prussian war. So far as can be learned, these are always made from ordinary varieties of beans and not from soy beans...”

“Under the name of coffee beans, soy beans are eaten to some extent in Switzerland as a vegetable, and dried and roasted are also used as a coffee substitute. Their use for this latter purpose is not unknown in America. The attempt has recently been made by certain dealers to place the soy bean on the market as a new substitute for coffee and to sell it under other names at an exorbitant price.

“Bulletin No. 98 of the North Carolina Experiment Station recommends soy beans as a palatable vegetable when prepared as follows: Soak the beans until the skins

come off and stir in water until the skins rise to the surface and then remove them. Boil the beans with bacon until soft, season with pepper, salt, and butter, and serve hot. If the beans are green the preliminary soaking may be omitted. No other references to the use of soy beans for human food in the United States have been found.”

Note 1. This is the earliest English-language document seen (Oct. 2003) that contains the term “soy-bean milk.” It is also the earliest U.S. government document or USDA document seen (May 2006) that uses the term “soy-bean milk” (or any other term containing the word “milk”) to refer to soymilk.

Note 2. This is the earliest document seen (Jan. 2005) concerning the work of the USDA with nutrition (or home economics) and soybeans. Address: Office of Exp. Stations, USDA, Washington, DC.

317. Trimble, Henry. 1897. The soy bean. *American J. of Pharmacy* 69:584-93. Nov. [11 ref]

• **Summary:** Much of this material is derived from Williams and Langworthy (1897). Illustrations (p. 585, from Williams, p. 5) show: (a) flowering branch of a soy bean plant (reduced 2/3), (b) one of the flowers (enlarged), (c) pods of a soy bean plant (reduced 2/3). One table (p. 588) shows the chemical composition of various kinds of forage made from the soy bean (fresh or air-dry substance, or water-free substance): Fodder (early bloom to early seed), soy-bean hay, straw, straw (hulls and vines after threshing), soy-bean seed, soy-bean meal (18.9% / 21.0% fat), soy-bean ensilage, corn and soy-bean ensilage, millet and soy bean ensilage. Another table (p. 591) shows the composition of the following “Soy-bean food products”: Fresh tofu, frozen tofu, natto, yuba, white miso, red miso, Swiss miso, and two types of shoyu. Address: USA.

318. Angell, Stephen H. 1897. Soya as food and fodder. *Consular Reports [USA]* 55(207):551-52. Dec. [2 ref. Eng]

• **Summary:** A remarkable article about all aspects of soybeans and soyfoods. It begins: “The following is a translation from an article by M. Henri Fortune, the well-known French agriculturist. ‘There exists a plant extensively cultivated throughout China, Japan, Cochin China, and Tonquin, of which the culture on clay and flinty clay lands would be an excellent experiment for agriculturists and persons interested in the progress of agriculture. This plant acclimatizes perfectly in Belgium.

“It is employed in the above countries as a food and for divers other purposes. Transformed by cooking into a pulp, which is mixed with salt and rice, we obtain the ‘miso,’ which constitutes the regulation breakfast of the Japanese. I have eaten this preparation in Yedo [Edo, Tokyo] in 1892, and I found it excellent in taste and very nourishing.

“Mixed with barley, fermented with water and pressed, this product yields a sirup known as the ‘soya,’ which is, so

to speak, the unique sauce for all and every Japanese dish, and is employed in such large quantities that the works in the town of Nagasaki have a yearly production of 2,000 tons. The soya also yields a very superior quality of oil, which advantageously replaces olive oil.”

“The bread made from the flour of the soya is as good as cake without sugar, and is very appetizing, and is not to be compared with gluten bread, which constipates.” Fortune believes that ‘soya bread is twice as nourishing as wheaten bread, five times as poor in starch, and ten times as rich in fatty materials, and, once its qualities are fully known, the soya may be pronounced the bread of the future.’ He recommends the use of soya in bread and biscuits for diabetic diets.

“In China, the soya replaces milk, which the Chinese do not drink at all. To make this milk, the grain must be crushed, put in a sieve, water slowly poured over it, and a product obtained having all the qualities of milk.

“The cheese made from soya is delicious. The grain is softened in water and pounded in a mortar. The pulp compressed in a cloth gives two parts; that which is hard is used to feed poultry, etc., and the other, which passes through the cloth, is albumen, and is put on the fire, the curds separated with the aid of rennet, and, when coagulated, a little salt is added.”

Of green vegetable soybeans he writes: “We have a project in hand to call together the principal Paris restaurant keepers this winter, to allow them to partake of this new vegetable, which will advertise it throughout the world under the patronage of such substantial connoisseurs.

“In a few years hence, one will buy soya at the grocers, as to-day one buys beans. It is an excellent substitute for hay, and keeps horses in good condition, and cows, when fed on it, will yield at least 20 per cent more milk daily than when fed on ordinary hay.

“The soya produces per hectare (2.471 acres) from 2,500 to 3,000 kilograms (5,512 to 6,614 pounds) of seed, especially if phosphate fertilizers are sufficiently employed.”

Note: This is the earliest document seen (Feb. 2001) concerning soybeans in Belgium, or the cultivation of soybeans in Belgium. This document contains the earliest date seen for soybeans in Belgium, or the cultivation of soybeans in Belgium (Dec. 1897). The source of these soybeans is unknown. Address: Commercial Agent, Roubaix, France July 13, 1897.

319. Lafar, Franz. 1897. Technische Mykologie. Ein Handbuch der Gaerungsphysiologie... Erster Band: Schizomyceten-Gaerungen [Technical mycology. A handbook of fermentation physiology... Vol. 1: Schizomycetic fermentations]. Jena: Verlag von Gustav Fischer. xiii + 362 p. See p. 290, 305-15. Illust. No index.

25 cm. Foreword by Prof. Dr. Emil Chr. Hansen (Carlsberg-Laboratorium, Kopenhagen [Copenhagen]). [7 ref. Ger]

• **Summary:** The introduction gives a detailed early history of the discovery of fermentation, microorganisms and *Mikrozymen / Mikrozyma* (microzymes) (including the work of Needham, Spallanzani, Franz Schulze, Theodor Swann, Schröder and Dusch, Louis Pasteur, and Béchamp), its relation to spoilage, the development of fermentation theory, and the nature of the fermentation organisms.

In Chapter 31, “Cheese fermentations and related decompositions,” section #179 is titled “Natto and miso.” These fermented foods are both made from the soybean (*Soja-Bohne*). For natto: The fermentation results in a partial transformation of the proteins into amides, peptones, guanin, xanthin, and tyrosin. The resulting mass is called natto in Japan, and is sold commercially. Note: Even though the word “enzymes” is not used, the author describes their action. This is the earliest document seen (July 2003) describing the action of enzymes produced during a soybean fermentation. At the end of the same section, koji, shoyu, tofu, nukamiso, taohu, and tao-yu (Chinese-style tofu and soy sauce) are mentioned—with 7 partial references.

Chapter 33, titled “The binding of free nitrogen by bacteria” (p. 303-17) discusses this relatively new idea in depth, including the discovery of root nodules on legumes, the origin and function of the nodules, and the nodule bacteria; Soybeans are mentioned on p. 303. Chapter 36, titled “Nitrogen-fixing bacteria” (p. 335-43) gives more details.

Note 1. Although there are many in-text citations, the bibliography for this volume appeared in Vol II, published in 1901-1907. An English-language translation of this volume was published in 1910.

Note: This is the earliest document seen (Sept. 2002) concerning the early history of microbiology and the discovery of enzymes. Address: Unestablished university lecturer (*Privatdozent*) for Fermentation-Physiology, Technical High School. Assistant at the Physiological Laboratory of the Royal Experiment Station for the Fermentation Industry at Hohenheim near Stuttgart [Germany].

320. *Tropical Agriculturist (Ceylon)*. 1898. The soy beans. 17(7):460. Jan. 1. [1 ref]

• **Summary:** “The Madras Government sends us a paper showing how Surgeon-Lieutenant -Colonel W.G. King, Sanitary Commissioner for Madras, addressing the District Medical and Sanitary Officer, Vizagapatam, the Deputy Collector of Bellary and the Tahsildar of [nearby] Saidapet [Tamil Nadu], on 8th September 1897, says:

“I have the honour to forward herewith ___ oz of soy beans, with the request that you will kindly cause them to be sown in any suitable place where they can be carefully watched as to progress of growth, and that you will oblige

me by stating the nature and amount of crop obtained and whether you think the beans can be grown successfully in your district from the experience so obtained. I need not remind you that the 'Soy bean' is probably the most nutritious form of readily assimilable pulse at present known, and that, should it prove possible to introduce it widely in this Presidency, it would prove of great advantage in jail administration and also to the poorer classes generally... In asking you to kindly undertake the experiment, I may state that it was only after long and persistent search in India and Burma that I have ultimately obtained specimen."

"Very few vegetable products are so rich as this bean at once in albuminoids and in fat or oil, the former constituent amounting on the average to 35%, and the latter to 19... In China and Japan three preparations are extensively made from the soy bean. Soy sauce is the best known of these, but more important are the soy or bean cheeses, and a kind of paste. The beans are sometimes pressed for the sake of the oil they yield; the residual cake forms an extremely rich cattle food, containing as it does 40 per cent. of flesh-formers and 7 per cent. of oil. The Soy bean may also be grown as a fodder plant. If cut just when the pods are fully formed, it makes an excellent hay, superior to that of the lentil."

321. *New York Times*. 1898. To stop customs frauds: Unusual instructions for United States consuls at foreign shipping ports. Appraisers to have facts. April 28. p. 4.
 • **Summary:** The U.S. Treasury Department and State Department are working "to stop undervaluations of imports at the Port of New York"

"Consuls at Hongkong and other Chinese ports are directed to forward at frequent intervals price lists or quotations on the following enumerated articles: Birds' nests, lichees preserved in tin, bamboo shoot, shrimp sauce, oyster sauce, plum sauce, bean sauce, soy sauce, preserved ginger, beansticks [yuba], and dried mushrooms."

322. Bishop, Isabella L. Bird (Mrs.) 1898. Korea and her neighbors: A narrative of travel, with an account of the recent vicissitudes and present position of the country. 2 vols. London: John Murray; New York, NY: Fleming H. Revell Co. Vol. 1: x + 261 p. Illust.

• **Summary:** In Vol. 1: Preface, p. vi: It must be evident to all who know anything of Korea, that a condition of tutelage, in some form or another, is now absolutely necessary to her existence as a nation. The nominal independence won for her by the force of Japanese arms is a privilege she is not fitted to enjoy, while she continues to labour under the burden of an administration that is hopelessly and superlatively corrupt."

Page xi: The author made four visits to Korea between Jan. 1894 and March 1897 as part of her larger plan to study

the characteristics of the Mongolian races. Her first journey produced the impression that Korea was the most uninteresting country she ever travelled in.

Soy [sauce] is mentioned—Pages 141-42: If, while traveling, no "clean room" existed in an inn, "I had a room in the women's quarters at the back, remarkable only for its heat and vermin, and the amount of ang-paks, bundles of dirty clothes, beans rotting [fermenting] for soy [sauce and paste], and other plenishings which it contained,..."

Page 177: "A quart of rice, which when cooked is of great bulk, is a labourer's meal, but besides there are other dishes, which render its insipidity palatable. Among them are pounded capsicum, soy [sauce], various native sauces of abominable odours, kimchi, a species of sour kraut [*kimchi*], seaweed, salt fish, and salted seaweed fried in batter. The very poor only take two meals a day, but those who can afford it take three and four."

Page 179: Koreans are omnivorous, and they waste nothing. "Cooking is not always essential. On the Han I saw men taking fish off the hook, and after plunging them into a pot of red pepper sauce, eating them at once with their bones. Wheat, barley, maize, millet, the Irish and sweet potato, oats, peas, beans, rice, radishes, turnips, herbs, and wild leaves and roots innumerable, seaweed, shrimps, pastry made of flour, sugar, and oil, *kimchi*, on the making of which the whole female population of the middle and lower classes is engaged in November, a home-made vermicelli of buckwheat flour and white of egg, largely made up into a broth, soups, dried persimmons, spongecakes, cakes of the edible pine nut and honey, of flour, sugar, and sesamum seeds, onions, garlic, lily bulbs, chestnuts, and very much else are eaten. Oil of sesamum is largely used in cooking, as well as vinegar, soy [sauce], and other sauces of pungent and objectionable odours, the basis of most of them being capsicums and fermented rotten [soy] beans!"

Page 182: The inn, if inn it was, gave me a room 8 feet by 6, and 5 feet 2 inches high. *Ang-paks*, for it was the family granary, iron shoes of ploughs and spades, bundles of foul rags, seaweed, ears of millet hanging in bunches from the roof, pack-saddles, and worse than all else, rotten beans fermenting for soy [sauce and paste], and malodorous half-salted fish, just left room for my camp-bed."

Note: This is the earliest document seen (Feb. 2009) that mentions Korean soy sauce, which it calls simply "soy." The author does not mention Korea's very popular soybean pastes—such as doenjang or kochujang. She may well have used the word "soy" to refer to both soy sauce and soy pastes.

Bean or beans are mentioned: Page 18: "Hides, [soy] beans, dried fish, *bêche de mer*, rice, and whale's flesh are among the principal exports. It was not till 1883 that Fusan was officially opened to general foreign trade, and its rise has been most remarkable."

Page 39: In the market booths are to be seen “rice, millet, maize, peas, beans,...”

Page 85: In 1894 they paid taxes on barley, beans, rice, and cotton.

Page 100: “... they conveniently export their surplus produce, chiefly beans, tobacco, and rice, and receive in return their supplies of salt and foreign goods.”

Page 112: In the Han River valley: “Every valley has its streamlet, and is barred across by dykes of mud from its head down to the Han—rice, with tobacco, beans, hemp, and cotton, being the great articles of export.”

Page 119: “Ma-Kyo is the river port of Che-chön... “It exports rice, beans, and grain from the very rich agricultural country on both sides of the river,...”

Page 123: “When full grown a bull can carry from 350 to 500 lbs. They are fed on boiled beans, cut millet stalks, and cut pea haulm, and the water in which the beans are boiled.”

Page 138: Korean ponies “are fed three times a day on brown slush as hot as they can drink it, composed of beans, chopped millet stalks, rice husks, and bran, with the water in which they have been boiled.”

Page 147: “There is much wet rice along the route, as well as dry rice, with a double line of beans between every two rows,...”

Page 149: “It is a most fertile tract, and could support a large population, but not being suited for rice, is very little cultivated, and grows chiefly oats, millet, and beans, which are not affected by the strong winds.”

Page 150: “There the villagers could not or would not take us in. They said they had neither rice nor beans, which may have been true so late in the spring.”

Page 185: “A smaller valley contains about 3,000 acres of rice land only, and on the slopes surrounding all these are rich lands, bearing heavy crops of wheat, millet, barley, cotton, tobacco, castor oil, sesamum, oats, turnips, peas, beans, and potatoes.”

Page 186: “In wheat, barley, or rye fields the sowing is in October, and the harvest in May or June, after which beans, peas, and other vegetables are sown.”

Page 187: “Grain, peas, and beans are threshed out with flails as often as not in the roadway of a village,...”

Page 189: The village “has several schools, and exchanges rice and beans for foreign cottons at Won-san,...”

Page 217: Newchwang “is a city of 60,000 souls, the growth of its population having kept pace with its rapid advance in commercial importance since it was opened to foreign trade in 1860. Several British steamers with big Chinese characters on their sides were at anchor in the tideway, and the river-sides were closely fringed with up-river boats and sea-going junks, of various picturesque builds and colours, from Southern China, steamers and junks alike waiting not only for cargoes of the small beans for which Manchuria is famous, but for the pressed bean-

cake which is exported in enormous quantities to fertilise the sugar plantations and hungry fields of South China.”

Page 218—Concerning Newchwang: “‘Peas,’ really beans (Footnote: *Glycine hispides* [sic, *Glycine hispida*] {Dr. Morrison}), are its chief *raison d’être*, and their ups and downs in price its mild sensations. ‘Pea-boats,’ long and narrow, with matting roofs and one huge sail, bring down the beans from the interior, and mills working night and day express their oil, which is as good for cooking as for burning.”

Page 235—Muk-den [Mukden] is a busy place, and does a large and lucrative trade, specially in grain, beans, and furs.”

Seaweed is mentioned on pages 38, 140, 142, 177, 179, 182, 198-99. Kimchi: p. 98, 147, 177. Address: F.R.G.S., Geographer, Great Britain.

323. Chamberlain, Basil Hall. 1898. A handbook of colloquial Japanese. 3rd ed. London: Sampson Low, Marston, & Co.; Tokyo: The Shuyeisha, Ichigaya; Yokohama, Shanghai, Hongkong, Singapore: Kelly & Walsh, Ld. ix + 567 p. 19 cm.

• **Summary:** Page 241: Court words, used by the Imperial Family, include: For miso they say “*o mushi* (lit. honourably steamed). English: bean sauce.” For tōfu they say “*o kabe*. English: Bean-curd.” O-kabe belongs also to the language of women.

Page 451: A poem of 31 syllables (5, 7, 5, 7, 7) says: Hototogisu / Jiyū jizai ni / Kiku sato wa,—/ Saka-ya ni san ri, / Tōfu-ya ni ni-ri!” Translation: “The village where one may listen undisturbedly to the cockoo’s song is—three leagues from the grog shop, and two from the bean-curd shop!”

Anglo-Japanese vocabulary: soy, *shōyu*, *shitaji*.

Japanese-English vocabulary: “kabe, (with honorific prefix *o*), the Court word for tōfu, bean-curd.”

Page 517: “miso, a kind of bean sauce.”

Page 520: “mushi, (with honorific prefix *o*), the Court word for miso, bean sauce.”

Page 538: “shōyu, soy (our word comes from the Japanese).”

Page 546: “tōfu, bean-curd: tōfu-ya, a shop for or seller of bean-curd.” Address: Emeritus Prof. of Japanese and Philology in the Imperial Univ. of Tokyo, Tokyo.

324. Fruwirth, Carl. 1898. Anbau der Huelsenfruechte [Cultivation of legumes]. Berlin: Verlagsbuchhandlung Paul Parey. xii + 274 p. See p. 11-13, 19, 47, 214-19 (Die Sojabohne), 264, 272-73. Illust. No index. 19 cm. [5 ref. Ger]

• **Summary:** Contents: Vernacular names in other countries. Botanical characteristics. Varieties, types (*Varietäten*, *Sorten*). Natural history. Uses and significance. Demands placed on the soil and climate (*Wärmesumme* or “heat units”). Use of fertilizers. Preparing the soil. Planting and

seed. Harvest and yields. Animal pests. An illustration (p. 215) shows the leaves and buds of a soybean plant (*Glycine hispida*).

Concerning varieties and types: In addition to the yellow-seeded form, soybeans (*Sojas*) with brown and with black seeds are also cultivated in Europe, and both likewise belong to the *Soja tumida* group. However the distribution of these latter two is insignificant. Haage and Schmidt, the seedsmen in Erfurt, sell a green-seeded form named Bluish-green Soybean (*Blaugrüne Soja*). 100 seeds weigh 8-13 gm. One liter of seeds weighs 712-717 gm. Individual seeds are 7-8.2 mm long, 5-5.5 mm wide, and 3.2-4 mm high.

Yield: The yield obtained in Hungarian Altenburg was 1,600 to 2,100 liters of seed and 1,300 to 1,600 kg of straw per hectare. The yield in Bavaria (*Bayern*), based on many trials, averaged 2,400 kg/ha of seed. Haberlandt calculated the yield, based on trial plots with small areas, at 1,685 kg/ha. The range in yield is considered to be 700 to 3,000 kg/ha of seeds and 1,200 to 3,000 kg/ha of straw.

A table (p. 266-73) gives the composition on an as-is and moisture-free basis of all legumes discussed in this book.

Note: Karl Fruwirth was born in 1862. Address: Professor at the Royal Agricultural Academy (an der Koenigliche Landwirtschaftlichen Akademie), Hohenheim [Württemberg, Germany].

325. *Proceedings of the American Pharmaceutical Assoc.* 1898. Report on the progress of pharmacy. 46:582-1120. See p. 857-60.

• **Summary:** In the section titled "Materia medica," under "Vegetable drugs," we read: "*Soy Bean-Food Value, etc.*—Referring to his paper on the soja bean (see *Proceedings* 1896, 634), in which he gave a summary of the literature on this valuable food product, Prof. Henry Trimble reproduces in the abstract a recent paper entitled "The Soy Bean as a Forage Crop," by Thomas A. Williams, with an appendix on "Soy Beans as Food for Man," by C. F. Langworthy, published in *Farmer's Bulletin*, No. 58, issued by the U. S. Department of Agriculture. While not adding anything new to the knowledge of the digestive ferment, which was prominently discussed in the summary above referred to, there is much valuable information that is of interest to the pharmacist.

Discusses *Glycine hispida*, soy bean, Prof. Haberlandt, yuba, shoyu, tofu, frozen tofu, natto, and miso.

See: Trimble, Henry. 1897. "The soy bean." *American J. of Pharmacy* 69:584-93. Nov.

326. Trabut, Louis. 1898. Le soja [The soybean]. *Algerie, Service Botanique, Informations Agricoles. Bulletin* No. 16. 7 p. [7 ref. Fre]

• **Summary:** The author, who demonstrates a good knowledge of American and European publications on the

soybean, has cultivated soybean varieties at Alger (Algiers) and Rouïba since 1896. The soybean resists dryness well. "Soya (*le Soja*) has remained a curiosity and is not well known among agriculturists. This is explained by the large diversity of soybean races having very different needs, and also by their very varied aptitudes and uses. This is not astonishing, for soya is cultivated in the country of its origin in both temperate and tropical zones, and is used for the feeding of animals, which eat it in the form of grain, hay, and green forage. It plays a major role in the human diet, providing abundant nutrition in the form of sauce, vegetable milk (*lait végétal*) or cheese [tofu], oil, flour, and bread. Soya completes rice, which is lacking in nitrogen. It is very widely used, furnishing, at a low price, a food which replaces meat or fish." Note 1. This is the earliest French-language document seen (Oct. 2003) that uses the term *lait végétal* to refer to soymilk.

"We have made the mistake of presenting soya as a rival to the haricot bean: the comparison turned out to be advantageous for the latter legume (haricot) and soya was rejected.

"In Algeria we think that, for the moment, soya must be looked at primarily as a forage plant. Very remarkable for its richness in nitrogenous materials and fat, it can be very useful in the feeding of animals, for fattening and for the production of dairy milk. Its role in the human diet is less evident, however the indigenous people might find a precious resource in this legume. The soya would perfectly complement 'bechna' [probably a local grain] and barley, which are used to make a flat cake which, is too low in nitrogenous materials."

"At this station the maximum yield has been obtained from a large yellow soybean obtained directly from China. On an area of 10 ares (1,000 square meters or 0.1 hectare) the yield has been 30 tonnes/ha of green forage giving about 70 quintals (7,000 kg) of dry forage." Note 2. This is the earliest document seen (Jan. 2001) that uses the word "quintals" (or quintal) in connection with soybeans. Note: 1 quintal = 100 kg.

"The yield of the seed had been high enough that cultivation of soybeans can be considered profitable. The early varieties have given the following yields in kg/hectare at the Rouïba Station in 1896/1897: Chocolate dwarf 1370 (not watered)/1735 (watered). Compact green 2980/1735. Yellow early 2500/1785. The spring of 1896 was very rainy, while the spring of 1897 was very dry and it was necessary to water the crop.

On page 7 is a brief description of miso, shoyu, and tofu (made by coagulation of soymilk).

Concerning nodulation: "Until this year, the numerous varieties of soya which I have cultivated at the station did not show any trace of nodulation on the roots; it is therefore evident that in our soils the special microbe which determines these nodules or tumors is not present. In Jan.

1897 I contacted Prof. Kirchner (at the School of Agriculture at Hohenheim), who is especially interested in the rhizobium of soya, and I asked him to send me several nodules in order to allow me to introduce to the soya crops here the microbe which assimilates atmospheric nitrogen. All the pots that were inoculated produced soybeans whose roots were covered with nodules the size of peas. It was not formerly possible to appreciate the influence of the nodules on the development of the plant. Field trials concerning this point will be made during 1898." An illustration (non-original, p. 2) shows a soybean plant (from an original in Carrière 1880). Address: Algeria.

327. Blasdale, Walter C. 1899. A description of some Chinese vegetable food materials and their nutritive and economic value. *USDA Office of Experiment Stations, Bulletin No. 68*. 112 p. See p. 32-36. [19 ref]

• **Summary:** "According to Prinsen-Geerligs [*Chemiker-Zeitung*, 20 (1896) 67-69], 'tao hu,' or bean cheese, is prepared from the seeds of the white variety of soy bean. These are allowed to soak for three hours in water, are then reduced to a thick paste, and the mass cooked. The cooked mass is strained through a coarse cloth. The filtrate consists of a milky-white liquid containing protein and fat. As soon as this becomes cool some material is added (for instance, crude salt containing magnesium chlorid [chloride]), which precipitates the proteid material, the fat being inclosed in the coagulated mass. The coagulated material is pressed and kneaded into small cakes. The cakes may be dipped for a few moments into a saline solution of curcuma. Variations in the process give rise to a number of varieties of bean cheese. This is essentially the method used by the Chinese of San Francisco in the preparation of the bean cheese used by them. It is sold either in the form of a freshly precipitated curd or in the form of small square cakes obtained by compressing the former material. It is usually cooked in peanut oil before being eaten and, in the author's opinion, is a palatable food. A partial analysis of one of the cakes gave 81.35 per cent, fat 5.19 per cent, and ash 0.80 per cent.

"The filtrate from the cooked soy beans resembles milk, and, on heating, a skin [yuba], not unlike that formed on milk, rises to the surface of it."

A large number of varieties of the soy bean are in cultivation in China and Japan, but only two were found in the Chinese markets in San Francisco, a yellow and a black variety. Aside from a difference in color, the two forms apparently do not differ materially from each other. The yellow variety is known as 'wong tau,' and is designated by the characters 'yellow' + 'bean,' while the black is known as 'hak tau,' and is designated by the characters 'black' + 'bean.'

"Both varieties obtained from the Chinese market in San Francisco grew readily in Berkeley, attaining a height of about 3 feet, and in spite of a very dry season produced an

abundant crop of seeds... The composition of the seeds of the two varieties is shown in Table 10 (p. 33), the average composition of American-grown soy beans being quoted also for purposes of comparison." On a dry-weight basis, the original black soy beans contained, on average, 0.35% more protein (39.62% vs. 39.27%) and 0.72% less fat (18.77% vs. 19.49%) than the yellow soy beans. The soy beans grown in Berkeley (average of 8 analyses) contained 38.1% protein and 19.00% fat.

Note: This is the earliest document seen (June 2007) concerning the cultivation of soybeans in California. This document contains the earliest date seen for the cultivation of soybeans in California (July 1899).

Photos show: The upper portion of a plant of the black soy bean (p. 33). "Mature plant of yellow soy bean" (showing only the pods and stems, no leaves, p. 35). Address: Instructor in Chemistry, Univ. of California.

328. Haury, Alfred. 1899. Die Schimmelpilze und ihre industrielle Anwendung [Molds and their industrial application]. *Oesterreichische Chemiker-Zeitung* 2(23):605-11. Dec. Series 2. [24 ref. Ger]

• **Summary:** Discusses three genera of molds: *Penicillium*, *Aspergillus*, and *Mucor*. Gives details and a review of the literature on the use of *Aspergillus* species of mold for the production of saké, koji, soy sauce, miso, and various other East-Asian foods. In 1896 a book titled *Les moisissures (The molds)*, by Calmette was published in Brussels, Belgium; he discussed sake, the chemical composition of koji, and the action of its diastase enzyme. "It was a Japanese named Jokichi Takamine who first had the idea of using koji in place of malt in American and European distilleries. In 1889 in the USA he was issued a patent on the process for using koji (or a mixture of koji and moto) in a fermentation to make of product containing 15-18% alcohol. The process was first tested in practice at Peoria, Illinois, is a distillery of the Distilling and Feeding Co., but not with the results that all the world had expected. Both Delbrueck (1894) and Saare (1895) had the opportunity to the process on the spot in 1894; in the opinion of Delbrueck koji is suited for use in place of malt in the saccharification of starches. For the production of koji, Takamine uses an inexpensive wheat bran instead of the typical rice. The process is then described in detail.

Aspergillus oryzae plays a key role in the production of two East-Asian foods: soy sauce (*Shoyu-Sauce*) and miso. The former is made with wheat, soybeans, salt, and water; miso is made from soybeans, koji, salt, and water. For details see Kellner's publication "On Saké, Shoyu and Miso." In Java, another species of *Aspergillus*, namely *A. Wentii* is used to make their soy sauce (*Sojasauce*), according to Prinsen-Geerligs.

Also discusses the use of *Mucor* species, such as *Amylomyces rouxii*, in the production of spirits or brandy

from dehulled rice. In 1892 Calmette was head of the Pasteur Institute in Saigon; today he is director of the Pasteur Institute in Lille, France. He has taken considerable interest in *Mucor* species, and published the results of his research in his 1896 book. Colette has a factory at Seclin near Lille. Colette and Boidin have formed the Amylo Society (*Société d'Amylo*) in Lille. Address: Chemist, Austria.

329. Chamberlain, Basil Hall; Mason, W.B. 1899. A handbook for travellers in Japan: Including the whole empire from Yezo to Formosa. 5th ed., revised and augmented. London: John Murray; Yokohama, Shanghai, Hongkong, Singapore: Kelly & Walsh, Ltd. ix + 577 + 53 p. "With 28 maps and plans and numerous illustrations." Index.

• **Summary:** Contents: Introduction. Routes: 1. Eastern Japan. 2. Routes connecting Tokyo and Kyoto. 3. Central Japan. 4. Western Japan and the Inland Sea. 5. The island of Shikoku. 6. The island of Kyushu. 7. Northern Japan. 8. The island of Yezo [Hokkaido]. 9. Luchu and Formosa. Glossary.

Page 10: Provisions: "Curry-powder will often help to make insipid Japanese dishes palatable, and *shōyu* (soy) adds a zest to soups." "The following Japanese articles of food are considered palatable by most foreigners: *Kaseteira*, sponge cake. *Miso-shiru*, bean-soup [miso soup],... *Sakana no tempura*, fish fritter. *Unagi-mesihhi*, layers of rice with eels done in soy. *Yokan*, sweet bean-paste" [azuki].

Gods and Goddesses (p. 56): Toyo-Uke-Bime, also called Uke-Mochi-no-Kami, is "the Shinto Goddess of Food or of the Earth. The *Nihongi*, one of the two principal sources of Japanese mythology and early history..." The Moon God killed the Goddess of Earth. From the body of the murdered Earth sprang cattle and horses, millet, silkworms, rice, barley, and [soy] beans, which the Sun-Goddess decreed should thenceforth be the food of the human race. In the *Kojiki* version of the myth, it is Susa-no-o who slays the Goddess of Food, and there are other differences of detail."

Eastern Japan (p. 225): "Tenjin-yama or Minato (Inn, Suiryō-kwan). This prettily situated place contains a few sake breweries and soy manufactories, the produce of which is shipped in junks to Tokyo;..."

Mountains of central Japan (p. 281): "Narada (accommodation at a Buddhist temple)" consists of but a few households; the people are isolated and poor. "Rice, sake, and soy [sauce] are with them luxuries to be indulged in on rare occasions, their ordinary food consisting only of millet and potatoes."

Central Japan (p. 334): "Yuasa (Inn, Edo-ya) is a dull town, noted for its manufacture of soy."

Central Japan (p. 336): "There is a current belief to the effect that Koya-san is so precipitous that such luxuries as

bean-curd (*tōfu*) cannot be carried up to it, but that the priests place coppers on the temple balustrade, with which the crows fly off to Kumano and bring back bean-curd in return."

Central Japan (p. 389-90): Kasuga no Miya (a Shinto temple). The oratory "is now used by the townspeople on the evening of the Setsubun (3rd February) for the performance of the ceremony of scattering [roasted soy] beans to expel evil spirits."

Central Japan (p. 403): Matsudō. "Travellers will remark the great industry and economy practised in the agriculture of this district, even the ridges between the rice-fields being sown with beans or barley." Note 1. Soy beans were often planted on such ridges, then harvested as green vegetable soybeans.

Note 2. The last 53 pages of this book are advertisements. Address: 1. F.R.G.S., Emeritus Prof. of Japanese and Philology in the Imperial Univ. of Tokyo, Tokyo; 2. Corresponding member of the Royal Scottish Geographical Society, and late of the Imperial Japanese Dep. of Communications.

330. Douglas, Carstairs. 1899. Chinese-English dictionary of the vernacular or spoken language of Amoy, with the principal variations of the Chang-chew and Chin-chew dialects. New edition. London: Presbyterian Church of England. xix + 612 p. 27 cm. [2 ref]

• **Summary:** The Preface begins: "The vernacular or spoken language of Amoy, which this dictionary attempts to make more accessible than formerly, has been also termed by some 'The Amoy Dialect' or 'The Amoy Colloquial;' and it particularly coincides with the so-called 'Hok-kien Dialect,' illustrated by the Rev. Medhurst in his quarto Dictionary under that title."

On page 58, under the character for *chiang-chiu* a sort of sauce or condiment. *tau chiu* sauce made from beans and flour. *chiu-chheng* the thinner part of *tau chiu*. *koan-kiu-chiu* this sauce seasoned with cayenne pepper. *chiu-liau* various sorts of vegetables preserved in *tau chiu*. *chiu-koe* pumpkins so preserved. *chiu-kiu* ginger so preserved. *chiu-mia-chia* wheaten dough balls in this sauce.

On page 156, under the character for *hu-tau-hu* bean curd shaped into squares (from the pulpy "tau-hoe"), but not yet pressed. See *tau*.

On page 176, under the character for *iu* meaning oil or fat. On the last line of the right column—*tau-iu* soy [sauce]. *e-tau-iu* dark-colored soy. *seng-iu* the common oil from ground-nuts. *moa-iu* oil from hemp-seed.

On page 423, under the character for *shi-si* salted vegetables and fruits. *tau-si* pickled and salted beans [soybeans]. *tau-si-pe* black beans [soybeans] boiled, dried, and kept till mouldy, to be made into soy [sauce]. *tau-si-phoh* beans from which soy has been made, broken down

small. *mi-si* (Cantonese) = *tau-chiu* (Amoy), sort of salted sauce.

On page 480, under the character for *tou-tau* peas or beans; pulse. *tau-khe* bean cake from North China, used as manure. *tau-iu* soy (see *iu*). *tau-chiu* a thick salt sauce made from pulse. *tau-si* salted beans. *tau-hoe* soft bean curd not yet pressed or shaped. *tau-chiu* same. *tau-hu* bean curd shaped but not yet pressed. *tau-hu-phe* same, but made into thin sheets for wrapping around eatables. *teh tau-hu* to shape the *tau-hoe* into pieces of *tau-hu*. *tau-koa* bean-curd that has been pressed in a cloth. *tau-ju* same cut into smaller squares and salted. *tau-kiam* (Cantonese) same. *tau-che* refuse from manufacture of bean-curd [okara]. *tau-thau* same. *the-tau* = lok-kha-seng, the Arachis, ground-nut, or pea-nut, from which oil is made. *tho-tau* same.

Note: This is the earliest English-language document seen (Nov. 2008) that uses the term “pickled and salted beans” to refer to soy nuggets.

Note 2. The first edition of this book was published in 1873. In 1970 the Ku-T’ing Book Store in Taipei published a photoreprint of the 1899 London edition; it was bound with a Supplement photoreprinted from the 1923 Shanghai ed. (612 p., 27 cm). Carstairs Douglas lived 1830-1877. Address: Rev., M.A., LL.D. Glasgow, Missionary of the Presbyterian Church in England.

331. Heuzé, Gustave. 1899. Les plantes alimentaires des pays chauds et des colonies. 2 ed. [Edible plants of the tropics and colonies. 2nd ed.]. Paris: Librairie Agricole de la Maison Rustique. xii + 381 p. See p. 174-78. 19 cm. Series: Cours d’Agriculture Pratique. [Fre]

• **Summary:** The soybean is referred to in French as “Dolic du Japon ou soja.” An illustration (non-original, p. 175; by Thiebault, from Carrière 1880) shows the soybean plant (titled *Dolic du Japon ou soja*) and a cluster of pods. Its scientific names are *Soja japonica*, Sav. or *Soja hispida*, Moench. Synonyms are *Dolic soja*, and *Dolic à café*. A botanical description is given. “Varieties which are most widely cultivated are the yellow soybean (le soja jaune; *Soja ochroleuca*) and the black soybean (le soja noir; *Soja hispida*). A sub-race named *soja d’Étampes* is the most widely appreciated in France. It is very productive but it needs 4-5 months to ripen its seeds. The soybean is an annual; it was introduced to France from China by de Montigny under the name *pois oléagineux*. It is successfully cultivated in China, Japan, the Indies, the Moluccas, etc. It is rather easily sold in the green state at various markets. Its principal merit is its ability to resist drought. It needs as much heat as haricots...

“The Japanese transform the seeds of this legume into a puree (tofu; *ten-hu*) or a paste (*miso*) with which they make a sauce (soja), which they use to prepare various seasonings named *shoyu* or *sooju* and *tofu* or *daizu*.

“Soybean seeds germinate very irregularly and very late in Europe, especially in their second year of existence. An analysis of the soybean seed on a moisture-free basis, conducted by Mr. Joulie, is given.

“The soybean is richer than wheat in fatty and proteinaceous materials. When one prepares dry soybeans, it is useful to soak them in water for 8-10 hours before cooking, for they are naturally very hard. They are also eaten in the shelled green state.

“The varieties with branches [les variétés à rames] are not yet cultivated in Europe.” Gustave Heuzé lived 1816-1907. Address: Membre de la Société Nationale d’Agriculture. Inspecteur Générale Honoraire de l’Agriculture.

332. Langworthy, C.F. 1899. Appendix: Soy beans as food for man. *USDA Farmers’ Bulletin* No. 58 (Revised ed.). p. 20-23. [1 ref]

• **Summary:** This part of Bulletin 58 is identical to the original July 1897 edition. Address: Ph.D., Office of Exp. Stations, USDA, Washington, DC.

334. Saito, Akio. 1899. [Chronology of soybeans in Japan, 1868 to 1899, first half of the Meiji period] (Document part). In: Akio Saito. 1985. Daizu Geppo (Soybean Monthly News). Feb. p. 11-12. [Jap]

• **Summary:** 1871 July—A brewing tax (*jozo-zei*) and patent tax are levied on clear sake (*seishu*), unclear sake (*dakushu*), and shoyu. But in 1875 the two taxes on shoyu are discontinued because shoyu is considered one of the necessities of life.

1873—At about this time a sincere farmer, Itoi Mosuke, of Akita prefecture finds a special type of soybean and names it Itoi-mame. Later the name changes to Ani and they are cultivated all over Akita prefecture.

1873 May—The Japanese government exhibits soybeans at the exposition in Vienna, Austria. And the USA becomes interested in soybeans. Also at this expo, Kikkoman uses glass bottles for their shoyu for the first time.

1875—At about this time, shoyu becomes so popular overseas that a German-made fake shoyu appears.

1877—There are now 40-50 miso shops in Tokyo, centered in Hongo (which comprises the areas of Yotsuya, Fukagawa, Shiba, Shinagawa, Ooi, Oshima, etc.).

1877 Feb.—Dried-frozen tofu (*kôri-dôfu*) is purchased as an army supply for the Seinan no Eki war.

1877 Aug.—The first domestic exposition is held in Japan, at Ueno Park, Tokyo. Kikkoman shoyu wins an award.

1878—The quick method of miso fermentation (*miso no sokujo-ho*) is mentioned in a government report.

1878—The first official government statistics on soybean cultivation in Japan start to be compiled. This year the area is 411,200 hectares and production is 211,700 tonnes [yield = 514 kg/ha].

1879—The price of high-quality miso in Tokyo is 4 *sen* per kg. In 1980 the price is 303 yen/kg—or about 7,575 times higher. Note: From now on prices from the Meiji era come from a book titled *History of Lifestyle of the Meiji, Taisho, and Showa periods as seen from prices of the day (Nedan no Meiji Taishi Showa Fuzoku Shi)*. It is published by the Weekly Asahi (*Shukan Asahi*).

1882—Around this time many small shoyu manufacturers appear and quite a few bad quality shoyu products are on the market. Shoyu loses considerable consumer confidence.

1885—The price of 1 keg (*taru*, 16.2 liters or 9 *sho*) of shoyu at this time is as follows: Highest grade (*jo no jo*) (Kikkoman) 1 yen, 40 sen; Middle upper grade (*jo no chu*) (3 makers including Yamasa) 1 yen 38 sen; Lower upper grade (*jo no ge*) (Kamibishi) 1 yen 25 sen; Upper middle grade (*chu no jo*) (Fujita) 1 yen 25 sen; Lower middle grade (*chu no ge*) (Chigusa) 1 yen 17 sen; Lower grade (*ge*) (Kinka) 80 sen. Yamaguchi Yoshihei of Yamasa Shoyu starts to sell Worcestershire Sauce, called “Mikado Sauce.”

1885 May—The government reinstates the tax on shoyu to raise money for the army.

1887—Soybean production in Japan tops 400,000 tonnes (419,700 tons) for the first time.

1890—The Tokyo-Area Shoyu Brewers' and Wholesalers' Union (*Ichifu Rokken Shoyu Jozo-ka Tokyo Tonya Kumiai Rengokai*) forms a cartel for the first time because of a 50% increase in the price of their raw materials.

1891—Mogi Kenzaburo of Kikkoman (1st generation) starts to use a special press (*gendo maki assaku-ki*) invented by Yamazaki Izuko to press the shoyu out of the moromi mash more efficiently and quickly.

1893—In recent years the import of soybeans to Japan has increased rapidly, and this year it reaches 96,000 tonnes. These soybeans are grown mainly in Manchuria. The average price of 2 liters of high-quality shoyu in Tokyo is 10 sen. (In 1982 it is 584 yen, or 5,840 times more than in 1893).

1894—Around this time miso soup is recognized for its value as a protein food. Dr. Sito Nesaku, an agricultural specialist, says that miso is a farm household's milk.

1894—Yabe Kikuji (1868-1936) calls natto “Japanese cheese” and presents the first academic paper on natto bacteria in Japan.

1895—Around this time the number of walking vendors of tofu, natto, and boiled whole soybeans (*ni-mame*) increased, as did the production of dried-frozen tofu (*kori-dofu*). The number of small shoyu makers decreased dramatically as Kikkoman, Yamasa, and Higeta increasingly used advanced industrialized methods. Recipes and methods for making miso pickles (*miso-zuke*) using carrots, daikon, udo, and ginger are given in women's magazines such as *Jokan*, *Katei Zasshi* and *Jogaku Kogi*.

1896—Around this time the importation of salt starts, as shoyu makers in Noda and Chiba buy 15,000 tons of salt from England.

1897—Soybean imports this year increase to about 140,000 tonnes, which is one-fourth of Japanese consumption. Domestic soybean production is 400,000 tonnes.

1899—Mogi Keizaburo of Kikkoman of Kikkoman (1st generation) starts using a boiler for the first time in the shoyu industry. Address: Norin Suisansho, Tokei Johobu, Norin Tokeika Kacho Hosa.

335. Sun Yi-jang. ed. 1899. Chou-li cheng-yi [The orthodox interpretation of the Ritual of Chou]. Taipei, Taiwan: Ssu Pu Pei Yao edition, reprinted 1966. 6 vols. [Chi]*

336. Yurkevich, Lyutsian. 1899. Soya rannyaya, kak nasyschnaya pischa dlya gybernii, postradavshikh ot neurozhaya [Early soya as daily food for provinces suffering from crop failure]. Kiev, Ukraine, Russia: Printing House of Peter Barsk. 19 p. 20 cm. [Rus]

• **Summary:** Sigizmund Yaroshevskii brought soybeans to Russia from abroad; however, due to lack of effort to acclimatize these soybeans, they started to disappear. In 1893, I. Ovsinskii [Owinski, Owinsky] reintroduced black and brown varieties of soybeans from the East to the Podol'skaya region [part of Ukraine in 2002]. In 1895, Yurkevich brought soybeans from North Korea into Chernigovskaya, Mogilevskaya and Vilenskaya regions [also part of Ukraine in 2002]. It was found that soybeans, which were inexpensive and nutritious, could be used to feed the starving and malnourished population. Also, soybeans were used in Russia as a feed for army horses (when Yurkevich traveled to Korea, he also noticed that their horses were fed soybeans). Also discusses: Acclimatization and cultivation of soybeans. Unique features of soybeans. Six recipes for dishes made with soybeans: 1. Soy flour to make bread. 2. Soy flour to make *mamalyga* (boiled dough). 3. Soy flour to make pancakes. 4. Cooked soybeans to make porridge. 5. Soybeans to make soy oil. 6. Miso used in a porridge.

Both Avgust Chechet (who lived under the name of Gal'vachi) in an article in the agricultural journal, *Roln. i Hodov* No. 40 of 1898, and J. Farcy in his article in *Journal de l'agriculture pratique* No. 14 of 1898 approvingly recommend soybeans. There follows a long quotation from Chechet's article. Address: Kiev, Ukraine, Russia.

337. Aso, K. 1900. The chemical composition of the spores of *Aspergillus oryzae*. *Bulletin of the College of Agriculture, Tokyo Imperial University* 4(1):81-96. Feb. [5 ref. Eng]

• **Summary:** "Our knowledge of the chemical composition of the spores of fungi is still very scanty, and as regards their ash, no analysis whatever has thus far been made." The spores of *Aspergillus oryzae* "can easily be obtained in any quantity in Japan, as the rice grains covered with the mycelium and the spores of this fungus form an article of commerce under the name of *Tane-Koji* or *Koji-dané*. I have preferred however to collect the spores myself, in order to obtain them in a pure state.

"*Aspergillus oryzae* plays a great part in several industries in Japan, being used not only in the manufacture of Sake or rice wine, but also in that of Shoyu or Soja-sauce, and of Miso.

"This fungus contains powerful enzymes, a diastase, a maltase, invertase and a peptase. Oxydases appear to be present only in traces."

In the section titled "Preparation of samples" (p. 82) the author describes how he prepared and collected the spores: "Tane-kôji was prepared roughly milled rice without mixing any ash [in sake factories the ash of oak leaves is typically mixed with the rice substrate]; and when the rice grains became covered with innumerable spores, they were brought out from the cellar and the spores were separated from the rice grains and the mycelium by tapping on the bottom of the culture boxes (*kôji-buta*) inverted on a sheet of paper." These spores "were then sifted with a very fine silk sieve to remove all impurities... This sample was exposed to air in a balance room for two weeks and kept in a bottle."

Two tables (p. 83) show the organic constituents in 100 parts of air-dry spores, and 100 parts of dry matter. The latter contains 5.151% ash, whose composition is discussed in more detail on pages 93-96. A table (p. 95) shows the ash content and composition of winter wheat, paddy rice (not whitened), oats, soy-bean, rice (not whitened), and spores of *Aspergillus*. The latter is by far the richest in ash, potash, and phosphoric acid. In conclusion, the author expresses "much thanks to Dr. O. Loew, formerly professor in this college..."

Note: This is the earliest English-language document seen (Jan. 2006) that uses the term "Soja-sauce" (regardless of capitalization) to refer to soy sauce. Address: Nôgakushi, Japan.

338. Gomilevskii, V.I. 1900. O kitaiskom bobbe (Soja hispida) i ego znachenii dlya rysskogo khozyaistva [The Chinese soybean (Soja hispida) and its meaning in Russian economy]. St. Petersburg, Russia: Printing House of "Obschestvennaya Pol'za" Union. 32 p. 22 cm. [17 ref. Rus]

• **Summary:** Contents: I. Research of Gil'desgeim proved that soybeans could replace meat in daily diet. More than 20 varieties of soybeans from Japan and China were introduced to Central Europe and Russia in 1873 at the World Exposition in Vienna. Soybeans were first recognized in Russia by agricultural writers Yaroshevskii and Semnalovskii in an article in their journal (name of which is not stated) and later in another article in the *Zemledel'cheskaya Gazeta*. During about the same time articles were written by I.G. Podoba and Mel'nikov. In the 1884 exhibition in Odessa, various Russian regions presented soybeans in various stages of development and soybeans which can be used as coffee substitutes. Soybeans were also cultivated in Kiev, now part of Ukraine.

II. Description of soybeans. Different varieties of soybeans in Europe (*Soja hispida praecox* is recommended for cultivation in Russia). III. Composition of soybeans. Use

of soybeans as meat substitutes for poor people and the army. Soybeans as substitutes for coffee. Soybeans used in tofu, miso and spicy sauces for meat. Recipes of foods uses of soybeans: soybean flour for bread, soybeans for soybean oil. IV. Composition of soybeans. Use of soybeans as feed for cattle, dairy cows, pigs and horses.

V. Characteristics of the soybean: How it stands hot and cold weather, uniqueness, not a demanding plant (needs little fertilizer), prefers southern climates/latitudes. VI. Cultivation of soybeans: Type of soil, preferred temperatures and time of year for planting, spacing between seeds and rows. VII. Soybean maintenance. VIII. Harvesting of soybeans. IX. Harvesting/gathering of soybeans. X. Conclusion: Soybeans have a bright future in Russia, they may help fight hunger in the poor regions, as well as provide an excellent source of nutrition and energy for the army and the marines. Address: St. Petersburg, Russia.

339. Sempolowski, A. 1900. Ueber den Anbau der Sojabohne [On soybean culture]. *Fuehling's Landwirtschaftliche Zeitung* 49(5):193-96. March 1. [Ger]
 • **Summary:** "The soybean first aroused great interest in Europe after the Vienna World Exposition in 1873, where a large collection of soybean varieties from China, Japan, India, etc. were exhibited. Professor Haberlandt in Vienna and others subsequently conducted a large series of agronomic trials with the soybean in various locations from Austria and Germany. These, however, showed that the cultivation of this fodder plant in the districts concerned is not worth recommending since the soybean matured either very late or not at all. At that time I also conducted soybean agronomic trials in the province of Posen and in Russian Poland; these, too, gave negative results in those vegetation areas. The farmers were discouraged from cultivating the soybeans and pretty soon the once-popular fodder plant was indeed forgotten.

"However, in more recent years, there arose a new, eager apostle of the soybean, the farmer J. Owsinski [Owinsky, Ovinski] from the province of Podolia. He had been working for a long time in East Asia, allegedly, and there he learned about new, earlier-ripening varieties of this fodder plant. For cultivation, he recommends two varieties above all: one black- and one brown-seeded. Since the soybean still continues to have a great reputation, publicity, especially in Russia, as an excellent fodder plant, I decided to conduct another agronomic trial with these two new varieties at agricultural research station at Sobieszyn (in Russian Poland). I wanted to answer two questions: First the time required for the soybean to mature in our climate, and second the value of the entire plant as fodder.

According to Owsinski, the soybean took 100 days to come to vegetative maturity in southwest Russia and 110 days in western Russia, corresponding to late varieties of

oats or blue lupins. The brown-seeded soybean is said to ripen in 100 days in southwest Russia and 108-110 days in western Russia, however the yield is low and the seeds shatter easily.

In East Asia soybeans are used to make soy sauce ("Shoya, Soohu, or Soy"), miso, and natto—the last two being fermented foods. A table shows the nutritional composition of soybean cake on a dry weight basis (41.73% protein, and 7.18% fat).

On 14 May 1898 the author planted his trial field with soybeans. On Sept. 22 he harvested 30 plants of brown-seeded soybeans, including 200 gm of seeds; 100 seeds weighed 22.07 gm. The plants were 26-36 cm high and on each stem were 13-17 pods. The time to maturity was 140 days. On Oct. 5 he harvested 23 plants of black-seeded soybeans, including 208 gm of seeds; 100 seeds weighed 16.01 gm. The plants attained a height of 30-55 cm, and on each stem were 12-56 pods. The time to maturity was 173 days.

On 17 May 1899 the author planted a larger quantity of brown-seeded soybeans at the rate of 643 kg/ha in rows 40 cm apart. The time to maturity was 130 days. At the same time on another test plot he planted black-seeded soybeans in rows 50 cm apart. The harvest took place on Oct. 7 and the time to maturity was 170 days, but the seeds were not completely ripe and had to be dried for another week. A table shows the nutritional composition of these two varieties. Brown: 39.03% crude protein and 18.55% fat. Black: 37.62% crude protein and 20.87% fat.

"When we consider the protein and fat content of the seeds, we must acknowledge that the soybean, compared with other crops, has a very high nutritional value. However, farmers must be urgently advised to treat the new, allegedly early-ripening varieties with great caution, since they have not yet been sufficiently tested to be recklessly praised and their cultivation widely expanded."

Note: This document contains the earliest clear date seen for soybeans in Russia, or the cultivation of soybeans in Russia (14 May 1898). This is also the earliest document seen that describes soybean breeding in Russia. The source of these soybeans was Owinski, who apparently obtained them from East Asia. Address: Dr., Sobieszyn [Russian Poland?].

340. Langworthy, C.F. 1900. Vegetable cheese. *Sanitary Home (Fargo, North Dakota)* 2(3):55-57. May.

• **Summary:** "It is commonly believed that the Japanese, Chinese, and other oriental peoples live almost exclusively on rice, eating little or no meat... In the course of centuries the Japanese and Chinese have evolved the art of preparing substances resembling dairy products from vegetable sources. It is well known that beans, peas, and other legumes contain large amounts of protein... The soy bean,

which is perhaps the principal legume grown in Japan and China, is less suited for food in its natural state.”

“Though the soy bean is not relished when cooked in the ordinary way, the Chinese and Japanese prepare very satisfactory foods from it in ways which are unknown to western cooks. Bean cheese or bean curd, called by the Japanese *tofu* and by the Chinese *tao hu*, is one of the most important of these products and is prepared as follows: The soy beans are soaked in water for about 12 hours and crushed between mill stones until of a uniform consistency. The ground material is then boiled with about three times its bulk of water for an hour or more and filtered through cloth. The filtrate is white in appearance and has somewhat the appearance of milk. It has the taste and smell of malt. Analysis shows that it resembles cow’s milk in composition. When heated a film forms on the surface which in appearance suggests cream. This is dried and eaten under the name of *yuba*. As soon as the soy bean milk becomes cool, some material is added; for instance, crude sea salt, containing magnesium chlorid [chloride], which precipitates the proteid material, the fat being inclosed in the coagulated mass. The coagulated material is pressed and kneaded into small cakes or cheeses. These are sometimes dipped in saline solutions of curcuma to color them. The bean cheese cakes are sometimes eaten fresh or may be cooked in different ways. Often when practicable they are frozen. This removes a considerable part of the water present. As shown by analysis, the fresh bean cheese contains about 5 per cent of protein and 3 of fat. Ordinary cheese made of milk contains about 28 per cent protein and 36 per cent fat.

“Miso resembles *tofu* to some extent. It is prepared from cooked soy beans, which are rubbed to a thick paste and fermented with rice wine ferment. *Shoyu* is a thick sauce prepared from a mixture of cooked pulverized soy beans, roasted and pulverized wheat, wheat flour, salt, and water. The mass is fermented with rice wine ferment in casks for from one to five years being frequently stirred. The resulting product is a moderately thick, brown liquid, in odor and taste, not unlike a good quality of meat extract, though perhaps a trifle more pungent. Throughout the East it is eaten in large quantities with rice and other foods and is an important source of protein. Under the name of soy sauce, it has been known to Europeans in India for many years, and is not unknown in the United States. Most of the soy bean products are fermented; that is, they are prepared with the aid of micro-organisms. The micro-organisms break down the cell walls and similar materials and thus the cell contents are rendered more accessible to the digestive juices at the same time peculiar and pleasant flavors are developed. The manufacture of these products is of very ancient origin and affords an interesting, practical illustration of the use of bacteria for economic purposes.

“The Chinese residents of San Francisco and other cities consume large quantities of these soy bean products and it is

stated on good authority that soy bean cheese is manufactured in this country, though doubtless it is seldom, if ever, eaten by any except the Chinese.”

Note 1. This periodical was later named *North Dakota Farmer*.

Note 2. This is the earliest English-language document seen (Feb. 2004) that uses the term “soy bean cheese” or “bean cheese cakes” to refer to *tofu*.

Note 3. This is the earliest document seen (June 2007) concerning soybeans in connection with (but not yet in) North Dakota.

Note 4. This is the earliest English-language document seen (Oct. 2003) that contains the term “soy bean milk.”

Note 5. Dr. E.F. Ladd was a nationally-known pioneer in food safety and sanitation in the United States. He published this periodical, *Sanitary Home*, in Fargo and distributed it free of charge like an extension publication before the extension service was created; North Dakota State Univ. paid the printing and mailing expenses. Interested in home safety, he rewrote technical publications in a language homemakers could understand. He did much work with North Dakota food purity and chemical purity laws. Address: PhD, Office of Experiment Stations, Dep. of Agriculture, Washington [DC, USA].

341. Abel, Mary Hinman. 1900. Beans, peas, and other legumes as food. *USDA Farmers’ Bulletin* No. 121. 32 p. See p. 9-11. Illust. Revised Nov. 1904. Corrected March 1906. [1 ref]

• **Summary:** A section titled “Soy Bean (*Glycine hispida*)” (p. 11-13) briefly describes the soybean plant and the rich nutritional composition of its seeds, then notes: “This leguminous plant, probably native in China, is the most important legume of China and Japan... In the Orient this bean and the various food products made from it are so largely consumed that it is perhaps the most important food plant next to rice. The soy bean is eaten so a small extent boiled like other beans, but in China and Japan it is elaborated into a variety of products, all of which have a high percentage of protein, and when eaten in connection with the staple food, rice, which is so deficient in that constituent [protein], helps to make a well-balanced dietary. Some one of these products is eaten at perhaps every meal and by rich and poor alike, especially in the interior of these countries, where sea food is not obtainable.

“One of the most important of these preparations is *shoyu*, and it is the only one that has been introduced to any extent into other countries, where it is known as soy sauce...”

“There are also several varieties of bean cheese or similar products made from this legume which are very important foods. These are *natto*, *miso*, and *tofu*. *Natto* is made from soy beans that have been boiled for several hours until very soft, small portions of the still hot mass being then wrapped securely in bundles of straw and placed

in a heated, tightly closed cellar for twenty-four hours. Bacteria, probably from the air or the straw, work in the mass, producing an agreeable change in its taste.

“For tofu, the soy bean, after soaking and crushing, is boiled in considerable water and filtered through cloth. To the resulting milky fluid 2 per cent of concentrated sea brine is added, which, probably by virtue of the calcium and magnesium salts present, precipitates the plant casein, which is then pressed into little snow-white tablets. It is made fresh every day. Tofu is sometimes cooked in peanut oil before it is eaten. In natto and miso the action of minute organisms plays an important part. In tofu there is no such action. The composition of a number of these products is as follows:”

A table (p. 11) shows the nutritional composition of food products made from soy beans, including fresh tofu, natto, white miso, red miso, Swiss miso, and shoyu (2 samples).

An illustration (non-original line drawing, p. 10) shows a soy bean plant with a cluster of 7 pods to its upper left (slightly changed from an original in Carrière 1880, p. 154).

Note 1. This is the earliest English-language document seen (Oct. 2003) that uses the term “milky fluid” to refer to soymilk.

Note 2. Mary Hinman Able was not an employee of the USDA or of the federal government. She was a pioneer in the fields of nutrition, nutrition education, home economics, and popularizing science for the general public. Between 1904 and 1913 she wrote several farmers bulletins for the USDA. From 1909 to 1915 she was editor of the *Journal of Home Economics*.

342. Product Name: [Light House brand Soy Sauce, Chiang, Fermented Tofu].

Foreign Name: Jiang-yu, Dou-jiang, Furu.

Manufacturer’s Name: Yeo Hiap Seng.

Manufacturer’s Address: Chang-chou, Fukien [Fujian] province, China.

Date of Introduction: 1900.

How Stored: Shelf stable.

New Product–Documentation: Letter from Alan Yeo. 1982. April, and YHS news release. 1990. Oct. Yeo Hiap Seng traces its origins to the year 1900 when the patriarch of the Yeo family, Mr. Yang (in the Amoy dialect, his name was pronounced Yeo Keng Lian) purchased a small company named “Hiap Seng” in the city of Chang-chou (pinyin: Zhang Zhou), Fukien (Fujian) province, China. “Hiap Seng” means “unite to succeed.” Yeo Keng Lian changed the company’s name to reflect his family’s ownership. He worked as a manufacturer and retailer of fermented soybean seasonings: soy sauce (*jiang-yu*), Chinese-style miso (*dou-jiang*), and fermented tofu (*furu*). All three products were sold from day one under the “Light House” brand. By working together, the family did succeed. Their soy sauce, fermented in the traditional Chinese way in

wooden vats and earthenware jars, was of superior quality and the business prospered. The original plant was located near the center of Chang-chou. In about 1920 a second plant was established in the eastern part of the city, and in the late 1920s a third plant was set up in the southern part of the city. Each of the three fermented soy products were produced in all three plants; the second and third plants also produced some pickled vegetables.

In 1935, during the Japanese invasion of China, when life was difficult and unsettled in Fukien province, Yeo Keng Lian sent his eldest son, Yeo Tian In, to Singapore to investigate possibilities there. The son founded the Yeo Hiap Seng Sauce Factory at 410 Outram Road, Singapore 3. He was joined shortly by the rest of the family.

Note 1. This is the earliest known commercial soy product (with a brand name) made in China.

Note 2. This is the earliest known commercial soy product made or sold by Yeo Hiap Seng. It is also the earliest record seen (Oct. 2001) concerning Yeo Hiap Seng.

343. Boorsma, P.A. 1900. Scheikundig onderzoek van in Ned.-Indie inheemsche voedingsmiddelen. De sojaboon [Chemical analysis of some indigenous foodstuffs in the Netherlands Indies. The soybean]. *Geneeskundig Tijdschrift voor Nederlandsch-Indie* 40:247-59. [18 ref. Dut]

• **Summary:** Contents: Literature review. Introduction (Boorsma is living in Java). Chemical composition of indigenous soybeans: Table giving figures (based on Boorsma’s original research) for large black, large yellow, small yellow, unripe or immature black soybeans, soy protein (*eiwit in de soja*) or legumine, the oil (*De vette olie*), analysis of the ash, starch, the black soybean (*zwarte kedeleh*), use of soybeans in Java and Japan. Japanese soya preparations (*soja preparaten*): Shoyu (soja) made with koji, tofu, yuba, miso and natto. Indigenous (Chinese) preparations: Tempeh (*tempe kedeleh*), Indonesian soy sauce (*Ketjap–Bataviasche soja*), tofu and pressed tofu (*Tao-hoe en Tao-koan*), Indonesian miso and soy nuggets (*Tao-tjo en Tao-dji*).

Note 2. This is the 2nd earliest document seen (March 2009) that mentions Indonesian-style miso, which it calls “Tao-tjo.” This is the earliest English-language document seen (Feb. 2009) that uses the word “Tao-tjo” to refer to Indonesian-style miso.

This excellent article contains a 4½-page description (the best seen to date) of the traditional process for making soybean tempeh (*Tempe kedeleh*). The soybeans are parboiled, soaked in water for 2-3 days, drained, steamed in a steamer (*koekesan*), spread in a layer several centimeters thick on woven bamboo trays in shelves, and covered completely with banana leaves. They are then inoculated with the *bijang*, which is the “mold containing residues of a previous preparation.” This is mixed in here and there, then the trays are covered lightly with banana leaves so as to let

in some air. “Rampant growth of the mold soon begins. In the evening the mass is molded a little and after two 24-hour periods one will obtain a coherent cake, which is cut into pieces and taken as is to the market.”

The cotyledons are stuck together by a dense mycelium, which has grown into a somewhat white covering. According to Prinsen Geerligs (cited above), the name of the mold is *Chlamydomucor Oryzae*.

During the two days of rampant mold growth, a radical conversion takes place in the components of the seeds; a lot of water, carbonic acid, and heat start to develop... A thermometer inserted into the fermenting mass shows a temperature 10-12°C above that of the environment.

As the preparation is finished, the banana leaves are taken away; the temperature drops slowly to normal, the rampant mold growth stops, and the mass dries out slightly. In this condition, the tempeh can be kept for several days with spoiling.

When the rampant mold growth is allowed to continue for a third day, simply by leaving the banana leaves in place, the conversion will soon become much stronger as noted by the formation of ammonia. Also poisonous products start to form; a monkey, given a little bit [of overripe tempeh] among his other foods that day was vomiting violently one hour later. Thus we should admit that the stories about poisonings caused by various sorts of tempeh [such bongkrek, made from coconut presscake] probably have some foundation. But there is little fear of this from soybean tempeh.

After microscopic examination, Boorsma concluded that Prinsen Geerligs and others were wrong in stating that (1) the mold hyphae penetrate and dissolve the hard soybean cell walls, and (2) cellulose is decreased during tempeh (*tempe*) fermentation. He studied the chemical and compositional changes at four stages during a 3-day tempeh fermentation; a table shows his findings. He observed that fats and soluble carbohydrates decreased substantially, while nitrogen decreased only slightly. He also discussed the hydrolysis of soybean lipids, and why tempeh is easier to digest than whole soybeans.

Note 1. This is the earliest Dutch-language document seen that uses the term *tempe kedele* or the word *tempe* to refer to tempeh.

On page 258 Boorsma briefly discusses Ketjap (which he called *Bataviasche soja*, or Jakarta soy sauce) and Tao-hoe and Tao-koan (tofu and firm tofu), based on information from Prinsen-Geerligs (for both) and Vorderman (for firm tofu). For each he gives a nutritional composition. On page 259 Boorsma briefly discusses *Tao tjo* and *Tao-dji* (Indonesian-style miso and soy nuggets). Note 2. This is the earliest Dutch-language document seen (Dec. 1999) that uses the term *Tao tjo* to refer to Indonesian-style miso or taucu / taucho.

Note 3. This is the earliest Dutch-language document seen (March 2001) that mentions soy nuggets, which it calls *Tao-dji*.

Note 4. This is the earliest document seen (April 2001) that contains the term *Tao-koan*.

Note 5. This is the earliest Dutch-language document seen (Feb. 2004) that contains the term *natto*.

Note 6. This is the earliest Dutch-language document seen (Oct. 2008) that mentions yuba, which it calls *Yuba* and describes as *een nog vetrijker product dat verkregen wordt bij uitdampen van de roomloog, die zich bij de zoeven genoemde boonenmelk aan de oppervlatke verzamelt.*”

Note 7. Boorsma was a Dutch naturalist who lived in Indonesia in the early 1900s. Address: Netherlands.

344. Hutchison, Robert. 1900. Food and the principles of dietetics [1st ed]. New York, NY: William Wood & Company. xviii + 548 p. Plus 3 leaves of colored plates. Illust. Index. 23 cm. [100+* ref]

• **Summary:** Chapter 13, “The pulses—Roots and tubers,” contains a table (p. 225) titled “Composition of pulses,” which gives the nutritional composition (based on many analyses) of 13 pulses, including soy beans, soy bean flour, peanuts, lentils, horse beans (dry), broad or Windsor beans, French beans (*haricots verts*), haricots (*haricots blancs*), etc. For each is given the percentage of water, proteid, carbohydrates, fat, cellulose, and mineral matter. Soy bean flour is the highest in proteid (39.5%), followed by soy beans (32.9%). Peanuts are the highest in fat (44.3%), followed by soy beans (18.1%), and soy bean flour (13.7%).

There is a basic description of each of the major pulses. We read (p. 226-27): “The Soy Bean (*Glycine hispida*) is the richest of all the pulses in proteid, and also has a large amount of fat, but very little starch. For this reason it is of use as a bread substitute in diabetes, a flour being prepared from it and made into loaves or biscuits. In China and Japan it is extensively eaten in the form of soy cheese [tofu], and as various sauces and pastes [miso], all of which are rich in proteid and so are fitted to supplement the deficiencies of rice. It is also grown in Southern Europe.

“The Peanut (*Arachis hypogaea*), although botanically one of the pulses, really resembles more closely the true nuts. Like these, it is rich in proteids and fat, and may be used as a diabetic food. It enters into the composition of a patent food known as ‘Nutrose,’ and after expression of the oil it forms cakes for cattle.”

The section on diabetes has a subsection on “Diabetic breads” (p. 475-76) stating that gluten, the chief proteid of wheat, was one of the first substances to be used in making them. More recently, oily nuts and “the soja bean” have also been used. Many of these breads, and especially the gluten breads, “are by no means free from starch.”

A table (p. 196) compares the “composition of wholemeal and white bread.” Wholemeal bread contains 5 times as much “cellulose” [dietary fiber] as white bread, yet white bread contains slightly more proteid. A second table (based on analyses by Atwater) compares the composition of “white bread, brown bread, and Graham bread.” There is a vigorous debate as to which of these is better nutritionally. Also discusses: Wholemeal bread, and Graham bread. Robert Hutchison was born in 1871. Address: M.D. Edinburgh, F.R.C.P., Asst. Physician to the London Hospital and to the Hospital for Sick Children, Great Ormond St. [London].

345. VanBuskirk, J.D. 1900. Some common Korean foods. *Transactions of the Korea Branch of the Royal Asiatic Society* 14:1-8.

• **Summary:** Table 1, “Korean food products,” based on statistics published in the 1917 report by the Bureau of Agriculture of the Government General, shows Korean production in millions of bushels: Rice 61. Barley 25. Millet 19. Wheat 8, Beans and peas 18. Since exports and imports of foodstuffs are relatively small compared to the amount produced, and the number of animals fed is not large, “these figures should give us a good idea of the amount of food eaten.”

Rice is sometimes cooked with peas or beans (incl. soy beans) mixed in (called *pat-pap* or *kong-pap*. But the cooking takes longer and the beans are often not well cooked, and thus less digestible (p. 3).

The section titled “Bean and pea foods” (p. 4-5) gives the name of each food in Korean characters and discusses: (1) Bean curd (*tu-bu*), equivalent to Japanese tofu, is curded with the “concentrated mother liquid from sea water” [Jap. nigari]. The bean residue (*pi-ch'i*) left over from making tofu is also sometimes eaten. Bean curd “is not generally eaten without further preparation; it is commonly added to soups and stews and often made into omelets with eggs; another palatable food is made by cooking the bean curd for a short time in bean sauce (*chang*) and serving this with sesame oil, pepper and onions; it is called *to-bu cho-rim*. Bean curd may be eaten without further cooking served in sauce.”

Pea curd (*mook*) is similar to beancurd in composition but made from peas using a very different process.

“Bean Sauce (*kan-chang*) is somewhat like the Japanese ‘sho-yu’ but is more salt and not sweetened. Soy beans are thoroughly boiled, mashed, made into cakes and partially dried. These cakes (*me-ju*) are stored for months and allowed to mold and slowly ferment: when ripe they are broken up and soaked in salt water for a long time, then strained, the solid part being dried and used as a condiment (*toin-chang*). The liquid is boiled and the coagulated protein scum frequently removed; when sufficiently concentrated

the liquid sauce is cooled and stored. This is the indispensable condiment for Koreans.

“Another bean sauce (*ko-cho-chang*) is made by taking about equal parts of the fermented bean cakes, rice, and salt, with a large amount of red pepper, the mixture being soaked in a small amount of water till ripe. This too is very important as a condiment.”

Note: This is the earliest document seen (March 2009) that clearly mentions a Korean-style miso, which it calls “ko-cho-chang,”—today commonly called “red pepper sauce.”

“‘Kong-cha-ban’ is made by boiling beans in the bean sauce; they do not swell but are hard, brittle, and very salty. Sugar and sesame oil may be added when serving them.

“Sprouted beans (*kong-na-mul*) are very common. The beans are soaked in water and allowed to sprout. When the sprouts are quite long both beans and sprouts are boiled and served—sauce is generally added.”

Kim-chi, a fermented food made from cabbage or sliced turnips, is sometimes served with added bean sauce.

Among animal foods: “‘Mut-chim’ is dried fish soaked in water, then shredded; it is then soaked in bean sauce. Sesame oil and pepper are added; it is then allowed to stand for a short time.” Address: M.D..

346. Zavitz, C.A. 1900. Co-operative experiments in agriculture. *Ontario Agricultural and Experimental Union, Annual Report* 21:6-37. For the year 1899. See p. 9, 16, 31-32.

• **Summary:** A table (p. 7) shows the number of distinct experiments in agriculture, number of experimenters, and number of satisfactory reports each year for 1886, 1888, and 1891-99. For 1886 these numbers were 1, 12, and 8. For 1888 they were 1, 90, and 40. For 1891 they were 12, 203, and 126. For 1895 they were 15, 1699, and 513. For 1899 they were 23, 3485, and 739. Thus, during these 14 years the Union made remarkable progress.

A table titled “List of experiments for 1899” (p. 9), under “Grain crops” includes “Testing three varieties of Japanese beans—3 plots.”

In a long “List of experimenters” we read (p. 16) that the Japanese beans were grown by: (1) F.B. Doud, Branchton, Brant Co. (2) Simon Miller, Unionville, York Co. (3) Jno. D. Neilson, Thedford, Lambton Co. (4) O.A.C., Guelph, Wellington Co.

In the section titled “Conclusions” (p. 31-32), table 15 shows the results (based on 4 tests) of testing three leading varieties of Japan [soy] beans: Medium Green (estimated value 72), yielded 2.6 tons/acre of straw and 22.4 bu/acre of grain. American Coffee Berry (estimated value 100), 1.4 tons/acre of straw and 21.3 bu/acre of grain. Extra Early Dwarf (estimated value 86), 1.1 tons/acre of straw and 12.7 bu/acre of grain.

The text immediately below the table explains: “The Soy beans [sic] (*Glycine hispida*) is a leguminous plant native of Japan and China, and ranks very high from a chemical point of view. The plant is an annual, erect in growth and branches profusely. There are a large number of varieties, nearly all of which are too late for the conditions of Ontario. The different varieties are distinguished largely by the time required for the plants to mature and by the color of the seed; the yellow, the green, and the black, being the most common. The Soy beans are used for green fodder, silage, hay, pasture, and as a soil renovator, and the grain is used as a feed for live stock. These beans have been used as a food for man from the earliest times in Japan and China, and more recently in the European countries. They are not used as a food by themselves, but are made into different complex forms, of which five are quite common among Japanese, namely: natto, tofu, miso, yuba, shoyu.

“Conclusions.

“1. The Soy beans gave very good results in the Union experiments in 1899.

“2. The medium green Soy beans which gave the largest yield of grain per acre of the three varieties tested over Ontario in 1899, is the latest of the three varieties.

“3. The American Coffee Berry was the most popular variety with the experimenters when yield, time of maturity, etc., were all taken into consideration.”

Note: This is the earliest report seen (Aug. 2002) in this periodical concerning soy beans. C.A. Zavitz is also secretary of the Ontario Agricultural and Experimental Union, and a member of its Committee on Agriculture (appointed at the last annual meeting). Address: B.S.A., Director of Co-operative Experiments in Agriculture, O.A.C. [Ontario Agricultural College], Guelph [Ontario, Canada].

347. D.A.R. 1901. Katjang-Kedelihpraeparaten [Soyfoods]. *Orgaan van de Vereeniging van oud Leerlingen der Rijks Landbouwschool* (see *Landbouwkundig Tijdschrift*) 13(161):242-45. Dec. [Dut]

• **Summary:** The author wrote an article in the April issue of this magazine about soybean cultivation. Now he will discuss how soybeans are used to make foods. As mentioned in the previous article, soya beans as such are not good to eat, even boiled or roasted; they need to be processed so as to digest the indigestible protein; then this protein can be absorbed by the digestive enzymes of the stomach and intestines.

As Japan is *the* soya country, we will start with the product that is most popular there, soy sauce, which has also earned its place in Europe. It is made from equal parts of roasted soybeans and wheat, 1-3 parts water, and much salt. The koji is fermented for a long time. Prof. Dr. M. Fesco [sic, Fesca], who provided much of this information, said it takes about 20 weeks to 5 years. The longest and slowest

fermentation gives the best quality product. In Japan, every housewife makes her own soya sauce and there is competition for the best homemade soy sauce. Late-ripening protein-rich soybeans, called shoyu-mame, are used. In Java, the residue from soy sauce is used a lot, along with peanut presscake, for fertilizing sugar-cane fields.

In the Netherlands Indies, ketjap [Indonesian-style soy sauce] is made solely by the Chinese. Also called Tao-yoe, it is prepared by covering cooked soybeans with hibiscus (*waroe*) leaves. The age and variety of the leaves is very important. The mold that grows produces substances [enzymes] that digest legumin [soy protein]. More of the process is described.

Note 1. This is the earliest document seen (Feb. 2009) that contains the term Tao-yoe. H.T. Huang (e-mail of 25 Feb. 2009) states: “Tao-Yoe sounds like Cantonese for *Douyou* (pinyin) or *tou yu* (W.-G.) which in Mandarin mean soy sauce, and which first appeared in about 1750 in the *Xingyuan Lu* (*Hsing Yüan Lu*). See Huang 2000, p. 371-73.

Star anise (*Hades manies*) is also added to Indonesian soy sauce. Some Chinese have gained a reputation for their knowledge of the different additives (*boemboengs*). 61. kg of soybeans (1 gantang or 10 katties) can yield 3 bottles of number 1 ketjap (which retails for 50 Dutch cents per bottle), plus 3 bottles of 2nd extraction ketjap (each 40 cents), plus 3 bottles of ketjap no. 3 (which is little better than salt water with a light brown tint; each 20 cents).

The Japanese also use soybeans to make tofu (*tofoe*). Precipitated with magnesium chloride, it is a greyish-white tough, or sometimes yellow product. Although containing 90% water, it is a concentrated food. A table (based on analyses by E. Kirch [sic, Kinch] of Tokyo) shows the composition of tofu and kori-tofu; the latter is made by freezing tofu then thawing it. Tofu is a good product for vegetarians, but beware than it can act as a laxative because of the magnesium chloride.

Note 2. This is the earliest Dutch-language document seen that uses the term “Katjang-Kedelihpraeparaten” in the title to mean “Soyfoods.”

Note 3. This is the earliest Dutch-language document seen (Feb. 2004) that mentions dried-frozen tofu, which it calls “kori-tofu.”

348. Lafar, Franz. 1901-1907. Technische Mykologie. Ein Handbuch der Gaerungsphysiologie... Zweiter Band: Eumyceten-Gaerungen [Technical mycology. A handbook of fermentation physiology... Vol. 2: Eumycetic fermentations]. Jena: Verlag von Gustav Fischer. x + 507 p. (p. 365-871). See p. 638, 640, 674-76. Illust. No index. 25 cm. Foreword by Prof. Dr. Emil Chr. Hansen (Carlsberg-Laboratorium, Kopenhagen). [5 ref. Ger]

• **Summary:** This book is continually paginated with Vol. 1, so the first numbered page is 365. Part 15 (chapters 56-58) is titled “Morphology, physiology, and classification of the

technically important higher Ascomycetes and related forms” (p. 627-704). Chapter 56, by Prof. Dr. Carl Wehmer (*Dozent an der Technischen Hochschule zu Hannover* [Germany]), “Morphology and classification of the families of the Aspergilli (*Aspergillaceen*)” discusses (p. 627+): Eighteen illustrations of *Aspergillus* conidiospores (p. 632-33). *Aspergillus Oryzae* (Ahlburg) Cohn (= *Eurotium Oryzae* Ahlburg), which is widely used in Japan to make saké, soy sauce (*Soja-Sauce*), and miso (p. 638-39, with illust.). *Aspergillus Wentii* (Wehmer), which is used in Java to make Tao-Yu (Chinese-style soy sauce) using cooked soybeans covered with *Hibiscus* leaves (p. 640).

Chapter 57, also by Prof. C. Wehmer, titled “Chemical effects of the Aspergilli (*Aspergillaceen*),” discusses (p. 674+): Saccharification of starches, diastase and diastatic enzymes, Takamine’s research using *Aspergillus* to make diastase (Takadiastase) and its efficiency compared with similar enzymes of different origins, koji extract which contains amylase and other enzymes, use of *A. oryzae* to make saké, shoyu, and miso (p. 675-76).

This book also discusses: Zygosporangium production (p. 379). Sporulation and *Aspergillus* (p. 387-89, with illust.). Morphology and classification of the Mucorales, zygomycetes, zygosporangia (p. 420-21). The genus *Mucor*, sporangia, *Rhizopus* (p. 424-27, illust.). Mucorales used in the spirits industry, *Mucor rouxii*, Chinese yeasts (p. 436-37). Ragi/raggi and tapé (*tapej*) (p. 441). Decomposition of proteins and their derivatives, protease (p. 690-91). Film-forming surface yeasts and their accompanying phenomena, *Mycoderma* (p. 732-33). Invertase (p. 828). Other enzymes discussed in this chapter include maltase, melibiase, lactase, trehalase, raffinase, and amylase. Address: Prof. of Fermentation Technology and Bacteriology at the Imperial-Royal Technical College at Vienna [o. ö. {obiger Oesterreichischer} Professor der Gaerungsphysiologie und Bakteriologie an der k.k. {kaiserlich-königliche} Technischen Hochschule zu in Wien].

349. Bie, H.C.H. de. 1901. De landbouw der inlandsche bevolking op Java [The agriculture of the indigenous people in Java]. *Mededeelingen uit 's Lands Plantentuin* (*Buitenzorg*) No. 45. 143 p. See p. 97, 99, 138-43. [Dut]
 • **Summary:** The soybean is discussed in the chapter titled “Cultivation of crops other than paddy rice: Cultivation of secondary crops (*Palawidja*).” Soya bean is one of the secondary foods served with rice, but it is mostly used to make soy sauce and tempeh (*tempe*). One variety of soybean, which originally came from Japan, is widely grown as a second crop on the wet rice fields (*sawahs*), and it is easy to cultivate at altitudes of 1,200 to 1,500 feet above sea level. It is called *katjang kedele* in Central and East Java, but *katjang djepoen* in Sunda or West Java (*de Soedalanden*). A description of the plant and the method of cultivation in Java is then given. It is planted much more on

wet rice fields than on dry (non-irrigated) fields (*tegalans*) near the rice fields used for vegetables and secondary crops. Usually the soybean seeds are planted right after the paddy stumps have been cut away, but sometimes they are planted just before or during the paddy harvest, and pressed into the earth under the feet of the paddy cutters. They are rarely weeded, excepted when the crop is suffocated by tall weeds. At harvest, the plants are pulled completely out of the ground and bound into bunches. At night they are stored under a specially-constructed roofed shelter in the field, and during the day they are sun-dried on bamboo structures or on the ground. This takes at most 3-4 days, if the plants are really ripe and the weather is good, after which the bunches are put on bamboo mats in heaps and threshed. To protect the seeds from damage, one preferably uses piece of banana tree branches which still have woody veins. The woody plant stems and branches are removed together with the soybean pods and burned on the sawah fields. Poor people first sort out the pieces good enough for fuel and take these home. Immature green leaves are fed to animals. Sometimes soybeans are planted on the dikes of the paddy fields at the same time as or a few days later than the paddy rice. The fresh seeds from this harvest are then planted in the sawah fields after the paddy is harvested. Soybeans planted in this way are called *katjang apitan*.

There are two varieties of soya: one has an ivory yellow seed coat and the other is black. The latter is used almost exclusively to make soy sauce; the former to make pastry and condiments for rice or as a vegetable (*sayur*). Soya is cooked with salt in the green pod and eaten as a snack.

The indigenous people don’t concern themselves with the production of ketjap (soy sauce). The work is too involved and takes too long before the product is ready to be sold. Most people are too inexperienced and there is not enough of a market for the product.

The only food that most people make out of soybeans is tempeh (*tempe*), which plays the same role in Central and East Java as does ontjom in Sunda or West Java, and is prepared similarly. The tempeh-making process is described. It takes place indoors, out of the light. It is sometimes cut into smaller pieces. It is usually eaten pan-fried after being soaked in a solution of tamarind and salt. It is also cooked with vegetables.

Most soybean seeds are sold to the Chinese, who export them or process them to make soy sauce and other products. To make soy sauce, the seeds are roasted to aid in removing the hulls. Some people pound the seeds instead. They are cleaned, boiled in water, drained, spread on flat bamboo trays (*tampah* or *njiroe*) and dried daily for a week in the wind. They are washed again then soaked for 30-40 days in salt water which has been boiled then cooled. This mash is mixed thoroughly and strained through a cloth. To the black liquid is added a boiled and cooled mixture of cane sugar and water, then the mixture is boiled until its volume is

reduced by 20%. If the solid residue removed by filtering still tastes salty, it is put into water, kneaded and strained again. A sugar solution is added and all is boiled down as before to make second-grade ketjap.

To make *taoetjo* (*tauco*, *taucho* or Indonesian-style miso), the soybeans are soaked in fresh water, the hulls are removed, the seeds boiled and spread on bamboo trays to cool. Rice or glutinous rice flour is roasted until golden brown, then mixed with the seeds and set aside for 2-3 days to ferment between hibiscus (*waroe*) leaves on flat trays. When the mass has molded, it is sun dried for a few days until very hard. Note: This is the soybean koji used making *taucho*.

Remove the leaves and put this mass of soybean koji into salt water. On the third or fourth day, add some yeast (*gist*) and some cane sugar syrup. Continue the soaking and fermentation in salt water for 2-3 weeks. Place it [in crocks] daily outside in the dew, taking care that no rain gets on it.

To stimulate the fermentation, take steamed rice or glutinous rice that is only half cooked. Add *ragi* starter and allow it to ferment for 2-3 days until a sweet, alcoholic flavor develops. This kind of fermented rice is called *peujeum* in West Java, or *tapé* in Central or East Java. Now add this fermented rice to the soybeans in salt water to enhance both the fermentation and the product.

After 3-4 weeks the soybeans should be very soft like porridge; then the *taucho* is ready to be used. It is eaten raw with cooked or raw vegetables, or mixed with meat or rice dishes; other condiments are also made from it.

Another product that the Chinese make out of soybeans is tofu (*tahoe* or *tauwhoe*). Soaked soybeans are ground and the puree is mixed with fresh water. Then a milky liquid (*melkachtige vloeistof*) is filtered off and coagulated. The Chinese use a coagulant called *tjiogo* (gypsum or calcium sulfate), which is specially imported from China and is not always available, even to the Chinese apothecary. It is first burned, then cooled before being added to the milky liquid. The white mass which is precipitated is called tofu. A similar product can be made from mung beans. Address: Batavia (Jakarta), Java.

350. Wehmer, Carl. 1901. Die Pilzgattung *Aspergillus* in morphologischer, physiologischer und systematischer Beziehung unter besonderer Berücksichtigung der mitteleuropäischen Species [The mold genus *Aspergillus*, from morphological, physiological, and systematic points of view, with special attention to the middle European species]. *Memoires de la Societe de Physique et d'Histoire Naturelle de Geneve* 33(4):1-157. [225* ref. Ger] Address: Hannover, Germany.

351. Sawa, S. 1902. Note on Hamananatto, a kind of vegetable cheese. *Bulletin of the College of Agriculture, Tokyo Imperial University* 4(5):419-20. March. [1 ref. Eng]

• **Summary:** “This peculiar product is prepared from soybeans, as are also two other kinds of vegetable cheese manufactured in Japan, the *Miso* and the *Natto*; but it has a different flavour and taste, and lacks the slimy character of the common *Natto*. It is manufactured only in the central provinces of Japan—especially in those of Mikawa and Totomi, from which it finds its way all over the country. It has an agreeable salty taste and a peculiar odor somewhat resembling that of the fresh crust of brown bread. There is not any mycelium discernible with the naked eye. The soybeans composing it form no compact mass, and are of a brown colour with a thin layer of a salty taste and a somewhat sticky consistency.

“In preparing this product, the soy-beans are well washed, boiled to softness, spread on straw mats, and mixed with wheat flour (6 liters flour to 10 liters soy-beans). Moldfungi will now develop, but soon afterwards this mixture is exposed to the direct sunlight for three days, probably to kill the fungi, and is then put into flat tubs. After 12-13 days some common salt and ginger are added. The entire mass is then kept in tubs under pressure for about thirty days.

“A portion, carefully freed from the pieces of ginger and particles of straw mats used in its manufacture, was dried, pulverized and sifted through a 0.5 mm sieve. I found the chemical composition of the dry matter to be as follows: Albuminoid nitrogen 3.57%. Crude fat 3.44%. Crude fibre 6.87%. Total carbohydrate excluding cellulose 8.40%. Total ash, including salt added 18.54%. The fresh sample contained 44.73% water and 55.23% dry matter.

“There exist at least three different kinds of bacteria in this product. The most numerous colonies on agar are of two kinds.” A detailed microbiological description is given.

Note: This is the earliest English-language document seen (Oct. 2008) that uses the word *Hamananatto* to refer to “soy nuggets” (also called “Hamanatto”).

352. Neuville, Henri. 1902. Les ferments industriels d'Extrême-Orient (Biologie, emploi et produits) [Industrial fermentations of East Asia (biology, utilization, and products)]. Paris: Masson et Cie. 192 p. 19 cm. Encyclopédie Scientifique des aide-memoire publiée sous la direction de M. Léauté. [60+ ref. Fre]

• **Summary:** Chapter 4, titled “Food products obtained by fermentation of amylaceous [starch-like] substances,” discusses the following fermented soyfoods and related products: Shoyu and miso, koji, brem, and ontjom. Contains a good bibliography. Neuville lived 1872-. Address: Préparateur au Muséum d'Histoire Naturelle.

353. Rorer, Sarah Tyson. 1902. Mrs. Rorer's new cook book: A manual of housekeeping. Philadelphia, Pennsylvania: Arnold and Company. 730 p. Illust. Index. 21 cm.

• **Summary:** The soy bean is mentioned in two special sections: Botanical classification of our common vegetables (p. 281): “Leguminosae: Pulse family. Soy bean, peanut, kidney bean, string bean, lima bean, black bean, pea, chick pea, lentil, St. John’s bread.”

Soy bean (*Glycine hispida*, Maxim.) (p. 334-35): “Soy beans are grown principally in China where they form an important article of food; in fact, they are the richest of all in food constituents. It is also grown to a considerable extent in India [sic], where it is mixed with rice. This bean ranks high in fat and albuminoids and is their only muscle-making food. It has more than meat value. By the Chinese it is made into cheese [tofu], pastes [jiang], and sauces [Soy]. Soy sauce is used by them on all meat and fish dishes. For the English and Americans it forms the foundation for such sauces as club-house and Worcestershire. Soy is an agreeable seasoning to creamed meat dishes and a very pleasant addition to French salad dressing. It can be purchased in jugs at any Chinese shop, or at the American wholesale druggists by measure.” A table (based on Church) gives the composition of the soy bean: Albuminoids, etc. 35.3%. Fat 18.9. Starch and dextrin 12.5. Sugar 12.0. Cellulose 4.2. Water 12.5. Mineral matter 4.6.

“Soy” [sauce] is used as an ingredient in 12 recipes: Japanese fish sauce (p. 228). Japanese eggs (p. 253). Sautéed celery (“When ready to serve sprinkle over two tablespoonfuls of soy or mushroom catsup, and send at once to the table,” p. 389-90). Ginger chutney (p. 435). Japanese dressing (p. 442). Celery salad (“This is greatly improved by adding a few drops of Worcestershire sauce, soy or mushroom catsup,” p. 451). Bobotee salad (p. 457). Philadelphia cream salad (p. 459-60). Shad roe salad (“one tablespoonful of Worcestershire sauce or soy,” p. 469). Salad seasoning (“Agreeable seasonings to be kept on hand for salad making: Garlic, mushroom catsup, tomato catsup, Worcestershire sauce, soy, tabasco oil, tarragon vinegar, mint sauce, capers and celery seed,” p. 472). “A group of Hawaiian recipes”—To cook beef (“bake until brown. Then pour over it a half pint of sweet cream, to which you have added a tablespoonful of soy. Cook slowly for one hour, basting frequently with the cream,” p. 691-92). Cream lettuce sauce to serve with fish (“a half saltspoonful of pepper and a teaspoonful of soy,” p. 695).

Worcestershire sauce is used as an ingredient in at least 25 recipes. The first four are: Ox tail soup (p. 62). Cream of cheese soup (p. 74). Mock turtle soup (p. 80). Baked carp (p. 104).

Peanut butter is used as an ingredient in 5 recipes: Cream of peanut soup (p. 75). Lentil pie (p. 337-38). Peanut wafers (p. 535). Nut and fruit crackers (with almond butter or peanut butter, p. 537-38). Marguerites (p. 556).

The earliest recipe seen for homemade peanut butter states (p. 535): “Peanut Butter: Roast the nuts, shell and blow off the brown skins. When making it in large

quantities, it will pay to have a bellows for this purpose, or put the peanuts on a coarse towel, cover them with another towel, rub them gently, then blow off the skins. If you use salt dust them lightly with it and grind at once. Pack the butter into glass jars or tumblers, cover them and keep in a cool place. This may be used plain or diluted with water.”

Two recipes use almond butter as an ingredient: Almond wafers (p. 525). Nut and fruit crackers (p. 537-38). A recipe for homemade almond butter is given (p. 525).

The word “vegetarian” is mentioned in connection with 7 sections of recipes: Meats (p. 135-36). Vegetables (p. 277-78). Salsify (p. 317-18). Tomatoes and okra with curry (p. 417-18). Nuts (p. 522-23). Nut croquettes (p. 538). Sample menus—Vegetarian (p. 666). The author speaks very favorably of a balanced vegetarian diet. Scientists in general agree, she says, that animal proteids are easier to digest than vegetable proteids. “I must contend, however, that a well selected vegetable diet will give health, bodily vigor and mental strength to those who live rationally.” In other countries and cultures, vegetarians are quite equal in strength to those of the same economic class who live largely on meat or on a mixed diet of proper proportions—and are most likely freer from disease. The out-door laborer would probably do better on a vegetarian diet whereas the sluggish digestive apparatus of an indoor is probably better suited to beef (p. 135-36).

“The American people, as a class, in their rushing and bustling life, prefer to take their nitrogen from animal products, which are more easily digested and assimilated than vegetables.” “The Japanese, who do in their country the work performed by horses here, are practically vegetarians.” The “vegetarian requires but two meals per day,” yet they are more nourishing than three meals of meat. They take less time to eat, cost less, and offer more variety. “The amount of cellulose or waste in vegetable foods keeps up the peristaltic motion of the intestines and lower bowels; hence, vegetable eaters are rarely troubled with constipation and torpid livers.” America has “grown into a meat-eating nation” in large part because the scullery maids who preside over the kitchen are largely uneducated, do not understand nutrition, and have never learned the subtleties of preparing vegetables (p. 277-78).

“To the vegetarian, they [nuts] are indispensable; they furnish his meat, milk and butter. They are palatable, nutritious, and, if well prepared, easy of digestion. Being of vegetable origin, they are free from the danger of disease germs. Their food value is generally overlooked by Americans as they are generally served as dessert”—on top of a heavy meal. “From the general awakening in regard to healthful diet, societies have sprung up all over the world, recommending the use of vegetable foods, especially fruits and nuts. We have well established, both in New York and London, large vegetarian societies, many with separate

branches of 'fruit and nut eaters.' Personally I have tried the experiment, and find it most satisfactory" (p. 522).

The Preface notes that this "new book on Domestic Science... represents on paper The School at its highest period of development..." "A great change in the methods of living has taken place in America during the last few years." Not long ago, schools of cookery taught "fancy cookery"—"to succeed with these elaborate, dyspeptic-producing concoctions as the highest ambition. All this has now changed: the teacher or cook book (an ever present teacher) that does not teach health, body building, and economy in time and money, is short lived. There are still a few women who do elaborate cooking to please the palate and appetite,... They are still at the palate stage of existence. Strive to reach a higher plane of thought—eat to live. Why should any woman be asked to stand for hours over a hot fire mixing compounds to make people ill? Is this cookery? Is the headache that follows a food debauchery more pleasant or pardonable or less injurious than that which follows drink? Results of intemperance are identical. Simple living and high thinking have the approval of learned men and women,..."

Sarah Tyson Heston Rorer (1849-1937) "is one of the great ladies of American culinary history. She was a nationally recognized cookery expert, founded and ran a cooking school in Philadelphia for 18 years, authored over 75 books and pamphlets, edited her own magazine *Table Talk*,... and was domestic editor of the *Ladies Home Journal* for 14 years." With over 1,500 recipes, tips and advice, and more than 125 recipes, this "is one of America's great cookbooks. The *Ladies Home Journal* reprinted it in 1970. It offers an excellent view of American cookery at the turn of the 19th to 20th centuries" (MSU introduction).

Note: This is the earliest document seen (Jan. 2007) stating clearly that shoyu (Japanese-style soy sauce) is used as an ingredient in making Worcestershire sauce. Address: Philadelphia.

354. Pozzi-Escot, Emm. 1903. Chimie de l'industrie du soja [Chemistry of the soy sauce industry]. *Revue Generale de Chimie Pure et Appliquee* 6(3):64-69. Feb. German-language summary in *Chemisches Central-Blatt* 1903(1):849-50. [3 ref. Fre]

• **Summary:** "The manufacture of soja [soy sauce] (which is also called shojou or miso) forms one of the most important industries of Japan. It is obtained by fermentation of the soybean (*du haricot-soja*), wheat and koji, with the aid of certain molds." Soja is widely consumed in Japan and also widely exported. "It is a condiment more than a food, and it serves in place of salt in most culinary preparations. The average Japanese consumes 50-80 cc/day.

The production reached 2,307,844 hectoliters in 1893, and today it surpasses 2.5 million hectoliters, bringing in more than 6 million marks to the government [in taxes].

Today the number of brewers surpasses 11,000; it was nearly 10,000 in 1897 and 10,600 in 1900. One of the factories in Tokyo employs 250 workers and produces 50,000 hectoliters each year. The author has become friends and communicated with two professors in Tokyo, Dr. Oscar Loew (Prof. of Agricultural Chemistry at Tokyo University) and K. Aso.

Three tables (by Murai 1897, by Nagai and Murai, and by Prinsen-Geerligs 1895) give the composition of shoyu (the first two tables are each based on two analyses).

Noting that many erroneous works have been published on the manufacture of soja [soy sauce], the writer proceeds to describe the process as he understands it, based largely on Japanese publications—but also with many mistakes. The process has four main steps: 1. Preparation of the wheat or soybeans. 2. Preparation of the soja koji. 3. The fermentation process. 4. Extraction and sterilization. The total process takes 1-2 years. He concludes with some ideas for improving the process by reducing the fermentation time. He would heat the soy sauce during fermentation and add alcohol. Address: In charge of pure chemical research at the labs., Malzeville, France.

• **Summary:** Page 32: The prefix *mi* expresses respect, as in *mikado* (Emperor), or *miya* (shrine). A woman's expression, *o mi o tsuke*, in which we find two honorifics, means a soup made of miso.

Page 66: Shō-yu or soy is a kind of sauce.

Page 71-72. Tōfu means "bean curd." A tōfuya is a tofu shop. "Tofu is one of the most important articles of food

among the Japanese.”

Page 108: *Shirouri wa misosuke ni suru to, taisô umô gozaimas*’. If you pickle white cucumbers in miso, they are quite delicious.

Page 353: “*Shoyu wo (o) shitaji to mo iimasu*. Shoyu is also called *shitaji*.”

Page 395: A mixture of soy, *mirin*, and vinegar is called *sambaizu*.

In the Japanese-English dictionary are definitions of: *miso*, a kind of sauce (p. 510), *shô-yu*, a kind of sauce (p. 533), *tô-fu*, bean curd (p. 541). Address: 1. PhD, Prof. of Japanese at the School of Oriental Languages, Univ. of Berlin [Germany]; 2. Formerly missionary of the Reformed Church, Sendai.

357. Whitehead, Jessup. 1903. The steward’s handbook and guide to party catering. 6th ed. Chicago, Illinois: Jessup Whitehead & Co., Pubs. v + 464 + 29 p. Illust. No index.

• **Summary:** Page 60: “Those everlasting relishes” mentions catsups, soys, Worcestershire sauce, mushroom and walnut catsups, Harvey’s sauce, India soy.

Page 87: Relishes: Tomato catsup, Worcestershire sauce. Page 214: Worcester sauce.

Alphabetical: Carp (p. 267): Baked carp; gravy made with Worcestershire sauce. Chinese cookery (p. 278-80): Chinese chop soly [chop suey], a savory ragout, is the national dish of China. Incidental ingredients include “salted black beans.” Chop sticks.

Cucumber (p. 299) and eggs, with vinegar and Worcestershire sauce. Devil sauce (p. 303), with Worcestershire. Drinks (p. 305): Prairie oyster, with dash of Worcestershire sauce. Garum (p. 324): “One of the two principal sauces used by the ancient Romans...; a kind of soy,...” Horseradish (p. 343): Napolitaine sauce, with Worcestershire sauce.

Japanese cookery (p. 350-51): Mentions “Japanese misoshiru [miso soup]... This is made from miso, a fermented mixture of soy, beans [sic, soy beans], wheat and salt. It has a gamey flavor all its own.” “Hachimono,... a piece of sole stewed in soy.” “... the brown soy-colored beans and strips of Kukirage, or ear-shaped mushrooms.” “Fu, a kind of biscuit made from the glutinous part of wheat flour.” A gravy “thickened with a transparent, starchy substance, obtained from the root of a climbing plant (*Pueraria Thumbergiana*), called by the Japanese Kuzu.”

Sauces (p. 430-34): “Harvey’s sauce—’A fair imitation of Harvey’s sauce may be produced by working the following recipe. Mince a clove of garlic very finely, add 6 chopped anchovies, ¼ oz. cayenne, 3 tablespoonfuls of Indian soy, 3 tablespoonfuls of mushroom or walnut ketchup...” “Soy—An East Indian bottled sauce; it is made of purple wrinkled morels, galangal root and spices.” “Bottled table sauce—The recipe for making the genuine Yorkshire relish is probably known only to manufacturers. However, the following is

said to yield a good imitation of that popular sauce: 1 oz. garlic, 1 teaspoonful cayenne, 2 tablespoonfuls Indian soy, 2 tablespoonfuls mushroom ketchup, and 1 pint vinegar.”

Scottish cookery (p. 438): Mince collops—incl. a “dessertspoonful Worcester sauce...”

“Soy—A bottle sauce imported from China and India; composition uncertain.”

Tripe (p. 461): Tripe a la Creole, with Worcestershire sauce. Address: Chicago, Illinois.

358. Kozai, Y.; Loew, O. 1904. Ueber fungicide Wirkungen von Pilzculturen [On the fungicidal effects of mold cultures]. *Bulletin of the College of Agriculture, Tokyo Imperial University* 6(2):77-79. March. German summary in *Chemisches Central-Blatt* 1904(2):252. [Ger]

• **Summary:** It has been observed that in Japan, a well-known vegetable cheese known as Miso, does not get covered with mold even during the hottest days of summer, despite its moist condition and the fact that it is exposed to the open air and dust in shops. The prompted the authors to conduct an experiment to see if *Aspergillus oryzae*, the miso mold, has fungicidal properties. The miso is made from the action of enzymes on cooked soybeans. Address: Tokyo Imperial Univ., Japan.

359. Humphreys, Mary Gay. 1904. The aesthetic housekeepers of Japan. *Ogden Standard Examiner (Utah)*. April 29. p. 23.

• **Summary:** The author, an American, writing from her experience of living in Tokio, notes that Japanese housekeepers bring a strong sense of beauty or aesthetics to every part of their daily life. Concerning foods: “One of these is bean curd, ‘tofu,’ a white substance that is sliced and fried like mush, with soy [sauce] for a flavor. This curd is so nutritious and so cheap that an American who lives in Japan suggested its being introduced into this country as a food. Soy is a liquid made from the black bean and is said to be the foundation of Worcestershire sauce. It enters into almost all cooking, and most agreeably.”

A Tokio restaurant meal: “It was charming, a meal to be remembered, and meat thus cooked in soy [sauce] something ‘Japanesy’ that we might well import.”

Nuta salad: “This is made of clams, rape tops and onion with a sauce of bean paste, rice, mustard and soy [sauce], rubbed into a brown liquid.” One large illustration shows a Japanese woman with elaborate dress and hairdo; three others show her working at home.

360. Abel, Mary Hinman. 1904. Beans, peas, and other legumes as food. *USDA Farmers’ Bulletin* No. 121. 39 p. See p. 11-13, 18-20. Revised. Illust. [1 ref]*

• **Summary:** A revised edition, 3 pages longer than the 1900 original. The information about soy is unchanged, however it is on different pages (see above). The section titled

“Nutritive value of the legumes” (p. 18-20) includes a table titled “Composition of fresh and dried legumes compared with that of other foods.”

361. Burg, Cornelis Leendert van der. 1904. *De voeding in Nederlandsch-Indië* [The foods of the Netherlands Indies]. Amsterdam, Netherlands: J.H. de Bussy. viii + 526 p. See p. 210-20, 222-23, 255-56. Index. 24 cm. [49 ref. Dut]

• **Summary:** Burg describes the preparation of tempe as follows: “Yellow soy-beans are boiled, soaked in cold water for 48-72 hours, squeezed out between cloths, and then steamed in a conical basket, made of flattened bamboo or of cane (Malay: kukusan) till they are done. Afterwards they are spread out on wire frames, which are entirely covered with banana leaves, and mouldy remains of a previous preparation are added, then all is covered again with banana leaves. The whole mass is stirred a few times, and after 2 days a cake has been formed, from which pieces are cut, which are fried in cocoanut oil and eaten afterwards. During the preparation, the cotyledons have been bound together by a tight mycelium, much water and carbonic acid being secreted in the meantime and the temperature of the mass rising 10 to 12°C above that of the surroundings. The cellular walls are not dissolved by the hyphae, but the soluble carbohydrates and the fat diminish, the nitrogen content remains about the same, but in tempé only 70% is to be found of the protein, as originally present in the beans.”

He also describes, on Prinsen Geerligs’ authority, the preparation of *tao-tjo* (Indonesian-style miso). Peanuts are discussed on p. 220; *tempé boengkil*, *tempé bongkrek*, *ontjom beurream*, *ontjom bodas* on p. 222.

362. Tokyo Plant, Seed & Implement Co. (Tokyo Konoen). 1905. *Agriculturist (The)* No. 125. Jan. 56 p. [Jap]

• **Summary:** This illustrated monthly Japanese-language periodical, which began publication in 1894, has two main parts and functions: (1) Articles that promote agricultural theories and techniques to the public in easy-to-understand language. (2) A catalog of the publisher’s seeds, plants, bulbs, and implements.

The catalog section titled “Beans” (p. 8+) includes two entries (p. 9) for soybeans (*daizu*): (1) Juninko (“ten people like”) variety. 5 sen per *gô* (100 sen = 1 yen; 1 *gô* = 180 cc = 0.763 cups {U.S.}). 40 sen per *shô* (1 *shô* = 1.8 liters = 1.903 quarts {U.S.}). A recently improved variety with medium sized, shiny seeds. They are good for making shoyu, miso, or other foods. (2) Kimusume (“fresh daughter”) variety. 5 sen per *gô*. 40 sen per *shô*. Mid-season / medium-maturing, summer varieties that yield a big harvest. Address: Tokyo, Japan. Phone: 2421.

363. Kadono, C. 1905. The diet of the Japanese. *Times (London)*. Feb. 11. p. 6, cols. 3-4.

• **Summary:** This article is actually mostly about soya beans and their products. “It is well known that the Japanese diet consists chiefly of rice, vegetables, and fish, with very small and occasional additions of butchers’ meat. The relative quantities of these, and vegetables and products thereof used, would be interesting and in some respects instructive.

“The following bill of fare, which attempts to give the three meals of a day for a family of moderate circumstances, will show how they live. It may also be said that all Japanese live rather simply whether high or low in their station of life, and the menu can be taken as typical of all classes.

“Breakfast (about 7 to 7:30 a.m.).—Miso soup (with vegetables, tofu, &c.), pickles, boiled rice, tea (sometimes raw egg or boiled sweet soya beans, or natto, &c.).

“Lunch (12 noon).—Fish boiled in soya, vegetables stewed in soya, pickles, boiled rice, tea.

“Supper (6 to 6:30 p.m.).—Soya soup (with vegetables, fishes, &c.), raw fish sliced and eaten with soya sauce, broiled fish (or boiled) with vegetables (or butchers’ meat or fowl and vegetables stewed), rice, tea...

“From the foregoing it can be seen how cereals and vegetables predominate in Japanese diet. Rice and miso and soya, as will be seen from the menu, form the predominant feature of the food, and it may not be an exaggeration to say that the Japanese physique is mainly built up on the products of soya beans, such as miso, soya sauce, tofu, &c.”

There follows a detailed table titled “Analysis of Soya Beans and Their Products. (Extract from a table by Mr. C. Omura.)” Nutritional analyses are given for the following, written exactly as they appear: Soya beans (5 varieties), miso (white, red Osaka, red Tokio, red Sendai), soya sauce (regular or Noda), tofu, dried frozen tofu, fried tofu, mash residue from tofu (Okara), yuba (Dried skim off tofu-mash), natto (Steamed beans with surface fermentation).

“Soya beans are grown all over Japan and in Manchuria, and so far as I know cannot be had here [in England]. They are eaten boiled, either young or ripe.” They are manufactured into those articles shown above, of which miso, soya, and tofu are the most important...” The author then gives a 5-10 line description for each of how miso, soya sauce, and tofu are made. Tofu is coagulated with a “strong brine. “The remnant (okara), being a white pulverized mass, called fancifully ‘snow balls’ by Japanese, is eaten boiled and seasoned with soya sauce.

“I have given Japanese meals to some English friends and most have pronounced the food excellent, and some have even braved the sliced raw fish with soya sauce.”

Note 1. Concerning the idea that okara is sometimes fancifully called “snow balls,” the term *kirazu* is written with three characters: yuki = snow, hana = flower(s), and sai = vegetable(s). Or the author may be referring to a local term from some part of Japan.

Note 2. This is the earliest English-language document seen (Oct. 2001) that uses the Japanese word *okara* or the term “mash residue from tofu” to refer to *okara*.

Note 3. This is the earliest English-language document seen (Feb. 2004) that uses the word “dried frozen tofu.” Address: England.

364. *Chambers's Journal (London)*. 1905. Japanese diet. Vol. 8. March 25. p. 270. Sixth series. [1 ref]

• **Summary:** “The nations of the world have now had the opportunity of learning many a valuable lesson from the general management of the Japanese army... It is interesting to note that the hard work done by the Japanese Tommy is performed on a dietary table which would hardly satisfy the soldiers of any other country. A large quantity of the Japanese soldiers' rations is made up of compressed fish-meal... Another form of food which seems peculiar to the Japanese army is obtained from kelp and other seaweeds, many of which afford very nourishing sustenance...”

“At home this is the bill of fare of a Japanese family in moderate circumstances, according to C. Kadono in the *Times*. Breakfast (about 7 to 7.30 A.M.)—miso soup (with vegetables, tofu, &c.), pickles, boiled rice, tea (sometimes raw egg or boiled sweet soya beans, or natto). Lunch (12 noon)—fish boiled in soya, vegetables stewed in soya, pickles, boiled rice, tea. Supper (6 to 6.30 P.M.)—soya soup (with vegetables, fish, &c.), raw fish sliced and eaten with soya sauce, broiled fish (or boiled) with vegetables (or butcher meat or fowl and vegetables stewed), rice, tea. The Japanese physique is thus largely built up on the product of soya beans, which are grown all over Japan and in Manchuria, and from which miso, soya, and tofu are made. Soya beans, which, we believe, are not to be had in this country, are much richer in albumen than either beef or mutton. The Japanese diet, therefore, mainly consists of rice, vegetables, and fish, with very small and occasional additions of butcher meat.”

365. *Vegetarian Messenger and Health Review (Manchester, England)*. 1905. The diet of the Japanese (Abstract). April. p. 86-87.

• **Summary:** This article is a summary of: Kadono, C. 1905. “The diet of the Japanese.” *Times* (London). Feb. 11. p. 6.

366. Kitao, Motohide; Akiyama, Takuji. 1905. Miso *shōyu chū ka kurooru tetsu ni yotte sarichiru-san to kokuji no nannō o teisuru ni tsuki*. I. Address: 1. Gishi; 2. Gishu. Both: Eisei Shikenjo.

367. Kitao, G.; Akiyama, T. 1905. Miso, *shōyu-chū ka kuroru tetsu ni yotte sarichiru-san to kokuji no hanna o tei suru seibun ni tsuki, dai ikkai hōkoku* [A constituent of miso and shoyu which gives, with ferric chloride, a reaction similar to that of salicylic acid]. *Yakugaku Zasshi (J. of the Pharmaceutical Society of Japan)* No. 280. p. 483-88. June. [Jap; eng]

• **Summary:** This constituent is thought to be tyrosine, which is a decomposition product of albuminous matter contained in the raw material. Authors also give the results of experiments on that constituent and the distinction between it and salicylic acid.

368. Clement, Ernest W. 1905. Mito samurai and British sailors in 1824. *Transactions of the Asiatic Society of Japan* 33:86-123. July. See p. 113, 122. Read May 17, 1905. [5 ref]

• **Summary:** In 1638, Tokugawa Iemitsu, the 3rd Tokugawa shogun, issued his famous edict with two parts: First, it prohibited foreigners from landing on the coast of Japan. Second, it prohibited Japanese from leaving Japan. Only a limited amount of trade was permitted at Nagasaki with the Dutch and the Chinese.

Yet no policy, no matter how stringent, could prevent the winds and currents from carrying foreign vessels to the Japanese shores. The seclusion became even more difficult to enforce after about 1750, when whaling and merchant vessels began to frequent the waters of the Pacific Ocean.

Page 88 cites three documents that discuss the attempts made before Commodore Perry's visit to open intercourse with Japan. Mito was a fief (*han*) on the eastern coast of Japan just northeast of today's Tokyo. Before 1824 various western ships were seen off the coast. “In 1823, some fishermen discovered a foreign ship off the coast of Hitachi [a village in Mito] and had an opportunity to go aboard. In the ship they found many swords, guns, etc.; and they saw the crew getting oil from whales.” The crew of one stranded ship landed, and attacked and robbed the people, throwing them into confusion.

On about June 24, twelve foreigners [British] landed at the village of Hitachi. They attempted to communicate a villager, and succeeded at basics; the story is told by Aizawa An, a prominent Mito samurai.

In *The Leading men of Japan*, by Charles Lanman [1883] we read (p. 283): “According to the native annals, the coast of Japan was visited by foreign vessels in 1637, 1673, 1768, 1791, 1793, 1796, 1803, 1808, 1813, and 1829.” In 1846 two American ships first arrived at Nagasaki [then Tokyo Bay] under Commander James Biddle, and Commander Matthew C. Perry made his visit in 1853, made memorable by resulting in a treaty with the United States. In 1854, Sir James Stirling, an English admiral, visited Nagasaki, and also concluded a treaty with Japan;... Perry

“opened” Japan primarily for the U.S. whaling industry. In 1824 British sailors landed in Japan.

Page 113: “Kuhachiro and Tōzō received the following provisions for three days’ use: 3 *shō* of rice, 6 *seki* of *miso*, 6 *seki* of salt.

“The following are the provisions for horses: 2 *shō* 1 *gō* of soja bean, 1 *shō* 2 *gō* of rice-bran, 9 *kwan* of hay and straw. These were to be used for three days...”

Footnotes (p. 110, 113, 122): 1 *shō* = about 1.5 quarts. 1 *seki* is about 0.03 pint. 1 *gō* is about 0.3 pint. 1 *kwan* is 8.2673 lbs. 1 *hiki* is ¼ *sen* [a small unit of Japanese money].

Page 122: “6 *seki* and 6 *sai** of *miso*... 3 *gō* and 5 *seki* of soja beans.” Address: M.A.

369. Muroi, Zengo. 1905. *Miso no hataraki ni tsuite* [On the action of miso]. *Kenbikyō (Microscope)* No. 66. p. 1-8. Sept. [Jap]

370. Macmillan, H.F. 1905. The “Soya (or Soy) Bean.” (*Glycine hispida*). A new vegetable, fodder, and green-manure product for Ceylon. *Tropical Agriculturist (Ceylon)* 25(5):682-83. Nov. 15.

• **Summary:** “It is strange that a product so important, so simple of cultivation and so quick in yielding returns as this has not hitherto attracted attention in Ceylon.

Notwithstanding the fact that it has been introduced several years ago by the Royal Botanic Gardens, and successfully grown at Peradeniya year in and year out, both for the instruction of visitors to the Gardens and for distributing seeds; I question whether there are at present half-a-dozen gardens or estates in Ceylon which count this amongst their crops.”

“The Soya Bean thrives at Peradeniya, and appears to be well-suited to the climate and soil; whilst it also flourishes in the Mediterranean region and Southern Europe. It would therefore seem reasonable to expect it to thrive at a comparatively wide range of elevations in Ceylon, provided the conditions of soil and rainfall were at all favourable. In China and Japan the Soya Bean forms a standard article of food with all classes of the community, being prepared for use chiefly in the form of a sauce, paste or cheese, the latter two preparations being made by crushing and pressing the seeds. In India the seeds are said to be cooked and used in various ways, often ‘roasted and ground as *satu*, or simply eaten in the form of *dal*.’ Soy sauce is said to form the basis of many popular sauces made in Europe.” A few years ago soy sauce in London was worth 2 shillings and 6 pence per gallon. “Personally I think Soya Bean as a vegetable is very agreeable and forms a good substitute for the Lentils and Broadbeans of Europe if cooked and served similarly. Its chemical composition, according to Professor Church, places it above all other pulses as an albuminous food.”

The soya bean is also considered valuable as a fodder plant and for green manuring. A brief description of its

cultivation is also given. “Regarding cultivation, probably few crops are less exacting in their requirements than this. Its most striking characteristic, judging by results recorded at Peradeniya, is the remarkably short space of time in which the plants grow and produce a crop. Here the seeds germinate in 3 to 5 days, the plants flower when a month old; a fortnight later the pods are fit for picking [for use as a green vegetable], and the harvesting is complete in about two months from the time of sowing. Thus, granted the seasons were favourable, it should be possible to obtain four crops a year. In making these statements, which may seem unduly optimistic, it is not by any means intended to convey the impression that practically no expenditure of labour is involved in the production of this crop. On the contrary it is pretty certain that to make it a profitable product for whatever purpose, even under the most favourable conditions for its growth, a reasonable amount of cultivation will be required. It has yet to be proved how far it would repay cultivation in Ceylon for fodder and green-manuring, but that it should prove a welcome adjunct to the food products of the natives, if not as a general vegetable, there seems no question.”

A footnote states: “* Since writing this Mr. Kelway Bamber has presented a small quantity of Soya Bean seed to the Botanic Gardens, remarking that he intended to recommend it as a green-manure crop.” Address: Curator of the Royal Botanic Gardens at Peradeniya.

371. Alviso Co. (The) 1905. Dealer in Japanese American provisions, dry goods and merchandise (Ad). In: Nichibei Shinbun-sha. 1905. *Zaibei Nihonjin Nenkan [Japanese-American Yearbook]*. Unnumbered page near the end. [Jap; eng]

• **Summary:** Ad (full page). The central 1/8 of this ad is in English. This company sells various goods including miso and shoyu. The Japanese title across the top: “Great bargain prices. You’ll be surprised!” An illustration shows two flags, Japanese and American, crossed. Address: P.O. Box 15, Alviso, Santa Clara Co., California.

372. Bui, Quang Chieu. 1905. Des cultures vivrières au Tonkin [On the food crops of Tonkin, Indochina]. *Bulletin Economique de l’Indo-Chine* 48:1152-90. New Series 2. Many illust. and photos. [4 ref. Fre]

• **Summary:** This article begins with a foreword by H. Brenier, Director of Agriculture, Forestry and Commerce for Indochina. He notes the importance of soybeans, soy products (including soy sauce and tofu) and adzuki beans (*Phaseolus radiatus*), among the people of Asia. In Annamite (south Vietnamese), tofu is called *dau phu* and the soybean is called *dau nanh* or *dau tuong*.

Adzuki beans are discussed (p. 1153-55, 1157) and a nutritional analysis of the azuki bean, which has been cultivated in France, is given. The section on the soybean

(p. 1153, 1157-68) discusses: The local names and varieties of the soybean, botanical characteristics, cultivation, utilization (to make soy sauce, *tuong*, tofu, etc.), commerce and trade (in the province of Hungyen, the stalks of the soybean plant are used to make a sort of incense). An illustration (line drawing, p. 1159) shows a Soja plant with pods.

A detailed description is given of the manufacture of *tuong* (a sort of soft miso) in Tonkin. First *moc*, or molded glutinous rice is prepared. After glutinous rice is cooked, it is covered with banana leaves and allowed to mold for 2-3 days. Then the soybeans are prepared. They are grilled, ground to a powder, boiled with water, and put into a jar for 7 days until sweet. Six parts of rice koji are then mixed with 5 parts soy. The mixture will be ready to eat after it has fermented for 15-30 days. If it is too thick, add salt. Good *tuong* is soft and mildly sweet. It is sweeter and smoother than *nuoc mam*. Annamites say that only the prosperous households succeed in making *tuong*. If the *tuong* starts well, then becomes sour, that is a bad omen.

Tuong can also be made from corn (*maïs*), which is grilled, ground, sifted, covered with taro leaves, and allowed to mold. Put it in salt water, then after 5-6 days add roasted soy flour as above. Stir it before sunrise and let it stand open in the sun for 15 days, putting on the cover as soon as the sun disappears. If this is done, it will last a long time.

Note 1. This is the earliest document seen (Jan. 2009) that mentions *tuong*. The importance of this fermented seasoning, a close relative of Chinese *jiang*, is indicated by the local name for the soybean (*dau tuong*), or “the bean used to make *tuong*.”

Production of tofu (*dau-phu*): Lots of *dau-phu* is made in Tonkin, especially in Hanoi, where it constitutes the basis of the poor people’s food. It is never made in large factories, only small shops. Soak the soybeans, wash them and remove their hulls, cook to soften them, then grind them with a hand-turned mill over a wooden bucket. The soymilk is extracted with cold water then boiled for 30 minutes. There remains in the sack a white residue (*un résidu blanc*) [okara] which is fed to the pigs. The next day, add some fermented whey from a previous batch to coagulate the soymilk. Then press the curds. The finished tofu cakes are each 15 by 8 by 1 cm thick. Tofu is widely used in soups. A table (p. 1165) shows the costs of equipment to start a tofu shop, and a profitability analysis. Early analyses of the composition of the soybean, conducted by Fremy, Muentz and Pellet (in France) and Wechler (in Austria), are reproduced. Photos show key steps in the process: (1) A person is washing soybeans in a bamboo colander while standing in a stream near Hanoi. (2) The soybeans are ground in a small, traditional, hand-turned stone mill by a person sitting on the same wooden bench as the mill, in a bamboo hut, surrounded by various wooden tubs and

colanders. (3) Using a sack to filter the ground puree from the stone mill. (4) Cooking the filtered liquid over a small wood fire in an earthenware pot. (5) Pressing the curds (outdoors) after precipitation of the protein. (6) More forceful pressing. (7) A merchant walking the streets selling tofu on two trays, each suspended by 3 ropes from the ends of a shoulder pole.

Note 2. This is the earliest French-language document seen that mentions okara (Oct. 2001), which it calls *un résidu blanc*.

Note 3. This is the earliest document seen stating that okara is fed to “pigs.” Address: Indo China.

373. Fernie, William Thomas. 1905. *Meals medicinal: With “herbal simples,” (of edible parts). Curative foods from the cook; in place of drugs from the chemist.* Bristol, England: John Wright & Co.; London: Simkin, Marshall, Hamilton, Kent & Co., Ltd. xxii + 781 p. See p. 84. Illust. Index. 22 cm.

• **Summary:** In this collection of unusual facts about the healing power of foods, the various foods are listed alphabetically. The section titled “Bean” states (p. 84): “The Soy Bean (*Glycina soja*) [sic, *Glycine soja*] is of three varieties, black, green, and white. These Beans are boiled, then mixed with barley, or wheat, until, through fermentation, they become covered with fungi; then brine is added, and further fermentation goes on for a couple of years. The sauce thus concocted is afterward boiled afresh, and put, when cool, into bottles, or casks. From a nutritive point of view it is superior to any other sauce in our markets.” Soy is made throughout Japan, and most Japanese partake of it with every meal. “In China, Soy Cheese [tofu] is extensively eaten, whilst various sauces, and pastes [jiang] are prepared from the Beans... An old fable said that Soy was made from certain beetles, and Londoners have improved this to ‘black beetles.’” Note: This is also the earliest English-language document seen (Feb. 2004) that clearly uses the term “Soy Cheese” (or “soy cheese”) to refer to tofu.

The author then quotes a four-line poem by Edward Lear from his *Book of Nonsense* (1862) which begins: “There was an old person of Troy / Whose drink was warm brandy and soy,...”

Also discusses: Seaweeds (p. 495-96, 627-33; Incl. Irish moss or carrageen, dulse, laver, sloke, samphire, sea holly, bladderwrack, and *Laminaria digitata* or sea-tang, sea spinach, agar-agar or Japanese isinglass). The Pea-nut (*Arachis hypogaea*, p. 504-05; Incl. pea-nut candy and nut cream). Vegetarianism (p. 711-17). The book contains no recipes. Address: M.D [England].

374. Nichibei Shinbun-sha (Nichi-Bei Shinbunsha). 1905. *Zaibei Nihonjin nenkan* [Japanese-American yearbook. No. 1]. 234 Turk St., San Francisco, California. 345 p., many

unnumbered. Reprinted in 25 Oct. 2001 in Tokyo by Nihon Tosho Senta. Series: Nikkei Imin Shiryôshû. Dai 1-kai [Collected Documents on Japanese Emigration. No. 1]. [Jap; eng]

• **Summary:** This book is read and numbered from “back to front” compared with typical English books; it is mostly (99%) in Japanese. There is no English-language title page. The company that publishes this yearbook also publishes (at the same address) a daily newspaper titled *The Japanese American*.

The book is composed of: 16 unnumbered pages of ads and basic information; page 14 is “About this publication, and pages 15-16 are the table of contents, 12 unnumbered leaves of black and white photos (including two maps, in Japanese, of northern and southern California, on glossy paper), 192 pages which are the body of the book, a directory interspersed with 80 pages of ads in groups of either 16 or 32 pages.

The table of contents reads: 1. Census of Japan and USA (both population and agriculture). 2. U.S. law. 3. U.S. agriculture as it relates to Japanese. 4. Commerce. 5. Education and religion. 6. Cities in which a significant number of Japanese live. 7. Statistics. 8. Japanese farmers in U.S. agriculture. Appendix: Directory and index to the directory.

Sources are cited: U.S. Agricultural Census for 1900. Trade information from Japan’s Dept. of the Treasury (*Ôkurasho*) and the U.S. Dept. of Commerce. Then there is a 2nd table of contents for the directory, listing different city place names, by state. This directory was compiled by this newspaper using every means at their disposal.

Imports of Japanese shoyu (soy sauce) to the USA were 429,135 *sho* worth \$86,681. Note: 1 *sho* = 10 *go* = 1.8000 liters. So this amount is 772,443 liters or 203,925 gallons (p. 136). A significant amount of Japanese miso was also imported but this yearbook was unable to get the exact statistics (p. 136).

The top half of p. 137 is about shoyu; the bottom half is about sake. Concerning shoyu: Shoyu is one of the daily necessities for Japanese. It is the 3rd largest item imported [probably after white rice and sake]. In Meiji 36 (1903) the amount imported was 4,291 *koku*, 3 *to* and 5 *sho* worth \$86,681 (see above). It is the No. 1 “direct import” because it is relatively easy to import due to its packaging, documentation, basic liquid nature, and way of invoicing (it does not require double invoicing). It is easy to sell; not much capital is needed to stock it and it is a very popular item. Like bread or flour in U.S. groceries, it has a small profit margin and the stock turns over rapidly. Many varieties of shoyu are imported from many parts of Japan: Choshi in Chiba prefecture, Hamaguchi Yoshibe, Sa-jirushi, Mogi Saheji’s Yama Kikkoman in Noda (Chiba prefecture), Ka-jirushi, Yamagata-hi, Sendai jirushi, and Bunmei jirushi. The best selling brands are those which are of medium

price. Recently, in San Jose, Mr. Yamamori, started a shoyu making plant and is working hard to make it successful. We look forward to receiving his product.

In San Jose, California, there are two shoyu makers (p. 156, bottom right).

The Directory shows Japanese companies making soyfoods only in California.

Note: This is the earliest document seen (Feb. 2008) that is a directory of Japanese living in the United States. Address: San Francisco, California.

375. Oshima, Kintaro. 1905. A digest of Japanese investigations on the nutrition of man. *USDA Office of Experiment Stations, Bulletin No. 159*. 224 p. See p. 20-33, 40-43, 46-47, 145-53, 168-73. [26 ref. Eng]

• **Summary:** One section titled “The Soy bean and its preparations” (p. 23-33) gives detailed discussions of tofu (including yuba, frozen tofu, kara [okara], and fried tofu), miso (incl. white miso, red or Sendai miso), shoyu, and natto. The nutritional composition of each is given, and many early studies by Western and Japanese scientists are cited.

“Next to rice in importance in the Japanese diet are legumes, which are universally used... Of the different legumes used as food in Japan, the soy bean (*Glycine hispida*) is by far the most important. According to agricultural statistics for the years 1879 to 1887, nearly 10 per cent of the cultivated land in Japan was devoted to the growth of this legume, an area somewhat larger than that devoted to wheat growing. In the northern Island [Hokkaido] in 1887 nearly 17 per cent of the total cultivated area was devoted to the soy bean. The average yearly production of soy beans amounts to about 360,000,000 kilograms... A part of the product is of course used for seed, and a not inconsiderable part is used as fertilizer.*” (Footnote: *”In northern China soy beans are used to some extent in the production of oil, which is used for cooking and illumination [in oil lamps]. The residue from this process [the presscake] is imported largely into Japan, where it is used as a fertilizer”). Other legumes widely used in Japan include the mungo bean (*Phaseolus mungo radiatus*) and the adzuki bean (*Phaseolus mungo subtrilobata*) (p. 23-24).

“Many varieties of soy beans are known, being designated according to the color, size or shape of the seed, and the time required for maturity. For example, there are black, green, yellow, and white varieties, and these are again designated as early, medium, or late, according to the season of maturity, and small, medium, and large, according to the size of the seed. The black soy beans are used chiefly for cooking, with sugar and shoyu; the green variety is also used in this way, either in the fresh state or after being dried” (p. 24). There follows a long section on tofu (detailed in a separate record).

The “larger part of the leguminous food in the Japanese diet consists of the preparations of soy beans, such as miso, shoyu and tofu,...” (p. 46).

In Japan, legumes about 8% of the protein and 11% of the fat in the diet (p. 137). Many digestion experiments are described (p. 144-87), including those with tofu, shoyu, “tofu cake or kara, the soy-bean residue remaining from the preparation of tofu (see p. 26),” and yuba conducted in Japan by Osawa and Ueda (1887), T. Suchi (1887), Kano and Iishima (1899). Table 91 (p. 191) is a “Summary of results of digestion experiments with legumes and legume preparations.” The percentages given are “coefficients of digestibility.” Experiments No. 6 and 7—soybeans (average): Protein 65.5%, fat (uncertain), carbohydrates (incl. crude fiber) 85.7%. Experiments No. 8 and 92—tofu (average): Protein 92.7%, fat 96.4%, carbohydrates (incl. crude fiber) 93.3%. Experiment No. 94—“yuba (soy legumin coagulated):” Protein 92.6%, fat 95.7%, carbohydrates (incl. crude fiber) 86.6%, crude fiber 35.5%. Experiment No. 93—“tofu cake (soy-bean residue [okara]):” Protein 78.7%, fat 84.3%, carbohydrates (incl. crude fiber) 82.8%, crude fiber 89.6%.

Note: This is the earliest English-language document seen (Oct. 2001) that uses the Japanese word *kara* to refer to okara.

Other Japanese foods discussed include adzuki or adzuke beans (*Phaseolus mungo subtrilobata*) (p. 24, 170), dried algae (sea vegetables, p. 34), and kuzu (p. 170). Address: Director, Hokkaido Agric. Exp. Station, Sapporo, Japan.

376. Oshima, Kintaro. 1905. A digest of Japanese investigations on the nutrition of man: Tofu (Document part). *USDA Office of Experiment Stations, Bulletin No. 159*. 224 p. See p. 26-28. [1 ref. Eng]

• **Summary:** “Tofu: This term is commonly translated as bean cheese—though sometimes bean curd—in English and *Bohnen-käse* in German. Tofu is not strictly equivalent to cheese, however, as neither bacteria nor ferments are involved in the process of manufacture. It consists chiefly of the albuminoid materials of the soy bean combined with magnesium and calcium salts, as pointed out by Inoue.” To make tofu, soaked soybeans are ground between millstones. “The mass is then mixed with about three times its bulk of water and boiled for about an hour, after which it is filtered through a cloth. By this process about 30 per cent of the total protein of the beans is dissolved and contained in the filtrate, ready to be precipitated as tofu. The filtrate is white and opaque, somewhat resembling milk. To this is added, with constant stirring, about 2 per cent of the concentrated mother liquid [nigari] obtained in the manufacture of salt from sea water, whereupon the albuminoid material is precipitated in combination with calcium and magnesium salts.” After pressing, the tofu is finally cut into cakes about

10 cm broad, 2 cm thick, and 25 cm long [about 3.9 by 0.79 by 9.8 inches], though the size varies in different localities.

“The residue from the boiled and filtered beans is known as kara [okara], or tofu cake, and contains a large quantity of protein and carbohydrates. It is a good food material, being used considerably by poor people as an ingredient of miso soup.

“If the milky filtrate mentioned above is boiled, a sort of film forms on the surface. This film, which consists mainly of coagulated albuminoids and fat, is sometimes prepared in large quantity, and when dried is used as an article of food, being known as yuba.

“Tofu is generally prepared every day and is eaten in the fresh condition simply with a little shoyu, though it is also frequently cooked in shoyu or in miso soup. Fried tofu, called abura-age, is also a very popular article of food, Rape-seed oil is generally used in frying, though sesame oil is sometimes used.

“Tofu may also be prepared for preservation and transportation. For this purpose it is cut into smaller pieces and exposed to severe cold weather, to remove the water by freezing, and then dried in an oven. As thus prepared it can be preserved for several years. When the tofu is frozen the water collects in fine needles of ice distributed throughout the mass. When the ice melts and the water runs out, it leaves the tofu porous and it may be easily dried. If it is not frozen, it is difficult to dry it and the resulting material is dense and horn like.”

Table 2 (p. 28) gives the average composition of the above-mentioned tofu preparations: “Fresh tofu, frozen tofu, fried tofu, tofu cake [okara], yuba.”

The digestibility of the nutrients in tofu has been found to be high, as will be seen from the results of digestion experiments summarized later (p. 191). As much as 95 per cent of the protein is digested and about the same proportion of fat. The carbohydrates were found to be somewhat less digestible when the tofu was eaten alone, but when it was eaten with rice about 99 per cent of the total carbohydrates of the diet was digested.

“Both the composition and the digestibility of tofu, therefore, prove it to be a very nutritious food material. This is extremely significant, because tofu in its various forms is used very extensively by all classes of Japanese. In the interior of the country, where fish can not be easily obtained, it is a most important source of protein. For Buddhist priests, as well as the strict adherents to Buddhism (who eat no animal food), it forms a very popular and almost indispensable dietary article. Though no authentic record has been found regarding the manufacture of tofu in Japan, it is believed on good authority that the method was first introduced from China by Buddhists for their own use.” Address: Director, Hokkaido Agric. Exp. Station, Sapporo, Japan.

377. Oshima, Kintaro. 1905. A digest of Japanese investigations on the nutrition of man: Miso (Document part). *USDA Office of Experiment Stations, Bulletin No. 159*. 224 p. See p. 28-30. [1 ref. Eng]

• **Summary:** “Miso: This material is prepared from a mixture of soy beans, barley [note that he does not say rice], common salt, and water by a slow process of fermentation. Although it is highly probably that the process of preparing miso was first introduced either from China or from Korea, the exact date of the introduction is not known. Mention is made of miso in a Japanese record of the latter part of the ninth century.

“In the extent to which it is used, miso surpasses all other preparations from soy bean. Among the rural population and wage-earners in general it forms an indispensable part of the daily menu; among the people living in cities, however, it is used somewhat less extensively. Its chief use is in making soup and in cooking vegetables. For this latter purpose, however, miso and shoyu are to a certain extent replaceable, and generally when more shoyu is used the amount of miso consumed is smaller.

“Since it is the general custom for the people in rural districts to prepare miso for their own use, no accurate statistics regarding the total quantity manufactured and consumed are available. It has been estimated that the daily consumption of miso per person in the rural districts is about 40 grams. In the statistics of 25 dietary studies described beyond (p. 131), with people living elsewhere than in the country, the average daily amount was 43 grams, but the range was from 13 to 100 grams.

“The production of miso depends primarily on the action of a fermenting agent known as koji. The process of preparing the koji used for miso is similar to that for sake-koji (see p. 36), except that for the latter only rice is used, whereas miso-koji may be made from either rice or barley. The object of preparing miso-koji is to propagate certain forms of fungi, of which *Aspergillus oryzae* is the principal one. The koji also contains diastatic and inverting ferments which change the carbohydrates of the raw materials into maltose, glucose, etc., and a proteolytic ferment which acts upon the nitrogenous bodies, converting them into simpler and more soluble materials. The yeast which causes alcoholic fermentation is also regularly present. Koji is dried and finely powdered before it is used.

“To prepare miso the soy beans must first be steamed, and upon this process depends largely the quality and especially the color of the final product. The steaming is continued usually twenty-five hours, at first with strong heat but later very gently. When the beans are properly steamed and cooked, they are rubbed into a thick, uniform paste, to which are added proper amounts of powdered koji, salt, and water. The whole mass is then well mixed and stored in a special vat. The temperature of the mixture is kept at about

15° to 20° C., though as the fermentation advances it often rises to 25° C.

“Different kinds of miso are distinguished by color, taste, and keeping properties, and are prepared by somewhat different processes, the differences consisting chiefly in the use of rice or barley koji, the amount of common salt added, a longer or shorter fermentation, and the temperature at which it takes place. Two of the most important kinds of miso are the following:

“*White miso*.—This material is white in color, contains a small amount of common salt, is fermented with rice-koji for three to four days, and may be preserved about ten days.

“*Red or sendai miso*.—This material is red in color, contains a relatively large amount of common salt, is fermented usually with barley-koji for one and one-half to two years, and may be preserved for several years.”

A table shows the composition of white miso and red miso. Note: The source of this table is cited incorrectly. Address: Director, Hokkaido Agric. Exp. Station, Sapporo, Japan.

378. Plaut, Hermann. 1905. Japanese conversation-grammar: With numerous reading lessons and dialogues. Heidelberg, Germany: Julius Groos; New York & Washington, DC: Brentano's. viii + 391 p. See p. 111-13. [Eng; Jap]

• **Summary:** Words (p. 111): “*misoshiru*—a soup made with miso, a kind of bean-sauce.” “*nimame*—boiled [soy] beans.” “*teriyaki*—meat or fish baked with shōyu.”

Page 113. “15. Reading Lesson. *Nihon no shokujū*.” “*teriyaki unagi*.”

Note: This is the earliest English-language document seen (Jan. 2008) that contains the word “*teriyaki*.” It does not contain the term “*teriyaki sauce*.” The word and the definition are both in English; the book is in English with Japanese lessons and words. Address: Berlin, Germany.

379. Sakura-fu Co. 1905. Sakura-fu Co. (Ad). In: Nichibei Shinbun-sha. 1905. *Zaibei Nihonjin Nenkan [Japanese-American Yearbook]*. Unnumbered page. [Jap; eng]

• **Summary:** Ad (½ page). The central ¼ is in English. This trading company sells various goods including shoyu, miso, and shiro / white sake (*shiro-zake*) and sake. They are also a shipping company.

A full-page ad in the 1908 yearbook states: “Sakura-fu Shōkai. Direct importers of all kinds of provisions. KSK. 1014–1016–1018 3rd St., Sacramento, California. Tel. Sunset Vale 1566.” They also sell retail. They still sell miso and shoyu, but shiro sake / white sake is not mentioned. Address: 1014 Third St., Sacramento, California. Phone: Vale 1566.

380. Tuck Wo. Co. (Tokuwago Shoten). 1905. Tuck Wo. Co. (Tokuwago Shoten) (Ad). In: Nichibei Shinbun-sha. 1905.

Zaibei Nihonjin Nenkan [Japanese-American Yearbook]. Unnumbered page in the block of ads after Directory p. 28. [Jap; eng]

• **Summary:** Ad (¼-page). This company sell various goods including shoyu and miso. The company name and address are in given in both English and Chinese. This ad also appears in the 1906 yearbook, and in the 1907 yearbook (near the end, p. 36). Address: 33 Cleveland Ave., San Jose, California. Phone: James 3821.

381. Peltriset, C.N. 1906. Les cultures alimentaires en Indo-Chine [The food crops of Indochina]. *Bulletin des Sciences Pharmacologiques (France)* 13:427-435. Aug. See p. 429-30, 434. [1 ref. Fre]

• **Summary:** “Next we will discuss the seeds of the soybean (*Soja hispida* ou *Glycine hispida*). This interesting product is used in many ways: the most interesting is, undoubtedly, the preparation of soy cheese (*fromage de soja* [tofu]), which is real vegetable casein (*veritable caséine végétale*).

Next is the complicated and difficult preparation of the fermented sauce, known under the name of *tuong* [a sort of soft miso]. Then, the therapeutic use of soy bread (*pain du soja*), commended for diabetes, because of its low content of sugars and starches, and its richness in albuminoids (*albuminoïdes*). Finally, the industrial and food uses of the oil obtained by expression / pressing (*expression*).

A table of synonyms (p. 433-35) gives the family name, the scientific name, and vernacular / local name in Indochina of 66 plant species, including: “Légumineuses—*Soja hispida* Sieb et Zucc—Dâu nành.”

Also discusses: *Cajanus indicus*. *Dolichos sinensis* et *tonkinensis*. Cowpeas (*Vigna sinensis*). Mung beans (*Phaseolus radiatus* L.; *haricot mungo*), which has green seeds, widely used for sprouting. An illustration (facing p. 430) shows mung bean sprouts and an entire mung bean plant. Job’s tears (*Coix Lacryma* L.; *larmes de Job*). Quinoa (*Chenopodium quinoa*; *Ansêrine*, *Quinoa blanc*). Address: Head of micrographic work, Elite Public College of Pharmacy of Paris (Chef des travaux micrographiques à l’École supérieure de Pharmacie de Paris).

382. Abel, Mary Hinman. 1906. Beans, peas, and other legumes as food. *USDA Farmers’ Bulletin* No. 121. 38 p. See p. 11-13, 18-20. Corrected. Illust. [1 ref]*

• **Summary:** A corrected edition, 1 pages shorter than the 1904 revised edition. The information about soy is unchanged.

383. Karuhorunia Company [California Co.]. 1906. Karuhorunia Company [California Co.] (Ad). In: Nichibei Shinbun-sha. 1906. *Zaibei Nihonjin Nenkan [Japanese-American Yearbook]*. Unnumbered page near the front. [Jap; eng]

• **Summary:** Ad (full page). They are an import, export, and wholesale company. “Direct importers of tea and rice. Manufacturers of Japan miso.” Their miso manufacturing company is named California Miso Seizô-sho, located at 262 Brannan St. They also sell various goods including miso. Address: 149 California St., San Francisco, California. Phone: Red 1002.

384. **Product Name:** Miso.

Manufacturer’s Name: Karuhorunia Miso Seizo-jo [California Miso Manufacturing Co.].

Manufacturer’s Address: 262 Brannan St., San Francisco, California. Phone: Red 1002.

Date of Introduction: 1906. January.

New Product–Documentation: Ad (full page) in Nichibei Shinbun-sha. 1906. *Zaibei Nihonjin Nenkan [Japanese-American Yearbook]*. Unnumbered page near the front. They are: “Direct importers of tea and rice. Manufacturers of Japan miso.” Their miso company is named California Miso Seizô-sho. They also sell various goods including miso.

385. Nichibei Shinbun-sha (Nichi-Bei Shinbunsha). 1906. *Zaibei Nihonjin nenkan [Japanese-American yearbook. No. 2]*. 234 Turk St., San Francisco, California. 345 p., many unnumbered. Reprinted in 25 Oct. 2001 in Tokyo by Nihon Toshosenta. Series: Nikkei Imin Shiryôshû. Dai 1-kai [Collected Documents on Japanese Emigration. No. 1]. [Jap; eng]

• **Summary:** This book is read and numbered from “back to front” compared with typical English books; it is mostly (99%) in Japanese. There is an English-language title page.

The book is composed of: 4 unnumbered pages of front matter, 4 unnumbered leaves of black and white photos (mostly of San Francisco) on glossy paper, 20 unnumbered pages of ads and basic information, of which the 4th to last page is why and how they wrote this book (they got a lot of help from people in various areas to gather data, although no names or places are given), and of which the last two pages are the table of contents, 224 numbered pages which are the body of the book, 44 unnumbered pages of ads, 59 pages of directory interspersed with 50 pages of ads in groups of either 16 or 32 pages.

There is a tofu shop in San Francisco (p. 183, bottom right) and a shoyu (soy sauce) maker in San Jose (p. 189, top right); last year Yamamori Shoyu Jozo-sho made 1,000 koku of shoyu. Note: 1 *koku* = 10 *sho* = 180 liters. Therefore the company made 180,000 liters of shoyu. Since 1 liter = 0.264 gallons, this is 47,520 gallons of shoyu.

There is 1 tofu shop in Florin (p. 203, top right) and two tofu shops in Isleton (p. 204, top right).

The Directory shows Japanese companies making soyfoods in California and Washington state. It is preceded

by an index of the Directory. Address: San Francisco, California.

386. Senft, Emanuel. 1906. Ueber einige in Japan verwendete vegetabilische Nahrungsmittel, mit besonderer Beruecksichtigung der japanischen Militaerkonserven [On some vegetable foods used in Japan, with special attention to Japanese military canned foods]. *Pharmazeutische Praxis* 5(12):481-91. [5 ref. Ger]

• **Summary:** Working for the German Food Administration, the author examined a number of preserved foods that had played an important role in helping Japan to win the Russo-Japanese war. He drew heavily on Loew (1895). “Widely distributed in Japan is a unique baked good, which is produced primarily from wheat gluten with only a little of wheat flour; it is called *Fu* (wheat gluten bread).

“A very important role is played by the soybean and the many diverse products made from it: Yuba, the vegetable cheeses tofu, natto, and miso, plus shoyu or soy-sauce (*Shoju oder Soy-Sauce*). Like the soybean, tofu and natto are rich in protein. They supply the protein lacking in rice.”

Also discusses fresh konnyaku, dried-frozen konnyaku, dried persimmons, sea vegetables (12 types in great detail, with an illustration of the cells of a kombu plant), and warabi (dried ferns). Address: Official of military medicines, Committee of military hygiene.

387. Stuerler, F.A. von. 1906. Nederlandsch Oost-Indische cultuurgewassen: Hunne kenmerken, teelt en bereiding [Crops of the Dutch East Indies: Their characteristics, cultivation and preparation]. Tiel: A. van Loon. ii + 373 p. See p. 341-43. Illust. Index. 25 cm. [5 ref. Dut]

• **Summary:** The subsection on the hibiscus plant (*De Waroe-boom, Hibiscus tiliaceus*, p. 334) states that the leaves are used in making foods from soybeans [tempeh].

In the chapter on crops that yield oils and fats (*Vette oliegewassen*, p. 335-44), the section titled “Soja” (p. 341-43) has the following contents: General botanical characteristics: Introduction, the plant, stem, leaves, flowers, fruit, seeds. Cultivation. Chemical composition of the seeds, preparation, and uses.

The main product made with soybeans is soy sauce (*kètjap*). The Chinese in Java cook the soybeans and inoculate them between hibiscus leaves (*Hibiscus tiliaceus*) to make tempeh (*tèmpé*). They also make *tao-tjo*, a sort of bean paste (Indonesian-style miso). And with the black soybeans they make a sort of bean cheese, *tao-djie* (soy nuggets). Also discusses peanuts (*aardnooten*, p. 335-37), sesame seeds (*sesam*, p. 337-39), the castor oil plant (*ricinus*, p. 339-41), other crops that yield oils and fats (p. 343-44).

Note: This is the earliest document seen stating that molds grown on Hibiscus leaves are used in Indonesia to inoculate tempeh. Address: Leiden.

388. Takemoto Shoten. 1906. Takemoto Shoten (Ad). In: Nichibei Shinbun-sha. 1906. *Zaibei Nihonjin Nenkan [Japanese-American Yearbook]*. Unnumbered page near the front. [Jap]

• **Summary:** Ad (full page). In big Chinese characters the ad says “New Year’s Greetings.” They sell various goods including miso and shoyu. A small illustration shows some bamboo leaves, with snow on them and a little bird flying. Address: P.O. Box 332, Gilroy, California. Phone: Main 334.

389. Teikoku Shokai. 1906. Teikoku Shokai (Ad). In: Nichibei Shinbun-sha. 1906. *Zaibei Nihonjin Nenkan [Japanese-American Yearbook]*. Unnumbered page near the front. [Jap]

• **Summary:** Ad (full page). This company, owned by USHIO Mankichi and KUBO Sakujiro, imports various goods directly including miso and shoyu. An illustration shows two crossed flags; one is the flag of Japan. Address: 802 Stockton St., San Francisco, California. Phone: Main 5556.

390. Woenne (W.M.). 1906. W.M. Woenne (Ad). In: Nichibei Shinbun-sha. 1906. *Zaibei Nihonjin Nenkan [Japanese-American Yearbook]*. Unnumbered page near the front. [Jap; eng]

• **Summary:** Ad (half page). In big Chinese characters the ad says “Happy New Year.” They sell various goods including miso and shoyu. Address: Mt. Eden, Alameda, California.

391. *New York Times*. 1907. Here is a Japanese bill of fare: Prof. Chittenden shows value of simple diet used in Japan. Aug. 11. p. SM5.

• **Summary:** A typical bill of fare of a Japanese family in moderate circumstances includes: “Breakfast (from 7 to 7:30 A.M.)—Miso soup with vegetables. Boiled rice, pickles, and tea. Sometimes raw egg or boiled sweet soya beans or natto.

“Lunch (12 noon)—Fish boiled in soya. Vegetables stewed in soya. Boiled rice, pickles, tea.

“Supper (from 6 to 6:30)—Soya soup. Vegetables. Raw fish sliced, eaten with soya sauce...”

“The miso, soya sauce, and topi [sic, tofu] are all products of the soya bean, on which, with rice, the Japanese physique may be said to be built up.” “Rice is the main foodstuff, with the soya bean a close second.”

Prof. Chittenden of Yale University notes that Japan’s “exploits in war have recently attracted the attention of the civilized world.” Yet the great majority of Japanese have “remained untouched by the prodigality of Western civilization.” Their “habits and customs still bear the imprint of simplicity and frugality.”

Since Japan defeated Russia in war, many observers have noted that “the people of no other nation... have greater powers of physical endurance, or greater bodily strength and agility...”

392. Bloch, A. 1907. Le soja. Sa culture, sa composition, son emploi en médecine et dans l'alimentation [The soybean. Its culture, its composition, its use in medicine and in food]. *Bulletin des Sciences Pharmacologiques (Paris)* 14:536-51. Sept.; 14:593-606. Oct. [46 ref. Fre]

• **Summary:** A review of the literature drawing heavily on Egasse (1888), Trimble (1896 and 1897), and Williams & Langworthy (1897, revised 1899), and including many others. Contents: Introduction (mainly a long history of the soybean worldwide, with emphasis on Europe). Chemical composition of the soybean. Chemical composition of the soybean plant.

Part II: Preparation of shoyu. Preparation of miso. Natto. Preparation of tao-yu ([Chinese-style soy sauce] a condiment made with black soybeans, hibiscus leaves, and *Aspergillus Wentii* mold) and tuong. Tofu and yuba. Other soyfoods, incl. soy coffee.

“We are presently looking everywhere for ways of giving economic value to our colonies. It seemed interesting to me to draw attention to the soybean, the Chinese bean (*le Soja, Haricot chinois*) which contributes a large part of the food of the people in China, Japan, and the Far East. Already in use in Indochina, tested in Europe with success then abandoned for no apparent reason, the soybean could acclimatize itself in other colonies of ours, particularly in Madagascar, and perhaps in certain of our African possessions, and therefore could contribute to increasing their riches and the well being of their indigenous peoples.”

Soy oil “can be extracted partially by pressure or completely by ether or petroleum ether. It is yellowish red with a not particularly disagreeable odor.”

Mr. Lailleux, a former intern at the hospital in Algiers, has reported that a certain number of diabetic Arabs under treatment at the hospital of Dey, in Algiers [Algeria], have been helped by a dietary regimen based on soybean pap.

Note 1. This is the earliest document seen (April 2004) concerning soybeans in connection with (but not yet in) Madagascar.

Note 2. This is the earliest French-language document seen (Feb. 2004) that mentions natto, which it calls *le natto*. Address: Pharmacist major 2nd class of the colonial troops. Doctor of pharmacy.

393. Ruata, Guido; Testoni, Giuseppe. 1907. La soia nell'alimentazione italiana [Soy in the Italian diet]. *Ministero d'Agricoltura, Industria e Commercio. Bollettino Ufficiale* 6(6):698-718. Dec. 18. (Chem. Abst. 2:864). [35 ref. Ita]

• **Summary:** Contents: Introduction. Description of the soybean. Cultivation and its history in Europe. Harvest and yield. Nutritional value of the soybean: Tables show analyses according to König (10 tables), to Balland (1 table analyzing 3 varieties, from Cambodia {Exposition of 1900}, from Cochin China, and from Tonkin), to Gautier (1 table), to Maurel (1 table), and to Lechartier and Joulie (from Grandeau 1903, analyzing 3 varieties, from Etampes, black soybean, and yellow soybean—all grown in France; each either as is or dry). Tables of nutritional analyses by Ruata & Testoni (includes the weight of 1,000 seeds for each variety): I. Black soybean, from Vilmorin-Andrieux of Paris, France; from Dammann & Co. [seedsmen] of Naples (Italy); and from the Inst. of Hygiene of Bologna, Italy. II. Giant Yellow, from Etampes (Pinolini), from Naples (Dammann), from Bohemia (*Boemia*-Ingegnoli); III. Small yellow soybean (from Dammann in Naples). IV. Green soybean (from Dammann). V. Brown soybean (from Dammann). The authors believe the Giant Yellow soybean is best adapted to Italian conditions. The analysis of the variety from Naples is as follows: Weight of 1,000 seeds: 205 gm. Water 9.80%. Albuminoids 37.13% (*albuminoidi*, protein) Carbohydrates 24.40%. Fat 18.36%. Lecithin 1.62%. Crude fiber 4.47%. Ash: 4.30%.

Preparation of soybeans (detailed descriptions and nutritional analyses): The whole seeds, miso (*Il miso*), tofu (*To-Fu* or *to-fu*), shoyu (made with koji), soy flour and bread (*farina e pane di soia*, incl. experiments by Brugia, and Rimini), soy polenta. Conclusions.

Three non-original illustrations (line drawings; between p. 700 and 701) show three different full-size views of the Soja plant, including: (1) Plant with roots. (2) Stem, leaves and pods. (3) Stem and pods (Original from Pinolini 1905).

Several bar graphs (following p. 712) give nutritional composition comparisons of 12 staple foods, mainly legumes, cereal grains, dairy products, and meat: Fig. 2—Albuminoids (protein content); soya is the highest with 37.13%. Fig. 3—Carbohydrate content. Fig. 4—Fat content; soya is highest with 18.36%. Fig. 5—Salt (*Sali*).

Other tables show: (1—p. 701): For four soybean varieties, weight of 100 liters in kg and number of seeds per kg. Soia d'Etampes yellow 72 / 7,400. Black soybean from Podolia 74.5 / 7,400. Yellow soybean 72.5 / 8,550. Black soybean 73 / 12,200. Note that the black soybean has by far the smallest seeds.

Selected translations of the text: The first part of the article discusses dietary problems in Italy, especially pellagra, a skin disease caused by deficiencies in protein and niacin. One of the causes seems to be the consumption of corn, especially spoiled corn (*maiz guasto*) (p. 699-700). The authors are interested in studying the soybean as a potential new food for Italy, based on the examples from other countries where it has been consumed for a long time and where corn is unknown or almost unknown. They want

to take the initiative in getting the best possible advantage from the introduction of soybeans as an Italian food (p. 700). In Italy the varieties which grow well are the early black, the yellow, the brown, the green, and the giant yellow; the latter is similar to the variety Soya Etampes, which has been acclimatized in France (p. 701). History in Italy: According to Pinolini, the soybean made its appearance around 1840, and has been cultivated with success around Verona, along the Lombard coast of Lake Maggiore, and near Mantua and Lucca (Mantova and Lucchese). As far as we know, it either was cultivated or is still cultivated in Liguria, Friuli, the Marches, and Emilia. Around Naples, it is especially cultivated in San Giovanni a Teduccio, under the care of Dammann & Co., a seed company (p. 702).

In the year 1906 in a field annexed to the Institute of Hygiene, we conducted experimental cultivation of soybeans, sowing the black variety from Podolia, sent to us by the Vilmorin-Andrieux, a seed company in Paris. A similar experiment was carried out on a larger expanse of land, at the same time as ours and with the same seeds, by Dr. Ignazio Buldrini at his farm near Bologna. The land at the Institute of Hygiene, being rather rich in humus, was fertilized with phosphate fertilizer at the rate of 500 kg/ha and potassium sulfate at the rate of 100 kg/ha. Dr. Buldrini's land, well supplied with potassium and phosphoric anhydride,... was fertilized with plenty of manure. The seed was planted on both fields in early May. The vegetation developed regularly and in August we obtained a harvest that yielded 1,500 kg/ha of seeds reaching perfect maturation (p. 703).

Brugia (1902) has conducted numerous experiments in baking with soy flour, and here is what he writes about it: "It is necessary to find an inexpensive food with great nutritional value for the poor farmers and rural people. It would be ideal to be able to make bread from soybean flour, thus creating a food that would be physiologically balanced and complete." He first tried mixing soy flour with wheat flour in the proportions 50/50 and 30/60, but the results were unfavorable. Then they tried using brewer's yeast in the process and had very good results, except that the price was a little high. It was then necessary to substitute a mixture of bicarbonate of soda and cream of tartar ($\frac{1}{2}$ gm per 3 g of flour) for the brewer's yeast. This worked very well. He then gives a table showing the nutritional analysis of the best bread (p. 716). In the conclusions of his work, Brugia says: "Soy flour cannot be used by itself in baking. But mixed with wheat it gives an optimum bread, soft textured, complete and balanced nutritionally, economical, and convenient. A second table shows an analysis of soy bread published by Rimini (1902) (p. 716).

Soy polenta, a mixture of soy and corn, was named Soyenta by Haberlandt who first prepared it. It could be of nutritional benefit to the people in those parts of Italy who

get almost all of their nutrients from polenta. We have conducted numerous tests to find a type of Soyenta (to adopt Haberlandt's name) which, because of taste and ease of preparation, could enter into the diet of our rural population without difficulty. Here are the results of our experiments with various types of Soyenta: (1) With whole yellow soy flour: The resulting product does not have a soft consistency; it is coarse and crumbles rather easily, but the taste is nice. (2) With sifted soy flour: This product is not as good as the previous one, because it is too sticky. The taste reminds us of infant cereal made of wheat flour. (3) Soy flour mixed with wheat flour in varying proportions: Not advisable because it presents in various degrees the difficulties of the former. (4) (p. 717). Soy flour mixed with corn flour: Best results were obtained with a mixture of 1 part soy flour to 4 parts corn meal (coarsely ground, Veronese style). The consistency of this product is not unlike that of regular polenta, and the flavor is also very close. Hot or cold it slices very well, and overall it can be used just like regular polenta, but it has more nutritional value (p. 717).

Note 1. This is the earliest Italian-language document seen that mentions tofu, which it calls *To-fu*.

Note 2.

Note 2. This is the earliest Italian-language document seen (March 2009) that uses the word "miso" (*Il miso*) to refer to miso.

Note 3. This is the earliest Italian-language document seen (Aug. 2003) that uses the term *albuminoidi* to refer to protein in connection with soybeans. Address: 1. Direttore dell'Istituto d'Igiene della Regia Università di Bologna (Director of the Inst. of Hygiene at the Univ. of Bologna); 2. Insegnante nella Regia Scuola Media Commerciale, Direttore del Laboratorio chimico Compartimentale delle Gabelle di Bologna, Italy.

394. **Product Name:** [HVP Cubes or Paste? ("A Type of Miso")].

Manufacturer's Name: Jul. Maggi & Co.

Manufacturer's Address: Kempthal, Switzerland.

Date of Introduction: 1907.

New Product-Documentation: Senft. 1907.

Pharmazeutische Praxis. 6(3):81-89; 6(4):122-24, 131-32.

"Recently the firm of Jul. Maggi in Kempthal [Switzerland] has begun to make and market a type of miso."

Note: This is the earliest known commercial soy product made in Switzerland.

395. **Product Name:** Miso.

Manufacturer's Name: Yamane Miso, Sakana Sho (Fish Shop).

Manufacturer's Address: 309½ L St., Sacramento, California.

Date of Introduction: 1907.

New Product–Documentation: Nichibeï Shinbun-sha. 1907. *Zaibei Nihonjin Nenkan [Japanese-American Yearbook]*. Directory entry p. 56. Note: This company makes miso and sells fish. Also in 1908, Directory p. 68 (Japanese numbers). Address is now given as 309 L Street.

396. Asai, Denzaburo; Saito, Rokuzan. 1907. *Miso ryôri nihyakushû: katei jitsuyô* [Two hundred miso recipes: For practical use at home]. Tokyo: Yurakusha. 159 p. 23 cm. [Jap]*

• **Summary:** Note: This is the 2nd earliest book in WorldCat / OCLC that has miso as a subject or title word. Address: Japan.

397. Jumelle, Henri L. 1907. *Les ressources agricoles et forestières des colonies Françaises* [The agricultural and forestry resources of the French colonies]. Marseille, France: Barlatier, Imprimeur-Éditeur. viii + 442 p. See p. 333. No index. 28 cm. [2 ref. Fre]

• **Summary:** In the chapter on Indo-China (p. 267-363) is a section on coconuts (p. 322+) followed by a section on “Other oil-bearing plants” (*Les autres plantes oléagineuses*), which contains paragraphs (p. 326-27) on the sesame seed (*Le sésame*, cultivated in Cambodia) and the peanut (*L’arachide*, long cultivated in Cochin China and central and south Annam). Some confusion exists concerning the oil of *Aleurites cordata* (Chinese wood oil, *l’huile d’abrasin*) (p. 331-32): “Why is this oil, so well known and widely used in Indo-China, not exported, as is its analogous oil from China? It is not ignored by European and American manufacturers; and in the United States, as in Europe, it is in demand * by the factories that make linoleum or that prepare varnish from copal.” (Footnote: *) “It seems that the oil imported into Europe and the United States is often adulterated with oil from the seeds of *Soja hispida* [soybeans], which is likewise a very drying oil”.

The next section, titled “The indigenous food” (*L’alimentation indigène*) (p. 332-35) includes a discussion of various legumes consumed in Indo-China. “Among the leguminous seeds used as food, there is a large consumption of kidney-beans (*de haricots*), of dolichos beans (*de doliques*), and, even more, of soybeans (*de sojas*).” “The large consumption of the soybean (*du soja*) is due to the fact that its beans, not only are eaten after a long cooking, but, again, serve as the base for various preparations, as in Japan and China (Footnote: It is with these soybeans, mixed with wheat and *koji*, and coarse salt, that the Japanese make their *shoyou* [*shoyu*, soy sauce] and their *miso*, and the Chinese their sauces or analogous dishes, *teou-ju* and *teou-tiung*. In Java, the indigenous people make similar preparations. The fermentations are, in all these cases, caused by various molds.) It is thus that the Annamites [of central Vietnam] make a cheese called *dau-phu*, which is the *teou-fou* of the Chinese, the *tofu* of Japan. They likewise make a sauce

named *tuong*, which is almost the same as the *teou-tiung* [*doujiang*] of the Chinese, and two cheeses [tofu], one solid, the other of a softer consistency, called *dau-hu* and *dau-hu-ao* in Cochin China.” Address: Prof., Faculte des Sciences de Marseille [Marseilles], France.

398. Nichibeï Shinbun-sha (Nichi-Bei Shinbunsha). 1907. *Zaibei Nihonjin nenkan* [Japanese-American yearbook. No. 3]. 234 Turk St., San Francisco, California. 398 p., many unnumbered. Reprinted in 25 Oct. 2001 in Tokyo by Nihon Toshô Senta. Series: Nikkei Imin Shiryôshû. Dai 1-kai [Collected Documents on Japanese Emigration. No. 1]. [Jap; eng]

• **Summary:** This book is read and numbered from “back to front” compared with typical English books; it is mostly (99%) in Japanese. There is an English-language title page.

The book is composed of: 4 unnumbered pages of front matter, 6 unnumbered leaves of black and white photos (mostly taken after the San Francisco earthquake and fire) on glossy paper, 18 pages of ads and basic information, numbered using Japanese numbers (NUJN), of which the last two pages are the table of contents, 176 numbered pages which are the body of the book, 84 unnumbered pages of ads, 75 pages of directory (preceded by an index of the directory) NUJN, 35 pages of ads and back matter NUJN.

There are two tofu shops in San Jose, California, and also two breweries (*jozo-sho*). Note: One may have been for brewing shoyu and the other for sake (p. 153). The San Jose shoyu maker [Sa-shi Shoyu Jozo-sho] helped Komada Shoten [probably not a shoyu maker] in San Francisco last year. Although they used wheat and salt made in the U.S., they had to get soybeans and also the bamboo hoops for the wooden kegs (*taru*) from Japan. It cost them over 50 cents to make one wooden keg; that’s a problem (p. 154, top right). There is one tofu shop in Watsonville (p. 154, bottom center).

The Directory shows Japanese companies making soyfoods in California and Utah. Address: San Francisco, California.

399. Senft, Emanuel. 1907. *Ueber einige in Japan verwendete vegetabilische Nahrungsmittel, mit besonderer Beruecksichtigung der japanischen Militaerkonserven* [On some vegetable foods used in Japan, with special attention to Japanese military canned foods]. *Pharmazeutische Praxis* 6(3):81-89; 6(4):122-24, 131-32; 6(6):211-12, 219. [19 ref. Ger]

• **Summary:** These three sections contain a good review of the literature (especially the Japanese literature) in German. Issue No. 3 begins with “Phanerogams. Chapter 5. Legumes. Soybeans and soybean preparations” (p. 81-89). Contents: Introduction. Varieties: Group I. *Soja platycarpa*-Harz (5 forms–olivacea-Harz and punctata-Harz,

melanosperma, platysperma, parvula Martens). Soja tumida-Harz (3 forms—pallida Roseb. [sic, Roxb = Roxburgh], castanea-Harz [brown], atosperma-Harz). Anatomy and cell structure of different parts of the plant and seeds. A non-original illustration (line drawing; p. 83) shows a soy bean, full-size and at cellular levels. Haberlandt and the Vienna World Exposition of 1873. Foods made from soybeans in China and Japan described by Charles Bryant (1785): Miso, soy sauce (*sooju-sauce* or soy), Roos, Koji. Tofu, sake. Shoju or Soja-Sauce. Miso (vegetable cheese; “Recently the firm Jul. Maggi & Comp. in Kempthal makes a type of miso and sells it commercially”).

Issue No. 4 begins with “Natto and tofu” (*Bohnenkäese*) (p. 122-24) and includes fresh tofu and frozen tofu (*gefrorener tofu*). Yuba. A separate section on miso pickles (*Misozuke*; p. 131-32) describes the different types, especially those made with daikon (*Rettiche*).

Issue No. 6 discusses shoyu (called *Extrakt-Sauce Japonica*, or Shoju-Sauce) (p. 211). A table (p. 212) lists the main food plants of Japan, including five different “varieties” (“var.”) of soybeans: *Kuro-mame*, *Shiro-mame*, *Ao-mame*, *Goishi-mame*, *Gankui-mame*. A photo (p. 219) shows various Japanese preserved foods, including a metal box containing “Fukujinsuke” [*fukujinzuke*] consisting of sliced vegetables (cucumbers, bamboo shoots, onions) preserved in soy sauce. Address: Military medicine official, Germany.

400. Strakosch, Siegfried. 1907. Das Problem der ungleichen Arbeitsleistung unserer Kulturpflanzen [The problem of the unequal production efficiencies of our crop plants]. Berlin: Verlagsbuchhandlung Paul Parey. 110 p. No index. 23 cm. [Ger]

• **Summary:** This book, dedicated to Julius Wiesner, “the master of plant physiology,” looks at national food supplies from the viewpoint of plant physiology. In the section on “Calculation of assimilative effects,” a table (p. 44-45) compares rye, wheat, corn, rice, soybeans, and potatoes in their production per hectare of starch, digestible protein, value of product in German marks, value of nutritive elements consumed, assimilative effect (defined as the ration of the value of the usable substance produced per unit area to the value of the nutritive elements borrowed from the soil by producing this substance), assimilative effect compared with rye, and difference between the production and consumption in German Marks. Soybean produces much more protein per given area of land than the other crops, has the highest assimilative ratio, 6.68 times larger than that of rye. Thus the culture of soybeans should be the most remunerative.

In the same section, a bar graph (p. 48) shows the value (in marks) of physiologically useful substance resulting from withdrawal of one mark worth of soil nutrients. The soybean gives the greatest returns of the 22 plants listed.

In the section on “Consideration of plant production efficiency in crop rotations” (p. 66+), the legumes are praised and soybeans are mentioned on pages 71 (the most productive of all legumes with an enormous number of 668) and 73. In this context, the work of Friedrich Haberlandt with soybeans and his book, *Die Sojabohne* (The Soybean, Vienna, 1878) are described in detail (p. 74-76). Haberlandt died shortly after the publication of this book, and Hecke, his friend, carried on his work.

In the last chapter, “Goals and consequences,” a table (p. 102) shows the productivity in the northern U.S. states of nine crops, including wheat, barley, corn, sugar beets, peas, Jerusalem artichokes, and soybeans. In value of crop per hectare, soybeans are third after Jerusalem artichokes (German: Topinambur; French: Topinambour) and sugar beets. Two long footnotes (No. 122 and 123, p. 109-10) discuss the importance in Japan of soybeans and the various foods made from them including shoyu (Shoju, Shoyu), miso, tofu, and yuba. Address: Dr., Wien-Hohenau.

401. **Product Name:** Miso, Koji.

Manufacturer’s Name: Kodama Miso Seizo-sho.

Manufacturer’s Address: 310 Crocker St., Los Angeles, California. Phone: MAin 3820.

Date of Introduction: 1908. January.

New Product–Documentation: Rafu Shinposha. 1908. *Rafu Nenkan* [*Rafu Shinpo Japanese-American year book*]. Ad, unnumbered page near front. Suri-miso, shiro koji seizo oroshi-uri. Rafu, Kurakka-gai 310. Denwa Meen 3820 [Ground miso. White koji maker and wholesaler]. Directory entry, p. 43.

Note 1. This is the earliest known miso manufacturer in Los Angeles or in California. Note 2. “Rafu” is the Japanese nickname for Los Angeles.

402. Takahashi, Teizô; Shito, Gorô. 1908. Miso no seibun ni tsuite (yohô) [On the composition of miso (prediction)]. *Tokyo Kagaku Kaishi (J. of the Tokyo Chemical Society)* 29(2):101-16. Feb. 28. [Jap]

Address: 1. Nôgaku hakase, Japan.

403. Chalmers, P.A. 1908. Japan: Report for the year 1907 on the trade of North Formosa. *Diplomatic and Consular Reports, Annual Series (Foreign Office, Great Britain)*. No. 4041. p. 1-19. June.

• **Summary:** A map shows the northern three-fourths of the island of Formosa, including railways, projected railways, and the savage frontier. It is in the Tamsui Consular District; the main city is Taihoku. Discusses the total trade of Tamsui and Keelung (both port cities) into North Formosa. Efforts are being made toward “pacification of the 30,000 aborigines of the island” using 5,000 border police.

Annex I shows return of principal articles of import into Tamsui and Keelung during the years 1906-07. One major

item is opium from Britain, Persia, Turkey, and China. Small amounts of miso and soy [sauce] were also imported. Trade into Keelung [later named Chilung] comes from Moji and Kobe [Japan]. Trade into Tamsui comes from Foochow, Amoy, and Hongkong. Address: British Consul.

404. **Product Name:** Miso.

Manufacturer's Name: Hawaiian Yamajo Soy Company.

Manufacturer's Address: Honolulu, Oahu, Hawaii.

Date of Introduction: 1908.

New Product–Documentation: Krauss. 1909. Hawaii Agric. Exp. Station, Annual Report. p. 83. "Seed of two other [soybean] varieties were donated by the Hawaiian Yamajo Soy Company of Honolulu. One of these, a green seeded type, has been grown in the Kona district of Hawaii for some years; the other, a yellow seeded variety, was imported direct from Japan. The seed of both these varieties is used in the manufacture of the Japanese food product, "Miso," and other preparations." [Note: It is not clearly stated that Yamajo makes miso. But some company in Hawaii was making miso at this time]. For the year 1908. Mr. Yamakami was manager.

Husted's Directory of Honolulu and the Territory of Hawaii. 1907. p. 609. Yamajo Soy Co., Nobuyuki Yamakami, mngr. Pua Lane, [Honolulu]. Two entries following: Yamakami, N., mgr, Yamajo Soy Co., residence King, near Palama Chapel. Note: No listing in 1905-06 Directory. 1909 Directory. p. 602. Company name has changed to Yamajo Soy and Sauce Manufacturing Co. Ltd., N. Yamakami, mngr, Pua Lane near Kukui. Note: Again no clear statement that Yamajo made miso.

Shurtleff & Aoyagi. 1983. The Book of Miso. 2nd ed. p. 234. In 1898 Hawaii was annexed as a U.S. Territory, so this company could be considered the earliest known miso manufacturer in the USA. Nihei. 1978. Nippon Jozo Kyokai Zasshi. 73(7):542-49. "Hawaii ni okeru Nihon-shu, miso, shoyu no rekishi." He lists this company as having been founded in Honolulu in 1905, as a shoyu maker but not as a miso maker.

405. Agricultural Bureau, Department of Agriculture and Commerce. 1908. Agriculture in Japan. Tokyo: Agricultural Bureau, Department of Agriculture and Commerce. x + 455 p. See p. 225-29, 434, 439, 448, 453-54. No index. 23 cm. [Eng]

• **Summary:** A table of moneys, weights and measures (p. x) includes British equivalents of the following Japanese units: Money—*yen, sen, rin*. Length: *ri, chô, ken, shaku, sun*. Area: *cho, tan, sé, bu or tsubo, kô (9.724 tan)*. Capacity / volume: *koku, tô, sho, go*. Weights: *kwan or kwamme, kin, momme*.

In Chapter 6 titled "Agricultural products," in section 2 on "staple food stuffs" is a subsection titled "Soja beans" (p. 225-29) which begins: "In point of production and use, soja beans occupy an important position among the various

beans, they are extensively cultivated from the Hokkaido in the north to Formosa in the south. They find a congenial soil to prosper, the acreage for 1906 was 460,895 *cho* (1 *cho* = 2.45 acres) which with the exception of the acreage of barley (503,498 *chô*) is equalled by no other products from the upland fields. Their use is quite extensive. They are eaten boiled, baked and powdered while *soy, miso* and *tofu* (bean curd) made out of beans, are found even in the remotest villages. They are found on the table both of high and low. In making *soy [sauce]*, a by-product in a shape of soy-cakes is obtained and may be used as excellent manure while making *tofu*, the remaining ingredients [okara] may be used as a subsidiary diet and as food for cattle. Soja beans may also be pressed, and its oil used for the purpose of diet and for various technical uses, while the residue forms excellent manure. The fresh stalks of soja beans may be used as forage or as effective green manure. In short, soja beans, either as an article of Japanese diet, or as agricultural manure or as food for cattle are indispensable.

"The cultivation of beans under the circumstances was developed from ancient times, and numerous varieties are most extensively cultivated while by its peculiar nature of root, it absolves nitrogen from air so that high priced nitrogenous manure may be dispensed with, and therefore the cultivation of beans like other agricultural products do not exhaust the productive power of the soil, but on the contrary, it operates favourably to improve the soil. As for rotation of crops of wheat, millets, corns and potatoes, beans are indispensable. Seeds are sown early in the beginning of May."

Tables show: (1) Output of soja beans in Japan, 1897-1906." For each year is given the area (in *chô*), the production (in *koku*) and the yield (in *koku per tan*) (1 *koku* = 4.962 bushels; 1 *tan* = 0.245 acres). The area increased from 435,605 *chô* in 1897 to a peak of 482,044 *chô* in 1898, then slowly fell to a low of 446,844 *chô* in 1904, then rose to 460,895 *chô* in 1906. Production increased from 3,100,973 *koku* in 1897 to a peak of 4,069,619 *koku* in 1901, then slowly dropped to 3,557,592 in 1906. The yield in 1897 was 0.712 *koku per tan*, rising to a peak of 0.830 in 1904. Hokkaido has the largest area (43,924 *chô*) and production (392,140 *koku*). The principal soja bean producing districts are Ibaraki (33,000 *chô*), Saitama (29,000 *chô*), Iwate (26,000 *chô*), Nagasaki (26,000 *chô*), Kumamoto (26,000 *chô*), Niigata (22,000 *chô*). There is no prefecture where the production does not exceed 10,000 *koku*.

(2) "As mentioned above, soja beans are used either boiled, baked or powdered or as material for *tofu* (bean curd), frozen *tofu, soy* and *miso* (bean-cheese), and particularly the latter two products besides meeting with domestic demands, are exported abroad in large quantities, as may be seen in the following table." This table shows amount and value (in *yen*) of miso and soy [sauce] exported

from Japan each year from 1903 to 1907, inclusive. Miso exports increased from 1,670,092 *kin* (1 *kin* = 1.322 lb) in 1903 to a peak of 5,199,957 *kin* in 1907 (a 3.1 fold increase in 4 years), while soy [sauce] exports increased from 1,974,119 *shô* (1 *shô* = 1.9 quarts) in 1903 to 4,403,851 *shô* in 1907 (a 2.2 fold increase). The total yen value of these two exports rose from 489,213 *yen* in 1903 to 1,354,517 *yen* in 1907 (a 2.8 fold increase). In American units: Miso exports increased from 2.20 million lb (worth \$347,647) in 1903 to a peak of 7.50 million lb (worth \$132,652) in 1905, dropping to 6.86 million lb (worth \$135,833) in 1907.

Shoyu exports increased from 5.92 million lb (worth \$204,959) in 1903 to 13.21 million lb (worth \$541,425) in 1907. Note that in 1907 shoyu exports are worth about 4 times as much as miso exports.

(3) Because of increasing exports, Japan now needs to import soja beans from abroad. This table (p. 227) shows the amount and value of soybeans imported by Japan for the years 1903-1907, inclusive. They rose from 146,971 tons (worth \$3.18 million) in 1903 to a peak of 193,479 tons (worth \$4.92 million) in 1905, dropping to 177,365 tons (worth \$4.79 million) in 1907. They are mostly imported from Manchuria and Korea. "While a greater portion of these imports is used as material for *soy and miso*, it is also used in making bean-cakes and is sown for obtaining green manure, or used as manure or for feeding cattle."

(4) This table (p. 228) shows the quantity and value of [soy] bean-cakes imported into Japan for the years 1903-1907, inclusive. The cake was used mostly for fertilizer. Cake imports rose from 216,198 tons (worth \$3.81 million and representing 57.8% of all fertilizers) in 1903 to 367,210 tons (worth \$8.71 million and representing 44.8% of all fertilizers) in 1907. (5) This table (p. 229) shows acreage and production (output) of [soy] beans in Formosa [today's Taiwan]. Acreage doubled in 3 years from 11,226 *kô* in 1901 to a peak of 22,641 *kô* [53,886 acres] in 1904, then decreased slightly to 21,220 *kô* in 1906. Note 1. 1 *kô* = 9.724 *tan*, and 1 *tan* = 0.245 acres. Therefore 1 *kô* = 2.38 acres.

Production in Taiwan increased more than 3-fold from 44,661 *koku* in 1901 to 135,271 *koku* in 1904, then decreased slightly to 100,803 *koku* in 1906. Note 2. Production of soja beans in Formosa in 1904 was only 3.6% as much as production of soja beans in Japan in 1904.

The next section, titled "Red-beans" (p. 229-30) gives similar detailed statistics on acreage, production, and yield for azuki beans in Japan. *Sarashi-an* (the powdered red bean) is made in Osaka, Tokyo, Niigata, and Aomori. A second table gives annual imports of red [azuki] beans to Japan from 1903 to 1907. They are imported mainly from China, Korea, and British India.

In Chapter 9, titled "Agricultural products in commerce," section 2 is on imports to Japan. A table (p. 433-34) gives imports of the following grains and seeds (in

quantity / piculs and value / yen) from 1903 to 1907: Italian millet, soja beans, red beans [azuki] (small white), and sesame seeds. Another table (p. 438) titled "Miscellaneous" includes imports of "bean's oil cake" for the same period. An explanation titled "Soja-beans" (p. 439) states: "Not only as foodstuffs, but also as a manure a large quantity of beans are consumed each year, as that from China and Korea a considerable amount is imported. Besides beans, bean-cakes are imported from China in large quantity." Imports of sesame seeds, rice, wheat and rape-seed are also discussed on the same page. In this same chapter, section 3 is on Exports and imports in Formosa. Soy is mentioned on pages 434, 439, 442, 448, 453-54. "Beans, Soja: The demand for soja beans in Formosa is enormous and as the Formosan product was not sufficient to meet the demand, a large amount is imported from abroad. Soja beans produced in Manchuria, and Chin-kiang [Chinkiang, Zhenjiang] are imported from China and Hongkong." "Oil, Beans [soybean oil]: This is principally produced in Manchuria and is brought here through China and Hongkong. Originally it was used as an illumination, but the demand has greatly increased as it is used in making cut tobacco" [to keep it moist]. Ground-nut oil is used for the same purpose (p. 453-54).

Note 3. This is the earliest document seen (Oct. 2003) concerning miso in international trade—exported from Japan; export statistics are also given. Note 4. The preface, by Chuzi [Chuji] Shimooka, explains that this book was compiled for the International Agricultural Association meeting to be held in Italy in the autumn. The compiler did not have time to explain all the terms [and units] adequately. Address: Tokyo, Japan.

406. Bloch, A. 1908. Le soja. Sa culture, sa composition, son emploi en médecine et dans l'alimentation [The soybean. Its culture, its composition, its use in medicine and in food]. *Annales d'Hygiène et de Médecine Coloniales* 11:85-122. [29 ref. Fre]

• **Summary:** This article is identical to that published by Bloch in 1907 in *Bulletin des Sciences Pharmacologiques* (Paris). Address: Pharmacist major 2nd class of the colonial troops. Doctor of Pharmacy.

407. Huang Shirong. 1908. Weituiju suibi [Random notes from the "plain flavor" studio]. China. Passage on soy reprinted in C.N. Li 1958 #349, p. 248-49. [Chi]

• **Summary:** Wade-Giles reference: *Wei T'ui Chü Sui Pi*, by Huang Shih-Jung. Qing dynasty. A revised edition of this book, edited by Huang's son, appeared in 1916 during the Republican period. This is a summary by Mr. Huang (in China) of a publication by Li Yu-ying—who was in France at the time.

The section titled "Soybeans efficacy and use" (*gongyong*) states: Mr. Li Yu-Ying recommends that China

establish an association / society for soybeans and soybean technology for Chinese manufacturing. Li wrote two articles: One, to promote the establishment of a society for soybeans, and the second to promote manufacture of soybean products in China using modern technology. It is most important to invent new methods of production and manufacture, which would have a great effect on the industry. These two, which contained 5,000 words, were published in a Chinese newspaper [probably in China] the 2nd month on the 6th, 7th, 8th, 9th, 10th, 11th, and 12th days. Note: The name of the newspaper is not given. Mr. Huang summarizes the content as follows:

The nutrients of the soybean benefit health, economics, and commercial production; it is worthy of future development. Its wider propagation will improve the fertility of the soil because the roots contain nodules which fix nitrogen to enrich the soil. Soybeans are a rich source of dairy products (milk content) and oil, so they are very nutritious. They can be used to make good substitutes for meat. They are rich in phosphorus and potassium, so they are healthful and strengthen the brain. Since they are lacking in starch, they are good for diabetic diets. Because they are a rich source of dairy products (milk content) and oil, they would be a good material for industrial exploitation. And its very inexpensive; it sells for only about one-fifth as much as legumes from other countries. When you compare the milk / protein content with that of meat, milk, or eggs, or with other legumes and cereal grains, it is at least 2-10 times higher.

The soybean is rich in phosphorus, which is equal to the efficacy of Western medical phosphorus. Other products: Whole soybeans (*douren*). Soybean noodles (*doumian*; wheat pasta enriched with soy); it is a substitute for wheat gluten (*mianjin*). Soybean oil (*douyou*). Soybean cake-defatted (*doubing*). Okara or residue from making soymilk (*douzha*; [mostly fed to animals]). Soymilk (*doujiang*). Spray-dried soymilk (*doujiangfen*). Canned soymilk (*guandoujiang*). Soured soymilk (*suandoujiang*; by lactic acid fermentation). Soybean extract (*doujing*). Tofu (*doufu*). Pressed tofu-sliced (*doufugan yupian*). Fermented tofu (*faxiao doufu*). Whey—from making tofu (*yujiang*). Soy sauce (*jiangyou*). Sweet wheat-flour jiang (*tiandoujiang*). Soy sprouts (*douyacai*). Soybean coffee (*douren jiafei*). (Translated by H.T. Huang, PhD, April 2003).

408. Nichibe Shinbun-sha (Nichi-Bei Shinbunsha). 1908. *Zaibei Nihonjin nenkan* [Japanese-American yearbook. No. 4]. 234 Turk St., San Francisco, California. 491 p., many unnumbered. Reprinted in 25 Oct. 2001 in Tokyo by Nihon Toshō Senta. Series: Nikkei Imin Shiryōshū. Dai 1-kai [Collected Documents on Japanese Emigration. No. 1]. [Jap; eng]

• **Summary:** This book is read and numbered from “back to front” compared with typical English books; it is mostly

(99%) in Japanese. There is an English-language title page.

The book is composed of: 4 unnumbered pages of front matter, 3 unnumbered leaves of black and white photos (two show before and after the San Francisco earthquake and fire) on glossy paper, 20 pages of ads and basic information, numbered using Japanese numbers (NUJN), of which the last four pages are the table of contents, 210 numbered pages which are the body of the book, 84 pages of ads NUJN, 6 unnumbered pages of index and ads, 95 pages of directory NUJN, 37 pages of ads and back matter NUJN.

The import tax on shoyu is either 40% or 4% (unclear, p. 48). There is one tofu shop near (but not in) Oakland, California (p. 180, lower right). There are three tofu shops in San Jose, one in Watsonville, one in Salinas, and a brewery [that may make shoyu and sake] in San Jose (p. 182).

The Directory shows Japanese companies making soyfoods in California and Nevada (Reno). Address: San Francisco, California.

409. **Product Name:** Miso, and Shoyu [soy sauce].

Manufacturer's Name: Sanyo Shokai. Renamed Sanyo Shoyu Jozo Gaisha by 1909.

Manufacturer's Address: 920 Hight St., Melrose (near Alameda), California.

Date of Introduction: 1908. January.

New Product-Documentation: Ad (¼ page) in *Nichibe Shinbun-sha*. 1908. *Zaibei Nihonjin Nenkan* [Japanese-American Yearbook]. Page 14 (Japanese numbers) middle block of ads. A maker of miso and shoyu {soy sauce} (*Miso shoyu seizō-gyō*).

Nichibe Shinbun-sha. 1909. *Nichi-Bei Nenkan* [Japanese-American Yearbook]. Directory entry p. 31. The company name is now given as Sanyo Shoyu Jozo Gaisha. Address: 920 Hight St., Melrose, California. The company no longer makes miso-only shoyu. Note: Melrose is on the mainland, just northeast of Alameda (an island). As of Jan. 2008 Melrose was part of central east Oakland, a city adjacent to Alameda.

410. Tsuda Shoten. 1908. Tsuda Shoten (Ad). In: *Nichibe Shinbun-sha*. 1908. *Zaibei Nihonjin Nenkan* [Japanese-American Yearbook]. p. 49, middle section of ads. [Jap; eng]

• **Summary:** Ad (half page). This company sells various goods including miso and shoyu. Address: 1020 Third St., Sacramento, California. Phone: Oak 1561.

411. Visser, M.W. de. 1908. The fox and the badger in Japanese folklore. *Transactions of the Asiatic Society of Japan* 36(1):1-159. See p. 126. [100+* ref]

• **Summary:** “The words and deeds of the persons so possessed are very strange. They ask, for example, for azuki-meshi (rice and red pea-beans mixed), tōfu-juice

(bean curd) and tai fish laid in miso (sauce made of wheat, beans and salt), and after having eaten very greedily the possessing fox demands through the mouth of the patient a piece of ground belonging to the family of the latter (in behalf of the fox keeper), menacing the life of the patient if it is refused.”

Contains a long discussion about “Inari, the fox-shaped spirit of rice” (p. 129+), but does not mention Inari-zushi. Address: PhD, Japan.

412. Watt, George. 1908. Commercial products of India. Being an abridgment of “The Dictionary of the Economic Products of India.” London: John Murray. viii + 1189 p. See p. 564-65. [15 soy ref]

• **Summary:** Since Watt’s *Dictionary of the Economic Products of India* has been out of print for some time, the Government of India asked him to write an updated 1-volume abridgement. He said that soybeans in India were first introduced from Indonesia. “The Soy Bean; in Indian vernaculars, *bhat*, *ram*, *gari-kulay*, *hendedisom horec*, *pond disom*, *an-ing-kiyo*, *tzu-dza*, *bhatnas*, *seta*, *musa*, *khajuwa*, etc.

“A sub-erect or creeping annual native of China, Cochin-China, Japan and Java, comparatively recently introduced into India, though recorded as acclimatised and even seen as an escape from cultivation. It might, in fact, be described as extensively cultivated, though more as a garden than a field crop; is especially prevalent in Eastern Bengal, Assam (Barpeta Sub-division), the Khasia hills, Manipur, the Naga hills and Burma. It is not infrequent in the plains of India proper, especially in Busti, Gorakhpur, Patna and Purnea, etc. In Bombay and Madras, however, the Soy Bean has apparently hardly passed the experimental stage.

“Cultivation.—Two chief varieties occur, one called white, the other black. On the plains it is generally grown by itself as a *kharif* (autumn) crop. The seeds are sown from June to September, and harvested from November to December... In Assam it is sown with *áhu* (autumn rice) in April and May. The *áhu* crop is removed in July and August, and its stubble acts as a support for the bean plants, which are ready for harvest in December and January.”

“It is eaten in India in the localities where it is cultivated, chiefly in the form of *dál* or *satú*. In Japan it is largely used as a sauce, cheese (*natto*) or paste, and in China an edible oil is obtained from the seed. If cut when the pods are fully formed it makes a most nutritious fodder, and the seed-cake, as already stated, is an extremely rich cattle food.”

Also discusses: Alfalfa (p. 778). Almonds (*Prunus amygdalus*, p. 905). Broad bean or Windsor bean (*Vicia faba*, p. 1106-07. “There are two distinct forms, the long-podded and the broad-podded, the latter originating the name ‘Broad’ or ‘Windsor bean’”). Chufa (*Cyperus*

esculentus, p. 465; also called Rush-nut, earth-almond, or tiger-nut). Coffee (p. 363-68, with an excellent history). Cowpeas (p. 1107-08). Lucerne or alfalfa (*Medicago sativa*, p. 778-79). Mung bean, *udid*, and *urud / urd* (*Phaseolus mungo* or *P. radiatus*, p. 880-82). Sea-weeds (Kelp, p. 50). Address: Kew Gardens, England; Formerly, Prof. of Botany, Calcutta Univ., Superintendent Indian Museum (Industrial Section) and reporter on economic products to the Government of India.

413. *Christian Science Monitor*. 1909. Want favorite food duty free. Jan. 1. p. 3.

• **Summary:** “Washington—Greeks, Japanese and Chinese now want to take a hand in framing the new tariff bill. The San Francisco Chinese chamber of commerce,... has submitted to the ways and means committee a brief asking that the duties be reduced on Chinese soy [sauce], rice, fish, meat, type and fire crackers.

“The Japanese association of America, with headquarters in San Francisco [California], makes a plea that mizo [sic, miso], a food, shoyu, a sauce, and greenhouse stock be placed on the free list, and that the tariff be reduced on rice, vegetables, and earthenware.”

414. *USDA Bureau of Plant Industry, Inventory*. 1909. Seeds and plants imported during the period from January 1 to March 31, 1908. Nos. 21732 to 22510. No. 14. 64 p. Jan. 9. Also titled *USDA Bureau of Plant Industry, Bulletin No. 137*.

• **Summary:** Soy bean introductions: *Glycine hispida* (Moench) Maxim. [Note the first use of this terminology in this publication.]

21754-21757. “From Paris, France. Purchased from Vilmorin-Andrieux & Co. Received January 3, 1908.

“21754. Yellow seeded.

“21755. *Ogemaw*. Extra early, brown seeded.

“21756. Black seeded.

“21757. Extra early, black seeded.”

21818. “From Paris, France. Purchased from Vilmorin-Andrieux & Co. Received January 17, 1908. *Ito San*. Called by the French, *Yellow Etampes*.

21825. “From Hokkaido, Japan. Presented by Mr. K. Hashimoto, Kuchchau Agricultural Society, Abutagun. Received January 14, 1908. *Amherst* (?). ‘Used in the manufacture of “soy,” “miso,” “tifu” [tofu], etc.’ (*Hashimoto*.)”

21830/21831. “From Hokkaido, Japan. Presented by the Yokohama Nursery Company, Yokohama, Japan. Received January 24, 1908.

“21830. *Butterball*. Japanese name *Akita*.

“21831. Japanese name *Rumoi*.”

21946. “From Buitenzorg, Java. Presented by Dr. M. Treub, director of the Department of Agriculture. Received February 11, 1908. ‘*Zwarte kadelee*’” [black soybeans].

21999. "Received through Mr. F.N. Meyer, agricultural explorer for this Department at the Plant Introduction Garden, Chico, Cal., February 12, 1908. From Boshan, Shantung, China. '(No. 799a, Sept. 18, 1907.) A rare variety of soy bean, sparsely grown near Boshan. Chinese name *Ta ha tau*. Used by the higher classes as a vegetable in soups.' (Meyer.)"

22311/22312. "From Shanghai, Kiangsu, China. Presented by Rev. J.M.W. Farnham, Chinese Tract Society. Received March 11, 1908.

"22311. Black. 'Similar to *Nuttall* but larger.' (Nielsen.)
"22312. Yellow."

22317-22322. "From Erfurt, Germany. Purchased from Haage & Schmidt [seedsmen]. Received March 16, 1908.

"22317. Probably *Butterball*.

"22318. '*Giant Yellow*.' Probably *Amherst*.

"22319. Brown.

"22320. *Samarow*. Like No. 17260.

"22321. Probably *Cloud*.

"22322. '*Early Black* from Podolia [Ukraine].' Probably *Buckshot*."

22333-22337. "Grown at Arlington Experimental Farm, Virginia, season of 1907. Received March 19, 1908.

"22333. *Baird*. 'This variety was mixed with *Brownie* when received from Pingyang [Pyongyang / P'yongyang], Korea. This mixture was given S.P.I. No. 6414. The two varieties were grown together under these numbers, 9417, 17256, and Agrost. No. 1542, respectively. The two varieties were separated in the 1907 seed from Arlington Farm, and *Baird* given the above new number, *Brownie* remaining as No. 17256.' (Nielsen.)

"22334. Flat black. 'Received from Mr. H.B. Derr, Agricultural Experiment Station, Champaign, Illinois. The original source of the seed is not known. It is quite similar in growth to *Nuttall*, but the seed is not the same shape, being flatter and larger.' (Nielsen.)

"22335. Yellow. 'Received from Mr. H.B. Derr, Agricultural Experiment Station, Champaign, Illinois, where it was grown as *Illinois Medium Yellow*. It is very similar to *Hollybrook*, and perhaps is the same, but appears different on account of having been grown farther north.' (Nielsen.)

"22336. *Guelph*. 'Received from Mr. H.B. Derr, Agricultural Experiment Station, Champaign, Illinois. Original seed was procured from the Agricultural Experiment Station, Wooster, Ohio.' (Nielsen.)

"22337. *Guelph*. 'Received from Mr. H.B. Derr, Agricultural Experiment Station, Champaign, Illinois. Original seed was procured from the Agricultural Experiment Station, Fayetteville, Arkansas' (Nielsen.)."

22379-22381. "From Canton, Kwangtung [province], China. Presented by Dr. J.M. Swan, Cooks Hospital. Received March 20, 1908.

"22379. Yellow.

"22380. Black.

"22381. Green mixed with yellow and a few brown."

22406/22407. "From Hongkong, China. Presented by Mr. S.T. Dunn, Botanical and Forestry Department. Received March 26, 1908. [Note: It is not clear whether or not they were ever cultivated in Hongkong. These two soybeans (#22406 and #22407, both black seeded) were later given the names "Hongkong" and "Nigra" respectively, and introduced to the USA in about 1910].

"22406. Yellow.

"22407. Black."

22411-22415. "From Naples, Italy. Purchased from Dammann & Co. Received March 25, 1908.

"22411. *Samarow*.

"22412. Black. 'Similar to *Cloud*.' (Nielsen.)

"22413. Brown.

"22414. Yellow. 'Similar to *Acme*.' (Nielsen.)

"22415. Giant yellow."

"*Glycine soja* Sieb. & Zucc." [Note the first mention of this species.] 22428. "Grown at Arlington Farm, Virginia, season of 1907, under C.V.P. No. 0474. Received March, 1908. 'Original seed presented by the Botanic Gardens, Tokyo, Japan. A near relative to the soy bean, but a spreading or decumbent plant, abundantly provided with large root nodules. Has considerable promise as a cover or green manure crop.' (Piper.)"

22498-22501. "From Hangchow, Chehkiang, China. Presented by Dr. D. Duncan Main, through Mr. J.M.W. Farnham, Shanghai, China. Received March 26, 1908.

"22498. Yellow. Similar to No. 18619.

"22499. Yellow.

"22500. Green. Similar to No. 17857.

"22501. Black."

22503-22507. "From Yokohama, Japan. Purchased from L. Boehmer & Co. Received March 31, 1908. The following seeds with Japanese names quoted; varietal descriptions by Mr. H.T. Nielsen:

"22503. '*Teppo Mame*.' Yellow, similar in appearance to *Amherst*, No. 17275.

"22504. '*Kaze Mame*.' Green.

"22505. '*Gogwatsu Mame*.' Yellow, similar to *Haberlandt*, No. 17271.

"22506. '*Maru Mame*.' Yellow.

"22507. '*Vieuri Lei*.' Green, similar to *Yosho*, No. 17262." Address: Washington, DC.

415. Holland, Edward B. 1909. Soy beans and soy bean oil. *Massachusetts Agric. Exp. Station, Annual Report* 21(Part II):111-19. Jan. 1909. [30 ref]

• **Summary:** Contents: Economic uses. The chemistry of soy bean meal. Table showing composition of Medium Green soy beans. Soy bean oil: Physical tests (tables show specific gravity, specific viscosity, refractive index, mean dispersion), chemical tests (tables show acid number, ether

number, Hehner number, insoluble acids, neutralization number, mean molecular weight, iodine number).

The oil was removed from the soy beans by the V.D. Anderson Company of Cleveland, Ohio, using torsional pressure. "An analysis of the resulting cake indicates that from 55 to 60 per cent. of the oil was removed. The oil was passed through a filter press, but was not refined otherwise. The oil was clear and of a dark amber color, with an odor similar to that of other vegetable oils." The author found the oil to have following physical constants: Specific gravity at 15°C 0.9206. Specific viscosity 8.43. Refractive index at 20°C 1.4749. Mean dispersion at 20°C 0.00938.

In chemical tests, the author found the following constants: Saponification (*Koettstorfer*) number 191.95. Acid number 1.27. Ether number 190.68. Iodine number 130.77. "According to the classification of Lewkowitsch, based on iodine number, soy bean oil is a semi-drying oil of the cotton-seed oil group."

Note 1. E.B. Holland is no relation to J.H. Holland of London, who wrote about soy in 1910.

Note 2. This is the earliest English-language document seen (Sept. 2006) with the term "soy bean oil" in the title.

Note 3. This is the 2nd earliest document seen (Sept. 2006) that uses the term "Refractive index" in connection with the soja bean, and the first that gives a value (1.4749 at 20°C).

Note 4. Values for the specific gravity and saponification number of soy bean oil, attributed to Shukoff in "correspondence with Dr. Lindsey," are the same as those published by Shukoff in *Chemische Revue ueber die Fett- und Harz-Industrie* (Hamburg, Germany) (Dec. 1901, p. 250-51). Address: M.Sc., Assoc. Chemist, 28 North Prospect St., Amherst, Massachusetts.

416. LeMaire, M.E. 1909. Nouvelles du Japon savant et industriel [New from Japan in science and industry]. *Bulletin de la Societe Franco-Japonaise de Paris* No. 15. p. 43-48. June. See p. 45-46.

• **Summary:** In the section titled Scientific publications from the University of Tokyo is a summary (p. 45-46) of an article titled "Notes on Japanese vegetable oils," by Tokuhei Kametaka, Article 4, Vol. 25 (Sept. 1908) of the *Journal of the College of Science, Imperial University of Tokyo*. On of the articles discussed is: "3° L'huile de soja, *Glycine hispida Maxim*, soja bean oil des Anglais, daizu-abura. On sait que le haricot de soja sert à préparer le miso, sauce qui entre dans la composition du *misoshiru* [miso soup], soupe au miso, plat de résistance des Japonais. Cette huile, d'un jaune clair, qui a trouvé des applications industrielles locales nombreuses, commence à être utilisée par les Européens. En 1907, le Japon en a exporté 700 tonnes, valant 20,4 livres sterling la tonne."

Note: This society was founded in 1909 by the government of Japan. Address: Ingenieur des arts et

manufactures.

417. Ruhrah, John. 1909. The soy bean in infant feeding; Preliminary report. *Archives of Pediatrics* 26:496-501. July. • **Summary:** This pioneering paper was read before the Twenty-first Annual Meeting of the American Pediatric Society, Lenox, Massachusetts, May 28, 1909. "The soy bean (*glycine hispida*), sometimes incorrectly called the soja bean, is an annual leguminous plant which originally grew in a wild state from Cochin China to the south of Japan and Java."

There follows a brief but accurate history of the soy bean. "In 1875 Professor Haberlandt began a series of investigations with this plant in Austro-Hungary, and in his work published in 1878 he urges the importance of the soy bean as a food both for man and animals. After his death, which occurred in 1878, very little notice was taken of the soy bean in Hungary and the prophecy that he made for its future failed."

"As early as 1829 Thomas Nuttall wrote an article in the *New England Farmer* concerning the bean as a valuable crop for this country. The Perry expedition to Japan also brought back soy beans, but until the last fifteen or twenty years the plant was known only as a curiosity."

"The plant is grown in America, but is used chiefly for the purpose of a forage crop and comparatively little reference has been made to its use as food for man." The plants "bear a remarkable number of beans and the flowers are self-pollinated, making the yield independent of insects. The bean may be easily grown in Maryland. I am indebted to three friends for experimenting with this plant in their gardens and obtaining good crops... At the present time there are seven varieties handled by seedsmen, and some twenty-two distinct varieties are known." The varieties Mammoth Yellow, Hollybrook, and Ito San have been used in infant feeding experiments. "The other varieties are the Guelph (green), the Samarow (green), the Ogemaw (brown), and the Buckshot (black). All of these latter may be grown in the north."

"I am indebted to Mr. Frank N. Meyer, agricultural explorer for the Department [U.S. Department of Agriculture], for information concerning the use of the beans in the East... The light-colored beans are eaten in soups and the pods are sometimes picked green, boiled, and served cold with a sprinkling of soy sauce. The green varieties are often pickled in brine and eaten moist or dried with meals as promoters of appetite." Also discusses soy sprouts, oil, natto, soy bean milk (which "has a composition nearly the same as that of cow's milk" as shown in a table), tofu, miso, yuba, shoyu, and roasted soybeans used as a substitute for coffee.

"The fact that the soy beans contain little or no starch suggested to Dujardin-Beaumont that they be used as a food for diabetics. The soy bean flour has been placed on the

American market, but was withdrawn owing to the fact that according to the manufacturers it contained 8 per cent. carbohydrate. It contains much less carbohydrate, however, than any of the other diabetic foods.”

“As regards the use of the beans in infant feeding it seemed to me that soy bean gruel or milk, either alone or with cow’s milk, might be of value in feeding several classes of cases, viz., of marasmus and malnutrition, as a substitute for milk in diarrhea, and in intestinal and stomach disorders, and in diabetes mellitus.”

Note 1. This is the earliest document seen (July 2008) that suggests the use of a soybean preparation as a milk substitute for infants.”

Note 2. This is the earliest document seen (Aug. 2003) concerning the actual feeding of soymilk to infants or children, or concerning a soy-based infant formula. The author was the world’s first pediatrician to use soybeans in infant feeding, and did the first U.S. studies with soyfoods and human nutrition.

Note 3. This is the earliest English-language document seen (Oct. 2003) that uses the term “substitute for milk” to refer to soymilk. Note 4. This is the earliest English-language document seen (Nov. 2002) that uses the word “malnutrition.”

The writer had hoped to conduct experiments and make a more complete clinical report but several misfortunes attended his efforts to secure the beans. “My first crop was eaten by rats, my second moulded in the pods owing to some unusually damp weather, and insects ate about two-thirds of my last crop. Fortunately, the beans may now be obtained from Messrs. T.W. Wood & Son, Richmond, Virginia.

“So far the gruel has been prepared by soaking the beans over night, stirring to remove the envelope surrounding the bean. Three times the amount of water is added to the beans and they are boiled until a smooth gruel results. This is strained if necessary [to make real soymilk]. This has the odor and taste of malt, but with the addition of a little salt is well taken, especially after the first bottle or two. The gruel is retained unusually well and seems to be easily digested. The stools are not more frequent than with other foods. The stools are light brown in color like those from malted milk. This soy bean gruel has nearly the same food value as milk and for certain children may need further dilution. About the same size feedings should be used as if milk were being given. Five percent sugar may be added to increase the fuel value.

“I have not used the beans in a sufficiently large number of cases nor over sufficient periods of time to justify any further statements at this time, but I do feel that properly used they will be a most valuable addition to the dietary of the sick infant. Grinding them to a bean meal would simplify matters very much, and, if success attends their use, a soy bean meal could easily be prepared.

“I hope to be able to make a second report at the next meeting and have called your attention to the bean in hope that other members may try them and report at the same time.”

Note 5. Pediatrician Herman F. Meyer (1960, p. x) published a long poem by Dr. John Ruhräh titled “A Simple Saga of Infant Feeding,” which described the history and present status of infant feeding. Meyer described Ruhräh as a “philosopher, teacher, poet, pediatricist [pediatrician] and able historian.”

Note 6. This is the earliest English-language document seen (Oct. 2001) that uses the term “soy bean flour.”

Note 7. This is the earliest document seen (Aug. 2008) that uses the term “self-pollinated” (or self-pollinating, etc., with or without the hyphen) in connection with soybeans. Address: M.D., Baltimore, Maryland.

418. Gordon, E.L.S. 1909. Report for the year 1908 on the trade and navigation of the port of Dairen (Dalny).

Diplomatic and Consular Reports, Annual Series (Foreign Office, Great Britain). No. 4372. 18 p. For the year 1908.

• **Summary:** The 1st map shows the “Kwantung Leased Territory” (Dairen consular district), a long peninsula including Dairen and Port Arthur, which are connected by the South Manchuria Railway. A 2nd map, “Sketch map of part of Manchuria,” shows the four three railways, plus major cities and towns, crops, and rivers: (1) South Manchuria Railway; (2) Chinese Eastern Railway; and (3) Chinese Imperial Railway.

Currency (p. 3): In ports other than Dairen, dealings with the Chinese are based on taels and copper cash, the amount of cash taken for each tael differing at each port. But “at Dairen, there are no taels or cash. The Chinese Imperial Maritime Customs of course make up their statistics in Haikwan taels, but the business here is all done in Yokohama Specie Bank Newchwang notes known as silver yen...” A table shows the value of Haikwan tael, gold yen, and silver yen in shillings and pence for 1907 and 1908.

Pages 3-4 state that “soya beans which come down from the north are made up in bags, each of which weighs from 185 to 200 lbs. avoirdupois. Bean cakes are reckoned by pieces, weighing nearly 60 lbs. apiece.” A table defines the following weights and measures: Chinese: *catty, picul, li, mow*. Japanese: *kin, ken (6 shaku), ri, tsubo, koku* (liquid and dry), 1 S.M.R. ton (2,000 lb).

The section titled “Possible industries” contains subsection III on “Bean cake and bean oil” (p. 6). A table gives the chemical composition of 3 samples of bean cake. “By the present method, using hand presses, the amount of oil extracted from the beans is about 8 per cent. At one mill in Dairen, which is fitted with hydraulic presses, nearly 10 per cent. can be obtained. The quantity of oil in the soya bean is from 16 to 17 per cent., and by improved processes

it should be possible to extract practically the whole of this, and still make from the fragments as good a quality of bean cake for fertilising purposes as is made now.”

The section titled “The South Manchuria Railway” states (p. 6-7): The work of broadening the main line of the South Manchuria Railway and its Fushun and Newchwang branches from the 3 feet 6 inches gauge to the standard gauge of 4 feet 8½ inches was completed by the end of April, 1908. A new and improved system of trains was introduced, and a revision of fares and traffic rates, in most cases involving a reduction, has been effected. As a result the complaints that were so rife during 1907 are no longer heard, and both traders and passengers seem generally satisfied with the treatment accorded to them. In October express trains composed of Pullman dining and sleeping cars commenced to run between Dairen and Changchun, the northern terminus, twice a week, covering the distance of 437½ miles in 21 hours. This time is to be shortened during 1909 to 18 hours, and no doubt further accelerations will follow and the express run oftener.

“With the completion of the reconstruction of the main line, the work of doubling the tracks between Dairen and Suchiatun, a distance of 238 miles, was commenced, and is to be finished in the autumn of 1909.”

The section titled “Exports” contains long subsections on [Soya] “Beans” and Bean cake” (p. 10-13). In the first subsection we read: “Towards the end of 1908 was commenced a trade in beans with the United Kingdom and Europe, which promises to have a great effect on this part of China, and, in view of the great possibilities of this trade, the following, taken from a report which appeared in the local newspapers some little time ago, may prove of interest.”

There follows the full-text of a 3-page article on production and exports of soya beans in 1907 and 1908.

The subsection on “Bean cake” states: “In 1907 there were at Dairen two large Japanese mills, in one of which steam is used as the motive power while in the other electricity has been adopted, and a few Chinese mills where the old native method has been retained. During 1908 some 17 Chinese factories have been added, and more are in contemplation. This increase is likely to be sustained, though possibly not in the same proportion. A better price can be obtained for bean cakes made here than for those brought down from the interior, as the latter are apt to get damaged in the course of transportation, and the demand for bean cake as manure in other countries is steadily increasing.”

Annex 1 (p. 14) gives the value of imports to Dairen during 1907 and 1908. In 1908 the value of soy [sauce] was £27,431 and of miso was £5,422.

Annex 2 (p. 16) gives the value (in British pounds sterling) of exports from Dairen during 1907 and 1908. [Soy] Beans: £658,135 / 1,000,948. Bean cake: £488,997 /

865,480. Bean oil:—/ £27,284. Address: Mr., Acting Vice-Consul [for Great Britain to Japan].

419. Imperial Hygienic Laboratories. 1909. Inshoku-butsumarabini shikô-hin bunseki-hyô [Analytical tables of food and luxury items]. *Eisei Shikenjo Hokoku (Bulletin of the Imperial Hygienic Sciences)* No. 10. p. 1-78. Miso, see p. 27-28. Shoyu, see p. 28-28. Soymilk, see p. 39-45. [Jap] • **Summary:** Gives a detailed analysis of the nutritional composition of these basic foods, including analyses of various well-known brands, which are clearly specified. The number of products analyzed are: Miso 30 products, shoyu 122, soy nugget Chiang (Shoyu shisho) 4, shoyu moromi 2, shoyu presscake (kasu) 1, Thick (noko) shoyu 11, shoyu second generation products and imitation products 16, soymilk (containing only soybeans) 6, other soymilk products 89. Address: Eisei Shikensho (National Institute of Hygienic Science), Tamagawayoga-machi, Setagaya-ku, Tokyo, Japan (in 1962).

420. Carson, John M. 1909. Soya bean and products. *Special Consular Report (U.S. Bureau of Manufactures, Department of Commerce and Labor)* No. 41. Part 5. 35 p. Erroneously numbered Special Consular Reports, Vol. XL. • **Summary:** Contents: Introduction. I. Countries of production. China: Newchang (Varieties of beans and amount produced {in centals [hundredweights; 1 cental = 112 pounds]}, methods of cultivating and harvesting, prices and exports, shipments to Europe—use by natives), Dalny (Manufacture of bean cake and oil, preparing the cake, expressing the oil and wages paid, freight charges to Dalny, exports, stock on hand, and prices), Chefoo (Beans imported for cake manufacture, quantity and value of output, bean vermicelli made by a peculiar process [from the small green bean lü tou {mung bean}], preparation of beans, drying of product and prices [for vermicelli]), Shanghai (Extent of export trade in beans), Shantung (manufacture of bean oil and cake, harvesting and pressing, shipping and prices), Swatow, Tientsin (Exports of raw beans, shipments of bean cake, extent of trade at Tientsin). Tables (p. 5) show prices and exports of soya beans, bean cake and bean oil at Newchang for the years 1905-1908. Japan: Cost of production and prices (of soya beans, quite detailed), imports of beans and cakes, use of the bean as food (shoyu, miso, tofu, koya-tofu, natto, flour), Kobe (Beans as human food {eaten boiled with a little soy [sauce], “made into bean curd, and a kind of sauce made of wheat, beans, and salt”}—small exports {“The total exports of beans, pease, and pulse [incl. soy] in 1908 were valued at \$25,971, of which about \$24,000 worth went to Hawaii, the United States, and Canada for use by the Japanese resident in those countries as an article of food”}), manufacture of cake), Nagasaki (Production of beans, imports of beans—market prices). Shipments from Vladivostok * [Russia, of

soybeans probably grown in Manchuria] (Fluctuations in prices, shipments during present season, immense shipments planned next season (by Mitsui)).

“It is the intention of Mitsui Bussan Kaisha, the largest exporter from this port, to ship about 200,000 tons of beans via Vladivostok during 1909 and about double that quantity via Dalny. Many large contracts have been made for next season, and from present indications a strong effort will be made against the control of Mitsui Bussan Kaisha as the Chinese are making arrangements to deal direct with the European market without the aid of the Japanese” (p. 18).

Tables show: The quantities and value of soya beans, soya-bean cake, and bean oil imported into Japan during the year 1908 (p. 15). The soya bean harvests (in bushels) reported in various Japanese districts (p. 16).

II. Markets. Denmark: Experimental imports made, views of an importer. France: High duties prevent importation of soya beans, soya-bean flour bread used by diabetics, unknown in Calais district. Germany: Danger of feeding cattle on soya-bean products, oil value—prices at Hamburg, comparative food value of the bean. Italy: Beans imported and cultivated in limited quantities, prices of soya products—American cotton-seed oil, not imported into Catania, home products supply Piedmont district. Netherlands: A great future for the soya-bean trade predicted, prices of the bean and bean cake, soya cake as cattle feed, manufacture of soya-bean products begun, English soya-bean cake defective. Norway: Imports of soya-bean meal and cotton-seed meal. Russia: Beans and products unsatisfactory as feeding stuffs. Spain: Soya bean unknown in Valencia district [They are neither cultivated nor imported in this district]. Straits Settlements [Singapore and Malaya]. Sweden: Soya-bean products introduced through England. Comparative value of cattle feed [work by Nils Hansson of Sweden], comparative prices of feed stuffs. Turkey. England: Liverpool (Conversion of the soya bean into cake and meal), Plymouth (Soya cake and meal extensively consumed), Southampton (The bean appreciated as a fattener and as a dairy ration, the soya bean as human food [for use in diabetic diets]). Ireland: Chinese bean products are favorably received, soya bean introduced in Belfast, small imports at Cork. Scotland: Statistics as to use in Dunfermline not available, test of feeding value of soya cake [by Prof. Douglas A. Gilchrist], Edinburgh mills making experiments (based on 1909 report 1909 of U.S. Consul Rufus Fleming from Edinburgh).

III. Competitive American exports. Tables (p. 35) show exports for 1907, 1908, and 1909 of cotton-seed meal, cotton-seed oil, and cottolene, lardine [not defined: presumably shortening made from cottonseed oil], etc. to major countries, especially in Europe.

The Introduction notes: “In compliance with requests from manufacturers of cotton-seed products in the United States, who desired that an investigation be made of the

production and use of the soya bean and its manufacturers in the Far East and of the extent to which they compete with American cotton-seed products in the European markets, the reports following have been submitted by consular officers in the various countries concerned...

“The reports of the consular officers have been placed in two groups, the first having to do with the countries that produce the soya bean and the second with the countries that are sought as markets. Statistics as to the imports of soya-bean products in many European countries were not available at the time the reports were submitted, but inasmuch as the prices quoted were generally lower than for other seed products, emphasis has been laid on the relative merits of the two classes of goods as shown by experiments and analyses in these countries. These manufacturers will have to work in meeting this new competition.”

Note 1. This is the earliest document seen (Dec. 2007) concerning soybean products (oil or meal) in Turkey, Denmark, Ireland, the Middle East, or Sweden (one of two documents); soybeans as such have not yet been reported in any of these countries. This document contains the earliest date seen for soybean products in the Middle East or Turkey (1909).

Note 2. This is the earliest English-language document seen (Oct. 2001) that uses the term “soya-bean flour.” Address: Chief of Dep.

421. Carson, John M. 1909. Soya bean and products: Japan (Document part). *Special Consular Report (U.S. Bureau of Manufactures, Department of Commerce and Labor)* No. 41. Part 5. p. 13-16. Erroneously numbered Special Consular Reports, Vol. XL.

• **Summary:** Vice-Consul-General E.G. Babbitt of Yokohama writes: “The soya bean, or soja bean, as it is known here (Common Japanese name ‘daidzu’ [daizu]), is cultivated throughout the Empire of Japan. The total area of cultivation is in the neighborhood of 1,200,000 acres, or about 3.8 per cent of the total area devoted to the cultivation of rice and other cereals and grains. The soya bean is often cultivated, not in fields by itself, but in rows along the edges of rice or wheat fields. These edges are, as a rule, very soft, for they have been previously plowed, and little labor is required in planting... In harvesting the plants are uprooted, and, after being dried in the sun for several days, flails are used to separate the beans from the pods. The flails are of a very primitive type, with bamboo handle and of light weight. Female and child labor is invariably employed in flailing.

“The kinds of fertilizers used differ by districts. In the prefecture of Miyagi, for example, straw ashes and superphosphate of lime are commonly employed, while in the prefecture of Akita wood ashes, superphosphate of lime, and horse dung are used.”

The average yield of soybeans in Japan over the past 10 years is 15.30 bushels per acre. For the year 1907 the highest yield is from Ishikawa prefecture, 21.62 bushels/acre, whereas the lowest yield is from Okinawa prefecture (Loochoo Islands, south of Kiushu), 8.48 bushels/acre. During 1908 huge amounts of soya beans (3.3 million piculs; 1 picul = 132.277 pounds weight) were imported to Japan from China, Kwantung, and Korea, with small amounts coming from Asiatic Russia. Large amounts of soya-bean cake (7.760 million piculs) were imported from China and Kwantung, with small amounts coming from Asiatic Russia and none from Korea. "The total imports of bean oil in 1908 amounted to only 49,993 pounds, valued at \$1,325."

"The soya bean is one of the most important articles of food in Japan. The beans are cooked in various ways, while in brewing soy (shoyu), in the manufacture of miso (pea or bean cheese), tofu (bean curd), koya-tofu (frozen bean curd), and natto (steamed beans) they are the chief ingredient. They are also manufactured into flour and make up the principal part of many Japanese sweetmeats. All these foodstuffs are daily used in Japanese homes.

"To a limited extent soya beans are used as horse or cattle food, being sometimes boiled and mixed with straw, barley, bran, etc."

The vice consul of Kobe states that in 1908 Japan produced 18,812,228 bushels of soya beans. Small amounts are exported "to Hawaii, the United States and Canada for use by the Japanese resident in those countries as an article of food." Three factories in the Kobe district make bean cake, largely from imported, lower-cost soya beans. "The beans are first crushed flat, then put into a big container and steamed, after which they are put into a steam press to extract the oil and to be made into cakes. The cakes come in circular pieces, a yard in diameter and an inch thick, each weighing about 50 pounds. The oil is used for lubricating machinery. The cake is used only as a fertilizer and is not fed to animals as it causes their hair to fall off."

Note 1. This is the earliest document seen stating that soya bean oil can be used as a lubricant.

Note 2. This is the earliest English-language document seen (Feb. 2004) that uses the term "koya-tofu" (or "koya-dofu" or "kôya-dôfu") to refer to dried-frozen tofu. Address: Chief of Dep.

422. Cornet, Paul. 1909. *Le régime alimentaire des malades: Considérations pratiques sur les aliments et les boissons diététiques et sur l'hygiène de l'alimentation* [The dietary regimen for the sick: Practical considerations on dietetic foods and drinks and on the hygiene of feeding]. Paris: G. Steinheil, Éditeur. 484 p. No index. 23 cm. [144* ref. Fre]

• **Summary:** In Part III, "Foods drawn from the vegetable kingdom," Chapter 20 titled "Starchy vegetables" discusses

various fruits, grains, and legumes. The section on "Soya" (p. 269-70) gives the name of the soybean in various countries (Japan, Annam, and China) and notes that the seeds can be used to make shoyu, miso, and tofu—which are widely appreciated.

"Dietetic uses: Without having recourse to these exotic preparations, the nutritional value of soybeans is not used enough in our country. Soy bread is only used in anti-diabetic diets*, whereas one could prepare a pap and a drink (*boisson*, [soymilk]) no less precious, as well as extracts [soy sauce] which could be substituted for meat extracts." Footnote: *Soya is well suited for diabetics, for the seed contains only 3% starch plus 16% oil and 27% protein.

In Part V, "The regimens," Chapter 30 titled "General solid regimens" has two parts: The first, the "Vegetarian regimen" (p. 341-55) has the following contents: Indications for the vegetarian regimen. Application of the vegetarian cure: Absolute [vegan foods plus water], mitigated (lacto-ovo vegetarian), total vegetarian diet (*régime total*) throughout the seasons (incl. dry legumes such as soybeans, peanuts, etc.), culinary preparations. Vegetal calendar (*Calendrier végétal*): soups, main dishes, and desserts for each month of the year. Address: Dr., Professeur at the municipal schools of the infirmaries of the Hospitals of Paris (aux Ecoles municipales d'Infirmières des Hôpitaux de Paris).

423. *Hawaii Agric. Exp. Station, Annual Report. 1909.* Soy beans. p. 83-85. For the year 1908.

• **Summary:** "The soy bean possesses many advantages as a green manuring and rotation crop. Early in the present year, three varieties of soy beans were obtained through the Bureau of Plant Industry. These were designated as Nos. 20797, 20798, and 21080... Seed of two other varieties were donated by the Hawaiian Yamajo Soy Company of Honolulu. One of these, a green seeded type, has been grown in the Kona district of Hawaii for some years; the other, a yellow seeded variety, was imported direct from Japan. The seed of both these varieties is used in the manufacture of the Japanese food product, 'Miso,' and other preparations."

All the varieties were sown on March 12. Variety No. 21080 yielded 600 lb of shelled beans per acre; the yellow seeded variety imported from Japan yielded 800 lb, and the Kona seed yielded 1,060 lb. "The average price in the Honolulu market is \$3 per hundred pounds. About 500 tons of the beans are imported from Japan annually, and the demand is said to be on the increase. It would appear that this could be made a profitable crop for the small farmer."

Photos show: A man standing in a plat of soy beans in Hawaii, with palm, banana, and other tropical trees in the background. Three sets of dwarf soy bean plants with roots; their soy beans are used in making miso and other Japanese food products.

Note: In 1898 Hawaii was annexed as a U.S. Territory.

424. Hokubei Boeki K.K. 1909. North American Mercantile Co. (Ad). In: Nichibeï Shinbun-sha. 1909. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*. No. 6]. p. A-1. [Jap]
 • **Summary:** Ad (full page). This company imports various goods including white rice, sake, shoyu, and miso. Illustrations show: (1) Two sacks of “Japan Rice—100 pounds.” (2) Two kegs of sake tied with traditional rice-straw ropes. Address: 318-320 Front St., San Francisco, California.

425. Iwakami Gomei-gaisha Shiten. 1909. Iwakami & Co. (Ad). In: Nichibeï Shinbun-sha. 1909. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*. No. 6]. Unnumbered page. [Jap]
 • **Summary:** Ad (full page). The company name is written across the top of this ad in English. This Japanese company has its main office in Yokohama, Japan, with branch offices (*shiten*) in Osaka, Hawaii, and San Francisco, California. It exports shoyu, miso, and other goods from Japan. Address: Yokohama, Japan.

426. Lewkowitsch, Julius. 1909. Chemical technology and analysis of oils, fats, and waxes. 4th ed. Entirely rewritten and enlarged. 3 vols. London: Macmillan and Co., Ltd. See vol. II, p. 122-24. [7 ref]
 • **Summary:** The section titled “Soja bean oil (Soy-bean oil, Bean oil, Chinese bean oil)” (Vol. II, p. 122-24) gives details about the soja bean, which is indigenous to China, Manchuria, Korea, Japan, Formosa, and Indo-China. The soja bean industry is one of the most important in Manchuria and Japan. In Manchuria, the expressed meal is made into bean cakes (*Téou-fou-tcha*) which are exported in large numbers. The Japanese make shoyu and miso from soja beans. “Efforts have been made to ship soja beans to Europe, but on account of the deterioration which they undergo on the long voyage, as also on account of the difficulty of disposing of the cakes, attempts in this direction have been abandoned.” Two tables give physical and chemical characteristics based on the investigations of: (1) Morawski and Stingl; (2) De Negri and Fabris; (3) Shukoff (from seed grown in an experimental station in South Russia); (4) Lane (who found 80.26% of liquid fatty acids).

Vol. II also discusses many other major and minor oils including: Linseed oil (p. 39-60), hemp seed oil (p. 76-77), sesamé oil (beniseed oil, gingelli oil, teal oil, p. 167-79), almond oil (p. 233-40), and arachis oil (peanut oil, earthnut oil, ground nut oil, p. 244).

Julius Lewkowitsch lived 1857-1913. Address: Ph.D., M.A., F.I.C., Consulting and analytical chemist, and chemical engineer, examiner in “soap manufacture” and in “fats and oils” to the City and Guilds of London Inst.

427. Maurel, Edouard César Emile. 1909. *Traité de l'alimentation et de la nutrition à l'état normal et pathologique*. Vol. 3 [Treatise on food and nutrition in normal and diseased conditions. Vol. 3]. Paris: O. Doin, Éditeur. xii + 685 p. Index (in vol. 4). 25 cm. [Fre]
 • **Summary:** The last entry in the section on “Legumes,” titled “Soy peas or beans” (*Pois ou fèves de Soja / Soya*), states: In order to be complete, to the preceding dried legumes I add the soybean, used here only as a therapeutic agent, but whose consumption in China and especially in Japan is considerable.

Its use in food is, moreover, completely justified by its great nutritive value. Here are some analyses of its nutritional composition: A table (p. 495) gives 6 analyses by three authors (each of whom cites other researchers) as follows: Balland (Gautier): maximum, minimum, mean. König (Siderski): black or yellow soybeans. König (Siderski): soy flour.

As you see, despite their great nutritive value, all the other legumes remain below that of the soybean. It contains more than 30% protein and 400 calories per 100 gm. It must be added that no other legume is as rich in minerals, for soy always contains at least 4%.

This legume, known in Japan by the name of *daidzou*, can be made into a cheese, tofu (*tôfou*), and above all the national sauce, shoyu (*shôyou*) and miso. These three substances result from fermentation, but under different conditions.

Japanese miso is a venerable food; it's the *tao-tzung* of the Chinese. It is made of crushed soybeans, boiled and mixed with rice or wheat koji, then submitted to fermentation. Miso consumption in Japan is 30 million kg.

Tofu is also used frequently but less than the preceding [miso], and much less than soy sauce which constitutes the universal seasoning. The consumption of this last would be, in fact, 5.5 liters per inhabitant.

Discussed in this section are: Dry beans (*haricots secs*; [*Phaseolus vulgaris*]), lentils, peas or round peas (*pois ronds* [*Pisum sativum*]), square peas (*pois carrés*; probably winged beans [*Psophocarpus tetragonolobus*], or flat pea / Lathyrus pea / chickly vetch [*Lathyrus sativus*], or *Pisum sativum medullare*), chickpeas (*pois chiches*), and dry [broad] beans (*fèves sèches*; [probably *Vicia faba*], broad beans). Address: M.D., principal physician for the Naval Reserves, Prof. at the Faculty of Medicine, Toulouse (Médecin principal de réserve de la Marine).

428. Murai Nishikawa Shokai. 1909. Murai & Nishikawa: Importers & com. merchts. [commercial merchants] (Ad). In: Nichibeï Shinbun-sha. 1909. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*. No. 6]. Unnumbered page near center of book. [Jap]

• **Summary:** Ad (full page). The top ¼ of this ad is in English. This company imports various goods including white rice, sake, shoyu, and miso. Cable address: “Muranisu” San Francisco. Code used: A. B. C. 5th Ed. Western Union. Address: 2001 Pine St., San Francisco, California. Phone: West 5407.

429. Nichibei Shinbun-sha (Nichi-Bei Shinbunsha). 1909. Nichi-Bei nenkan [Japanese-American yearbook. No. 5]. 650 Ellis St., San Francisco, California. 605 p. Reprinted in 2001-02 in Tokyo by Nihon Tosho Senta. Series: Nikkei Imin Shiryôshû. Dai 5-kai [Collected Documents on Japanese Emigration. No. 5]. [Jap; eng]

• **Summary:** This book is read and numbered from “back to front” compared with typical English books; it is mostly (99%) in Japanese. The English-language title page reads: *The Japanese American Year Book*.

The book is divided into 17 parts, each numbered separately. Contents: (1) Front matter (5 p.) (2) Table of contents (3 p.). (3) Maps (2 p.): Map of the United States. Map of California (1 p. each, in Japanese). (4) Black and white photos on 6 unnumbered pages (single sided). (5) Advertisements (A-1 to A-32). (6) Front part (p. 1-168), including general information about America, Japanese in America, U.S. and agricultural census data, etc. (7) Ads from San Francisco printers (2 p.). Appendixes: (8) Appendix 1: Table of contents (2 p.) (9) Appendix 1. Japanese agricultural workers in the various states (p. 1-60). (10) Ads (p. B-1 to B-96). (11) Appendix 2 table of contents (2 p.). (12) Ads (3 p.). (13) Appendix 2. Japanese living in America, alphabetically by state, and within each state by city (p. 1-148). (14) Ads (2 p.). (15) Ads on numbered pages (C-1 to C-66). (16) California ads (p. C-1 to C-42). (17) Publication data / Copyright page (1 p.).

Basic information about how this book was compiled and the survey conducted is given on pages 60-66, 140-41, and on the title page of Appendix 1 of this year book. Pages 60-66 show various existing government registration forms that Japanese are required to fill out, such as birth, marriage, death, and divorce certificates, employment / occupation, agricultural details (employer, land use, nature of relationship with employer, etc.), and visa.

The tariff (import duty) on shoyu and miso from Japan is 40% for each (p. 32).

The value of the 1900 soybean crop in the United States is \$7,634,262 and the value in California is \$1,022,586 (p. 69). Note: This is the earliest document seen (March 2009) that gives soybean production or area statistics for either the USA or California—much earlier than any U.S. Dept. of Agriculture statistics. Unfortunately, the source of these statistics is not given. During the period 1900 and 1909 many Japanese were farming land in California, and there was a significant number of soyfoods manufacturers in California and, more broadly, west of the Rocky Mountains.

Therefore it we should not be surprised to learn that these farmers were growing soybeans in California, either for use as edamamé (green vegetable soybeans in the pods) or for sale as whole dry soybeans to soyfoods makers.

Value of selected imports from Japan to the USA in 1906: Miso—Imported to the mainland \$55,648. To Hawaii \$43,108. Total \$98,756. Shoyu [soy sauce]—Imported to the mainland \$241,345. To Hawaii \$211,265. Total \$452,610 (p. 119).

Retail prices of Japanese foods in San Francisco (on 1 Nov. 1908): Amazake [cup] for 15 cents (100 cents apparently = \$1.00). Kikkoman shoyu: 1 cho for 300 cents. Yamasa shoyu: 1 cho for 280 cents. Miso: 1 cho for 180 cents. Tai [sea bream] miso: 1 piece (*ko*) for 10 cents. Note: A *cho* is an undefined, vague unit of Japanese measurement. A photo shows the inside of a Japanese retail store (p. 120). Note: The meaning of “1 cho” is unclear.

In 1908 the Japanese population in the United States totaled 103,630, including 93,149 men (89.9%), 6,379 women, and 2,100 male children, and 2,010 female children. Six pages of tables give the Japanese populations of different U.S. states and cities.

The directory (p. 5) gives a listing of sake and shoyu sellers in San Francisco: Hokubei Boeki Kaisha, 318 Front St. Tel. [Phone] Kearny 451. McKendry Shosha, 149 California St. Tel. Kearny 2970. Iwagami Shokai, 441 Commercial St. Tel. 2447. Kagawa Soko Shiten, 41 Commercial St. Tel. 1263. Ichida Shoten, 1968 Bush St. Tel. West 1688. Murai Ishikawa Shokai, 2001 Pine St. Tel. West 5407. Tanaka Kyodai Shokai, 1609 Gough St. Tel. West 6615.

The Directory shows Japanese companies making soyfoods in California, Colorado, Nevada, New York, Oregon, Utah, and Washington. Address: San Francisco, California.

430. Saito, Kendo. 1909. Tôyô-san yûyô hakkôkin [Useful fermentation microorganisms from East Asia]. Tokyo: Hakubunkan. 200 p. See p. 14-17, 108-09, 122-25, 144-47, 162-64. [Jap]

• **Summary:** This book contains a little information about *Rhizopus oligosporus*, onchom, and miso or *Tao-Tjung* [a term, and perhaps a product, between *doujiang* and *tao-tjo*, Indonesian-style miso]. Address: Botanical Inst., Tokyo Univ., Japan.

431. Wilcox, E.V. 1909. Summary of investigations: Miscellaneous crops. *Hawaii Agric. Exp. Station, Annual Report*. p. 9-16. For the year 1908. See p. 16.

• **Summary:** “Several varieties of soy beans have been grown for use as fodder, green manuring, and human food, particularly in the Japanese product, Miso. The yields have been very encouraging. About 500 tons of soy beans are annually imported from Japan, and the demand is

increasing. The beans are sold in Honolulu for \$3 per 100 pounds. The market can easily be supplied by home production.

“Peanuts have yielded gratifying results in various localities. On the trial grounds of the station a number of varieties have been grown, including Spanish, Bunch Jumbo, Running Jumbo, and Virginia Running.”

Note: In 1898 Hawaii was annexed as a U.S. Territory. Address: Special agent in charge.

432. Yukawa, Genyô. 1909. Ueber die absolut vegetarische Ernahrung japanischer Bonzen [The strict vegetarian (vegan) diet of Japanese Buddhist monks]. *Archiv fuer Verdauungs-Krankheiten* 15:471-524. [5 ref. Ger]

• **Summary:** The author studied a group of 12 strict vegetarian [vegan] Buddhist monks in Japan and found them to be in good health. He estimated that their daily diets, if evaluated for a 150-pound male, supplied 3,575 calories and 113 gm of protein. The older men ate somewhat less. The diet consisted chiefly of rice and barley, with soy products, vegetables, and rape seed oil.

A table (p. 478-79) summarizes the author's research on the protein content of vegetarian meals by previous Japanese researchers. These meals contained various soy products: Miso (*Soybohnennmus*), soy sauce (*Soy*), and tofu. On pages 489-91 are definitions of miso soup, miso, soy sauce (*Soy*) koji, grilled tofu (*Yakidofu*), cooked soybeans (without the hulls removed), azuki bean paste, and mochi, which are served at Nanshuji temple. A table (p. 497-98) gives the nutritional composition of these and other foods. Amounts served at each meal are shown on p. 501, 514, 522, including daikon pickled in miso. The terms “Makrobiotik” and “Makrobier” are used. Address: Aus der Privatklinik fuer Magen- und Darmkrankheiten von Dr. Yukawa in Osaka, Japan.

433. Japan, Bureau of Agriculture (Norinsho, Nomukyoku), Dep. of Agriculture and Commerce. 1910. Outlines of agriculture in Japan. Tokyo: Agricultural Bureau, Department of Agriculture and Commerce. 132 p. March. Illust. No index. 23 cm. [Eng]

• **Summary:** This book was compiled to acquaint foreigners with agriculture in Japan. Company name with diacritics is: Nôrinshô, Nômukyoku. A map near the front shows Japan and its empire (incl. Korea, Formosa, Kwantung, Karafuto, and the Kurile Islands, with an inset pie chart showing the value of Japan's agricultural products). Oval photos show Japan's six top agricultural officials. A full-page table shows the moneys, measures and weights of Japan with English equivalents. Contents of the first part of the book: Introduction: Geographical location, area, population, topographical position, climate. 1. General remarks. 2. Condition of farmers. 3. Condition of agricultural land.

The section titled “Upland fields” (p. 18) states: “Upland fields are those portions of land being located in high and dry places which by wanting means of irrigation could not be converted into paddy fields. The utilization of these fields is commonly made by the rotation system and crops are raised twice a year. The commonest instance is that barely, naked barely, and wheat are raised as the first crop in winter whereas soja beans, sweet potatoes and millets are raised during the summer as the second crop.” The profits from upland fields are generally smaller than from lowland / paddy fields. The average yield of soja beans over the past 10 years is given in Japanese units (p. 19).

In Japan only cows and horses are kept as work animals. In 1907 Japan had 1,008,922 cows and 2,204,031 horses. But they were used more for their manure than for plowing.

A table (p. 28) shows the value (in yen) of the principal commercial fertilizers in Japan from 1905 to 1907. “Soja bean cakes” (a key source of nitrogen) is by far the largest, averaging 12.9 million yen for these three years, followed by superphosphate of lime, mixed manure, rape-seed oil cakes, herring cakes, bone dust, and cotton-seed oil cakes. Note 1. This is the earliest English-language document seen (Nov. 2005) that uses the term “cotton-seed oil cakes” (plural or singular) to refer to cotton-seed cakes.

A table (p. 37) gives the cultivated area (in 1,000 *cho*) of major Japanese crops in 1887, 1892, 1897, 1902, and 1907. In 1907 rice had by far the largest area (2,906), followed by naked barley (694), barley (658), soja bean (471), wheat (444), mulberry tree (390), sweet potato (288), Indian millet (202), rape seed (143), small red bean ([azuki], 135). Soja bean area remained almost unchanged between 1887 (466) and 1907 (471).

A table (p. 39) gives average yield (in *koku/tan*) of the same major Japanese crops for the same years shown in the previous table. Yield of soja beans rose from 0.698 in 1887 to 0.777 in 1907. Since 1 *koku* = 4.963 bushels and 1 *tan* = 0.245 acres, the 1907 yield is 15.74 bushels/acre.

A table (p. 40) gives the production (in 10,000 *koku*) of the same major Japanese crops for the same years shown in the previous table. Production of soja beans rose from 325 in 1887 to 366 in 1907. Since 1 *koku* = 4.963 bushels, and 10,000 *koku* = 49,630 bushels, then 366 *koku* is 18.164 million bushels. The next table (p. 42) shows the value (in yen) of each of these agricultural products in 1905-07, and a table (p. 46) compares the cultivated area of each of these crops with rice; soja beans are 16.2% of rice.

In the section on “Food crops” (p. 47+) is a detailed discussion of each. Concerning “Soja bean” (p. 50-51) we read: “The use of this bean is extremely extensive since they are used for the purpose of supplying to the people low priced starchy food by being made into *miso* (pea cheese), soy, *tofu* (bean curd), and other food-stuffs required by the Japanese. The residue obtained from making these food-stuffs from the bean is used for the purpose of feeding cattle

or of pressing oil while as manure it is highly valued. Soja bean is easily cultivated requiring less amount of manure and labour. It is therefore cultivated all over the country and occupies the principal position among summer crops of upland fields. Within recent years the demand for it has considerably increased at home and also the export of various food-stuffs prepared out of bean has shown some increase so that no small amount of bean is imported either from China or Korea. The amount imported actually reaches 10,000,000 *yen*. Over and above these, the import of bean cakes is approximately figured at 20,000,000 *yen* so that the domestic output has somewhat been affected.”

Also discusses: Barley and naked barley. Indian millet, Barnyard millet and sorghum. Small red bean [azuki] (“A large amount of small red bean is used as a material for cakes [confections], Hokkaido being the principal producing district.” p. 51). Flax and hemp. Green manure crops, incl. *genge* (*Astragalus sinicus*, *umagoyashi* (*Medicago denticula*)), soja beans, etc.

Note 2. This is the earliest English-language document seen (March 2006) that uses the term “small red bean” to refer to the azuki bean.

Chapter 4, titled “Animal industry and poultry” (p. 69+) contains many statistics which may be of interest to vegetarians. Japanese traditionally ate fish rather than meat. “Even at present, the amount of meat consumed per capita a year does not exceed 1.7 pounds while that consumed in America is 150 pounds and in England 118 pounds per capita.” etc.

A table (p. 85) shows imports of principal agricultural products (quantity and value) each year from 1906 to 1908. Imports of soja beans increased from 286 to 352 (x 10,000 piculs) during this period, while imports of [soja] bean cake increased from 433 to 776. Both were imported mainly from China. However “the output of *soy* [sauce] and *miso* made of soja bean is exported to the amount of 1,200,000 *yen*, while bean cake forms the principal fertilizer in Japan” (p. 86). Address: Tokyo.

434. *New York Times*. 1910. Latest customs rulings. Japanese “miso” for use in preserving soups is dutiable at 20 per cent. April 22. p. 14.

• **Summary:** “The United States Circuit Court for the Territory of Hawaii has handed down a decision favorable to importing interests regarding the classification under the tariff of so-called ‘miso,’ a preparation used for the most part in making soup.

“The article in controversy is a Japanese preparation, and is used by both the Japanese and Americans. The question at issue was whether the commodity is subject to duty at 20 per cent., as claimed by S.B. Fujiyama, the importer making the test case, or at double that rate under the tariff provision for ‘preserved vegetables’ or as ‘a sauce.’ The Board of General Appraisers found in favor of

the Government’s contention at the higher rate. The importer then appealed to the Circuit Court, which finds for the protestant...”

“This Japanese product is made from [soy] beans and rice by process of cooking and fermentation, which have the effect of changing its taste and flavor, though not entirely destroying its form. The chief use of miso is in preserving soup with which it is used.”

435. Brenier, H. 1910. La question du soja [The soya question]. *Bulletin Economique de l’Indochine (Hanoi)* 13(83):105-28. March/April. Series 2. [22 ref. Fre]

• **Summary:** This is an in-depth look at the relevance of the soybean to France, both now and in the future. It is prompted by the rapid growth of soybean imports to Europe from Manchuria. The author has a good knowledge of the literature on soybeans and a familiarity with the crop in the field in French Indochina and China.

Contents: 1. Soybean cultivation: Species and varieties, major soybean producing countries (China, Japan, Korea, Indochina), other countries (Java and the Dutch East Indies, France, USA. The Imperial Institute of London is conducting trials in the Cape of Good Hope and Natal [South Africa], in British West Africa, and in Gambia), methods of cultivation and yield. 2. Commerce: Exports of soybeans and soybean cake (beancake, *tourteaux de soja*) from China and especially Manchuria (Newchwang, Dairen/Dalny, Antung, Ta tung kow, Suifenho [Suifenhe] / Sui-fen-ho), importing countries in 1908 in descending order of amount imported (Russian ports on the Pacific [Vladivostok, for re-export to Europe], Great Britain, France, Holland, Italy, Belgium, Germany), prices. 3. Soybean utilization: Chemical composition, use as a forage plant and for improving the soil, use in human foods (tofu, shoyu, Worcestershire sauce, tuong [Annamite soy sauce], miso, natto, soymilk), the soybean as an oilseed (yield of oil from various oilseeds), soybean cakes. Conclusions.

Page 109 discusses soybeans in Indochina, according to information received from M. Crevost, Curator of the Agricultural and Commercial Museum of Hanoi, and from the article by Bui-quang-Chiêu (Dec. 1905). The names of the soybean are different in the various parts of Indochina. In Cochin China (especially in the provinces of Chaudoc and Baria), in Annam (sporadically), and in Tonkin it is called *dau-nanh* or *dau-tuong* (*Tuong* is a sauce made with soybeans, described later under “Uses”). In Cambodia (*Cambodge*) it is called *sandek sieng*. The variety most widely cultivated in Indochina seems to be one with a yellowish-white color, more oblong than round, a little flattened (*soja platycarpa* of Harz [1880, 1885] (?)), different therefore from the fine (*belle*) varieties of Manchuria and Japan that are well rounded and pure yellow.

A table (p. 112) shows soy bean grain exports (in 1,000 metric tons) from different Manchurian ports for the years

1905-1908. The author notes that Indochina could be exporting soybeans to France. One factor that stimulated the large exports of soybeans from Manchuria in 1908 (besides an excellent harvest in 1907) was a program to suppress the cultivation of opium by expansion of soybean acreage (p. 113). The author uses the scientific *Phaseolus radiatus* to refer to the *petit haricot vert* (probably mung bean). He observed soybeans planted in mixed culture in Szechuan.

Page 116 notes that the rise of soybeans in Manchuria is due in part to the power of the Japanese commercial house Mitsui Bussan Kaisha and the large English oil mills, which joined to develop an industry that had not previously existed. At the end of 1906, which had a dominant commercial role in Southern Manchuria, sent one or two trial shipments of soybeans to England. Mitsui was followed mainly by the British trading houses (Samuel & Samuel, Jardine, Matheson), then by the Germans (Otto Reimers, Arnhold Karberg), and the Russians. Continued suppression of opium growing led to further expansion of soybean cultivation.

A table (p. 117) gives the price of soybeans (per picul of 300 catties = 180 kg), soybean cake (per 10 cakes of 53 catties each or 318 kg for the 10), and soybean oil (per picul of 100 catties = 60 kg) in New chwang [Newchwang] taels and in French francs in the average year from 1882-1891, and in the year 1897. Prices were up in 1897.

Page 124 states: "A factory was recently founded near Paris (at Saint Germain en Laye), with Chinese capital, for the preparation of a series of products derived from soya: milk, "caséo-sojaïne," cheese [tofu], sauce, and sweet soya preserves (*confiture (?) de soja*)." A footnote states: "I owe this curious piece of information to the amicability of the secretary of *Ecole française d'Extrême-Orient*, Mr. Ch. Maybon, who pointed it out in the January 1910 issue of the *Bulletin de l'Association amicale franco-chinoise*."

A table (p. 125) shows that the soybean gives the lowest yield of oil of all major oilseeds: copra (from coconut) yields 67-70% oil, sesame seeds 50-56%, poppy seed (*pavot*) 43-50%, castor oil plant 42-50%, rapeseed (*colza*) 42-45%, linseed 43%, peanuts 35-47%, cottonseed 21-26%, soybeans from Manchuria 16-18%.

Note: This is the earliest document seen (March 2000) that describes *caséo-sojaïne* as a product. Yet this may well be a mistake since its source of information is given as *Bulletin de l'Association Amicale Franco-Chinoise* (Jan. 1910)—which uses the term to refer to a business name. Address: Inspecteur-Conseil des Services Agricoles et Commerciaux de l'Indochine.

436. Langworthy, C.F. 1910. Apéndice. La soya como alimento para el hombre [Appendix: The soy bean as human food]. *Boletín de la Sociedad Agrícola Mexicana* 34(20):389-92. May 25. [1 ref. Spa]

• **Summary:** This is a Spanish-language translation of USDA Farmers' Bulletin No. 58 (1897, Revised 1899). The soybean is referred to throughout as "La haba soya." It describes and gives the nutritional composition of various Japanese soyfoods, including natto, miso (3 types; *miso blanco, colorado, Suiza* [Swiss]), tofu (*Tofu o queso de haba; Tofu fresco*), soymilk (*leche de la haba soya*), frozen tofu (*Tofu helado*), yuba, shoyu (*salsa de la haba soya*).

Note 1. This is the earliest Spanish-language document seen (Oct. 2008) that mentions yuba, which it calls *yuba*.

Under the name of coffee beans (*habas de café*), soybeans (*las habas soya*) are sometimes consumed in Switzerland as legumes (*como legumbres*); when they are dry and toasted, they are used as a substitute for coffee (*sustituir al café*). No mention is made of soybeans or soyfoods in Mexico.

Note 2. This is the earliest Spanish-language document seen (July 2000) that mentions tofu, which it calls *Tofu or queso de haba*.

Note 3. This is the earliest Spanish-language document seen (Feb. 2004) that mentions natto, which it calls *natto*.

Note 4. This is the earliest Spanish-language document seen (March 2009) that mentions miso, which it calls *miso*.

Note 5. This is the earliest Spanish-language document seen (Feb. 2004) that mentions soy as a substitute for coffee, which it calls *sustituir al café*.

Note 6. This is the earliest Spanish-language document seen (Oct. 2003) that uses the term *leche de la haba soya* to refer to soymilk.

Note 7. This is the earliest Spanish-language document seen (Feb. 2004) that mentions frozen tofu, which it calls "Tofu helado." Address: PhD, Office of Experiment Stations, USDA, USA.

437. Nippon Shubyo Kabushiki Kaisha (Japan Seed & Plant Co., Ltd.). 1910. Eigyô annai [Sales information]. Tokyo, Japan. Spring. 26 cm. [Jap]

• **Summary:** On the cover of this Japanese-language catalog we read (in characters from right to left): Number on seed store in the Orient (*tôyô*). Capitalization: 700,000 yen. 43rd year [of Meiji], spring. Sales information.

Page 3 is devoted entirely to beans (*mamé rui*). Shipping and tax free. Each small bag costs about 2 *sen*. The first section described 7 varieties of soybeans: (1) Large white soybeans (*Ooshiro daizu*). 5 *sen* per *gô* (100 *sen* = 1 *yen*; 1 *gô* = 180 cc = 0.763 cups {U.S.}). 32 *sen* per *shô* (1 *shô* = 1.8 liters = 1.903 quarts {U.S.}). Large, shiny beans. Good tasting. Good for making *nimame* (boiled, seasoned whole soybeans) or kinako (roasted soy flour) (2) Black soybeans (*Kuro daizu*). 5 *sen* per *gô*. 32 *sen* per *shô*. Black beans, large beans, extremely productive. (3) Large green soybeans (*Ao ômamé*). 5 *sen* per *gô*. 23 *sen* per *shô*. The seed coat is green. Good for making kinako and roasted soybeans (*irimamé*). (4) Black soybeans for rice fields (*Ta no*

kuromamé). 5 sen per *gô*. 32 sen per *shô*. Planted on the sides of the foot paths between rice fields (*azé*), these will produce a big crop. Good for making a type of boiled (?) soybeans and miso. (5) Branch and pod *Sangorô* soybeans (*Eda saya sangorô daizu*). 7 sen per *gô*. 60 sen per *shô*. Pull up the whole plant, boil the beans in the pods, and enjoy. Satisfies large demands. (6) “Little bells” soybeans (*Suzunari daizu*). 5 sen per *gô*. 40 sen per *shô*. Although the beans are small, they grow in many clusters, so you get a big crop and a big profit. (7) “Goose eating” soybeans (*Gan-kui mamé*). 5 sen per *gô*. 40 sen per *shô*. Black, large-seeded soybeans. Good for making *nimame* (boiled, seasoned whole soybeans).

Next come 5 varieties of azuki beans: (1) Summer azuki (*Natsu shôzu*). 5 sen per *gô*. 35 sen per *shô*. Early type, therefore if you grow them, they could be profitable. (2) White azuki (*Shiro shôzu*). 6 sen per *gô*. 40 sen per *shô*. Small and white, they are used to make high quality sweet azuki bean paste (*an*). (3) Dainagon *shôzu*. 5 sen per *gô*. 35 sen per *shô*. Large and high quality, they are the best to make sweet azuki bean paste (*an*). You can get a large crop on any type of land. (4) “Thin seed coat” azuki (*Usu kawa shôzu*). 5 sen per *gô*. 35 sen per *shô*. Although small seeded, they have thin seed coats and are good quality. (5) Mottled azuki (*Kasuri azuki*) 5 sen per *gô*. 40 sen per *shô*. White beans with white kasuri pattern. Tasty. Note: Kasuri is a famous type of Japanese dyed cloth with a splashed or mottled pattern, usually white on blue. (6) Green beans (*Yainari*. [Also written “yaenari”]). 7 sen per *gô*. 60 sen per *shô*. The very small green seeds can be used [ground] to make green kinako (*ao kinako*) or sweet azuki bean paste (*an*). Note: Yainari / yaenari is the most expensive variety of azuki. Address: Near Shinjuku Station, Tokyo, Japan.

438. Crowe, E.F. 1910. Japan. Report for the year 1909 on the trade of Japan. *Diplomatic and Consular Reports, Annual Series (Foreign Office, Great Britain)* No. 4511. 86 p. July.

• **Summary:** “Imports of manures.—The question of manures forms one of the most interesting items of 1909. A detailed table showing the quantities and values imported during the past three years will be found in Table 1 (B), page 61. Bean cake, of course, heads the list as regards value. The total amount imported in 1909 was 575,180 tons, worth £2,283,700, or £3 19s. 4d. a ton, as compared with 461,950 tons, worth £2,220,000 in 1908, or an average of £4 16s. 1d. a ton.

“Next comes the sulphate of ammonia, but in this item there was a big drop from 66,445 tons, valued at £898,000, to 45,835 tons, worth 604,700, while in the case of both phosphate rock and fish guano there was a decrease of about £100,000. Nitrate of soda made a small gain.

“It is a well-known fact that bean cake has for years occupied the position of the most popular imported fertiliser

in Japan. Now, however, that the United Kingdom, and the Continent of Europe and America to a lesser extent, have become purchasers of Manchurian beans the questions arises as to whether Japan will be able to continue to buy bean cake in huge quantities if the price rises appreciably. In studying this question two factors should not be lost sight of; one is that Japan is herself a large grower of soya beans, having, according to the latest available returns (1908) over 1,200,000 acres under cultivation, producing annually some 19,000,000 bushels of beans, while the other is that Japan imports very large quantities of soya beans from China and Korea.

“The greater part of these beans is used for the purposes of human food, *i.e.*, the making of “soy,” “miso,” and bean curd, but a portion, by no means small, is used also as a fertiliser.

“The Russo-Japanese war had such an effect in curtailing the supplies of beans and cake that to arrive at a just appreciation of the position it is necessary to go back a good many years.” A table (p. 18) shows imports of [soy] beans and bean cake (in piculs; 1 picul = 132.27 lb), the value of each, and the average price of silver each year from 1900 to 1909. Imports of [soy] beans increased from 1,575,022 piculs in 1900 to a record 3,623,377 piculs in 1909. Imports of bean cake increased from 2,280,687 piculs in 1900 to a record 9,663,036 piculs in 1909. The average price of silver fell by about 16% during this period. “Should the price in future be forced up very high in consequence of British and other demand, the presumption is that Japan would turn to sulphate of ammonia if the cost per unit of nitrogen therein were to be less than in the bean cake. On the other hand it must be remembered that the removal of duty on sulphate of ammonia in the United States of America means that that country will probably absorb large quantities of the British output and that Japan will have to pay a bigger price if she wants a share of this fertiliser.

“Thus the outlook for nitrate of soda becomes a good deal brighter and now that, owing to the subsidised Japanese line which runs to South America, it is possible to get cheap direct rates of freight, it looks as though the nitrate of soda will be a serious competitor to the other nitrogenous fertilisers, except in the matter of wet rice cultivation.”

Page 31 shows the shares of principal countries in the import and export trade of Japan during the years 1908 and 1909. Japan’s biggest imports came from the United Kingdom, followed by the USA, then China. The biggest customer of Japan’s exports was the United States, followed by China then France (p. 31). Japan’s biggest port (in terms of value of imports and exports) was Yokohama, followed by Kobe than Osaka (p. 37). Japan’s population at the end of 1909 was estimated at 49,769,704 (not including Formosa or Karafuto [Japanese Sagalien]). Japan’s most valuable exports in 1909 were tea, followed by rice then

fish. Exports of “Soy” (probably soy sauce) rose from £110,500 in 1907 to £111,100 in 1909.

Summarized in *J. of the Board of Agriculture (London)*, Aug. 1910, p. 410.

Note: This is the earliest document seen (Sept. 2001) that gives statistics concerning industrial utilization of soybeans—in this case soybean meal used as a fertilizer in Japan. Address: Attaché, British Embassy, Tokio [Tokyo].

439. Paton, G.P. 1910. Japan. Report for the year 1909 on the trade and navigation of the port of Dairen. *Diplomatic and Consular Reports, Annual Series (Foreign Office, Great Britain)* No. 4504. 22 p. July.

• **Summary:** On pages 3-4 key weights and measures are defined: Chinese: catty = 1.333 lb, picul = 133.33 lb, *li* = 1/3 miles, *mow* = 736½ square yards; Japanese: 1 *koku* [liquid] = 39.703 gallons, 1 *koku* [dry] = 4.963 bushels. The Japanese, Chinese, and total populations are given for Dairen, Shaokangtzu [Shao-kuan, in Kwantung Leased Territory], Port Arthur, Chinchou [Chin-chou] and Pitsewo [Pikou, in Kwantung Leased Territory]. One map (p. 5) shows part of Manchuria, with the main towns, railroads, and where major commodities are produced. Next comes a large fold-out map of the Kwantung Leased Territory [and peninsula] (Dairen Consular District).

Dairen may now be considered the principal outlet for the produce of South Manchuria. The Central Laboratory is doing good work in the manufacture of bean cake and bean oil, and soap from bean oil. “The manufacture of soap from bean oil has been commenced on a very small scale by three different firms in Dairen, but the excessive price of bean oil since the end of 1909 is proving a great handicap.” The South Manchuria Railway Company takes a major share in the development of South Manchuria as well as the Kwantung Peninsula. Its work during the past year is discussed. An ice-breaker has been added to facilitate the berthing of ships during the winter months.

“Export trade.—Thanks to the very large increase in the export of beans, the export trade is in a very thriving condition... Beans and bean products.—The most striking feature in the exports is the enormous increase in the shipments of beans and bean products, viz., oil and cake” which accounted for nearly 70% of all exports from Dairen. Export of [soy] beans rose from 206,653 tons in 1908 to 462,423 tons in 1909. In 1909, some 56% of these beans went to Europe, 29% to Japan, 12% to north China, and 21.4% to south China. “Of the amount sent to Japan, probably some was re-shipped to Europe; while of the quantity sent to Europe about 90 per cent. went to the United Kingdom.” There follows a long discussion of economic factors causing the prices of soybean and bean cake to be currently high in Manchuria. If, as seems probable, the French, German, and U.S. governments remove the import duty on [soy] beans, then a great impetus

will be given to the export... The farmer in Japan has learned the value of bean cake as a fertiliser for the paddy field and the mulberry plantation, and immense quantities are exported to that country. In 1909, indeed, Japan took over 99 per cent. of the bean cake exported from Dairen... A small quantity is exported to South China where it is used both as a fertiliser and as a food for pigs. A shipment was also made last year to Formosa [today’s Taiwan] for trial in the sugar plantations and, as the result was successful, the experiment will probably be repeated this year.”

“Bean oil.—In Manchuria the primary object of the bean mills is the manufacture of bean cake, and the oil is only of secondary importance. The mills are worked on the press system and only extract 7 or 8 per cent. of the 17 or 18 per cent. of the oil contained in the bean... The largest purchaser of bean oil is South China, which takes about one-half of the output. Of the remainder, the bulk goes to Japan, where it is mostly transhipped [transshipped] to Europe and America.” The value of “Soy” (soy sauce) imports to Dairen increased from £22,367 in 1907, to £27,431 in 1908, falling to £21,551 (3,307 tons) in 1909. The value of miso imports to Dairen increased from £2,128 in 1907, to £5,422 in 1908, falling to £2,815 (656 tons) in 1909. Tables (p. 19-21) show returns of: (1) Import trade of Dairen during 1907-09 (2) Export trade of Dairen during 1907-09 (3) Shipping entered at the Port of Dairen during 1908-09. Note: In some parts of this report, the £ sign is written as “l.”

Summarized in *J. of the Board of Agriculture (London)*, Sept. 1910, p. 502. Address: Acting British Vice-Consul, Dairen.

440. Société Française des Distilleries de l’Indo-Chine. 1910. Nouveau procédé de traitement des légumineuses et particulièrement du Soja (*Glycine hispida*) pour la fabrication des sauces, condiments ou produits alimentaires [New process for the treatment of legumes and particularly of Soya (*Glycine hispida*) for the making of sauces, condiments or food products]. *French Patent* 415,026. Sept. 16. 3 p. Application filed 1 July 1909. [Fre]

• **Summary:** Soya or other leguminous seeds, with or without addition of cereals, are suitably cooked, and after being cooled aseptically are seeded with pure cultures of the organisms necessary to produce the desired results. They are then aged. The process is very delicate and the aging sometimes very long (as in the preparation of *shoyu*, which can last from 8 months to five years). Other products include *tao-yu*, *miso tao-tjing*, and *tuong*. The sauces or condiments produced are sterilized or pasteurized in trade packages. Address: Boulevard Gia-Long 53, Hanoi [Hanoi] Tonkin [French Indochina].

441. Gilbert, A.W. 1910. Soy beans and fertilizer question. *Daily Consular and Trade Reports (U.S. Bureau of*

Manufactures, Department of Commerce and Labor
13(79):55. Oct. 5. [1 ref]

• **Summary:** The following is an extract from the *National Review*, of Shanghai, China: "It is well known that soy-bean cake has for years been the most popular fertilizer in Japan. Now, however, that the United Kingdom, and the Continent of Europe and America to a less extent, have become purchasers of Manchurian beans, the question arises whether Japan will to be able to buy bean cake in huge quantities if the price rises appreciably. In studying this question two factors should not be lost sight of: One is that Japan is herself a large grower of soy beans, having according to the latest available returns (1908) over 1,200,000 acres under cultivation, producing annually some 19,000,000 bushels of beans, while the other is that Japan imports very large quantities of soy beans from China and Korea. The greater part of these beans is used for the purpose of human food—i.e., in making of 'soy,' 'miso,' and bean curd—but a portion by no means small is used also as a fertilizer.

"The Russo-Japanese war had such an effect in curtailing the supplies of beans and cake that to arrive at a just appreciation of the position it is necessary to go back a good many years. In making such a review it will be noted that, both in the case of beans and of cake, the amounts imported in 1909 were record importations, but that the average price was the lowest since 1903. Should the price in the future be forced up very high in consequence of British and other demands, the presumption is that Japan would turn to sulphate of ammonia, if the cost per unit of nitrogen therein were less than the cost of bean cake. On the other hand, it must be remembered that the removal of the import duty on sulphate of ammonia in the United States of America means that the United States will probably absorb large quantities of the British output, and that Japan will have to pay a higher price if she wants a share of this fertilizer. Thus the outlook for nitrate of soda becomes a good deal brighter, and now that, owing to the subsidized Japanese line to (South) America, it is possible to get cheap freight rates, it looks as though (Chilean) nitrate of soda will be a serious competitor to the other nitrogenous fertilizers, except in the matter of wet rice cultivation.

"There is a point which, though obvious enough to those intimately connected with the trade, is sometimes overlooked in general discussions on the subject of bean cake, viz, that the British farmer can afford to pay a proportionately higher price for cake than the Japanese farmer, the reason being that in the United Kingdom the cake, after serving for provender, turns into a fertilizer, whereas in Japan it is employed as a fertilizer directly, without any intermediate use.

"As regards rock phosphate, most of the supplies have hitherto come from Ocean and other islands. Owing, however, to the new fertilizer law which prohibits any

admixture in Japan of earth and sand with rock, it will probably be found that the phosphate from the above-mentioned islands, being pure and expensive, will be displaced by the cheaper varieties of rock from Tennessee and Algiers, which are naturally mixed with impurities." Address: Vice-Consul, Nanking.

442. *Los Angeles Times*. 1910. Fertilizers for Japan. A scarcity of soy beans makes a market for Tennessee rock phosphate. Oct. 13. p. I13.

• **Summary:** "It is well known that soy-bean cake has for years been the most popular fertilizer in Japan. Now, however, that the United Kingdom, and the Continent of Europe and America to a less extent have become purchasers of Manchurian [soy] beans, the question arises whether Japan will continue to be able to buy bean cake in huge quantities if the price rises appreciably.

"In studying the question, two factors should not be lost sight of: One is that Japan is herself a large grower of soy beans, having according to the latest available returns (1908) over 1,200,000 acres under cultivation, producing annually some 19,000,000 bushels of beans, while the other is that Japan imports very large quantities of soy beans from China and Korea. The greater part of these beans is used for the purpose of human food—i.e., in making of 'soy' [sauce], 'miso,' and bean curd [tofu]—but a portion by no means small is used also as a fertilizer.

"The Russo-Japanese war had such an effect in curtailing the supplies of beans and cake that to arrive at a just appreciation of the position it is necessary to go back a good many years." In 1909 Japan imported record amounts of beans and cake, but "the average price was the lowest since 1903. Should the price in the future be forced up very high in consequence of British and other demands, the presumption is that Japan would turn to sulphate of ammonia, if the cost per unit of nitrogen therein were less than the cost of bean cake."

The "British farmer can afford to pay a proportionally higher price for cake than the Japanese farmer," since in the UK the cake, "after serving for provender [feed], turns into a fertilizer [manure], whereas in Japan it is employed as a fertilizer directly, without any intermediate use. "

443. *Oil, Paint and Drug Reporter*. 1910. The soya bean and the fertilizer question. 78(17):41. Oct. 24. [1 ref]

• **Summary:** "An extract from the *National Review of Shanghai*, regarding the relation of the soya bean to the fertilizer question, has been sent to the Department of Commerce and Labor by Vice-Consul A.W. Gilbert from Nanking. The discussion of the subject by the Review is as follows:" There follows a long excerpt.

444. *Times (London)*. 1910. Soy bean as a fertilizer. Nov. 21. p. 14, col. 6.

• **Summary:** “Several subjects of importance to this country are discussed in the *Daily Consular and Trade Reports* published by the Bureau of Manufacturers, Department of Commerce and Labour, Washington [DC]. A note upon soy beans as a land fertilizer is particularly noteworthy in view of the doubt expressed in this country last year as to their manurial value.”

There follows a summary of: Gilbert, A.W. 1910. “Soy beans and fertilizer question.” *Daily Consular and Trade Reports* (U.S. Bureau of Manufactures, Department of Commerce and Labor). Oct. 5. p. 55.

445. Li, Yu-ying. 1910. Produits alimentaires et condimentaires à base de graine de soja [Food products and condiments made from soya]. *French Patent* 424,125. 2 p. Application filed 27 Dec. 1910. Issued 5 May 1911. [Fre]

• **Summary:** “This invention has for its object the manufacture of products based on cooked soybeans (*graines de soja cuites* (*pois chinois* = Chinese peas)), which can be divided into two large categories: 1. Products fermented with salt, including soy sauce (*la sauce de soja*) and soybean paste (*la pâté de soja*). 2. Non-fermented, sweetened products, including sweet soya preserves (*la confiture de soja*) and soy powder (*la poudre de soja*), which can be utilized in pastry (*la pâtisserie*) and confectionery (*la confiserie*).

The process for making each type is described in general terms. To the fermented sauces “can also be added spices such as pepper, cloves, ginger, nutmeg, pimento/allspice, etc. Or sugar can be used in place of the spices. The soy sauce or paste obtained, as has just been said, can be concentrated or dried by heat or evaporation.

“For the non-fermented, sweetened products, including soy confectionery and soy powder, one proceeds as follows: For the confectionery, the soybean seeds are dehulled, cooked, and crushed. Then this pulp is mixed with about one-third part sugar. Or, one can add dry fruits, chestnuts, almonds, hazelnuts, cocoa*, etc. The product can be dried to obtain a soy-based powder, which can be employed in various ways in pastry and confectionery. This powder is different from flour, not only because it comes from cooked soybeans, but also because it contains none of the cellulose in the soybean hulls.”

* Note: This is the earliest suggestion seen stating that soy can be used with cocoa. *Webster’s Dictionary* defines cocoa (pronounced CO-co, a modification of the Spanish term cacao), a term first used in 1577, as “1: Cacao. 2a: Powdered ground roasted cacao beans from which a portion of the fat has been removed.” *Webster’s Dictionary* defines cacao (pronounced kuh-KAO, derived from the Spanish from Nahuatl *cacahuatl* cacao beans, and first used in 1555) as the dried partly fermented fatty seeds of the cacao (a South American tree, *Theobroma cacao*), used in making

cocoa, chocolate, and cocoa butter—also called cacao bean, or cocoa bean. Address: Resident in France (Seine).

446. Piper, Charles V.; Morse, W.J. 1910. The soy bean: History, varieties, and field studies. *USDA Bureau of Plant Industry, Bulletin* No. 197. 84 p. Dec. 31. Includes 8 plates showing plants, pods, and seeds, and an excellent 6-page index. [27 ref]

• **Summary:** Contents: Botanical history and identity of the soy bean. Botanical classifications of soy-bean varieties. Varietal characteristics of soy beans: Habit of growth, foliage, pubescence, flowers, pods, seeds. Frost resistance. Period of maturity (soybeans were planted at the Arlington Experimental Farm, near Washington, DC, from 3 June 1905 to June 1909). Changes in life period (soybeans were planted at the Arlington Farm in 1902). Pollination and hybridization. Mutations. Nomenclature and classification. Early agricultural history in the United States. Varieties introduced in the United States independently of the Department of Agriculture or previous to 1898: Enumeration, Ito San, Mammoth, Buckshot, Guelph, or Medium Green, Butterball, Kingston, Samarow, Eda, Ogemaw, or Ogema.

Varieties grown in Europe (p. 32-33; Early history, Samarow, Etampes, Chernie [from Khabarovsk, Siberia], “Yellow Riesen,” Buckshot, “Yellow,” “Brown,” Butterball, S.P.I. No. 5039. European seed companies carrying soybeans include Dammann & Co., Naples, Italy; Haage & Schmidt, Erfurt, Germany; Vilmorin-Andrieux & Co., Paris, France).

The soy bean in Asia (p. 34-35): Asiatic sources of soy beans, list of varieties with SPI numbers from each of the following countries and places: Siberia (South Usuri [Ussuri], Khabarovsk, Merkoehofka), Manchuria (Newchwang, Harbin, Tieling), Korea (Pinyang, Ko-bau), Japan (Tokyo, Kobe, Yokohama, Hokkaido, Anjo), China (many places), Formosa (Taihoku), Cochin China (Saigon), India (Darjiling [Darjeeling] and Khasi Hills—Assam; Pithoragarh—Kumaon Dist.; Safipur, Hasangani, Ranjitpurwa—Unao, Uttar Pradesh; Etawah, Manipuri—Uttar Pradesh; Cawnpore, Dehra Dun, United Provinces; and Poona Bombay), Java (Buitenzorg), Celebes (Macassar).

Desirable characters in soy-bean varieties (p. 36-37): Considerations governing choice, habit of the plant (“Erectness of stem with upright or ascending branches is a prime requisite of a desirable variety. A tall habit is also important, as dwarf varieties usually bear pods very close to the ground, so that many will be left on the stubble...”), coarseness (a coarse, woody stem makes mowing difficult. However slender varieties often have small pods and seeds, often with vining tips and a tendency to lodge), ability to retain leaves, color of the seed (“Yellow or green seeds are preferable to darker colors, as the shattered seeds are more easily found by hogs pasturing the field or stubble”),

shattering, resistance to disease (“In sections where nematodes and cowpea wilt occur most soy-bean varieties are seriously affected by both these diseases”), nonfilling of pods. Synopsis of the groups (plants bushy vs. twining). Synopsis of the varieties (within each group lists the total number and acquisition numbers of varieties with various colored seeds and germs: Group I–190 varieties (seeds straw-yellow, germ yellow–71 varieties; seeds olive-green, germ yellow–45 varieties; seeds chromium-green, germ green–17 varieties; seeds brown to olive, germ yellow–28 varieties; seeds black, germ yellow–18 varieties; seeds black, germ green–7 varieties; seeds bicolored, germ yellow–4 varieties). Group II–4 varieties. Group III–8 varieties. Group IV–76 varieties. Group V–7 varieties.

Of the 285 varieties in the five groups, 152 varieties (53.3%) have yellow (straw-yellow or olive-yellow) seeds, 55 varieties (19.3%) have black seeds, 44 varieties (15.4%) have brown seeds, 24 varieties (8.4%) have green seeds, and 10 varieties (3.5%) are bicolored).

Catalogue of soy-bean varieties (by S.P.I. number, from no. 480 in 1898 to no. 27,501 in 1909; p. 39-74). In 1908 USDA acquired soybean seeds from Vilmorin-Andrieux & Co. (Paris, France), Haage & Schmidt (Erfurt, Germany), and Dammann & Co. (Naples, Italy) (p. 57-60).

The best varieties of soy beans (p. 75, in 7 groups from very early to very late). Explanation of plates. Index.

The “Catalogue of soy-bean varieties” (p. 39) is “a complete list of soy beans imported by the United States Department of Agriculture, arranged chronologically in accordance with the sequential S.P.I. (Seed and Plant Introduction) numbers assigned to them by the Office of Foreign Seed and Plant Introduction.” These numbers start at #480 (imported from South Ussuri, Siberia, in 1898) and end at #27501 (imported from Shanghai, Kiangsu, China, in 1909). Concerning No. 21825 (p. 58): “From Hokkaido, Japan, 1908... This variety is said to be used principally in the manufacture of ‘soy,’ ‘miso,’ ‘tifu’ [sic, tofu], etc. It has also been obtained again from the same place and grown under Nos. 21830 and 21831.”

“The best varieties of soy beans” (p. 75) lists 35 varieties, each with a name and S.P.I. number, arranged in seven groups based on time to mature, from “Very early.–Ogemaw, 17258” to “Very late.–Barchet, 20798; Riceland, 20797 (In 1908 at Biloxi, Mississippi, it displayed astonishing diversity).” This list is “based primarily on the results at Arlington Experimental Farm [in Virginia], but those obtained in cooperation with various experiment stations have also been given due consideration:

“Very early.–Ogemaw, 17258.

“Early.–Early Brown, 25161 (from Indiana Agric. Exp. Station, 1909); and Vireo, 22874.

“Medium early.–Chernie, 18227; Auburn, 21079 A; Merko, 20412 (from Merkoechofka, Siberia); Elton, 20406; Chestnut, 20405 B.

“Medium.–Ito San, 17268; Medium Yellow, 17269; Tashing, 20854; Shingto, 21079; Swan, 22379; Brindle, 20407; Sedo, 23229; Lowrie, 22898 A.

“Medium late.–Brooks, 16789; Flava, 16789 A; Cloud, 16790; Ebony, 17254; Haberlandt, 17271; Peking, 17852 B; Wilson, 19183; Taha, 21999; Austin, 17263.

“Late.–Mammoth, 17280; Edward, 14953; Acme, 14954; Flat King, 17252; Tokyo, 17264; Hope, 17267; Hollybrook, 17278 (from Arkansas Agric. Exp. Station, 1904); Farnham, 22312.

“Very late.–Barchet, 20798; Riceland, 20797.”

Matsuura (1929 and 1933) cites this as the world’s earliest publication on soybean genetics: “Recording segregation of seed- and flower-color in its natural hybrids.” Page 11 notes that soybeans named “New Japan peas” were obtained from Norway (Source: Martens 1869). Page 20 notes that the Ogemaw variety of soybeans, which takes 92-97 days to mature, was obtained in 1908 from the Idaho Agricultural Experiment Station, where it had been grown for several years. Note 1. This document contains the earliest date seen for soybeans in Idaho, or the cultivation of soybeans in Idaho (about 1906).

Page 20 also notes that Buckshot variety of soybeans, which takes 92 days to mature, was obtained in 1908 from the Minnesota Agricultural Experiment Station, where it had been grown for several years. This is the second earliest document (April 2004) seen concerning the cultivation of soybeans in Minnesota. “Potomac Flats” is not mentioned in this report.

Concerning “Habit of Growth” (p. 12-13), the author states: “All soy beans are strictly determinate as to growth; that is, the plants reach a definite size according to the environment and then mature and die. The great majority of the varieties are erect and branching, with a well-defined main stem (Plates I and III)... In other varieties the stems and branches, especially the elongated terminals, are more or less twining, and usually weak, so that the plant is only suberect or even procumbent (Plates I-III).”

Photos show: (1) Plants of a wild soy bean grown in a greenhouse in a pot. (Fig. 1) Plants of a wild soy bean from Soochow, China, grown at the Arlington Experimental Farm. (2) Plants of a soy bean from Cawnpore, India. (3) Rows of different varieties of soy beans at Arlington Farm. (4) Plants of seven varieties of soy beans, showing types of habit: Meyer, Peking, Austin, Pingsu, Hollybrook, Haberlandt. (5) The same seven varieties shown in plate 4 after hanging in a dry room for 6 months. (6-7) Eleven soy bean pods, ranging in size and shape. (8) 36 varieties of soy bean seeds, showing variation in size and form.

Note 2. This is the most important document ever published on early soybean varieties in the USA. Note 3. This is the earliest document seen (June 2008) that uses the word “determinate” in connection with soybeans. Determinate plants terminate main stem elongation at, or

soon after, the onset of flowering. Indeterminate cultivars continue main stem elongation several weeks after beginning flowering.

Note 4. This is the earliest publication see (Feb. 1999) written jointly by Piper and Morse, two of the most influential early advocates of the soybean in the USA. It is also the earliest document by or about Morse in connection with soybeans. Morse graduated from Cornell University, New York, on 20 June 1907 and 2 days later reported for duty at the Bureau of Plant Industry in Washington, DC, to work under Dr. C.V. Piper.

Note 5. This is the earliest document seen (Feb. 2004) in which Piper or Morse mention miso, tofu, or the use of soy beans as a coffee substitute.

Note 6. This is the second earliest document seen (July 1998) that uses the word “shatter” (or “shattered” or “shattering”) in connection with soybeans. The earliest document (in 1854) used the word “shatter” in a very general sense. This document uses it more precisely, as the title of a section and for comparing varieties (p. 36): “When grown for grain alone, shattering is a serious fault. Some varieties, like Guelph, shatter inordinately; others, like Peking, scarcely at all... As a rule the varieties with large pods and seeds shatter much worse than those with small pods and seeds...”

Note 7. This is second the earliest English-language document seen (Oct. 2004) that uses the term “germ” to refer to a part of a soy-bean seed. The germ or embryo is the part of the seed inside the seed coat. The section titled “Seeds” (p. 15) states: “The germs or embryos of soy-bean seeds are yellow, except in the green-seeded and part of the black-seeded sorts, in which they are green.” Address: 1. Agrostologist; 2. Scientific Asst., Forage-Crop Investigations, Bureau of Plant Industry, USDA, Washington, DC.

447. Friedenwald, Julius; Ruhräh, John. 1910. The use of the soy bean as a food in diabetes. *American J. of the Medical Sciences* 140:793-803. Dec. [9 ref. Eng]

• **Summary:** The article begins: “The soy bean (*Glycine hispida*), sometimes incorrectly called the soja bean, is an annual leguminous plant...” It continues with a brief but accurate history of the soy bean in Europe and the USA, a botanical description of the plant, examples of food uses such as boiled whole dry soybeans, green vegetable soybeans (“The beans are eaten as a vegetable, in soups, sometimes picked green, boiled and served cold with a sprinkling of soy sauce and sometimes served as a salad... If the beans are green, the preliminary soaking may be omitted.”), soy sauce or shoyu, natto, tofu, miso, yuba, a coffee substitute, and whole dry soybeans. A brief description of the process for making tofu is given, together with nutritional analyses of tofu, and 4 varieties of soybeans. “The most striking point about the bean is that it

contains no starch, or, at least a very small quantity, which is strange when one considers it resembles the various beans very closely and all other varieties of beans are extremely rich in starchy materials.” An analysis of the “gruel flour from the soy bean” made by the Cereo Co., Tappan, New York, shows it to contain 14.64% protein, 19.43% fat, no starch, and no reducing sugars. “Our own experience with the soy bean in diabetes extends over a series of eight cases.” The 8 cases are then described individually. Cooking directions and recipes are given for making gruels, broths, and muffins using “soy gruel flour” or “soy flour.”

The authors conclude: “(1) The soy bean is a valuable addition to the dietary of the diabetic on account of its palatability, and the numerous ways in which it can be prepared. (2) The soy bean in some way causes a reduction in the percentage and total quantity of sugar passed in diabetic subjects on the usual dietary restrictions.” Address: 1. M.D., Prof. of Diseases of the Stomach, College of Physicians and Surgeons, Baltimore, Maryland; 2. M.D., Prof. of Diseases of Children and Therapeutics same college.

448. Honcamp, F. 1910. Die Sojabohne und ihre Verwertung [The soybean and its utilization]. *Tropenpflanzer (Der) (Berlin)* 14(12):613-34. Dec. (Chem. Abst. 30:45). [9 ref. Ger]

• **Summary:** Contents: Introduction. Utilization as food and food adjuncts (stimulants / enjoyables) (*als Nahrungs- und Genussmittel*). Use for technical purposes. Use for fodder.

According to English consular reports the total production of soya beans in China amounted in 1907 to 580,000 tons, rising in the following year to 850,000 tons. During the year 1909 no less than 35 million kg of the beans passed through the Suez Canal.

Harz classified the varieties of *Soja hispida* into 2 main groups, one containing those of strongly compressed form and of olive green to brownish-black color, and the other swollen varieties more or less sickle-shaped, and of yellowish-brown to deep brown color.

Dietrich and König [1891] conducted 20 analyses of the soybean and found the following average composition: Water 11.34%, crude protein 35.11%, crude fat 16.98%, nitrogen-free extract 26.18%, crude fiber 5.88%, and ash 4.51%.

An analysis of the inorganic constituents of the beans by Schwackhöfer gave the following results: Potassium oxide, 44.56%; sodium oxide, 0.98%; lime, 5.32%; magnesia, 8.92%; iron oxide, trace; silica, trace; phosphoric acid, 36.89%; sulphuric acid, 2.70%; and chlorine, 0.27%.

Both in China and Japan the black varieties are boiled and roasted and eaten with rice, while the green and white varieties are ground to meal and baked into cakes, etc. The soy sauce, which is now largely exported to England and America, and used in the manufacture of other sauces, is

prepared from wheat and a small light yellow variety of the bean, with the addition of salt and water, the prepared mass being fermented in open vessels at as low a temperature as possible for a period of 8 months to 5 years, and the sauce then separated from the residue. Another product made from the beans in Japan, and used in the preparation of soups and flavors for cooking, is known as miso. In addition to these, a so-called bean cheese (tofu), and a similar product from which the bulk of the water has been removed (kori-tofu), are prepared from soya beans in Japan.

Attempts to acclimatize the plant in Germany have not yet proved successful, although it may be possible to introduce an early-ripening variety with a short vegetation period.

Note: This is the earliest document seen (Aug. 2007) that gives soybean production or area statistics for China. It is not clear whether or not this includes Manchuria, or refers only to Manchuria. Address: Prof., Germany.

449. Honcamp, Fr. 1910. Die Sojabohne und ihre Abfallprodukte [The soybean and its by-products]. *Landwirtschaftlichen Versuchs-Stationen* 73:241-84. Dec. (Chem. Abst. 4:3099). [18 ref. Ger]

• **Summary:** Largely a good review of the literature. Contents: Introduction and history. Botanical and microscopic characteristics. The best varieties for production of seeds / beans (incl. Soja platycarpa, Soja tumida, etc.). Soybean cultivation (incl. Fesca, Haberlandt). Chemical composition. Utilization of the soybean and its products: Use as food and food adjuncts (stimulants / enjoyables) (*Genusmittel*) (incl. boiled or roasted soybeans, shoyu or soy sauce {*Shoyu oder Bohnensauce*} made with rice- or wheat koji {*Reis- oder Gerstenkoji*}, miso, tofu {*Bohnenkäse*}, dried-frozen tofu {*Kori-Tofu oder Eisbohnenkäse*}, soybean meal {*Sojabohnenmehl*}, soybean oil {*Sojabohnenöl*}), industrial and technical uses of soybean oil (illuminant, soaps, table of constants), use as a livestock feed (Sheep were fed soybean oil meal and meal {*Sojakuchen, Sojamehl*}, pressed residue {*Pressrückstand*}, or solvent processed {*Extraktionsrückständen, Sojamehle, Sojakuchenmehl*}; soybean hay {*Sojabohnenheu*} and straw also make good feeds).

Illustrations show: (1) A soy bean plant with pods (non-original, p. 245; from an original in Fesca 1898). (2) Soy bean pods, seeds, and cells (non-original, p. 246; from an original in C.O. Harz 1885).

Note: This is the earliest German-language document seen (Feb. 2004) that uses the term “Eisbohnenkäse” to refer to dried-frozen tofu. Address: Rostok, Germany.

450. Inouye, Jukichi. 1910. Home life in Tôkyô. Tokyo, Japan: Printed by the Tokyo Printing Co. vii + 323 p. No index. Illust. (some color). 23 cm. Facsimile edition reprinted in 1985 by KPI (London & Boston). [Eng]

• **Summary:** Chapter 5, “Meals,” states (in a description of making breakfast): “But in point of utility the soy bean comes next to rice, for our soy sauce which enters into almost all dishes is made from the bean, wheat, and salt. So extensively is this sauce employed that table salt is comparatively little needed. The bean is also the principal ingredient in *miso*, which is a mixture of the soy bean, steamed and pounded, with rice-yeast [koji] and salt. This *miso* is largely used in making soup; and the soups into which it does not enter are usually flavoured by boiling shavings of sun-dried bonito and straining them off” (p. 58).

“After the rice-pot is removed, another pot is put over the hearth for making *miso*-soup... *Miso*-soup contains strips of garden radish [daikon], edible seaweed (*alopteryx pinnatifida*) [wakame], bean-curd [tofu], egg-plant, or other vegetables according to season. These two, the rice and the soup, are all the cookery required in the morning. There must, of course, be hot water for tea.” Pickled vegetables (called *kôkô* or *kô-no-mono*) especially garden radish, invariably accompany Japanese meals (p. 58-59).

“The breakfast, then, is very simple. Sometimes the family take their meals at a large low table which is set before them [as they sit on their heels in the *seiza* position on tatami mats] at each repast; but often a small tray, about a foot square and standing six inches or more high, is placed before each member. In the left corner of the tray near the person before whom it is set, is a small china bowl of rice, while on the right is a wooden bowl of *miso*-soup. A tiny plate of pickled vegetables occupies the middle or the farther left corner, while any extra plate would fill the remaining corner. This plate also holds something very simple, such as [*umeboshi*] plums preserved in red perilla leaves, boiled kidney beans, pickled scallions, minute fish or shrimps boiled down dry in soy sauce, a pat of baked miso, shavings of dry bonito boiled in a mixture of soy and *mirin*.” An illustration (line drawing) shows such an individual meal tray, with chopsticks resting on the rim of the tray (p. 59-60).

“Soy [sauce] is usually sold in wooden kegs as it does not change [spoil] with time; but the poor buy it in half-pint bottles” (p. 68).

The midday meal is very simple. But the “evening repast is the principal meal of the day... fresh fish is more frequently served than at noon. The fish may be boiled in a mixture of *mirin* and soy, be put into a soup made with an infusion of dried bonito shavings, be roasted on the iron netting with a sprinkling of salt or repeated coatings of soy, or be taken raw in thin slices [*as sashimi*]. This raw fish is a peculiarly Japanese dish” (p. 70).

Note: In Japan, almost everything is done in an orderly way, followed by nearly everyone. There are rules (often unwritten) for how to do almost everything.

Chapter 6, “Food,” states: “Sea-weeds are also in great demand. Of these the principal are the *konbu* (*Laminaria*

japonica), which is largely exported into China, and the laver [*Porphyra tenera*], which is obtained in this sheets [*nor*] and taken with soy alone or with rice rolled into it." Yellow chrysanthemum flowers are also used as food, "either fried with a coating of *kuzu* (*pueraria Thunbergiana*) or boiled in brine and pressed" (p. 72).

Eels are eaten, with bamboo skewers passed through them; "they are roasted over a fire, being from time to time dipped in a gravy [sauce] of *mirin* and soy. Tokyo is especially noted for eels served this way." Sun-dried cuttlefish, which are flat and hard, "are cut into slices which are roasted and dipped in soy" (p. 73).

"As we do not use a knife and fork at table, all fowls have to be cut up before they are served... The commonest method with the domestic fowl and duck is to boil them in small slices in a shallow pan with bits of onion in a gravy [sauce] of soy, *mirin*, and sugar." "It is only of recent years that we have begun to eat beef and pork; but we have in Tokyo a large number of shops where they are sold." One kind of shop is "a sort of restaurant where beef is served in the same manner as the domestic fowl and duck above mentioned" (p. 74).

"Though cooking is mostly done at home, no small quantity of small quantity of prepared food is bought for the meals. The most important of such food is the bean-curd [tofu]. For this the soy bean is soaked in water, ground, steamed, and strained; and the liquid is allowed to coagulate by the addition of brine [*nigari*] and then pressed in a square box with a cotton-cloth bottom until the water has been drawn off, leaving behind a soft white curd. This curd is cut into small slices and put into soup in the morning; it is sometimes thrown into hot water, and as soon as it is warmed [as *yudofu*], dipped into a mixture of soy and *mirin* and eaten. It is also fried. Indeed, the bean-curd shares with the *tai* [sea-bream] the distinction of having a special treatise dealing with a hundred ways of dressing [cooking / serving] it" (p. 74).

"As there is no dessert at a Japanese meal, fruits are commonly eaten at odd hours, especially by children." Apples are grown mostly in Yezo [Hokkaido], "the most northerly of the larger islands" (p. 75).

A common dish for the beverage [a light lunch eaten between meals] is the (*soba*) or buckwheat noodles. *Soba* "is dipped before eating, into an infusion of bonito shavings flavoured with a little soy and *mirin*, to which small bits of onion [*negi*] and Cayenne pepper have been added" (p. 77).

Another inexpensive food "is a kind of cracknel [*senbei*] made by baking and dipping small disks of rice or wheaten flour in soy" (p. 78).

"The bulk of confectionery is made of rice, red beans [*azuki*], millet or sugar. Glutinous rice is steamed, pounded in a wooden mortar into a pasty consistency, and left to cool" [to become *mochi*]. The red bean is boiled, pounded, strained and mixed with sugar to make "red bean jam" [*an*],

which "is the most important ingredient of Japanese sweetmeats..." "Starch extracted from the root of the *kuzu* (*pueraria Thunbergiana*) is also much employed in confectionery." "By steaming a mixture of red beans, sugar, wheat, and *kuzu*, we get a sweet dark-red cake, which is almost as popular as the sponge-cake" (p. 80).

Inouye, who lived 1862-1929, lived to witness the Meiji period end and westernization begin. A scholar, journalist, translator and Japanese diplomat, he served at Japanese embassies in Belgium and the United States. Returning to Japan in 1918, he devoted the remaining years of his life to compiling English-Japanese and Japanese-English dictionaries.

Note: This book comes in an elegant, traditional "folding case" (*chitsu*), consisting of five stiff pieces of paperboard, covered with cloth, and held in place by two ivory-looking pegs (each 3 cm long), each of which slips into a cloth sleeve. This folding case performs much the same function as a Western slipcase. Address: Tokyo, Japan.

451. Lafar, Franz. 1910. Technical mycology: The utilization of micro-organisms in the arts and manufactures. Vol. I. Schizomycetic fermentation. Translated from the German by Charles T.C. Salter. London: Charles Griffin & Co. xvi + 312 p. Introduction by Dr. Emil Chr. Hansen (Principal of the Carlsberg Laboratory, Copenhagen). Illust. (90 figs). Index is in Vol. II. 23 cm. [Eng]

• **Summary:** This first volume discusses bacterial ("schizomycetic") fermentations. Richly illustrated, it also includes accurate historical background on many subjects. An extensive bibliography for both this volume and volume II appears at the back of volume II (p. 417-518).

The Preface, by Emil Chr. Hansen of Copenhagen, states (p. vi): "Within the last two decades the study of Microbiology has made gigantic strides, both in the pathological and technical branches of the subject; and just as investigations into the Physiology of the higher plants gave the first impetus to the establishment of Agricultural Experiment Stations in all countries, so, in like manner, have the Physiology of Fermentation and Technical Bacteriology called into existence, within the last few years, a number of Stations and Laboratories for the development of those branches of industry where micro-organisms play an important part." The first three chapters, comprising the introduction, give an interesting early history of the discovery of fermentation. Their contents: 1. The theory of spontaneous generation: Definition, discovery of fermentative organisms, Needham's demonstration in favour of 'Generatio Aequivoca', Spallanzani's experiments, Franz Schultze's experiment, foundation of the science of antiseptics by Schwann, labours of Schröder and Dusch, Pasteur's examination of the theory, Béchamp's microzome theory, spontaneous generation only unproven, not impossible. 2. Theories of fermentation: The alchemists–

Stahl's theory of fermentation, Gay-Lussac's opinion, Cagniard-Latour's vitalistic theory, Th. Schwann's researches, Fr. Kützing's general theory, Liebig's decomposition theory, Pasteur's theory. Nägeli's physico-molecular theory, the enzymes and M. Traube's ferment theory, general definition of fermentation, so-called spontaneous fermentation of sweet fruits, decompositions effected by light and air.

In Chapter 31, titled "The fermentation of cheese and allied decompositions" (p. 243-52) are sections on "Pure culture ferments" (p. 246-47) and "Natto and miso" (p. 247-48; each a kind of "vegetable cheese"). The latter section also discusses the Soja bean, Fr. Haberlandt, koji, shoyu (called shojou, soy or shoyu), tofu and nukamiso. Reports by H.C. Prinsen-Geerligs "on the preparation (by the aid of fungoid ferments) of other dishes from soja beans in Chinese cookery, such as Taohu or bean-cheese [tofu], the sauce Tao-yu, &c."

In Chapter 33, titled "The fixation of free nitrogen by bacteria" (p. 259-71) are sections on "The discovery of leguminous nodules" (p. 261-62; Malpighi, Boussingault, Hellriegel), "Formation and functions of the nodules" (p. 262-64; Lachmann, Frank, Woronin, Hellriegel, Wilfarth), "The nodule bacteria" (p. 264-66; organized albuminoids, *Bacillus radicicola*), and "The bacteroids" (p. 266-69). Concerning bacteroids: "The first successful, artificial production of nodules by the aid of pure cultures was made by A. Prazmowski. This worker, in view of the absence of the sporogenic faculty in these organisms, changed the name of *Bacillus radicicola*, bestowed on them by Beyerinck, into *Bacterium radicicola*."

Note 3. This is the earliest English-language document seen (March 2003) that uses the word "bacteroids" (or "bacteroid") in connection with root nodules on plants.

Note 4. This is the earliest English-language document seen (Feb. 2004) that uses the word "Taohu" to refer to Chinese-style tofu. Address: Prof. of Fermentation-Physiology and Bacteriology, Imperial Technical High School, Vienna.

452. Lafar, Franz. 1910. Technical mycology: The utilization of microorganisms in the arts and manufactures. Vol. II. Eumycetic fermentation. Part II. Translated from the German by Charles T.C. Salter. London: Charles Griffin & Co. ix + p. 191-748. Illust. Index. 23 cm. [3240* ref. Eng] • **Summary:** An extensive bibliography on mycology and fermentation (3,240 references) for both this volume and volume I appears at the back of this volume (p. 561-695). The first chapter in this volume is Chapter 49, titled Mineral Foodstuffs (p. 191-202).

Chapter 55, titled "Classification of the families Saccharomycetaceae and Schizosaccharomycetaceae" is on p. 270-295. Section XVII (starting p. 456) is titled "The enzymes and the enzyme actions of yeast." It begins with

Chapter 53, on "Alcoholase," by Dr. Rudolf Rapp, which starts with an historical introduction. Page 506 mentions the "Amylo process."

Chapter 56, by Prof. Dr. Carl Wehmer, titled "Morphology and subdivision of the family Aspergillaceae" discusses (p. 296-346): Eighteen illustrations of *Aspergillus conidiospores* (p. 300-19). "*Aspergillus Oryzae* (Ahlburg) Cohn (= *Eurotium Oryzae* Ahlburg). This species is of practical importance as a saccharification fungus, and has been cultivated for centuries in Japan for the preparation of the rice mash for Saké, as well as for the production of Soja sauce and miso." It was first identified (as *Eurotium oryzae*) by Ahlburg in 1876, and was renamed *Aspergillus oryzae* by Cohn in 1883, though a full morphological description was not given until 1895 (by Wehmer) (p. 308). *Aspergillus Wentii* (Wehmer), which is used in Java to make Tao-Yu (Chinese-style soy sauce). It appears spontaneously on the boiled Soja beans that have been covered with *Hibiscus* leaves, as described by Wehmer in 1896 (p. 311).

Chapter 57, also by Prof. C. Wehmer, titled "Chemical activity of the Aspergillaceae," discusses (p. 350-74): Saccharification of starch, Takamine's research using *Aspergillus* to make diastase (Taka-diastase) and its efficiency compared with similar enzymes of different origins, koji extract which contains amylase and other enzymes, use of *A. oryzae* in the preparation of rice-wine, Soya [shoyu], and Miso (p. 352).

This volume also discusses: The degradation of proteids and their derivatives, protease (p. 369-70). Film-forming surface yeasts and their accompanying phenomena, *Mycoderma* (p. 411-15). Invertase (p. 516). Other enzymes discussed in this chapter include maltase, melibiase, lactase, trehalase, raffinase, and amylase. Address: Prof. of Fermentation-Physiology and Bacteriology, Imperial Technical High School, Vienna.

453. Li, Yu-ying. 1910. Ta tou: Le soja [The soybean]. Paris: Societe Biologique de l'Extreme Orient. 66 p. Illust. 28 cm. [Chi]

• **Summary:** This remarkable work, written entirely in Chinese, was the first of Li's major works on soybeans and soyfoods. Published in Paris, it was written in Chinese and meant to be read by young people in China interested in coming to Paris to study or in helping Li with research on Chinese soybean varieties. An expanded and revised version was published into French the next year (1911).

Contents: Soybeans: 1. Introduction. 2. Names and varieties (colors, sizes, and shapes) of soybeans. 3. Where soybeans are produced and their history. 4. The place of soybeans in the hierarchy of plants (taxonomy). 5. Nutritional composition of soybeans. 6. Characteristics of soybeans (physiological, morphological, etc.). 7. Food uses of soybeans (incl. tables comparing the price of tofu with various meats, and the various sicknesses associated with

eating different types of meat). 8. Equipment used in making soyfood products (a photo shows the equipment in Li's modern soymilk and tofu plant near Paris; p. 37), and compares soymilk with cow's milk. A large soybean utilization diagram in Chinese (p. 44) shows all the products that can be made from soybeans using the wet process (from soymilk) or the dry process (from flour). Note: This is the earliest document seen (July 2002) that contains a diagram of this type.

9. Value of soybeans in agriculture (incl. fertilizer use).

10. Conclusion. Appendixes: (1) About the *Société biologique de l'Extrême Orient* (Far-East Biological Society). (2) Membership form for the Far-East Biological Society (Paris): Date, name, A.K.A., Address, Occupation or subject of study, Place of birth. Please enclose 2 yuan membership fee (p. A6). (3) Bibliography of publications on soybeans by the Society of the Far East (p. A7-8). (4) Special announcement concerning soybean research (p. A9).

Illustrations (line drawings) show: (1) Comparison of shapes and colors of 7 different colors of soybeans (p. 5). (2) Five views of soybean pods with beans, incl. outside of pod, inside of both halves when open, with beans in one half, the two cotyledons of a single soybean (p. 11). (3) Soybean plant with pods (p. 12). Photos show: (1) The cellular components and layers of soybeans and hyacinth beans (p. 22, 23). (2) The interior and equipment in Li's soymilk and tofu plant on the outskirts of Paris (p. 37). (3) Microscopic views of soymilk (*doujiang*) and a liquid resembling soymilk made from soy flour (p. 38).

Tables show: (1) Size range (length, width, and thickness; maximum, average, and minimum) of 7 colors of soybeans: yellow bean, green skin bean, green bean, dark bean {"black" or "crow" bean}, black bean, red bean, spotted bean (p. 4). (2) Composition of four parts of a soybean plant: Comparison, water, protein, oil, carbohydrates, ash (p. 18). (3) Comparison of oil and protein content of 5 colors of soybeans (red, black, green, white, yellow) from various countries and regions: China, Japan, Southeast Asia, Russia, Hungary, and France (p. 19). (4) Composition of soybeans, hyacinth beans, and wheat (p. 21). (6) Comparison of the price of tofu with that of various meats (p. 29). (7) Ash content of soybeans, hyacinth beans, duck, uncooked rice, cabbage, egg, beef, chicken, lamb, pork, carp, wheat flour (p. 31). (8) Carbohydrate content of uncooked rice, wheat flour, hyacinth bean, soybean (p. 32). (9) Weight of products containing 100 gm of protein: Soybeans, tofu (somewhat firm), hyacinth bean, uncooked rice, bread, cooked rice, vegetables (p. 32).

Publications listed in the Bibliography (p. A7-8): *Ta tou—The soybean* (this book; published 1909). *Bean curd—20 centuries of great craftsmanship around the world* (1908). *Soycrafting—China's manufacturing specialty* (1908). *The Paris Bean Curd Company* (1908, illustrated).

An outline of the agricultural societies of France (1908).

Note: the above publications concern industrial matters.

A description of herbs (Chinese medicinal plants etc.) (1909). *TB [Tuberculosis] and its cure* (1909). Note: the above publications concern medicinal herb and health matters.

The benefits of soyfoods (1909). *Smoking and its relationship to health, economics and industry* (1909). Note: the above publications concern industrial and health matters.

Special announcement concerning soybean research (p. A9): "Gentlemen—Many of us in this society are researching the benefits of the soybean. It may be considered as China's greatest resource. We have already published a number of specialized reports. These have been made available to you. In view of the fact that there are so many varieties of soybean in China and that the regions of cultivation are so extensive, we must rely upon you, our colleagues, in all parts of the country to go into the field and collect data for us. Only then will we be able to complete our research into every variety of Chinese soybean. If we should receive your kind consent, we beg you to be so good as to send the soybean varieties to the Peking postal address of this Society (address is given). We are interested only in soybeans (see pages 1-6 of this book) and need one or two cattles (0.5-1.0 kg) of each. Once our research into the benefits and properties of these beans is complete, we will submit a further report to this Society, in order to repay your goodwill. If you would please advise us of the cost of the beans and the postal charges, we will make the appropriate refunds. We will also send you a copy of this book as a modest token of our gratitude. Enclosed please find an explanatory document. Please take the trouble to complete this and send it together with the beans.

"The Paris/Far-East Biological Research Society"

On page A-10 is a form to be used when submitting the Chinese soybean varieties.

454. Sawyer, E.R. 1910. *Studies in agriculture. Series 2. The soya bean.* Div. of Agriculture and Forestry, Natal, South Africa. 33 p. Reprinted from the Natal Mercury. [10 ref]

• **Summary:** Contents: 1. The agricultural romance. 2. The commercial aspect. 3. The adaptability of the bean. 4. The cultivation of the crop. 5. Soya bean oil. 6. A food for man. 7. A stock food and fertiliser (the cake is widely used as an agricultural fertiliser in the Far East). A photo (opposite contents page) shows two men standing in a crop of soy beans at the Central Experiment Farm, Cedara, 1908-09.

Concerning "Soya bean oil": "In the Far East it is largely employed for edible purposes; it is suitable for cooking, for a salad oil, and as a component in such butter substitutes as margarine. In the 'Mark Lane Gazette' for Jan. 20, 1910, it is stated that one third of the frying oil used in London

kitchens now comes from the soya bean, instead of from cotton seed as heretofore” (p. 21).

Illustrations on unnumbered pages show: (1) A typical soya bean plant. (2) Botanical characters of soya bean, with close-ups of vegetative parts, floral parts, and fruit. (3) Seeds and pods of 7 varieties of soya beans. (4) Soya bean seedlings, with roots. (5) Roots of soya bean plant, with nodules (by Blanchard). (6) Curing frame for harvesting soya beans. Address: Director, Div. of Agriculture, Natal, Durban, South Africa.

455. Shaw, Norman. 1911. The soya bean of Manchuria. *Shanghai, Statistical Department, Inspectorate General of Customs. China Imperial Maritime Customs. II. Special Series No. 31. 32 p.* Also published by P.S. King & Son, 2 Great Smith St., Westminster, London SW, England. [6 ref. Eng]

• **Summary:** Contents: Introductory. Varieties. The plant. Soil and climate. Cultivation. Soil infestation. Yield. Uses of the soya bean: In the Far East: Bean sauce or soy (called shoyu in Japan [whence the name “soya”] and *chiang-yu* in China), the Chinese paste *chiang* (incl. *ta chiang* {great, made with yellow soybeans} and *hsiao chiang* {small, made with soybeans and maize}), tofu (incl. firm tofu {*tou-fu kan-tzu*}, tofu curds {*tou-fu nao*, curded with calcium sulphate instead of brine}, curd skin or yuba {*tou-fu p'i*}, layers of tofu pressed in cloth [pressed tofu sheets] {*ch'ien-chang tou-fu*}, and “frozen curd” {*tung tou-fu*, tofu that is frozen then dried}), bean flour, bean refuse {okara}, bean oil for food or industrial uses. Beancake and its uses. Uses in the Western world (beancake in Europe, and bean oil in Europe). The bean oil and cake industry in Manchuria. Trade development (statistics on exports from Newchwang have been kept since 1864). Beginnings of the European trade. Bean oil and cake production in South Manchuria. Chief sources of supply. Map references. Supplementary note.

Appendixes: 1. Table showing values (in Haikwan taels) per picul of [soya] beans, beancake, and bean oil at Newchwang, 1864-1909. 2. Graph showing monthly values (in silver yen) at Dairen of beans, bean oil, and beancake, 1907-10. 3. Table showing estimated [soya] bean production of Manchuria in normal years, compiled by the South Manchuria Railway Co. in 1909. 4. Estimates of [soya] bean production of Manchuria for the last 5 years by province and territory, compiled by the South Manchuria Railway Company in 1909: Fengtien province 1,092,350 tons. Kirin province 626,500 tons. Heilungkiang province 280,250 tons. Grand total for all Manchuria: 1,999,100 tons. Estimated soya bean production in Manchuria has increased from 600,000 tons in 1906 to a peak of 1,500,000 tons in 1908, to 1,400,000 tons in 1910. Percentage contributed by various colors of soya bean in 1910: Yellow 80.1%, green 9.4%, white-eye 3.8%, black-eye 3.2%, and black 3.4%. 5.

Table showing total export of [soya] beans and bean products from Manchuria, 1909. For export of soya beans: Dairen 51% of total, Suifenhö [Suifenhö] 25%, Newchwang 23%. For export of bean cake: Newchwang 50%, Dairen 44%, Antung 2%. For export of oil: Newchwang 75%, Dairen 21%, Harbin 1%. The writer frequently refers to Sir Alexander Hosie’s book on Manchuria (1901, 1904).

The introduction begins: “It is only in the last three years that soya beans have become important in intercontinental commerce, and their rapid emergence from obscurity has, indeed, been one of the most remarkable commercial events of recent times. The circumstance that ‘the rise of a great export trade in beans is that fact that overshadows all others,... the soya bean thus taking at a bound a position equal to that of tea in the list of exports and, with the addition of beancake, even challenging the position of silk at the top of the list’”* (Footnote: * = “Statistical Secretary’s Report on the Foreign Trade of China in 1909”).

The “bean district *par excellence* is the upland country beyond Moukden [Mukden] where the hills... are overlaid with wind-deposited soil...”

“Cultivation: In Manchuria the beans are produced almost entirely by hand methods. The plough, which is drawn by quaintly mixed teams of oxen, mules, and donkeys, has only one handle and a rough steel-tipped cutter. The seed is sown by hand, on top of the drills, in April, and is covered by hand. A heavy hoe is used for a good deal of the turning and breaking. When the plant appears the earth is heaped up round it, so that the roots may derive the maximum of nourishment from the soil.”

“The harvest takes place in September, and the pods are usually harvested before they are quite ripe, as otherwise they are liable to burst on drying, a loss of seed being thus occasioned. The plants are pulled up by hand or cut with a straight-bladed sickle in Manchuria, and collected into small heaps in order to facilitate drying, and, when dry, the seed is separated by means of a cylindrical stone roller having longitudinal cuts on its surface, which is dragged over the plants by a mule as they lie on the threshing-floor. After this primitive threshing operation has been completed, the beans are winnowed in the usual Chinese method—that is, by throwing them against the wind. The only manure used is a compost of stable manure and earth, which is often taken from the miry pools formed in the roads—the despair of the carter but a boon to the farmer. In countries where chemical manures are used, it is only necessary to apply potash and phosphoric acid where they are lacking, for nitrogenous manure is unnecessary, owing to the property which the soya bean possesses, in common with other leguminous plants, of obtaining nitrogen from the air by means of colonies of bacteria.”

Yield: In 1867 the Rev. A. Williamson, who travelled in the upper Sungari district at the time and who appears to

have been a very close observer, estimated a maximum yield of 2,000 lb., or 15 piculs, to the acre.

The Chinese paste *chiang* is not the same as the Japanese paste miso. *Chiang* “is made by farmers and eaten with fish, meat, and vegetables, while the more expensive Chinese soy [sauce] is only made by wealthy families and restaurant keepers and is not consumed by the very poor. There are two kinds of *chiang*: *ta* (great) and *hsiao* (small).” Describes in detail how each is made. Great *chiang* is made from yellow soybeans, salt, and water. Small *chiang* contains a small amount of maize (p. 7).

Industrial uses of bean oil: (1) As an illuminant, where it has not been superseded by kerosene oil. One advantage is that “no lamp is needed to hold it, the wick being inserted into the basin or plate containing the oil.” (2) As a lubricant, bean oil is used to a very considerable extent in north China and Manchuria “for greasing axles and parts of native machinery” (p. 8-9).

In China, bean oil “is used as a substitute for lard, in cooking. Although it is inferior to rapeseed and sesamum oils for this purpose, these oils cannot compete with it in point of price... In spite of its unpleasant characteristic odour and unpalatability, the poorer classes in China consume it in its crude state, but among the rich it is boiled and allowed to stand until it as become clarified” (p. 8). In Europe “Refined bean oil may be used as a salad dressing in place of other oils (but, owing to its unpleasant odour, is usually mixed with an oil of animal origin or with rapeseed oil), or in the manufacture of margarine, when a greater percentage of soya oil than of copra oil is allowed” (p. 10).

Traditional methods of pressing out the oil yield only about half of that present in the seed (9% of the weight of the beans); the rest is left in the cake, and this distracts very much from its fertilizing value. “By gasoline extraction the beans give up practically all their oil, which, as refined by this process, is a clear, pure liquid, hardly resembling the muddy, dark oil produced in the old way” (p. 14).

Photos on unnumbered pages show: (1) Seven varieties of soya beans: Large black, small black, large flat black, small flat black, two green, and two yellow. (2) Soybean root nodules. (3) A massive granite roller for crushing beans. (4) “Steaming vat with grating on which [soya] beans are placed in gunny bags during the steaming process. (5) Native bean press, showing cakes in receptacle and log wedges driven in to press out the oil. (6) Modern bean press [hand turned screw?] set up in bean mill. (7) Oil-motor and crusher. (8) Modern crushing machinery. (9) Piles of beans in sacks awaiting loading onto trains at Changchun. (10) Color fold-out map titled [soya] “Bean districts of Manchuria.” A schematic diagram (in the form of a rhombus / diamond) shows the probable relationships of the different groups of soya beans based on their color. A beautiful map, approximately 17 by 22 inches, is attached between page 26 and page 27. “Wuchang” [not Wochan] is in the area labeled

“Yellow Beans” in the map. Other labeled growing areas on the map include “Grasslands,” “White eye,” “Black beans” [soy], “Maize” and “Green beans.” The major railways, rivers, roads, and towns / cities (with their Chinese characters) are shown. The major soybean markets (underlined) are Fenghwa / Maimaikai, Kungchuling, Changtufu, Tungkiangtze, Sinminfu, Tienchwangtai, Newchwang, Kaiyüan, Tiehling, Mafengkow, Moukden, Takushan, Antung, Harbin, and Shwangcheng.

Shaw finished writing this yellow book on 31 December 1910.

Note 1. This is the earliest document seen (July 2000) that mentions the South Manchuria Railway Company in connection with soybeans. This company was run by Japan. According to the *Encyclopedia Nipponica* (vol. 22, at “Minami”), the South Manchuria Railway Company (*Minami Manshu Tetsudo K.K.*) was established in 1905 based on the Portsmouth Treaty ending the Russo-Japanese War; Japan took over the rights to the railway from Russia. The company started to actually run the railway in 1907.

Note 2. This is the earliest English-language document seen (Feb. 2004) that uses the term “frozen curd” to refer to dried-frozen tofu.

Note 3. This is one of the earliest English-language documents seen (Sept. 2006) that repeatedly uses the word “bean” (not preceded by the word “soya”) to refer to the soya bean.

Note 4. This is the earliest English-language document seen (Oct. 2008) that uses the term “toufu p’i” to refer to yuba. Address: 4th Asst., Custom House, Dairen.

• **Summary:** Contents. Introduction. The plant: origin and history, species and varieties, culture, and production: USA, Japan, Manchuria, France, England, China, Korea, Indochina (it is cultivated for the needs of the population in Cochin China {especially in the provinces of Chaudoc and Baria}, Annam, Tonkin, Cambodia), Formosa, Java, India, Africa. The soybean—a food plant: The plant, the seed, large table showing many analyses from many countries of the chemical composition of many soybean seed varieties.

Introduction to food products made from soybeans in East Asia. Shoyu [soy sauce] (and koji). Miso. Natto. Tao-yu. Tao-tjiung (doujiang, from China). Tuong (from Annam). Tofu. Li Yu-ying. Table showing composition of powdered soymilk, fresh tofu, and soy flour.

The soybean—an oilseed plant. The soybean as an oilseed in the Far East. Table showing exports of soybean cake and oil from various Manchurian and Chinese ports in 1908 and 1909. The soybean as an oilseed in Europe and the United

States. Table showing imports of soybeans to various British ports in 1909 and 1910 (the leading port by far is Hull, followed in 1909 by Liverpool, London, Bristol Channel, Scotland, and Other ports {Rochester, etc.}). Table showing exports of soy oil from Great Britain in 1910: To Germany, Austria, Australia, USA, Belgium, Denmark, Egypt, France, Holland, Italy, the Indies (*Indes*), Norway, Russia, Sweden, other, total (115,372 barrels, each weighing 175 kg). Discussion of soy oil and cake in most of the above countries.

Trade in soybean seeds: Mitsui Bussan, Manchuria, England, China, Japan. Soybean cake.

Soy oil: Physical and chemical properties. Applications and uses as food and in industry: Margarine, for illumination, soaps, as a drying oil, paints and varnishes, linoleum, artificial rubber. An extensive bibliography is at the end of the last article in the series.

Note: This is the earliest document seen concerning the cultivation of soybeans in Cambodia. This document contains the earliest date seen for the cultivation of soybeans in Cambodia (April 1911). Earlier documents imply that soybeans were being cultivated in Cambodia by 1900, and it is highly likely that they were being cultivated for at least a century before that time. Address: Ingénieur-chimiste E.C.I.L., France.

• **Summary:** The author's advisors were Prof. Dr. H. Matthes, and Prof. Dr. Haussner. Contents: Introduction: Nomenclature, history in Asia and Europe (Kaempfer, Haberlandt), taxonomy, chemical composition, Maggi and shoyu, miso, tofu, soy bread for diabetics, coffee substitute, soy oil in China and Japan, in England and Germany, use in soaps and as a substitute for linseed oil, constants (such as iodine number), fatty acids, the work of Prof. Matthes. Experimental part.

In Japan and China, two fermented products are made from soybeans: Shoyu or bean sauce (*Bohnensauce*) and miso. Shoyu is enjoyed with almost all foods as a seasoning, and for quite some time has been exported in abundance to England and America, where it is used in the manufacture of English and American sauces. Shoyu is even used in the well-known Maggi seasoning. With respect to its nutritional

value and stimulating effect (on the appetite), shoyu sauce (*Shoyu-Sauce*) is somewhat comparable to meat extract. For the preparation of shoyu sauce, milled wheat, soybeans broken into large pieces then cooked until half soft, water, and table salt are combined in specific proportions and allowed to ferment in large vats. The fermentation lasts anywhere from 8 months up to 5 years.

The preparation of miso seems similar to that of shoyu except that barley or rice are used [instead of wheat]

Moreover, in Japan, a type of raw cheese, so-called "bean cheese" (*Bohnenkäse*), is made from soybeans (*Soja*); in Japan it is called tofu (p. 8). (p. 8).

Biography: The author was born on 20 March 1884, in Halberstadt, the son of a chemist, who was later the director of a sugar factory. Address: Halberstadt, Germany.

459. Krauss, F.G. 1911. Leguminous crops for Hawaii. *Hawaii Agric. Exp. Station, Bulletin* No. 23. 31 p. Sept. 20. See p. 23-27, 30.

• **Summary:** "Soy bean (*Glycine hispida*): While possessing most of the good qualities common to other leguminous forage plants, the great diversity of type to be found in the soy bean adapts it to many uses and conditions unsuited to other legumes."

"Among its most important uses is that for culinary purposes especially in the manufacture of the Japanese products (soy and miso). These products are imported into Hawaii from Japan in large quantities, but their manufacture is being rapidly extended in Hawaii. This has created quite a demand for the bean locally. At present two and one-half million pounds of the bean are being imported into Hawaii annually. The average cost is about \$3 per hundred pounds landed in Honolulu and the beans sell for \$3.25 to \$3.40 per hundred pounds. The Japanese coffee growers in the Kona district in Hawaii have been growing the bean as an intercrop for years. The total production is said to be about 200,000 pounds per annum. It will thus be seen that the immediate local demand is very far from being supplied at present."

Note 1. This is the earliest document seen (Jan. 2005) that gives soybean production or area statistics for part or all of the United States (Hawaii).

"The yield of seed obtained by the station from small experimental plantings ranges from 600 to 1,000 pounds per acre for the dwarf early maturing varieties, and about twice that amount from the medium late and medium tall sorts."

"The following list has been selected from about 100 varieties tested by the station. It is believed to include the best sorts for each of the several purposes for which the soy bean is especially recommended. In the case of culinary varieties, both quality and yield of seed have been considered. The soy and miso manufacturers demand a large, hard, light colored seed, with a thin skin, and the writer is indebted to Mr. N. Yamakami, manager of the

Hawaiian Soy Co., for his assistance in selecting varieties according to these qualities.

“Under Group I has been collected the best culinary varieties. These are usually found among the dwarf, early maturing sorts, qualities which make them well suited for intercultures, short rotations, and catch crops. Group II contains the heaviest seeding sorts irrespective of their culinary qualities. These varieties are especially well suited for growing as grain for cattle feeding. Group III contains the rankest growing sorts. These supply the maximum yields of both forage and grain, which makes them especially valuable for fodder and green manuring.” Two photos show two types of soy bean plants: (Fig. 1) Three dwarf types (culinary varieties). (Fig. 2) Three intermediate types (general purpose varieties). These are accompanied by a list of the soybean names in the 3 groups with SPI numbers and basic characteristics. The six culinary varieties in Group I include Hollybrook, Manhattan, Swan, Elton, and Acme. The four culinary and grain varieties in Group II include Acme, Edward (“Mr. Yamakami, of the Hawaiian Soy Co., pronounces this the largest seeded yellow soybean he has ever seen and considers it a very desirable variety for the production of miso and other Japanese food products”), Ito San, and Ruralnook. The two forage varieties in Group III (tall, rank-growing, and best suited for green manuring) are Riceland and Barchet.

Another photo (Plate VIII) shows “Seeds of leguminous plants described in this bulletin, natural size—including three colors and sizes of soy beans.

Note 2. This is the earliest English-language document seen (June 2005) that uses the word “intercrop” (or “intercropped” or “intercropping”) in connection with soybeans.

460. Barrett, O.W. 1911. Rice ally crops. *Philippine Agricultural Review* 4(11):592-98. Nov. See p. 594-96. [1 ref]

• **Summary:** The section titled “Soybeans” (p. 594-96) begins: “Probably every tourist who has visited any of the cities of Japan or China has noticed in the markets these peculiar blocks of a grayish white, jelly-like substance and wondered whether they were really good to eat, but comparatively few have ever tried there the three or four varieties of vegetable ‘cheese’ prepared from the soybean*.”

*Footnote: A 3/4 page footnote, extracted from USDA Farmers’ Bulletin No. 58 by Langworthy, discusses five preparations commonly made in Japan from the soybean: natto, tofu or bean cheese (eaten in the fresh state or frozen), miso, yuba, and shoyu.

“Experts in threpsology, the new science of nutrition, seem to be in accord on the fact that in dietary matters two kinds of food are at least four times as good as one... Recently the European food experts have realized the high nutritious value of the soybean and a factory has been

established near Paris [by Li Yu-ying] for the manufacture of various food products from this wonderful seed.”

“Now is the time for the Philippine Agriculturist to take up soybean culture in earnest, and to develop it in the same way, even if not to the same degree, as our neighbors across the way have been doing for centuries. The fact that there are practically no seeds of this valuable crop at the present in the Philippines is a sad commentary on the progressiveness of the Philippine farmer; but it is never too late to learn” (p. 596). Address: Chief of the Div. of Exp. Stations, Philippines.

461. Giles, Lionel. comp. 1911. An alphabetical index to the Chinese Encyclopedia *Ch'in ting ku chin t'u shu chi ch'êng* (of 1726). London: British Museum. xx + 102 p. 32 cm.

• **Summary:** The author was born in 1875. The Introduction contains a lengthy discussion of Chinese encyclopedias (*lei-shu*), starting with the *Erh Ya*, dating from the 5th century B.C.; the 19 classes or categories of the *Erh Ya* are given. The next great encyclopedia was the *T'ai P'ing Yü Lan*, produced in 1,000 *chüan* or books A.D. 987. Unlike Western encyclopedias, these contain “no original articles on any subject, but consist simply of grouped extracts from previously existing literature.” “Another even more famous compilation of the same class is the *Wen Hsien T'ung K'ao*, by Ma Tuan-lin, published in 1319.”

For soybean chiang, see p. xxvii and p. 299-300. Address: Asst. in the Dep. of Oriental Printed Books and Manuscripts at the British Museum.

462. Hutchison, Robert. 1911. Food and the principles of dietetics. 3rd ed. New York, NY: William Wood and Co. viii-xx + 615 p. See p. 234-36, 496. Illust. Index. 22 cm. [100+* ref]

• **Summary:** Contains exactly the same information about soy and related products as the 1906 edition, in the same chapters, except it is on slightly different pages: See p. 234-37, and the section on diabetes, which has a subsection on “Diabetic breads” (p. 496-97). Robert Hutchison was born in 1871. Address: M.D. Edinburgh, F.R.C.P., Physician to the London Hospital [London].

463. Jingu Shicho. 1911. Koji ruien [Encyclopedia of early references to things Japanese]. Tokyo: Koten Kokyusho. Revised editions publ. in 1931 and 1971 by Yoshiko Bunkan; 51 volumes. Key volumes are Inshoku (#39) and Shokubutsu (#50). [50+ ref. Jap]

• **Summary:** Koji means “ancient things” or “origins.” Rui means “varieties” or “description.” En means “dictionary.” This is one of the best books for doing historical research on Japanese culture, including foods. The book is divided into 30 major subject areas, such as Food and Drink. Within that section all basic Japanese foods and beverages are listed. After each one is listed many of the important early works

in which that food is mentioned, with a quote of what is said. Furigana are used liberally to assist with pronunciations of hard-to-pronounce early document names and terms. Compiled from 1896 to 1914, volume 1 of the original edition is dated 1908. The works cited are from ancient times to 1867. The final volume is an index to the whole.

The volume on Food and Drink is titled *Inshoku-bu* (Vol. 51). Whole soybeans, p. 229-35. Black soybeans, p. 235-36. Green soybeans (*ao-daizu*), p. 236-37. Green vegetable soybeans (*edamame*), p. 239-40. Soybean cultivation, p. 240-42. Soybean utilization, p. 243-47. Daizu-ko Mochi, p. 555. Amazake, p. 695-97. Shirozake, p. 697-98. Hishio (Chiang), p. 836-40. Shoyu, p. 840-49. Miso, p. 851-68. Kuki (soy nuggets), p. 868-71. Natto, p. 871-74. Tofu (incl. Dengaku), p. 984-1005. Yuba, p. 995-96.

464. Kagawa (T.) Company 1911. Importers and distributors (Ad). In: Nichibei Shinbun-sha. 1911. *Nichi-Bei Nenkan [Japanese-American Yearbook. No. 7]*. p. C-64. [Eng; Jap]
 • **Summary:** Ad (full page). About ¼ of this ad is given in English. This company imports and sells various goods. These include (in Japanese) shoyu [soy sauce], shiro miso [sweet white miso], and aka miso [red miso]. And (in English) “Japanese refined sake (Aramakiya-Masamune), rice, miso, sauce, canned goods, dried fish, vegetables & pickles.” Address: 442 Merchant St., San Francisco, California. Phone: Kearny 1263.

465. Lafar, Franz. 1911. Technical mycology: The utilization of microorganisms in the arts and manufactures. Vol. II. Eumycetic fermentation. Translated from the German by Charles T.C. Salter. London: Charles Griffin & Co. ix + 558 p. Illust. Index. 23 cm. [3240* ref. Eng]
 • **Summary:** An extensive bibliography (3,240 references) for both this volume and volume I appears at the back of this volume (p. 417-518). The opening chapter begins: “Already in the first volume (sect. 22) the algae and the fungi were arranged in a single group. that of the Thallophytes, in contradistinction to all other plants, the latter being classed in the group Cormophytes.” The latter group has “an articulation of the body of the individual organism into leaf and stem.”

Chapter 43, titled “Morphology and systematology of the Mucors (p. 48+) contains sections on “Subdivision of the Mucor family” (p. 49-51), “The genus Mucor” (p. 51-53; The genus was established by Micheli as far back as 1729. It contains *Mucor Rouxii* and *Mucor mucedo*), and “Rizopeæ” (p. 53-56). An illustration (p. 55) shows *Rhizopus nigricans* (After Brefeld). *Rhizopus nigricans* is the best and longest known member of this family. In 1818 it was described by Ehrenberg under the name *Mucor stolonifer*, which is still used by several workers.” “The name *Rhizopus oryzae* has been given by Went and Prinsen

Geerligs (I.) to a fungus discovered by them in Ragi (sect. 241), the sporangia and spore of which organism are considerably smaller than those of *R. nigricans*.

Chapter 44, is titled “Fermentation by Mucors” (p. 57-62). Chapter 45, titled “The use of Mucoreæ in the spirit industry” (p. 63-71) has three sections: Sect. 240. “*Mucor rouxii* and other species of Amylomycetes” (p. 63-67) states: “For the preparation of rice spirit there is produced in China, Cochin China, and neighboring countries, an article known as Chinese Yeast, and put on the market in the form of flat mealy balls, about the size of a half-crown. Its preparation, composition, and application were first described in 1892 by E. Calmette (I.), whose reports were extended and supplemented by C. Eijkman (II.) in 1894.” The method of preparation is given. More important than its bacteria are “the yeast cells, which must be regarded as the exciting agents of the alcoholic fermentation; and certain Mucors, which affect the saccharification of the starch. Of the last-named organisms, which concern us here., Calmette isolated a species which, in honour of his teacher and colleague, E. Roux, he named *Amylomyces Rouxii*.” Two illustrations show this organism, which produces a “diastatic enzyme” (p. 65). The so-called amylo process and the work of Colette and Boidin with β -*Amylomyces* and α -*Amylomyces* in this process are discussed (p. 65-66).

Sect. 241 titled “Ragi and tapej” [tapé or tapeh] (p. 67-69) states that “Tapej... is prepared from rice by the aid of a secondary auxiliary material, which the Malay natives of Java term Ragi or Raggi, and the Chinese settlers call Peh-Khah.” A.G. Vorderman (1893) describes the preparation of Ragi. According to Eijkman (1894) Tapej, which is also called Tsao, is prepared with the aid of Ragi, by boiling husked Mochigome rice (*Oryza glutinosa* [*Oryza sativa glutinosa*], known as “Ketan” in Java) in water until soft. The flora of Ragi and Tapej comprises three groups of microorganisms; bacteria, budding fungi, and fungi belonging to the family *Mucoraceæ*.

Sect. 242, titled “The so-called Amylomyces process,” (p. 69-71), or Amylo process for short, states that “this is the name given to the process for the industrial utilisation of the diastatic activity of *Mucor Rouxii* and several allied fungi. A company, the ‘*Société d’Amylo*, was founded by A. Collette and A. Bodin (I, 1897), who also, in 1897, took out in the name of this company a German patent for a ‘process for producing alcohol from starchy materials, by means of aseptic saccharification and fermentation with *Mucedineæ*,...’”

Fernbach (II, 1899) has given a lucid description of the practical performance of this process in the patentees’ works, the maize distillery at Seclin near Lille, France. This description is summarized. “An English patent for the mechanico-technological modification of the process was also taken out by Collette and Boidin (III.) in 1898.” See also two other 1897 English patents by Collette and Boidin

No. 19858 and No. 1155. “The reader interested in this matter will find more precise data in the review published by M. Delbrück (III, 1899). The chief advantage of the *Amylomyces* process is the abolition of the expensive additions of malt requisite in the older method of saccharification, the amount formerly needed being up to 15 per cent. in the case of maize, and 2 to 3 per cent. in the case of potatoes. With regard to the yield furnished by the *Amylomyces* process, it is stated that in the Seclin works, 37.8 litres of absolute alcohol are obtained per 100 kilos. of maize containing 57.5 p, a yield corresponding to 66.2 litres per 100 kilos of starch. Owing to the large amount of mycelial hyphae, the residue filters easily.” “Finally it should be said that, since 1898, the aforesaid patentees have replaced *Mucor (Amylomyces) Rouxii* by another species, namely, so-called β -*Amylomyces*, or *Mucor* β . This organism is capable of dealing with more highly concentrated mashes than the other, and enables a charge of 25,000 kilos. of maize to be mashed to 1000 hl (22,000 gallons) of goods. per cent. of starch

Page 213 states that *Pichia farinosa* (Synonym: *Saccharomyces farinosus* Lindner, a film yeast) has been found by K. Saito (II, 1905, *Botanical Magazine*, Tokyo) in Japanese Soja sauce.

Chapter 51 discusses the genus *Aspergillus* (p. 228-31) with many fine illustrations, including conidiophores, conidia, ascospores, different stages of *A. oryzae* and *A. glaucus*. Page 228-29 state: “*Aspergillus Wentii*, Wehmer, was observed by Went in the preparation of Tao Yu (see vol. I, p. 248) according to the method practised in Java, and was described by Wehmer (XIX.) in 1896. It appears spontaneously on the boiled Soja beans that have been covered with *Hibiscus* leaves, and affects a loosening and disintegration of the firm tissue of the bean. The species forms a pale coffee-coloured, dense mold vegetation (Fig. 167).”

In Chapter 57 titled “Chemical activity of the Aspergillaceæ,” by Prof. Dr. C. Wehmer, page 270 states: “Two species, *Asp. oryzae* and *Asp. Wentii* are reported as able to grow through the substance of soft-boiled rice and Soja beans...” The “enzyme mixture from *Asp. oryzae* (the so-called ‘Takadiastase’)” is also mentioned.

Chapter 62 titled “The Monillæ and Oidia,” by Dr. H. Wichmann mentions *Monilia javanica* (occurring in association with others in Ragi, p. 333)., “*Monilia sitophila* (Mont.), Saccardo, is said by Went (IV.; reference missing) to be used by the natives in West Java in the preparation of a sweetmeat known as ‘ontjom’ composed of the seeds of the ground-nut or earth-nut (*Arachis hypogæa*). The ground-nuts, which are thoroughly permeated by the fungus, are made up in the form of small, orange-colored cakes, the surface of which is covered with the conidia, whilst the interior is both chemically altered and loosened in structure by the mycelium.” Sect. 315 (p. 336-39) is titled “Oidium

lactis and allied species.” Also discusses *Oidium lupuli*, Matthews and Lott (p. 338). Address: Prof. of Fermentation-Physiology and Bacteriology, Imperial Technical High School, Vienna.

466. Nichibei Shinbun-sha (Nichi-Bei Shinbunsha). 1911. Nichi-Bei nenkan [Japanese-American yearbook. No. 7]. 650 Ellis St., San Francisco, California. 647 p. Reprinted in 2001-02 in Tokyo by Nihon Tosho Senta. Series: Nikkei Imin Shiryôshû. Dai 5-kai [Collected Documents on Japanese Emigration. No. 5]. [Jap; eng]

• **Summary:** This book is read and numbered from “back to front” compared with typical English books; it is mostly (99%) in Japanese. The English-language title page reads: *The Japanese American Year Book*.

The book is divided into 12 parts, each numbered separately. Contents: (1) Front matter, incl. 1 ad (5 p.) (2) Table of contents (6 p.). (3) Map of California agriculture (fold out, in Japanese, 1 p.). (4) Black and white photos on unnumbered pages (12 p., front and back). (5) Ads (p. A-1 to A-18). (6) Front part of Nichibei Nenkan No. 7 (p. 1-200), including general information about America, Japanese in America, U.S. and agricultural census data, etc. (7) Ads (12 p.). (8) Nichibei Nenkan continued (p. 108 p., incl. original printing and publication dates and data on last page). (9) Ads (B-1 to B-66). (10) Directory of Japanese businesses and other organizations in the USA (p. 1-152, as of 1910 Oct. 1) (11) Ads (C-1 to C66). (12) New printing and publication dates (2002 Feb. 25), data, and ISBN (1 p.).

This year book focuses on Japanese in California. In early 1909, the California legislature “approved an appropriation of \$10,000 to be utilized for investigating the conditions of the Japanese in that state. The duty of directing the investigation naturally devolved upon the State Commissioner of Labor Statistics (*Rôdôkyoku-cho*), Mr. John D. Mackenzie. The work was begun on April 15, 1909, with the appointment of 9 special agents,” 8 men and one woman, all white Americans. “There were no Japanese or other aliens employed in any capacity. To this force were added for the office work two expert statisticians and two stenographers.” In early 1910, Mr. Mackenzie submitted to the governor of California (Gov. Gillette) a 78-page report (K. Kawakami 1912, p. 343-44).

Basic information about how the survey was conducted, its scope, and reaction to it is given on pages 27-28, 36-45, 47, 61-62, 150-51 of this year book. The text is written in the Japanese of the day, which included old-fashioned characters, sentence structure, and grammar—and is thus difficult for modern Japanese to read or translate. The surveyors went to every part of California where Japanese believed to live, and eventually surveyed an estimated 95% of the Japanese in California.

Most Japanese welcomed the surveyors and responded accurately and in detail on forms which were printed in both

Japanese and English. A very high percentage of the forms were returned by mail to the survey headquarters. The Japanese were also asked to fill out more specialized forms such as business license, payment of taxes, no. of children in school (incl. where and in what grades), occupation, employment, land use, etc. This newspaper (*Nichibei Nenkan*) obtained much information from this survey, and (apparently) from another census begun on 15 April 1910 (or is it 1909?); this one took one year and 5 days—finishing the research in April 1911, at which point compilation began. A key reason for the census was the strong anti-Japanese feeling in California, stirred up by leaders of the labor movement. The survey praised Japanese in California.

A table of U.S. farm crops (p. 54, near the front of this book) shows that in 1911 some 2,785,516 bushels of soybeans were produced in the entire USA worth \$7,767,702. Note: What is the source of these statistics? These are very early statistics on soybean production in the United States—earlier than any known USDA statistics.

A table of U.S. imports and exports from Japan (p. 74) shows that \$109,316 worth of miso and shoyu were imported; they were considered dutiable items, with a 40% duty levied on each (part 2, p. 23).

The Directory shows Japanese companies making soyfoods in California, Utah, Colorado, New York City, Washington state, and Oregon. Address: San Francisco, California.

467. Noda Iwachi. 1911. [Hishigi miso] (Ad). In: *Nichibei Shinbun-sha*. 1911. *Nichi-Bei Nenkan [Japanese-American Yearbook*. No. 7]. p. C-41. [Jap]

• **Summary:** Ad (¼ page). This company sells various goods including shiro miso [sweet white miso], Kinzanji miso, and Hishigi Miso, made by Matsuda in Kobe, Japan, and imported to the USA. Only the address in California is given in English. Address: P.O. Box 114, Mountain View, California. Phone: San Jose 5417 R 1.

468. Okurasho Shuzeikyoku. 1911. *Naikokuzei isan 53* [Domestic tax; treasure from the past 53]. Tokyo: Tokyozeimu Kantoku-kyoku. 1 vol. 23 cm. [Jap]*

• **Summary:** This is a Japanese government publication. Note: This is the 3rd earliest book in WorldCat / OCLC that has miso as a subject or title word. Address: Japan.

469. Sawyer, E.R. 1911. *Cedara memoirs on South African Agriculture*. Vol. II. Containing reports on feeding crops and livestock experiments in South Africa. Natal/Pietermaritzburg, South Africa. 371 p. See p. 131, 177, 183-218. Report X. The Legumes as Grain and Oil Crops: Soya Beans. [15 ref]

• **Summary:** A superb, early overview of soybeans and their uses in South Africa and England. Contents: An agricultural romance. Early experiments with the soya bean [in Europe

and South Africa]. Export trade from Manchuria. The course of prices. Consumption in Great Britain. Botanical character. The commercial aspect. History of the oil market during 1910. The adaptability of the bean. Germination of seed. Climatic requirements. Classification of varieties. Variety tests at Cedara: Black seeded (Buckshot and Nuttall tested in 1906), brown seeded, green seeded (Samarow and Guelph), yellow seeded (Mammoth and Hollybrook, planted Nov. 1908). The cultivation of the crop. Times of planting. Distances of planting. Manure experiments at Cedara. Nodule formation and composition of the plant. Harvesting soya beans. Storage of seed. Comparative yields of grain. Soya bean oil. Uses of the oil [for cooking, paint, soap, etc.]. Soya beans as human food (incl. natto, tofu, miso, shoyu). Digestion experiments [on humans in Japan]. Milling experiments. Soya beans as stock food and fertiliser. Live-stock experiments. Soya cake as fertiliser. Soya bean as green forage.

Concerning industrial utilization: The Vice-Consul-General at Yokohama writes that “the annual value of fertilisers employed in this country (Japan) amounts on an average to about £8,000,000 represented in equal proportions by artificial fertilisers and soya bean cake.” The year 1908 was exceptional, however, in that the value of the bean cake was 3.5 times that of the artificial fertilizers.

During 1910 the linseed oil reached its highest price in 50 years. Soya oil, now produced in large amounts in Manchuria after the Russo-Japanese war took its place. It was used in making paints, candles, and soaps. “Soya bean oil has been found eminently suitable for the soap-makers’ purpose on account of its low content of free fatty acids and of unsaponifiable matter or impurities. In the latter respect it has been shown superior to any of the other oils or fats of commerce, whether of vegetable or animal origin. The glycerine, which is secured as a by-product of soap and candle manufacture, is subsequently distilled for explosives, such as dynamite, blasting gelatine, cordite, etc., and for various purposes in the arts, for filling gas-metres, for the manufacture of inks, printers’ rollers, etc. The residue from the distillation of glycerine is used in the manufacture of boot blacking.”

Concerning germination (p. 191): At Cedara: “The first crop was planted in 1903, and a maximum yield of 920 lb. of grain obtained per acre. In the following season, characterized by unfavourable weather conditions, the heaviest yield on a new series of plots was 780 lb. per acre. A third season’s trial on the same ground, however, witnessed a marked increase with local seed, the heaviest crop totalling 1,252 lb. of grain.”

Concerning soybean cultivation in British colonies in Africa (p. 192): “Early last summer the late Sir Alfred Jones shipped to West Africa soya beans for experimental purposes, and it was subsequently reported by Mr. A.G. Turner, who was entrusted with a special mission to

encourage this culture on the west coast, that the soya bean could be successfully cultivated throughout the Gambia, Sierra Leone, Nigeria, and the Gold Coast Colony, but that the yield to the first experiment had only been from six to eight bushels per acre, there having been a considerable loss owing to faulty germination. Later results, however, were phenomenally successful.”

Concerning soybean trials in South Africa (p. 192-93): “During the past year favourable results have been received from Umzinto [from Messrs. Archibald and Co., 52 miles south of Durban; elevation 300 feet], Nel’s Rust Estate [64 miles north of Durban; elevation 2,710 feet], Nottingham Road [elevation 4,807 feet], and Naval Hill [Mr. J.R.T. Clouston of Garrow planted a few acres in 1908], Colenso [elevation 3,200 feet], and Cedara [82 miles by rail from Durban; elevation 3,540 feet; a number of varieties were tested in 1906] in Natal; and from Barberton and Pretoria in the Transvaal.”

Concerning comparative yields (p. 203): “As a grain producer, the soya bean compares very favourably with other leguminous crops, such as field beans, peas, etc. At Cedara no other legume has produced, with chemical manures only, so heavy a yield of seed; and not other legume, except the lupine, has showed itself so much to be depended upon as a grain producer.” “Land that will produce 10 muids of maize per acre should yield at least six muids of beans after the second year’s cultivation,…”

Concerning human digestion experiments (p. 212): “The general opinion of Japanese investigators, and others familiar with Oriental dietetics, is that the protein in articles of food prepared from soya beans is in a very available form, and that these preparations are most valuable foods.”

Five photos show various men standing in a crop of soya beans and in some of the variety plots at Cedara (1909-11). An illustration (line drawing) shows a curing frame for soya beans.

Tables show: (1) Yields in lb. per acre of soya beans sown at different times, during 3 years (19-3-04 to 1905-06). For each year is given: Date of sowing, date of harvest, yield of grain and straw, and manures used (superphosphate, gypsum, and potash). The variety tested was Henderson’s Early Green (Guelph) (p. 198). (2) Results of manure experiments with soya bean (Early Green) in lb. per acre. Sown 4 Nov. 1904. Harvested 13 March 1905. Increasing yields “may be attributed to the association of nitro-bacteria, the benefits of constant cultivation, and the accumulation of humus and residues of fertilizers” (p. 200). (3) Feeding value of soya bean cakes for manure, based on experiments by Messrs. Lever Bros., Port Sunlight, Liverpool (p. 215).

Note 1. This is the earliest document seen (June 2004) that mentions the use of a soy oil derivative (glycerine) in printing inks.

Note 2. This is the earliest document seen (May 2004) that mentions the use of soy oil to make candles (one of two

documents).

Note 3. This is the earliest document seen (June 2004) concerning the use of soy oil (or the glycerine derived from it) to make explosives.

Note 4. The next section of this report (p. 218+) is about ground nuts (*Arachis hypogoea*). Address: Director, Div. of Agriculture and Forestry, Natal; Principal, Cedara School of Agriculture; Formerly Asst. Secretary of Agriculture, Southern Rhodesia.

470. Stuart, George A. 1911. Chinese materia medica: Vegetable kingdom. Soy [Chinese miso and soy sauce] (Document part). Shanghai, China: American Presbyterian Mission Press. 558 p. See p. 195-96. 23 cm.

• **Summary:** “Soy.—(Chinese character given) (Chiang). Common names are (Chinese characters given) (Chiang-yu [soy sauce]) and (Chinese characters given) (Shih-yu [soy nugget sauce]). Li Shih-chen says that the Chinese name indicates the power of this substance to counteract the poison which may exist in food. Several forms of soy exist, such as flour soy, made of wheat or barley flour; sweet soy, of similar composition, but varying slightly in the method of manufacture; and bean soy, made of various kinds of beans, but more particularly of the *Hispidia* [sic, *Hispidia*] bean. One method of manufacture is as follows: ‘Take of *Hispidia* beans three quarts, and boil in water. Mix with twenty-four cattles of flour and allow to ferment. To every ten cattles of the mixture take of salt eight cattles, of well water forty cattles; mix and allow to stand until it is ripe.’

“Several other methods of manufacture are given in the *Pêntsao*, differing in various respects from this, but the method here given will suffice to illustrate the mode of manufacture. Soy is a black, thin liquid, having an agreeable saltish flavor, and frothing up of a yellow color when even slightly shaken. It is the universal sauce of the Chinese and Japanese, and is largely exported to India and Europe as a convenient menstruum for other flavoring substances used as condiments. In China it is both made in large quantities by shops and in smaller quantities by domestic manufacture. It is considered to provoke the appetite and to correct any injurious qualities of food. It is laxative, cooling, and antidotal to various poisons, according to Chinese estimation. It is often applied to burns, scalds, eczema, and leprosy sores. Its use is considered beneficial in threatened abortion and the hematuria of pregnancy.

“Two other kinds of soy are mentioned in the *Pêntsao*, each made from the seeds of different species of elm tree. One is called (Yü-jên-chiang) and the other (Wu-i-chiang) (Chinese characters given before each term). In regard to these two terms for elm, see the article on *Ulmus*. Both these kinds of soy are considered to be laxative, diuretic, and anthelmintic [expelling or destroying parasitic worms esp. of the intestine]. They should not be used to excess, as

they are considered to have some deleterious properties.”
Address: Rev., M.D., Shanghai, China.

471. Ward, Artemas 1911. The grocer's encyclopedia—
Encyclopedia of foods and beverages. New York, NY:
Published by the author. 748 p. Illust. (color). 29 cm.

• **Summary:** Soy-related entries: Bean (p. 49-54): “The bean of European history is the Broad or Windsor variety,...” “The principal beans of United States cultivation are the Kidney and Lima, both of them believed to be native of South America. The Kidney Bean is the Haricot of the French and in Great Britain is sometimes called the French bean.” The many varieties can be classified into “tough podded” and edible podded.” “The ‘tough podded’ class produces the bulk of the dried beans of commerce, variously known as ‘Kidney Beans,’ ‘Navy Beans,’ ‘Marrow Beans,’ ‘Black Beans,’ ‘Turtle Beans,’ etc., in many colors, shapes and sizes.” “‘Flageolets’ are cultivated with special regard to the consumption of the fresh seeds or beans.” To the “edible podded” class of kidney beans belong Wax or Butter Beans, the Cranberry Bean or Red Speckled Bean, String Beans, Snap Beans, French Beans. “Pea Beans are the Cowpeas of the agriculturist.” “Among numerous other ‘special’ varieties are the Soy Bean (which see), Asparagus Bean, Frijole, Lab-lab (or Egyptian Kidney), Red Bean, and Scarlet Runner.” Asparagus Beans are known as *Tou Kok* by Chinese gardeners in California.

“Catsup, Catchup, Ketchup: a word derived from the name of an East Indian pickle, which was formerly applied specifically to the boiled spiced juice from salted mushrooms, but is now freely attached to various sauces (sold both bottled and in bulk) which consists of the pulp—bottled, strained and seasoned—of various fruits, as tomatoes, green walnuts, etc.” Note: At “Catchup” and “Ketchup” we are told to see “Catsup.”

Locksoy ([Lock Soy], p. 346): “Rice boiled into a paste and drawn into threads, imported from China. It is used to thicken soups.”

Nuts (p. 412-13): A table shows the nutritional composition of all major American nuts, including almonds, chincapin [chinquapin] or water chestnut, chufa (earth almond), cocoanut, peanut, and peanut butter. “Many special nut foods, such as malted nuts, meat substitutes, etc., have been devised and extensively advertised by manufacturers for general dietetic use and for the special needs of vegetarians and fruitarians. It is said that some of these products contain soy beans, but apparently the peanut is very important in their composition.

Sauces (p. 552-53): In bottled sauces, vinegar is the most common liquid ingredient. “Commercial sauces of the Worcestershire kind, if of good quality, generally have Soy (which see) as their chief character ingredient. A typical formula of Worcestershire-style includes, in addition to Vinegar and Soy, a considerable percentage of lime juice,

onions and tamarinds and small quantities of garlic, fish (as anchovies or pickled herrings), red chilies and spices. The product, after cooking, is strained through fine hair sieves. Leicester Sauce resembles Worcestershire in general characteristics but is less pungent.”

Soy (p. 576): “A brown sauce, valuable to the commercial sauce market, made from the Soy Bean, a native of Southeastern Asia [sic] and widely grown in China and Japan. The beans are boiled, mixed with ground wheat or other grain, salt, etc., and allowed to ferment for a month or 6 months. The liquid is then strained off and clarified. Molasses is frequently added. In appearance it resembles Worcestershire Sauce, of which it is an important ingredient. It should not be too salt [salty] or too sweet, and although thick and syrupy, should be clear. When shaken in a bottle or glass it should, if it is genuine, leave a bright yellow film on the glass. Being a very desirable article, it is often counterfeited.”

Soy bean (p. 577): “Commercial and government circles, both in Europe and this country are devoting increased attention to the cultivation of the Soy Bean as a food product, as it contains a large percentage of protein and a fair amount of fat, thus resembling meat in general nutritive value. The cell-walls of the raw bean are very tough, but thorough cooking makes it readily digestible. Boiled with bacon and other fatty broths until soft and then seasoned, the result is a vegetable dish very pleasing to the average palate. If the beans are dry, a preliminary soaking to remove the skins is necessary.

“The Soy Bean is largely consumed in Japan, China and other parts of Asia as an adjunct to rice and other foods, taking the place of meat in the popular dietary. It is most popular in these countries in fermented form, the best known types being *Shoyu* or Soy Sauce; *Tofu*, a kind of cheese; *Miso*, Soy Bean ‘Milk’ [sic]; *Yuba*, the evaporated product of ‘Miso’ [sic], and *Matto* [sic, *Natto*], a product obtained by simple fermentation of the boiled beans. The various degrees and styles of fermentation serve the double purpose of rendering the beans more easily digestible and producing new flavors, just as by the fermentation of milk and cream we produce the different flavors of cheese.

“The plant is an annual, growing chiefly in bush form...” The different varieties are classified principally by the color of the beans: “Black, Yellow, White and Brown,... Types of all these four classes are grown to some extent in Germany, Austria, and Switzerland, and the first three also in this country, in North Carolina and other Southern States. Under favorable conditions a single plant may bear a hundred or more pods.

“Because of the fact that the beans contain little if any starch, they have been recommended as a desirable food for diabetics, and Soy Bean Bread and Soy Bean Meal are prepared for that purpose in Paris. The dried beans are also used in Switzerland and elsewhere as a coffee substitute.”

An illustration shows the top of a soy bean plant, with leaves, pods, and flowers.

Note 1. This book is full of fascinating information about the food system in the USA in 1911, with entries such as cold storage (first attempted in 1860, it has grown to extraordinary proportions), coloring matter (great improvements, no longer harmful), ice and refrigeration (ice manufacture dates from about 1870; today nearly 200 companies produce ice for general sale, mostly using the compressor and anhydrous ammonia). Dictionary of food names in five languages (English, French, German, Italian, and Swedish, p. 710-724) and a dictionary in English of "Culinary and bill-of-fare terms" (p. 741-45).

Note 2. The author, Artemas Ward, lived 1848-1925. His father was Henry Dana Ward (1797-1884), his grandfather was Thomas Walter Ward (1758-1835), and his great-grandfather was Artemas Ward (1727-1800), the first Commander-in-Chief of the colonial troops before the arrival of George Washington (a little-known Virginia planter) on 3 July 1775. Thereafter he served as second in command after Gen. Washington and was a Major General in the American Revolutionary War. Address: Formerly (from 1874) founder and editor of *The National Grocer*, 30 Union Square, New York.

Translated into French and expanded from the Chinese edition, published by la Société Biologique d'Extrême-Orient (1910). [151 ref. Fre]

• **Summary:** One of the earliest, most important, influential, creative, interesting, and carefully researched books ever written about soybeans and soyfoods. Its bibliography on soy was larger than any published prior to that time. It was first published as a series of eight articles in *Agriculture Pratique des Pays Chauds (Bulletin du Jardin Colonial)* from September 1911 to April 1912. Before being published as a book, it was revised slightly by adding a table of contents at the back, dividing the material into 5 parts with 19 chapters, and adding several photos (p. 16-17), a world map showing the distribution of soybean cultivation (p. 21), and an interesting 2-page table (p. 66-67).

Contents: The soybean: Origin and history. Part I: Soybean culture. 1. Species and varieties of soybeans: Botanical characteristics, species, varieties (Chinese, Japanese, Indian, Indochinese, Hawaiian, USA, European). 2. Needs of the soybean: Climatic, geographical area of the soybean by region worldwide, agrological/soil needs, fertilizers, soil preparation, the place of the soybean in crop rotations. 3. Soybean seeds: Study of seeds (by weight, by germination rate, selection of seeds), time of planting, plant spacing, depth of seeding, rate of seeding per hectare, method of seeding (broadcasting, in rows, in mounds). 4. The soybean during its vegetative stage: Germination, transplanting, types of care (e.g., second dressings), irrigation, flowering and fruiting, enemies of the soybean (e.g., insects). 5. Harvest of soybeans: Time for harvest (forage or grain), methods of harvesting (forage or grain; mechanical mower), threshing (use of machine), yields of soybeans (forage and grain in various countries, ratio of seeds harvested to straw is about 1 to 2, yield of nutrients). 6. Fixation of atmospheric nitrogen by soybeans, and improvement of the soil. 7. The soybean in mixed cultures and alternate rows: With corn, cowpeas, rice, sweet sorghum, or millet.

Part II: Chemical composition of the soybean. 1. Composition of the plant: Minerals in the leaves and total plant. 2. Study of the seed: Composition, chemical composition, microscopic comparisons, table of analyses by 28 previous researchers, albumins, sugars, starch, dextrin or dextrine, diastase, lipids, ash/minerals.

Part III: The soybean as human food and animal feed. 1. The soybean as feed for animals: Green forage and hay. 2. The soybean in human feeding: From the viewpoints of physiology, economy, and gastronomy. The role of soya in

special diets: Vegetarianism, remineralization, diabetic, and lactose intolerant.

Part IV: Food products based on soya. 1. Soymilk and its derivatives: Soymilk (Methods of manufacture, Chinese and modern at l'Usine de la Caséo-Sojaïne, nature and properties [physical and chemical] and composition of the milk, action of ferments and diastases (enzymes) on the milk, uses of the milk, the residue from the soy dairy [okara], condensed soymilk, powdered soymilk, fermented soymilk (kefir, yogurt, etc.)), tofu (called Caséo-Sojaïne, or fromage de soya; methods of production, coagulants, yield of tofu, storing tofu, composition and comparison with various meats, digestibility, culinary preparations made from tofu (smoked tofu, tofu pâté, tofu sausages)), Soy casein (food and industrial uses). 2. Soy flour and its derivatives: Soy flour, soy bread, wholemeal bread, other products based on soy flour (as biscuits and cakes for diabetic diets). 3. Soy oil and its by-products: Soy oil, physical and chemical properties, usage, residue of the oil mill: the cake, price, uses. 4. Use of the soybean as a legume: Whole soybeans (composition and digestibility), soy sprouts (*germes de soja*), green vegetable soybeans (*le soja frais*). 5. Fermented soy condiments: Solid condiments from Japan: Tokyo natto (*Le Tokio-Natto*) and Ping-Ming natto or tao-tche (*Le Ping-ming-Natto*; soy nuggets with salt, ginger, orange rind, etc. A similar product is made in China and called tao-tche). Paste condiments: Miso (four types and composition), tao-tjung (Chinese miso). Sauces: Shoyu (its production, varieties, properties, composition), chiang-yu (*tsiang-yeou*), ketjap [kechap, from Java], tuong (from Annam, with rice or corn), tao-yu (widely used in China and Japan, described by Prinsen Geerligts). 6. Confectionery products: Comparison with chestnuts, roasted soy flour to replace chocolate. 7. Soy coffee (with analysis by Kornauth). 8. Special fermented products: Kiu-tsee (a special commercial ferment from Canton described by Thiersant), fermented soymilks.

Part V: Industrial uses of soybeans. Oil based: soap, wax candles (*bougie*), and paint oils. Protein based: sojalithe or soy stone which corresponds to lactite, insulators for electrical apparatus, glue, etc. Conclusion. Addendum (*Complément*) to Part III, Chapter 1: Soybean straw and stems. Composition of various seeds, including soybeans. Soy flour. The cakes from oil mills. Soymilk and the cake from soy dairies (*tourteau de laiterie*, okara).

A very interesting table (p. 66-67, which does not appear in the original 8 articles) shows earlier nutritional analyses of the composition of soybeans by Steuf (from Hungary, Mongolia and China), Schroeder, Caplan, Pellet (from China, Hungary, Etampes), Muntz, Nikitin (black soybeans from Russia, 2 samples), Lipski [Lipskii] (yellow, from Russia), Giljaranski (yellow from Russia, China and Japan; black from China and Japan; green), König (*Hispida platycarpa* black, Tumida yellow, brown and black), Prinsen

(white from Java and China), Goessmann, Kellner, USDA, Chemiker Zeitung (white from Java and China, 29 Jan. 1896), Scuff (misomame; miso soybeans), Zulkovski (yellow from China, reddish brown from Mongolia), Institut Agr. de Vienne (Austria; yellow from Vienna, reddish brown from Tirol), Ecole Imp. et Roy d'Ag. Hong (yellow from Mongolia and China, reddish brown from China), Chez M. Olivier Lecq (from Moravia), Lechartier (Etampes and black), Joulie (yellow), Stingl and Morawski, Bloch (yellow, green, and black), Balland, Cavendish Evelyn Liardet (yellow, brown, green, black, and white), Jardin Colonial (Laos, Tonkin, China), Aufray (Tonkin, Yun-nan), Homes Laboratory (black from China, or white). Photos and illustrations are the same as those referenced in individual sections of the book, except for the following: A field of soybeans (p. 16). A soybean plant growing in Europe (p. 17). Color illustrations appear facing pages 12, 22, and 64. Address: Li is from Societe Biologique d'Extreme-Orient (Chine). Grandvoinet is from Ingenieur Agricole (G).

479. Aki Shokai (Aki Co., Inc. (The)). 1912. The Aki Co. (Ad). In: Nichibei Shinbun-sha. 1912. *Nichi-Bei Nenkan [Japanese-American Yearbook. No. 8]*. p. [C-41]. [Eng; jap]
 • **Summary:** Ad (full page). The top ¼ of this ad is given in English. This company sells various goods including (in Japanese) miso and shoyu [soy sauce]. The company also has a Fresno branch at 1505 Kern St., Fresno, California. An illustration shows the face of a Tengu, a long-nosed mythological creature or goblin. Mock Joya (1960, p. 523) states: "The Tengu is the most widely feared of traditional superhuman monsters. It is known to abduct young women, kidnap little children, and do other mischief but at the same time, much superhuman power of punishing the bad and helping the good is attributed to it." It is part bird and part human, and is able to fly at terrific speeds. "It is dressed in a costume similar to that worn by *yamabushi* or mountain Buddhist priests... All Tengu live in high wooded mountains, far from villages."

This ad also appears in the 1913 yearbook. Address: 1122-1130 4th St., Sacramento, California (P.O. Box 258).

480. Giles, Herbert Allen. 1912. A Chinese-English dictionary. 2nd ed., revised & enlarged. 2 vols. Shanghai, China: Kelly & Walsh, Ltd.; London: Bernard Quaritch. 33 x 26 cm. Reprinted in 1964, 1978. [4 ref. Eng; chi]
 • **Summary:** These two massive volumes, each weighing about 9½ lb, contain more than 1,800 pages and 13,848 Chinese characters. Contents of Vol. I: Part I. By the same author (25 books). Dedication. Preface. Extracts from

preface to first edition. Dialects (The romanized pronunciation of each character is given in Cantonese, Hakka, Foochow, Wênchow, Ningpo, Peking, Mid-China, Yangchow, and Ssuch'uan {Szechwan} dialects, as well as in Korean, Japanese, and Annamese, each being distinguished by its initial letter). Tables: Insignia of official rank, the family names, the Chinese dynasties, topographical, the calendar, miscellaneous (the Chinese digits, the Chinese decimal system). The 214 radicals. Radical index. Part II. A Chinese-English dictionary (p. 1-1711, in two volumes). Examples of soy-related characters:

Chiang (p. 149, No. 1220). "A soy made by mixing salt with bean flour. Sauce." Fourteen compounds using this character are given, including: Bean sauce, soy. Pickled bean curd. Bean sauce. Soy is of two kinds, the clear and the thick. Dry relishes. Soy [sauce] colour—a dark reddish drab. He won't use money for vinegar to buy soy.

Ch'ih (p. 249, No. 1996). "Salted fruits, etc., dried and used as relishes." Four compounds incl.: Salted beans. Soy, sauce.

Fu (p. 458, No. 3686). "Rotten; putrid; worthless." Eleven compounds and sayings include: Bean curd, see No. 11,417. Bean curd officials—a term of contempt applied to certain of the poorer classes of official servants who are compelled to feed largely on this cheap food. Also explained as flabby or unenergetic officials. A Mongol name for cheese. A kind of milk made from beans (milk + fu) [Note: Probably fermented tofu].

Huang (p. 635, No. 5124). Yellow. Compounds: Yellow beans.

Mao (p. 955, No. 7,679). "Hair, down, feather." But the word *Maodou* ("Hairy beans") = edamame does not appear here.

Ta (p. 1,294-96, No. 10,470). "Great." But the word "Great bean" = soybean does not appear here.

Tou (p. 1,412, No. 11,417). "Beans; pulse." See also No. 11,412. Thirty compounds, incl.: Bean-sprouts. Bean-curd. A cheap restaurant (a bean-curd restaurant). Like making bean curd—very tedious. A tongue like a knife, but a bean-curd heart (soft). Bean-cake. Bean oil. Big bean, black bean, or yellow bean = the soja or soya bean (*Glycine hispida*, Max.), used for making bean-curd, soy, oil, etc. Ground-nuts.

Yu (p. 1,661, No. 13,409). "Oil, fat, grease." 45 compounds incl. Oil, salt, soy, and vinegar = condiments generally. Sesamum-seed oil. Linseed. Wood oil. An oil factory. Oil dregs. But "bean-oil" = soybean oil does not appear here.

Note 1 (see p. vii): Other earlier important Chinese dictionaries are: Morrison (1819, English). Medhurst (1843, English). Williams (1874, American). Giles (1892, English). Giles lived 1845-1935.

Note 2. Unfortunately, the pronunciation of the compounds is not given (as in Mandarin). Address: Prof. of

Chinese, Univ. of Cambridge, Cambridge, England; and sometimes H.B.M. Consul at Ningpo.

• **Summary:** A summary of: Settimj, L. 1912. "Sopra una reazione cromatica caratteristica dell'olio di soja [On a chromatic or color reaction characteristic of soy oil]". *Annali del Laboratorio Chimico Centrale delle Gabelle (Rome)* 6:461-65. Note: This summary says that the author of the original article was "L. Settimi."

482. Hokubei Shokai. 1912. Hokubei Shokai (Ad). In: Nichibei Shinbun-sha. 1912. *Nichi-Bei Nenkan [Japanese-American Yearbook]*. No. 8]. p. C-11. [Jap]

• **Summary:** Ad (½ page). This company (an original manufacturer and importer, under special contracts) imports various goods including miso and shoyu. Only the address in California (1 line) is given in English. Address: 246 Jackson St., San Jose, California.

483. Kinokuniya Co. (The). 1912. The Kinokuniya Co. (Ad). In: Nichibei Shinbun-sha. 1912. *Nichi-Bei Nenkan [Japanese-American Yearbook]*. No. 8]. p. C-16. [Eng; jap]

• **Summary:** Ad (¼ page). The top ¼ of this ad is given in English. This company sells various goods including (in Japanese) miso and shoyu [soy sauce]. Address: 224 Jackson St., San Jose, California. Phone: San Jose 1276.

484. Nichibei Shinbun-sha (Nichi-Bei Shinbunsha). 1912. *Nichi-Bei nenkan [Japanese-American yearbook]*. No. 8]. 650 Ellis St., San Francisco, California. 652 p. Reprinted in 2001-02 in Tokyo by Nihon Tosho Senta. Series: Nikkei Imin Shiryôshû. Dai 5-kai [Collected Documents on Japanese Emigration. No. 5]. [Jap; eng]

• **Summary:** This book is read and numbered from "back to front" compared with typical English books; it is mostly (99%) in Japanese. The English-language title page reads: *The Japanese American Year Book*.

The book is divided into 14 parts, each numbered separately. Contents: (1) Table of contents (4 p.). (2) Ads (4 p.). (3) Maps (2 p.): Map of the United States. Map of California (1 p. each, in Japanese). (4) Graphs and charts on 4 unnumbered pages: (A) Bar graph: Population of Japanese living in the USA from 1869 to 1911 (some years missing before 1904). Three pie charts: (B) In which U.S. states do Japanese live. (C) Occupations of Japanese in USA. (D) Japanese in USA by gender. (E) Bar graph: Agricultural land use by Japanese by state. (F) Bar graphs of four things for 7 years. (5) Black and white photos on 16 unnumbered pages. (6) Advertisements (A-1 to A-18). (7) Front part (p.

1-150), including general information about America, Japanese in America, U.S. and agricultural census data, etc. (8) Ads from San Francisco. (9) Back part (p. 1-136). (10) Assorted ads (B-1 to B-66). Appendixes: (12) Table of contents of Directory of Japanese living in America (2 p.). Appendix 1. Japanese living in America, alphabetically by state, and within each state by city (p. 1-194). Appendix 2. Assorted California ads (p. C-1 to C-42).

(4A) Population of Japanese living in the USA from 1869 to 1911. 40 people in 1869, 55 in 1871, 95 in 1874, 270 in 1878, 420 in 1884, 500 in 1885, 1,200 in 1887, 2,300 in 1890, 6,000 in 1895, 35,000 in 1899, 53,761 in 1904, 61,034 in 1905, 75,534 in 1906, 89,575 in 1907, peak of 103,683 in 1908, 98,718 in 1909, 93,644 in 1911.

(4B, top pie chart) In which U.S. states do Japanese live: Total Japanese population in USA: 93,359. California 56,760. Washington 16,817. Colorado, Arizona, and New Mexico combined 5,083. Rocky Mountain region (Nevada, Utah, Idaho, Wyoming, Montana?) (*Sanchubu-gun*) 4,896. Oregon 3,795. Colorado 3,731. New York 2,178. Idaho 1,168. Utah 1,472 (see also p. 79).

(4C, lower left pie chart) Occupations of Japanese in USA: Total 76,000. Farm laborers 36,000. Domestic 8,000. Merchants and hotel workers 7,500. Farm owners (*Nogyo keiei-sha*) 5,000.

(4D, lower right pie chart) Japanese in USA by gender: Total 93,359. Adult men 76,378. Adult women 9,673 (so 7.9 men for each woman). Boys-American born 3,237. Girls-American born 3,195.

(5) How Japanese worked agricultural land in the USA (3 bar graphs) (5A) Far left graph: Too hard to read bottom of graph. (5B) Right graph: California. Colorado. Idaho. Texas. Washington. Utah. Oregon. Nebraska. New York. Florida. Other. (5C) 3rd graph (full page): Gives data from 1905 to 1911 for the following states: California, Colorado, Idaho, Texas, Washington, Utah, Oregon, Nebraska, New York, Florida, and Other. For each state gives the following: black bar = *genkin shakuchi* = rent the land; pay cash (most prevalent). White bar with wavy line = *buai kôsaku* = pay a percentage of the crop (#2 most prevalent). Dark diagonal lines = *ukeoi kôsaku* = a person asks you to cultivate and manage the land (#3 most prevalent). Light diagonal lines = *shoyû* = Cultivators owns the land (least prevalent).

In 1910, the value of miso and shoyu imported from Japan to San Francisco topped \$100,000. Also imports of soybean cakes (*daizu kasu*) from Manchuria increased rapidly (p. 75).

In 1910, the value of shoyu and pickles imported from Japan to Portland, Oregon, was \$11,094 (p. 77).

Basic information about how the survey was conducted, its scope, and reaction to it is given on pages 67, 73, 79-80, 90, 98-100, and 114 of this year book. The date on page 1 of the directory is Meiji 44 (1911), Oct. 1. On page 67 is a comparison of Japanese and American import and export

data—this data compiled by both countries. Pages 73 on show existing government forms that Japanese had filled out: Marriage certificate, birth certificate, divorce, military draft, type of business and business license, agricultural work details, visa, etc. These provided important basic information for the surveys of Japanese in California.

Pages 79, 80, and 90 contains data compiled by the *Nichibei* newspaper, perhaps a survey conducted by sending out forms, with follow-up by phone calls. The first Japanese laborers came into California in Meiji 2 (1869); A Dutchman named Snail brought a group of 40 Japanese workers. In Meiji 11 (1878) a census of Japanese in California was conducted. In Meiji 37 (1904) the first detailed research on Japanese in California was conducted.

The Directory shows Japanese companies making soyfoods in California, Utah, Oregon, and Washington. Address: San Francisco, California.

485. Okurasho Shuzeikyoku. 1912. Naikokuzei isan 55 [Domestic tax; treasure from the past 55]. Tokyo: Tokyozeimu Kantoku-kyoku. 161 p. 23 cm. [Jap]*
 • **Summary:** This is a Japanese government publication. Note: This is the 4th earliest book in WorldCat / OCLC that has miso as a subject or title word. Address: Japan.

486. Okurasho Shuzeikyoku. 1912. Naikokuzei isan 56 [Domestic tax; treasure from the past 56]. Tokyo: Tokyozeimu Kantoku-kyoku. 133 p. 23 cm. [Jap]*
 • **Summary:** This is a Japanese government publication. Address: Japan.

487. Pacific Trading Co., Inc. 1912. General importers and exporters (Ad). In: Nichibei Shinbun-sha. 1912. *Nichi-Bei Nenkan* [Japanese-American Yearbook. No. 8]. Unnumbered page near front. [Jap; Eng]
 • **Summary:** Ad (full page). The top 1/5 of this ad is given in English. This company imports various goods including (in Japanese) shoyu and miso. In English: “Rice, soy, canned goods, vegetable wax, dried vegetable, crockery, chilli pepper, dried ginger, etc.” “Cable address ‘PacTrad.’”

The company’s full-page ad near the front of the 1914 Yearbook (p. 1) shows company trademarks / logos for Kikkoman Shoyu and Higeta Shoyu. Address: 441-443 Clay St., San Francisco, California. Phone: Kearny 1263. Douglas 170. Home C 5456.

488. Settimj, L. 1912. Sopra una reazione cromatica caratteristica dell’olio di soja [On a chromatic reaction characteristic of soy oil]. *Annali del Laboratorio Chimico Centrale delle Gabelle (Rome)* 6:461-65. (Chem. Abst. 7:908). [Ita]
 • **Summary:** The soybean seed (*semi di soja*) is furnished by the plant *Soja hispida*, which is a member of the legume family. In Japan, since ancient times, the seeds of the

soybean have been used to make miso and shoyu. In the United States, England, and Germany the soybean is used mostly as a source of oil, of which it contains 13-19%. During the past year, soy oil in Italy (*dell’olio di soja in Italia*) has assumed a new importance; it is coming to be used mainly for the manufacture of soaps but also for edible use, mixed with the oil of other seeds and olive oil. The Settimi Test is a color test which has been proposed for use with vegetable oils, including soy oil. On shaking together a mixture of 5 c.c. of soya bean oil, 2 c.c. of CHCL₃, and 3 c.c. of a 1:50 aqueous solution of uranium nitrate, a distinctly yellow emulsion is obtained. This yellow color is permanent. With sesame (*sesamo*), cottonseed (*cotone*), peanut (*arachide*), rapeseed (*colza*) and maize (*maiz*) oil, a white emulsion results. Olive oil gives a greenish tint, sometimes also a yellowish tint like that of an oil mixed with a little soya oil.

Note 1. This article was summarized in *Chemische Umschau auf dem Gebiete der Fette, Oele, Wachse und Harze* (1913, p. 61), *Pharmazeutische Zentralhalle für Deutschland* (1913, vol. 54, p. 522), and *Year-Book of Pharmacy* (1913, p. 107).

Note 2. This is the earliest Italian-language document seen (Sept. 2006) that mentions soy oil, which it calls *olio di soja*.

Also discusses: Sesame oil, peanut oil, olive oil, corn oil, and colza oil. Address: Rome, Italy.

489. Winkler, Hubert. 1912. Botanisches Hilfsbuch fuer Pflanze, Kolonialbeamte, Tropenkaufleute und Forschungsreisende [Botanical guidebook for colonial settlers and officials, buyers of tropical goods, and explorers]. Wismar: Hinstorffsche Verlagsbuchhandlung. 322 p. See p. 240-41. [1 ref. Ger]
 Address: Privatdozent an der Universitaet Breslau [Germany].

490. *New York Times*. 1913. Latest customs rulings. Seaweed is not shellfish—Amasake assessed as miso. Jan. 28. p. 13.
 • **Summary:** “The Board of United States General Appraisers yesterday overruled the Asia Company, who contended that bottled seaweed could be duty free under the Tariff act of 1909 as shellfish. The commodity was assessed by the Collector at 40 per cent ad. valorem under Paragraph 252 as prepared vegetables.”

“Amasake, a Japanese beverage imported by Okada and Ischida [Ichida], was properly assessed at 40 per cent. ad valorem under Paragraph 252 of the present law as being a product similar to miso. Amasake is composed of rice yeast [koji], combined with boiled rice.”

Note 1. This is the earliest English-language document seen (April 2004) that uses the term “amasake” to refer to amazake.

Note 2. This is the earliest document seen (April 2004) showing amazake in the United States.

491. Granato, L. 1913. A soja [The soybean]. *Sao Paulo Secretaria de Agricultura, Comercio e Obras Pulicas. Boletim de Agricultura, Series 14. No. 3. p. 159-67. March. Series XIV. [Por]*

• **Summary:** Contents: Names of the soybean: Scientific and in various foreign countries. Botanical characteristics. Soybean cultivation: In Russia, France, Italy, Austria. Harvest and yield: In Italy, Hungary, France, in Brazil at the Agronomic Institute of Campinas (*instituto Agronomico de Campinas*) where Dutra reported yields of 2,200 to 2,300 liters/hectare. The soybean as a food: Nutritional composition and food value of the seeds of varieties analyzed by König, of varieties cultivated in 1899 at the Agronomic Institute of Campinas and analyzed by Mr. R. Bolliger. Soja as a forage crop. Uses of the soy bean (esp. Japan and China): Miso, tofu (a type of cheese {*queijo*} called *To-fu*), shoyu, koji, soy flour.

Three bar graphs (p. 165-66) compare the protein (*albuminoides*), oil and fat, and carbohydrate content of the soybean with those of other major foodstuffs (of both animal and vegetable origin, such as common beans {*feijao*}, beef, eggs, wheat, etc.). Soybeans have the highest content of protein, and of oil or fat, of all foods with which they are compared.

492. Takahashi, Teizô; Abe, Goro. 1913. Preliminary notes on the chemical composition of miso. *J. of the College of Agriculture, Tokyo Imperial University* 5(2):193-98. March. Published in 1908 in *Tokyo Kagaku Kaishi* 29(2). Feb. [5 ref. Eng]

• **Summary:** This article begins: “‘Miso’ is a food very common in Japan. The raw materials used in making it are soy beans, rice or barley, common salt, and water. In preparing ‘Miso,’ rice or barley is changed first into ‘Koji’...”

A full-page table compares the chemical composition of Hatsuchô-miso [Hatcho miso], Sendai-miso, and Inaka-miso, including amino acid content. “Assuming 37.5 grams to be the least quantity daily consumed per head and that 30 million out of the 50 millions of the whole population eat ‘miso’ every day, the annual consumption of ‘miso’ would amount to nearly 45 million kilograms.”

Note: This is the earliest document seen (March 2009) that mentions “Hatsuchô-miso” [Hatcho miso]—a type of miso made with soybean koji. Address: Japan.

493. Woodhouse, E.J.; Taylor, C. Somers. 1913. The varieties of soy beans found in Bengal, Bihar, and Orissa and their commercial possibilities. *India Department of Agriculture, Memoirs. Botanical Series* 5(3):103-76. March. 4 plates. Also published as a book in Calcutta by Thacker,

Spink & Co. and in London by W. Thacker & Co. 28 cm. [15 ref]

• **Summary:** Contents: 1. Introductory. 2. Nomenclature. 3. Varietal characters of soy beans: Habit, foliage, pubescence, flower (morphology, pollination, extent of natural crossing), pods, seeds (morphology), seeds (composition; black, yellow, and chocolate seeded varieties grown by the authors from seed obtained in 1909; the back varieties contained significantly more nitrogen/protein and less oil), maturity, diseases. 4. Description of types: *Kala Bhetmas, Safed Bhetmas, Lal Bhetmas, Barmeli Bhetmas, Nepali Bhetmas* (obtained from Kalimpong and tested at Sabour in 1911). 5. Distribution. 6. Cultivation. 7. Yield. 8. Price. 9. Uses: Food-stuff, bean sauce (soy, or shoyu), chiang or miso, tou-fu (tofu), soy beans as a green vegetable, oil (for use in England in soap-making, or in China “as an illuminant, as a substitute for lard in cooking, though it is inferior to rapeseed and sesamum oil for this purpose, as a lubricant for greasing cart axles, or for waterproofing cloth”), cake and flour. 10. General conclusions.

“In 1909 the survey work on the crops of Bengal was commenced, and in July of that year a number of trial plots of the chief pulse crops of the Province were sown for identification and field study. Among these were three samples of *Bhetmas*, of which one sample of black-seeded *Bhetmas*, received from the Settlement Officer, Bhagalpur, was found to be pure for seed characters... All the plots did well and were identified as varieties of the Soy Bean, but in October it became apparent that the black-seeded type differed from the other two in having darker bullate leaves and a more prostrate habit...”

“In 1910 the seed of the single plants which had been analysed was sown together with some samples obtained by Mr. A.C. Ghosh from the Kurseong bazar [bazaar]... a distinctly earlier black seeded form was obtained from a plot (E256 of 1910) grown from seed collected at the Bankipur Exhibition. The trial plots of the seed from Kurseong failed.”

“In 1911... the success of the plots of the acclimatized American varieties induced us to exchange seeds of the Bengal types with Mr. Piper, of the United States Plant Industry Bureau, who kindly supplied us with seed of the varieties, Barchet, Duggar, Haberlandt, Hollybrook, Mammoth, Pekin [Peking], Pingshu. Another attempt was made to cultivate at Sabour the varieties grown in the Sikkim Himalayas, and plots of the Nepali, Barmeli, black seed, greenish yellow seed and chocolate seed varieties were obtained from Mr. Goodwin, Superintendent of the Kalimpong Homes Farm, and grown successfully at Sabour” (p. 104-05). Note 1. This is the earliest document seen (Sept. 2004) that spells the soybean variety named “Peking” as “Pekin.” This spelling also appeared in Cuba in 1920 (3 documents), in Argentina in 1922, and in the United States in 1925 (in Alaska, see Georgeson 1925).

Concerning seed morphology (p. 114-15): The weight of 100 seeds in some of the American varieties such as Barchet, Pekin and Pingshu have remained approximately constant, whereas others, such as Duggar, Hollybrook and Mammoth have decreased in weight more or less considerably during the past season. The Nepali type has decreased in weight from 24.4 grams to 12.8 grams per 100 seeds. The variation in weight per 100 seeds in the case of varieties cultivated in new localities would appear to give a good indication of the adaptability of a variety to its new environment."

The authors record the results of a large number of selection experiments which they have carried out with a view to obtaining early-maturing types rich in oil, and also deal briefly with the cultivation and uses of soy beans.

Concerning uses (p. 138): "In Bengal, soy beans are used very little for food as they are said to be too heat producing. It is usually taken after frying over a heated sand bath as *bhunja*, but it is also heated, crushed, and then used as *dal*, and also as *larua* mixed with *gur*." In the "Soya Bean of Manchuria" (1911), Shaw states that soy beans can also be used to make bean sauce or shoyu, chiang or miso, and tou-fu (tofu). They can also be used to make oil, cake, and flour.

"General conclusions (p. 140): At the present time, Soy Beans are grown to a slight extent only in the Darjeeling hills and to no appreciable extent elsewhere although satisfactory yields have been obtained in the experiments conducted by the Agricultural Department in both these areas. We may ascribe the present unpopularity of the crop to the following reasons. For export the price offered in Calcutta is not yet sufficiently attractive; as a food-stuff it is more potent than the ordinary pulses to which the people are accustomed; as a crop for growth in the plains it has the disadvantage of occupying the land during two seasons, it may suffer from waterlogging during the rains, and requires plenty of moisture in October, and it harbours rats during the last two months of its growth. These objections do not appear to us by any means unsurmountable [insurmountable]... The use of Soy Beans for food could be extended if the educated classes once appreciate its value as an addition to a rice diet, and experiment with its preparation for food on the lines suggested."

"Its cultivation in the hills would probably be largely extended on the present lines as soon as the price reached a satisfactory figure. It only remains to say that our work is being continued on the lines indicated in this paper with a view to isolating early maturing types possessing a high yield of oil."

Contains many tables, mostly showing the composition of various black, yellow, and chocolate soy beans and the history of descendants of various singly selected plants. Black soy beans contain on average 6.72% nitrogen and 13.52% oil. Yellow soy beans contain 5.61% nitrogen and

16.99% oil. Note 2. Therefore black soy beans contain 19.8% more nitrogen [protein] and only 79.6% as much oil as yellow soy beans. Chocolate-colored soy beans contain 5.57% nitrogen (the least of all three types) and 17.13% oil (the most of all three types).

A table titled "Life periods of American varieties of Soy Beans grown at Sabour, 1911" (p. 124) gives information on eight varieties: Barchet, Duggar, Haberlandt, Hollybrook, Mammoth, Pekin, Pingshu, and Riceland. For example, Duggar: Origin: S.P.I. No. 17268C. Date of planting: July 12, 1911. Date of harvesting: Oct. 11. Life period at Sabour: 91 days. Life period in the U.S.A.: 110-120 days.

Another table titled "Yield of the types of soy beans found in Bengal, Bihar, and Orissa lists 8 varieties, and for each: Where grown, dates of sowing, area sown, approximate yield in lbs/acre, corresponding yield (on unmanured land) in mds., srs., and chtks. [mds. = maunds; 1 maund = 82.28 pounds or 37.32 kg; srs. = seers; 1 seer = 2.05 pounds; chtks. = chittaks or chittacks or chattaks or chattacks; 1 chittak [also chattak or chattack] = 1/16 seer = 900 grains = about 2 ounces], and remarks. Two trials gave yields of more than 2000 lb/acre (2,189 lb from the variety Nepali in Kalimpong, and 2,164 lb for a Chocolate variety at Bankipur Farm). Seven additional trials gave yields of 1,000 to 1,400 lb/acre.

Photos on unnumbered pages near the end show: 1. Type I—"Late Black-seeded" soybean variety, photographed 28 Oct. 1911. 2. Type V—Barmeli variety. 3. Type VI—Nepali variety on left, and Type IIIa—"Upright long branched greeny yellow seeded variety on right." 4. Barchet variety, photographed 30 Oct. 1911.

Four graphs on the last page show the distribution of chocolate, black, and yellow soybeans according to both their nitrogen and oil contents.

Note 3. This is the earliest document seen that clearly refers to the cultivation of soybeans in Bengal (probably later Bangladesh). Address: Economic Botanist to the Government of Bihar and Orissa, India.

• **Summary:** Contains detailed information on soybeans in Indonesia, including various local names, soybean production in Indonesia by province from 1918-1925 (the top producers in 1925 were Madoera and Madioen; total production grew from 222,426 to 260,125), soybean culture, imports, exports, tempeh, tofu (tao hoe), tao koan, tao tjo (Indonesian miso), and soy sauce (ketjap). Also discusses ontjom and dagé made from peanuts.

Note: This is the earliest document seen (April 2001) that contains the term *tao koan*. Address: Chef van het Museum voor economische botanie te Buitenzorg (Bogor).

497. **Product Name:** Miso.

Manufacturer's Name: Marumi Miso Seizo-sho.

Manufacturer's Address: 2113 S. Vermont Ave., Los Angeles, California. Phone: 71525.

Date of Introduction: 1913.

New Product–Documentation: Nichibei Shinbun-sha. 1913. *Nichi-Bei Nenkan [Japanese-American Yearbook]*. Directory entry p. 126. Also in 1914, p. 128. But the address is now 607 N. Alameda St. Phone: A 2818. Note: This is the 2nd earliest known miso manufacturer in Los Angeles or in California (one of two).

498. **Product Name:** Miso.

Manufacturer's Name: Rafu Miso Seizo-sho [Los Angeles Miso Manufacturing Co.].

Manufacturer's Address: 6079 N. Alameda St., Los Angeles, California. Phone: A 2818.

Date of Introduction: 1913.

New Product–Documentation: Nichibei Shinbun-sha. 1913. *Nichi-Bei Nenkan [Japanese-American Yearbook]*. Directory entry p. 126. Note: This is the 2nd earliest known miso manufacturer in Los Angeles or in California (one of two). "Rafu" is the Japanese nickname for Los Angeles.

499. Asahi Shokai K.K. 1913. Asahi Co., Inc. (Ad). In: Nichibei Shinbun-sha. 1913. *Nichi-Bei Nenkan [Japanese-American Yearbook]*. No. 9]. p. 31 (near end). [Eng; jap]

• **Summary:** Ad (¼ page). The top ¼ of this ad is given in English. This Japanese company imports many items, including miso and shoyu. Ad also in the 1914 Yearbook, p.

40 in last block of ads near end of book. Address: P.O. Box 1057, Oxnard, California. Phone: Home 116. Red 322.

500. Friedenwald, Julius; Ruhrah, John. 1913. *Diet in health and disease*. 4th ed. Thoroughly revised and enlarged. Philadelphia, Pennsylvania: W.B. Saunders Co. 857 p. Illust. 24 cm. [4 soy ref]

• **Summary:** The section titled "The soy bean" (p. 124-26) states: "This bean (*glycine hispida*), sometimes called the soja bean, is an annual leguminous plant extensively used as a food in China and Japan. Until recently it has been regarded as a botanical curiosity in the Occident. It has recently been extensively used in America as a forage crop and to improve the soil if plowed under... There are a large number of different varieties, which vary in size, shape, color, and length of time they take to mature. Some are grown exclusively for the oil they contain, and it is used for culinary, illuminating, and lubricating purposes. The light-colored beans are eaten in soups, and the pods are sometimes picked green, boiled, and served cold with a sprinkling of soy sauce. The green varieties are often pickled in brine and eaten moist or dried with meals as appetizers; the same varieties are often sprouted, scalded, and served with meals in winter as a green vegetable. The bean forms the basis of the so-called soy sauces, used as a condiment all over the world. The Oriental races most frequently eat the bean, in more or less cheesy-like foods, which are prepared from it. The most common of these are natto, tofu, miso, yuba, and shoyu. Natto is a sort of bean cheese made by boiling the beans until they become soft and then placing the resulting mass in a warm cellar where it ferments. Tofu is made by soaking the beans in water, crushing between millstones, and boiling in about three times their bulk of water. The protein is precipitated and the resulting cheese eaten. The white milky liquid of the above has nearly the composition of cows' milk, and tastes something like malt. It may be used in infant feeding to advantage (see same).

"Americans may eat the beans in numerous ways described under the head of soy bean cookery in the recipes at the end of this book. The bean is of particular value in diabetic diets (see same). It may be used to increase the protein of the diet.

There are variations in the composition of the different varieties." A table shows the chemical composition of yellow soy beans grown in the USA, both as is and calculated on a water-free basis. "The Cereo Company of Tappan, New York, have made a soy bean flour which is useful." Its composition is given. "The percentage of protein in this flour is almost one-third greater than the percentage of protein in the whole beans. This is caused by removing the coarse fibrous hulls which contain little protein.

"Vegetable food of such composition certainly is remarkable when compared with round beef, medium"—

whose composition is given.

Soy flour can be used as a gruel, in broths, and in making biscuits. A table (p. 126) shows the "Composition of fresh and dried legumes (incl. soy beans, cow peas, chick-peas, peanuts) with that of other foods" (Based on Abel, Farmers' Bulletin No. 121 [1900, p. 17]).

The section on "vegetarianism" (p. 130-31) is the same as that in the 1909 edition (p. 113-14).

In the chapter on "Infant feeding," the section on "Other food for infants" has a subsection on "The soy bean" (p. 297-98) which begins: "In certain conditions the soy bean... is of great value. In cases when milk is badly borne, in certain forms of intestinal disorders, in diarrhea, and especially in the convalescence after diarrhea, in certain cases of marasmus and in malnutrition, the soy bean flour, properly used, is of great value. Each ounce contains 13 grams protein and 120 calories." A table shows the composition when mixed with various amounts of water. Recipes for making gruels are given.

In the chapter on "Diet in disease," in the section titled "Diseases in which diet is a primary factor," is a subsection on "The soy bean" (p. 592) states: "The bean contains about 8 per cent. of sugar and no starch, and furnishes a large amount of available protein and fat." "A patient on a strict diabetic diet, who is excreting a certain amount of sugar, will excrete less sugar when the soy bean is added to the diet. It seems to be of particular value in severe cases. In addition to this action, it is a very valuable food, both on account of its nutritious properties and owing to the fact that it may be prepared in a number of different ways, and so serves to vary the diet."

In the section on "Diabetic Foods" (p. 601-02) is based on Winton (1906) and contains the same information, including that about The Health Food Company of New York.

In the chapter on "Recipes" is a section on "Bread" (p. 740-41) which includes whole-wheat bread, zwieback, and bran muffins for constipation. The same chapter has a section on "Soy bean cookery" (p. 766-69) with the following recipes: Introduction, gruels, broths, muffins, nut-cakes, soy bean cakes, breakfast food (like oatmeal), pancakes, soy bean cheese ("In Seattle, Washington, and other places in the West we are informed that tofu is made by the Japanese and sold to the Oriental residents"). Goff (1911) offers the following: Grilled soy bean [dry roasted soynuts], [whole] soy beans with butter, soy beans au gras (fried with onions and fat), bread or cakes of soy beans.

Note: Julius Friedenwald lived 1866-1941. John Ruräh lived 1872-1925. Address: 1. Prof. of Gastro-Enterology; 2. Prof. of Diseases of Children. Both: College of Physicians and Surgeons, Baltimore, Maryland.

501. Iwakami & Co. 1913. Importers and wholesale dealers in Japanese merchandise (Ad). In: Nichibei Shinbun-sha.

1913. *Nichi-Bei Nenkan* [Japanese-American Yearbook. No. 9]. p. 1. [Eng; jap]

• **Summary:** Ad (full page). The top and bottom 1/5 of this ad are given in English. This company imports shoyu and miso from Japan. Address: 427-435 Commercial Street, San Francisco, California. Phone: Kearny 2447. Home C 2447.

502. Japan year book. 1913. Tokyo, Japan: Y. Takenob and G. Takeda (The Japan Year Book Office). 702 p. See p. 163-64, 230, 351, 356, 358, 438, 654, 659, 672, 690. [Eng]*

• **Summary:** In chapter 11, "Agriculture" (p. 155-77) is a table titled "Beans, sweet potato and potato (p. 163) which gives "Soy bean" production in Japan for 1906-1910 (in *koku*).

On page 164 we read: "The three daily articles of diet for all classes, viz. soy [sauce], *miso*, and *tofu* are manufactured from this bean..."

In chapter 15, "Industry," is a paragraph (p. 230) on the patented Suzuki process for brewing soy [sauce].

In Chapter 25, "Home trade" is a table (p. 351) titled "Prices of principal commodities in Japan," which includes prices for 1905-1911 in yen for soy beans (per *koku*), soy [sauce] (per *koku*), and miso (per *kwan*).

In Chapter 26, "Foreign trade" is a table (p. 356-58) titled "Imports" (in 1,000 yen). Under the heading "Staples articles of over yen 1,000,000" (p. 356) is given the value of soja bean imports for 1908-1912. Under the heading "Trade with China (p. 359) is given the value of imports of "beans" and of "oil-cakes" for 1906-1911.

In chapter 30, "Finance," is a paragraph (p. 438) titled "Tax on Japanese soy" [sauce].

In chapter 34, "Chosen (Korea)," a table (p. 654) on "Exports (in 1,000 yen), under the heading "Foreign trade" has data on beans and peas for 1906-1912. Under the heading "Agriculture" is a paragraph (p. 659) titled "Barley and soya bean," giving acreage and yield for soya bean (no year is specified) with the value (in yen) of exports to Japan in 1909.

In Chapter 35, "Taiwan (Formosa)," under the heading "Agriculture," a table (p. 672) titled "Agricultural products" has production data on "Beans and peas" (in 1,000 *koku*) for 1905-1909.

In Chapter 37, "South Manchuria," is a paragraph (p. 690) titled "The soya bean" which has information on South Manchuria's soya bean yield, [soya] bean-cake output, and amount exported. Address: Japan.

503. Jumelle, Henri L. 1913. Les cultures coloniales: Légumes et fruits. Deuxième édition [Crops of the colonies: Vegetables and fruits. 2nd ed]. Paris: Librairie J.-B. Baillière et Fils. 122 p. See p. 47-51. Illust. No index. 18 cm. [Fre]

• **Summary:** This is the 2nd volume of an 8-volume work. In Chapter V, "Vegetables," the section titled *Glycine*

hispidia Max. discusses soybeans and soyfoods.

Henri Jumelle lived 1866-1935. Address: Prof., Faculte des Sciences de Marseille [Marseilles], France.

504. Kin, Choshi. 1913. *Shōyu enkaku-shi*. ed. 3 [History of shoyu production. ed. 3]. Choshi, Japan. 186 p. First edition was 1909. 28 cm. [Jap]

• **Summary:** Contents: 1. Overview (p. 1): Shoyu as a special East Asian product, shoyu as superlative seasoning, relationship between shoyu and sauce, shoyu as an influence in life. 2. Origins of Japanese shoyu (p. 7): About Chinese jiang, Japanese shoyu in history, origin of the shoyu industry in Japan, trends and growth of shoyu production (output), the shoyu industry and taxation, household makers of shoyu and changes in home usage, the Japanese government's attitude toward shoyu, overseas demand for shoyu, the development of shoyu in the Kantō (Tokyo/eastern Japan) region.

3. Choshi shoyu (p. 117): Shoyu in the Kantō region, the shoyu makers guild in Choshi, the development of the shoyu-makers' union (or cartel) in Choshi and Noda, names and identification of the best quality shoyu brands, current varieties of shoyu, Choshi shoyu and raw materials (ingredients), Choshi shoyu and the local topography, Choshi shoyu and transportation, Choshi shoyu and microclimate, Choshi shoyu's trademarks and brands. 4. Higeta shoyu (p. 151): The origins of Higeta shoyu, how to judge good-quality shoyu, the raw materials for Higeta shoyu, a chemical analysis of Higeta shoyu, the handling of Higeta shoyu, shelf life (period of freshness) of Higeta shoyu, awards received by Higeta shoyu. 5. Conclusions (p. 174). A table (p. 35-36) shows national production statistics for shoyu for the years 1885-1910, including the amount and number of makers. Appendixes: 1. The reputation and names of Japanese shoyu in Europe (in English, French, and German) according to various early documents (p. 175). Historical documents in Asian languages about raw materials (soybeans and wheat) used for shoyu (p. 182).

Notes and observations by Mark Fruin: Kin Choshi was the pen name of Genba Tanaka XIII, the head of an important shoyu brewing family in Choshi during the Tokugawa and Meiji periods. Forty percent of the book is early shoyu history and 60% is the history of Choshi Shoyu-Higeta.

Yuasa shoyu appears to be the first true shoyu in Japan; it gradually separated from miso production. Yuasa shoyu was sold throughout Japan by Osaka merchants and it benefited as well from the political protection of the Daimyo of Wakayama. The Osaka shoyu trade developed gradually and it was not important until the 17th century. Yet shoyu developed somewhat independently in Western Japan (Yuasa) and Eastern (Noda and Choshi).

The earliest record of an Osaka merchant (one Komatsuya Ibei) handling Yuasa shoyu dates from 1535;

some 50 years later some Osaka merchants had certain ships earmarked for the exclusive task of carrying Yuasa shoyu to and from market, which by this time had spread from Osaka to the Inland Sea trade area.

In 1908 shoyu was the fifth most important export from Wakayama prefecture [to other parts of Japan]; there were 59 makers in a locally organized cartel producing 52,700 koku with a value of 850,000 yen.

Tatsuno shoyu began its history some 319 years ago (from the year 1594) when in 1594 a local farmer in the Tatsuno area, Yokoyama Gorobei, began to make sake as a sideline to his farming. Later he added shoyu to his household industries. In 1596 Yokoyama turned over his sake making activities to a branch household established for that purpose and concentrated his own efforts on farming and shoyu manufacture. By the late Tokugawa Period (1600-1868) the Yokoyama family sold its shoyu business to the Kataoka family and the latter merged with the Nakahara family in 1893 to form Kikuichi Shoyu.

Shodoshima shoyu began being made in the middle of the Tokugawa period. In 1882 production stood at 34,000 koku and in 1908 at 98,832 koku. In 1901 many of the various shoyu makers in numerous villages on the island amalgamated into a cartel and in 1908, the first corporation for making shoyu in Japan was formed. Later, three other forms merged to establish Marukin Shoyu. p. 35-36 gives Japanese national statistics for total shoyu production and the number of manufacturers each year from 1885 to 1910. In 1,176,535 units? were produced by 10,971 companies. In 1910 some 2,205,574 units were produced by 14,364 companies.

505. Marusan Joto Shiromiso. Renamed Marusan Miso Seizo-sho in 1920. 1913. Marusan Sweet White Miso (Shiro-Miso), Special Koji. 607-609 North Alameda, Los Angeles, California. [Eng; jap]

• **Summary:** Nichibeishinbun-sha. 1913. *Nichi-Bei Nenkan (Japanese-American Yearbook)*. Ad (full page), p. 27 near end of book. Our goods are the best (*Marui beppin*). Mr. Saburo Takasugi, owner. This company makes sweet white miso (*shiro miso*) and special koji, which it says are better than similar products imported from Japan. This ad also appears in the 1914 Yearbook, p. 28 near end of book.

A similar half-page vertical ad appears in the 1917 Yearbook (p. 31). "L.A. Miso Mfg. Co., 605-7-9 N. Alameda St., Los Angeles, California." Trade mark: Shows 3 horizontal lines in a circle ("Reg. U.S. Pat. Off."), pronounced either "Marusan" or "marumi" (the latter means "flavor" in Japanese). In Japanese is written (in big, bold characters). *Rafu Shiro-miso Seizō-sho. Takasugi Saburo. Shiro-miso seizō-sho.*

The Japanese American Directory. 1920. p. 274. Ad (¼ page), top right. The company name and address are written in English at the top of this ad: L.A. Miso Co., 607 N.

Alameda Ave., Los Angeles, California. But 80% of the ad is in Japanese. The large Marusan brand and logo (three horizontal lines in a circle) is at the top center of the Japanese portion. Phone: 12818. Making and selling shiro miso [sweet white miso]. The original maker of miso in the United States. Marusan Joto [high class] shiro miso and special koji. Note: This company (which now has only an English name) was one of two which began making miso in Los Angeles in 1913. Of the two, this company may very well started to make its miso first, and/or started to sell its miso commercially first. Sweet white miso takes less time to make than any other type of miso.

The Japanese American Directory. 1920. p. 296. Directory entry reads (all in Japanese): Marusan Miso Seizô-sho, 605 N. Alameda St. Phone: 12818. Also in 1921, p. 305. Ad (¼ page) all in Japanese. A huge Marusan logo fills the top half of the ad. The address is now given as 605 N. Alameda St. (607-609). Also in 1921 directory, p. 314. Also in 1922, p. 303 (½-page ad. At top of ad is written in English: "L.A. Miso Mfg. Co., 605-7-9 N. Alameda Street, Los Angeles, Calif." Large, bold Marusan logo below that. KATO Shigetaro is now owner), and p. 315 (directory). Also in 1923, p. 332 (ad) and p. 355 (directory). Also in 1924, p. 371 (impressive full-page ad. Founded in 1912 [but SC's earliest record is 1913]) and p. 394 (directory; new phone number: 826773). Also in 1925, p. S-15 (full-page ad; new phone number: VAndike 6773. Founded in 1912) and p. S-44 (directory; new phone number: VA 6773). Also in 1926, p. S-35 (directory). Address: Los Angeles, California. Phone: A 2818.

506. Nichibei Shinbun-sha (Nichi-Bei Shinbunsha). 1913. Nichi-Bei nenkan [Japanese-American yearbook. No. 9]. 650 Ellis St., San Francisco, California. 716 p. Reprinted in 2001-02 in Tokyo by Nihon Tosho Senta. Series: Nikkei Imin Shiryôshû. Dai 5-kai [Collected Documents on Japanese Emigration. No. 5]. [Jap; eng]

• **Summary:** This book is read and numbered from "back to front" compared with typical English books; it is mostly (99%) in Japanese. The English-language title page reads: *The Japanese American Year Book*.

The book is divided into 13 parts, each numbered separately. Contents: (1) Front matter (incl. how this book was created) (5 p.). (2) Table of contents, general (4 p.). (3) Table of contents, ads (4 p.). (4) Photos (black and white on 12 unnumbered pages). (5) Graphs and charts on 4 unnumbered pages: Three pie charts for 1912: (A) In which U.S. states do Japanese live. (B) Occupations of Japanese in USA. (C) Japanese in USA by gender. Two pie charts (D-E). Increase and decrease of Japanese population by gender. (F) Bar graph: Agricultural land use by Japanese by state. (G) Agricultural crops grown by Japanese. (6) Photo of the site to be of the Panama-Pacific International Exposition (1915) in San Francisco. (7) Two maps: Map of the United States.

Map of California (2 p.). (8) Advertisements (A-1 to A-18). (9) Front part (p. 1-152), including general information about America, Japanese in America, U.S. and agricultural census data, etc. (10) Ads (p. 1-16). (11) Back part (p. 1-142). (12) Ads (B-1 to B-64). Appendixes: (13) Table of contents for directory of places where Japanese live in America, by state, and within each state by city: In Japanese (2 p.). In English (2 p.). (14) Directory of Japanese living in America, interspersed with ads (p. 1-228). (15) Ads (p. 1-50). (16) Copyright page.

In a table (p. 57), one vertical line gives soybean production statistics in Japan from 1905-1909 (five year average): Area: 464,021 *cho* (1 *cho* = 2.45 acres; so 1,136,851 acres). Production: 3,766,962 *koku* (1 *koku* = 180 liters = 47.6 gallons = 308 lb = 5.13 bushels; so 1,932,452 bushels). Average yield 0.87 *koku/tan* or *tanpo*. Note: Something seems to be wrong with these soybean statistics. The yield of Japanese soybeans seems too low; only about 1-2 bushels per acre.

A table (p. 92) shows Japanese population in the top 8 U.S. states in 1912. There are 7 columns: Male adults, female adults, male children born in USA, male children born in Japan, female children born in USA, female children born in Japan, and total. The totals are: California: 58,555. Washington: 16,037. Colorado 3,556. Oregon 3,518. New York 2,002. Idaho 1,392. Utah 1,390. Montana 972.

Individual lines in various tables (p. 115-150) show tofu, miso and shoyu makers in the United States by state, and within California by city. There are 7 columns: Location, total no. of shops, no. of owners, investment (\$), sales (\$/year), workers, salary (\$/year). The number of tofu makers by state is: California 28. Utah (Ogden) 1. Idaho 2. Colorado (Denver) 2. Oregon 1. Washington 9. There are also 2 miso makers in Los Angeles and 1 shoyu maker in Oregon. Columns 1-2 are filled out for all entries, columns 3-4 for all California entries, and columns 5-6 for about half the California entries.

A table (p. 26-27) shows import tariffs on goods from Japan. These include: Soybeans \$0.45/bushel. Shoyu, miso, deep fried tofu pouches (*aburage*), dried frozen tofu (*Koyadofu*) and yuba 40% of their value, but a request is being made to change the shoyu, the two tofu products and the yuba to 20%.

The Directory shows Japanese companies making soyfoods in California, Utah, Idaho, Colorado, New York, Washington state, and Oregon. Address: San Francisco, California.

507. Paerels, J.J. 1913. Tweede Gewassen [Second crops]. *Oost-Indische Cultures* (Dr. K.W. van Gorkom's) 3:276-88. [11 ref. Dut]

• **Summary:** See Prinsen Geerligs (1913, vol. 3, p. 276-88). Address: Indonesia or Netherlands.

508. Prinsen Geerligs, H.C. ed. 1913. Dr. K.W. van Gorkom's Oost-Indische Cultures, opnieuw uitgegeven onder redactie van H.C. Prinsen Geerligs. Compleet in drie deelen [Dr. K.W. van Gorkom's East-Indian crops. New edition. 3 vols.]. Amsterdam, Netherlands: J.H. de Bussy. See vol. 3, p. 276-88. Illust. Index. 27 cm. [7 ref. Dut]

• **Summary:** In vol. 3 is a section on "Second crops (*Tweede Gewassen*)" (p. 243-91). Chapter 4 (*Hoofdstuk IV*) of that section is titled "Soybeans (*Soja*)" (p. 276-88). Contents: Origin and native land. The soybean plant: Botanical description (flowers, seeds, fertilization, germination), types and varieties, geographical distribution. Cultivation of soybeans: General instructions for growing, planting, manuring, diseases and pests. Production, trade, and use of soybeans: Tofu (*Tao-Hoe*), Chinese soy sauce (*Tao-Yoe*), soybean paste (*Tao-Tjong*), Tempeh, composition and value as a food (*samenstelling en voedingswaarde*).

Note: This is the earliest document seen (Feb. 2009) that contains the term *Tao-Tjong*, a term, and perhaps a product, that appears to be between *doujiang* (Chinese-style miso) and *tao-tjo* (Indonesian-style miso).

Photos show: (1) A soybean plant that bears black-seeded varieties (p. 277). A soybean plant that bears white-seeded varieties (p. 278).

Also discusses (in vol. 2): Peanuts (p. 227-41). Sesame seeds (p. 247-51).

Reprinted in Van Gorkom 1918, p. 839-51. Karel Wessel van Gorkom lived 1835-1919. Address: Amsterdam, Netherlands.

509. Tanaka Shoten. 1913. K. Tanaka Co. (Ad). In: Nichibei Shinbun-sha. 1913. *Nichi-Bei Nenkan [Japanese-American Yearbook]*. No. 9]. p. 43 (near end). [Eng; jap]

• **Summary:** Ad (¼ page). The top ¼ of this ad is given in English. This Japanese company imports many items, including sake, white rice, miso and shoyu. Address: 1531 Geary St., San Francisco, California. Phone: Filmore 2179. S 2947.

510. Grimme, Clemens. 1914. Die Sojabohne und ihre Verarbeitung zu Nahrungs- und Genussmitteln [The soybean and its processing for food and stimulants]. *Konserven-Zeitung* 15(1):1-3, 10-11. Jan. 2. [1 ref. Ger]

• **Summary:** The author discusses the many food uses of soybeans and how they are made and use, drawing heavily on *Le Soja* by Li & Grandvoinnet (1912). He notes that there is a steadily rising interest in soyfoods in almost all branches of the German food industry [perhaps in anticipation of World War I].

Foods made from natural [unfermented] soybeans include: Soymilk (*Sojamilch*), tofu (*Sojakäese*), frozen tofu (*Kori-Tofu*), soy flour (*Sojamehl*), soy bread (*Sojabrot*), soy confections (*Sojakonfekt*), soy chocolate

(*Sojaschokolade*), soy coffee (*Sojakaffee*), and green vegetable soybeans (*Soja als Gemuese*). Foods and seasonings made from fermented soybeans include: (1) Solid seasonings: Natto, and tao-tche (Chinese natto [sic, soy nuggets]); (2) Seasonings in paste form: Miso (4 types), and Tao-tjiung (*Doujiang*, Chinese miso); (3) Liquid seasonings: Shoyu (*Schoyou*), Tsiang-Yeou (Chinese soy sauce), Ketjap (Javanese soy sauce), Tuong (Annamite soy sauce, made with rice or corn), Tao-Yu (soy sauce made with black soybeans in China and Japan).

Note 1. This is the earliest German-language document seen (Oct. 2004) that mentions green vegetable soybeans, which it calls *Soja als Gemuese*.

Note 2. This is the earliest German-language document seen (Oct. 2003) that uses the term *Sojamilch* to refer to soymilk. As of Jan. 2009 *Sojamilch* is the modern German word for soymilk.

Note 3. This is the earliest German-language document seen (Jan. 2009) that uses the word *Sojaschokolade* to refer to soy chocolate. The German word for "chocolate" is *Schokolade*. Address: Dr.

511. Eddington, Jane. 1914. Economical housekeeping: More about soy beans. *Chicago Daily Tribune*. Feb. 4. p. 16.

• **Summary:** Because of its high protein content, the [whole dry] soy bean must be soaked for a long time then cooked gently for "several hours to reduce it to the required softness.

"It does not make as smooth a purée as the pea or peanut—in fact a rather granular one is obtained—but that nevertheless is palatable when dried over a hot fire, with a seasoning or butter, pepper, and salt if needed." We should manufacture "soy sauce from this bean—that sauce without which chop suey and many other Chinese dishes would not be what they are. In a government bulletin on the legumes we have a general description of how this is made." There follows a summary, with long quoted excerpts, of the section titled "The soy bean and its preparations" in: Oshima, Kintaro. 1905. "A digest of Japanese investigations on the nutrition of man." *USDA Office of Experiment Stations, Bulletin* No. 159. 224 p. See p. 23 on. Shoyu, tofu, miso and natto are discussed briefly.

512. Eddington, Jane. 1914. Economical housekeeping: Soy beans. *Chicago Daily Tribune*. Feb. 11. p. 11.

• **Summary:** It is called "the soy or soja bean." "In an English food magazine of two years back there is an interesting and very suggestive article, 'About the Soy Bean.' In the first paragraph it is said that medical men have been experimenting with it and writing about it for a year or so. Then it says:

"The soja (or soy) hispida is the only representative of a genus of leguminosae or the tribe papilionaceæ, and it has

been cultivated from time immemorial in Japan and China. It grows freely in tropical countries, and since 1878 it has been grown successfully in the warmer parts of Europe. There are a number of varieties of the soy bean, the difference lying in the size, shape, and color of the seeds. The Japanese is the most highly esteemed and in appearance it is a good deal like the common dwarf kidney or French bean...

“The bean, which has a most agreeable flavor, is used by the orientals in many ways. The oil is expressed, used as a food, and the residual cake, which contains 40 per cent of flesh forming material, is eaten by the poorer classes [sic]. A paste [miso] and a kind of cheese [tofu?] are also obtained from the bean, but one of its principal uses—perhaps the best known to us—is for the manufacture of the celebrated soy sauce, the making of which has always been surrounded by a certain amount of mystery.

“It is the chemical composition of the soy bean which has attracted so much attention of late, and it has been found to be worthy of the highest place among pulses. It is rich in albuminoid, or flesh forming constituents, also in fat or oil, and contains but a very small proportion of starch or sugar.

“The bean has been said to favor digestion, and it is a fact that the protein it contains is particularly easy of assimilation. A delicate infant, unable to digest cow’s milk, often will thrive on a gruel made of the soy bean flour and water, and during the little intestinal disturbances of summer, to which children are so liable, it is much to be recommended. Diabetic patients find it an invaluable article of diet on account of the small amount of starch and sugar which it contains.

“One might well expect that so valuable a food necessarily would be expensive, but when one learns that both bean and flour are sold for about 3d (6 cents) a pound, one feels that it is high time to give it a trial.

“It is in the form of flour that the soy bean is likely to be most popular on this side of the globe, although the beans themselves, when properly cooked, make good soups and form the basis of many of those little dishes beloved of those who prefer a meatless fare [vegetarians]...

“The soy bean thus is a cheap substitute for meat. In the dried state it looks more like a pea than a bean, but when soaked in warm water it expands and assumes its beanlike appearance...”

“The article says that these beans soaked and cooked are excellent mixed with a well flavored tomato or other sauce and made up into cutlets, croquettes, etc., to be used with cheese, etc., because its flavor is not pronounced, for which reason it is more valuable in the kitchen.

“These beans can be obtained at a seed store at just the price one pays for other sorts of beans at a grocery.”

513. Sahr, C.A. 1914. Report of the Assistant Agronomist. *Hawaii Agric. Exp. Station, Annual Report*. p. 43-49. For

the year 1913. March 16. [1 ref]

• **Summary:** In this report’s only section, titled “Experiments with leguminous plants,” all crops are grouped into three types based on the length of their growth period. The soy bean appears in both the first group (quick rotation, short season, 3 to 4 months) and the second group (medium time, 4½ to 6½ months). The importance of inoculation is emphasized.

The subsection on “Soy bean” (p. 46-49) states: “Soy beans were grown more or less extensively by Japanese farmers in Kona to defray expenses while their coffee trees came into bearing, finding a ready market for culinary purposes and also among local soy sauce brewers. Since the coffee orchards now demand the entire attention of the growers, the soy brewers depend upon soy beans imported from Japan for their supply.

“The brewing of Japanese soy sauce having become a well-established industry in Hawaii, a visit of inspection to several of the largest factories was made to ascertain the method of manufacture, which is given here briefly...” Equal parts of boiled soybeans and roasted California wheat are mixed, “poured into molds, and left to stand for 3 or more days, or until slightly covered by mold fungi. The molds are then emptied into large cedar vats of 500 to 800 gallons capacity. A starter made from cass [soybean presscake] and brine is then added, and the mass is left to ferment for a period ranging from 6 months to a year or 18 months, the mass being thoroughly stirred twice each day. The fermented mass is then transferred into a large press and the liquid sauce is pressed out, boiled 2 or 3 hours, and put in cedar tubs of 4½ to 6 gallons capacity... The ferment starter is made of a small quantity of soy-bean cake, or cass, sprinkled over a few handfuls of parboiled soy beans and left in a warm place for several days. The cass is sold for 20 cents per 100 pounds to rice planters as a fertilizer, and contains about 20 per cent salt. It is also fed to hogs, after soaking in water to draw out the salt. The brewers buy imported soy beans at \$72 per ton in Honolulu, wheat at \$40, and salt at \$10. The tubs in which the soy sauce is put up are made of Japanese cedar, shipped knocked down from Japan, and put together as wanted. The cost per tub is from 40 to 70 cents, according to their capacity, which ranges from 4½ to 6 gallons. Soy sauce is eaten by all classes of Japanese as a table sauce, with their rice, fish, and meats. It has the color of strong black coffee.

“Miso, another Japanese table sauce, is brewed from soy beans and rice. The brewed liquid is clear white. The climate of Hawaii is too warm for its manufacture.”

A table (p. 48) shows five soybean varieties (each with an “Agronomy accession number, three also with an S.P.I. number—20798, 19183, and 14953) and their yields as hay, fodder and/or seed, and stages of growth in Hawaii. The only named variety, Ootoan [black seeded], was “grown from seed received from the College of Hawaii in May

1911. This variety is undoubtedly the coarsest, rankest soy bean ever grown by this station. It is also most tolerant of both dry and wet conditions, but only makes a rank growth during a cool and moist growing period." Trials of this variety were made at the Hilo and Glenwood substations.

No. 698, a Russian soy bean, was received from S.R. Cope of London, England. Seven varieties were received from the College of Hawaii. Eight varieties were received from the Bureau of Plant Industry (USDA) under the [S.P.I.] numbers 19183, 22379, 32906, 32907, 34857, 34934, 34924, 34987, and 34123; they were planted in May. "Four varieties, said to be rich in oil content, were received from an eastern paint and oil company for trial by this station. Samples of these will be analyzed and the oil content determined."

A photo shows two Ootoan variety soy bean plants, valuable for forage and green manuring; one is bigger than the other and both are hanging up-side down.

Other leguminous plants tested: Kulthi or horse gram, cowpeas, sunn hemp (*Crotalaria juncea*), a variety of Cuban peanut, asparagus bean (*sasagi*; probably yardlong cowpea) and sesbania.

Note 1. This is the earliest document seen (Aug. 2004) that mentions the soybean variety Ootoan.

Note 2. This is the earliest document seen (March 2004) that mentions the asparagus bean (*Vigna sesquipedalis*). Address: Asst. in Agronomy.

514. Loomis, Henry M. 1914. Food products from the soy bean. *American Food Journal* 9(8):472-74. Aug.

• **Summary:** Loomis collected information on soybean products while stationed on the Pacific Coast. "Probably the most interesting and important of these food products is soy sauce, or shoyu, as the Japanese call it. It is the only one which is used to any extent among Occidental nations, with whom it forms the principal ingredient of Worcestershire and similar table sauces. It is also used to some extent as an ingredient of bouillon cubes. König estimates that the consumption of this product in Japan amounts to two or three fluid ounces per day for each person, which would make a total consumption for that country alone of three to four hundred million gallons. No figures are available as to the amount of this sauce which is used in China, but all except the poorest class eat it habitually on rice and fish, which form their principal articles of diet."

Japanese soy sauce "is prepared on more scientific principles and it is considered much superior to Chinese soy. Each manufacturer of Japanese soy has special brands or trade marks under which his products are sold. Japanese soy is usually imported into this country in wooden tubs holding about three gallons each and sells at wholesale price of from 75 cents to \$1.50 per tub" [i.e. 25 to 50 cents per gallon]. A brief description of the Japanese process for making soy sauce follows; it mentions Koji.

Brief descriptions are also given of the following foods and their method of preparation: (1) "Soy bean curd, or, in Japanese, Tofu, is as its name implies prepared by coagulating or precipitating the legumin or vegetable proteid, of the soy bean by mineral salts. (2) "The frozen bean curd, or 'Koritofu,' ..." (3) [Yuba]. "The liquor or bean milk is the milky fluid produced in the manufacture of bean curd after straining and before coagulating. Chinese bean curd [sic], or Toufu-pi, is prepared by drying the scum produced on boiling the bean milk. It is imported in the form of vitreous, brittle, yellowish sticks in appearance like dried casein. (4) Soy bean oil. (5) "Kinako is prepared by roasting and grinding soy beans. It has a very agreeable flavor and is much used in the preparation of confections, particularly as a sort of coating powder. (6) Miso, which is made from "Koji, the same ferment as is used in the making of soy. There are two principal kinds imported into this country, the white and red Miso. They differ principally in the rapidity of fermentation and in the amount of salt used."

"Winton and others have suggested the use of soy bean products as foods for diabetics and it appears that there are many of the foods mentioned above which would serve a useful purpose in this regard. There are a number of firms now putting out soy bean meal or flour on a commercial scale and notices have appeared recently that soy bean curd and milk are to be manufactured on a large scale in Europe.

A large table contains nutritional analyses of four types of soy [sauce] (incl. Kikkoman, Kikkoraku, typical Japanese shoyu and Chinese soy) plus each of the foods mentioned above, including tofu (8.6% protein) made in Seattle, Washington, and "Bean milk (strained bean liquor before coagulating; 2.09% protein).

Mr. J.T. Willard notes: "I remember twenty years ago [i.e., 1894] that Prof. Georgeson of the Kansas Agricultural College had half a dozen varieties [of soy beans]. He was a teacher of agriculture in Japan and I suppose he learned as much there as he taught, and he became very enthusiastic over the soy bean. I remember there was a great difference in the different varieties of the soy bean." A portrait photo shows Mr. H.M. Loomis.

Note: This is the earliest English-language document seen (Feb. 2004) that uses the term "soy bean curd" to refer to tofu. Address: Bureau of Chemistry, USDA.

515. Suzuki, U.; Sera, S.; Sasaki, Y. 1914. Dobutsu no eiyô-jô sekkai no kôka ni tsuite [The effect of limestone (calcium) on the nutrition of animals]. *Tokyo Kagaku Kaishi (J. of the Tokyo Chemical Society)* 35:1035-91. [Jap] Address: 1. Nôgaku Hakase; 2-3. Nôgaku-shi.

516. Bosse, Sara; Watanna, Onoto. 1914. Chinese-Japanese cook book. Chicago and New York: Rand, McNally & Co. 120 p. Index. 17 cm.

• **Summary:** A remarkable and pioneering East-Asian cookbook. It may well be the earliest Japanese cookbook seen published in America. It is one of the earliest Chinese cookbooks published in America. The cover illustration shows a well dressed Japanese woman in a Japanese room kneeling and cooking over a brazier. Contents: Preface. Part I: Chinese recipes (12 sections, p. 9-64). Part II: Japanese recipes (7 sections, p. 74-110). List of Chinese and Japanese groceries.

The Preface begins (p. 1): “Chinese cooking in recent years has become very popular in America, and certain Japanese dishes are also in high favor. The restaurants are no longer the resort of curious idlers, intent upon studying types peculiar to Chinatown, for the Chinese restaurants have pushed their way out of Chinatown and are now found in all parts of the large cities of America.” “There is no reason why these same dishes should not be cooked and served in any American home.”

Concerning shoyu, or Japanese-style soy sauce (p. 2-3): “You, sometimes called Soye, is similar to Worcestershire and similar European sauces. In fact, the latter are all said to be adaptations of the original Chinese syou, and most of the European sauces contain syou in their makeup. It lends a flavor to any meat dish, and is greatly esteemed by the Oriental peoples.”

Note 1. This is the earliest English-language document seen (Jan. 2006) that uses the word “syou” to refer to shoyu.

Syou (soy sauce) is an ingredient in at least 55 recipes in this book, both Chinese and Japanese—starting with Chinese soups (p. 12-17). When first mentioned here it is called “syou (Chinese sauce),” but thereafter simply “syou.”

“Miso paste” appears in 5 Japanese recipes: Satsuma soup (“one quarter pound of aburage {oil-fried Tofu}; one quarter pound of miso paste {soy bean and rice cheese},” p. 71-72). Uwo shiru (Fish soup) (“one pound of miso paste {bean and rice paste}; one half cupful of syou sauce,” p. 73-74). Shika shiro (Pot-roasted venison) (“one cupful of syou sauce;... one quarter pound of miso paste,” p. 80). Tamago bolan (Peony eggs) (“finely mashed miso,” p. 91-92). Shiro uri (Stewed squash) (“syou sauce... two tablespoons of miso,” p. 95).

“Aburage (oil-fried Tofu)” and regular tofu appears in Satsuma soup (p. 71, see above). Yaki zakana (Fried fish) (with “oil-fried Tofu... Note: Tofu is made from a mixture of syou bean [soy bean] and rice. It is mashed and rolled into a thin cake, and fried in oil, very much like pancakes,” p. 77-78). Note 2. A poorer definition of tofu would be hard to find. Yaki udzura (Broiled quail or pigeons) (“aburage {bean cheese paste}” and “Tofu cakes,” p. 79). Fried squab (with “fried Tofu,” p. 81). Tamago tofu (a tofu-like custard made with eggs and syoyu sauce, but no real tofu, p. 89-90).

Bean sprouts are used in many recipes, but we are never told what type of beans are sprouted [probably mung beans]; a recipe for homemade bean sprouts (p. 109) calls

for “ordinary white beans, or dried lima beans.” Other interesting ingredients include: “Adzuki (purple beans)” (mentioned once in Yohan candy). Goma seeds [sesame] or goma-seed oil (mentioned 15 times). Kudzu starch (6 times, misspelled once as “kudze”). Peanut oil (at least 10 times). Seaweed (1 can of seaweed; small piece of seaweed), seaweed jelly or gelatine, or Kanton [kanten, agar] (15 times). Sweet rice [mochigome].

The authors, “Winnifred and Sara Eaton were sisters, daughters of a Chinese-born mother and an English-born father, and grew up in a large family in Montreal, Canada. Winnifred Eaton was a very successful fiction writer who, by taking on a Japanese identity, both exploited the public’s craze for ‘Japonica’ at the time, and obscured her Chinese heritage during an age of anti-Chinese sentiment and policies. This cook book was her first collaboration with Sarah, who may have done very little of the writing. A painter, Sarah (1868-1940) lived out her life with her German artist husband, Karl Bosse, in New York. Winnifred (whose Japanese pseudonym was Onoto Watanna) lived 1879-1954, knew almost nothing about Japanese cooking. Winifred’s biographer and granddaughter, Diane Birchall, says that the authors’ claim in the Preface that the Chinese recipes are “... secret recipes handed down from Vo Ling, worthy descendant of a long line of noted Chinese cooks...’ is just a hoax. “According to Birchall, Eaton was awful at cooking Chinese dishes” (MSU introduction and biography).

Note 3. This is the earliest document seen (Jan. 2009) concerning soy ingredients used in Japanese-style recipes, food products, or dishes outside Japan.

517. Davison, Mrs. 1914. Domestic economy in Japan. [Tokyo, Japan]: Kyo Bun Kwan (Methodist Publishing House). Tokyo Katei Mondai Kenkyu Kurabu. v + 73 + [16] p.; 17 + 1157 + 6 p. No index. 19 cm.

• **Summary:** On the title page: “Compiled by the Home Problem Club, Tokyo.” Contents: Soups. Fish. Meats and substitutes. Vegetables. Salads. Puddings. Pudding sauces. Sweets. Cakes. Breads. Native cereals. Preserves. Jams. Pickles. Suggestions. Japanese disinfectants. Useful addresses. Menu-maker (from *Ladies Home Journal*).

The front part of this book (p. v + 73 p.) is in English. The back part (17 + 115 + 6 p., reading from back to front) is in Japanese, and numbered separately. In the middle is a 16-page “Advertising section,” mostly in English, on unnumbered pages. Each recipe is numbered sequentially, from 1 to 1-186, in each part. The recipe numbers in the English part correspond exactly to the numbers in the Japanese part.

Soy related recipes: “Tofu” (bean curd) soup (p. 2). [Soy] Bean roast (p. 12). “Tofu” roast (3 types; calls for 1 *cho* or 1 square of tofu, p. 12-13). “Tofu” and celery stew (p. 14). In the chapter on vegetables: “Daizu” (p. 23): “Soja

or Soy bean. There are white, green and black soy beans. This bean is used in the preparation of *miso*, *tofu*, etc. A drink is made from the black soy bean and unhulled barley. These are parched and then boiled in a tea, sweetened with sugar and used in the summer time.” Soya beans (p. 24): “Hull and boil; remove the skins and dress like lima beans. *Azuki* a little red bean may be prepared in many ways. One way, boil, place in center of a mound of rice, and serve with a curry sauce made with apple and onion in it.”

Tofu (p. 26-29): “Tofu is a most nourishing inexpensive curd made from the bean. It may be served in many ways. The process of preparation takes away part of the bean difficult to digest and leaves one of the most wholesome of foods. It is especially good for diabetic patients. It may be bought in any part of Japan. Always pour boiling water over it before using.” These recipes follow: Scrambled “tofu”. “Tofu” and cheese. “Tofu” croquettes (3 recipes). “Tofu” box. “Tofu” and tomatoes. “Tofu” and peanut butter. “Tofu” and cheese (2 recipes). “Tofu” and corn.

“Tofu” (bean-curd) salad (with 2 *cho* [= cakes] of “tofu,” p. 38). “Tofu” custard (p. 40).

This book also calls for peanuts in many recipes. A few recipes call for *goma* (sesame seeds), *kanten* (“a kind of gelatine made from seaweed. A substitute for gelatine,” p. 61). in a few. Pudding sauces and sweets include many recipes for “mizu-ame” (“1 pint of golden-colored mizu-ame.” Some is made from millet, and some from rice). “Health food” is mentioned on p. 52. Address: Tokyo, Japan.

518. Hashimoto (E.D.) Co. 1914. Hashimoto Shokai (Ad). In: Nichibeishinbun-sha. 1914. *Nichi-Bei Nenkan* [*Japanese-American Yearbook*. No. 10]. Unnumbered page before last block of ads. [Eng; jap]

• **Summary:** Ad (fill page). Only two lines of this ad are in English: The company name and address. This Japanese company imports many food items, including miso and shoyu. A large photo shows the front of the company, with two delivery wagons parked in front. Address: 163-165 N.S. Temple St., Salt Lake City, Utah. Phone: Was. 3442.

519. Nichibeishinbun-sha (Nichi-Bei Shinbunsha). 1914. *Nichi-Bei nenkan* [*Japanese-American yearbook*. No. 10]. 650 Ellis St., San Francisco, California. 693 p. Reprinted in Feb. 2002 in Tokyo by Nihon Tosho Senta. Series: Nikkei Imin Shiryōshū. Dai 5-kai [Collected Documents on Japanese Emigration. No. 5]. [Jap; eng]

• **Summary:** This book is read and numbered from “back to front” compared with typical English books; it is mostly (99%) in Japanese. The English-language title page reads: *The Japanese American Year Book*.

The book is divided into 14 parts, each numbered separately. Contents: (1) Front matter (incl. how this book was created) (5 p.). (2) Table of contents, general (4 p.). (3)

Table of contents, ads (4 p.). (4) Photos (black and white on 15 unnumbered pages). (5) Maps and charts on 3 unnumbered pages. (6) Advertisements (A-1 to A-16). (7) Front part (p. 1-165), including general information about America, Japanese in America, U.S. and agricultural census data, etc. (8) Ads (p. 1-13). (9) Back part (p. 1-136). (10) Ads (p. 1-66). Appendixes: (11) Table of contents for directory of places where Japanese live in America, by state, and within each state by city: In Japanese (2 p.). In English (2 p.). (12) Directory of Japanese living in America, interspersed with ads (p. 1-228). (13) Ads (2 p. + p. 1-50). (14) Copyright page.

In the front part: There is no import duty / tax on soybean oil. The value of the total amount imported was \$733,937 (p. 87). There is also no import tax on soybeans (written “sooyabinzu” in katakana for the first time in these Yearbooks) (p. 87). The total value of soybeans imported to San Francisco was \$27,867 (p. 91). There is (again) no tax on soy oil (written Soyamame Abura, in kanji). The total value of soy oil imported to Portland, Oregon was \$13,692. No tax on soy sauce pickled imported to Portland, Oregon, worth \$10,353 (p. 94).

A table (p. 97) shows the Japanese population in the USA for most years from 1860 (6 people) to 1913. For recent years: 1907–89,573. 1908–103,683 (peak). 1909–98,715. 1910–91,958. 1911–93,359. 1912–93,751. 1913–95,843.

A table (p. 98) shows Japanese population in the USA in the 8 states with the highest populations: California, Washington state, Oregon, Colorado, New York, Utah, Montana, Wyoming.

A table (p. 102) shows the number of tofu shops in the USA: Total 48. Owners 48. Workers 7. This research was conducted by Nihonsha (“Japanese Company”).

A table (p. 103) shows the total population of California from 1850 to 1919 (projected) and percentage increase during each decade: 1850–92,957 (-). 1860–379,994 (310% increase). 1870–560,247 (47%). 1880–864,694 (54%). 1890–1,213,398 (40%). 1900–1,485,053 (22%). 1919–2,377,540 (60%–projected).

Individual lines in various tables (p. 127-163) show tofu, miso and shoyu makers in the United States by state, and within California by city. There are 7 columns: Location, total no. of shops, no. of owners, investment (\$), sales (\$/year), workers, salary (\$/year). The number of tofu makers by state is: California 34. Utah (Ogden) 1. Colorado (Denver) 2. New York City 1. Oregon 1. Washington 9. There is also 1 miso maker in Los Angeles and 1 shoyu maker in Oregon. Columns 1-2 are filled out for all entries, columns 3-4 for all California entries, and columns 5-6 for about half the California entries. Note: The information on this page is not identical to that in the directory. For example, for Utah, the directory shows 3 tofu shops in Salt Lake City and one in Ogden.

A table (p. 155) shows Japanese population in the top 8 East Coast states in 1913. There are 4 columns: State, males, females, and total. The totals are (in descending order of population): New York: 2,209. New Jersey 277. Massachusetts 230. Pennsylvania 223. Florida 89. Washington, DC 54. Rhode Island 41. Maryland 29. Five other states except Vermont 89. Grand total 3,275 Japanese, including 3,108 males (95% of total) and 167 females.

Tariff (import duty) reduction on soybeans, from the old rate of \$0.45 per bushel to \$0.13 per bushel in 1913 (p. 27). Tariff reduction on Manchurian soybeans, from the old rate of \$0.45 per bushel to no tax in 1913 (p. 28).

The Directory shows Japanese companies making soyfoods in California, Utah, Colorado, Oregon. Address: San Francisco, California.

520. Takenob, Y. 1914. Japan year book. Tokyo, Japan: Y. Takenob and G. Takeda (The Japan Year Book Office). 740 p. See p. 334, 400, 433-34, 439-40, 442, 689, 692, 705, 718. [Eng]

• **Summary:** This annual book was first published in 1905. Facing the Preface is a table of Japanese weights, measures and moneys. In chapter 16, "Agriculture" (p. 337-57) is a table titled "Beans, sweet potato and potato (p. 345) which gives "Soy bean" production data in Japan for 1908-1912 (in *koku*). The next paragraph contains information on soy [sauce], *miso*, and *tofu* similar to that in the 1913 year book.

In chapter 20, "Industry," is a table on soy [sauce] production in Japan from 1908-1911, and a paragraph (p. 400) on the patented Suzuki process for brewing soy [sauce].

In Chapter 22, "Trade" is a table (p. 433-34) titled "Prices of principal commodities in Japan," which includes prices for 1907-1912 in yen for soy beans (per *koku*), soy [sauce] (per *koku*), and *miso* (per *kwan*).

In Chapter 23, "Foreign trade" is a table (p. 439) titled "Imports" (in 1,000 yen). Under the heading "Staples articles of over yen 1,000,000" (p. 438) is given the value of soja bean imports for 1911-1913. In a table titled "Soja bean" (p. 442), under the heading "Staple exports and destinations (in 1,000 yen)" (p. 440) is given the value of soja bean exports to China, Kwantung, India, and other places for 1911-1913.

In chapter 35, "Chosen (Korea)," under the heading "Agriculture" (p. 691) is a paragraph (p. 692) titled "Barley and soja bean," which gives acreage and yield for soja (year not specified) with the value (in yen) of exports to Japan in 1912.

In Chapter 36, "Taiwan (Formosa)," under the heading "Agriculture," a table (p. 705) titled "Agricultural products" has production data on "Beans and peas" (in 1,000 *koku*) for 1911-1912.

In Chapter 38, "South Manchuria," is a paragraph (p. 718) titled "The soya bean" which has information on South

Manchuria's soya bean yield, [soya] bean-cake output, amount exported for specific years, and production of various milling centres.

In the advertisements at the rear (p. xiii) is a full page ad for Higeta Shoyu, showing many medals: "Patronized by the Imperial Household. Trade mark. The celebrated Japanese sauce. Established in 1616. Manufactured by G. Tanaka, Chioshi [Choshi], Chiba-ken, Japan." Address: Prof. at Waseda Univ. and Late of the *Japan Times*, Japan.

521. Terry, Thomas Philip. 1914. Terry's Japanese empire: Including Korea and Formosa, with chapters on Manchuria... A guidebook for travelers. Boston and New York: Houghton Mifflin Co.; London: Constable & Co., Ltd.; Tokyo: Kyo-Bun-Kwan, Ginza, Shichome. cclxxxiii + 799 p. See p. 515. Maps. Index. 16 cm. [75 ref]

• **Summary:** This guidebook, after its 283-page introduction, is organized geographically into: 1. Central Japan. 2. Northern Japan. 3. Yezo, the Kuriles, and Saghalien. 4. Western Japan. 5. Kyushu and the Loochoo and Goto islands. 6. Korea, Manchuria, and the Trans-Siberian Railway. 7. Formosa (Taiwan) and the Pescadores. Abbreviations (p. ix). List of maps (13).

In the Introduction: Japanese inns (p. xxxvi, xxxix-xl): The best food is not always to be had in the most pretentious places. In certain modest inns, where the rooms are as bare as a monk's cell, and the general appearance of austerity might argue a strict economy, there will often come, as an agreeable surprise, dainty food served in dishes that delight the lover of beautiful porcelain or lacquer. Later the traveler may learn that the place enjoys fame for some savory specialty—eels boiled in soy, broiled crayfish, stewed octopus, buckwheat-macaroni, or the like."

"Food is served in the guest's room on a lacquered tray... One of the soups may be made of... lobster, or seaweed, in which case it is amazingly thin and unpalatable; the other of beans [*miso*], bean curd or something of that nature. Salt is not provided unless asked for. Many of the dishes are cooked in soy; a tiny dish of which is supplied for dipping bits into before eating them."

Japanese food (p. xliii-xlvii): "Rice is a luxury with thousands of the peasants; it takes the place of bread with the well-conditioned; and wherever it is eaten to the exclusion of other foods it produces (because the thin phosphorous skin is polished off it) the prevalent beriberi. The proportion of animal food is small. Beans eaten in a variety of ways occupy a conspicuous place in the food of all classes and they supply the nitrogenous matter essential to those who rarely eat meat and who do not get the casein obtained by cheese-eating peoples. The soy-bean (*daizu*; *omame*) ranks first in extent, variety of use, and value among the pulse of Japan, and in point of nutriment is quite near to meat. It contains nearly two fifths of its weight in legumin, nearly one sixth in fat, and is rich in nitrogen. It is

to the Nipponese what frijoles are to Mexicans and garbanzos (chick-peas) to Spaniards. Of the numerous varieties some are made into curd [tofu], and into the widely celebrated bean-sauce (the Worcestershire of Asia) called shoyu (sho, soy; yu, oil), and which is almost as indispensable as rice. It forms the daily relish of the rich man and the beggar, and is in as general use as tea and tobacco.”

Fish (sakana)... Teriyaki: Fish in a sauce of soy, mirin, and sugar... Sashimi: raw fish cut in thin slices and eaten after being dipped in shoyu.—Kabayaki: fish which is first steamed then dipped into soy and roasted (or eels cut open on the dorsal line, covered with soy mixed with sugar, and roasted). The latter dish, usually called Unagi-no-kabayaki, is a favorite with the Japanese,...

“Rice:... Azuki-meshi: rice and red pea-beans mixed (boiled).—Mochi: small dough-cakes made of rice and sold throughout Japan.—Sushi: a general name for food of boiled rice and fish, eggs, vegetables, etc., seasoned with vinegar and soy...—Inari-zushi: fried tofu stuffed with chirashi-zushi.—Maki-zushi: boiled rice and other vegetables rolled and wrapped in a sheet of the sea weed called Asakusa-nori...—Kombu-zushi: fish seasoned with vinegar and wrapped in a piece of the edible seaweed known as *Laminaria japonica*. A differentiation of this popular food is the Kombumaki: baked or roasted fish wrapped in kombu, then tied, and boiled in sugar and soy.

Various:... Tsukudani: small fish boiled in soy and used as a relish or condiment (named for Tsukudajima, a place in Tokyo famous for its preparation).—Oden: a stew (greatly enjoyed by the proletariat) of fried bean-curd, lotus-roots, potatoes, etc.” Ame and midzu ame.

“Soup (shiru): Tōfu-jiru: bean-curd soup.—Miso-shiru: bean-soup with vegetables.”

Railways—Dining cars (p. lxxxiv): Discusses “The unique and not unpalatable bento,—a sort of national sandwich,—put up (usually cold) in thin, flat, twin boxes (bento-bako) of dainty white wood (1 in. high, 5-7 in. long), along with a paper napkin (kuchifuki) and a pair of chopsticks (hashi), and sold at many stations, is distinctively Japanese and widely popular... Besides the full box of plain boiled rice, the ordinary (15 sen) bento contains usually... a few boiled black beans (nimame)... seaweed (kobu)...” Rice cakes (mochi) with the kernel of yokan, or sweet [azuki] bean paste, which usually forms their center.

Buddhism (cxc): Again the rice-flour cake [mochi] is offered at the domestic altar. It now takes the form of a lotus-petal with capsule of [azuki] bean-paste.” (an).

Yokohama (p. 13): “The return gifts from the emperor and princes included...jars of soy [sauce]; coral and silver ornaments;...”

Tokyo (p. 199): “The hill beyond the intersecting roadway is called Suribachi-yama because of the similarity

in shape to a suribachi—an earthenware vessel in which bean-soup [miso soup] is prepared.”

Nikko—Shops: “... the kuri-yokan (so-called from the chestnuts mixed with the sweetened bean-paste [azuki]) is good and cheap (10 sen).”

Kyoto—The Shinto Shrine of Inari. There are many local festivals, the most important of which is the Inari-matsuri which usually falls on June 5. There are trick riders on horseback and decorated sacred cars [carts] are “placed in the procession, and the day is devoted to general jollity—and pocket-picking. On this occasion the people eat Inari-zushi, or fried tofu stuffed with boiled rice, since tofu [fried, as aburage] is the favorite food of the fox popularly believed to be the messenger of Inari (and by extension, the God of Rice).”

Kyoto—Miidera (p. 504-05): Travelers visit Benkei’s Iron Pot (*Benkei-no-shiru nabe*), a very old, rusted, and broken contraption (about 5 ft. wide and 3 deep) resembling a soap-boiler, and from which Yoshitsune’s devoted servitor (and popular hero) is supposed to have eaten his bean-soup [miso soup]—which may well be doubted.”

Kyoto to Koya-San (p. 515): For the Western traveler there is “a tiny kitchen a blessed refuge wherein, if he is making a prolonged stay, he may cook his un-Christian food without the vegetarian priests knowing (or caring) that such a sacrilege is being committed! Meals are served in one’s apartment; the food is purely vegetable, and after the second day distressfully unpalatable. Fish, flesh, fowl, butter, cheese, eggs, milk, bread, coffee, and other necessities of life are absent, and are replaced by seaweed, greens, bamboo-shoots, cabbage, daikon in various unappetizing forms, and other garden-truck which one eats as a novelty the first meal and rejects with an involuntary tightening of the throat when it is offered at the second and third. In addition there are flabby mushrooms boiled in very thin water without seasoning; the omnipresent boiled rice without sugar, milk, or salt; a bean-curd (tofu) for which one acquires a liking only after much patient effort; a yellow substance (known as yuba) made of the skin of bean-curd, and looking and tasting like thin sheet rubber;...”

Kobe excursion—The Tansan Hotel (p. 630): The strawberries and other ground fruits and vegetables, which grow nearly all the time in this favored spot, are enriched with [soy] bean-cake only [no human excrement is used] (as a precaution against typhoid).”

Korea (p. 725): “Among the dishes dear to the native heart are pounded capsicum, bean curd [tofu], various sauces of abominable odors, a species of sour kraut (kimshi [kimchi]), seaweed, salt fish, and salted seaweed fried in batter.”

Manchuria and the Trans-Siberian Railway (p. 756): “Considerable [soy] bean-cake and furs, and vast quantities of lumber, etc., come down the river from upper Manchuria and Siberia.”

Also discusses edible seaweed (p. xlv, 330): Japanese food: "Seaweed in almost endless variety enters largely into foodstuffs. Not only are the giants of the marine flora taken up and utilized in various ways, but also the more delicate red and green sorts—the use of which has been adopted by other nations. Most of the edible green and red algae bear the generic term nori, while the words *umi-kusa*, or *kai-so* (which also means *bêche-de-mer*), are used for algae in general. Many of the weeds are eaten fresh, others in soup. Some are dried or pickled and eaten in vinegar. They usually appear in commerce in the form of little packages, to the sale of which special stores are dedicated. Certain varieties are converted into jelly."

Yezo—fisheries: "Certain of the many varieties of edible seaweed which flourish along the Japanese coast are found in Yezo, particularly the circumpolar tangle (*Laminaria*) and seawracks (*Fucus* species), which prefer cold water and a heavy surf. For this reason sea-algae add considerably to the value of the Yezo exports."

Note: The author resided for almost 12 years in Japan and made repeated journeys on foot (and otherwise) from one end of the country to the other. Address: F.R.G.S. [Fellow of the Royal Geographical Society, England].

April 1914 [The soybean: From a lecture... presented at the main meeting of the Gardening Society of Frankfurt am Main, on 17 April 1914]. Frankfurt am Main: Fr. Honsack & Co. 30 p. 22 cm. On title page: Als Manuskript gedruckt (Printed as a manuscript). [3 ref. Ger]

• **Summary:** On the gray cover: *Die Sojabohne der Mandschurei* [The soybean of Manchuria]. Contents: Introduction. Sir Alexander Hosie, in his books about Manchuria, counts eight types of soybeans: Yellow soybeans (3 varieties), green soybeans (2 varieties), and black soybeans (3 varieties). The soybean plant. Condition / nature of the soil and the climate. Cultivation of soybeans. Soybeans can enrich the soil with nitrogen. Yield.

Utilization of the soybean: 1. In East-Asia. A. As foods: 1. Soy sauce. 2. The Chinese paste *Chiang* and its near relative Japanese miso. 3. Tou-fu or tofu (incl. firm tofu, tofu curds, tou-fu p'i or yuba, ch'ien-chang or pressed tofu, tung tou-fu or frozen tofu). B. Soybean meal or flour. C. Soybean meal for use as fertilizer or animal feed. D. Soybean oil. E. Lard substitute and margarine. F. Industrial uses such as lubricant and waterproofing agent. Soybean meal. 2. In Europe and the USA. Refined soybean oil used for salad oil, margarine. Utilization of soybean cake in Europe. Utilization of soybean oil in Europe (for making soap, above all). The soybean oil and cake industry in Manchuria.

This booklet begins: A year ago today I had the opportunity to speak about the soybean for the first time. What we knew and understood about it then was still very little. Except within botanical circles, even its name was completely unknown, even though in East Asia (China, Japan, India), for more than 1,000 years, the soybean has been cultivated and is near rice as the main food for more than 500 million people.

Note: Part of this lecture was based the following English-language article, translated into German by Werner Winkler (Gustav's son) in 1913: Shaw, Norman. 1911. "The soya bean of Manchuria." *Shanghai, Statistical Department, Inspectorate General of Customs. China Imperial Maritime Customs. II. Special Series* No. 31. 32 p. Address: Mainkur-Fechenheim [Frankfurt am Main, Germany].

523. Togano, Meijiro. 1915. Shôyu, miso, tamari sokuji-hô [The quick process for brewing shoyu, miso or tamari]. *Jozo Shikensho Hokoku (Report of the Brewing Experiment Station)* No. 55. p. 121-51. Jan. [Jap]

Address: Jozo Shikensho, Gishi.

524. Fruwirth, C. 1915. Die Sojabohne [Soybeans]. *Fuehlings Landwirtschaftliche Zeitung* 64(3/4):65-96. Feb. 1 and 15. [65 ref. Ger]

• **Summary:** Contents: Introduction (work in East Asia and Europe from 1905-10). History. Botanical aspects. Varieties. Breeding. Needs of the plant (incl. "heat units, *Wärmesumme*). Utilization (incl. in German *Tofu, Miso, Chiang, Schoyu* or *Sojatunke* (shoyu, p. 83), *Natto, vegetabilische Milch* (soymilk), soy sprouts). Measures and precautions in cultivating soybeans (incl. yields). The soybean as a crop in central Europe. Conclusion.

Note: On p. 83 the term "Sojas" is used to refer to soybeans, and "Sojatunke" to refer to soy sauce.

In 1905 the Japanese made the first attempt to import soybeans from Manchuria to Europe, but it failed because they did not arrive in good condition. The repetition of the attempt in 1908, however, gave good results. Then imports of soybeans grew, followed by imports of soybean cake (*Sojabohnenkuchen*). Major importers today are England, France, Germany, Denmark, Italy, Belgium, Netherlands, Sweden. The high import duty hinders imports to Austria-Hungary.

Toward the end of the 1800s in Russia, Owinsky took early-ripening soybean varieties from China and Japan and requested the expansion of soybean cultivation. In 1899 in Kiev, Owinsky wrote the name of the soybean as *Soja hispida praecox* (p. 67). Owinsky in Derajne [Derazhne?] grew Podolie soybeans (p. 77). Sempolowsky in Derebzin, Russian Poland, also grew soybeans. European Russia gets soybeans overland (probably from Manchuria). Russia was one of the first countries to take an interest in growing soybeans after 1908. Russia now grows large amounts of

soybeans in Podolia. In Germany, Prof. Kallo in Wiesbaden was a pioneer who recommended soybeans as an inexpensive food for the people. North America first started to import lots of soybeans as a source of oil because of a bad cottonseed harvest.

“Since the start of my teaching activities, I have had an interest in the soybean plant and have carried on my own investigations.” In 1900 the author received 7 soybean varieties from L.V. Jurdiewicz from Deraznia in Podolia; these had been imported by Owinsky. In 1901 at Hohenheim he began to study the time needed for soybeans to mature; He found it ranged from 141 to 163 days. He continued this research at Hohenheim from 1901 to 1903, getting soybean seed yields of up to 1,560 kg/ha. From 1910 to 1914 he continued at Waldhof-Amstetten, with 5 varieties. The maturity range there was 112-166 days and the yields were up to 1,500 kg/ha (about 23 bushels/acre), but the yields of many varieties were low, about 300 to 500 kg/ha (4.5 to 7.5 bu/acre). Yields of soybean straw, however, were up to 3,600 kg/ha. Fruwirth uses three terms to refer to soybeans: (1) Die Sojabohne; (2) Die Soja; and (3) Sojas, as “Zuechtung von Sojas” or “Sojas, meist gemahlte.” There are now a proposal to establish a joint stock company for growing soybeans in central Europe (probably in Germany), using big money. But it may not succeed because soybean yields in Germany and Austria are low. Seedsmen who sell soybeans commercially in 1915 include: Haage and Schmidt (Erfurt, Germany), Vilmorin Andrieux (Paris, France), Dammann & Co. (St. Giovanni at Tedaccio, near Naples, Italy), and Wood and Son (Richmond, Virginia, USA). The main soybean varieties sold by each of these companies are described in detail (p. 73-74).

Utilization (p. 82): Since soybeans are rich in protein and fat, they can be used as a good meat substitute. In Europe the use of soybeans for food is still very small. “In Europe, the first foods from soybeans were made in France, at Vallées near Asnières: Flour, bread, and cakes for diabetics, and cheese. In Germany not long ago the Soyama-Works at Frankfurt am Main likewise began the production of such foods. Similar foods were also made in Romania. Soybeans sprouted in the dark yield a bitter-tasting salad. Production of vegetable milk started in France at ‘Caséo Sojaine’ at Vallées (Seine); and is now being studied by the Synthetic Milk Syndicate in England. Using the process developed by Fritz Goessel, this Syndicate made 100 liters of soymilk from 10 kg of ground soybeans at a factory at Liverpool.” “It is in no way certain that soybeans will ever be widely used in human foods.”

A fairly large amount of soybeans are ground for use as fodder. The main use is for oil extraction. Yet Haberlandt considered that since the soybean contained only about 18% fat (range: 13-22%), its use as a source of oil would not be economical. The main use of soy oil is in soaps, for which it

is highly prized. It is also used in making paints as a partial substitute for linseed oil. The best quality may be used as food. In England soy oil is used for margarine production.

Conclusion: The soybean originated in central Asia and is now widely cultivated in China, Japan, Manchuria, and India. Its seeds are rich in protein and, unlike most other legumes, also rich in fat. The plant is used in its homeland mostly as a source of human foods and seasonings, made by fermentation; the oil is used mostly for industrial non-food purposes. In recent years soybean production has expanded significantly in the southern part of the United States. There it is used mainly as green fodder, hay, silage, and soil building. The main expansion of soybean cultivation in Europe has been in Italy, southern France, Hungary, and southern Russia. Good early varieties give yields of 1,100 to 1,300 kg/ha. A large expansion of soybean production in central Europe is possible only in southern Austria and Hungary, and maybe in a few other places where it is warm. But late-maturing soybeans may be grown for forage and silage in the cooler parts of Germany and Austria. Address: Prof., Dr., Wien (Vienna).

• **Summary:** “Hatsucho-miso” is a special variety of “miso” chiefly manufactured in Mikawa Province. Its chemical composition was reported by T. Takahashi and G. Abe in 1908.

In preparing “Hatsucho-miso,” the cleaned soy-bean is steeped in water and boiled for 6 to 7 hours. The boiled soy-bean is crushed and then moulded in a round or cylindrical mass suitable to lay on the floor of the “koji” -chamber. “Koji” ripens after 20-40 days. It is then mixed with salt and water and is introduced into a fermenting vat covered by straw mats, weighted with a large number of stones to ensure the materials ripening en masse. The ripening of “Hatsucho-miso” is generally attained in from 3 to 5 years.

Lists the ten species of mould fungi found in almost every matured “koji.” The species of fungi predominating during the stages of preparation differ in accordance with the season in which the preparation is carried on.

3 species of yeast were isolated from “koji”: *Torula*, *Willia anomala* and *Mycoderma*.

“Hatsucho-miso” is reported to have a special flavor and aroma. “The nature of the aroma is not explained at present, but the taste is ascribed to the water soluble matter beside protein-matters, so that part of it at least must consist of the decomposed substances derived from protein matters.” Address: Japan.

527. Schieber, W. 1915. Die Sojabohne und deren volkswirtschaftliche Bedeutung als Nahrungsmittel [The soybean and its economic significance as a food]. *Seifensieder-Zeitung* 42(22):471-72. June 2. (Chem. Abst. 10:1558). [Ger]

• **Summary:** Descriptions and nutritional analyses are given of a number of different food products prepared from the unfermented and the fermented soy bean. Unfermented: soya milk, tofu (*Sojakäese*), soy flour ("because of its composition it can be recommended as a first class food for diabetics and vegetarians"), soya bread, soya confections (resembling marzipan), soya chocolate, soya coffee, soy grits, whole dry soybeans, and soy sprouts. Fermented: Solid seasonings such as Japanese natto, pastes such as Japanese miso, sauces (in Japan each year 10,000 factories make 700 million liters of soy sauce), a new German fermented soyfood product is made by a secret process; its contains 45% protein, 6% nutritional salts, and about 2% lecithin. Address: Dr.

528. *New York Times*. 1915. From here and there. Oct. 24. p. SM11.

• **Summary:** "The usual Japanese breakfast consists of rice, miso soup, pickles, and occasionally fish. Tea is always served with meals, and is drunk clear, without sugar. Miso soup consists of strips of radishes, seaweed, eggplant, or other vegetables cooked with bean curd and water. The cooking is not continued for a long, and so few vegetables are used that the soup partakes only slightly of the flavor of the ingredients."

529. *Los Angeles Times*. 1915. Japanese breakfasts. Nov. 27. p. II6.

• **Summary:** From the *Boston Transcript*: This article is identical to the following, published about a month earlier: *New York Times*. 1915. "From here and there." Oct. 24. p. SM11.

530. Japan year book. 1915. Tokyo, Japan: Y. Takenob and G. Takeda (The Japan Year Book Office). 789 p. See p. 349, 401-02, 436, 714, 716-17, 730, 743. [Eng]

• **Summary:** In chapter 16, "Agriculture" (p. 340-60) is a table titled "Beans, sweet potato and potato (p. 349) which gives "Soy bean" production data in Japan for 1911-1913 (in *koku*). The next paragraph contains information on soy

[sauce], *miso*, and *tofu* similar to that in the 1913 and 1914 year books.

In chapter 20, "Industry," is a paragraph (p. 402) on the patented Suzuki process for brewing soy [sauce] similar to that in the 1913 year book. Following that is a small table with production data for Soy [sauce] (in *koku*) for 1912-13, 1913-14 and 1914-15—"Year (March to Feb.)."

In Chapter 22, "Trade" is a table (p. 436) titled "Prices of principal commodities in Japan," which includes prices for 1911-1913 in yen for soy beans (per *koku*), soy [sauce] (per *koku*), and miso (per *kwan*).

In chapter 35, "Chosen (Korea)," under the heading Foreign Trade," is a table (p. 714) on "Staple exports" (in 1,000 yen) which has data on "Beans and peas" for 1910-1914. Under the heading "Agriculture" (p. 716) is a paragraph (p. 717) titled "Barley and soja bean," which gives acreage and yield for soja (year not specified) with the value (in yen) of exports to Japan in 1912.

In Chapter 36, "Taiwan (Formosa)," under the heading "Agriculture," a table (p. 730) titled "Agricultural products" has production data on "Beans and peas" (in 1,000 *koku*) for 1912-1913.

In Chapter 38, "South Manchuria," is a paragraph (p. 743) titled "The soya bean" which has information on South Manchuria's soya bean yield, [soya] bean-cake output, amount exported for specific years, and production at various milling centres (almost same wording as 1914 Year Book). Address: Japan.

531. Porter, Robert Percival. 1915. Japan, the new world-power: Being a detailed account of the progress and rise of the Japanese empire. London, New York, Toronto, Melbourne and Bombay: Humphrey Milford, Oxford University Press. xxiv + 789 p. Illust. Seven colored maps. Index. 23 cm. [soy ref]

• **Summary:** Japan (regardless of race and colour) intervened in the Great War on the side of her ally Great Britain. They worked together successfully against Germany in the siege of Tsing-Tau in 1914 from Oct. 31 to Nov. 7.

Near the front of the book is a table of "Weights, measures and moneys, for Japan, Great Britain, and the USA."

Page 149-50: "The annual average number of immigrants from Japan is about 20,000. Roughly, half go to China and the United States of America... Since 1907 two batches of Japanese emigrants, under 2,000 in all, have gone to Brazil, the majority of which have been under contract with the Sao Paulo Government to work in the coffee plantations." There are now about 155,000 Japanese in the United States. Since a 1907 agreement between Japan and the USA, immigration of Japanese labour to the USA has been restricted. Some Japanese have tried to enter the

USA by going first to Mexico. There are not more than 2,000 Japanese in Canada at present.

Page 232: In Japan: "The necessity for increased military and naval expenditure, which rose in connection with Korea in 1881, called for considerable additional revenue. Fresh military taxes were therefore levied; income-tax was introduced along with indirect imposts [taxes] on soy [sauce], tobacco, confectionery, and stamps, and the tax on *sake* was raised, augmenting the receipts to such an extent that the Government was able in 1886 to reduce the land-tax again. But following the war with China [1894-95] it became necessary to establish occupation and registration taxes, to raise again the *sake* tax, and to create a Government monopoly of leaf tobacco."

A table (p. 233) shows how the ordinary State revenue of Japan was derived in the financial years 1898-99 and 1909-10. The two main sources of revenue were: Land tax (38.4 and 85.7 million yen respectively) and liquor tax (33.0 and 91.5 million yen). By comparison, the soy tax was relatively small: 1.54 and 4.73 million yen.

Page 235-36: "The tax on liquors is levied upon (a) brewers of *shurui* (alcoholic liquor), which is divided into five classes, viz. *seishu*, or refined *sake*, *dakushu*, or unrefined *sake*, *shirozake*, or white *sake*, *mirin*, or sweet sake, and *shochu*, or distilled sake; (b) brewers of beer; and (c) wine and alcohol and alcoholic liquors other than sake or beer."

"Soy tax: The soy tax is levied upon manufacturers of this sauce at the rate of about 1 3/4 yen per *koku*. A tax on soy for household use was introduced in 1900, and ranges from 50 sen to 4 yen per *koku*, according to the amount manufactured. No more than 5 *koku* of soy per annum may be made for household use."

Page 240: A full-page table shows the "Budget for financial year 1911-12." The main sources of "Ordinary revenue" are liquors tax (88.7 million yen), land tax (75.1 million), customs duties (50.5 million), and tobacco monopoly (50.5 million yen). Revenue from the soy [sauce] tax is 4.6 million yen. The sugar excise is 14.7 million yen.

Page 261-62: "The upland fields, being for all intents and purposes unirrigable, are only to a very limited extent utilized for the cultivation of rice. Rotation crops are, however, raised twice a year, usually barley, 'naked barley,' and wheat as winter crops, and soya (more properly soja), sweet potatoes, and millets as summer crops." A key unit of area in agriculture is one *tan* = 0.245 acre. On [lowland] paddy fields, nationwide over the past 10 years, the average yield per *tan* is 7.913 bushels of rice and 6.668 bushels of barley, which may be considered a representative winter crop. "Upland fields, upon the same basis, produce 6.638 bushels of barley as a summer crop and 3.756 bushels of soya bean."

Another key (larger) unit of area in agriculture is one *cho* = 2.45 acre.

A table (p. 263) shows the total area, production, and yield of 17 major crops in Japan in 1897 and in 1910. Both years, the leading crop (by far) in area was rice, followed (in 1897) by barley, naked barley, wheat, and soya bean. For 1897 the three figures for soya beans were: 1,067,000 acres under cultivation, 15,381,000 bushels total production, and 14.41 bushels per acre yield. For 1910 the three figures for soya beans were: 1,137,000 acres, 18,834,000 bushels total production, and 16.56 bushels per acre yield.

Statistics for "small red bean" [*azuki*] are also given: For 1897 268,000 acres under cultivation, 3,069,000 bushels total production, and 11.45 bushels per acre yield. Thus, in 1897 and 1910 the production of soybeans was roughly 5 times the production of *azuki* beans.

Chapter 15, "Agriculture," contains a section titled "Soya bean" (p. 264-65): The soya, or soja, bean is well enough known in England as a cattle-food, but in Japan its application is by no means limited to this use. It is the basis of the Japanese sauce, soy, of which enormous quantities are brewed; of *miso*, or bean cheese [sic], used extensively for soup and in cookery in general; and of *topu* [sic, tofu], or bean curd, a cheap, highly nutritious and very popular article of diet. The residue from these manufactures is used both as fertilizer and as cattle food, or, alternatively, an oil of some value may be obtained from it. It is the principal summer crop of the upland fields, and its cultivation, which requires less fertilizer and less labour than other products, is general throughout Japan and particularly in Hokkaido. But the supply is far from equal to the demand, and a large quantity of beans and bean cake is imported from Chosen and Manchuria, the value of the present importation amounting to £3,000,000 annually.

"Among other beans the small red bean is largely cultivated, especially in Hokkaido, and is used for cakes and confectionery, and boiled with rice on occasions of ceremony. The Japanese are very fond of peas, horse-beans, and kidney-beans, which are grown as a stolen crop after rice in the paddies and just before it in the upland fields."

Page 269: "A comparison of the relative positions of human and animal labour in paddy fields and upland farms for the years 1903 and 1908 (the latest year for which figures are available) shows that the area tilled exclusively by human labour still forms a very large proportion of the total, though it tends steadily to decrease." "Manual labour is plentiful and it is chiefly by reason of its abundance that the intensive system can be carried on. Rice-growing requires, for instance, the labour of 17 men and 9 women per *cho* (2.45 acres), barley and wheat 11 men and 6 women, tobacco 25 men and 23 women, soya bean 7 men and 5 women, and so on. Farmers, in the vast majority of cases, are their own labourers, and those who may be distinguished as 'professional labourers' are a very small class."

Page 292: Sea-weeds: “Chief among the sea-weeds used as food is that known as ‘Kombu’ (*Laminaria*). It grows mostly on the shores of Hokkaido and the south-east of Honshu [Honshu], and is eaten sliced into very thin shreds. ‘Kanten’ is made by dissolving the weed *Tengusa* in water and exposing the resulting gelatinous infusion to the action of cold by night and the sun by day. Only the Chinese use it as food, however; in the West it is a substitute for gelatine, isinglass, starch, and the like. Other sea-weeds are used as paste.” Address: Queen Anne’s Mansions, London, England.

532. Latham, F.P. 1916. Soy beans as a cereal: Soy beans a great crop for southern farmer. *Progressive Farmer* 31(8):254-55. Feb. 19. See also p. 286 (Feb. 26) and p. 342 (March 4).

• **Summary:** “The first mention of the soy bean in this country was in the early part of the 19th century; however, it attracted little attention prior to 1854, when 2 varieties were brought to this country from Japan by the Perry expedition. It followed that other varieties were found and introduced, among them that ‘old standard,’ the Mammoth Yellow, which came to our shores sometime previous to 1882. The success with Mammoth furnished an encouraging lead to our diligent research workers, resulting in the importation into this country by the Department of Agriculture of some 800 distinct varieties.”

As a cereal, it is widely produced in Japan, China, Korea, and Manchuria. “By certain processing of the ground beans a milk is extracted which is not such a poor substitute for the real article; from this a cheese [tofu] is made that resembles in texture and nutrient value, our cottage cheese. Another product is a heavy, rich sauce [miso], similar to our peanut butter, which is consumed in large quantities. Soys occupy the place in the diet of these people that navy and lima beans do in our own, and are prepared in a like manner. They furnish the brown man his ‘peanut.’ By the simple process of soaking in salt water, then roasting they at once become a close competitor of the famous American delicacy.”

“So far as I have been able to ascertain there is but one mill in the United States built for and operating exclusively on soy beans. The Pacific Oil mills, of Seattle, Washington, have build up a lucrative business in this line and only get foreign beans for crushing, its output of both oil and meal meeting a ready demand in the West. That such can be done profitably in the South is no longer a question. The fact has already been demonstrated by several cotton oil mills in eastern North Carolina... If these satisfactory results can be obtained in mills not constructed for the purpose of handling beans, it is entirely reasonable to suppose that specially constructed machinery will in time be installed that will further enhance the profits accruing from such operations.”

A portrait photo shows F.P. Latham.

Note 1. This is the earliest document seen that mentions Pacific Oil Mills of Seattle, Washington.

Note 2. This is the earliest of many articles seen that likens tofu to cottage cheese, or roasted soybeans to peanuts. Address: Belhaven, North Carolina.

533. *Washington Post*. 1916. Admiral Togo, ‘Nelson of Nippon,’ ‘simple life’ model, servants say. May 21. p. ES14. • **Summary:** Admiral Togo, the victor of Tsushima, has never been interviewed and he never speaks about himself. Note: Tsushima Strait was the site of a naval battle in May 1905 in the Russo-Japanese War in which the Russian fleet was destroyed or captured by the Japanese fleet under Admiral Togo Heihachiro.

So the *Katei Zasshi*, a popular monthly magazine, sent reporters to “interview the count’s butcher and baker and candlestick maker, his barber and fishmonger and man at the corner.” By paying attention to his monthly housekeeping bills, they were able to conclude that the hero led a simple, frugal life—which all the tradespeople sincerely admired.

The man at the sake (spirits) shop said: “I get no orders for sake [saké] nowadays and only send in some soy (sauce) and miso (a curd [sic] made from beans and eaten for breakfast) of the commonest quality, occasionally.”

534. Piper, C.V.; Morse, W.J. 1916. The soy bean, with special reference to its utilization for oil, cake, and other products. *USDA Bulletin* No. 439. 20 p. Dec. 22. [9 ref] • **Summary:** Contents: Introduction. Soy beans in Manchuria. Soy beans in Japan. Soy beans in Europe. Soy beans in the United States. Methods of oil extraction. Soy-bean meal as human food. Soy-bean meal as stock feed. Soy-bean meal as fertilizer. Uses of soy-bean oil. Analysis of important varieties of soy beans. Possibility of developing a manufacturing industry with American-grown soy beans.

“Analyses of important varieties of soy beans (p. 16-17):... In determining the range in the oil and protein contents of over 500 varieties grown in the variety tests at Arlington Farm, Virginia, the percentage of oil was found to range from 11.8 to 22.5 [Tokyo had 20.7% and Biloxi had 20.3% oil] and of protein from 31 to 46.9 [Chiquita had 46.9% protein]... At the present time the Mammoth Yellow variety is the most generally grown throughout the South and is the one used in the production of oil. The yellow-seeded varieties, which are most suitable for the production of oil and meal, contain the highest percentage of oil.

“Environment has been found to be a potent factor in the percentage of oil in the same variety. Considerable differences occur in oil content when soybeans are grown in different localities. The Haberlandt variety grown in Mississippi, North Carolina, Missouri, Virginia, and Ohio

gave the following percentages of oil, respectively: 25.4, 22.8, 19.8, 18.3, 17.5; while the Mammoth Yellow variety grown in Alabama, South Carolina, Tennessee, North Carolina, and Virginia gave, respectively, 21.2, 19.6, 19.5, 18.4, and 18.8. Variety tests conducted in various parts of the country indicate a higher percentage of oil with the same variety for southern-grown seed. Similar results have been obtained in Manchuria, the North Manchurian beans showing an oil content of 15 to 17 percent and the South Manchurian beans from 18 to 20 percent."

Photos (both by Frank N. Meyer) show: A fleet of junks carrying soy beans to Newchwang, Manchuria (p. 2). Coolies at Newchwang, carrying loads of soy beans from junks to big stacks (p. 10). An outline map of the USA (p. 8) shows the area to which the soy bean is especially adapted for growing for oil production. The area of double hatching shows that it is especially well suited to the Deep South. The northern boundary of the area where it is "less certain of profitable production" includes the southern one-third of Ohio, Indiana, and Illinois, and most of Missouri. On the west, the "less certain" area includes the eastern one-third of Nebraska, Oklahoma, and Texas.

Tables show: 1. "Exports of soy beans, bean cake, and bean oil from the principal ports of South Manchuria (Antung, Dairen, Newchwang), 1909 to 1913, inclusive." 2. "Quantity and value of exports of soy beans and soy-bean oil from Japan to foreign countries, 1913 and 1914." The countries are: China, United Kingdom, France, Germany, Belgium, United States, Hawaii, British America, Australia, other countries. 3. "Quantity of imports of soy beans, soy-bean cake, and soy-bean oil from Dairen, Manchuria, into Japan, 1911 to 1914, inclusive. The greatest imports were of soy-bean cake, followed by soy beans, with only small amounts of oil.

(4) "Quantity and value of imports of soy beans, bean cake, and bean oil by European countries, 1912 to 1914, inclusive." The countries are: Austria, Belgium, France, Germany, Italy, Netherlands, Russia, Sweden, United Kingdom. In 1912, the UK imported the most soy beans, while Netherlands imported the most cake and oil. (5) "Quantity and value of imports of soy beans, soy-bean cake (Footnote: Includes bean cake [perhaps fermented tofu or canned regular tofu], or bean stick [perhaps yuba], miso, or similar products, with duty, 40 per cent) and soy-bean oil into the United States, 1910 to 1915, inclusive." The quantity of soy bean imports was greatest in 1915 with 3.837 million lb. The quantity of soy-bean cake imports was greatest in 1913 with 7.005 million lb. The quantity of soy-bean oil imports was greatest in 1911 with 41.106 million lb. "Prior to 1914 soy beans were not classified separately in the customs returns" (p. 9). (6) "Composition of soy-bean flour in comparison with wheat flour, corn meal, rye flour, Graham flour, and whole-wheat flour."

(7) "Value of a short ton of soy-bean cake and other oil cakes in the principal European countries" (Incl. cottonseed, linseed, peanut {Rufisque}). Countries: Germany, United Kingdom, Netherlands, Denmark, Sweden. (8) "Analyses [nutritional composition] of soy-bean meal and other important oil meals." (Incl. Cottonseed, linseed (old and new processes), peanut (decorticated), sunflower seed). (9) "Fertilizing constituents [nitrogen, ammonia, phosphoric acid, potash] of soy beans, soy-bean meal, and cottonseed meal."

(10) Analyses for protein and oil of important varieties of soy beans grown at Arlington Farm (Virginia), Newark (Delaware), and Agricultural College (Mississippi). The varieties are: Mammoth, Hollybrook, Manchu, Haberlandt, Medium Yellow, Ito San, Chiquita, Tokyo, Lexington, Guelph, Black Eyebrow, Shanghai, Peking, Wilson, Biloxi, Barchet, Virginia. Note 1. "At the present time, the Mammoth Yellow variety is most generally grown throughout the South and is the one used in the production of oil" (p. 16). (11) "Acreage, production, and value per ton of cottonseed in the boll-weevil states." "Since the boll weevil first entered Texas in 1892," it has steadily decreased production of cottonseed. The soy beans offers a good replacement. (12) "Comparative prices per ton of cottonseed and soy beans on the European market, 1911 to 1914, inclusive." Soy beans are usually slightly more expensive.

Note 2. This is the earliest published document seen that contains soy-related photos by Frank N. Meyer.

Note 3. This is the earliest document seen in which William Morse describes soy milk, or mentions natto, or correctly mentions tofu.

Note 4. This is the earliest document seen (Sept. 2004) that mentions the soybean varieties Biloxi or Lexington. Address: 1. Agrostologist in Charge; 2. Scientific Asst. Forage-Crop Investigations, USDA, Washington, DC.

535. Piper, C.V.; Morse, W.J. 1916. The soy bean, with special reference to its utilization for oil, cake, and other products: Soy beans in Japan, in Europe, and in the United States (Document part). *USDA Bulletin* No. 439. 20 p. Dec. 22. [2 ref]

• **Summary:** "Soy beans in Japan (p. 4):... In many districts it is cultivated not in fields by itself, but in rows along the edges of rice and wheat fields. Although not grown to any considerable extent as a main crop by the Japanese farmer, the average annual production is about 18,000,000 bushels. In quality the beans raised in Japan are said to be superior to those of Manchuria and Chosen [Korea] and are used exclusively in the manufacture of food products. The imported beans, of which very large quantities are obtained from Manchuria and other Asiatic countries, are used principally in the manufacture of bean cake and oil."

"The soy bean forms one of the most important articles of food in Japan. It is one of the principal ingredients in the

manufacture of shoyu (soy sauce), miso (bean cheese), tofu (bean curd), and natto (steamed beans). The beans are also eaten as a vegetable and in soups; sometimes they are picked green, boiled, and served cold with soy sauce, and sometimes as a salad. A 'vegetable milk' is also produced from the soy bean, forming the basis for the manufacture of the different kinds of vegetable cheese. This milk is used fresh and a form of condensed milk is manufactured from it. All of these foodstuffs are used daily in Japanese homes and for the poorer classes are the principal source of protein. To a limited extent, soy beans are used as a horse or cattle feed, being sometimes boiled and mixed with straw, barley, and bran."

"Soy beans in Europe (p. 6): The soy bean was first introduced into Europe about 1790 and was grown for a great number of years without attracting any attention as a plant of much economic importance. In 1875 Professor Haberlandt, of Vienna, begun an extensive series of experiments with this crop and strongly urged its use as a food plant for man and animals. Although interest was increased in its cultivation during the experiments, the soy bean failed to become of any great importance in Europe. At the present time it is cultivated only to a limited extent in Germany, southern Russia, France, and Italy."

"Soy beans in the United States (p. 7): Although the soy bean was mentioned as early as 1804 (Footnote: Willich, A.F.M. American Encyclopedia, 1st Amer ed., v. 5, p. 13. Philadelphia, 1804), it is only within recent years that it has become a crop of importance in the U.S. At the present time the soy bean is most largely grown for forage. In a few sections, such as eastern North Carolina, however, a very profitable industry has developed from the growing of seed... The yields of seed to the acre in various sections of the United States range from about 15 bushels in the Northern States to about 40 bushels in the northern half of the cotton belt. The average yield in eastern North Carolina is about 25 bushels, although many fields produce 35 bushels or more to the acre..." Note: This is the earliest U.S. document seen (June 2003) that cites the 1804 publication by Willich [and James Mease] concerning the soybean in Philadelphia. Note that this article appeared 112 years after 1804.

"The first extensive work in the U.S. with the soy bean as an oil seed was entered upon about 1910 by an oil mill on the Pacific coast. The beans, containing from 15-19% of oil, were imported from Manchuria, and the importations, most of which are used in the manufacture of oil and cake, have gradually increased, as shown in Table V. The oil was extracted with hydraulic presses, using the same methods employed with cottonseed and linseed. It found a ready market, as a good demand had been created for this product by soap and paint manufacturers, which up to this time had been supplied by importation from Asiatic countries and England. The soy cake, ground into meal, was placed on the

market under a trade name and was soon recognized as a valuable feed by dairymen and poultrymen. The use of the cake has been confined almost wholly to the Western States, owing principally to the high cost of transportation."

"An industry which promises to be of importance in a further utilization of the soy bean is the manufacture of 'vegetable milk.' At the present time a factory in New York State is being equipped for this purpose." Address: 1. Agrostologist in Charge; 2. Scientific Asst. Forage-Crop Investigations, USDA, Washington, DC.

• **Summary:** Wade-Giles reference: *Tung T'ing Tung Shan Wu Ch'an K'ao*, by Chu Chên. Republican period. The section titled "Yellow soybeans" (*huangdou*) states: When fresh, they are called green vegetable soybeans (*maodou*; "hairy beans"); when dry, they are called yellow soybeans. Plant them in the 4th lunar month. The stem grows to a height of 2 feet. The leaves are round with pointed tips. The color is deep green, with little yellow flowers. The pods are a little more than an inch (*cun*) long, have green hairs, and contain 2-3 beans. When the beans are fresh, they are green; but when they grow old, they turn yellow. They are round like pearls. After removing the skin [seed coat] from the individual beans, you will find two parts [cotyledons]. They are like almond seeds. Most beans have that same structure. Green vegetable soybeans (*maodou*) are boiled in the summer and served on a plate as a vegetable.

There are two kinds of green vegetable soybeans. One kind is called *guanbangqing*; in the 5th month you can harvest them as green vegetable soybeans, or in the 7th month you can harvest them as yellow soybeans (mature). Another kind is called *shijixiang*; in the 7th month you can harvest them as green vegetable soybeans, or in the 9th month you can harvest them as yellow soybeans.

For some, you do not wait until they are mature; just harvest the [green] pods and boil them, then spread them in the sun until dry; they are called dry green soybeans (*xunqingdou*). They are also called *maodougan* ("green vegetable soybeans dried").

Green vegetable soybeans (*maodou*) are easily infested by worms. There is no way to prevent this, whereas [mature, dry] yellow soybeans can be stored for a long time. After you get rid of the pods, they do not become wormy.

There are many ways to eat yellow soybeans. You can boil them, roast them, use them to make jiang or tofu (*doufu*), or to obtain oil. These are methods handed down to us from antiquity. Their nature is warm. They benefit the large intestine. If you eat them raw, the flavor is not good; they have an unnatural flavor. If you have an ulcer, then their flavor is sweet. Western doctors say the efficacy of yellow soybeans is better than cow's milk. Therefore, in recent years, many Westerners [in this part of China] have begun to drink soymilk (*doufujiang*), so its price has risen. When you put yellow soybeans among the rice straw and pour water on them, after 6-7 days, the soybeans will sprout to a length of 2-3 inches to become soybean sprouts (*douyacai*). The villagers call them *ruyicai* ("as you wish vegetable") [probably because you can grow soy sprouts quickly, for use as a vegetable, whenever you wish, year-

round]. The stalks can be dried and used as fuel. (Translated by H.T. Huang, PhD, April 2003).

542. *Weekly News Letter (USDA)*. 1917. Soy bean useful crop. May be utilized in greater number of ways than almost any other agricultural product. 4(27):3. Feb. 7. [1 ref]

• **Summary:** "The soy bean... may be utilized in a greater number and a greater variety of ways than almost any other agricultural product..."

"In Japan the soybean forms one of the most important articles of food in use. It is one of the principal ingredients in the manufacture of shoyu (soy sauce), miso (bean cheese), tofu (bean curd), and natto (steamed beans). The beans are eaten also as a vegetable and in soups; sometimes they are picked green, boiled, and served cold with soy sauce, and sometimes as a salad. A 'vegetable milk' is also produced from the soy bean, forming the basis for the manufacture of the different kinds of vegetable cheese. This milk is used fresh, and a form of condensed milk is manufactured from it."

In several European countries and to some extent in America, soy-bean "flour enters largely as a constituent in many of the so-called diabetic breads, biscuits, and crackers manufactured as food specialties.

"Soy-bean milk... has been produced in small quantities in the United States, and recently a factory has been equipped to make this product." In Europe and America soybeans are roasted to make "an excellent substitute for coffee. In Asia the dried beans, especially the green-seeded varieties, are soaked in salt water and then roasted, this product being eaten after the manner of roasted peanuts."

Soy-bean meal (for use as a stock feed) and soy-bean oil are also discussed. "In addition to its availability as a food, soy-bean oil has found important uses in the markets of the world for making paints, varnishes, soaps, rubber substitutes, linoleum, waterproof goods, and lubricants. It is also used in the Orient for lighting and in the manufacture of printing ink."

545. McClelland, C.K. 1917. Farms and farmers: Soy beans (Continued). *Atlanta Constitution (Georgia)*. March 18. p. A10.

• **Summary:** Discusses soy bean harvesting machinery and uses for human food (shoyu, miso, natto, tofu, and soy bean meal [flour]). Address: Editor & Prof., Experiment, Georgia.

546. *J. of Home Economics*. 1917. The soy bean. 9:183-84. April.

• **Summary:** “The soy bean, already one of the most important crops of Asia, promises to take an important place in the agricultural industry of the United States. It is said that it may be utilized in a greater number and a greater variety of ways than almost any other agricultural product. Not only are the beans, and the oil expressed from them, available as food, but soy bean oil is used for making paints, varnishes, soaps, rubber substitutes, linoleum, waterproof goods, and lubricants, besides its use in the Orient for lighting and other purposes.

“In Japan the soy bean is one of the principal ingredients in the manufacture of shoyu (soy sauce), miso (bean cheese), tofu (bean curd), and natto (steamed beans). The beans are eaten also as a vegetable and in soups; sometimes they are picked green, boiled, and served cold with soy sauce, and sometimes as a salad. A ‘vegetable milk’ is also produced from the soy bean, not only forming the basis for the manufacture of the different kinds of vegetable cheese, but used fresh, while a form of condensed milk is also made from it. All of these food stuffs are used daily in Japanese homes, and for the poorer classes are the principal source of protein.

“Soy bean oil resembles that of cotton seed in many ways. The meal remaining after the oil is extracted from the beans has become important during the last few years as a food of low starch content, and so adapted to the use of diabetic patients.

“Soy bean flour enters as a constituent into many of the so-called diabetic breads, biscuits, and crackers manufactured as food specialties. The flour or meal may be used successfully in the household as a constituent of muffins, bread, and biscuits in much the way in which corn meal is used.

“An artificial milk like that manufactured in the Orient has been produced in small quantities in the United States, and recently a factory has been equipped to make this product. Such milk may be used for cooking in the household, and by bakers, confectioners, and chocolate manufacturers. Such products must, of course, be properly labeled.

“The soy bean has also been utilized as a substitute for the coffee bean. When roasted and prepared, it makes an excellent substitute for coffee.”

547. Prinsen Geerligs, H.C. 1917. Ueber die Anwendung von Enzymwirkungen in der Ostasiatischen Hausindustrie [On the application of enzymes in East Asian cottage industries]. *Zeitschrift fuer Angewandte Chemie, Wirtschaftlicher Teil* 30(3):256-57. May 8. [Ger]

• **Summary:** Paper read before the *Niederlaendische Chemische Vereinigung* (Dutch Chemical Union), General session in Hague, December 28, 1916.

This paper is on the domestic application of enzyme actions in Eastern countries, and describes, among other things, the making of fermented and non-fermented soybean food products. “To make soymilk (*Milchersatz*), only white soybeans are used, softened in water for 3 hours until they have swollen to 3 times their original size. Then, while water is added continuously, they are milled between two hard stones and fall through a hole in the bottom stone into a pail. A very small amount of the thin soybean slurry is set aside; through the proliferation of lactic acid bacteria it quickly becomes so sour that after several hours that lactic acid content has risen to 1.5%. The above mass is cooked in a large pan. The now pasteurized liquid is filtered through a large sieve to remove the hulls and hard pieces. The filtered milk-white liquid has, in appearance and chemical composition, the greatest similarity with animal milk. A sample contains 6.9% solids, 3.13% protein, and 1.89% fat. It gives an alkaline reaction and contains a solution of legumin bound to potassium phosphate, while the fat is emulsified in the thick protein solution. Unfortunately this soymilk (*Bohnenmilch*) tastes very much like raw French-beans (*Schneidebohnen*), so that people who are accustomed to cow’s milk do not enjoy it much. But infants should be very content with it.

“If cheese is to be made from this milk, a small amount of the slurry soured with lactic acid is added to it. Thereby, the legumin (protein) is dissolved from the potassium phosphate and coagulated, then settles out with the fat with which it is emulsified. When the milk, through several hours mixing with the coagulation liquid, has become fully firm, it is packed in cloths and pressed between boards, in order to remove any excess water. Then the cakes are cut into square pieces; if they are to be eaten raw, it must be done quickly, lest they continuing souring and spoil. In order to impart a pleasant color to the cakes, they may be placed for several moments in a *Curcuma* [turmeric] decoction. Mostly the cakes of cheese (*Kaesekuchen*) are dried in the sun or fried (*gebraten*). They then keep better and acquire a pleasant flavor.”

“Of much greater significance is the preparation of the most popular and prevalent soybean preparation, soy sauce (*der Soja*), which in East Asia is an indispensable seasoning

for a variety of dishes, and is produced and used in unbelievably large quantities. There are various types, some of which contain wheat flour. But here we will consider only the type that is made [in the Dutch East Indies] with soybeans plus some added ingredients to improve the flavor. For the preparation of soy sauce, brown or black soybeans are cooked for several hours. After pouring off the cooking water, the beans are placed in flat pens / trays (*Hürden*) of woven bamboo and dried for half a day in the sun, then cooled in the shade. When they are cooled, the beans are covered with leaves of *Hibiscus tiliaceus*, a species of mallow, and they are soon covered with a layer of *Aspergillus* mold, which is usually found on the tiny hairs or cilia on the underside of the hibiscus leaves and so is transferred to the beans. The mold filaments or hyphae penetrate between the tough and thick cell walls, dissolve these through hydrolysis, and thus make the cell contents accessible to the influence of the molds. The mold is allowed to work until it forms spores (*Fruchtstaende*). The beans then appear to be covered with a brownish green felt. The beans are then dried in the sun and placed in a strong, cold salt solution. The mixture is placed in the sun for several days and then cooked. The brine solution, which contains the soybean extract, is poured off and the beans are cooked several more times until they have lost their salty taste. The various cooking extracts are mixed, filtered through a fine sieve, then mixed with palm sugar, aniseed [*Pimpinella anisum*], and an herb extract, which one can buy at a druggist's shop, and finally cooked until salt crystals appear. The soy sauce (*Soja*), which is now ready to use, is a dark brown, thick, very salty liquid, in which a viscous sediment forms. By thinning with water, it becomes turbid. But the solution again becomes clear with the addition of salt. This thorough investigation has shown that the mold hyphae branch out into the cell walls, hydrolyze and dissolve the pectin substances, and likewise break down the protein content of the cells to leucine, tyrosine, asparagine, and other decomposition products of legumes.

“But this action and result is of secondary importance. The main point is the dissolution of the cell walls, whereby the protein becomes free and can be dissolved in the concentrated salt solution. The composition of soy sauce, except for the salt content, is very similar to that of meat extract, so that it can completely replace meat in the largely vegetarian diets of the people of the East.

“In a similar way, various other foods are obtained, whereby a mold dissolves the cell wall and so fulfills the function otherwise accomplished by cooking. We mention here only the bean paste (*Bohnenbrei*) [*tao-tjo*], for the preparation of which, dehulled white soybeans are cooked and then mixed with rice flour and glutinous rice flour (*Kleereismehl*). The mixture is placed in a small basket that is lined with the same hibiscus leaves mentioned above, and the *Aspergillus* molds growing on the leaves are allowed to

develop. This saccharifies the rice starch flour and dissolves the bean cell walls. Thereby, the mixture becomes sticky and glutinous, and tastes sweet. It is dried and placed in a pot with saltwater. There it remains until each bean is permeated with salt and a sample tastes salty. Palm sugar is added to taste and it is ready for use without further cooking. Microscopic analysis showed that the cell walls were completely dissolved and the contents lay free, so that the mold growth had greatly improved the digestibility of the beans.

“In Java, soybeans are also cooked and made into flat cakes on a flat bamboo lattice. A small piece of an old cake is added and the mass is covered with banana leaves. One soon observes a rise in temperature and the development of moisture. The mass is penetrated by hyphae of *Rhizopus Oryzae*, which again dissolves the cell walls and frees their contents. The cake [tempeh, though the term is not mentioned] with its covering of mold, is consumed without further processing, raw or fried (*gebraten*).

Also discusses the preparation of onchom from peanut press-cake. Address: PhD, Netherlands.

548. Hagerty, Michael J. trans. 1917. The beans: Imperial encyclopedia (T'u shu shih ch'eng. Published, 1728). 18 p. May. 28 cm.

• **Summary:** This section on beans (including soy beans) appears in the encyclopedia in Category IV—Science (*Po Wu Hui Pien*), Section 20—Vegetable Kingdom (*Ts'ao Mu Tien*), Subheading—Beans (*Tou Pu*), Book 35. Virtually all of the translation concerns a General Chronological Survey (*Hui K'ao*). For many of the longer detailed sections concerning soy beans, the translator refers the reader to his 1917 translation of: Wu Ch'i-chün, ed. 1848. *Chih wu ming shih t'u k'ao*.

A table (p. 11) compares the nutritional composition of [soy] bean milk and cow's milk.

Note: This book was presented to the U.S. Department of Agriculture Library by Mr. W.T. Swingle. Address: Translator of Chinese, Office of Crop Physiology, Bureau of Plant Industry, USDA.

549. Hagerty, Michael J. trans. 1917. The soy bean (ta tou), by Wu Ch'i-chün, in *Chih wu ming shih t'u k'ao*, Published 1848 at T'ai-yüan-fu, Shansi [China]. Translated and indexed by M.J. Hagerty, Chinese translator, Office of Crop Physiology and Breeding Investigations, May, 1917. Washington, DC. 6 + 96 p. May.

• **Summary:** See: Wu, Ch'i-chün. 1848. Ta tou [The soy bean]. Address: Translator of Chinese, Office of Crop Physiology, Bureau of Plant Industry, USDA; Berkeley, California.

550. *New York Times Magazine*. 1917. Woman off to China as government agent to study soy bean. Dr. Kin will make

report for United States on the most useful food of her native land. June 10. p. 9. (New York Times section 6).

• **Summary:** The *New York Times Magazine* is part of the Sunday *New York Times* and may be simply cited as such. Dr. Yamei Kin is “the only Chinese woman with a physician’s diploma from an American college,” the Woman’s Medical College of New York. “She left New York a few days ago for the orient to gather data on that humble but nutritious food [the soy bean] for the Department of Agriculture at Washington.” During World War I, new demands are being placed on America to feed its citizens and allies. “The appointment of Dr. Kin marks the first time the United States Government has given so much authority to a Chinese. That it is a woman in whom such extraordinary confidence is now reposed detracts nothing from the interest of the story.”

China was the first country to invent paper, printing, gunpowder, porcelain, chess, playing cards, and silk. “And now Dr. Kin is going to see if her native land can teach the United States how to develop a taste for the soy bean in its numerous disguises...

“‘The world is in need of tissue-building foods,’ said Dr. Kin, ‘and cannot very well afford to wait to grow animals in order to obtain the necessary percentage of protein. Waiting for an animal to become big enough to eat is a long proposition. First you feed grain to a cow, and, finally, you get a return in protein from milk and meat. A terribly high percentage of the energy is lost in transit from grain to cow to a human being.’”

“‘The statement is frequently made that the Orientals live almost exclusively upon rice, eating little meat. It is not generally known, perhaps, that deficiency in protein is made up by the consumption of large quantities of products of the soy bean, which take the place in our dietary of meat and other costly nitrogenous foods. They are eaten in some form by rich and poor at almost every meal. Instead of taking the long and expensive method of feeding grain to an animal until the animal is ready to be killed and eaten, in China we take a short cut by eating the soy bean, which is protein, meat, and milk in itself. We do not eat the plain bean in China at all. It is never eaten there as a vegetable, but in the complex food products—natto, tofu, miso, yuba, shoyu, and similar dishes.

“‘The chief reason why people can live so cheaply in China and yet produce for that nation a man power so tremendous that this country must pass an Exclusion act against them is that they eat beans instead of meat.’”

She then describes how to make tofu. “‘Soup noodles are made out of bean curd. Entrées made of bean curd are served with cream mushroom sauce or a hot Spanish tomato sauce. A salad of bean sprouts, accompanied by cheese—the cheese [fermented tofu] a cross between Camembert and Roquefort, and made from the soy bean—is very nutritious and palatable. Americans do not know how to use the soy

bean. It must be made attractive or they will not take to it. It must taste good. That can be done. We make from it a delightful chocolate pudding. A black soy bean sauce we use as a foundation for sweetmeats in China.” Note: None of the various Chinese food experts whom we have asked can understand what Dr. Kin means by the previous sentence. None has ever heard of a “black soy bean sauce” that is used as a foundation for confections or sweets in China. The two black soy bean sauces made in China, from either soy nuggets or jiang, are both salty. (WRS Jan. 2009). Nevertheless: This is the earliest English-language document seen (Oct. 2008) that uses the term “black soy bean sauce” to refer to a kind of sauce made from soybeans.

“The soy bean contains practically no starch, which means that it is a most desirable food for diabetics, and also, of course, for vegetarians. Buddhists kill no animals—they thrive by making a specialty of the soy bean, which, by the way, is already being used in the French Army. They find there that soy bean mixed with flour makes a good cracker, more nourishing than any other cracker.”

“The Chinese do not know what worn-out soil is. Some places are so fertile and are cultivated with so much care and skill that three or four crops a year are regularly gathered... it is very common to see two crops in the same field at the same time... The Chinese have a passion for fertilizing the soil...”

“Dr. Kin is a graduate of the Woman’s Medical College of New York, and her great interests have always been domestic sanitation, civic hygiene, the conservation of life, and questions of nutrition. She is the head of the Imperial Peiyang Woman’s Medical School and Hospital, near Peking... the Imperial Infant Asylum in Tien-tsin, the Widows’ Home, and the Girls’ Refuge all come under her supervision as head of the woman’s hospital work of Northern China. She will return to this country in October, bringing to our Government the detailed results of her study of the uses of the soy bean as a foodstuff needed by this country and by the world in the campaign of food raising and conservation.” An illustration (line drawing) shows a portrait of Dr. Yamei Kin.

Note 2. This is the earliest published document seen (July 2000) that mentions Dr. Yamei Kin. Frank N. Meyer wrote letters about her in 1911 and 1916.

Note 3. This is the earliest document seen (Oct. 2001) that mentions a soy pudding (a “delightful chocolate pudding” made from bean curd).

551. *Literary Digest*. 1917. To study the soy-bean for Uncle Sam. 55(2):52-53, 55. July 14. Whole No. 1421.

• **Summary:** This is a lengthy summary of an interview with Dr. Yamei Kin, published in *The New York Times Magazine* on 10 June 1917. It includes several lengthy excerpts. “So interested has the United States become in this discovery [China’s knowledge of the soy-bean] that Dr. Yamei Kin, a

Chinese woman graduate of an American college, has been sent back home to gather for the Agricultural Department at Washington [DC] all the facts that are known in China about the soy-bean.”

“Instead of taking the long and expensive method of feeding grain to an animal until the animal is ready to be killed and eaten, in China we take a short cut by eating the soy-bean, which is protein, milk, and meat in itself,” says Dr. Kin.

“The plain bean, however, is never eaten, but it furnishes such products as natto, tofu, miso, yuba, shoya [sic, shoyu], and other dishes with queer-sounding names...”

A letter dated 26 March 1917 from Frank N. Meyer in China gives the address of Dr. Mrs. Yamei Kin as 500 W. 111th St., New York City.

552. Ishii, Eiichi. 1917. Mamekasu-sei pate [Paste from soy bean refuse]. *Japanese Patent* 31,331. July 19. 2 p. [Jap] Address: Manchuria (probably); Kanto-shu, Ryojun-shi.

553. *New York Produce Review and American Creamery*. 1917. Navy bean has rival: Soybean has higher food value—Bean milk preparation. 44(14):565. Aug. 1. [1 ref]

• **Summary:** Discusses the advantages of soybeans over navy beans, based in part on *Ohio Agric. Exp. Station Bulletin* 312. “Soybeans are rapidly finding a place as human food, used as common white beans and in new preparations, but more nutritious and economical. Less risk and labor are involved in growing and harvesting soybeans as compared with navy beans.

“Boiled or baked alone, or in combination with pork, potatoes or rice, soybeans take the place of navybeans. Soaking over night in considerable water is necessary to remove the strong flavor of the beans. A little soda in the water during cooking makes them softer.

“Green soybeans cooked in the pod shell easily, and make a palatable dish when served with butter or milk. The pods are tough and seldom eaten.

“A little soybean flour added to cornmeal makes mush made from the mixture brown and quicker and increases its food value.”

“Soy sauce, bean milk, bean curd and a ripened vegetable cheese called ‘miso’ are common foods made of soybeans in Japan and China.”

Note: This is the earliest English-language document seen (Oct. 2001) that uses the term “soybean flour.” Address: New York.

554. *USDA Bureau of Plant Industry, Inventory*. 1917. Seeds and plants imported by the Office of Foreign Seed and Plant Introduction during the period from January 1 to March 31, 1914. Nos. 36937 to 37646. No. 38. 105 p. Aug. 17.

• **Summary:** Soy bean introductions: 37036 to 37058. From Chusan, Chosen (Korea). Presented by Rev. George H. Winn, Presbyterian Mission. Received Jan. 28, 1914.

“37036 and 37037. Soja max (L.) Piper. (*Glycine hispida* Maxim.)

“37036. ‘No. 1. *Yulgochi* bean. Very hardy, will grow and produce where the ordinary beans will not amount to much.’

“37037. ‘No. 2. *Kambool*. Very commonly found in the markets.’

“37038 and 37039. *Phaseolus angularis* (Willd.) W.F. Wight. Adzuki bean.”

“37040 to 37055. Soy bean.

“37040. ‘No. 5. Brown mottled bean; carefully cultivated and given sufficient fertilizer.’

“37041. ‘No. 6. Brown. Planted around the edges of the rice fields or where there is a small corner that can be utilized, they are very hardy and will grow and produce where the ordinary beans will not amount to much.’

“37042. ‘No. 7. Large white-eyed bean; carefully cultivated and given sufficient fertilizer.’

“37043. ‘No. 8. Large green bean. The larger beans are all carefully cultivated and given sufficient fertilizer.’

“37044. ‘No. 9. Black mottled brown bean. As a rule, the smaller beans are planted around the edges of the rice fields or where there is a small corner that can be utilized. They are very hardy and will grow and produce where the ordinary beans will not amount to much.’

“37045. ‘No. 10. White mottled black bean; carefully cultivated and given sufficient fertilizer.’

“37046. ‘No. 11. Ordinary green bean. As a rule, these beans are planted around the edges of the rice fields or where there is a small corner that can be utilized. They are, however, often planted in fields. They are very hardy and will grow and produce where the ordinary beans will not amount to much.’

“37047. ‘No. 12. Brown mottled bean; often planted around the edges of rice fields and where there is a small corner that can be utilized; very hardy and will grow and produce where ordinary beans will not amount to much.’

“37048. ‘No. 13. Large blue bean; carefully cultivated and given sufficient fertilizer.’

“37049. ‘No. 14. Large black bean; carefully cultivated and given sufficient fertilizer.’

“37050. ‘No. 15. Small black bean; grown around the paddy fields. It is cultivated in larger areas because it is supposed to be extra nourishing, and some seem even to suppose it has medicinal properties, but I fear there is not much to it.’

“37051., ‘No. 16. The larger beans are all carefully cultivated and given sufficient fertilizer.’

“37052. ‘No. 17. The red bean; carefully cultivated and given sufficient fertilizer.’

“37053. ‘No. 18. Black mottled yellow. Small beans which are planted around the edges of the rice fields or where there is a small corner that can be utilized; very hardy and will grow and produce where the ordinary beans will not amount to much.’

“37054. ‘No. 19. Maroon bean. One of the larger beans, all of which are carefully cultivated and given sufficient fertilizer; but this is not very commonly found.’

“37055. ‘No. 20. Ordinary white bean. One of the larger beans; carefully cultivated and given sufficient fertilizer.’”

“37062 and 37063. Soy bean. From Harbin, China. Presented by Mr. Southard Warner, American consul, at the request of the American consul at Newchwang. Received Feb. 5, 1914.

“See report on the ‘Soya Bean of Manchuria,’ 1911 [by Norman Shaw, Dairen].

“37062. Grown south of Harbin.

“37063. Grown north of Harbin.”

“37069 to 37083. From Tientsin, China. Presented by Dr. Yamei Kin, Peiyang Woman’s Medical School and Hospital. Received Feb. 6, 1914.

“37074 and 37075. Soy bean.

“37074. ‘*Yüeh ya tou*, literally ‘moon-tooth’ bean, so called from the edge of the green peeping outside of the black thick skin like the crescent moon in the sky. Is largely used for making bean sprouts, which they say requires a bean that is not mealy or farinaceous, as that kind becomes mushy in the process of germination and has no taste left. Also is good for feeding animals, requiring to be lightly steamed before feeding, not boiled, for then the oil escapes and the flavor is lost. This kind is valued for its oil, which it contains in a great amount, and for making bean curd. This must be grown in a well-drained clay soil; black or moist earth will not do.’

“37075. ‘*Cha tou*. Specially used for making bean curd and bean sprouts.’”

“37077. Soy bean. ‘*Huang tou*. Used for making bean curd as well as starch and vermicelli.’ Note: #37078 is Mung bean (*Phaseolus aureus* Roxb. [Roxburgh], *Lü tou*).

“37080. Soy bean. ‘*Ching tou*. Used only for the oil expressed and fodder purposes.’”

“37228 to 37325. Soy bean. From Seoul, Chosen (Korea). Presented by Mr. George H. Scidmore, American consul general. Received Feb. 17, 1914.

“I submit the following information, which has been obtained, for the most part, from the Director of the Department of Agriculture, Commerce, and Industry, of the General Government of the Chosen. The same officer has very kindly supplied samples of 98 varieties of soy beans.

“The usual period during which the seed is sown extends from the middle of May to about July 10. In case the sowing is postponed till the latter part of that period, the fields from which wheat has already been harvested are used. The soil is first prepared by plowing and is then

shaped into small hemispherical hillocks about 4 ft in diameter. The seed is then planted in drill holes on the top of these hillocks, 6 or 7 inches being left between drill holes and 5 or 6 seeds being sown together in a hole. As a general rule, no manure or other fertilizer is used, but when it is desired to enrich the soil ashes are most commonly employed. After the plants have sprouted sufficiently, the shoots are thinned out so as to leave two or three only to each drill hole. This process takes place at the time of the first weeding. The ground surrounding the plants is gone over with a hoe or other implement two or three times to turn over the soil and to weed the field. The process outlined above gives briefly the method of cultivation generally in use throughout Chosen, and is applicable whether the beans are planted in separate fields by themselves or in the same fields with other crops.

“It is used mainly for its food value, the oil, and the residue as a fertilizer after the oil has been expressed. It is valuable as a food product for both men and cattle, the latter finding it a very excellent fodder when the whole plant is used. The principal food products for human consumption derived from the soy bean are bean paste [jang, Korean miso], soy [sauce, kan jang], bean curd, meal, etc.’” There follows a long list of 98 new soybean introductions from Korea, grouped by seed color; the first four are representative of the rest:

“37228. ‘A1. *Six Months*. Yellow. From South Chusei Province, Kosu district.’

“37229. ‘A2. *Widower*. Yellow. From North Heian Province, Seisen district.’

“37230. ‘A3. *Broad River*. From South Heian Province, Junan district.’

“37231. ‘A4. *White*. Yellow. From North Zenra Province, Chinan district.’

“37232. ‘A1. *Early Yellow*. Yellow. From North Heian Province, Kokai district.’

Note: This is the earliest document seen (March 2009) that mentions Korean-style soy bean paste; it is also the earliest English-language document seen (March 2009) that uses the term “bean paste” to refer to Korean soybean paste (*jang*).

Other interesting names among these 98 introductions from Korea are: *Rengyo Egg*, *Large-Grained White*, *White Rat’s Eye*, *Rich and Virtuous*, *Large Date*, *Indigo*, *Bluish*, *Barbarian Blue*, *Clasped Hands*, *Clear Blue*, *Black Rat’s Eye*, and *Thousand Tied*. A tally of the seeds by color shows: Yellow 35. Green 22. Gray 17. Black 16. Striped 8. Note that Yellow seeds comprise only 35.7% of the total by color. Address: Washington, DC.

555. Park, J.B. 1917. Soybeans as human food: Palatable dishes made from a comparatively new legume. *Ohio Agric. Exp. Station, Monthly Bulletin* 2(9):299-303. Sept. Extract

from Ohio Agric. Exp. Station, Bulletin No. 312, "Soybeans: Their Culture and Use." [2 ref]

• **Summary:** For details, see Williams and Park. 1917. "Soybeans: Their Culture and Use." Address: Ohio.

556. Eddington, Jane. 1917. The Tribune Cook Book: Beans, soy special. *Chicago Daily Tribune*. Oct. 14. p. E8 (Part 6, p. 8).

• **Summary:** "We do not know enough about that most charming family of plants which furnish us the meat stuff of the vegetable kingdom, or vegetable protein."

"Don't forget the soy bean,' was one of the commands urged on growers this year, 'for there is sure to be a larger demand for the beans for human food.' Last year these beans cost no more than a third as much as navy beans and only a fourth as much as limas, and more people were trying them and failing in their cooking than ever before. They really ought never to be subject to a boiling temperature. Protein of any sort is easily hardened by much heat, and these beans have a high per cent of this food principle. With this in mind they may be baked, etc., like navy beans.

"The soy bean, though so long used in China and Japan, whence we have such products as soy sauce, was introduced many years ago into the United States as a soil renewer and fodder crop."

Years ago, experiment station bulletins were discussing "the total digestible nutrients" of fodder crops. Yet more than 25 years were to pass "before even a few people would listen to the word 'nutrient' in reference to their own diet. 'Roughage' was a term much used that far back, as contrasted with such condensed foods as grains, while now we use the term in talking about human diets."

"Perhaps we shall some time learn to make the bean curd of soy beans which the Chinese use so much. I am hoping to get a precise recipe. The soy bean flour came into use some time ago."

"The medical writers, who for a considerable number of years have used this bean extensively and written much about it with recipes," say that the "yellow soy bean" contains 35 per cent protein.

The section titled "Soy bean cheeses" contains a long excerpt from Friedenwald and Ruhrah (1913, p. 124-26), which states that the most common of these "cheeses" are natto, tofu, miso, juba [sic, yuba], and shoyu. A brief description of each is given.

The last section, titled "Home made soy bean flour," again discusses Friedenwald and Ruhrah, "patent soy bean flour, mostly known to doctors only," grilled soy beans, diabetics, and a recipe for home made soy flour.

557. Frazer, Robert, Jr. 1917. Japan. Kobe. *Supplement to Commerce Reports [USA] (Daily Consular and Trade Reports, Bureau of Foreign and Domestic Commerce, Department of Commerce)* No. 55c. Dec. 31. p. 15-40.

• **Summary:** Goods shipped from Osaka to all countries: Pea cheese (miso): In 1915 612,517 lb worth \$16,379 was exported; in 1916 this rose to 886,245 lb worth \$23,268. Soy sauce: In 1915 80,977 gallons worth \$32,157 were exported; in 1916 this decreased to 73,261 gallons worth \$29,881.

Imports at Kobe from other countries included soya beans and oil cake. Tables summarize imports to and exports from Osaka for the years 1915 and 1916. Address: Consul, Kobe, Japan.

558. **Product Name:** Koji, Miso.

Manufacturer's Name: Fujimoto Koji, Miso Seizo-sho (Fujimoto Koji & Miso Manufacturing Co.).

Manufacturer's Address: 1014 Stockton St., San Francisco, California. Phone: Kearny 2339.

Date of Introduction: 1917.

New Product–Documentation: The Japanese American Directory. 1919. p. 68. Also in 1920, p. 45 (½-page ad; all in Japanese characters. Miso manufacturing department. Koji manufacturing department. And pickles manufacturing department. Rice, shoyu, soybeans, and other merchandise sales department), and p. 57 (directory). Also in 1921, p. 58 (½-page ad) and p. 64 (directory). Also in 1922, p. 30 (full-page ad) and p. 40 (directory).

Shin Sekai-sha. 1922. *Zaibei Nippon-jin Kan (Directory of Japanese in the USA)*. p. 41. A half-page display ad states: "Fujimoto Co., San Francisco, California. Kanemasa miso." Note: A metal square used by traditional Japanese carpenters is called a *kane-jaku*. Thus a trademark with the same right-angle is pronounced "Kane."

The Japanese American Directory. 1924. p. 58. New address: 328 Jackson St. Phone: Douglas 1216. Also in 1925, p. N-17. Also in 1926, p. N-22.

San Francisco City Directory. 1925. First listing for Fujimoto Co. in this English-language directory (E.K. Fujimoto). Food products. 238 Jackson St. Phone: Douglas 1216. No mention that they make miso.

The Japanese American Directory. 1930. p. 18 (directory; new company name: Fujimoto Miso, Shoyu Seizō-sho, 238 Jackson St., San Francisco. Note: The company has apparently started to make shoyu / soy sauce) and p. A-11 (full page ad; Fujimoto Shokai, 238 Jackson St. Makes Kanemasa brand shoyu, miso, koji, and Japanese-style pickles (*tsukemono*)) and p. A-11 (ad; makes Kanemasa brand shoyu, miso, koji, and Japanese-style pickles (*tsukemono*)). Also in 1932 directory, p. 17, but the name has returned to Fujimoto Miso Koji Seizō-sho. Same address and phone (Douglas 1216). Also in 1934, p. 20. Phone: EXbrook 1756; Ad (½ page. The top 1/3 of this ad is in English. Fujimoto Company. 238 Jackson St., San Francisco. Cable address: "Fujimoto" San Francisco. Importers Manufacturers Exporters. In Japanese: Makers of Kanemasa brand miso, koji, Japanese-style pickles

{*tsukemono*}, salmon pickled in saké lees {*kasuzuke*}. Specialized U.S. seller of nigari. Direct import and export). Also in 1936, p. 34, but the address is now 246 Front St.

San Francisco City Directory. 1930, same. Importers and exporters of food products, 238 Jackson. Tel. Douglas 1216. Retail store 1640 Post. Tel. West 0733. Fujimoto, E.K. (Miyako). Fujimoto Co. residence 1640 Post.

The Japanese American Directory. 1937. p. 8. Under the category "Importers of groceries:" Fujimoto Shokai, Fujimoto Co., 246 Front St., EXbrook 4776, 4777. But in the directory under "Food products manufacturers:" Fujimoto Miso Koji Seizô-sho. And on p. 9 is a ½-page ad. Also in 1938. p. 6 and 8 (directory) and p. 7 (full-page ad). Also in 1939. p. 6 (full-page ad) and p. 7 (directory, under both importer and manufacturer)

The Japanese American Directory. 1940. p. 7. Under the category "Food Products Manufacturers." Fujimoto Miso, Koji Seizô-sho (Fujimoto Co.), 246 Front St., San Francisco. Phone: EXbrook 1756. A full-page display ad on page 6 states that Fujimoto Company (Fujimoto Shokai) is an importer, manufacturer, and exporter. They make Kanemasa Miso, Koji, and Tsukemono (Japanese-style pickles). They also sell raw materials for making tofu (presumably whole soybeans and one or more coagulants). Also in 1941 Directory (p. 6, 7, and 28) as Fujimoto Shoten (Fujimoto Co.).

Chicago Shimpō, Inc. 1958. Chicago Japanese American directory. Page 19: ¼ page ad for Fujimoto & Company, 302 South 4th West, Salt Lake City, Utah. Tel. EMpire 4-8279. Illustrations show: (1) The company's Kanemasa brand; (2) A Japanese woman kneeling behind a porcelain mortar (*suribachi*), holding a wooden pestle (*surikogi*), and using it to grind miso until it is smooth. The woman has a unique head-covering called a hōkaburi, hōkamuri, or hokkamuri. The top 25% of the ad is in English; the rest, which is in Japanese, states: *Kanemasa (brand / logo) Edo Miso, Koji. Sake-kasuzuke. Sujiko Kasazuke. Matsukaze-do, san-mi Yōkan (Mitsuaji? Yōkan). Yuta-shu, Enko-shi, Fujimoto Shokai.* In English: Kanemasa (brand / logo) Edo Miso, Koji. Salmon pickled in saké lees. Salted salmon roe pickled in saké lees. Matsukaze-do brand 3-flavored Yōkan. Salt Lake City, Utah. Fujimoto Shōkai.

Hokubei Mainichi Nenkan (Year Book). 1970. Page 11. Same ¼-page ad as in 1958 Chicago Shimpō.

Shurtleff & Aoyagi. 1983. *The Book of Miso*. 2nd ed. p. 234. The earliest known miso company in the continental USA was founded by Mr. Genpei Fujimoto, and began operation in 1917. In 1942 it was the largest miso company in the continental USA. During World War II, in about 1943-44, because of the Japanese evacuation, it was shut down and moved to 302 South Fourth West, Salt Lake City, Utah. It was reestablished in Salt Lake City after the war by the son of the founder, Edward Kanta Fujimoto, and his wife, Shizue. Note: The source of this information was

probably Edward Fujimoto or his wife, who told it to Shurtleff in a phone interview in 1983. Although we have documents showing that Fujimoto started before 1919, we will accept the date 1917 until further evidence is available.

See separate record for Fujimoto in Salt Lake City.

559. Couling, Samuel. 1917. *Encyclopaedia Sinica: Bean, Soya*. London: Oxford University Press, Humphrey Milford; Shanghai: Kelly and Walsh. See p. 46. [2 ref]
 • **Summary:** "*Glycine hispida*, Monch. or *Dolichos soja*, L. This bean, so valuable for the oil which is expressed from it, has come into great prominence of recent years, owing to the enormous dimensions of the export trade in it since the Russo-Japanese War... The oil-yielding variety par excellence is the yellow bean, of which nearly 15 million piculs, or not far short of one million tons, were exported in 1915, 90% of this being from Manchuria, and the balance from Chihli, Hupei and Kiangsi... For several generations beans, but more especially beancake, had been sent to South China as manure for the sugar plantations; exportation abroad was prohibited until 1869, when shipments were made to Japan, which soon became a large customer both for beans and bean oil... In the Far East soya beans are used, as human foodstuffs, for making soy [sauce], bean paste, or *chiang*, as *tou fu* or beancurd, in soups, etc.; in cooking instead of rapeseed and sesamum oil; and the cake is employed as a fertilizer and for fattening hogs... Besides the Soya Bean there are many other kinds of bean cultivated in China, and entering largely into the diet of the people. The chief of these is *Phaseolus mungo* L, the green bean Lü Tou [mung bean], which contains little oil but is used in the manufacture of vermicelli.

"The annual export of vermicelli, principally from Chefoo, is considerable—amounting in both 1913 and 1915 to nearly Hk. Tls. [Haikwan Taels] 3,000,000; it goes to Chinese emigrants abroad." Address: M.A. (Edin.), Lately honorary secretary and editor, North China Branch, Royal Asiatic Society.

560. Crevost, Charles; Lemarié, Charles. 1917. *Catalogue des produits de l'Indochine*. 5 vols [Catalog of the products of Indochina. 5 vols.]. Hanoi: Imprimerie d'Extrême-Orient. 175 p. 29 cm. Formerly published in *Bulletin Economique de l'Indochine*, Vols. 25 and 26. [Fre]

• **Summary:** Volume 1 (published 1917), titled *Produits Alimentaires et Plantes Fourragères (Nutritious Products and Forage Plants)*, describes plants grown in Indochina and the nutritive value of each. Pages 106-09 describe "Soja—*Glycine Soja*," the soybean. Local names are given in Annam and Tonkin, Cambodia, China, and Japan. "The plant is widely cultivated in Indochina for its seeds, which are consumed in various forms. Soybean seeds in Indochina are typically yellowish white... It is well known that the Japanese use the soybean to prepare a sauce named *shoyu*

(*teou yeou* in China), as well as a *fromage de pâte* or vegetable cheese named *to fu* [tofu], or *teou fou* in Chinese. The Annamites also prepare an analogous sauce named *tuong* and a *fromage de pâte* named *dau phu* and *dau phu-ao*. Cambodia and the Indochinese province of Châu-dôc produce significant quantities of soybeans, of which a part is sent down to Saigon to be consumed or exported. There are good varieties on the high plateaus of Tonkin, especially in the province of Lang-son, whence large amounts can be obtained for export.

“The dead leaves are ordinarily burned. However some indigenous people partially burn the stems of the soybean plants, stripped of their leaves, to obtain a very fine charcoal dust or ash, which they mix with the resinous balm of *Canarium commune*, to use in making joss sticks. These are slender incense sticks burned as offerings in the pagodas and at the altars of their ancestors in their family homes.” [Note: A joss house is a Chinese temple or shrine.] A large, excellent, and very detailed illustration (p. 108) shows a soybean plant, with leaves, pods, seeds, and flowers. Nutritional analyses of soybeans from Laos, Tonkin, and Manchuria are given (from other sources).

Volume 3, titled *Matières Grasses Végétales (Fats and Vegetable Matter)*, includes analyses of Indochinese plants and their fat and oil contents. The contents of Vol. 3. was first published in the *Bulletin Économique de l'Indochine* 1922-1924. Pages 75-78 discuss “Soja–Soja Max (Lin.) Piper,” the soybean. “Mr. Li Yu-ying, a member of the Biological Society of the Far East, has greatly contributed, following several attempts made for more than a century by naturalists and those who acclimatize plants, to popularize in France this plant of many uses. He introduced cultivation of the plant in the area around Paris and, in Paris itself, in 1908 he established a laboratory for the study of the soybean, since completed by a soyfoods factory (*l'usine de la caséo-sojaïne*), where all the products derived from this plant are manufactured: Soymilk (regular, concentrated, powdered, or fermented), tofu (*fromage de soja*), soya patés, soya casein, soy flour and bread, etc.” The rest of the article is concerned mostly with characteristics, uses, and trade of soybean oil.

Crevost was born in 1858. Note: The meaning of soya casein is not clear. Address: 1. Inspecteur des Services agricoles et commerciaux; Conservateur du Musée [Maurice Long] agricole et commercial de Hanoi; 2. Ingénieur-Agronome, Directeur des Services agricoles et commerciaux du Tonkin, Lauréat de la Société nationale d'acclimatation.

561. Fuerstenberg, Maurice. 1917. *Die Soja, eine Kulturpflanze der Zukunft und ihre Verwertungsmöglichkeiten* [The soybean, a cultivated plant of the future, and possibilities for its utilization]. Berlin: Paul Parey. 40 p. [59 ref. Ger]

• **Summary:** Dedicated to the Prof. Friedrich Haberlandt, who introduced the soybean to Central Europe. Contents: Foreword. Introduction: The soybean. Ways of using the soybean in its homeland (East Asia, especially Japan and China). Shoyu or soy-sauce. Miso (vegetable cheese). Natto. Tofu of the Japanese or Tao-hu of the Chinese (bean cheese). The soybean as an oilseed. Soybean meal (and flour). Soya as a coffee substitute or extender. Soybean milk. Soya meat substitutes. Soybeans as a chocolate substitute. Soya rubber substitute. The utilization of soya in agriculture: As cow fodder. Summary. Bibliography. Photos show: (1) A field of soybeans (p. 6). (2) A soybean plant with the leaves removed to show the pods (p. 12). (3) Soy beans and pods (p. 13). Contains numerous tables, mostly from other sources: pages 11, 16-17, 19, 25, 27, 30, 35-37. Contains one of the best early European bibliographies on the soybean.

The author wrote this book during World War I. In his first book, published one year earlier in 1916 and titled “The Introduction of Soya, a Revolution in the Food of the People,” he discussed what he believed to be the great agricultural and nutritional value of the soybean. He uses two terms, *Die Soja* and *Die Sojabohnen* to refer to soybeans.

Chapter 1 (p. 5-7): In 1908 England started to import large quantities of soy beans; in 1909 these increased to 400,000 tonnes and in 1910 to 800,000 tons. Also in Germany, in the years just before World War I, imports of soybeans climbed in an unexpected way, reaching 43,500 tonnes in 1910, 90,600 tonnes in 1911 and 125,200 tonnes in 1912. Note: These units are given in dz. One dz (*doppelzentner*) = 100 kg.

The first manufacture of soyfoods in Europe took place in France, at Valees near Asnieres, where they made flour, bread, cakes, cheese, and soymilk—though only in small quantities and, above all, for diabetics. In England, soy flour has been used for a long time in the preparation of cakes.

However it was in Germany that the utilization of soybeans for food took place on a large scale; this began shortly before the war. The supply of foods to Germany was almost completely cut off during the war, so general attention soon turned to the new foods prepared from soybeans and people quickly became aware of their great nutritional value. Thus, in the middle of the war, a soybean industry was built in Germany. Unfortunately this youngest twig of the food industry was left crippled due to lack of raw materials. However one can predict that this industry has a bright future because of the great encouragement given to these products in so short a time. For example, in October 1914 the *Agumawerke* (Aguma Works) located in Harburg (near Hamburg) on the Elbe, first began mass production of a soy flour according to its own process. During the next few years it made many thousands of

tonnes of this meal, until the production had to be stopped for lack of raw materials (p. 6).

Equally gigantic sales of soy products were made by the *Soyamawerke* (Soyama Works) in Frankfurt am Main; this company made only soy food products. In addition to a meal (flour), it also produced a meat substitute (*Fleischersatz*), and, largely from soybeans, fresh and dried milk (*Frisch- und Trockenmilch*) as well as a fresh and dried cream preparation (*ein Frisch- und Trockenrahm-Präparat*). Likewise, this firm had to cease production of most of its soy products because of difficulties in soybean procurement, and concentrate only on the production of meat substitutes (*Fleischersatz*). These articles likewise entered all classes of the population splendidly as is seen from the large demand for them. Within 3-4 weeks this firm had orders for more than 1½ million pound cans, of which unfortunately it was able to satisfy only a small part. In addition to these two well-known firms, there are in Germany still a number others that are occupied with the production of foods from the soybean.

In Austria [the Austro-Hungarian empire], there exists a unique firm, the food factory Santosa in Prague [in the Czech Republic as of Sept. 2002], which is still processing soybeans. They introduced soy coffee into commerce. I understand that in Austria a large-scale soy processing venture is now being planned.

Certainly the soy processing industry finds itself in a beginning state and, like all young industries, in need of improvement. Remember the sugar-beet industry was also once young but it made improvements and went on to great success, as will be expected of this new twig on the food industry. In any case, the beginning of utilization of the soybean as food for the people has been made, and in the foreseeable future the soybean may, as in China and Japan, become an indispensable part of our people's food.

It is different with the introduction of the soybean as a cultivated plant in Central Europe. Forty years ago Friedrich Haberlandt showed (and after him countless others have shown) that the soybean grows well in Central Europe. Although additional new tests verify this, there are still those who object to soybean culture. One objection is the long time required by the soybean to come to maturity; the answer is the development of new varieties. Another is the relatively low yield compared with other beans; the answer lies in the use of inoculation. The author then discusses nutrient yield per acre and per unit of money, showing both to be high for soybeans.

Pages 10-11: It is well known that legumes possess the ability to transform and fix free nitrogen from the air. In 1886 Prof. Hellriegel discovered that this capability is due to certain bacteria that live in the soil and move through the root hairs into the root, where they cause nodule formation. The nitrogen-fixing bacteria living in the nodules nourish the plant. The author then talks about inoculation using

either soil from a previous planting or "Nitragin," a pure culture of root bacteria, which is well known and has recently been improved. Dr. Kuehn of Berlin-Grunewald showed that soil inoculated with Nitragin gave a 3- to 4-fold increase in yield, plus an increase in protein in the roots and leaves. He then discusses improved cultural practices. Winkler says that transplanting improves yields. Continued. Address: Steiermark, Germany.

562. Fuerstenberg, Maurice. 1917. *Die Soja, eine Kulturpflanze der Zukunft und ihre Verwertungsmöglichkeiten* [The soybean, a cultivated plant of the future, and possibilities for its utilization. Part II (Document part)]. Berlin: Paul Parey. 40 p. 28 cm. [59 ref. Ger]

• **Summary:** Continued on p. 14. Ways of using the soybean in its homeland (East Asia, especially Japan and China): Note: In this section, starting on p. 15, the author repeatedly uses the word *Sojaspeisen* meaning "soyfoods." The soybean probably originated in India. The Chinese and Japanese used it to fortify their rice-based, protein-poor diet. The practice came before the theory. The author says (incorrectly, p. 15) that all the basic soyfoods are fermented. He then gives a long description of koji and how it is made.

Shoyu or soy sauce (*Shoju oder Soja-Sauce*) (p. 15-17)" In Japan, 540-720 million liters are manufactured each year so each Japanese uses 60-100 ml/year. The fermentation time is 8 months to 5 years. The best soy sauce is fermented for 3 to 5 years. He explains how as soy sauce is fermented, the protein is broken down into amino acids such as leucine, tyrosine, and members of the "Xanthin" group.

Miso (vegetable cheese, p. 17-18): Miso is widely used in soups. More than half of the yearly Japanese soybean harvest is used for making miso. This is 30 million kg per year. Types of miso include *shiro miso* and Sendai miso. Winkler, in his small work titled "The Soybean of Manchuria," mentions two other types of miso: Aka or red miso and nuka miso. Kellner investigated five types of miso; a table shows their composition. Loew reports that this vegetable cheese (miso) is consumed either raw or in soups. Kellner, Nagasaka and Kurashima report that, based on their investigations, the amount of amino-nitrogen increases 3-fold and the quantity of carbohydrates is significantly diminished through lactic acid and alcoholic fermentation. The carbonic acid created thereby rises significantly during fermentation (Loew).

Natto (p. 18): Discusses the findings of Yabe.

Japanese tofu or Chinese Tao-hu (p. 18-20): This is the so-called "bean cheese" (*Bohnenkäese*). A table (p. 19, from König) shows the nutritional value of fresh tofu (84.8% moisture) and frozen tofu (17.0% moisture). E. Senft studied frozen tofu, a Japanese military preserved food (*Militärkonserve*) that is not canned; he found it had a beige color and a unique, slightly sour aroma which was at times

reminiscent of dextrin. It has a uniform texture throughout, with many tiny pores. Winkler refers to five other types of soy cheese. Concerning the military preserved foods, they were highly regarded during the Russo-Japanese War and (according to Senft) played a key role in the war. (Footnote: The descriptions of the various preparations made from soya make E. Senft's treatises (1906 and 1907) valuable; in them he published his investigations of a number of Japanese vegetable foods and military preserved foods or conserves). The well-known food manufacturer Maggi in Kempttal, Switzerland, has tried for many years to introduce a commercial miso-like product, but was not successful.

The soybean as an oil plant (p. 20-26): Winkler, in his brochure, discusses the uses of soybeans in Manchuria. After 1908, soybeans were sold in Europe at incredibly low prices which resulted in the expansion of imports and production. Then tariffs were levied on soybeans. There were some major problems in the Austrian oil industry.

Soybean flour (*Sojabohnenmehl*; p. 26-28): In recent years, various processes have been patented. One manufacturer is Soyamawerke in Frankfurt am Main, which makes *Soyama Kraftmehl*. Yellow soybeans are mechanically cleaned, washed, dried, and dehulled according to the process of Dr. Fritz Goessel. Agumawerke in Harburg also makes soy flour.

The soybean as a coffee substitute and extender (p. 28-31): Coffee is known to be detrimental to good health and void of nutrients. Rye, for example, has been used since the 17th century as a coffee substitute. Barley also plays a major role, especially as malt. A table (p. 30) shows the nutritional composition of ten coffee substitutes, including chicory, figs, lupin, and carob. Soy coffee tastes remarkably similar to real coffee. In Istria (*Istrien*), in the Austrian alps, in Switzerland as well as in Alsace (*Elsass*), the soybean has been used since its introduction as a coffee substitute. Haberlandt reported in his work that a teacher from Capo d'Istria told him that the soybean was used as a coffee substitute in Istria, and a friend told him that there was no difference between the flavor of the two. The Thunschen is used to make good soy coffee. The soybeans are mechanically cleaned, put into a trommel, agitated with water at 65-70°C, brushed and thereby freed of a large number of impurities which can leave a burned smell. The aroma of soy coffee can be improved by impregnation with an extract of largely decaffeinated coffee. It has roughly twice the nutrients of regular coffee and no harmful constituents.

Soybean milk (*Sojabohnen-Milch*, p. 32-33): The most popular vegetable milk is Dr. Lahmann's Vegetable Milk (*Lahmannsche Vegetabile Milch*), an emulsion made from almonds and nuts. In Japan, they make milk from soybeans; he describes the process, inaccurately, based on information from Winkler. This milk is also used to make cheese [tofu]. Also in Europe there have been successful attempts to make

a soymilk adapted to European tastes, as in France by the Caseo-Sojaine at Valées near Asnieres, and in England by the Synthetic Milk Syndicate. Using the process of Dr. Fritz Goessel, the latter company has a factory in Liverpool; it makes 100 liters of soymilk from: 10 kg ground soybeans plus 5 gm sodium phosphate, 2.4 kg lactose, 2 kg sesame oil, 6 gm common salt, and 60 gm sodium carbonate. Also the Soyamawerke in Frankfurt makes a soybean milk, named Soyama, as mentioned above (fresh and dried milk and cream). Recently Prof. Melhuish developed a new method using soybean, peanuts, and added coconut milk fat.

Soy meat substitutes (*Soja-Fleischersatz*; p. 33): Soyamawerke makes a product named *Soyama-Fleisch-Ersatz*.

Soybean as a chocolate substitute (p. 34): Haberlandt reports such a product.

Soya rubber substitute (p. 34): Goessel and Sauer have developed a rubber substitute made from soybean oil.

The utilization of soya in agriculture (p. 34-38): Use as fodder for cows. In 1880 Blascowicz [Blaskovics], Assistant at the Royal Hungarian Academy in Hungarian Altenburg, conducted fodder tests, whose results are given in various tables.

Conclusions (p. 38).

Note: This is the earliest document seen that uses the word *Ersatz* or the word *Fleischersatz*. They mean "artificial or inferior substitute" and "meat substitute" respectively. Though often associated with World War I, the word "ersatz" (which means simply "substitute" in German) was actually adopted into English as early as 1875, in reference to the German army's "Ersatz reserve," or second-string force, made up of men unqualified for the regular army and drawn upon only as needed to replace missing soldiers. Hence the meaning "inferior substitute." Address: Steiermark, Germany.

564. Lyman, Benjamin Smith. 1917. Vegetarian diet and dishes. Philadelphia, Pennsylvania: Ferris & Leach. 416 p. See p. 155-58. Index. Portrait. 21 cm. [3 ref]

• **Summary:** Discusses the physiological, economical, and ethical advantages of a vegetarian diet, with recipes and principles of preparation. The author, who wrote mostly about geology, lived 1835-1920.

A large table titled "Composition of foods" (p. 44-47) gives the percentage of protein, fat, carbohydrates, and ash (on a dry basis) for many foods, including natto, fresh tofu,

soy bean–dried, Swiss miso, soy [shoyu] No. 1 and 2, and white miso (all figures from Abel 1900), plus peanuts–dried.

In the chapter titled “Foods of vegetable origin” (p. 141-267), the section on “Pulse” (p. 152-78) contains a subsection titled “Soy bean” (p. 155-58), which begins: “The soy bean of China and Japan is perhaps the most important food plant there, next to rice. The bean is eaten to a small extent boiled like other beans; but is generally elaborated into a variety of products remarkably rich in protein and fat and therefore going well with rice so deficient in those constituents.” The following soy-related subjects are discussed, based largely on the writings of others: Soy sauce (Abel), natto (Abel), miso (R. Takahashi), tofu (Abel), *aburage*, *koritofu*, substitutes for milk and cheese, and nutritional comparison with eggs, milk and cheese (Abel, Atwater).

The section titled “Substitutes for milk and cheese” states: “The Chinese in Paris [probably Li Yu-ying] have been urging the culture of the soy bean. The seeds, when boiled, mashed, and pressed, yield both milk and cheese; if thinned with water, a very good substitute for animal milk; and if coagulated with mineral salt, a cheese that is usually eaten fresh, though it may be preserved by salting or smoking, after being cooked. Three varieties of the cheese are common in the oriental markets; a fermented kind, white, yellow, or gray in color, with a piquant taste, like roquefort; a salty and white kind, like goats’ milk cheese; and a third kind, smoky and resembling Gruyère. The soy cheese costs about a fiftieth as much as animal cheese; and in nutritive value, like the vegetable milk, compares very favorably with the ordinary products of the cow. (‘Phila. Ledger,’ Sept. 27, 1906).”

Note 1. No such article in the *Philadelphia Ledger* or the *Public Ledger* (Philadelphia), of this date, can be found.

Note 2. This is the earliest U.S. document seen (Dec. 2008) that mentions smoked tofu.

The section on peanuts (p. 158-62) includes roasted peanuts, peanut butter, peanut taffy, and “Terralac or peanut-milk (here first published).” Details on how to make peanut-milk at home are given, followed by many recipes for its use—each preceded by the word “Terralac.” Thus: Terralac custards, Terralac punch. Terralac cream, salad dressing, sauce, cream sauce, creams, blanc-mange [blancmange], cream pie, Bavarian cheese, Terralac in soup, “Ice-Terralac, or peanut ice-cream,” peanut soup, salted peanuts.

There are also sections on the cowpea (p. 163+), almonds (p. 263-65; incl. salted almonds, marchpane, macaroons, nougat or almond cake, almond milk, orgeat syrup, burnt almonds, replacing almonds), vegetable-gelatine (p. 384-87, incl. carrageen or carrageen [carrageenan], Irish moss, and kanten), sesame oil or gingelly oil (p. 388), peanut oil or groundnut oil (p. 388),

almond oil (p. 389), and sago and sago recipes (p. 390-91, incl. three sago puddings).

Note: *Merriam-Webster’s Collegiate Dictionary* (1998) defines orgeat (a word first used in 1754) as “a sweet almond-flavored nonalcoholic syrup used as a cocktail ingredient or food flavoring.”

565. Morse, Edward S. 1917. *Japan day by day, 1877, 1878-79, 1882-83*. 2 vols. Boston & New York: Houghton Mifflin Co. Vol 1, xiv + 441 p.; Vol. 2, 453 p. Illust. (Color frontispieces + sketches). Index. 22 cm. [20+* ref]

• **Summary:** These charming books, illustrated with 777 illustrations from sketches in the author’s journal, is a diary (to avoid the duplication of home letters; subjects are treated chronologically rather than topically), filled with detailed observations about most aspects of Japanese life and the author’s pioneering work there as a professor. It gives a vivid picture of daily life in Japan in the late 1870s. Morse quickly grew to admire and love the Japanese people; his greatest problem was learning to enjoy Japanese food.

Volume 1: “Almost everything in the sea furnishes food for the masses... Seaweed, a thin green leaf, is also eaten; it is dried and put up in tin boxes,” apparently a species of *ulva*. “I have mustered courage enough to taste a few of the dishes, and have succeeded in swallowing but one of them, and that was a kind of soup... Water was boiled in a tin vessel with a sauce [shoyu or miso] made from fermented bean [sic, beans], dark in color like Worcestershire sauce; into this were put slices of what looked like a cucumber, and then followed large blocks of a substance which resembled new white cheese [tofu], fresh from the press; this was cut into triangular slices. This last substance was made from [soy] beans, strained to remove the skins, and then made into a paste-like block. This soup was certainly nourishing and with a little practice one might come to like it. Another common article of food is made from seaweed and is known as *tokoroten*” (p. 87-88).

“It was delightful... to sit down again to a dinner of rare roast beef, real butter, and good bread. It is difficult to understand a country in which there is no milk, butter, cheese, bread, or coffee, and never has been. Butter is so distasteful to the Japanese that they cannot eat cake or other article of food in which composition butter is used” (p. 120).

A famous preparation is “cold raw fish, cut in this slices from the fish while fresh and alive. The idea of eating raw fish is particularly repulsive to our taste, though we eat raw oysters; nevertheless, foreigners soon get accustomed to it. The sauce [soy sauce] made of fermented [soy] bean, barley, and some other grain seems to have been specially created for this kind of food. I ate a great deal of it and must confess that my first experience was fairly good,... (p. 143-44).

“The tail of the fish was cut off and flung overboard... the [raw] fish was chopped into small pieces, head, eyes, bones, and all, and this hash was put into a wooden bowl... From a box was added a substance [miso] that had a very sour odor, something made of beans and allowed to ferment, a little water was added, and it was all stirred up together, and such an unsavory-looking mess I never saw before. The gusto, however, with which the man ate it to the last grain, showed that it was palatable to him at least” (p. 185).

“I have lived on rice, sweet potatoes, egg plant, and fish for two weeks. I would give all my old shoes, and new ones too, for a good slice of bread-and-butter, a bowl of bread-and-milk, or any other thing you are enjoying at home” (p. 227).

“The cakes has a stamp of the chrysanthemum on top; these were red and white and were made of [azuki] bean paste and sugar. The Japanese are very fond of them, but they are rather insipid in taste” (p. 395).

“I have finally resigned myself to the Japanese food of this region [Yezo {Hokkaido} near Hakodate]... And of all places to start such an experiment in this village! It required some courage and a good stomach to eat for dinner the following: fish soup, very poor; bean paste [miso?], which was not so bad;... and holothurian, or sea cucumber,... by no means agreeable. It was eaten with Japanese sauce, *shoyu*, which renders everything more or less palatable... On the whole, I am keeping body and its animating principle together, but long for a cup of coffee and a slice of bread-and-butter. I am the only outside barbarian in town” (p. 440-41).

Volume 2: The New Year’s food included “a bean pickle in sugar syrup and Japanese sauce” [probably black soybeans (*kuromame*)] (p. 93). A detailed description of mochi and its pounding are given, with two illustrations (p. 95).

As they left Izumi and entered the Province of Kii [today’s Wakayama], “I saw the process of manufacture of a curious kind of food one often sees in certain soups. It has a bright-yellowish color, as thin as paper, and has no definite flavor. The substance is made from soya beans by a curious and simple process. The beans are boiled in a large boiler till they are very soft; they are then ground in a mill to a fine paste, and mixed with water and colored by some stuff that is imported from abroad (fig. 675). This material is then put into a shallow trough divided by square partitions, beneath which is a charcoal fire which keeps the stuff gently boiling. The surface coagulates as it does on boiled milk, or on a cup of cocoa, and the film that forms is taken off very skillfully with slender bamboo sticks and hung up to dry (fig. 676). Other films form and are promptly removed by a girl who is kept busily at work” (p. 286-88).

In Kawagoe [a city in today’s Saitama prefecture, about 20 miles northwest of Tokyo]: “It is a common custom... to eat grasshoppers as a relish... The Japanese prepare them by

boiling them in shoyu, sugar, and a little water, till the water has nearly all boiled away” (p. 324-25).

At New Year’s “our old cook brought me a box of *yokan* (made of sugar and [azuki] beans)... (p. 393).

Edward Sylvester Morse, a marine biologist specializing in Brachiopods, lived 1838-1925. Address: Salem, Massachusetts; Former Prof. of Zoology, Imperial Univ., Tokyo.

566. Howell, E.V. 1918. Soy beans and soy bean oil. *J. of the American Pharmaceutical Assoc.* 7(2):159-63. Feb. [14 ref]

• **Summary:** “This bean is a native of southeastern Asia. It is at present the most important legume grown in China and Japan, where it is grown almost exclusively for human food. It has been cultivated from a remote period, each district having its own distinct variety, some two hundred kinds in all... The bean was introduced into England in 1790. Apparently the first mention of soy beans in American literature was in the *New England Farmer*, October 23, 1829, in an article by Thomas Nuttall.” There follows a summary of this article and several other early U.S. documents that mention the soy bean.

“Importance: I think the soy bean is the most important plant introduced into the South within a hundred years. This opinion is based on the range of the plant, the value as a soil improver, and the numerous uses of the seed and oil, together with the fact that the present cottonseed oil mills can produce the oil with practically no change in machinery and thus double their mill season. The beans can be stored, as they are practically immune to insects. Especial emphasis is placed on this statement in the present demand for food on account of the war. In Japan the bean forms one of the most important articles of food, by nature a meat, to go with the starch of rice. The Chinese make from the beans a cheese resembling our own cheese, while the Japanese make the well-known sauce for rice or fish, soy or suey sauce. It is one of the principal ingredients in ‘Tofu’ (bean curd), natto (steamed beans), and white and brown miso, which is like our molasses brown bread.”

“A factory for the production of this [soy] milk has recently been established in America. This can be used in cooking, by bakers, confectioners, and chocolate manufacturers. I have before me the following food articles in which soy bean meal is the principal ingredient: Egg substitute No. 1, egg substitute No. 2, colored cocoanuts, coffee substitute, cocoa substitute, roasted malted nuts, coloring curry powder, cutlet powder, soy and navy beans with pork, the equal of any pork and beans.

“The use of the soy meal for soups, for proportional use in muffins, cookies, fritters, croquettes, biscuit, and loaf bread is unlimited. Its use is checked only by our prejudice for certain customary flavors, just as northern people and Europeans do not use corn meal. In other words, North

Carolina, if forced to by war conditions, could largely exist on the soy beans crushed in the State this year, including the imported and native beans crushed, the oil from which I estimate to yield this year 400,000 gallons. This oil can be used for frying, and for a salad oil in French dressing or in mayonnaise. I fried a partridge in the crude unrefined oil, and found it delicious.

“While the chief use, so far, of the oil has been for soaps and paints, the particular object of this paper has been to call attention to the use of soy oil in pharmaceutical preparations.”

Tables show: (1) The specific gravity, saponification value, and iodine for three samples of Manchurian soy oil purchased in New York. (2) The chemical composition of soy bean meal (8.77% fat), compared with the meal of five other seeds (including cottonseed, linseed {old and new process}, decorticated peanut, and sunflower seed). (3) Four chemical constants of seven samples of domestic and imported soy oils (from L.P. Nemzek). (4) The food values (nutritional composition) of soy beans and six other foods, including lean beef, milk, and eggs.

Because of World War I: “During the past six or seven months there has been produced in this country in the neighborhood of one hundred thousand gallons of soy oil. The largest part of this quantity has been produced in North Carolina by the Elizabeth City Oil & Fertilizer Co., Winterville Cotton Oil Co., and the New Bern Cotton Oil & Fertilizer Mills. Samples from the different crushings have been examined in comparison with the imported oil.”

“Medicinal use: In England a diabetic biscuit is manufactured. In this country an infant’s food from the soy bean is on the market. The enzyme in the bean is also attracting attention and opening a field for investigation.”

Note 1. This paper was presented at the Scientific Section, American Pharmaceutical Assoc., Indianapolis meeting, 1917.

Note 2. This is the earliest English-language document seen (Oct. 2008) that contains the word “crushings.”

567. Itano, Arao. 1918. Soy beans (*Glycine hispida*) as human food. *Massachusetts Agric. Exp. Station, Bulletin* No. 182. 10 p. March. [16 ref]

• **Summary:** Contents: Introduction. Chemical composition and digestibility. Human food prepared from soy beans (practical recipes for making Japanese foods at home; names in parentheses indicate the Japanese name). Soy bean milk (*Toniu*): The ordinary method employed in Japan, toniu from soy bean meal (made by grinding soybeans in a wheat flour mill or fine coffee mill), author’s method [from soy bean meal, plus inoculation with *Bacillus coli* and *B. lactis aerogenes*], synthetic toniu, condensed soy bean milk (condensed toniu). Evaporated soy bean milk (yuba). Soy bean curd (tofu): Fresh curd (tofu), frozen tofu (*kori tofu*), fried tofu (*abura-age*). Baked beans. Boiled beans. Roasted

beans. Powdered beans: Roasted, or raw (soy bean meal). Green beans. Soy bean pulp (*kara*). Fermented boiled beans (natto). Ripened vegetable cheese (miso; discusses koji). Soy bean sauce (shoyu). Vegetable butter, ice cream, oil (table use) and lard (cooking): “The manufacture of these articles from soy beans needs further investigation.”

Concerning “Baked beans” (p. 7). “1. Soak the beans, suspended in a cloth bag, in a large quantity of hot water over night. (Soaking for twenty-four hours in ice-cold water which is changed occasionally will give the same result.) 2. Change the water, when hot water is applied, in the morning and an hour or two before cooking. 3. Add 1 teaspoonful of soda [sodium bicarbonate] per quart of beans and boil until the beans become soft. 4. Bake like other beans. Note.—The characteristic strong flavor of the beans is removed by soaking before cooking; the addition of soda [sodium bicarbonate] makes the beans soft. Cooking with salt pork, potatoes, onions, molasses and other substances makes the beans more palatable to some tastes.”

Concerning the “Roasted beans” (p. 7). “1. Roasting can be done either in an oven or in an ordinary corn popper. 2. Roast until the skin of the bean is burst by popping. Note.—The beans can be kept soft by immersing them in a syrup while they are hot. Thus very wholesome candy is prepared.”

Concerning the “Powdered beans: Roasted” (p. 7). “1. Roast as in the roasted beans. 2. Let them stand until they cool to harden them. Grind them in a coffee mill or other suitable grinder. Note.—The powder can be used as a salad dressing or cooked [baked] with cookies like peanuts and other nuts, or employed as a substitute for coffee.” Note 1. This is the earliest English-language document seen (Dec. 2005) that uses the term “Powdered beans: Roasted” to refer to roasted soy flour.

Concerning “Green beans: 1. Pick them when the beans are three-fourths to full grown. Boil them in salt water. 3. Discard the pods. 4. Serve the beans with butter of milk. Note—The pods are tough and they can be removed easily on boiling.”

Concerning “Soy bean pulp (*kara*): 1. This is the residue after the milk is extracted in the process of preparation of soy bean milk. 2. Cooked like any other vegetable with proper seasoning. Note.—Makes a very rich dish; an addition of green onions, cabbage or parsnip may improve it.”

Tables contain chemical composition analyses.

Note 2. This is the earliest English-language document seen (March 2007) concerning soy ice cream, which it calls simply “ice cream.” This is also the earliest document seen (March 2007) concerning the etymology of soy ice cream.

Note 3. This is the earliest English-language document seen (Oct. 2001) that uses the term “soy bean pulp” to refer to okara.

Note 4. This is the earliest English-language document seen (Feb. 2004) that uses the word “kori tofu” to refer to

dried-frozen tofu.

568. *USDA Bureau of Plant Industry, Inventory*. 1918. Seeds and plants imported by the Office of Foreign Seed and Plant Introduction during the period from January 1 to March 31, 1915. Nos. 39682 to 40388. No. 42. 123 p. April 17.

• **Summary:** Soy bean introductions: Soja max: “39967/39982. From Soochow, China. Presented by Mr. N. Gist Gee, Soochow University. Received February 11, 1915. Quoted notes by Mr. Gee, except as otherwise indicated. “39967-39972.

“39967. ‘(No. 1. *Kua shu tou (Kwa zoh)*. Melon-ripe bean.) This is so named because of its time of ripening. Seeds are sown about the first of May and cropped late in June when melons are ripe. Used only as a vegetable.’

“39968. ‘(No. 2. *Chia chia san tou (Kah kah sen)*. Pod pod three bean.) Planted in the middle of May and reaped during September. Used as a vegetable and for manufacturing of oil.’

“39969. ‘(No. 3. *Hung hsiang chih tou (Ong sing sze)*. Red familiar bean.) These are “Loving beans,” as the characters suggest. Planted in the middle of May and harvested about September. Used both as vegetables and in the manufacture of oil.’

“39970. ‘(No. 4. *Hei tou (Huk)*. Black bean.) Owing to their color, these are called “Black beans.” Planted in the first part of June and reaped in the middle of October. Used as a vegetable and in the manufacture of oil.’

“39971. ‘(No. 5. *Ku li ch’ing (Kwa lea ching)*. Bone inside green.) Planted early in June and harvested in late October. Used only in making oil.’

“39972. ‘(No. 6 *Shih tzû ho tou (Zee tee ‘ah)*. Persimmon-seed bean.) Planted in the first part of June and cropped in the middle of September. They are largely used as vegetables.’

“39974-39977.

“39974 ‘(No. 8 *Pa yüeh pai tou (Gee buh)*. Eight-month white bean.) The combined meaning of its color and its time of ripening indicates the name. Planted in May and harvested in September, which is the eighth month of the Chinese calendar. Used to make oil. This and No. 9 [S.P.I. No. 39975] are the best two for oil manufacture.’

“39975. ‘(No. 9. *Shui pai tou (Gee buh)*. Water white bean.) Planted in late May and reaped in September. Used to manufacture oil; one of the best two for oil manufacture.’

“39976. ‘(No. 10. *Niu t’a pien (Nue duh pea)*. Cow crush flat.) Its use and time of harvesting are the same as those of the *Gee buh* [S.P.I. No. 39975]. The beans are trodden out by cows; hence the name.’

“39977. ‘(No. 11. *Wu ch’iao tou (Oh tsah)*. Sparrow’s cackling (or magpie) bean.) Planted about the last part of June and cropped in mid-October. Used largely to make oil.’”

“39982. ‘(No. 16. *Lü tou (Loh)*. Green bean [mung].) Planted in the early part of June and cropped early in September. Used the same as the *Ch’ih tou* [S.P.I. No. 39980]. Called “green bean” because of its color, probably.’”

“40106/40138. From Wakamatsu, Iwashiro, Japan. Presented by Rev. Christopher Noss. Received March 8, 1915. Quoted notes by Mr. Noss. ‘From an exhibition in Kawamata, near Fukushima City.’

“40106-40127.

“40106. ‘*Mochidaizu (dai)*, large; *zu*, bean), used in *mochi* (glutinous rice boiled and pounded in a mortar).’

“40107. ‘No. 2. *Nakatedaizu* (second early), used in *miso* (beans, etc., pickled in salt and made into soup), *tofu* (bean curd).’

“40108. ‘No. 3. *Shichi-ri-korobi-daizu* (20-mile rolling), used for *tofu*, *soy*, and *miso*.’

“40109. ‘No. 4. *Yuki-no-shita-daizu* (under the snow), used for *tofu*, *soy*, and *miso*.’

“40110. ‘No. 5. *Wasedaizu* (early), used for *tofu*, *soy*, and *miso*.’

“40111. ‘No. 6. *Misodaizu*.’

“40112. No. 7. *Ko-tsuba-daizu* (small grain), used for *miso* and *natto* (buried, fermented, and eaten as a relish).’

“40113. ‘No. 8. *Kinako-daizu*, made into *kinako* (a flour used in cooking) and also *natto*. Said to have been brought by soldiers from Manchuria.’

“40114. ‘No. 9. *Tamazukuridaizu* (name of a country near Sendai), used boiled.’

“40115. ‘No. 10. *Asahidaizu* (morning sun), used for *natto*.’

“40116. ‘No. 11. *Darumadaizu* (Dharma, whose image was a roly-poly, can not be upset), used boiled and for *tofu*.’

“40117. ‘No. 12. *Taiwandaizu* (Formosa), used boiled.’

“40118. ‘No. 13. *Hato-koroshi-daizu* (dove killer), used boiled.’

“40119. ‘No. 14. *Usu-ao-daizu* (light green), used for *kinako* and boiled.’

“40120. ‘No. 15. *Ao-daizu* (green), used for *kinako* and boiled.’

“40121. ‘No. 16. *Aka-kuki-daizu* (red stalk), used for *natto* and *miso*.’

“40122. ‘No. 17. *Fuku-shiro-daizu* (clothing white), used for *tofu*.’

“40123. ‘No. 18. *Hachi-ri-han-daizu* (21 miles), used boiled. The name *Hachi-ri-han-daizu* involves a curious play on words. *Hachi-ri-han-daizu* means “eight ri (a ri is 2.5 miles) and a half,” which is just a little short of *ku-ri*. Now *ku-ri* means nine ri, and *ku-ri* also means chestnut, so the expression in question means that the beans so named are almost equal to chestnuts.’

“40124-40127. ‘Beans are used boiled.’

“40124. ‘No. 19. *Yoshiwaradaizu* (harlot quarters in Tokyo).’

“40125. ‘No. 20. *Chadaizu* (tea, alluding to the color [brown]).’

“40126. ‘No. 21. *Kichidaizu* (lucky).’

“40127. ‘No. 22. *Kurodaizu* (black).’”

“40370-76. From Wakamatsu, Iwashiro, Japan.

Presented by Rev. Christopher Noss. Received March 27, 1915. Quoted notes by Mr. Noss.

“40370. ‘No. 33. *Hikagedaizu* (shade), produces in shady places; used for *miso*.’

“40371. ‘No. 34. *Dekisugidaizu* (excessive yield); used for *miso*.’

“40372. ‘No. 35. *Kurodaizu* (black); eaten boiled and sugared.’

“40373. ‘No. 36. *Nakatedaizu* (medium early); used for *miso*.’

“40374. ‘No. 37. *Hishidaizu* (water caltrop, alluding to the flattened shape); eaten parboiled and seasoned with shoyu and salt.’

“40375. ‘No. 38. Name unknown, cultivated from ancient times in Soma County, Fukushima Ken; used for *miso*.’

“40376. ‘No. 39. *Hakodate-nishiki-daizu* (Hakodate brocade); used for *miso*.’” Address: Washington, DC.

569. Evans, W.A. 1918. How to keep well. *Chicago Daily Tribune*. Aug. 28. p. 6.

• **Summary:** “Soy beans offer large possibilities as a food. They contain 17 per cent fat, 36 per cent proteid, and 14 per cent starch. Soy bean milk has been used for feeding children for a long time. Le Wall says that soy bean cheese and soy bean croquettes resembling meat croquettes are in use. According to the same author, soy bean is the basis of Worcestershire and other sauces. Among orientals soy bean foods are: Tashir, a bean natto and miso, also soy bean cheeses. Ordinary soy milk and Yuba or soy cream are in use. Shoyer [sic, shoyu] is an oriental sauce in making which soy beans are used.” Address: Dr.

570. Winkler, Gustav. 1918. Die Sojabohne: Aus einem Vortrage... gehalten in der Hauptversammlung der Gartenbau-Gesellschaft Frankfurt a.M. am 17. April 1914. Zweite Auflage [The soybean: From a lecture... presented at the main meeting of the Gardening Society of Frankfurt am Main, on 17 April 1914. 2nd ed.]. Mainkur bei Frankfurt am Main, Germany: Published by the author. ii + 28 p. Illust. 22 cm. [4 ref. Ger]

• **Summary:** On the cover: “Die Sojabohne der Mandschurei [The soybean of Manchuria]. Much of this lecture (as stated on the title page) was based the following English-language article, translated into German by Werner Winkler (Gustav’s son) in 1913: Shaw, Norman. 1911. “The soya bean of Manchuria.” *Shanghai, Statistical Department, Inspectorate General of Customs. China Imperial Maritime Customs. II. Special Series No. 31.* 32 p.

Contents: A 2-page insert at the front. Photos show: (1) The author (with a large white beard and moustache) with a many-branched soybean plant, stripped of its leaves, mounted on a 2 x 3 foot wooden board, from his beanfield (*Winklers Bohnenfeld*) at Mainkur. This one plant grew from May 10 to Oct. 15, 6 months, producing 242 pods containing 503 completely mature soybeans. This line was acclimatized for 6 years and cultivated in the soil for 5 years. (2) The author standing and holding (with the roots facing upward) one soybean plant in each hand. In his right hand is an acclimatized soybean which produced 58 beans in 100 days. In his left hand is a plant grown from Chinese seeds of 1912-13 which produced 224 flowers and no seeds in 100 days. (3) A many-branched soybean plant, stripped of its leaves, from Winkler’s beanfield, affixed to a board. Grown from Chinese seeds harvested in 1911/12. It grew from 15 May 1917 until Oct. 1, five months. 105 pods produced about 250 completely mature soybeans. From seeds that were not yet acclimatized grown on cultivated soil. (4) A similar looking plant from Winkler’s beanfield. Grown from Chinese seeds harvested in 1911/12. It grew from 15 May 1918 until Oct. 15, five months. 160 pods produced about 350 soybeans. The seeds were not yet completely ripe because of bad, raw weather in 1918.

Foreword to the 2nd edition. Introduction. Diagram in the shape of a rhombus / diamond, showing how the various colored soybeans change from one color into another (adapted from Shaw 1911, p. 2). Description of the diagram: Discusses: (1) Ball, Carleton R. 1907. “Soy bean varieties.” *USDA Bureau of Plant Industry, Bulletin No. 98.* 30 p. + 5 plates. May 27. (2) Hosie, Alexander. 1910. *Manchuria: Its People, Resources, and Recent History*. London: Methuen & Co. xii + 293 p. Hosie describes 3 types of soybeans: Yellow, with 3 subvarieties. Green, with 2 subvarieties. Black, with 3 subvarieties.

The rest of the contents is fairly similar to that of the 1st edition (1914), but the details within many sections are greatly expanded. On the rear cover is a photo of two soybean plants attached to a board, one month after planting the seed, Summer 1917; 15 May to 15 June. In the Supplement (p. 26-28), the author summarizes the results of his 8 years of soybean cultivation in Frankfurt; he concludes that it can be grown with good results in southern Germany. Frankfurt am Main is about midway between the northern and southern tips of Germany. Address: Mainkur bei Frankfurt am Main, Germany.

571. Arnold, Julean. 1918. Chinese products of interest to Americans. *Commerce Reports [USA] (Daily Consular and Trade Reports, Bureau of Foreign and Domestic Commerce, Department of Commerce)* 21(299):1110-19. Dec. 21.

• **Summary:** About Chinese vegetable products. Two long sections (“Chinese production of beans” and “Extensive use of bean products—Exports during 1917”) contain detailed

discussions of soybeans and soyfoods in China. However, the author states (p. 1112) that the “greater part of the descriptive information above is taken from:” Shaw, Norman. 1911. “The soya bean of Manchuria.” *Shanghai, Statistical Department, Inspectorate General of Customs. China Imperial Maritime Customs. II. Special Series. No. 31. 32 p.*

The first of these sections states: “It is only within the past 10 years that the outside world has become acquainted with the soya bean of China. It is probably safe to say that the sudden rise of the soya bean from a position of comparative obscurity to a position of prominence in the world of trade, during a period of little more than a decade, constitutes one of the commercial wonders of the world.

“In the Far East soya beans are used for the following purposes: (1) For bean sauce or soy (‘soya’ is a corruption of the Japanese ‘shoyu’), known to the Chinese as ‘chiang-yu’ and made... The sauce is clear, resembles Worcestershire sauce, and is used in a somewhat similar way. (2) For ‘chiang’ or bean paste, eaten with fish, meat, and vegetables, and made by... (3) For ‘tou-fu’ or bean curd [tofu], made from green or yellow beans by... (4) For a form of flour, extensively used for bean vermicelli, which is tasty and nutritious. (5) As a table vegetable [green vegetable soybeans]. (6) For soups. (7) For making confectionery (in Japan). (8) For oil, as a substitute for lard, as a lubricant, as an illuminant, and to make waterproof cloth, paper umbrellas, and lanterns.”

Also discusses “Exports of peanuts” (p. 1118-19): Just before the outbreak of World War I, the peanut export industry in China reached a peak. “The annual exports then were about 70,000 tons of shelled peanuts and about 50,000 tons of oil. More than 40% of these exports went from the port of Tsingtau [Tsingtao] as Shantung has developed into the largest peanut producing Province in China.” Address: Commercial Attaché, Peking.

572. Crevost, Charles. 1918. *Plantes oléifères de l’Indochine [Oil-bearing plants of Indochina]*. In: *Congrès d’Agriculture Coloniale, Gouvernement Générale de l’Indochine. Hanoi-Haiphong: Impr. d’Extrême-Orient. 57 p. Series: Hanoi No. 6. See p. 26-27. [100* ref. Fre]*

• **Summary:** Following an overview, the various oil-bearing plants are described in detail, organized by family. The section on Soja (p. 26-27) states: Indigenous names in Cochin China, Annam and Tonkin: Dau nanh, Dau tuong. Cambodia: Sandek sieng. China: Teou [dou]. Japan: Daizu mame. The plant is widely cultivated in Indochina for its seeds which, although not consumed directly as food, are used nevertheless to make various other foods: cheeses (dau phu and dau oc [tofu]), and a condiment sauce [soy sauce] (tuong).

In Indochina there is only one variety of soybean, which has oblong yellowish-white seeds, slightly flattened, more

or less large according to its place of origin, whereas in China and Japan soybeans come in various colors and colorations.

The best seed in the colony come from Cambodia and the province of Lang-son in Tonkin.

It is well known that soy protein (*graine de soja à base de caséo-sojaïne*) serves as the basis for numerous food preparations; but the seeds are now most widely used in the manufacture of an oil, used for illumination [in lamps] or food; it tends to replace cotton oil in the soap industry, whereas soybean cakes (*les tourteaux de soja*) are considered excellent for use as a fertilizer or for fattening cattle.

A table shows nutritional analyses of soybeans from three locations, conducted at the colonial garden of Nogent-sur-Marne: Laos, Tonkin, and Manchuria. For each the moisture, protein, oil, carbohydrate, and mineral content are given.

Also discusses: Peanuts (p. 25-26, with illustration facing p. 25, and 9 references), sesame (p. 29-30, with illustration facing p. 29), perilla (p. 30).

Note the interesting phrase *graine de soja à base de caséo-sojaïne*, based on the work of Li Yu-ying near Paris, France. Address: Inspecteur des Services agricoles et commerciaux; Conservateur du Musée [Maurice Long] agricole et commercial de Hanoi.

573. Nichibei Shinbun-sha (Nichi-Bei Shinbunsha). 1918. *Nichi-Bei nenkan [Japanese-American yearbook. No. 12]. 650 Ellis St., San Francisco, California. [20] + 432 p. Reprinted in Feb. 2002 in Tokyo by Nihon Tosho Senta. Series: Nikkei Imin Shiryôshû. Dai 5-kai [Collected Documents on Japanese Emigration. No. 5]. [Jap; eng]*

• **Summary:** This book is somewhat similar to the 1915 yearbook but very different from previous yearbooks in this series in that it has no directory (giving business names, address, and sometimes phone numbers). It has more pages of advertisements than the 1915 edition but fewer than previous editions. Moreover the structure and contents are very different. For the first time, the pages are numbered sequentially throughout the book—except for the first 20 pages which are unnumbered. Again, it is not clear what caused these major changes. But the main message seems to be: Japanese are hard-working people adding significantly to the production and value of the United States.

Like its predecessors, it is read and numbered from “back to front” compared with typical English books; it is mostly (99%) in Japanese. The English-language title page reads: *The Japanese American Year Book*.

Contents: Front matter (6 p.). Preface, correction notice, and full-page ad for Pacific Trading Co. (soy is not mentioned) (2 p.). Photos (black and white on 6 unnumbered pages). Maps and charts on 2 unnumbered pages: Total value of agricultural products by Japanese

farmers in the USA in 1917: (1) Pie chart of value (\$) of principal crops produced. The top 5 are vegetables, beans, grapes, sugar beets, and potatoes. (2) Bar graph of percentage of principal crops produced by Japanese, showing their adaptability for intensive cultivation (average 1915-1917). Japanese produce 90% of all celery, 88% of berries, 86% of asparagus, 85% of cantaloupes, 83% of onions, 80% of tomatoes, 72% of florists' products, 53% of seeds, etc. Bar graph showing the increase in land value under the cultivation of Japanese in 12 places of California. For each place, a white bar shows land value per acre before 1913 and a black bar shows land value per acre in 1918. These places include: Imperial Valley (melon ranch). Colusa (rice field). Sonoma (vineyard & orchard), etc. On average, the land has increased in value from 4.5-fold to 6.7 fold.

Table of contents (2 p.). Map showing yearly amount of rainfall in California (1 p.).

Nichibei Nenkan No. 12—Industrial edition (p. 1-). Japanese agricultural conditions (p. 1-20, with ads on p. 16-17). Various other Japanese industries (p. 21-28). Ads (p. 29-36). Education (p. 37-64). Ads (p. 65-80). Agriculture (part 1 of 3; p. 81-209, with ads p. 204-209). How to run an agricultural business (part 2 of 3, p. 210-340, with ads p. 297-300, 341-348). Agricultural production industry (part 3 of 3, p. 349-389). Industries: Fishery (p. 389-419). Forestry (p. 420-24). Mining (p. 425-28). Manufacturing (p. 429-31). Ad (Hinoe / The Hinoe, p. 432). Copyright and publishing information page.

Summary: Tofu makers (*tofu-ya*): In 1908 there were 20 tofu makers. This number increased to 50 in 45 locations in 1917 (p. 25). Miso makers (*miso seizô-sho*): Since 1908 there have been 12 miso makers that opened; some have closed. In 1917 the number increased to 6 due to the ban on importing Japanese miso. Among the oldest and most established in Los Angeles: Miso Seizô-sho. Their capital investment is \$12,000. They use 180,000 *kin* of soybeans (1 *kin* = 1.323 lb = 600 gm) and 240,000 *kin* of rice. Sales are \$36,000/year. Number of workers: 4 (p. 28). The only soy-related ad in this volume is for "L.A. Miso Mfg. Co., 605-7-9-N. Alameda St., Los Angeles, California." Trade mark: Shows 3 horizontal lines in a circle, probably pronounced "marumi"—which means "flavor" in Japanese. In Japanese is written (in big, bold characters). *Rafu Shiromiso Seizô-sho*.

The Directory shows Japanese companies making soyfoods in California and other states. Address: San Francisco, California.

574. Paerels, J.J. 1918. Soja [Soya]. In: Dr. K.W. Van Gorkom's Oost-Indische Cultures. 1918. Amsterdam: J.H. de Bussy. 2nd ed. Vol. 2. Edited by Dr. H.C. Prinsen Geerligs. See p. 839-51. Figs. 285-86. [8 ref. Dut]

• **Summary:** This is a reprint of Paerels 1913. Contents: Origin and native land. The soybean plant: Botanical description (flowers, seeds, fertilization, germination), types

and varieties, geographical distribution. Cultivation of soybeans: General instructions for growing, planting, manuring, diseases and pests. Production, trade, and use: Tofu (*Tao-Hoe*), Chinese soy sauce (*Tao-Yoe*), soybean paste (*Tao-Tjiong* [a term, and perhaps a product, between *doujiang* and *tao-tjo*, Indonesian-style miso]), composition of the seeds and value as a food (*samenstelling en voedingswaarde*). Photos show: Plants of a black variety (p. 840), and a white variety of soybeans (p. 841). Address: Netherlands.

575. Shih, Chi Yien. 1918. Beans and bean products. Shanghai, China: Soochow University Biology Dept. 13 p. 24 cm. [Eng]

• **Summary:** The author's name in pinyin is probably Shi Jiyan. At the head of each section, the name of each product or type of bean is written in Chinese characters. Contents: Introduction by N. Gist Gee of the Dept. of Biology, Soochow Univ., China. Note 1. Soochow, also called Szechow (formerly Wuhsien) is a city in southern Kiangsu (pinyin: Jiangsu) province, in eastern China, on the Grand Canal. Introduction and names of soy beans: Classical Chinese names, colloquial Chinese names, Latin names, and English name (Soja bean). Soy beans. The food products of soy beans. Bean curd (Cc). Tou fu koen. Po yeh. Yu tou fu. Ju fu. Tsao ju fu. Ch'ing hsien ju fu. Tou Chiang or bean sauce. Chiang yu. Bean ferment or tou huang. Bean Sprouts. Bean relish or tou shih [soy nuggets]. Bean oil. Note 2. *ju fu* refers to fermented tofu.

Beans (Four varieties of *Phaseolus mungo* var. *radiatus*: chidou = dark-red [azuki] bean, baichidou = white dark-red bean, lüchidou = green red bean, and lüdou = green [mung] bean): The food products from the green [mung] beans (lüdou): Bean sprouts, green bean congee or lu tou chou, green bean soup or lu tou tang, green bean pudding or lu tou kao and lu tou sha. The food products from the red [azuki] bean (quite similar to those made from the green [mung] bean): Congee, rice, pudding, tou sha.

Hyacinth beans (*Dolichos lablab*; five Chinese varieties / names: biandou, baibiandou, qingbiandou, zibiandou, longzhao biandou). Asparagus beans [cowpeas] (*Vigna catiang*; four Chinese varieties / names: jiangdou, panxiang jiangdou, manli jiangdou, baimi jiangdou). The food products from Pien Tou and Chiang Tou. Medicine. Flowers and seeds of the Pai Pien Tou, the broad bean, windsor bean, or horse bean (*Vicia faba*); In China it has two names: (1) Ts'an Tou or silkworm bean, because it is harvested at the time the silkworm is making its cocoon; (2) Han Tou or cold bean, because it grows through the winter. The food products from Ts'an tou (broad bean): Bean shoot (tou miao), Ch'ing tou (as a vegetable), Ja tou (broad bean sprouts), Shien fan and fan bee (made from broad beans and mung beans), Tou sha. The section on the names of beans (p. 1) we will give the English name, Latin name, the

classical Chinese names / colloquial Chinese names, and an English translation in parentheses, as follows: (1) Soja bean, *Glycine hispida*: heidou / heidou (black [soy] bean), huangdou / huangdou (yellow bean), yangyandou / yangyandou (sheep eye bean), maliaodou / maliaodou (horse material / feed bean),-/ guguo qingdou (bone wrap green bean),-/ jiajia sandou (pod pod three bean), xiangsidou (mutually think bean) / xiaqngzhidou (fragrant branch bean),-/ bayue baidou (8th month white bean). Soja bean: *Dolichos cultratus* quedou (magpie bean) / equedou (chirp magpie bean). Soja bean: *Phaseolus vulgaris* baidou (white bean) / shui bai dou (water white bean),-/ shidou (fennel bean) (Note 3. shiluo means “fennel”),-/ guashudou (melon ripe bean),-/ maquedou (sparrow bean),-/ niuta biandou (cow tread flat bean),-/ yadou (sprout bean),-/ shijia xiangdou (ten family fragrant bean),-/ xifeng qingdou (west wind green bean),-/ shizi hedou (persimmon pit bean),-/ denglongdou (lantern bean).

Note 4. The large title “Soy Beans” at the top of this table, the right column which says that the English name of each variety is “Soja bean,” and the next 8 pages which are only about soy beans, strongly indicate that all the colloquial names in this table refer to different varieties of soy beans. Moreover, all these colloquial names appear again on page 3 in a table on planting and harvest times of different varieties of [soy] beans. The bottom half of the colloquial names are probably from different parts of China, since Dr. H.T. Huang (a soybean expert) has never heard many of these colloquial names before. The most puzzling question is: What are *Dolichos cultratus* and *Phaseolus vulgaris* doing at the bottom of the “Latin name” column? *Dolichos cultratus* is not listed on either of the two comprehensive taxonomy databases (GRIN and ILDIS, which include all past Latin / scientific names). *Phaseolus vulgaris* refers to the common bean, such as the kidney bean, pinto bean, navy bean, frijole, etc.

2. Soy beans. “They were introduced into France during the reign of Ch’ien Lung about 1740 A.D. by a French Consul; into England in 1790, into Australia in 1875, into Germany 1881, and 1888 into America. They were known here from ancient times and were mentioned in the oldest books Pên Ts’ao Kong Mu, which were written by the Emperor Shen-nung in the year 2838 B.C., and the later Chinese Classics.”

Note 5. This is the earliest English-language document seen (Aug. 2002) that treats Shen Nung as a real, historical figure, or that says the first written record of the soybean appears in a book written by him. The information about that book is wildly inaccurate. The *Bencao gangmu* (The great pharmacopoeia), perhaps China’s most famous materia medica, was written by Li Shizhen (+1596). The above information, which is all wrong, has been cited again and again, down to the present day (2002), in connection with the supposed origin of the soybean.

“Even during the ancient times they were considered by the people to be the most important of the cultivated leguminous plants.” Note 6. This is the earliest document seen (Aug. 2002) which gives, incorrectly, that the date of Emperor Shen-nung’s book as 2838 B.C.

“The methods of cultivation are as follows: In general all of the soja beans are planted in rows along the banks of canals and the boundaries of the fields, which separate the fields of one family from those of another, except those which are called oil beans or Eighth month white bean and Water white bean. These last are planted in large fields. The oil beans are planted early in June.” The method of cultivation, harvest, and threshing is then described in detail. A table gives the time of planting and harvest for 18 varieties of Chinese soybeans, grouped into 6 types by planting and harvest dates: (1) Plant in latter part of April, harvest in latter part of Sept.: *Heidou* (black [soy] bean), *huangdou* (yellow bean), *maliaodou* (horse material / feed bean), *guguo qingdou* (bone wrap green bean), *jiajia sandou* (pod pod three bean), *xiangzhidou* (fragrant branch bean). (2) Plant in early part of June, harvest in middle part of Sept.: *bayue baidou* (8th month white bean), *shuibaidou* (water white bean), *maquedou* (sparrow bean). (3) Plant in early part of July, harvest in early part of Oct.: *equedou* (chirp magpie bean), *niuta biandou* (cow tread flat bean), *shijia xiandou* (ten family fragrant bean), *xifeng qingdou* (west wind green bean), *shizi hedou* (persimmon pit bean), *denglongdou* (lantern bean). (4) Plant in early part of April, harvest in early part of July: *guashudou* (melon ripe bean). (5) Plant in early part of April, harvest in latter part of July: *shidou* (fennel bean). (6) Plant in early part of April, harvest in latter part of June: *yadou* (sprout bean).

The rest of the work concerns the food products of the beans, including a detailed description of how each is made.

Note 7. This document contains the earliest date seen for soybeans in Australia or Oceania (1875). It is not clear whether or not these soybeans were cultivated in Australia; they may well have been. The source of these soybeans is unknown, as is the author’s source of information concerning that early introduction, 43 years before Shih wrote this booklet. He is the first to give such an early date for the introduction of soybeans to Australia. Yet the date does not seem unreasonably early since there were 17,000 Chinese in Australia by 1855 (see Australian Department of Immigration and Ethnic Affairs. 1985. “A Land of Immigrants”). Address: Biology Dep., Soochow Univ., China.

576. Shih, Chi Yien. 1918. Beans and bean products: Tou Chiang or bean sauce [Chinese-style miso] (Document part). Shanghai, China: Soochow University Biology Dept. 13 p. See p. 6-7. [Eng]

• **Summary:** (Cc) = Chinese characters inserted in text; pinyin romanization has been added. Tou Chiang or Bean

Sauce (Cc = doujiang): This product can be made from any kind of beans: but it is largely made from Water White Bean (Cc = shui baidou) *Phaseolus Vulgaris*. (Note: This reference to *Phaseolus Vulgaris* (common bean, pinto bean, navy bean, frijole, etc.) is puzzling. Doujiang is usually made from soy beans.) It is made in the following way:—(1) Soaking the beans in cold water about twelve hours. (2) Washing the beans thoroughly in cold water. (3) Then boiling the beans about six hours in water. (4) After thoroughly boiling, the beans are taken out from water and allowed to cool. (5) Then dipping the moistened beans into wheat flour so that the flour sticks on the beans. (6) Spreading the beans upon matting and covering with the large leaves of reeds to allow them to become molded. (7) After one week, the beans are thoroughly covered with a whitish mold and then they are placed in the sunshine for about two days. (8) Then pouring the beans into a big earthenware jar containing cold water and salt. Every ten catties of the mixture requires eight catties of salt and forty catties of water. (9) Then the jar is put in the sunshine for about one week and the beans are ground into a black, thin liquid, having an agreeable saltish flavor, and frothing up of yellow color when the jar is even slightly shaken. This thin liquid is called Tou Chiang or bean sauce. (10) After grinding, the Tou Chiang is kept in the sunshine 2 weeks longer. (11) Then the Tou Chiang is put into a small earthenware jar which is covered with a straw cover. In this jar it can be kept indefinitely. If the Tou Chiang becomes sour in taste, it must be restored by boiling for about three hours.

“The Tou Chiang is used to boil with any kind of cabbage or meat. It is sometimes used as a sauce and eaten with meat to give a salty flavor.” Address: Biology Dep., Soochow Univ., China.

577. *Virginia Department of Agriculture and Immigration, Bulletin*. 1918. Soy bean useful crop. May be utilized in greater number of ways than almost any other agricultural product. No. 126. p. 174-76.

• **Summary:** “In addition to its availability as a food, soybean oil has found important uses in the markets of the world for making paints, varnishes, soaps, rubber substitutes, linoleum, waterproof goods, and lubricants. It is also used in the Orient for lighting and in the manufacture of printing ink. In Japan the soy bean forms one of the most important articles of food in use. It is one of the principle ingredients in the manufacture shoyu (soy sauce), miso (bean cheese), tofu (bean curd), and natto (steamed beans). The beans are eaten also as a vegetable and in soups; sometimes they are picked green, boiled, and served cold with soy sauce, and sometimes as a salad. A ‘vegetable milk’ is also produced from the soy bean, forming the basis for the manufacture of the different kinds of vegetable cheese. This milk is used fresh, and a form of condensed

milk is manufactured from it. All of these foodstuffs are used daily in Japanese homes, and for the poorer classes are the principle source of protein.”

“An artificial milk like that manufactured in the Orient has been produced in small quantities in the United States, and recently a factory has been equipped to make this product.” Photos show: (1) Soy beans as a forage crop, arranged in stacks. (2) Lime spreader at work. Address: Virginia.

578. Daizu Seisan Gaisha (Soybean Food Products Co.). 1919. Save food. Dealers in soybeans and soybean products (Ad). In: Nichibei Shinbun-sha. 1919. *Japanese-American Directory (Nichibei Jushoroku)*. Page 40 near front. [Jap; eng]

• **Summary:** Ad (full-page). The top half of this ad is in English, with large, bold letters. The company, which has a factory in Petaluma, lists the following products in Japanese characters (*kanji*): *Daizu shushi* [Soybean seeds]. *Shoyu-yo daizu* [Soybeans for use in making shoyu / soy sauce]. *Jozo-yo daizu* [Soybeans for use in making fermented products; miso and perhaps natto seem to be implied]. *Tofu-yo daizu* [Soybeans for use in making tofu]. *Tofu-ko* [Tofu powder]. Note: Not clear what this is / means. *Seisei nigari* [Refined nigari (probably magnesium chloride)]. *Mamekasu* [Soybean presscake, probably left over from making soybean oil].

The following product names are written in Japanese katakana characters: Soybean oil, soybean flour, soybean table sauce, soybean butter, soybean cheese, soybean candy, soybean feed.

In the center of the ad is the company’s smaller logo, with all the text in English: Sun Brand Soy. Registered U.S. Patent Office. Above the huge “Save Food” logo near the top of the is an American flag in a circle surrounded by ears of wheat. Just above that, across the very top of the ad we read: “With patronization of U.S. Food Administration.”

Note: No address in San Francisco is given in the ad. Note 2. World War I ended not long ago. Address: San Francisco, California.

579. **Product Name:** Kikko San-jirushi Sweet White Miso, Shoyu, and White Koji.

Manufacturer’s Name: Hokubei Miso, Shoyu Seizo Oroschi Kouri (North American Mfg. Co.).

Manufacturer’s Address: 519 East 1st St., Los Angeles, California. Phone: 64215.

Date of Introduction: 1919. January.

New Product–Documentation: The Japanese American Directory. 1919. p. 368. Ad (¼ page). At the top of the ad in English: “North American Mfg. Company, 519 E. 1st St., Los Angeles, Cal.” Most of the ad is in Japanese. The three words at the end of the company’s Japanese name mean “Manufacturing, Wholesale, and Retail.” The large, central

logo, a hexagon with three horizontal lines inside, is probably pronounced “Kikko San-jirushi.” The company makes high-class sweet white miso (*joto shiro miso*) and white koji (*shiro koji*) [as well as shoyu]. The owners are NISHI Isokichi and YAMASHITA Iwasuke.

The Japanese American Directory. 1920. p. 277. Ad (¼ page). This is as basically the same as the one which appeared in 1919, except it looks very different because the large logo has changed. The outside is still a hexagon (although smaller and bolder) but inside it is the number “3” but having an unusual form that makes it look like a cross between the usual Arabic numeral “3” and a Tibetan character. Apparently the previous logo either belonged to another company or looked too Japanese.

The Japanese American Directory. 1920. p. 296. Hokubei Miso, Shoyu Seizô-sho, 519 East 1st St., Los Angeles. Phone: 64215. Also in 1921, p. 288 (ad) and p. 314 (directory). The directory gives the company name as Hokubei Miso Seizô-sho. Also in 1922, p. 315 (directory) and ad (¼-page, p. 321). At the top of the ad is written in English: “N.A. Miso Mfg. Co., 519 E. First St., Los Angeles, Calif.” In Japanese, the company’s name has changed to Hokubei Miso, Koji Seizô Moto Oroshiuri [Manufacturing and wholesale]. The word “Shoyu” no longer appears in the company name or in the ad, as it did in 1919-21. Also in 1923, p. 347 (ad; In Japanese, the company’s name has changed to Hokubei Miso, Koji Seizô, Tsukemono Seizô Oroshiuri. Tsukemono are Japanese-style pickles) and p. 355 (directory: Hokubei Miso Seizô-sho). Also in 1924, p. 371 (¼-page ad) and p. 394 (directory). Also in 1925, p. S-17 (½-page horizontal ad. New name in English: “North American Miso M’f’g. Co.” New phone number: TUcker 4215) and p. S-44 (directory). Also in 1926, p. S-15 (Full-page ad. Name in English is now “North American Miso Mfg. Co.” An illustration shows a large box of dried koji (*hoshi koji*) near top center of ad) and p. S-33 (directory; Hokubei Miso Seizô-sho).

The Japanese American Directory. 1930. p. S-53. The company (Hokubei Miso Seizô-sho) now makes only miso. Phone: TUcker 4215. Also in 1932, p. 346 (directory; this old company has a new name: Kikko San Miso Seizô-sho. The address, although unchanged, is now written in English: “519 E. First St.” New phone: VAndike 5702). Also in 1934, p. 305 (directory; same company name, address and phone number).

580. Japanese American News Inc. / Nichibei Shinbunsha. 1919. Nichibei jûshoroku [The Japanese American directory. No 15]. San Francisco, California: The Japanese American News Inc. (Nichibei Shinbunsha). Jan. 1. Index of cities. 23 cm. [Eng; Jap]

• **Summary:** Soyinfo Center has only the pages mentioning soyfoods in the following cities in California: San Francisco, San Jose, Sacramento, Los Angeles. Plus

Portland (Oregon), and Seattle (Washington). See individual directory entries and advertisements. This directory was published on 1 Jan. 1919 by Nichibei Shinbunsha. For each of the directory entries, the company name is written in Japanese characters; the street address and phone number are written in English. Within each city, businesses of the same type are grouped together under a Japanese heading. In this volume the makers of soyfoods in San Francisco are all on pages 67-68 under the heading *Shokuryo-hin Seizo-sho* (Food manufacturing companies). Address: San Francisco, California.

581. **Product Name:** Miso.

Manufacturer’s Name: Maruman Miso Seizo-sho.

Manufacturer’s Address: 1531 Geary St., San Francisco, California.

Date of Introduction: 1919. January.

New Product–Documentation: The Japanese American Directory. 1919. p. 68. No phone listing. Also in 1920, p. 57. Also in 1921, p. 64.

582. **Product Name:** Miso.

Manufacturer’s Name: Mihara Miso Seizo-sho.

Manufacturer’s Address: 1415 Laguna St., San Francisco, California. Phone: West 5058.

Date of Introduction: 1919. January.

New Product–Documentation: The Japanese American Directory. 1919. p. 68. Also in 1920, p. 57. Also in 1921, p. 64. But the phone number has changed to Fillmore 2719. Also in 1922, p. 40, but the address has changed to 1417 Laguna St. from 1415. Also in 1923, p. 60. Also in 1924, p. 59. Also in 1925, p. N-17. Also in 1926, p. N-22.

The Japanese American Directory. 1930. p. 18. Mihara Miso Seizô-sho, 1417 Laguna St., San Francisco, California. Phone: Fillmore 2719. Also in 1932, p. 3. Also in 1934, p. 20. Also in 1936, p. 34. Also in 1937, p. 8. Also in 1938, p. 8.

583. **Product Name:** Miso.

Manufacturer’s Name: Nagatomi Miso Seizo-sho.

Manufacturer’s Address: 1532 Post St., San Francisco, California. Phone: West 3286.

Date of Introduction: 1919. January.

New Product–Documentation: The Japanese American Directory. 1919. p. 68. Also in 1920, p. 57. But address is now 1534 Post. St.

584. **Product Name:** Miso, Koji.

Manufacturer’s Name: Sanyo Shokai [Sanyo Co.].

Manufacturer’s Address: 69 N. 5th St., Portland, Oregon.

Date of Introduction: 1919. January.

New Product–Documentation: Ad (1/8 page) in The Japanese American Directory. 1919. p. 230. Sanyo Shokai, 539 Delay St., Portland, Oregon. Phone: 1397 (written in

Japanese characters). They make and sell shoyu, miso, and koji (*issai seizô hanbai*) plus various other non-soyfoods.

585. **Product Name:** Miso, Koji.

Manufacturer's Name: Wada Miso, Koji Seizo-sho (Wada Miso & Koji Mfg. Co.).

Manufacturer's Address: 1436 Cahuenga Ave., Los Angeles, California. Phone: 579136.

Date of Introduction: 1919. January.

New Product–Documentation: The Japanese American Directory. 1919. p. 368. Ad (1/8 page), lower right. Wada (or possibly Maruta) brand miso and koji. Address in Japanese: 2436 Cahuenga, Hollywood, Los Angeles. Address in English: 1436 Cahuenga. Sanitary, economical, and tasty. The world's best. Wada miso. Note: Subsequent ads show that 1436 is the correct street number.

586. Denton, -; Yeatman, -. 1919. Miso sauce, Received from Miss Margaret B. Church (Dr. Thom), Bureau of Chemistry. January 8, 1919. USDA Office of Home Economics, Experimental Kitchen [Washington, DC?]. 2 p. Unpublished manuscript.

• **Summary:** Contains 5 American-style recipes.

587. USDA Bureau of Chemistry. 1919. Inspection of imported foods: Label for samples. San Francisco. 1 p. each.

• **Summary:** These three inspection forms have been filled out to show that samples of red miso (shipped from Yokohama), white miso (shipped from Kobe), and bean paste (made by Suruqaya & Co. in Wakayama), all imported from Japan, were inspected in San Francisco by the USDA Bureau of Chemistry. The 3 samples arrived on May 26 and 27 on the steamers Shimpu Maru and Nippon Maru. On June 4 and 5 they were forwarded to Margaret B. Church, Microanalyst at the Microbiological Laboratory. Address: San Francisco.

588. Phelps, J.K. 1919. Re: Analysis of Japanese miso and bean paste conducted for Miss Margaret B. Church, Microbiological Laboratory. Letter to Miss B. [sic] Church, July 1. 1 p. Typed, with signature on letterhead.

• **Summary:** The products are designated White Miso, Red Miso, and Japanese Bean Paste [probably azuki bean paste]. Each was analyzed for percentage of moisture, total ash, protein, fat, sucrose (Clerget), reducing sugars as invert before inversion, reducing sugars as invert after inversion, crude fiber. The Japanese Bean Paste “evidently contains agar-agar as the microchemical examination showed the presence of diatoms.” J.F.B. adds in a handwritten note: “This total ash is doubtless too low, probably heated too far.” Address: Chemist in Charge, Food Control Lab., Bureau of Chemistry, USA, Washington, DC.

589. Takahashi, A. 1919. Re: Response to request for sample of miso. Letter to Miss Margaret B. Church at Bureau of Chemistry, Washington, DC, Aug. 12. 1 p. Typed, with signature on letterhead. [Eng]

• **Summary:** In her letter of May 27, Miss Church asked him to please send a sample of miso. She received his sample of shoyu. “There are two or three kinds of Miso manufactured in Japan, but we usually import only one kind—*shiro miso*. *Shiro* means ‘white’ in English. I am sending sample bottle under separate cover, and this is the best quality of shiro miso manufactured in Japan; this is a fresh sample, only having been made four or five months, as it is a commodity that is easily manufactured.”

He is also trying to find her a sample of *aka miso* or Red Miso, “which requires a considerable time to manufacture.”

Note: The writer is the younger brother of Teizo Takahashi, who is a lecturer at the “Imperial University of Tokyo.” Address: Pacific Trading Co., 331-343 Battery St., San Francisco, California. Phone: Sutter 270.

590. Bowers, William G. 1919. Some studies on the nutritive value of the soy bean in the human diet. *North Dakota Agric. Exp. Station, Special Bulletin, Food Department* 5(13):278-328. Aug. Reprint of his 1919 PhD thesis, Ohio State Univ. 28 cm. [65 ref]

• **Summary:** Contents: Part I: Introductory. Extent of production. Human food preparation made from the soy bean. Varieties and chemical composition. Character of the carbohydrates of the soy bean and its bearing on nutrition. Character of the fats of the soy bean and its bearing on nutrition. Character of the protein and its bearing on nutrition. Vitamines of the soy bean. Minerals of the soy bean. The soy bean compared to some other legumes used as human food as to fuel value and organic nutrients. Digestibility of soy bean products.

Part II: Experimental part. The character of the materials used in the experiments. Digestibility of soy cake meal baked into bread. Digestibility of soy cake meal mush. A study of the nutritive value of the nitrogen free contents of the soy bean. Malt digestion. One per cent HCl [hydrochloric acid] extract (incl. pentosans, galactans, true cellulose). Milling of the soy bean: Composition of parts (incl. “the bran”), digestibility of the bran, the nitrogen-free extract, crude fiber, physical effects of a diet solely of a mush made from the bran, the calcium oxide and phosphorus pentoxide content of the soy bran and soy meal. Toxic and disagreeable or unpalatable substances of the soy bean: Some investigations as to the possible poisons, location and elimination of the disagreeable and unpalatable substances (20 experiments, incl. soy and navy bean bran, benzine extracted soy and navy bean meal, alcohol extracted soy and navy meal, a steam distillation for the purpose of separating objectionable flavor). Discussion of results. Summary.

Introductory: Only within the last 35 years “has the soy bean been considered with much favor as a food for stock. Only within the last ten or fifteen years has it met with any favor at all as a food for man” (p. 279). “Soy milk and soy milk products are being made in the United States now” (p. 280). “Roasted beans. Soy beans may be roasted in an oven or ordinary corn popper. They are heated until the beans are burst like popcorn. The beans thus roasted may be softened by immersing in a syrup while they are hot. This is said to make a wholesome candy. The roasted beans may be powdered and used as a salad dressing or employed as a substitute for coffee” (p. 281). “The fresh green beans, those that have been dried without being allowed to ripen thoroly [sic, thoroughly], or those that have ripened on the vine after the vine has been pulled show slight amounts of starch” (p. 282).

“Experimental part (p. 287): “In our experimental work we propose to inquire into the digestibility of soy cake meal. We shall then determine the digestibility of the different carbohydrates as found in a representative variety of the soy bean. After passing some of the beans thru a milling process we shall study the composition and digestibility of the meal and bran and determine their relative amounts of calcium and phosphorus, and locate any possible poisons or objectionable substances that may be present in either of these. This will make it possible, then, to determine whether or not it would be profitable to carry on the milling process and eliminate certain products, or whether by the use of certain extractives we can get rid of the objectionable constituents.”

Recalling the fact that “navy bean bran is so indigestible and is responsible for fermentation and discomforting gas in the digestive system, we were led to the effort to separate the bran and the meal of the soy bean and make determinations of each separately... we found the bran to constitute 8% of the whole bean.” The germ was 1½% and the remainder was cotyledon. “The bran consisted of very large flakes. We had to grind it thru a burr mill three times before it would pass thru a twenty mesh sieve” (p. 301-02). The bran can be easily separated from the soy bean by milling. It is composed of about 37% crude fiber and 43% nitrogen free extract. “Digestibility experiments on the bran showed that the nitrogen free extract, including the hemicelluloses and waxes, is about 84% digestible, which is much less than that of the whole bean. (p. 323).

“In order to see what would be the physical effects of a day’s diet on the bran alone, we made three meals of 30 grams each for one day. Next day we were a little uncomfortable on account of a slight amount of gas in the bowels. We were a little weak and very hungry but not sick. The next day the stool was voluminous but not so very soft. The diet had neither a laxative nor a constipating effect that could be noticed” (p. 304).

“In most of the Japanese foods made from the soy bean the disagreeable flavor is avoided by the nature of the preparation made. These, of the most part, involve some sort of fermentation which changes the flavor entirely. The Domestic Science Department of the Ohio State University [under the leadership of Dr. J.F. Lyman, with help on milling from Dr. Park of the Farm Crops Dept.], has carried on considerable experimentation making different preparations, combinations and extractions, as well as making use of different methods of cooking soy bean preparations, to avoid the disagreeable flavor.”

The calcium oxide content of the bran was found to be 0.8% and the phosphorus pentoxide content 0.27%. No salicylic acid was found in the bran, and no hydrogen cyanide or cyanates in the samples tested. There was no trace of tannin in the bran and only a slight trace of alkaloids.

“As far as flavor is concerned there is no point gained in removing the bran from either the soy bean or the navy bean. The beany flavor and some of the disagreeable taste can be easily removed from the soy bean by steam distillation, but the disagreeable flavor in the oil cannot be removed in this way.”

Numerous tables show compositional percentages of soy beans, and a summary of results. Charts (bar graphs) show experimental results. An illustration (line drawing; p. 297) shows the apparatus for extracting meal with 95% alcohol.

Note 1. Although this document was reprinted as a Special Bulletin by the Food Department of the North Dakota Agricultural Experiment Station, it has nothing to do with North Dakota per se, and makes no mention of soybeans being used or grown in North Dakota.

Note 2. This is the earliest English-language document seen (Oct. 2001) that mentions soy bran, which it calls “soy bran.” It is also the earliest document seen concerning the etymology of soy bran.

591. Phelps, J.K. 1919. Re: Analysis of Japanese White Miso conducted for Miss Margaret B. Church, Microbiological Laboratory. Letter to Miss M.B. Church, Oct. 8. 1 p. Typed, with signature on letterhead.

• **Summary:** This white miso product contained: Moisture 19.18%. Total ash 6.70%. Protein 10.20%. Fat 2.72%. Sucrose—none. Reducing sugars as invert before inversion 21.75%. Reducing sugars as invert after inversion 22.03%. Total acids (as acetic) 1.44%. Starch (diastase method) 3.59%. Alcohol—none.

“Microchemical of whole sample showed the presence of a little starch although whole rice kernels were found.”

Margaret Church adds in a handwritten note: “Shiro (white) miso—finest grade, rec’d [received] from A. Takahashi summer of 1919.” Address: Chemist in Charge, Food Control Lab., Bureau of Chemistry, USA, Washington, DC.

592. *Christian Science Monitor*. 1919. The window of the world. Oct. 13. p. 3.

• **Summary:** The section titled “Climbing prices in Japan” states that “Japan finds herself in the same economic fix as other nations,” with prices that continue to climb; “the high cost of living threatens the livelihood of the majority of the Nation.” Figures show that “compared with August, 1918, the cost of rice just before the rice riots last spring had risen by 9.1 per cent, sugar by 34.5 per cent, miso by 21.1 per cent, soy [sauce] by 11.7 per cent,…” Citizens of all nations of “the world sympathize with each other because they are all in the same boat.”

About 30 newspapers have been suppressed by the government for “expressing incendiary thoughts on the subject of rice.”

593. **Product Name:** Miso.

Manufacturer’s Name: Honolulu Miso Factory. Called Hamamura Kojiba in 1935.

Manufacturer’s Address: 1134 Peterson Lane, Honolulu, Oahu, Hawaii.

Date of Introduction: 1919.

New Product–Documentation: Polk-Husted Co.’s Directory of Honolulu and the Territory of Hawaii. 1919. p. 360, 1285, 288. “Honolulu Miso Factory, S. Fujikawa, proprietor, 1134 Peterson Lane.” Mr. Fujikawa (p. 288) apparently lives at this address. The year 1919 is the first year that a business category listing for “Miso Manufacturers” appears in this city directory (p. 1285), and this company is the first listed miso company in Hawaii. The 1920 directory lists K. Enomoto as the proprietor. The phone is now 89064. Mr. Enomoto (p. 277) also apparently lives at the plant. 1924 Directory. p. 208. Kiyochi Hamamura (Honolulu Miso Factory). Residence, 1607a Pohaku. 1928-29 Directory. p. 205. Kojiba Hamamura (Kyoichi Hamamura), Miso Manufacturers, 1134 Peterson Lane, Tel. 8001. Note that the company name now appears as K. Hamamura rather than Honolulu Miso Factory.

594. **Product Name:** Sweet White Miso (*Shiro Miso*).

Manufacturer’s Name: Norio Co. Renamed Norio Koji, Miso Seizo-sho by 1922.

Manufacturer’s Address: 1531 Geary St., San Francisco, California. Phone: Fillmore 4368.

Date of Introduction: 1919.

New Product–Documentation: The Japanese American Directory. 1922. p. 40 (directory; Norio Koji, Miso Seizô-sho, 1531 Geary St. Phone: Fillmore 4368) and p. 41 (1/8-page ad, lower left. Norio Shokai, 1531 Geary St. Same phone. Making shiro miso (sweet white miso), koji, and Sakura Miso {probably a red rice miso}. Logo: The character for 10,000 in a circle, probably pronounced

“Maruman”). Note: In 1921 Maruman Miso was at this address and phone number.

Note: In the San Francisco City Directories (all English), 1917-1930, there is no listing for Norio Co. or anything like it except a 1930 listing for Norio Sadaichi rice dealers.

The Japanese American Directory. 1923. p. 60 (directory). Also in 1924, p. 58 (directory). Also in 1925, p. N-17 (directory) and p. N-17 (¼-page ad; at the top part of this ad is written in English: “Norio & Co., 1531 Geary St., San Francisco, Calif.” About half of the ad is in Japanese characters: Norio Koji, Miso Seizô-sho, 1531 Geary St., Phone: Fillmore 4368. Maker, wholesaler, and retailer of koji, shiro miso, and Sakura Miso. Illustrations show a box of the company’s koji, and one keg of miso stacked atop two others, side by side). Also in 1926, p. N-22 (directory).

Also in 1930, p. 15 (1/3-page ad, very similar to that in 1925 but larger. Address: 1531 Geary St., San Francisco. Phone: Fillmore 4368. They make koji, sweet white miso (*shiro miso*), sakura? miso. Manufacturing, wholesaling, and retailing. Illustrations show: A box of dried koji {*hoshi-koji*; high quality}. Three tubs of miso) and p. 18 (directory; gives the company name as Norio Koji, Miso Seizô-sho, in characters). Also in 1932, p. 17 (directory). Also in 1934, p. 20. Also in 1936, p. 34 (directory; the company name is still Norio Koji, Miso Seizô-sho. But the address is now 1532 Post St. The phone is still Fillmore 4368). Also in 1937, p. 8. Also in 1938, p. 8. Also in 1939, p. 7. Also in 1940, p. 7.

The Japanese American Directory. 1941. p. 7. Listed in the category “Food Products Manufacturers.” Norio Koji Miso Seizô-sho (Norio Co.), 1532 Post St., San Francisco, California. Phone: Fillmore 4368. Also listed in the 1942 Directory. Norio Shoten (Norio Co.), 1534 Post St. Phone: Fillmore 5368.

Hokubei Mainichi Year Book. 1951, p. 9. Ad (½ page, vertical). Top 1/3 of the ad is in English. “Norio Company, 1532-34 Polk St., San Francisco 9, Calif. Tel. WEst 1-8672. Soy bean products.” Below that is the large “Maruman” logo. In Japanese: Maker and wholesaler of Maruman brand miso and koji. Also sells soybeans and nigari. Directory entry, under “Food Products: Wholesalers” (p. 37), and under “Food Products” (p. 38). Norio Miso Tofu Seizô-sho (Norio Co.), 1534 Post St., WE 1-8672. Note that they now make tofu!

Nichi-Bei Jiji Jushoroku [Japanese American Times Directory]. 1952, p. 16. Under “Food Products; Grocers-Whsle.” In Japanese: Norio Miso Tofu Seizô-sho. In English: Norio Co., 1532 Post St., San Francisco. Phone: WE 1-8672. Ad (¼ page), p. 21. Top 1/3 of ad is in English. Norio Company, 1532-34 Post St., San Francisco. Phone: WEst 1-8672. In Japanese: Maruman brand. Miso koji seizô [manufacturing]. Note: Do they make both tofu and koji?

Hokubei Mainichi Nenkan (Year Book). 1970. Page 11. Half-page vertical ad. Address has expanded to 1532-34 Post St., San Francisco 9, Calif. Phone: 931-8672. “Soy

bean products” (in English). Their large logo is still Maruman, with the character *Man* (meaning ten thousand) inside a bold circle. The bottom half of the ad (in Japanese) states that they make and sell (wholesale) Maruman brand miso and koji. They also sell tofu and agé. Directory entry, p. 37 under “Food Products.” *Norio miso tofu seizô-sho* [Norio, maker of miso and tofu].

B.W. 1971. *East West Journal*. 1(14):6. Arikawa. 1982, personal communication; Shurtleff & Aoyagi. 1983. *The Book of Miso*. 2nd ed. p. 234. The second earliest know miso company in the continental USA was started in 1919 by Mr. Masaichi Norio. He made only shiro miso and exported most of it to Hawaii (Based on two interviews with Mr. Arikawa, former owner of the Norio Co.; He still lives in San Francisco. Phone: 415-387-7217). Note: Even though the company may have “started” in 1919, it was not listed in any directory seen until 1922.

Talk with Mr. Arikawa. 1989. Dec. 6. The company started on Geary St., then moved to 1532 Post St. before 1930. The owner bought the company of a competitor at that address on Post street [probably Kanedai Koji Miso Co. at 1534 Post St.] and merged the two companies.

595. **Product Name:** [Sendai Miso].

Foreign Name: Sendai Miso.

Manufacturer’s Name: Sendai Miso Shoyu K.K.

Manufacturer’s Address: Furujiro 1-5-1, Sendai-shi 982, Japan.

Date of Introduction: 1919.

Ingredients: Water, rice, soybeans, salt.

How Stored: Shelf stable.

New Product–Documentation: The present owner is the ninth generation. Letter from Mitsuo Miyazawa. 1988. Jan. This company, Sendai Miso Shoyu K.K. was founded in 1919, as an amalgamation of many smaller miso and shoyu companies in the area. The first miso made was called Sendai Miso, and the first Shoyu was called Josen Shoyu. The Josen brand originated in 1919.

596. Hedrick, U.P. ed. 1919. Sturtevant’s notes on edible plants. Albany, New York: J.B. Lyon Co., state printers. vii + 696 p. Index. 30 cm. Series: New York, (State) Dept. of Agriculture, 27th Annual Report, 1918/19, vol. 2, part II. [9 soy ref]

• **Summary:** The 2,897 plants are arranged alphabetically by genus and species. Common names and synonyms are listed alphabetically. Contains many footnotes and a huge bibliography.

The entry for “*Glycine soja* Sieb. & Zucc.” (p. 291-92) states: Family: Leguminosae. Synonyms: Coffee bean, soja bean, soy bean. Origin: Tropical Asia. Contains a summary of information from other sources, and mentions “the sauce known as soy,” miso, and oil.

Also discusses: *Amaranthus paniculatus* (prince’s feather, red amaranth). *Apios tuberosa* (groundnut). *Arachis hypogaea* (earth nut, earth almond, goober, grass nut, ground nut, peanut, pindar). *Cannabis sativa* (fimble, gallow grass, hemp). *Chenopodium quinoa* (petty rice, quinoa). *Coix lachryma-jobi* (Job’s tears). *Cyperus esculentus* (chufa, earth almond, zulu nuts). *Gracilaria lichenoides* (agar-agar). *Laminaria digitata* (red-ware, sea-girdles, sea-wand, sea-ware, tangle). *Laminaria esculenta* (badderlock). *Linum usitatissimum* (flax). *Lupinus albus* (field lupine, wolf-bean). *Lupinus hirsitus* (blue lupine). *Lupinus luteus* (yellow lupine). *Medicago sativa* (alfalfa, lucerne). *Porphyra laciniata* (laver, slokam, sloke). *Porphyra vulgaris* (laver). *Prunus amygdalus* (almond). *Psophocarpus tetragonolobus* (goa bean, pois carrés). *Sesamum indicum* (sesame). *Vigna catjang* (cowpea, Jerusalem pea, marble pea). *Voandzeia subterranea* (groundnut). Edward Lewis Sturtevant lived 1842-1898. A large oval portrait photo (frontispiece) shows E.L. Sturtevant. Address: Horticulturist, New York State Agric. Exp. Station.

597. Mattei, G.E. 1919. La soja ed i suoi prodotti [The soybean and its products]. *Bollettino di Studi ed Informazioni del Regio Giardino Coloniale di Palermo* 5(1/2):1-34. [40 ref. Ita]

• **Summary:** This article contains one of the best histories seen to date of the soybean in Italy, from 1760 to 1813. Contents: Brief history of the soybean. History of its taxonomic classification. Botanical description of the wild and domestic soybean. Varieties. Introduction of the soybean to Europe (especially France and Italy). The question of the root nodule bacteria. Cultural requirements. Importance / value of the production. Utilization of the seeds. Soy flour (*farina di soja*). Soymilk (*latte di soja*). Soy cheese [tofu] (*formaggio di soja*). Soy oil (*olio di soja*). Soy cakes (*panelli di soja*). Other Japanese preparations: Miso, shoyu, koji. Opportunities for soybean cultivation in Italy. Results of cultural trials at the Colonial Garden (*Giardino Coloniale*) in Italy.

“Introduction of the soybean into Europe: The soybean (*La Soja*) was long confined to East Asia, and it is only towards the 17th century that it appears in the Indian Archipelago; in fact, if it had existed in the Pacific islands at the time of Cook’s voyage, Forster surely would have reported it. Its introduction to the East Indies is even more recent. Roxburgh mentions its cultivation in the Botanical Gardens of Calcutta from seeds acquired from the Moluccas, in 1798. On the other hand, as Alphonse de Candolle observes, if its cultivation were ages-old, it would have spread long ago toward the West to Syria and Egypt, which did not occur.

“Its introduction to France is said to date back to 1739, when certain missionaries sent soybean seeds, from China,

to the *Jardin des Plantes* in Paris: the uncertainty however arises as to whether, even before this time, it was cultivated in Europe, since, as Saccardo points out, it appears that essays (*saggi*) on the plant exist in the *Herbarium* of Bartolomeo Martini of Verona, Italy, written (*composto*) in 1701.

“In any event, concerning France, the soybean is reported as being grown extensively in about 1821 at Champ-Rond near Etampes; it seems, however, that subsequently its cultivation was nearly lost; in fact, Lachaume, in the *Revue Horticole* of 1857 [pages 568-70. Nov. 16], reports it as a new introduction, thanks to the French Consul in Shanghai, and he describes and illustrates it.

“As for Italy, Pinolini [1905] dates the soybean to 1848 [sic, 1840]. It is possible that its cultivation as an agricultural plant began to spread from that date, but the existence of the soybean in Italy antedates this date by at least a century. Saccardo says in fact: ‘cultivated since the mid-18th century, and at times extensively, as in the Treviso region.’

“With the existence, as I have stated, of essays on the soybean in the *Herbarium* of Bartolomeo Martini of Verona, an herbarium written in 1701, one might suspect that from that time the soybean was being cultivated in the Verona region; but who could have brought the seeds? And if this were the case, why do we not find any reports of it in somewhat later authors? Or was the above-mentioned essay brought directly from the Orient. It should be noted that Kaempfer’s voyage to Japan dates to 1690, and we have the first accurate reports on the soybean in 1712 with Kaempfer’s own publication. Should we perhaps believe that some study, brought back by Kaempfer, was given to Martini? He might have obtained it from Zannichelli who, as Targioni-Tozzetti relates, in the life of Micheli, carried on a correspondence with Martini himself? Assuredly Kaempfer had to regard a plant which is used for so many purposes in Japan as important and it is possible he brought back essays about it, and perhaps even seeds.

“In any event, the *Jardin des Plantes* in Paris, after 1739, must have distributed seeds to various botanical institutions, including Italian. In fact, from the old *Catalogs (Cataloghi)* of the first Italian botanical gardens and from the pertinent *Index seminum*, we see that in the second half of the 18th century, the soybean is being cultivated almost everywhere: in 1760 Allioni mentions its cultivation in the Botanical Gardens of Turin; in 1780 Abbot (*l’Abate*) Farsetti introduced it to his Santa Maria di Sala garden near Venice; in 1785 Scopoli mentions it in Pavia; in 1787 Guatteri records it in Parma; in 1790, with the Botanical Gardens barely established, Tineo was cultivating it in Palermo, as results [show] from the Catalogue published in precisely that year; in 1793 Zuccagni refers to it in Florence; in 1798 Durazzo had introduced it into his garden Dello Zerbino

near Genoa; in 1801 Tilli mentions it in Pisa; in 1805 Graefer refers to it in Caserta; in 1807 Arduino introduced it to the Agricultural Gardens (*Orto Agrario*) of Padua; in 1811 Fabriani refers to it in Modena; in 1813 Tenora points it out in Naples, and the same may be said for other more recent reports. From this we see that, at the end of the 18th century, the soybean was already cultivated throughout Italy, not for agricultural but for scientific purposes, that is, in Botanical Gardens.

“Perhaps this information escaped those, like Pinolini, who did research on the soybean as an agricultural plant because, in all works dealing with plants cultivated at that time, the soybean is found under the name of *Dolichos soja*, the generic name *Soja*, of Moench or Savi, not yet having been adopted.”

In 1918 a soybean cultural trial was conducted at the Colonial Garden, Palermo, on a plot of 350 square meters; smaller experiments had been conducted in previous years. A variety was chosen which had almost spherical seed and was greenish yellow in color. The seeds were planted on March 29, in furrows at a spacing of 30 x 40 cm.; they germinated regularly about 10 days later. The plants were hoed twice to reduce weeds and irrigated eight times from the end of May until the end of August. Flowering began in early July and the seed was harvested on Nov. 15. The entire vegetative period was, therefore, 7½ months. The plants reached an average height of 90 cm. Their growth was luxuriant and there was a normal development of nodules on the roots. From this plot of 350 square meters, 51 kg of clean seed was harvested; this corresponds to a yield of about 1,450 kg/ha, which is considered quite satisfactory and could be increased by manuring. The beans, when cooked in different ways, were found to have an agreeable taste.

Talk with Ted Hymowitz, soybean geneticist, Univ. of Illinois. 2003. Aug. 18. Caution! It is not clear whether the early dates for soybean in Italy this article are based on herbarium specimens or living plants. With herbarium specimens, it is easy to make errors.

Note 1. This document contains the earliest solid dates and the second earliest overall dates seen (Aug. 2003) for soybeans in Italy, or the cultivation of soybeans in Italy (1760). The source of these soybeans is unknown. Yet note that the earliest possible date that the soybean was cultivated in France was about 1740. Perhaps there was some connection between the earliest possible soybean cultivation in France and in Italy.

Note 2. This article was reprinted in the Nov. 1991 issue of *Il Giornale della Soia* (p. 11-16). Address: Royal Botanical Garden (R. [Regio] Orto Botanico), Palermo, Italy.

598. Rouest, Leon. 1919. Étude sur le soja [Studies on the soybean]. *Genie Rural (Le)* 11(99-100):23-26. (New Series

Nos. 39-40). Continued: See Rouest 1920. [Fre]

• **Summary:** Gives a brief overview of the history of soya in Europe and France, including Li Yu-ying, Dr. Bloch, the Soyanna [sic, Soyama] Werke near Bockenheim, Messrs. Paillieux, Sagot, Raoul, and Jumelle, and the various soyfoods from China and Japan that they describe (Miso, shoyu {*Shoyua*}, tofu {*Tofou*}, dried frozen tofu {*Kouri Tofou*}, yuba {*Uba*}), and the potential threat of soya to the French cheese industry. “Finally in 1910-11 numerous soy products were presented at the expositions in Brussels [Belgium], Turin [France], and Dresden [Germany].”

Describes work on the *Ferme Expérimentale de Néoculture du Sud-Est*, at Villardonnell, Aude. Mr. Semichon, Director of the wine station at Aude, sent this experimental farm some soybean seeds which he received from the USDA accompanied by a bulletin written by William Morse (probably “The soy bean: Its culture and uses,” 1918). Rouest translates the Bulletin into French. The most important varieties mentioned are: Mammoth, Hollybrook, Ito San, Guelph, Haberlandt, Medium Yellow, Wilson, Peking, Tokio, Manchu, Black Eyebrow, Barchet.

Rouest was born in 1872. Illustrations (line drawings, both non-original) show: *Soja hispida* plant, with close-up of a cluster of pods. *Soja Hato* soybean plant. Address: Director, *Ferme Expérimentale de Néoculture du Sud-Est*, at Villardonnell (Aude), France.

599. *USDA Bureau of Plant Industry, Inventory*. 1919. Seeds and plants imported by the Office of Foreign Seed and Plant Introduction during the period from January 1 to March 31, 1916. Nos. 41685 to 42383. No. 46. 97 p.

• **Summary:** Soy bean introductions: *Soja max*: “42058/42065. From Keijo, Chosen (Korea). Presented by Miss Katherine Wambold. Received February 28, 1916. Descriptive notes by Miss Wambold.

“42059. ‘*Kong*. Cooked, pressed, hung all winter to rafters, then soaked in a brown liquid called *chang*, used as a salty sauce on food. It is parched then eaten. A few partly cooked grains are often scattered in the rice, as we use raisins in a rice pudding.” Address: Washington, DC.

600. **Product Name:** Hishinaka-jirushi Miso, Koji.

Manufacturer’s Name: Nakamura Miso Seizo-sho (Nakamura Miso Mfg. Co.).

Manufacturer’s Address: 306 North Ave. 22, Los Angeles, California. Phone: 31422.

Date of Introduction: 1920. January.

New Product–Documentation: The Japanese American Directory. 1920. p. 295. Ad (1/8) page in lower left. The company name and address are written in English near the top of the ad. But about 85% of the ad is in Japanese. Hishinaka-jirushi brand miso and dried koji for easy long distance shipping. Also in 1920, p. 296. Directory entry gives same information as above. Also in 1921, p. 314

(directory and 1/8 page ad). Also in 1922, p. 315 (directory) and p. 329 (1/8 page ad). Also in 1923, p. 347 (ad) and p. 355 (directory). Also in 1924, p. 394 (directory; new phone number: Capital 1971) and p. 394 (¼-page ad). Also in 1925, p. S-44 (directory) and p. S-49 (1/8 page Ad). Also in 1926, p. S-35 (directory) and p. S-71 (1/8-page ad).

Ad (1/8 page) in The Japanese American Directory. 1930. p. S-30. The address is still 306 North Ave. 22, Los Angeles, California. Phone: CApitol 1971. Owner: Mr. Kentaro Nakamura. You don’t need moto! (*Moto wa irazu*). (Note: “Moto” is the “mash” made from rice koji that is used to make saké. If you have koji, you can make your own moto, from which you can make sake). Miso, koji, Japanese-style pickles (*tsukemono*). Manufacturer and wholesaler (*Seizô oroshi-sho*). The directory entry (p. S-53) contains the same name, address, and phone number.

Also in 1932. p. 346 (directory; new phone: Capital 3949). Also in 1934, p. 305. Address is now written (in English): 306 N. 22nd Ave. Also in 1936, p. 374 (directory). Also in 1937, p. 320. Also in 1938, p. 348. Also in 1939, p. 327. The company name is given. But surprisingly, no address or phone number are given.

The Japanese American Directory. 1940. p. 326-27. Listed in the category “Foodstuff Factory.” Unlike all other companies in this category, no street address or phone number is given. Also in 1941, p. 328; again no street address or phone number is given. Nakamura Miso Seizô-sho (Nakamura Miso Mfg.).

601. Okazaki Co. (Okazaki Shokai). 1920. General importer and exporter (Ad). In: Nichibei Shinbun-sha. 1920. *Japanese-American Directory (Nichibei Jushoroku)*. Page 57. [Jap; eng]

• **Summary:** Ad (¼ page). The top 1/5 of this ad is in English. The company specializes in selling rice, miso, shoyu, tea, canned goods, etc. Address: 545 Grant St., San Francisco, California. Phone: Douglas 1656.

602. **Product Name:** [Yamaizumi Sweet White Miso, Fresh Koji, Dried Koji].

Foreign Name: Yamaizumi Shiromiso, Nama Koji, Hoshi Koji.

Manufacturer’s Name: Yamaizumi Miso Seizo-sho.

Manufacturer’s Address: 1436 Cahuenga Ave., Los Angeles, California.

Date of Introduction: 1920. January.

New Product–Documentation: The Japanese American Directory. 1920. p. 277. Ad (¼ page, top right). At the top center of this ad is the large, bold Yamaizumi logo—a mountain over the character for “spring” (a source of water). Only the address is written in English: 1436 Cahuenga Ave., Los Angeles, Calif. They make shiro miso, fresh koji, and dried koji. Same ad in 1921, p. 305. Also in 1921 directory, p. 314. Their first phone: 579136. Also in

1922, p. 303 (ad) and p. 315 (directory). Also in 1923, p. 334 (ad, ¼-page bottom left) and p. 355 (directory; The company is at the same address but in Hollywood instead of Los Angeles. The new phone number: Holly 3036. Note 1. In 1900, the area named Hollywood today was called “Cahuenga.” Note 2. In 1903 Hollywood was incorporated as a municipality. Also in 1924, p. 394 (directory. New phone number in Hollywood: 433666).

Also in 1925, p. S-44 (directory, New phone number: HEMPstead 3666) and p. S-110 (directory, Yamaizumi Miso Shoyu Seizô-sho, 1436 Cahuenga Ave., Hollywood. Phone: HEMPstead 3666) and p. S-234 (¼-page ad). *Shiro miso, Kyushu-zuke, nama (fresh) koji and hoshi (dried) koji.*

Also in 1926, p. S-35 (directory) and p. S-75 (¼-page ad).

Ad (¼ page) in The Japanese American Directory. 1930. p. S-41. Yamaizumi Miso, Shoyu Seizô-sho is located at 1506 Fishburn St., City Terrace, Los Angeles, California. A large illustration shows the company logo. The source of the Yamaizumi brand (*Seizô hanbai moto*). There follows a poetic message in Japanese: Like a mountain spring, daily spring out our highly acclaimed sweet white miso (*shiro miso*), shoyu, chop suey sauce, koji, Kanro (sweet) Koji, and Japanese-style Kyushu pickles (*Kyushu-zuke*). The directory entry (p. S-53) contains the same name, address, and phone number. Note 3. City Terrace is about 3 miles east of downtown Los Angeles, near today’s USC Medical Center.

Also in 1932, p. 346 (directory; name is given as Yamaizumi Miso Seizô-sho. New phone number: ANgelus 6336). Note 4. The word “Shoyu” is no longer in the company name; they apparently no longer make shoyu. However, the use of a shorter company name in the directory than in the ad may reflect space limitations in the free directory.

Also in 1934, p. 395 (directory; Company name given in Japanese as Yamaizumi Miso Seizô-sho.) and p. 297. Ad (1/8 page). Yamaizumi Miso Shoyu Seizô-sho. Note 5. In the ad only “Shoyu” is back in the company name. 1532 Fishburn St., City Terrace, Los Angeles. Phone: ANgelus 6336. Also in 1936, p. 374 (directory; Yamaizumi Miso Seizô-sho) and p. 375 (¼-page ad; company name: Yamaizumi Miso, Koji Seizô-sho). Also in 1937, p. 320. Also in 1938, p. 348. Also in 1939, p. 339.

The Japanese American Directory. 1940. p. 326-27. Listed in the category “Foodstuff Factory.” Yamaizumi Miso Seizô-sho (Yamaizumi Miso Koji Mfg. Co.), 1532 Fishburn Ter., Los Angeles, California. Phone: ANgelus 6336. The address has changed, but not the phone number. Also in 1941, p. 328.

Nichi-Bei Jiji Jushoroku [Japanese American Times Directory]. 1952, p. 310. Under “Food Manufacturers.” In Japanese: Yamaizumi Miso Seizô-sho. In English:

Yamaizumi Miso & Koji Mfg. Co., 1532 Fishburn Ave., Los Angeles. Phone: AN. 5035.

Shurtleff & Aoyagi. 1983. The Book of Miso. 2nd ed. p. 234. (Based on an interview with Noritoshi Kanai, president of Miyako Oriental Foods). The company started in 1948 under the direction of Mr. Nagai, a craftsman from Fukuoka, Japan. During the 1960s their business declined, and in 1972 they started repacking Marufuku-brand miso imported from the American-Hawaiian Soy Company in Honolulu, and selling it in America under the Yamaizumi brand. In 1975 Miyako Oriental Foods bought the rights to the Yamaizumi brand from Mrs. Nagai and the Yamaizumi company ceased operations.

Note 6. This is the earliest record seen (April 2009) related to Miyako Oriental Foods.

603. Parry, Charles A. 1920. Travel sketches, LXXXIII–Bean that made Manchuria famous: A factory at Shimizu–The bean of many qualities. *Japan Advertiser (Tokyo)*. Jan. 25. p. 7. [Eng]

• **Summary:** Contents: Introduction. Sweet and nasty. “Not now.” The tea port. History of a bean. Substitutes. Big business. Japanese place names. On 26 Nov. 1919 the author traveled by train from Tokyo to the port city of Shimizu, on Suruga Bay, in Shizuoka prefecture (about 90 miles southwest of Tokyo). “Shimizu is one of the 36 treaty ports, and it was opened along with now fewer than 26 others, in 1899. The name means ‘clear water’... My chief object in coming to Shimizu is to visit the Suzuki Company’s Bean Oil Factory, for which I have obtained permission by courtesy of the Japan Tourist Bureau. This consists of several large buildings, erected three years ago, including a central office and two mills which being built in a castellated Gothic style, make a picturesque adjunct to the scenery as they rise by the calm waters of Shimizu Bay. The mills deal at present with two only of the many products of the wonderful manchurian [sic] or soy bean, called in Japanese daizu (glycerine [sic, Glycine] hispida) the crushed bean and the oil.” The two mills are capable of treating 300 tons of beans per day. The process is secret. “I am informed that factories for the extraction of this oil exist only in Japan and Manchuria; but the Suzuki Co. has a branch office in New York, and the business is rapidly extending.”

“The oil is used for frying, for lubricating, for waterproofing clothes, for medicine, as a butter substitute, and in the manufacture of soap, candles, guncotton, and artificial rubber; though it can hardly yet be said to be on the market.” For culinary purposes it is not as good as the ordinarily used goma (sesame) oil, being much lighter and requiring the use of a deep saucepan. Yet it costs only about 62% as much as sesame oil; the latter costs ¥1.60 per sho (1.58 quarts).

“At present its chief use is for making soap, for which it is taken at a less refined stage, of a dark brown color while the finished product is light yellow. The oil is at present little used in Japan because little known; its retail sale seems to be limited to the neighborhood of the factories. Of these there are three, the two others being at Yokohama and Kobe, both established only last year.

“One large shed is devoted to storing the crushed beans (*kasu*) after the oil has been extracted, large piles of which lie about... The chief use of this at present is for cattle-food; but it is now to be manufactured into flour, useful for mixing in various proportions with wheat flour.”

“The daizu [soy] bean has long been known in Japanese cookery in the form of ‘kiriako’ [sic, kinako] (‘yellow powder’) to make which the entire bean is slightly roasted and pulverized; then used for mixing with flour to make light cakes, for giving savor to boiled rice, etc. The prices are not yet determined, the cost of manufacture not being known; but it will be cheaper than flour, as well as more nutritious, and will help to relieve the scarcity of rice.

“Substitutes: Other products of the bean are: tofu, the white bean-curd, used universally in Japan and, until recently, almost absurdly cheap; also used in the forms of age-dofu (fried in cottonseed oil), yake-dofu (baked) [yaki-dofu (grilled)], and the curious gori-dofu [kori-dofu], ‘frozen tofu,’ also called koya-dofu (from koya-san) tofu sprinkled with hot water, frozen, dried, and cut into small cakes; miso, the cheap condiment made of daizu beans fermented with yeast and barley; and soy, Japan’s only sauce. A later addition to the list has been to-nyu, or tofumuilk [sic, “bean milk], a very passable substitute for cow’s milk at half the price; and still more recently tofu-butter. The whole bean, parched and boiled, is an excellent coffee-substitute, yielding when parched just to the right degree, much of the aroma of that fascinating drink without any of its deleterious effects.”

“The present demand for bean cake in Japan is met by the three factories of the Suzuki Co. that at Shimizu supplying central Japan, Yokohama Northern and Kobe Southern.

“There are several varieties of the bean known as white, yellow green and black, the first two being the most used. The plant is as yet little grown in Korea and Japan.

“Big Business: The Shimizu factory, which is the largest of the three, employs about 300 workpeople on day and night shifts. This new bean-industry is, however, only the latest among many activities of the Suzuki Co. which ranks among the great industrial concerns of the world, the third largest in Japan, standing next to the Mitsui and the Mitsubishi, and employing a total of over 3,000 clerks and 100,000 workpeople. It deals also in rice, wheat flour, sugar, sake-brewing, coal, timber, metals, camphor, wool, cloth and manure besides numerous small lines. It has three dockyards, at Harima, Toba and another; a coal-mine in

Kyushu; copper mines at Hibi (Okayamaken) Hiroshima (Yamaguchiken) and Dairi (Fukuoka ken) also mines of zinc and iron; while its steel works (*seikojo*) at Kobe are the largest in Japan.”

“Shimizu is well situated for growth being midway between the ports of Yokohama and Yokkaichi and serving a prosperous hinterland. Its chief exports are tea and oranges and its imports coal and timber.” Address: Japan.

604. Japanese American News Inc. / Nichibei Shinbunsha. 1920. Nichibei jûshoroku [The Japanese American directory. No 16]. San Francisco, California: The Japanese American News Inc. (Nichibei Shinbunsha). Index of cities. 23 cm. [Eng; Jap]

• **Summary:** Soyinfo Center has only the pages mentioning soyfoods in the following cities in California: San Francisco, Oakland, San Jose, Sacramento, Fresno, Los Angeles. Plus Portland (Oregon), and Seattle (Washington). See individual directory entries and advertisements. Address: San Francisco, California.

605. *Japan Advertiser*. 1920. Tokyo a city of many kinds of specialty restaurants: All sorts of food can be found at all sorts of prices if one knows where to go. No. 9,307. Aug. 22. p. 5, cols. 1-3. Sunday. [Eng]

• **Summary:** This introduction to the many types of restaurants in Tokyo mentions various soyfoods. Better class houses serve beef. The centerpiece is the “nabe”—“the iron skillet in which the food is cooked. The cooking is done by the customer, no skill being required as the secret of good ‘nabe’ is in the tenderness of the meat and in the sauce which is prepared by the house. Onions, either Bermuda or the long leek variety, tofu, konnyaku (a stringy preparation made out of a root), and sometimes cabbage leaf are the usual ingredients which are put in the nabe along with the thin slices of meat. Sake can be had if ordered. A reasonable meal at a beef house now costs about ¥1.50, although the nabe alone is probably listed at only 60 or 70 sen.

“Another name by which this dish is usually known outside of Tokyo, is *sukiyaki*. This is derived from *suki*, which means a spade, and *yaki*, to cook. The reason for this unusual derivation is that when meat we first introduced into Japan as food for humans, there was a very great prejudice against it. Those who wished to indulge in this ‘unclean’ food were forced to go into the mountains, far from any habitation and conveniences, and they made use of the farmer’s broad spade on which to cook the meat. Another reason, aside from the fact that Buddhism preached abstinence from the flesh of animals, that the Japanese did not look with favor upon meat as a food was the flesh has always been eaten by the Eta, or the outcast class of the country.” Note: This is the earliest document seen (Sept. 2002) that contains the word “*sukiyaki*.”

"In contradistinction to meat, eels have always been looked upon as a delicacy. Eel restaurants are numerous in Tokyo, but they are not cheap... The customer is served in private rooms at these eel houses... Eels are considered very nutritious and are eaten by all classes. It is a favorite dish with coolies when they have the price... The first 'ox' day of the summer doyo, or period of greatest heat, is set aside as a special day to eat eels.

"There is not much choice in the way in which eels are prepared. Kaba-yaki is the name of one style. The bones are all removed, the eel is laid out flat and broiled over a charcoal fire with a special shoyu sauce and served on a big flat plate. Rice is also served..." One serving typically costs 1-3 yen.

"A very cheap kind of food, yet one whose 'social standing' is as good as any, is soba or udon... Cold soba is known as mori, and is eaten by being dipped into shoyu sauce and is flavored with sea-weed." "Tempura soba is served in a bowl with a piece of tempura placed on top. This is a very nutritious dish. Soba is served is served in the same way with onions or a piece of abura-age or fried tofu and is known as okame soba."

"A typical Japanese restaurant where a table d'hote is served is known as a kaiseki restaurant." One popular dish is "onuko, or fish mixed with miso and flavored with vinegar."

In Tokyo, pork "is eaten more than any other kind of meat, but as it is the cheapest it is found only in the poorest restaurants." Surprisingly large quantities of horse-meat are consumed at cheap restaurants. Tempura, which is very popular, "means a certain way of cooking—namely, dipping in this wheat-flour batter and frying in deep oil, usually goma-abura, or sesame oil, although almost any vegetable oil can be used." Also discusses sushi. Rice comes at the end of the meal. Sake is not supposed to be drunk after rice is consumed, as it produces indigestion. Address: Tokyo.

606. Rindl, M. 1920. Vegetable fats and oils. IV-V. Semi-drying oils. Soy bean. *South African J. of Industry* 3(6):518-31. June; 3(8):742-49. Aug. [29 ref]

• **Summary:** These are 2 installments of a series of articles on vegetable fats and oils, forming a Report to the Advisory Board of Industry and Science on Vegetable Oils, Fats, and Waxes. Soybeans are considered among the semi-drying oils. Contents of Part I: Introduction. Early [soybean] experiments in South Africa. Botanical characters. Varieties. Germination. Inoculation. Technique of inoculation. Soy beans as a rotation crop for maize. Comparison of soy beans and cowpeas. Storage of seed. The soy bean as human food. Vitamines. Soy-bean [food] preparations: Soy-bean milk, soy-bean curd [tofu], the soy bean as a vegetable (baked, boiled, roasted, green beans [green vegetable soybeans], soy-bean pulp (kara)). Soy-bean meal [soy flour and its uses]. Fermented soy-bean products: Fermented boiled

beans (natto), ripened vegetable cheese (miso), the Chinese paste chiang, soy-bean sauce (shoyu).

Contents of Part II: Oil content of seed produced in South Africa. Quality of oil from South African beans. Extraction of oils. Nature and composition of soy-bean oil, and methods of treatment. Uses of the oil. Soy beans as forage. Enemies of the soy bean. Method of shipment from the East.

"The first systematic trials [with soy beans] were initiated about 1903 at Skinner's Court, on the Springbok Flats, and at the Natal Experiment Farms, Cedara, Weenen, and Winkle Spruit. These latter were continued until the season 1910-1911 when the field trials referred to above [by the Transvaal and Natal Departments of Agriculture] were carried out by the Department of Agriculture in conjunction with Messrs. Lever Bros. and a large number of farmers" (p. 519).

The best yields during the 1910-11 season at the three Natal Experiment Farms were: At Cedara: Haberlandt 2,000 lb/acre. Winkle Spruit: Mammoth Yellow 1,191 lb/acre. Weenen: Mammoth Yellow 1,400 lb/acre.

"Method of shipment from the East. The beans are shipped in bags, vessels are well dunnaged, and a large number of wooden pipe ventilators are placed in the ships' holds to keep the cargo from getting heated. The beans, on a long voyage from Eastern Asia to Europe, being liable to sweat, are sometimes dried before shipment."

Tables show experimental yields and chemical compositions of soy beans from different countries and soy-related products. A diagram (outline-form) shows the various ways in which plants and seeds of soy beans are utilized. Note: This is the earliest English-language document seen (Feb. 24) that uses the term "soy-bean curd" to refer to tofu. Address: Ing. D., Prof. of Chemistry, Grey University College, Bloemfontein [Orange Free State, South Africa].

607. **Product Name:** Miso.

Manufacturer's Name: Kanda (T.) Miso Manufacturer. Name changed in 1924 to Kanda Soy & Miso Factory (Kanda Seizo-sho).

Manufacturer's Address: Pacific Rd., corner of Iwilei Rd., Honolulu, Oahu, Hawaii.

Date of Introduction: 1920.

New Product–Documentation: Directory of Honolulu and the Territory of Hawaii. 1920. p. 448. "Kanda, T. Miso manufacturer. Pacific Rd., corner of Iwilei Rd. Residence, same. In 1923 Directory, address changes to Quinn Lane. In 1924 Directory, listing changes to Kanda Soy & Miso Factory, 62 Quinn Lane. 1928-29 Directory. Kanda Shokwai [Shokai]. T. Kanda, president. R. Watanabe, v.p. K. Kanda, manager. Soy and Miso Manufacturers. Koula corner Halekauwila. Phone: 5135. P.O. Box 934.

Nihei. 1978. *Nippon Jozo Kyokai Zasshi*. 73(7):542-49. "Hawaii ni okeru Nihon-shu, miso, shoyu no rekishi." Says: "Kanda Seizo-sho, founded by Takejiro Kanda in the 1920s. On Cooke St., Honolulu." Wm. Higa. 1980. *History of Miso Companies in Hawaii*; Shurtleff & Aoyagi. 1983. *The Book of Miso*. 2nd ed. p. 234. This was the second miso company in Hawaii and the United States, started in 1920 by Mr. Takejiro Kanda. No longer in business.

608. Noorden, Carl von; Salomon, Hugo. 1920. *Handbuch der Ernährungslehre. Erster Band. Allgemeine Diätetik* [Handbook of nutritional education. Vol. I. General dietetics]. Berlin: Verlag von Julius Springer. xxxiii+ 1237 p. [100+* ref. Ger]

• **Summary:** The section titled "Vegetable Milk and Cream" (p. 311-14) notes that the authors have had extended experience with soybean milk and soy flour made by Frankfurter Soyama-Werken in various forms. For each product the percentage protein, fat, carbohydrates, ash, and calories per 100 gm is given, based on analyses of Dr. G. Popp in Frankfurt: Soyama Flour (*Soyamamehl*; 42% protein, 18% fat), Soyama Milk (*Trink-Soyamamilch* [normal], 3.77%, 3.36%), Soyama Milk for Diabetics [low in carbohydrates] (*Trink-Soyamamilch [fuer Diabetiker]*, 3.77%, 3.40%), Soyama Milk for Baking (3.29%, 4.40%), Soyama Cream (Soyamarahm [normal], 2.93%, 11.50%), Soyama Cream for Diabetic (*Soyamarahm [fuer Diabetiker]*, 2.95%, 11.50%), Soyama Cream [extra rich in fat, especially for diabetics] (*Soyamarahm*, 2.50%, 30.0%). The soybean is of special importance in diabetic diets because of its low carbohydrate content, which can be reduced even more by a special process.

When Soyama Cream is mixed with coffee, tea, or chocolate, one can scarcely tell whether or not one is using cow's milk. Pages 312-13 summarize the findings of Fischer on the ease with which plant- or vegetable milks are digested.

The section on variety breads (p. 427) notes that soybean flour is now warmly recommended in such recipes.

A section titled "Soybeans" (p. 542-43) notes that edible soy products are made by Aguma-Werken F. Thoerl in Harburg, Vaterland brand soy flour is made by E. Friedrichsen in Berlin, and an excellent soy flour is made by Soyama-Werken in Frankfurt am Main. In Japan and China countless preparations made from soybeans are on the market. Especially prized is the cheese named tofu (To-fu). Soy sauce is also known worldwide. Soy coffee (p. 694) is of much less economic importance than imitation coffees made from cereal grains or malt. Page 714 mentions tests using soybean flour to make cocoa or chocolate. Page 800 discusses soya seasonings such as shoyu fermented with koji, and miso.

Pages 887-903 discuss vegetarian cures for diseases, and ten specific diseases for which they are well suited. Some

groups of German vegetarians are endeavoring to return to a more "natural way of life," and some of these eat a raw-food diet. Pages 898-99 give the protein content and calories per 100 gm of soy flour and soymilk, plus a discussion of soymilk. Page 979 gives the composition of two brands of soymilk and one of soy cream. Also contains early information on using baking soda for cooking whole soybeans. Noorden lived 1858-1944. Address: 1. Geheimer Medizinalrat und Prof., Frankfurt-am-Main, Germany; 2. Prof., Vienna, Austria.

609. U.S. Tariff Commission. 1920. *Summary of tariff information, 1920*; prepared for the use of the Committee on Ways and Means, House of Representatives. Washington, DC: Government Printing Office. 1004 p. See p. 320-22, 779-80, 990. [7 ref]

• **Summary:** Contains a description of the soybean, its uses, production, and quantities imported, and the tariff regulations applicable to the various soy products.

Paragraph 200, page 321: "The provision in this paragraph for 'bean stick or bean cake, miso, and similar products,' covers a Japanese food product made from ground soja (soya) beans and water, known as frozen tofu or koya-dofu, and fried tofu or hoshi aburage, the frozen tofu or koya-dofu being in the shape of small, porous, yellow cakes about one-half inch thick, from 1½ to 2 inches square, and the fried tofu or hoshi aburage being in thin cakes one-quarter inch thick and 2½ to 5 inches in diameter, which have been fried in some kind of oil or grease. Even if not bean cake it is dutiable as a product similar to bean cake, bean stick, and miso. (G.A. 8045, T.D. 37079, of 1917, following Abstract 29577, T.D. 32780, of 1912.) 'Amasake,' made from rice yeast (30 per cent) and boiled rice (70 per cent), used as a drink among the Japanese, was likewise classified as a 'similar product,' apparently as similar to miso. (Abstract 31147, of 1913).

Oil cake produced from the soya bean is free of duty as oil cake provided for in paragraph 560. (Abstract 23794, T.D. 30828, of 1910)."

Paragraph 201, p. 321-22: In the Act of 1909, sauces of all kinds were subject to a 40% ad valorem duty; this decreased to 25% in the Act of 1913. Thick sauces include dressings and condiments such as chutney. "Thin *Chinese soy* made by mixing cooked soy beans with wheat flour, salt, and water and exposing to the sun for about three months, used to flavor and color soups, fish, and meats, about 80 per cent being used in the kitchen and about 20 per cent on the table, is dutiable as a sauce hereunder and not as a nonenumerated manufactured article under paragraph 385. (9 Ct. Cust. Appls., -; T.D. 37976, of 1919.) *Japanese shoyu* is also classified as a sauce under this paragraph. (T.D. 37574, of 1916; Abstract 43496, of 1919)."

Paragraph 606, p. 779-80. A duty is first levied on soya beans in the Act of 1913.

“Description and uses.—*Soya beans* used in oil mills, the important consumers, are chiefly imported. Soya-bean cake, or meal, a by-product of oil manufacture, is a valuable cattle feed and enters extensively into international trade. (See pars. 560 and 561.) In China and Japan the beans, cake, and oil are elaborated into a large number of food products, such as milk, cheese, flour, bean cake, and soya sauce... Except by resident Asiatics there is only a limited use of soya beans for food purposes.

“Production.—Soya-bean culture has recently developed rapidly... Imports of *soya beans*, too small to be listed separately prior to 1914, rose from about 2,000,000 pounds in 1914 to about 32,000,000 pounds in 1918; during the same period imports of soya bean *oil* rose from 16,000,000 to nearly 337,000,000 pounds.

“*Soya beans cooked and salted*, but not enough to so change them as to prevent their identification as soya beans, and packed in tins, jars, bottles, or similar packages, do not thereby lose their status as soya beans and are free of duty under this paragraph rather than dutiable under paragraph 199. (6 Ct. Cust. Appls., 415, of 1915.) *Soya beans* in stone jars and hermetically sealed tins, invoiced as *bean sauce*, were likewise classified, and not dutiable as prepared beans under paragraph 199, nor as sauce under paragraph 201. (G.A. 8217, T.D. 37860, of 1918.) *Beans* and *bean sauce* prepared or preserved in tins, jars, bottles, or similar packages, were also held free of duty under this paragraph, analysis of the samples showing them to be soya beans, either natural or prepared. (Abstract 41021, of 1917.)... A *black bean* known to the Japanese as *Kuromame*, was held not to be free of duty under this paragraph, the evidence being insufficient to prove that the merchandise was soya beans. (Abstract 42852 of 1919).” Address: Washington, DC.

610. Thom, C. 1920? Utilization of molds in certain foods. 9 p. Undated. Unpublished typescript.

• **Summary:** “Here is some soy sauce in a bottle—this was made between January and October 1920 in Washington, DC, by the Department of Agriculture.” Describes how soy sauce is made and its microbiology. Also discusses miso (red and white), grey-white or red Chinese cheeses based on soybean curd (made by ripening with a mold and then brining; in Foo-chow is made a red vegetable dye—made from ang-quac or red rice made with the red mold *Monascus purpureus*), katsuobushi. Address: USDA Bureau of Chemistry, Washington, DC.

611. Japanese American News Inc. / Nichibei Shinbunsha. 1921. Nichibei jûshoroku [The Japanese American directory. No 17]. San Francisco, California: The Japanese American News Inc. (Nichibei Shinbunsha). Jan. 1. Index of cities. 23 cm. [Eng; Jap]

• **Summary:** Soyinfo Center has only the pages mentioning soyfoods in the following cities in California: San Francisco, Oakland, San Jose, Sacramento, Fresno, Los Angeles. Plus Portland (Oregon), and Seattle (Washington). See individual directory entries and advertisements. Address: San Francisco, California.

612. **Product Name:** Miso.

Manufacturer’s Name: Kagidai Miso Seizo-sho.

Manufacturer’s Address: 1534 Post St., San Francisco, California. Phone: West 3286.

Date of Introduction: 1921. January.

New Product–Documentation: The Japanese American Directory. 1921. p. 64. Note: In 1920 Nagatomi Miso Seizô-sho was at this same address and phone number.

613. **Product Name:** Miso.

Manufacturer’s Name: Nihonichi Miso Seizo-sho (Nihonichi Miso Mfg. Co.). Renamed Nihon Miso Seizo-sho in 1924.

Manufacturer’s Address: 439 Turner Ave., Los Angeles, California. Phone: 16836.

Date of Introduction: 1921. January.

New Product–Documentation: The Japanese American Directory. 1921. p. 314. Note: Nihon-ichi means “Japan No. 1.” Also in 1922, p. 315. Also in 1923, p. 355. Also in 1924, p. 394 (directory; the company has a new name: Nihon Miso Seizô-sho. New phone number: 827260) and p. 394 (¼-page ad, shows new company name and number. Owner: Mr. KANAMINE (?) Katsumaro. Wholesaler and retailer of miso, shoyu, and koji).

Also in 1925, p. S-44 (directory; new phone number: VAndike 7260. Address: 439 Turner St.) and p. S-44 (ad, ¼ page bottom right). Also in 1926, p. S-33 (directory) and p. S-73 (¼-page ad; the company now makes miso, koji, and natto. Sells wholesale and retail).

614. **Product Name:** Koji, Miso.

Manufacturer’s Name: Shiro Koji, Miso Seizo-sho.

Renamed Arada Miso oyobi Koji Seizo-sho in 1923.

Manufacturer’s Address: 922 G St., Fresno, California. Phone: 2797R.

Date of Introduction: 1921. January.

New Product–Documentation: The Japanese American Directory. 1921. p. 231. Also in 1921, p. 234. Ad (1/8 page). In addition to the basic information given above, states that the owner is Mr. Arada. Also in 1922, p. 226 (directory) and p. 228 (Ad). Also in 1923 directory, p. 262. The company now has a new name: Arada Miso Oyobi Koji Seizô-sho (Arada Miso and Koji Manufacturing Co.).

Also in 1924, p. 277 (ad; The company name is now Shiro-miso, Koji Seizô-sho, at 923 G. St. Owner: Mr. Arada. Phone: 2707R). and p. 281 (directory; the company name here is the same as it was in 1923!). Also in 1925, p. N-261

(directory and 1/8 page ad). Also in 1926, p. N-256 (directory; new phone number 2797R) and p. N-256 (1/8-page ad; Shiro-miso, Koji Seizô-sho. Phone: 2797R).

The Japanese American Directory. 1930. p. 264. Arada Miso Koji Seizô-sho, at 923 G St., Fresno, California. Phone: 2-4388. Also in 1932, p. 257 (directory; new phone number: 2-4388). Also in 1934, p. 239. Also in 1936, p. 286 (directory).

615. **Product Name:** Miso.

Manufacturer's Name: Watanabe Miso Seizo-sho [Watanabe Miso Manufacturing Co.]. Renamed Sacramento Miso Seizo-sho in 1922.

Manufacturer's Address: 427½ North St., Sacramento, California. Phone: Main 2933J.

Date of Introduction: 1921. January.

New Product–Documentation: The Japanese American Directory. 1921. p. 163. In 1920 the company's name was Watanabe Koji Seizô-sho [Watanabe Koji Manufacturing Co.]; same address and phone no. Also in 1922, p. 149. But the company has been renamed Sacramento Miso Seizô-sho. Same address and phone. Also in 1923, p. 173. Also in 1924, p. 193. Also in 1925, p. N-164. Also in 1926, p. N-162.

616. Adkins, Dorothy Margaret. 1921. The soya-bean problem. *Science Progress (London)* 15(59):445-51. Jan. [9 ref]

• **Summary:** This is a popular article. Contents: Introduction. Practical applications of the bean: Food uses include Tofu, or bean cheese (Japanese), Miso similar to chiang (Chinese), Shoyu (Japanese) and chiang-yu (Chinese), Natto (Japanese), whole dry soybeans, soybeans canned as a green vegetable (see description below), vegetable milk, roasted soybeans as a coffee substitute, soya flour, soya in diabetic diets and macaroni. Utilisation of soya-bean oil: In Italy, China, Manchuria. Utilisation of soya-bean cake and meal: As fertilizer in China and Japan, for feeding stock. Food value of the bean. The cultivation of the soya bean: China, Japan, United States, Australia (New South Wales), South Africa, West Indies, British East Africa, West Africa, Burmah [Burma], England.

“In Japan beans are germinated until the sprouts are about five inches long, and eaten with vinegar; beans, germinated and treated with brine, have also been noted in Spain.” Note: It is not stated clearly that these beans in Japan or Spain are soya beans.

“Soya-beans may be cooked and used in the same way as haricot-beans, and may also be picked when young and treated like green peas, in which condition they may be canned.”

“In South Africa success has been achieved in growing the plant; in 1910 the outlook was so hopeful that a project for constructing oil mills was suggested. Unfortunately the

bean was not taken up by farmers, who preferred to cultivated maize, as it was an easier crop to produce. Thus no extensive culture of the bean was attempted, and the subject was dropped.

“In other parts of the Empire, for example the West Indies, British East Africa and West Africa, trials of soya-beans have proved successful, but in no district have promising early experiments been followed by tests on a larger scale.”

“In certain parts of India, for example Burmah, soya-beans are grown on a large scale and are consumed by the natives.” Address: Royal Holloway College, London.

617. Oshima, Kokichi. 1921. Re: Description of Japanese foods pickled in miso or shoyu, imported to New York. Letter, probably to Margaret B. Church at USDA Bureau of Chemistry, Washington, DC, Feb. 12. 2 p. Handwritten. [Eng]

• **Summary:** Mentions daikon misozuke (white radish), taimiso (sea bream), youkizuke (Miscellaneous vegetables in shoyu).

Note: According to Dr. Charles Thom's personal papers from about 1922-23, Kokichi Oshima spent 7-8 months at the Microbiological Laboratory of the USDA Bureau of Chemistry doing research related to food fermentation, such as quantitative determination of industrial mold enzymes. Oshima was a graduate of Hokkaido Imperial University (Sapporo, Japan). In Dec. 1922 and Feb. 1923 Oshima was back in Sapporo. Address: Apt. 42, 604 W. 139th St., New York City, NY.

618. *Light of Manchuria*. 1921. Present Manchuria and Mongolia, Series II. Oct. 1. p. 12-14, 30-31, 46-47.

• **Summary:** This article, continued from the September number, notes that one of the principal agricultural products of Manchuria and Mongolia [probably Inner Mongolia] are soya beans. “Yellow (Soya) Beans belong to the most common species. They contain a good percentage of oil and are also good as an article of food and also for the expression of oil. The Manchurian (Soya) Beans have become widely known all over the world. Hitherto they used to be used by Manchurian inhabitants as a food-stuff and for the expression of oil as a source of light. The residue left after oil was obtained served as cattle feed. Since the residue popularly known as Bean Cake came to awake demand in Japan as fertilizer, and Bean Oil began to be exported to the Western countries as industrial material, a marvellous development has been noted in the cultivation of Soya Bean. This belongs to only a recent date...”

“The Chinese not only use Beans and Bean Oil in their daily cooking, but also *tofu* (bean curd palatable also to the Western palate and pronounced by the qualified chemist as similar in its composition to cow's milk), *miso* (an article of

the staple food to both Japanese and Chinese), and soy are also made from Beans...

“Beans put out in Manchuria and Mongolia are put at about 20,000,000 *koku* (1 *koku* being equivalent to 4.96 bushels), but the outputs are increasing rapidly year by year, and there is a vast area of territory awaiting cultivation.”

Page 30, under “Manufacturing Industry,” notes that “Bean milling ranks foremost in manufacturing industry... Bean milling is best developed at Dairen, which is now possessed of sixty mills. In the interior of the country, the old primitive system by which a few head of mules or donkeys and a few hands do the work of expressing oil from Beans is still found in vogue. Such is only a domestic by-industry. However, such extensive mills as use steam engines and express oil by hydraulic pressure are mostly found at Dairen. The Suzuki Bean Mill at Dairen is operated on the chemical extraction system which is the latest scientific method. The round-shaped cake left after the expression of oil weighs 46 *kin* a piece, which is the standard weight for export cake. In the fiscal year 1919, 19,693,000 piculs valued at 43,029,000 *Hk. taels* [Haikwan taels] were exported to Japan. Bean Meal, which is put out at the Suzuki Mill, is good for use as it is. Bean Cake is used by the Chinese for cattle-feed, and by the Japanese as fertilizer.”

On pages 46-47 are tables giving exports and imports at Dairen. The three exports with the greatest value (in Haikwan Taels) were Bean Cake (36,851,244), Beans (Soya) (24,750,377), and Bean Oil (17,369,655). Imports included Miso and soy [sauce] (97,305).

619. North, J.L. 1921. To solve the cost-of-living problem? A magic bean. *Illustrated London News (The)*. Oct. 8. p. 476-77. [1 ref]

• **Summary:** “The leading article and letter in the *Times* of Sept. 28 from its Vienna correspondent about Manna flour, manna bread, and milk substances made from the Soya bean, are likely to do good if they help us to realise how much we are losing by our neglect of this, the most valuable—for the uses to which it can be put—of all legumes.

“In the letter giving the details of the researches of Dr. László Berczeller of Vienna, there is no reference to the fact that these ‘Manna’ or Soya bean products were first made in England before the war. Samples of the flour and biscuits are to be seen in the cases of the London Institute of Hygiene, and Manna milk has been for years—and, no doubt, still is—sold here under the name of ‘Solac’ at a price considerably lower than that charged for milk by dairymen. The appearance and rapid rise into importance of the Soya bean is one of the most remarkable commercial events of modern times.”

“In 1790 the [soy] bean was brought to Europe when its cultivation was first attempted by Young [Arthur Young, lived 1741-1820 in England], the father of British

Agriculture, though without success. In 1878 an Austrian professor, Haberlandt, tried it, but failed [Note 1. Haberlandt did not fail; he successfully cultivated soybeans in Austria as early as 1875, and many times thereafter.] When the bean came here in 1908 there was an immediate rush to grow it both in Europe and America. Experiments were started by our Board of Agriculture, the Royal Agricultural Society, and many semi-public bodies. The early experiments failed completely, for the reason that they were made with seed whose climatic origin was unknown, as well as the orthodox Chinese methods of growing it. Later, this was remedied...”

By 1918 Europeans were aware of 500 different soybean varieties that were growing experimentally at Arlington, Virginia.

“My interest in the Soya bean began in 1913 with a visit from an agent of a German cultivator at the office of the Royal Botanical Society at Regent’s Park. He was, he said, trying to form a syndicate to grow what he called an acclimatised Soya bean, brought from China in 1910, and already in cultivation in Germany. He refused seeds for testing, but sent from Hamburg a plant which had been carefully cleared of the seed, though the *empty* pods, nearly sixty in number, were left. The syndicate never materialised, and I thought no more of the matter, until later on, whilst examining the dried plant, I noticed a tiny pod, scarcely half an inch long, which contained a seed no bigger than a pin’s head. Going over the plant I found other pods which evidently had been thought too insignificant to be of use, and from these I obtained thirteen seeds. These were sown in 1914 and resulted in thirteen plants, which produced four hundred and forty seeds. From thirty-three plants in 1915 one thousand seeds resulted, and in 1916 no less than twelve thousand. Many experiments as to the value of different methods of growing them were made in several countries, and with no less than twenty-one different foreign varieties. One thing came clear throughout the tests, and that was that the original variety started with was by far the best. It says a good deal for German astuteness that they should have gone to Manchuria and, from hundreds of varieties, chosen the one best for them and for us.”

The future of the Soya bean in England is uncertain. “Natural selection helps the plants that mature earliest produce most seed; those that mature late die out. It is noticeable that the plants experimented with in England fruit earlier now than they did at first, and this is a very hopeful sign. Another satisfactory fact is that there is no lessening in the number of pods produced, but rather a gain. This year there are plants with three times the number of pods shown in a photograph of the best German-grown specimen of 1912.”

In China and Japan the Soya bean “enters into the composition of most dishes, and in one form or another, as Soy sauce, bean paste, bean cheese, bean curd, bean milk,

bean wafers, bean cakes and confectionery, is used everywhere. For a hundred years Soy sauce has been imported—the principal ingredient in the well-known Worcester [Worcestershire] sauce.”

Apart from its value as a food, it is used in the manufacture of glycerine, explosives, enamels, varnish, varnish, waterproofs, linoleum, paints, soaps, celluloid, printing inks, and as a lubricant.”

Photos (all but #1 by Frank N. Meyer of the USDA) show: (1) A typical pod from a soya bean plant grown by Mr. J.L. North at Chiswick in 1921. (2) Blocks of tofu (also called soya bean cheese, bean curd, or soya bean curd) ready to be cut up into squares for sale. (3) Varieties of soya bean cheese on a bamboo tray. (4) A pile of wooden trays full of bean curd in a dark room. (5) A basketful of sprouted soya beans. (6) Soy bean plant with leaves, many pods and roots.

Note 2. This is the earliest document seen (March 2002) written by Mr. J.L. North, the pioneer in cultivating soybeans in England.

Note 3. This is the earliest English-language document seen (Feb. 2004) that uses the term “soya bean cheese” or “soya bean curd” to refer to tofu.

Note 4. This is the earliest English-language document seen (July 2007) that uses the term “magic bean” or that uses the word “magic” as an adjective to refer to the soybean.

Note 5. Concerning Arthur Young. He was the author of many books on agriculture, which were very influential in their day. He was an important advocate for the progressive agricultural practices of his time, advocating such innovations as the seed drill, improved crop rotations, the use of marl as fertilizer, and the enclosure of open fields. In 1767 he undertook the management of a farm in Essex. He conducted various experiments and published the results in *A Course of Experimental Agriculture* (1770). In 1784 he began the publication of the *Annals of Agriculture*, a periodical which was continued for 45 volumes and had many contributors. Young traveled to France during 1787-89 and in 1792 published an important book about his travels and observations there. The soybean was first grown in Paris, France, perhaps as early as 1740, definitely by 1779. So he may have learned about soybean from fellow agriculturalists in Paris while on this trip. Address: Curator of the Royal Botanic Society of London.

620. Satow, Sadakichi. 1921. Researches on oil and proteids extraction from soy-bean. *Tohoku Imperial University, Technology Reports (Sendai, Japan)* 2(2):1-124 (41-164). Oct. 28 cm. [Eng]

• **Summary:** Contents: 1. General description of the soy-bean: The use of the soy-bean (as a food-stuff [shoyu, miso, tofu, natto], soy bean oil [for the manufacture of soap, hydrogenated oils, paints, varnishes, oil-cloth, and rubber

substitutes], and bean cake or waste residue from the manufacture of soy-bean oil [nitrogenous fertilizer, as a cattle food, Solite—a water-based paint]). 2. Classification and analysis of soy beans and their standardization: By color, by protein / proteid content, conclusion of analysis (the best soy-beans are Tsurunoko and Kauro grown in Hokkaido): Standardization of the raw material, content of proteids, color of the raw material, moisture, regularity of the grain, specific gravity of the soy-bean, impurities. 3. Microscopical observations of soy-beans: Colour reactions of cellular substances, distribution of proteids and fatty acids, distribution of fatty oils. 4. Oil extraction (p. 17): Influence of hulls, influence of moisture, influence of oxidation, comparison of the dissolving power of various solvents, to find the best conditions for the extraction of oil by means of benzine, how to extract the oil technically without denaturing the proteids and how to remove the retained solvent, on the apparatus employed in oil extraction, working of the extracting apparatus, recovery of solvent by application of the vacuum system, separation of oil from the solvent and oil refining, reserving the oil-freed soy-bean meal.

5. Isolation of proteids out of oil-freed soy-bean (p. 35): General discussion, necessary and sufficient conditions for the extraction of proteids (on the quality of isolated proteids [plasticity, solubility, coloration], on the purity of isolated proteids, to obtain a maximum yield). 6. The extraction of proteids by means of water (p. 41): General properties of bean meal, on gummy substances and their properties (saccharo-colloids, incl. stachiose [stachyose], araban, galactan; p. 43), quantitative estimation of water-soluble proteids and carbohydrates, determination of the volume of water necessary for the extraction of soluble carbohydrates, relation of the duration of extraction to the quantity of extractable proteid and carbohydrates, effect of the process of water-extraction. 7. On the extraction of proteids by means of alkaline reagents: General properties of glycinin against alkaline reagents, classification of alkaline reagents, comparisons of dissolving power of alkaline reacting compounds, relations of the plasticity and coloration of the proteid to various kinds of extracting agents, standardization of plasticity of isolated proteid, on the relations between plasticity and chemical reagents, comparative experiments relating to the extracting process by means of sodium sulfite and sodium hydroxide.

8. The determination of the concentration, quantity, and other factors of Na₂SO₃ [sodium sulfite] in the process of extraction (p. 69): Determination of the concentration of sodium sulfite, the determination of the relation between the plasticity of the protein and the concentration of sodium sulphite, to determine the relation between the yield and the time of extraction, to find out the actual yield of proteid, as well as the volume of sodium sulfite solution provided the bean meal is previously extracted by water, then extracted

with sodium sulphite, conclusion of this chapter. 9. Extraction of proteids by means of caustic alkalies (p. 80): To determine the concentration of the caustic soda [sodium hydroxide] solution, determination of the relation between the time of extraction and the yield of proteid, to determine the volume of caustic soda, the systematic extraction of proteids (using water, sodium sulphite, or alkali). 10. Clarification of extracted proteid solution and precipitation thereof (p. 86): Precipitation of proteids, precipitation by means of alkaline earth metals (such as magnesium sulphate), by means of colour base (such as malachite green, methyl violet, brilliant green, auramine, or new fuchin), by means of alcohol, by means of heating, by means of formaldehydes, by means of fermentation, by means of acids (choice of acid, yield of precipitated proteid, quality of proteid). 11. Quantitative investigations on the precipitation of proteids (p. 101, 11 experiments with summary of conclusions). 12. Effect of heating on the yield of proteid (p. 115). 13. Separation of excess water from the proteidal precipitate (p. 118). 13A. Process for drying the proteidal mass and for drying the residue (p. 121). 14. Pulverizing the dried proteid (p. 122). 15. Recovery of carbohydrates from waste liquid (p. 123).

World soybean production (in short tons): Manchuria 1,850,000 (25% is used in Manchuria as food; 75% is exported to all parts of the world in the form of "bean cakes or bean meal"). Japan 450,000. Korea 322,500. Kantoshu 15,400. Total of the above: 2,640,000 tons valued at more than 200 million Japanese yen (p. 2).

The author investigated the use of soy-bean proteins in plastics. There are upwards of 30 varieties of soybeans which may be classified into yellow, blue, and black. The first contain the most protein and oil, the last the least. The protein content varies from 35-40.5% and the oil content from 15.4 to 20.9%. The mean analysis of 16 different varieties was: Water 10.2%, proteins 37.8%, oil 18.9%, carbohydrates 23.5%, fiber 5.2%, and ash 4.4%. The carbohydrates consist mainly of non-reducing sugars with little or no starch. The cell membrane consists of galactan or hemicellulose, with a little free cellulose. The presence of the hulls in the crushed bean reduces the speed of extraction of the oil and the yield, and gives the oil and protein a brown color. Note: This is the earliest document seen containing the word "hemicellulose." *Webster's Dictionary* defines hemicellulose, a word first used in 1891, as "any of various plant polysaccharides less complex than cellulose and easily hydrolyzable to simple sugars and other products." The sugar molecules in this polymer each contain 5 carbon atoms.

Oil extraction: Benzene is the most suitable commercial solvent; the solvent must not be recovered by direct steaming of the meal, but by the use of a vacuum.

Protein extraction: The soluble carbohydrates are removed from the meal by washing with very dilute acetic

acid. The protein is then extracted in 3 stages, i.e. with water, with 0.2-0.4% sodium sulphite solution, and with 0.2% sodium hydroxide solution. 20-30% of the total available protein is extracted in the first stage, a further 50% in the second, and the total yield is about 95%. The protein is finally dried at the lowest temperature and highest vacuum and in as short a time as possible. The dry protein is very tenacious and can only be ground in high-speed disintegrators; it is then suitable for the manufacture of plastic materials, lacquer, enamel, or imitation leather. The soluble carbohydrates, which amount to 10-12% of the meal treated, can be worked up into syrup or converted into alcohol or lactic acid by fermentation. The bean residue consists of fiber, galactan, and protein and can be used for cattle feed or as an ingredient of linoleum-like products. Continued. Address: Kôgakuhakushi.

621. Satow, Sadakichi. 1921. Researches on oil and proteids extraction from soy-bean: Illustrations and tables (Continued). *Tohoku Imperial University, Technology Reports (Sendai, Japan) 2(2):1-124 (41-164)*. Oct. 28 cm. [Eng]

• **Summary:** Continued: Illustrations show: (1) The cells of the soy-bean (after Winton, p. 55). (2) The effect of various chemicals on soy-bean cells (8 figures, after p. 16). (3) A rotary drum extractor used with solvent and a vacuum system (p. 68). (4) An endless pelt system for drying proteid precipitate.

Tables show: (1) Percentage of proteids and fat found in 23 samples of beans. The varieties are: Akakiji bean, Nagaaneko bean, Kintoki bean, Shônembo bean, Biruma ingen bean, Chûnembo bean, Maru uzura bean [speckled], Naga uzura bean, Kumamoto ingen bean, Azuki, Chûnaga uzura bean, Aneko bean, Shiromarufuku bean, Green pea, Dainenbô bean, Daifuku bean, Chûfuku bean, Red pea, Black soy-bean (38.61%), Yellow soy-bean from Manchuria {2 samples, 38.65% and 39.12%}, Yellow soy-bean from Korea (41.00%, and 22.826 fat—the highest fat of any bean tested), Yellow soy-bean from Hokkaido, Japan (41.92%—the highest proteid of any bean tested) (p. 6-7). (2) Previous analyses of the chemical composition of 16 soybean samples from Manchuria, Korea, and Japan. For each, gives the district, variety (mostly yellow but one "Blue variety"), water, proteids, fat, carbohydrate, fiber, ash, name of analyst (an organization) (p. 8). (3) Analyses by Sato of the chemical composition of 14 soybean varieties from Manchuria, Korea, and Hokkaido (Japan). For each, gives the varietal name, growing region, "moisture, total protein, soluble proteose, available protein, non-proteid nitrogenous matter, fat, nitrogen-free extract, fiber, ash, color and shape (all yellow), producing organization (Korean Central Experimental Station or Sapporo), date of production. Named varieties include: Harupin, Shoshu bean, Utsuzan bean, Ampen bean, Chogei bean, Ryusan bean,

Turunoko [Tsurunoko], Kanro, Yoshioka, Otanizi [Otaniji] (41.92% total protein and 37.53% available protein, both the highest of any bean tested) (p. 11). (4) Effect of hulls on solvent extraction of soy-bean oil with 3 varieties: Kanro, Otaniji, Yoshioka (p. 18). (5) Influence of moisture on solvent extraction (ether) of soy-beans (p. 19). (6) Effect of using benzene in place of ether in solvent extraction of soy-bean oil. The best moisture content is 7.5% to 12.5% (p. 20). (7) Substitution of vacuum drying for open air drying in removing moisture. Shows that the smaller the quantity of moisture contained in the bean, the greater the yield of oil, provided that the oil is protected from oxidation (p. 22). (8) Effect of different solvents on oil extraction: Carbon bisulphide (flammable and expensive), ether (flammable and expensive), benzene (boiling point 75°C), carbon tetrachloride [tetrachloride]. (9) Separation / distillation of benzene from oil solution (p. 34).

(10) Chemical composition of “soy bean meal” from which the hull and oil have been removed (p. 42). (11) Composition of carbohydrates or saccharo-colloids, based on S. Yukawa (p. 43). (12) Composition of para-galactaraban / gummy substances in 9 varieties (p. 44-45). (13) Percentage of water-extractable substances and reducing sugars in flattened and powdered soy-beans (p. 46-47). (14) Sugars in soy-beans (p. 48). (15) Proteids and soluble carbohydrates in soy-beans (p. 49). (16) Effect of acetic acid in retarding dissolution of the globulins (p. 50). (17-18) Dissolving power of alkaline reagents on proteids in bean meal (p. 54-56). (19) Effect of reagent on plasticity and coloration of proteids (p. 56).

(20-22) Amount of proteid extracted in 3 consecutive extractions, or with pressure (p. 63-65). (23) Effect of 4 consecutive washings in removal of ash (p. 66, 68). (24-26) Percentage of proteid extracted with sodium sulfite after 1 or 2 hours (p. 70-71). (27) Concentration of sodium sulfite, mark of plasticity [rating], and color of precipitate (p. 73). (28) Relation between time of extraction and yield of nitrogen and proteid (p. 74). (29-30). Yield of proteid with water or sodium sulfite and 5 or 6 consecutive extractions (p. 76).

(31) Test to maximize yield of proteid using sodium sulphite solvent; the weight of the solution must be 16 times that of the meal, and the yield will be 52.20 (p. 78). (32) Effect of adding acetic acid on yield (p. 79). (32-33). Effect of caustic soda (sodium hydroxide) on percentage of proteid extracted (p. 81) (34-37) Relation between time of extraction and yield of proteid using caustic soda (p. 82-83). (38) Volume of caustic soda consumed by different volumes of bean meal solution (p. 83). (39) Volume of caustic soda solution needed in three extraction processes: water, sodium sulphite, or alkali (p. 85).

(40) Extraction with magnesium sulphate for 1, 2, or 3 hours (p. 90). (41) Percentage of proteids precipitated by different precipitants; “isolated proteid,” “glutinizing

chemicals” (p. 95) (42). Effects of sulphurous acid, formaldehyde, and formalin (p. 96). (43) Effect of different precipitants on quality of precipitate; “sulphurous acid gives proteid of the whitest and best quality, and most suitable for the manufacture of plastic products” (p. 100). (44) Yields of proteid with different volumes of sulphurous acid; all yields are very unsatisfactory (p. 103). (45-47) Effect of adding sulfur dioxide to sulphurous acid at various concentrations; remarkable increase in yield (p. 104-06). (48-51) Precipitation of water extracted protein using acetic acid (p. 107-10). (52-55) Effect sulphuric acid for precipitation of proteids (p. 111-14). (56-57) Effect heating on yield of proteids (p. 116-17).

Note: Horvath (1937) states: “The extraction of protein from soybean meal, its subsequent precipitation and properties, as well as its industrial applications have been extensively studied by S. Satow, and the results published (in English) in 1921-23 in two voluminous reports [*Technology Reports, Tohoku Imperial University* (Japan): 2(2) and 3(4)]. These reports continue to serve as an unsurpassed source of information on this subject, and a number of discoveries during the last 15 years can be traced to the researches of Satow.” Horvath then summarizes many of Satow’s key findings. Address: Kôgakuhakushi.

622. Product Name: Miso.

Manufacturer’s Name: Araki (T.).

Manufacturer’s Address: 15 Ohia Lane, Hilo, Island of Hawaii.

Date of Introduction: 1921.

New Product–Documentation: Directory of Honolulu and the Territory of Hawaii. 1921. p. 967. Araki, T., Miso Manufacturer, rear 15 Ohia Lane, Hilo, Hawaii. Note: T. Araki is listed as a baker in the 1920 Directory. Note also that in 1928-29 Sotaro Araki started making miso in Hilo, perhaps a relative.

623. Product Name: Matsu-jirushi Shiro Miso.

Manufacturer’s Name: Takei Miso Factory (Takei Miso Seizo-sho).

Manufacturer’s Address: Kahului, Maui, Hawaiian Islands.

Date of Introduction: 1921.

New Product–Documentation: Hawaiian Japanese Annual & Directory. 1936-37, p. Maui 25. Shûji Takei (from Yamaguchi prefecture), Takei Koji, Miso Seizô-gyo [Takei Koji & Miso Manufacturing Co.] Box 237, Kahului, Maui.

Nihei. 1978. *Nippon Jozo Kyokai Zasshi*. 73(7):542-49. “Hawaii ni okeru Nihon-shu, miso, shoyu no rekishi.” Takei Miso Seizo-sho was founded in about 1921 by Shuji TAKEI. They made Matsu-jirushi Shiro Miso, but are no longer in business.

Note: In the 1909 there was apparently a shoyu maker named H. Hirao in Kahului. Wm. Higa. 1980. History of

Miso Companies in Hawaii; Shurtleff & Aoyagi. 1983. *The Book of Miso*. 2nd ed. p. 234. This was the third miso company in Hawaii and the United States, started in 1921 by Mr. Shuji Takei. No longer in business.

624. Kinoshita, Asakichi. 1921. *Jitsuyô miso jôzô-hô* [Practical miso fermentation]. Tokyo: Meibundo. 411 p. [30+ ref. Jap]

• **Summary:** Contains the most complete description of miso preparation published during the first quarter of the 20th century.

625. Japanese American News Inc. / Nichibeï Shinbunsha. 1922. *Nichibeï jûshoroku* [The Japanese American directory. No 18]. San Francisco, California: The Japanese American News Inc. (Nichibeï Shinbunsha). Jan. 1. Index of cities. 23 cm. [Eng; Jap]

• **Summary:** Soyinfo Center has only the pages mentioning soyfoods in the following cities in California: San Francisco, Oakland, San Jose, Sacramento, Fresno, Los Angeles. Plus Portland (Oregon), and Seattle (Washington). See individual directory entries and advertisements. Published Jan. 1 by Nichibeï Shinbunsha. Address: San Francisco, California.

626. **Product Name:** Koji, and Miso.

Manufacturer's Name: Kanedai Koji, Miso Seizo-sho (Kanedai Koji Miso Co.).

Manufacturer's Address: 1534 Post St., San Francisco, California. Phone: West 3286.

Date of Introduction: 1922. January.

New Product–Documentation: The Japanese American Directory. 1922. p. 40. Note: In 1921 Kanedai / Kagidai Miso Seizô-sho was at this same address and phone number. Also in 1923, p. 60. Also in 1924, p. 58. Also in 1925, p. N-17. Also in 1926, p. N-22.

Ad in 1922 directory. In English: “Kane Dai Koji & Miso Co., 1534 Post. St., San Francisco, Calif.” In Japanese: The original maker of Kane Dai brand American-made koji and miso. Also makes pickles. Sells wholesale and retail.

Ad (¼ page) in 1925 directory, p. N-63. Similar to 1922 ad except “Kane-Dai” is hyphenated.”

Shin Sekai-sha. 1922. *Zaibeï Nippon-jin Kan (Directory of Japanese in the USA)*. p. 50. Gives company name and address. The display ad for this company says it was the first to make koji and miso in the USA (*Beikoku koji oyobi miso no ganso*). Note that this company was later purchased by and merged with Norio Co.

Same ad in 1923, p. 43 (top right). Same ad in 1924, p. 31 (top right). Half-page ad in The Japanese American Directory. 1926. p. 31. The largest writing is in English at the top: “Kane-dai Co., 1534 Post St., S.F., Calif. Phone

West 3286.” Most of the ad and characters are in Japanese. Maker of Kane-dai brand koji and miso.

627. Fujimoto Co. (Fujimoto Shokai). 1922. Kanemasa (Ad). In: Nichibeï Shinbun-sha. 1922. *Japanese-American Directory (Nichibeï Jushoroku)*. Page 30 near front. [Jap; eng]

• **Summary:** Ad (full-page). The top 1/5 of this ad is in English. Miso, koji, pickles manufacturing department, 1014 Stockton St.; Phone: Kearny 2339. Japanese food, groceries, direct importing and exporting department, 1640 Post St.; Phone: West 733. The prominent brand / logo is pronounced Kanemasa–Not Kadomasa, Kakumasa, Kanesho, Kadosho, or Kakusho. Note: Similar but smaller ads, and all in Japanese, appeared in 1920 and 1921.

The Japanese American Directory. 1923, p. 36. Full-page ad. Same as 1922 except the company is now making Japanese rice vinegar. Same full-page ad as in 1922, p. 29, but the main office and plant are now at 238 Jackson St.; rice vinegar is no longer mentioned. Ad also in 1924, p. 21, however a 2nd phone number is given: West 7353. Address: San Francisco, California.

628. Nishimura, Torazô; Kinoshita, A.; Inoue, T. 1922. *Miso jôzô-yô enshitsu hikaku shiken hôkoku* [Comparative test on salts used to manufacture miso]. *Jozo Shikensho Hokoku (Report of the Brewing Experiment Station)* No. 87. p. 579-86. March. [Jap]

Address: Jozo Shikensho. 1. Gishi; 2. Gishi; 3. Gushu.

629. **Product Name:** Miso, and Koji.

Manufacturer's Name: Arata Miso Koji Seizo-sho.

Manufacturer's Address: 825 F Street, Fresno, California. Phone: 3285-J.

Date of Introduction: 1922.

New Product–Documentation: Shin Sekai-sha. 1922. *Zaibeï Nippon-jin Kan (Directory of Japanese in the USA)*. p. 234.

630. **Product Name:** Miso, Vinegar, and Koji.

Manufacturer's Name: Miso, Su, Koji Seizo-sho.

Manufacturer's Address: Jackson Street near 7th Street, San Jose, California.

Date of Introduction: 1922.

New Product–Documentation: Shin Sekai-sha. 1922. *Zaibeï Nippon-jin Kan (Directory of Japanese in the USA)*. p. 208. This may be a side business with no real company name.

631. Niki, E. 1922. *Tsuboi hakase hakken no jiyô miso ni tsuite* [The nutritious miso discovered by Dr. Tsuboi].

Nippon Jozo Kyokai Zasshi (J. of the Society of Brewing, Japan) 17(7):8-10. [Jap]

Address: Naigai Jozo K.K., Japan.

632. **Product Name:** [Nishii Super Shoyu, and Miso].

Foreign Name: Nishii Super Shoyu, and Miso.

Manufacturer's Name: Nishii Super Shoyu.

Manufacturer's Address: Renovacion 101-A, La Victoria, Lima 13, Peru.

Date of Introduction: 1922.

Ingredients: Water, soybeans, wheat, salt.

Wt/Vol., Packaging, Price: 750 ml bottle.

How Stored: Shelf stable.

New Product–Documentation: Nishii Shoyu, located in the Victoria district of Lima, Peru, is owned by Mr. Shinji Kawakami, age 75, the second-generation Japanese owner. The outside and inside of his shop, and the process by which he makes 5 tonnes/week of shoyu in the traditional hand-made way, are shown. He also makes miso. A close-up shows the 750 ml bottle and its colorful label, orange, blue, and green on yellow. One bottle costs the equivalent of about 300 yen.

Talk with Mr. Kawakami by phone. 1991. March 21. His uncle founded this company at this location in 1922. He is the second generation owner. He runs it as an “individual business” so there is no real company name. His address is shown above. His phone is 14-31-81-05.

Letter from Marco Kamego of Kikko Corporation S.A. in Peru. 1998. Feb. 13. The present manager of this company is Mr. Cesar Kawakami.

Note 1. This is the earliest known commercial soy product made in Peru, or in South America, or in all of Latin America.

Note 2. This is the earliest document seen concerning soybean products (shoyu and miso) in Peru. This document contains the earliest date seen for soybean products (shoyu and miso) in Peru (1922); soybeans as such had not yet been reported by that date.

634. Togano, Meiji-ro. 1922. Shôyu miso no sokujô ni tsuite [Rapid manufacture of shoyu and miso. I-III.]. *Nippon Jozo Kyokai Zasshi (J. of the Society of Brewing, Japan)* 17(3):7-9; 17(4):4-8; 17(5):14-16. [Jap] Address: Nihon Jozo Kogyo K.K., Senmu Torishimari Yaku, Nôgaku-shi, Japan.

635. **Product Name:** Miso, and Shoyu.

Manufacturer's Name: Tsuruda Miso Shoyu Seizo-sho (Tsuruda Miso & Shoyu Mfg. Co.).

Manufacturer's Address: 472 Jackson St., San Jose, California. Phone: 5539.

Date of Introduction: 1922.

New Product–Documentation: Shin Sekai-sha. 1922. *Zaibei Nippon-jin Kan (Directory of Japanese in the USA)*. p. 208.

San Jose City Directories. 1927-1936. The first listing, in 1927, says: Tsuruda Co., Nabutaro Tsuruda, mgr. Food products. 472 Josefa, San Jose. In 1929 the company name had changed to Tsuruda Bros. (Nabutaro and Tsuneo). Yasua and Yoshio were factory heads. In 1932 the occupation first changed to condiment manufacturers from food products. In 1936 the listing was: Tsuruda Bros. Mitsuo Tsuruda, mgr. Condiment mfrs, 472 Josefa.

Shurtleff & Aoyagi. 1983. *The Book of Miso*. 2nd ed. p. 234. Started by Mr. and Mrs. Tsuruda, this company was shut down during World War II and never resumed.

636. Fritsch, Jean. 1922. *Fabrication et raffinage des huiles végétales: Manuel à l'usage des fabricants, raffineurs, courtiers et négociants en huiles. Troisième édition entièrement refondue* [Manufacture and refining of vegetable oils: A manual for the use of manufacturers, refiners, brokers, and wholesale merchants. 3rd ed., completely reset]. Paris: Desforges–Librairie Générale Scientifique et Industrielle. xiv + 723 p. Illust. Index. 25 cm. [16 ref. Fre]

• **Summary:** Chapter 2, “Drying oils (*Huiles siccatives*)” contains a section on “Soybean oil (*Huile de Soja hispida; Huile de pois*)” (p. 368-76). Its contents: Origin (Incl. miso, shoyu, tofu). Manufacture (China, Japan, above all Formosa). Physical and chemical properties. Table showing such properties, with 16 references. Applications and uses. Residues (soybean cake remaining after the oil is pressed from soybeans; *le tourteau de soja*).

Also discusses: Margarine (p. 232-33). Peanut oil (*Huile d'arachide*, p. 238-48, 699-701). Colza oil (Coleseed oil, *Huile de colza*), rapeseed oil (*Huile de navette*), and rubsen oil (*Huile de rabette*) (p. 265-72, 652). Sesame oil (*Huile de sésame*, p. 273-81, 705-06).

Note 1. The first edition of this work was published in 1905, and the second edition in 1914.

Note 2. This is the earliest document seen (March 2005) that uses the English word “coleseed” or the term “coleseed oil” to refer to rapeseed or to rapeseed oil, respectively. Address: Ingénieur-Chemiste.

637. Shin Sekai-sha. 1922. *Zaibei Nippon-jin kan* [Directory of Japanese in the USA]. San Francisco, California: Shin Sekai-sha. See p. 19, 41, 50-51, 207-08, 234, 238, 346, 357, 409. [Jap] Address: San Francisco, California.

638. U.S. Tariff Commission. 1922. Summary of tariff information, 1921, relative to the bill H.R. 7456.

Washington, DC: Government Printing Office. 1625 p. See p. 152, 786-87, 802-03.

• **Summary:** “The principal sources of information have been the commodity surveys and reports of the Tariff Commission, especially the ‘Summary of Tariff Information, 1920.’ The material in the latter has been amplified and brought up to date.”

Soybeans are more specifically dealt with in the 1920 Summary. Soybean oil, however, is considered in H.R. 7456.

The section titled “Soya-bean oil” (p. 152-53) states: “Description and uses... This oil “is a semi-drying oil used in paint either as a substitute for or mixed with linseed oil. Its greatest use is in soap making, for which it has largely replaced cottonseed oil, but the purified oil is edible. After the oil is expressed the cake becomes a feed for dairy cattle or a fertilizer.

“*Production* of soya beans has increased greatly, but only a small portion of the crop is used for oil. In 1915 approximately 100,000 bushels of American-grown beans were pressed for oil. The domestic output of oil (inedible and edible) increased from 2, 764,000 pounds in 1914 to 42,074,000 pounds in 1917 and 79,861,000 pounds in 1918. Reports of the Bureau of the Census show that no crude soya-bean oil has been produced either from domestic or imported beans in this country from 1919 to September 30, 1921, inclusive. The oil is imported in the crude state and refined in this country.

“*Imports* have increased from 16,360,452 pounds in 1914 to 336,824,646 pounds in 1918, the great bulk coming from China and Japan. Imports since 1917, almost wholly from Kwangtung, China proper, and Japan, have been as follows:”

A table shows that imports fell rapidly after 1918 (and the end of World War I) to 195.8 million lb in 1919, 112.5 million lb in 1920, and only 16.3 million lb in the first 9 months of 1921. The value per pound plunged from \$0.11 in 1918 to \$0.04 in 1921.

Exports since 1918 have been chiefly to Italy, France, and Austria. A table shows the quantities: 27.7 million lb in the last 6 months of 1919, 43.5 million lb in 1920, but only 1.93 million lb in the first 9 months of 1921.

“Important changes in classification.—Soya-bean oil was exempt from duty under the Act of 1913 (par. 561); it is dutiable under the emergency tariff act of 1921 (par. 11).”

The next section, titled “Hempseed oil” (p. 152) states that this oil is obtained from the seeds of the hemp plant, cultivated in France, Belgium, Germany, southern Italy, Turkey, Algeria, North America, India, Manchuria, and Japan. It is used mainly in paint as a drying oil.

Soya beans are also mentioned under “Beans” (p. 786). Under “Beans, prepared or preserved” (p. 787) we read: “Soya beans are also made into various food preparations, especially for use by orientals.” A table shows that imports

of such soya beans increased from 1.43 million lb in 1918 to 3.4 million lb in the first 9 months of 1921.

The section on “Vegetables prepared or preserved” (p. 802-03) states: “Bean stick [perhaps dried yuba] or bean cake is an oriental food product made from ground and fermented soya beans. Miso is a cooked and fermented combination of rice and soya beans, generally used in making soup.” “Imports of bean stick or bean cake and miso were valued at \$73,097 in 1914, soya bean cake constituting about 40%. Edible bean cake and miso are imported to meet the demand of the oriental population.” A table shows that there was a 25% duty on such products and imports and value dropped from 1918 to 1921. Address: Washington, DC.

639. Japanese American News Inc. / Nichibei Shinbunsha. 1923. Nichibei jūshoroku [The Japanese American directory. No 19]. San Francisco, California: The Japanese American News Inc. (Nichibei Shinbunsha). Jan. 1. Index of cities. 23 cm. [Eng; Jap]

• **Summary:** Soyinfo Center has only the pages mentioning soyfoods in the following cities in California: San Francisco, Oakland, San Jose, Sacramento, Fresno, Los Angeles. Plus Portland (Oregon), and Seattle (Washington). See individual directory entries and advertisements. Published Jan. 1 by Nichibei Shinbunsha. Address: San Francisco, California.

640. **Product Name:** Maru-sho brand Miso, Shoyu [Soy Sauce].

Manufacturer’s Name: Tsuruda Goshi-gaisha (Tsuruda Limited Partnership). Miso, Shoyu Seizo-sho. Renamed Tsuruda Kyodai Goshi-gaisha in 1930 (Tsuruda Brothers Limited Partnership).

Manufacturer’s Address: 472 Josefa St., San Jose, California. Phone: San Jose 5539.

Date of Introduction: 1923. January.

New Product–Documentation: The Japanese American Directory. 1923. p. 138. Ad (¼-page) at bottom middle of same page (all in Japanese) says the company makes Marusho (or possibly Marumasa) brand miso and shoyu. Marusho is their registered trademark (*toroku shohyo*). Also in 1925. p. 4. Full-page ad (all in Japanese). The company now makes and sells koji. Tsuruda (probably not Tsuruta) Goshi-gaisha makes Maru-sho brand miso, shoyu, and koji. 473 Josefa St. (probably is 472 Josefa), San Jose. No phone number listed. A large illustration shows Maru-sho brand shoyu in a 30 oz. glass bottle, and a keg, Maru-sho brand miso in the same size keg, and Maru-sho koji in a wooden box. Also in 1924 directory, p. 143. Address is now 472 Josefa St. Also in 1924, p. 143. Also in 1925, p. N-114. Also in 1926, p. N-111. Still 472 Josefa. Full-page ad (identical to that of 1923) also in 1926, p. N-113. Also in 1930 directory, p. 116. New company name: Tsuruda Kyodai

Shokai. Miso, shoyu. 472 Josefa St., San Jose, California. Phone: BALLard 5539. Also in 1932 directory, p. 112, plus ad (¼ page) on same page, bottom right. Makes Maru-sho brand miso, shoyu, and koji. Also in 1934 directory, p. 116. Also in 1936 directory, p. 140.

641. Piper, Charles V.; Morse, William J. 1923. The soybean. New York, NY: McGraw-Hill Book Company, Inc. xv + 329 p. Feb. Illust. Index. 24 cm. Reprinted unrevised in 1943 by Peter Smith Publishers, New York. [563 ref]

• **Summary:** This is the first comprehensive book about the soybean written in English, and the most important book on soybeans and soyfoods written in its time. Contains an excellent review of the world literature on soybeans and soyfoods with a bibliography on soy that is larger than any published prior to that time (563 references), a good description of the present status of the soybean worldwide based on the authors' extensive contacts, and a great deal of original information. It quickly became a key source for people and organizations working with soybeans and soyfoods in all countries, and a major factor in the expansion of the soybean in the western world. Because of its scope and influence, Soyfoods Center considers the year of its publication to mark the end of the "Early Years" of the soybean worldwide. It remained in print until about 1986.

Contents: Preface. 1. Introduction: Name of the plant, origin, literature, use by the Chinese and Japanese, present importance, future prospects in the U.S., recognition of the possibilities. 2. The commercial status of the soybean: Manchuria and China, Japan, Europe, U.S., other countries, summary of imports and exports of soybeans and soybean oil. 3. Botanical history of the soybean: History prior to Linnaeus' "Species Plantarum" 1753, Linnaeus' misunderstandings of the soybean, Prain's elucidation, other and the correct botanical name.

4. Agricultural history of the soybean: Vernacular names of the soybean, China, Korea, and Japan, India and neighboring regions, Cochin China, Malayan region, early introduction into the United States, later U.S. introductions, the early introduced varieties (grown in the USA by 1898–Ito San, Mammoth, Buckshot, Guelph or Medium Green, Butterball, Kingston, Samarow, Eda, Ogemaw or Ogema), soybean in Europe, varieties grown in Europe and identification, Hawaiian Islands, Australia, Africa, Argentina (p. 50), Canada, Philippines, Egypt, Cuba (p. 52), British Guiana, Mauritius (p. 53), present culture distribution. 5. Culture of the soybean: Climatic adaptations, soil preferences, water requirement, preparation of seed bed, time of planting, methods and rate of seeding, seeding for pasturage, depth of seeding, inoculation, fertilizer reactions, cultivation, soybeans in mixtures (with cowpeas, sorghums, Sudan grass, Johnson grass, millet, corn, or sunflowers and corn).

6. Harvesting and storage of soybeans: harvesting soybeans for hay, silage, for the seed, seed yields, proportion of straw to seed, storing seed, separation of cracked from whole soybean seed, viability of soybean seed, pedigreed, inspected, registered, and certified seed. 7. Composition of the soybean: Proportions of stems, leaves and pods, composition of plant and seed, nutritive and mineral constituents, forms of nitrogen in soybean nodules, factors affecting oil content of seed. 8. Utilization of the soybean: Diversity of uses (a chart, p. 129, shows 59 products that can be made from soybean seeds, and 6 more that can be made from soybean plants), soybeans for green manure, pasturage, soiling, ensilage, hay, straw.

9. Varieties: Japanese, Manchurian, botanical classifications, vital characteristics, descriptions of important varieties, key for identification, breeding and improvement, genetic behavior, oil content.

10. Structure of soybean seeds. 11. Soybean oil: Methods of extraction [Manchurian, and solvent], American oil mills, methods of shipping and marketing, prices, utilization in soap manufacture, food, paint manufacture, miscellaneous. 12. Soybean cake or meal: Feeding value, composition, use for feeding for dairy cows, cattle, swine, sheep, poultry, digestibility, injurious effects, fertilizer.

13. Soybean products for human food: Food value of the soybean, digestibility of the soybean and its products, mature or dry soybeans, immature or green soybeans [a nutritious green vegetable], soybean flour, digestibility of soybean flour, soybean bran (p. 225-26), soybean sprouts, soybean coffee, soybean or vegetable milk [soymilk] (preparation, composition, residue from the manufacture of vegetable milk [okara], utilization of soybean milk, condensed vegetable milk, vegetable milk powder, fermented vegetable milk), vegetable casein, tofu or soybean curd (names and brief history, method of manufacture, coagulating agents, manufacturing yields, digestibility, utilization of bean curd and manufactured products, bean curd brains or *tofu nao*, dry bean curd or *tofu khan*, thousand folds {*chien chang tofu*}, fried bean curd {*tza tofu*}, Fragrant dry bean curd {*hsiang khan*}, frozen tofu {*kori tofu*}, Chinese preparation, various dishes), natto, hamananatto [hamanatto], yuba, miso, shoyu [soy sauce], confections. 14. Table dishes of soybeans and soybean products: mature or dry beans, flour, tofu, sprouts (86 recipes). 15. Enemies of the soybean: bacterial, mosaic, fungus [fungus], and nematode diseases, insects, rodents. This last chapter is a comprehensive review of the literature on soybean diseases and insects published before 1922.

The Preface begins: "The soybean, also known as soya or soja bean, has assumed great importance in recent years and offers far-reaching possibilities of the future, particularly in the United States. It is, therefore, desirable to bring together in a single volume the accumulated information concerning this crop..."

“The aim has been to present the information so as to make it useful from both agricultural and commercial standpoints, not omitting, however, much that is mainly of historical or botanical interest...”

The introduction begins: “There is a wide and growing belief that the soybean is destined to become one of the leading farm crops in the United States.”

Note 1. C.V. Piper lived 1867-1926. Note 2. This is the earliest English-language document seen that uses the term “soybean bran” to refer to soy bran.

Note 3. This is the earliest document seen in which Piper or Morse describe natto, Hamananatto [Hamanatto], yuba, or miso.

Note 4. This book was published by March 1923 (See *Ohio Farmer*, 10 March 1923, p. 313). Address: 1. *Agrostologist*; 2. *Agronomist*. Both: United States Dep. of Agriculture, Washington, DC.

642. Read, Bernard E. comp. 1923. Botanical, chemical, and pharmacological reference list to Chinese materia medica. Peking, China: Printed by the Bureau of Engraving and Printing. v + 38 p. Feb. 28 cm.

• **Summary:** Contents: Chemical and pharmaceutical references (45 entries; p. i-ii). Botanical literature (17 entries; p. iii). Bibliography of materia medica and medical botany other than cited in this reference list (47 entries; p. iv-v). Note: For these first three parts, column 1 is the abbreviation; column 2 is the full title.

The rest of this book consists one long table (p. 1-38) composed of four columns. (1) Chinese names (The name of each materia medica substance written in Chinese characters). (2) Romanized Wade (The Wade-Giles romanization of the Chinese name; the table is sorted alphabetically by this column). (3) Botanical references (such as the scientific name of a plant, or terms like “soy oil,” “rice congee,” or “rice gruel”). (4) Chemical & pharm. references (Abbreviations of references to documents containing information about this plant or other substance).

Chiang Yu–Soy oil appears on p. 3. References: (1) USDA Office of Experiment Stations, Bulletin No. 68, p. 36 (1899). (2) Stuart, G.A. 1911. Chinese materia medica, Shanghai. (3) J. of the College of Agriculture, Tokyo Imperial University 1:97 (16 June 1909). (4) J. of the College of Agriculture, Tokyo Imperial University 1:89 (16 June 1909).

Huang Ta Tou–Glycine hispida [The yellow soybean] appears on p. 11. References: (1) Matsumura, J. *Shokubutsu-me-i*, Tokyo, 1915. (2) *China Medical Journal* 35:247 (1921). (3) Martindale and Wescott, *Extra Pharmacopoeia*, London, 1921, p. 824, 1913. (4) *Pharmaceutical Journal* (London), II, p. 120, 1913. (5) Loureiro, J. *Flora cochinchinensis*, 1790, vol. II, 1844, 1912. (6) *Pharmaceutical Journal* (London), II, p. 154 (1912). (7) USDA Office of Experiment Stations, Bulletin No. 68, p. 33

(1899). (8) Wehmer, C. *Die Pflanzenstoffe*, Jena, 1911, p. 362.

Pai Tou–Soja hispida [The white soybean] appears on p. 11. References: (1) Stuart, G.A. 1911. Chinese materia medica, Shanghai. (2) Wehmer, C. *Die Pflanzenstoffe*, Jena, 1911, p. 362. (3) *American J. of Physiology* 19:468 (1907). (4) *J. of the American Chemical Society* 20:419 (1898).

Ta Tou–Glycine hispida M. [The soybean] appears on p. 11. (3) Bretschneider, E. *Botanicon sinicum*, 1881, 1892, 1895. (4) Giles, H.A. *A Chinese-English dictionary*, 1892

Ta Tou Ch’in–Bean relish appears on p. 30. No references.

Ta Tou Huang Chüan–Bean sprouts appears on p. 30–References: (1) Stuart, G.A. 1911. Chinese materia medica, Shanghai. (2) USDA Bureau of Plant Industry, Bulletin No. 107 (?), p. 28. (3) *China Medical Journal* 35:247 (1921).

Note 1. The references in this book are very cryptic and hard to understand, even after careful analysis. The book also contains quite a few typographical errors, inconsistencies, and mistakes.

Note 2. Other interesting substances mentioned in this book are: Mung beans (p. 4; *Phaseolus mungo*). Laminaria and Sargassum (p. 7, 15; types of sea vegetables, like kombu). Amaranthus (p. 9). Sesame seeds (p. 10; *Sesamum indicum*). Fermented nonglutinous rice (p. 12). Job’s tears (p. 12; *Coix lachryma*). Kudzu (p. 13; *Pueraria hirsuta*). Daikon (*Raphanus sativus*). Umeboshi plum (p. 19; *Prunus mume*). Address: Dep. of Pharmacology and Physiological Chemistry, Peking Union Medical College.

643. Piper, Charles V.; Morse, William J. 1923. Miso (Document part). In: Piper and Morse. 1923. *The Soybean*. New York: McGraw-Hill. xv + 329 p. See p. 247-50.

• **Summary:** “In extent of use miso is said to surpass all other preparations from the soybean in the Orient. It forms an indispensable part of the daily menu of the rural population and wage earners but it is used somewhat less extensively among the people living in cities. It is the general custom of the people in rural districts to prepare miso for their own use. It has been estimated that the daily consumption of miso per person in rural districts of Japan is about 40 grams.

“The preparation of miso depends primarily upon the action of a fermenting agent known as *kojii* [sic, koji], containing certain forms of fungi, of which *Aspergillus oryzae* is the principal one. The *kojii* also contains diastatic and inverting ferments which change the carbohydrates of the raw material into maltose, glucose, etc., and a proteolytic ferment which acts upon the nitrogenous bodies, converting them into simpler and more soluble materials.”

Describes the method of preparing miso in Japan, and two of the most important kinds of Japanese miso. The soybeans “are usually steamed for about 25 hours first with strong heat and later very gently.” “White miso, which

contains but little salt, is fermented with rice koji for 3 or 4 days only, and may be preserved for about 10 days. Red miso is red in color and contains a relatively large amount of salt. It is fermented usually with barley koji for 1½ to 2 years, and may be kept for several years." A table (from Kellner 1889) compares the composition of these two types of miso.

Photos show: (1) Five Japanese men making miso in a commercial shop; shows the steamer and a large miso fermentation vat. (2) Four men working at the "mill used for crushing the soybeans, yeast [koji] and salt mixture in the manufacture of miso. (3) Two Japanese men shoveling "early cured miso" out of a large vat and packing it into small wooden tubs, each ringed by 5 bamboo hoops.

Note: This is the earliest document seen in which Piper or Morse describe miso.

644. Church, Margaret B. 1923. Soy and related fermentations. *USDA Department Bulletin* No. 1152. 26 p. May 12. [27 ref]

• **Summary:** This long and very informative paper, with its excellent bibliography and review of the literature, is the third earliest study seen of a fermented food published by a USDA researcher. The focus is on Japanese fermentations because of the laboratory's contact with Japanese researchers, such as Dr. T. Takahashi and Dr. G. Kita. "The experimental work reported here was conducted under the direction of Charles Thom, mycologist in charge, Microbiological Laboratory, Bureau of Chemistry."

Contents: Introduction. Work of previous investigators. Experimental work: Apparatus, material, preparation of ingredients, shoyu-koji, peanut press cake koji, shoyu-moromi. Proportions of ingredients. Yields. Chinese soy sauce. Peanut sauce. Relation of enzymic activity to soy processes. Manufacture in the United States. Related fermentations (Miso, soy cheese [fermented tofu], natto). Summary. Bibliography. "Soy sauce is a dark-brown salty liquid made by the fermentation of soy beans with, as a rule, some additional starchy component. It is widely used as a seasoning throughout Japan, China, and Java [Indonesia], and has been introduced into the Philippines and Hawaii* (* = See letter from C.W. Carpenter, Sept. 23, 1918). Where the occidental would use a vegetable or meat extract and salt, the oriental daily uses soy sauce. Americans are familiar with soy sauce as it is used in the Chinese-American restaurants and as an ingredient which produces the characteristic flavor of the Worcestershire type of sauce." In Japan, the process of preparing "shoyu-koji," a mold-fermented product made from "tane-koji," takes 3 to 4 days. "The mold-fermented material is emptied into a strong brine, thus producing a mash. Constant daily attention is given to aeration, even distribution, and stirring of the solid ingredients. Progressive changes take place over a period of from six months to several years, until at last the mature

'moromi,' as the mash is designated by the Japanese, is produced. These changes are due partially to the activity of bacteria and yeasts, but chiefly to the enzymes of the mold introduced into the mash with the koji."

"Experimental work: The Department of Agriculture had certain strains of the *Aspergillus flavus-oryzae* group of molds known to be used in making soy sauce. Through the courtesy of W.T. Swingle, of the Bureau of Plant Industry, a can of commercial Japanese rice *tane-koji* designed for shoyu manufacture was also received. Dr. Gen-itsu Kita brought additional samples of shoyu *tane-koji* under sterile conditions directly from Japan. Provided thus with soy beans, wheat, and the mold ferment, experiments with soy sauce were undertaken by the Bureau of Chemistry in 1918.

"Apparatus: The apparatus was made according to specifications drawn by Doctor [T.] Takahashi, of the Imperial University of Tokyo, who worked in the bureau for a month." "The usual Japanese koji room (fig. 2) is 32½ feet long, 11 feet wide, and 7 feet high. The walls are thick, and in the more modern factories are built of brick, which does away with fluctuations in the temperature from without. At one end of the room is an entrance and at the opposite end a window (fig. 3). In the ceiling several openings provide means of escape for the carbon dioxide [dioxide] and the damp air. Steam pipes along the floor make it possible to warm the room in cold weather. The ceiling is built with many layers of straw in order that the condensing moisture may be absorbed. One disadvantage of such a ceiling is that infection always occurs in the wet straw. A large area of infection directly over the piles of koji trays is detrimental to the production of sweet koji. In modern buildings, therefore, the surface of the ceiling is coated with cement. When a cement ceiling is used the condensed water drops on the trays of koji, which also is harmful... The burning of sulphur is useful in combatting any infection of a koji room."

Material: "The mold ferment employed in shoyu-koji manufacture is *Aspergillus flavus* Link, occasionally *A. oryzae* (Ahlb.) Cohn, or strains intermediate between the two species." "Certain Japanese manufacturers add cultures of pure yeast belonging to the genus *Zygosaccharomyces* at the time of placing the first mold-fermented material in the brine."

Preparation of ingredients: While soaking the soy beans, the water should be changed at intervals of several hours to prevent the formation of spore-forming rods, which cause heating and souring. The spores of these bacilli are on the beans as they come from the field. "After being soaked for 20 to 24 hours the swollen beans are cooked in an open kettle or under pressure until they are soft enough to be easily pressed flat between the thumb and finger. This desired softness can be obtained by autoclaving at 15 pounds pressure for 50 minutes and also by much longer cooking in an open kettle. Autoclaving under pressure has

the advantage of sterilizing the material.” After roasting, the wheat is crushed or cracked. It is important to “reduce some portions of the kernel to a fine powder or dust.” The cooked beans and cracked wheat are “mixed in large trays or on mixing tables.” Hot beans “may be cooled with a draft of air directed over a thinly spread layer.” These “two ingredients need to be thoroughly mixed, so that the wheat dust may form a coat over each bean. The lower water content thus induced on the exterior of the beans makes them better adapted to mold growth than to bacterial growth.”

“Shoyu-koji–Ripening: After the beans and wheat are thoroughly mixed, a very small quantity of previously molded material, such as mature rice koji (tane-koji), some shoyu-koji, or a pure mold culture, is thoroughly mixed into the ingredients. The whole mass is then distributed into the small flat koji trays (Plate II, inserted between pages 4 and 5) which are immediately placed into the koji fermentation room before they cool further. Each tray holds about 1.8 liters, or about 2 quarts of raw material. The koji trays are placed in tiers along the wall of the room (Fig. 3).” They are usually stacked in a zigzag fashion to ensure adequate aeration. This is extremely important “because moisture and the lack of oxygen induce the development of mucors and bacteria, and are said to cause the diastatic enzyme to develop at the expense of the proteolytic enzyme. In some localities in Japan no such trays are used, but a broad straw mat with which very good koji can be secured.” “The koji room or compartment is kept at a temperature of 24° to 25° C., with a definite humidity.” Continued. Address: Microanalyst, Microbiological Lab., Bureau of Chemistry [USDA].

645. Church, Margaret B. 1923. Soy and related fermentations: Related fermentations–Miso (Document part). *USDA Department Bulletin* No. 1152. 26 p. May 12. See p. 23.

• **Summary:** “Soy sauce is only one of the mold-fermented food products originating in the Orient, the majority of which are ripened by means of the molds represented by the yellow-green group of *Aspergilli*.

“Miso, one of these products, is one of the most common breakfast foods for children. There are two types of miso, white or shiro miso and red miso. Miso is prepared from a koji ripened by means of the *A. flavus oryzae* group of molds. The soy beans are cooked in miso before the fermentation is undertaken. The treatments subsequent to the cooking and preparatory to the fermentation doubtless varies in different localities. It is said that the beans may be made into a paste before being ripened by the mold. As bought in this country, however, miso shows the beans intact. White miso is said to be made from a koji of soy beans or soy beans and a starchy material, as rice or barley. The koji is ripened as is shoyu-koji and placed in a weak brine for 10 days. Unfinished rice wine may be added to

improve the flavor and to preserve the product, which is rather perishable. Red miso is prepared in the same way as the white miso, but is ripened for from one to three months in a stronger brine. White miso has been bought in the United States in two forms. One type is very salty and therefore less perishable than the other. Probably because of longer fermentation red miso is dark red. It is very cheap, whereas white miso is expensive.” Address: Microanalyst, Microbiological Lab., Bureau of Chemistry [USDA].

646. Brook, Harry Ellington. 1923. Care of the body. *Los Angeles Times*. July 8. p. XI30-35. Sunday magazine.

• **Summary:** The section titled “What workers eat” begins: “Dr. Josiah Oldfield, an eminent English physician, has been investigating the diet of the world’s workers. He obtained the following information from foreign legations in London:”

“From the Consulate General of Japan: Rice, barley, wheat, vegetables, miso soup (miso is prepared from the soya bean), soy [soy sauce or shoyu] (Japanese sauce which is indispensable for cooking purposes), fish (fresh or salt, wet or dried), vegetables are chiefly cooked with soy, salt, sugar, etc. Rice is taken in the place of bread. Flesh-meat does not form an important part of the Japanese dietary.”

After discussing food consumption information from 13 countries, Brook concludes: “These people are better nourished than the Americans, who subsist mainly on lean meat, bread made from refined white flour and refined white sugar, with tea and coffee and little vegetables”

647. **Product Name:** Miso.

Manufacturer’s Name: Takesuye (S.) Miso.

Manufacturer’s Address: Wailuku, Maui.

Date of Introduction: 1923.

New Product–Documentation: Directory of Honolulu and the Territory of Hawaii. 1923. p. 1365. But not listed in the Business Directory under Miso Manufacturers. First clearly listed there in 1924. Address is now Kahului. 1934-35 Directory lists him as Takesue S. in Kahului, Island of Hawaii.

648. **Product Name:** Miso.

Manufacturer’s Name: Ueno Miso Factory (Ueno Kojiten).

Manufacturer’s Address: 639 North King St., Honolulu, Oahu, Hawaii.

Date of Introduction: 1923.

New Product–Documentation: Directory of Honolulu and the Territory of Hawaii. 1923. p. 950. Ueno Yakuma, miso, 1100f Hoapili Lane. General Store, 639 N. King. 1924 Directory. p. 469. Residence given as 639 N. King. 1928-29 Directory. p. 516, 837. Ueno Yakuma/Yakumo, General Store 639 N. King. Miso, 1100f Hoapili Lane. Note: No business name is listed yet. Yakuma is listed as a vinegar

manufacturer in the 1922 Directory. Phone numbers are 8818 and 8896. Y. Ueno is listed as early as 1917. 1914 Directory. p. 712. Yakuma, U., soy, 642 N. King. Residence, same. 1947-48 Directory. p. 1216. Yakuma Ueno, 1024 Hoapili Lane, Honolulu, is the only miso mnfr listed for this year.

Nihei. 1978. *Nippon Jozo Kyokai Zasshi*. 73(7):542-49. "Hawaii ni okeru Nihon-shu, miso, shoyu no rekishi." Says: "Ueno Koji-ten, founded by UENO Yuichi at 639 N. King St., Honolulu. No longer in business." No date of founding given. Wm. Higa. 1980. *History of Miso Companies in Hawaii*; Shurtleff & Aoyagi. 1983. *The Book of Miso*. 2nd ed. p. 234. The company was started by Mr. Yuichi Ueno. No longer in business.

649. Bottari, Fulvio. 1923. *La soja nella storia, nell'agricoltura e nelle applicazioni alimentari ed industriali* [The soybean in history, in agriculture, and in food and industrial applications]. Torino & Genova, Italy: S. Lattes & Co. 243 p. Preface by Prof. Oreste Matriolo (R. Università di Torino). With 34 illust. 22 cm. [25 ref. Ita]

• **Summary:** Contents: Preface. Reason for the work; its scope and limits. Part I: The origin and history of the soybean. Reason for this history, the origin of the soybean and its early dissemination, soya (including production statistics) in Oriental countries (China, Manchuria, Japan, Formosa, Korea, French Indochina), how the soybean was introduced to Europe, the cultivation of soya in France, Soya in England, Austria, Germany, Denmark, Holland, Russia, Sweden, Alsace-Lorraine (now in northeast France), Spain, Italy, America, Conclusion.

Part II: Cultivation of soya. Part III: Soya in the feeding and nutrition of humans and animals. 1. The analysis and physiology of metabolism as an element in the study of nutrition. 2. Soybean forage in the feeding of animals. 3. Soybeans (*il grano di soja*) and soy products in the feeding of humans and animals. 4. Flour, pasta, and bread in feeding. 5. Soymilk (*il latte di soja*) and its use in the feeding of animals and humans. 6. Tofu (*il formaggio di soja*). 7. Soy oil and oil-cakes (*panelli*). 8. Condiments and sauces: Natto, miso, soy sauce. 9. Enzymes (I fermenti, incl. urease). 10. Conclusions.

Part IV: Industrial applications of soya.

Part V: General conclusions.

The first test of the lactation of calves with soymilk was conducted in the winter of 1916-17 by the Bonafous Institute in Turin. The results were splendid, and have encouraged eminent pediatricians such as Dr. Casalini, Prof. Dr. Alberto Muggia (teacher of clinical pediatrics at the University of Turin), and Dr. Enrico Gasca (vice director general of infants at Turin) to extend their experiments (p. 6).

In Italy vegetable oil production has decreased steadily from 1870 to 1920. Attempts were made to grow sesame,

peanuts, and rapeseed, and to import oils from abroad. During World War I, unrefined soy oil was introduced to the market in large quantities, but its unappealing taste disgusted consumers and for a while nothing more was heard of it. Then in 1921 it began to be introduced again, but this time it was refined at Italy's national oil works. The good results obtained encouraged the Italian oil milling company, Sairo, and other oil works to make great progress in soy oil production. Several thousand quintals (i.e. several hundred metric tons) of the best soy oil, sold under the name "refined oil from seeds," were introduced in the first half of 1922 by the national oil works of Genoa.

Returning to the early history of soya in Italy, we find that in 1848 some missionaries brought soybean seeds and a little soil to Italy from Japan. They waited for the cultivation for several years, then nothing else was said. In 1880 the Italian Ministry of Agriculture recommended the cultivation of soybeans as a fodder crop for the future, as was being done in the USA, but their suggestion received no attention. In 1918, according to Mattei, a test of soybean culture was done at the Colonial Garden of Palermo on a parcel of 300 square meters.

Since 1912, after seeds had been brought by foreign delegates to the International Exhibition at Turin in 1911, repeated experiments with soybean cultivation have been conducted at the Bonafous Agricultural Institute in Turin, with the goal of developing two well adapted varieties, one for fodder and one for seed. Their green variety is for fodder and their yellow one for seed.

From 1920 the directorship of the cultural work was given to the head professor at the Institute, Venanzio Manvilli, also professor of the Germano Sommeiller Technical Institute, professor the faculty of agriculture, University of Turin. They worked with seeds already selected from the institute and with those obtained from Prof. Don Ricaldone, and from Tientsin, China, directly. Others who have done important work with soya in Italy are Paolo Bottari (with soymilk at the Bonafous Institute), Tamanini Guido, Mossello and Bellia, Prof. Cav. Giov. Batt. Allaria, Dr. Mose Miccinelli

A table (p. 31) shows soybean and cotton hectareage and production in Korea from 1909 to 1917. Soybean hectareage increased from 277,776 ha to a record 487,134 ha. Soybean production grew from 1,991,126 quintals (1 quintal = 100 kg or 0.1 metric tons) to a record 3,816,498 quintals.

Page 35: "Prof. Rouest of Luxey (Landes) in France wrote us on 30 Nov. 1921. 'I have finished only the period of acclimatization of the soybean. It remains for me to propagate it a little everywhere. The experiments of 1921 were extended in all the Departments, being viewed from an industrial and commercial point of view. I must now study which variety adapts among those I am cultivating. Soy flour will not be able to be made until we have many thousands of hectares under cultivation, and then we will be

able to think of other applications as well... Actually the firm Hendebert de Lion sells its flour, originating in China, at 10 French francs per kg, a prohibitive price.”

Page 206: At the pediatric congress held in Milan in Sept. 1922, the question of lactation (feeding children) with vegetable milk was discussed in a favorable way, proposed by Prof. Muggia and sustained by the illustrious Prof. Berghius, Director of the Pediatric Clinic of the University of Padua, and by Prof. Francioni of Bologna. We can also add that experiments on lactation are proceeding in Italy at the pediatric clinics of Turin, Bologna, Padua, Genoa, and Florence, and also at the Infant's Dispensary in Turin.

Photos show: (1) Three different varieties of soybean plants (p. 70). (2) 2 soybean plants up close (p. 71). (3) The leaves of 3 different varieties of soybean plants (p. 72). (4) Close-up of the stem and pods of a soybean plant (p. 73). (5) Beans and pods of soybeans (p. 74). (6) Different stages of germinating soybean seeds (p. 75). (7) Close-up of soybean roots (p. 76). (8) Field of soybeans at the “Istituto Bonafous” (p. 106, 108, 113). (9) Field of soybeans grown with corn (p. 122, 123). (10) Cellular transverse section through a soybean (facing p. 152). (11) Pasta made from soy (p. 181). (12) Bread made from soy (p. 183-89).

Note 1. Quite a bit of the historical and non-Italian information in this book comes from Léon Rouest's 1921 book *Le soja et son lait végétal: Applications agricoles et industrielles*.

Note 2. This is the earliest Italian-language document seen (Feb. 2004) that mentions natto, which it calls “il Natto in Giappone che corrisponde al *Tao-Teche* della Cina.” Address: Dr. of Economic and Commercial Science, Turin [Torino], Italy.

650. Jansen, B.C.P. 1923. On the need of anti-beri-beri-vitamin of the animal organism and on the amount of this vitamin in different foodstuffs. *Mededeelingen van den Burgerlijken Geneeskundigen Dienst in Nederlandsch-Indie* p. 1-122. See p. 65-73. [60* ref. Eng]

• **Summary:** Eykman, who discovered the nutritional cause of beri-beri, quickly pointed out the great importance of determining the protective power of various substances against beri-beri. It has been known for 25 years that living mainly on polished rice contributes to beri-beri, “whilst unpolished rice entirely protects against this disease.” Most Javanese farmers still pound their own rice; when they do, only a part of the pericarp is removed by pounding. This sort of rice contains sufficient vitamin to protect the population from beri-beri. Industrial workers, who have neither time nor opportunity to pound their own rice, buy polished rice (with the whole pericarp removed) from rice mills. Though nearly devoid of vitamin, it is a product which “much more lasting with regard to storage and transport, and which at the same time by its nicely white aspect fetches a much better price on the market.” Therefore

the authors are investigating foods that can be eaten with polish rice to help prevent beri-beri.

Section 8, titled “Katjang kedele (Soy-beans)” (p. 65-73) begins: “This is a very important kind of beans for the native dietary.” Soy-beans were fed to pigeons with white rice in varying proportions. The higher the proportion of soybeans, the better the health of the pigeons. When a large proportion of the diet was washed and polished white rice, the birds developed polyneuritis and often died or became paralyzed.

On page 68 the author notes that in Java, “soy-beans are not only eaten as such, but also very much in the shape of different native concoctions. It has been asserted (by C.L. van den Burg, 1904) that in this way the hard-to-digest legumins would be made easier to digest. However as far as I know, this assertion has not been founded on any experiment. A priori I think it as probable that by making tempé of the beans the taste is changed to such an extent, that they may be used continually, without being objected to. I hope some time to find an opportunity of experimentally deciding this question. Till at present I only examined, whether in these concoctions the vitamin-content either has increased or lessened... I now experimented with tempe kedele and with tao-tjo” [Indonesian-style miso].

Tempe, purchased on the market in Batavia, was fed in place of the soybeans. The results showed “a rather considerable loss of vitamins may be seen to have taken place during the preparation of tempe kedele from the soy-beans.” Tao-tjo (Indonesian-style miso) was then used in place of soybeans, and it too was found to be a poor source of vitamins.

Note 1. This is the earliest English-language document seen that mentions tempeh, which it calls “tempé” or “tempe” or “tempe kedele.” These terms are not italicized in the text.

Note 2. This is the earliest English-language document seen (March. 2009) uses the word “tao-tjo” to refer to Indonesian-style miso. Address: Dr., Head of the Chemical Dep., Medical Lab. at Weltevreden.

651. Kellogg, John Harvey. 1923. *The natural diet of man*. Battle Creek, Michigan: The Modern Medicine Publishing Co. 386 p. Illust. Index. 20 cm. [50+* ref]

• **Summary:** This classic of vegetarian literature contends that a vegetarian diet is the natural diet of man. Contents: 1. Man not naturally a flesh-eater: Modern civilized life unnatural and unbiologic, animal dietaries, lessons from the monkey, porcine wisdom in diet, animals classified by diet, the ancient family of primates, all mammals originally vegetable feeders, when germ diseases were unknown, kinship of higher apes and men, flesh-eating never a universal human custom.

2. Twenty popular delusions about flesh foods: D-1. That meat is superior as a blood-making food, and, hence, is

needed in anemia. D-2. That meat is essential as a flesh-building food. D-3. That a flesh diet is essential to support severe or prolonged activity; that is, promotes endurance. D-4. That flesh-eating is necessary to produce physical courage. D-5. That vegetarian races are inferior physically and mentally to races using a mixed diet. D-6. That flesh foods are more refined and more easily digested and, hence, more nutritious than are foods of vegetable origin. D-7. That man is naturally omnivorous. D-8. That flesh foods are stimulating and thus supply an element needed especially by brain workers. D-9. That beef tea is a useful nutrient. D-10. That a meat diet is required to prevent or cure gastric acidity. D-11. That a meat diet is desirable in tuberculosis. D-12. That a meat diet is necessary in diabetes. D-13. That a flesh diet is essential in the treatment of obesity. D-14. That meat is required in beri-beri. D-15. That meat is essential as a “building-up” or restorative food. D-16. That meat is needed by growing children. D-17. That meats are needed as a stimulus to appetite. D-18. That the beef industry is a necessary part of our national economic system. D-19. That a meat diet is necessary to insure reproductive activity. The law of diminishing returns versus flesh-eating. D-20. That meat is a harmless luxury.

3. Scientific objections to the use of meat: Human liver not adapted to meat diet; important differences between meat and milk; meat deficient in vitamins and food lime; Eskimos eagerly seek vegetable food; ill effects of meat diet on Arctic explorers; meat saturated with tissue poisons; meat readily putrefies, natural foods do not; the poisons of meat; meat extracts; why viscera are especially objectionable; bacteriology condemns meat as food; vast numbers of bacteria in meat; putrefactive products of meat; why physicians forbid meat in cases of kidney disease and high blood pressure; how flesh-eating causes constipation.

4. Diseases due to flesh eating: Tuberculosis in animals, cancer from meat eating, cancer rare and appendicitis unknown among flesh abstainers, meat-eating causes disorders of nutrition, acidosis from a flesh diet, a meat diet and scurvy, meat eating and arteriosclerosis, pernicious effects of a meat diet experimentally proven, recognized meat contraindications, the peregrinations of a deadly parasite, typhoid germs in meat products, flesh poisoning, no protection for meat-eaters, oyster poisoning, converting sewage into food.

5. Experimental evidence against flesh eating: McCollum’s experiments, Dr. S. Weir Mitchell endorses the meatless regimen, an eminent scientist on meat diet, Fauvel’s observations, greater endurance of flesh-abstainers, the death rate reduced by meatless diet, flesh-eating does not develop intelligence, meat-eating and race degeneracy, meat-eating a city habit, non-meat diet best even for carnivorous animals, the Scotchman’s dog, the effects of a meat diet on rats, the effects of a flesh diet on rabbits, flesh-eating animals short lived. 6. The ethical argument.

7. Historical facts and authoritative opinions: Biblical teaching about flesh eating, apostles who were flesh abstainers, the Essenes were flesh-abstainers, the diet of the ancient Greeks, King Cyrus a flesh-abstainer, Julius Caesar’s army ration, diet of Peruvian soldiers, diet of athletes of ancient Greece, ancient philosophers were flesh-abstainers, Plutarch’s essay on flesh-eating, fleshless diet of a Roman emperor, meatless diet endorsed by Gautier, views of Seneca, diet of the ancient Sumerians [today’s Iraq], eminent modern flesh abstainers, vegetarian monks, Thoreau on the fleshless diet, a Chinese statesman’s experience, the views of two great naturalists, the poet Shelley a food reformer, a child’s natural repugnance to meat, Liebig on the advantages of a non-flesh diet, Sylvester Graham’s diet reform movement.

8. Interesting facts concerning the dietary habits of various peoples. 9. The marvelous adaptation of the natural diet to human needs. 10. How to discard meats comfortably and safely.

11. Is the disuse of meat advisable from a practical standpoint? The U.S. Department of Agriculture shows the use of less meat to be safe and economic, the importance of planting nut trees, avoidance of meat is necessary to change the intestinal flora, vegetable substitutes for meat, the recent low protein movement in the United States, the half century experience of the Battle Creek Sanitarium with a fleshless diet.

12. Newspaper and magazine misinformation: An “eat-more-meat” campaign, Professor Fisher of Yale University [Connecticut] refuses to support the “eat-more-meat” campaign of the [Chicago, meat] packers, pernicious piffle.

Soy is mentioned in many places. The section titled “Flesh-eating never a universal custom” states (p. 33-34): “According to Mori, the Japanese peasant of the interior is almost an exclusive vegetarian. He eats fish once or twice a month and meat once or twice a year... The soy bean is held in high esteem and used largely in the form of *miso*, a purée prepared from the bean and fermented; also *to-fu*, a sort of cheese; and *cho-yu* [shoyu], which is prepared by mixing the pulverized beans with wheat flour, salt, and water and fermenting from one and a half to five years. The Chinese peasant lives on essentially the same diet, as do also the Siamese, the Koreans, and most other Oriental peoples. Three-fourths of the world’s population eat so little meat that it cannot be regarded as anything more than an incidental factor in their bill of fare.”

Page 45: Complete “proteins are found in milk and eggs as well as in most nuts, peanuts, and the soy bean...”

Page 73: “The protein of milk, of the soy bean, and of nuts is known to be superior to meat as a source of body nitrogen.” Address: Superintendent of the Battle Creek Sanitarium, Battle Creek, Michigan.

652. Kempfski, Karl E. 1923. *Die Sojabohne: Geschichte, Kultur und Verwendung unter besonderer Beruecksichtigung der Verhaeltnisse in Niederlaendisch-Indien* [The soybean: History, culture and use, with special attention to the situation in the Netherlands-Indies]. Berlin: Paul Parey. 88 p. Illust. Index. 22 cm. [101 ref. Ger]

• **Summary:** Contents: Introduction. Some remarks on the soybean's early history. Overproduction of soybeans in Manchuria after the Russo-Japanese War—English oil mills make their first trials. Soybean production in Manchuria. Soybean production in Korea. Soybean production in Japan. Soybean production in America—Soybean meal and soybean milk are introduced. Soybean production has also expanded in Africa, British India, and the Philippines. The introduction of soybean cultivation to Europe. The many uses of the soybean in Europe. Uses of soy oil. Old and new methods of obtaining soy oil. Soybean production and use of soybeans in the Netherlands-Indies. Appendix: Descriptions of how the most important soybean products are manufactured: In Java (*tao-hoe* [tofu]), *tempeh*, *ketjap* [soy sauce], *tao-tjong* [or *tao-jiung*, a term, and perhaps a product, between *doujiang* and *tao-tjo*, Indonesian-style miso], in China and Japan (soy sauce, miso, tofu, frozen tofu, *natto*, soymilk) (p. 62-68). Supplements: I: Soybeans in Manchuria. II; *Hansamuehle* [Hansa Muehle] in Hamburg, Germany. III: *The Soybean* by Piper and Morse.

Note the extensive, early bibliography. Unfortunately, it contains many errors.

This book is largely a review of the literature, but with some original information, especially on Indonesia and Germany. In 1923 Java imported 150,000 to 200,000 tons of soybeans and had a population of 35 million. The area of soybeans planted in Java (including Madura) increased from 157,600 ha in 1918 to 164,700 ha in 1922 (p. 32). In 1921, 67.3% of Java's soybean acreage was in Central Java, 20.7% was in East Java, and only 5.7% was in West Java. (p. 35). Large quantities of soybeans are imported to the Netherlands-Indies from Manchuria: 35,105 metric tons (tonnes) in 1920, rising to 95,742 tonnes in 1922. From these and local soybeans are made *tempeh* [spelled like this!], *tofu* (*tahoe*; *Bohnenkäese*), *soy sauce* (*Ketjap*, *Sojasauce*), etc. In Java, mostly black soybeans are grown. To make *tofu* yellow, it is cooked in an extract of the *Curcuma* root / rhizome. Sometimes it is also sun-dried or fried/roasted (*gebraten*). *Tempeh* is inoculated with a piece of *tempeh* from a previous fermentation, and often fried in coconut oil. Detailed descriptions are given of the production of *soy sauce* (*ketjap*; which is made from black soybeans) and Indonesian *miso* (*taucho*; *tao-tjong*). The author (p. 64) states that *ketjap* and *tao-tjong* are both inoculated using *Hibiscus tiliaceus* (hibiscus) leaves, called *waroe* in Java. Today Germany, like America, produces fresh and dried soymilk, fresh and dried soya cream, meat analogs, and soy sauce (p. 25).

This book contains 17 interesting, old photos. Descriptions of those reproduced from other periodicals are omitted. (1) A soybean field on the farm Kikai Nojo near Sempo-Station, Korea, owned and run by Mr. Moegling (p. 12). (2) A combine used for harvesting regular beans in California in 1918 (p. 19). (3) Many hydraulic presses in a modern American oil factory (p. 29). (4) The equipment used in steaming the soybeans before they are crushed in an American "steam mill" type oil mill (p. 31). (5) The interior of a British oilmill (p. 33). (6) The electrical generators in a modern oilmill (p. 34). (7) Soybeans being harvested manually at Madioen [Madiun, in East Java], Java (p. 48). (8) Harvested soybeans being dried on racks in a field in Java, and carried away by one worker (p. 48). (9) Workers dividing up the harvest in Java (p. 50). (10) Threshing soybeans with bamboo flails in the courtyard of a small farmer in Java (p. 51). (11) Selling soybeans in a small market in Central Java (p. 51).

Tables show: (1) Imports of soybeans to Germany from 1910 (43,500 tonnes) to 1912 (more than 125,200 tonnes) (p. 24). (2) Soybean acreage in Java (including Madoera) from 1918 (157,600 ha) to 1922 (164,700 ha) (p. 32). (3) A breakdown of soybean area in Java in 1921 (of 226,186 bouws) into West Java (12,980 bouws), Central Java (152,154 bouws), and East Java (61,082 bouws) (p. 35). Note: 1 bouw = 1.754 acres (Johnstone 1975). (4) Imports of Manchurian soybeans to Java (including Madoera) and other parts of the Dutch East Indies (mainly Sumatra) from 1920 to 1922 (p. 36). (5) Yields (average or range) of soybeans in various countries: Germany, Italy, British Indies, Manchuria (incl. China and Korea), Japan, America (up to 2,700 kg/ha), Java (p. 52). (6) Comparison of the nutritional composition of soybeans, peas, and regular beans (*Phaseolus* varieties) (p. 53). (7) Comparison of the nutritional composition of soya cheese (*Sojakäse*, *tofu*), beef, and lean pork (p. 53). (8) The prices of white and of black soybeans in Java during January and December 1922 and the same two months of 1923 (in Gulden) (p. 56). (9) Comparison of yields, price, costs, and profit for peanuts (*Katjang tanah*) and soybeans in Java (p. 57-58). (10) Nutritional composition of canned frozen *tofu* (based on E. Senft) (p. 68). (11) Exports of soybeans from five Manchurian ports (Dairen, Antung, Newchwang, Suifenho [Suifenhe], and Sansing) in 1919, 1920, and 1921 (p. 70). (12) Exports and value of soybeans from all of China to four countries (Netherlands, Russia, Japan, Dutch East Indies) in 1919, 1920, and 1921 (p. 72). (13) Exports of soybean oil from five Manchurian ports (Dairen, Antung, Newchwang, Suifenho [Suifenhe], and Harbin) in 1919, 1920, and 1921 (p. 72). (14) Exports and value of soybean oil from all of China to five countries (England, Netherlands, Belgium, Japan, USA) in 1919, 1920, and 1921 (p. 72). (15) Exports of soybean meal from four Manchurian ports (Dairen, Antung, Newchwang, Suifenho

[Suifenhe]) in 1919, 1920, and 1921 (p. 73). (16) Exports and value of soybean meal from all of China to three countries (Japan, Russia, USA) in 1919, 1920, and 1921 (p. 73). (17) Names of the five major railway lines in Manchuria (South Manchuria Railway, Chinese Eastern Railway, Peking Mukden Line, Kirin-Changchun Line, Saupingkai-Taonan Line) (p. 74). (18) Amounts (in tons) of soybeans, soybean cake, and soy oil (*Sojaöl*) shipped over the South Manchuria Railway, and the Chinese Eastern Railway in one year (p. 74). (19) Railway transport and production amounts of the mills (in tons) in Dairen and Newchwang of soybeans, soybean cake, and soy oil (*Sojaöl*) during the year 1921 (p. 74). Address: Agricultural Expert in Poerbasari te Pengalengan, Java.

653. Watson, Ernest. 1923. The principal articles of Chinese commerce (import and export) with a description of the origin, appearance, characteristics, and general properties of each commodity; an account of the methods of preparation or manufacture together with various tests, etc., by means of which the different products may be readily identified. Shanghai, China: Statistical Dept., Inspectorate General of Customs; sold by Kelly & Walsh [etc.]. xi + 630 p. Illust. 28 cm. The Maritime Customs. II. Special Series No. 38.

• **Summary:** Section II, titled “Oils, fats, and waxes” (p. 76-149) contains detailed definitions of the following: Bean oil (*Tou-yu* or *Oleum dolichos*) obtained from the soya bean of China, and the residual meal (*tou-ping-fên*) (p. 85-86). “In China bean oil is used as a food; for cooking purposes; for mixing with lacquer; in making varnish and printing ink; in soap making; and, to a slight extent, as an illuminant, although for this purpose it has been almost superseded by kerosene. It is also used in water proofing cloth and paper for making umbrellas and lanterns. In foreign countries, where the demand for the oil is practically unlimited, bean oil is used chiefly in the manufacture of soap and in preparing salad oils. On account of its drying properties bean oil is not very suitable for use as a lubricating oil.

“Bean oil appears in Chinese commerce packed in wooden tubs, paper-lined baskets, or in earthenware jars, of no standard weight. It is exported in great quantities from many of the northern ports, particularly from Dairen and Newchwang, and, to a smaller extent, from Hankow and other Yangtze ports.”

Section VI, titled “Miscellaneous products” contains a long subsection on “Beans, Soya” (*Tou*) (p. 320-21). “Soya beans, or ‘soy beans’... are cultivated in enormous quantities in Central Manchuria... It is estimated that about 1,600,000 tons are produced annually in Manchuria alone... The beans are small,... the yield per acre being from 1,100 to 1,600 pounds [18.3 to 26.6 bushels]. Several varieties are grown in China and are commonly classified by the Chinese according to form, colour, size, use, and other

characteristics. The best known of these varieties are (with Chinese characters for each term): -

(1) Yellow beans (*huang-tou*), subdivided into *pai-mei-tou* or ‘white eye-brow bean,’ so called from the whiteness of the prominent hilum; *chin-yüan-tou* or ‘round golden bean’; and *hei-ch’i-tou*.

(2) Black beans (*wu-tou*), subdivided into (*ta-wu-tou*) or ‘large black bean’; (*hsiao-wu-tou*) or ‘small black bean’; and (*pien-wu-tou*) or ‘flat black bean.’

(3) Green beans (*ch’ing-tou*), subdivided into two varieties, one of which has a green epidermis and green interior, the other a green epidermis and yellow interior.

Three subspecies [of soya beans], yielding very small beans, are known as: (*hsiao-pai-tou*) or ‘small white bean’; (*hsiao-hung-tou*) or ‘small red bean’; and (*hsiao-liü-tou*) or ‘small green bean.’” Note 1. The writer may be mistaken in calling these last three subspecies of soya beans. They are probably white azuki beans, red azuki beans, and mung beans.

Soya beans “are valued chiefly as a source of bean oil, but are also extensively used as food, either whole or ground to flour in making beancurd, bean milk, bean sauce, or ‘soy,’ and salted relish (*ta-tou-shih*) [soy nuggets], which is used both as a food and as a medicine. The black beans, which are not much used as food because they are supposed to make the body too heavy, are used in medicine, to impart strength and vigour, as a carminative, and also as an antidote for vegetable poisons, such as aconite, croton oil, etc. The hulls of green [soy] beans are applied to smallpox ulcers and other sores; the bruised leaves of the plant are used in treating snakebite; the flowers are used in treating diseases of the eyes. Young bean sprouts (*tou-ya*) are used as a vegetable food.” Details are given on the following products made from soya beans: “Beancurd (*tou-fu*), bean milk (*tou-fu-chiang*), bean sauce (see under ‘soy’), and bean vermicelli (*Fen-ssu*, *Tou-fen-ssu*, *Hsi-t’iao-mien*, or *Kua-mien*.—A very famous vermicelli made in the Chefoo district, from beans most of which are originally imported from Manchuria).

Note 2. This is the earliest English-language document seen (Nov. 2008) that uses the term “salted relish” to refer to soy nuggets.

The section titled “Soy (*Chiang* or *Chiang-yu*)”—with Chinese characters for each term) states: “Soy is a sauce made in China from the soya bean (*Soja hispida*). In preparing it, a quantity of beans are slowly boiled, an equal quantity of coarsely ground wheat or barley being added. The mixture, after being allowed to ferment for some time, is put into a jar with an equal amount of salt, a few aromatics, and three times as much boiling water as there were beans at first; the whole is then allowed to stand for several weeks exposed to the sun, after which the liquor, which constitutes the soy, is separated by pressing and

straining the mass. The finished product is afterwards packed into jars or bottles ready for the market.

“Soy is thin, and, in colour, very dark brown or almost black; it becomes brighter and clearer on being kept, has an agreeable salty flavour, and produces a yellowish froth when even slightly shaken. It is much used by the Chinese as a sauce and condiment, as it creates an appetite and is supposed to counteract the injurious properties of contaminated food; it is also used in medicine as an application for burns, scalds, eczema, leprosy sores, etc. Soy is often exported from China to foreign countries, where it is extensively used in the manufacture of many European sauces.”

Also discusses: Groundnut oil (*Hua-shêng-yu*), also called peanut oil, earth-nut oil, and arachis oil (*Oleum arachis*) (p. 105-06). Hemp-seed oil (*Ma-yu or Ma-tzu-yu*) (p. 106).

Sesamum-seed oil (*Chih-ma-yu or Hsiang-yu; Oleum sesame*) also known as “gingelly oil,” “teel oil,” or “benne oil” (p. 133-35). Groundnuts (p. 421-22). Wheat gluten (*Mien-chin*, p. 574). A second edition was published in 1930. Address: Chief Appraiser, Chinese Maritime Customs.

654. **Product Name:** [Sweet White Miso].

Foreign Name: Shiro-miso.

Manufacturer’s Name: Harada Shiro-miso Seizo-sho (Harada Sweet White Miso Manufacturing Co.). Renamed Harada Miso, Koji Seizo-sho in 1926.

Manufacturer’s Address: 825 F St., Fresno, California. Phone: 5606W.

Date of Introduction: 1924. January.

New Product–Documentation: The Japanese American Directory. 1924. p. 277. Ad (1/10 page. The company also makes pickles and koji. The address has changed to 825 F. St. New phone number: 2858W). Also in 1925, p. N-261 (directory and 1/8 page ad; still has two different names). Also in 1926, p. N-256 (directory; Harada Miso, Koji Seizô-sho).

The Japanese American Directory. 1930. p. 264. A 1/12 page ad (p. 271) gives the company name and address (in characters): Harada Miso Koji Seizô-sho, 825 F St., Fresno, California. Phone: 2-1761. They also make and sell various Japanese-style pickles (*tsukemono*).

655. Japanese American News Inc. / Nichibei Shinbunsha. 1924. Nichibei jûshoroku [The Japanese American directory. No 20]. San Francisco, California: The Japanese American News Inc. (Nichibei Shinbunsha). Jan. 1. Index of cities. 23 cm. [Eng; Jap]

• **Summary:** Soyinfo Center has only the pages mentioning soyfoods in the following cities in California: San Francisco, Oakland, San Jose, Sacramento, Fresno, Los Angeles. Plus Portland (Oregon), and Seattle (Washington). See individual directory entries and advertisements.

Published Jan. 1 by Nichibei Shinbunsha. Address: San Francisco, California.

656. **Product Name:** Miso, Koji.

Manufacturer’s Name: Kushiro Miso, Koji Seizo-sho (Kushiro Miso & Koji Manufacturing Co.).

Manufacturer’s Address: 915 Meridian Ave., South Pasadena, California. Phone: ELliot 1367.

Date of Introduction: 1924. January.

New Product–Documentation: The Japanese American Directory. 1924. p. 369. Ad (½ page vertical). The top part is written in English: “Kushiro Miso Koji Mfg. Co., 915 Meridian Ave., So. Pasadena, California. Tel. 351367.” But most of the ad (about 85%) is in Japanese. At the top of the Japanese part, an illustration shows two containers of koji, side by side. On each is written, from right to left, in Chinese characters and hiragana, *tokusei hoshi kauji* (today pronounced *tokusei hoshi koji* = special dried koji). The company makes both fresh and dried koji. They are trying to get a patent for their new koji making process. Also in 1925, p. S-44 (¼-page ad, bottom left. New phone number: ELliot 1367. They are still trying to get a patent for their new koji making process). Directory entry p. S-155 under South Pasadena. Same address and phone. Also in 1926, p. S-73 (¼-page ad; They have been issued a patent on their new koji making process).

Ad (¼ page) in The Japanese American Directory. 1930. p. S-41. Phone: ELliot 1367. A maker and seller of high quality koji. Special patented koji. Sold in an 8-kin container of Takara [Treasure] Koji. An illustration shows one or two containers of this koji. On each is written (in horizontal characters, from right to left), *hoshi koji* = dried koji. Note: A kin is a Japanese unit of measuring capacity / volume. 1 kin = 1.323 lb = 600 gm at this time. The 1st directory entry (p. S-53) contains the same name, address, and phone number. But the 2nd directory entry (p. S-171) contains the same address and phone number, but the company name is given as Kushiro Miso, Koji Seizô-sho.

657. **Product Name:** Koji, Miso.

Manufacturer’s Name: Oofu Koji, Miso Seizo-sho (Oakland Koji, Miso Manufacturing Co.)

Manufacturer’s Address: 283 7th St., Oakland, California. Phone: Lakeside 4373.

Date of Introduction: 1924. January.

New Product–Documentation: The Japanese American Directory. 1924. p. 99. Note: *Oofu* is the Japanese name for Oakland. Also in 1925, p. N-67. Also in 1926, p. N-67.

658. **Product Name:** Miso, Vinegar, Koji.

Manufacturer’s Name: San Jose Miso, Su, Koji Seizo-jo (San Jose Miso, Vinegar, Koji Manufacturing Co.).

Renamed Sa-shi (San Jose) Koji, Miso Seizo-sho in 1925.

Manufacturer's Address: North 7th and Jackson Streets, San Jose, California.

Date of Introduction: 1924. January.

New Product–Documentation: The Japanese American Directory. 1924. p. 143. No phone number given. Also in 1925, p. N-114. Renamed Sa-shi (San Jose) Koji, Miso Seizô-sho. Jackson & North 7th St. Phone: S.J. 1015. Also in 1926, p. N-111.

659. Loew, Oscar. 1924. The soy bean, a superior crop. *Porto Rico Agricultural Experiment Station, Agricultural Extension Notes* No. 64. p. 1-2. Jan. 15.

• **Summary:** “The soy bean originated in Eastern Asia and has been introduced during the past 30 years into different countries of the world. It can be grown successfully even in a rather poor soil, in the absence of nitrogenous manure, provided the specific root-nodule bacteria are present. This plant is far superior to other leguminous crops, even those very rich in protein, as the lupin, which it equals in protein and highly surpasses in fat content. In fact, the soy bean is richer in fat than all other leguminous crops and is, therefore, sometimes called the oil bean. The soy bean does not contain alkaloids and bitter tasting matters like the lupin...”

A table compares the nutritional composition of the pea, common bean, lupin, and soy bean. “From the analyses it would appear to be of great advantage for the people of Porto Rico to replace the common bean now serving as an essential part of the daily food, by the soy bean, it providing a higher percentage of protein and fat... Since the Soy bean needs prolonged boiling until it reaches a sufficient degree of softness, it is best soaked for a day in water to which some soda and common salt are added (about a teaspoonful of each to half a liter) followed by washing two to three times with fresh water and then boiling for an hour or so. The taste of this dish is very agreeable.

“In Japan the soy bean serves for several preparations, called ‘tofu,’ ‘yuba’ and ‘miso,’ which might be prepared in Porto Rico. Also, a dressing or condiment similar to the English Worcestershire sauce, is prepared from the seeds.” The preparation of tofu is described. It is “generally fried like cakes and represents an excellent food.”

“The milky liquid can also doubtless be used as a suitable nutrient, but it can never replace the mother’s or cow’s milk for children, since the lime content is exceedingly small and the protein differs widely from the casein of the milk.

“In our trials with soy beans at the Experiment Station, Mayaguez, the results at first were disappointing. This was found to be due to the fact that the soil was not inoculated with the proper bacteria for assimilating nitrogen for the roots. We now have inoculated soil, and before planting on ground new to this crop inoculating material should be secured from the Station for mixing with the seed at the

time of planting. When the soil is once inoculated it will remain so for all succeeding crops.”

Note: Who was Dr. Oscar Loew and how did he learn about soyfoods? From 1897 to 1906 he was a Professor of Agricultural Chemistry at the Imperial University of Tokyo, Japan, where he wrote articles about soy sauce, tofu, soymilk, and yuba. In 1911 he was in Munich, Germany, where he wrote an article about soymilk. When he speaks of “our trials with soy beans at the Experiment Station, Mayaguez,” he seems to indicate that he was living at the Station in Porto Rico in about 1924. Address: Mayaguez, Porto Rico.

660. Faber, Sandor. 1924. A szójabab jelentősége és termelése [The significance and cultivation of the soybean]. *Gazdasági Lapok (Agricultural Papers)* 5:49. [Hun] Address: Hungary.

661. Kodama, Renichi. 1924. Nature of the oil of soy bean miso. *Industrial and Engineering Chemistry* 16(5):523. May.

• **Summary:** This article begins: “Miso, a soy bean paste made by fermentation, is one of the most staple and nutritious food products of Japan. All the people like it, and it is used as a soup stock and seasoning in every home.” Miso is made from polished rice fermented with *Aspergillus oryzae*, mixed with steamed soy beans, salt, and water. The yearly consumption amounts to about 400,000,000 kan (1 kan = 8.27 pounds), and its value is about 360,000,000 yen, or \$180,000,000. There are two varieties of miso—the Edo or Tokyo miso, and the Sanshu or Haccho miso.

The preparation of both types of miso is described and the properties of the extracted oil studied. “The Sanshu miso is produced chiefly in the central part of Japan. It is made by inoculating the steamed soy bean with Koji mold and mixing with salt and water. This is also packed down under weights and kept for 1 or 2 years to ferment. The result is a dark brown paste with a salty taste.”

The oil was extracted from the vacuum-dried miso of the two different varieties. Tables show: (1) The composition of “Edo miso” and “Sanshu” miso—in terms of the amount of rice, soy beans, salt, and water used to make each. (2) The properties of miso oils for the two types of miso. (3) The constants of soy bean oil, including specific gravity, melting point, solidification point, acid value, saponification value, iodine value, Hehner value, and R.M. value [Reichert-Meissl value].

The appearance of ordinary soy bean oil and of the oil of soy bean miso is practically identical. The decolorization of the oil with animal charcoal materially altered the above characteristics; the iodine value was greatly decreased, and the saponification and Hehner values were increased, the oil becoming nearly solid. The miso oil shows a greater

Reichert-Meissl value and a smaller iodine value than soy bean oil.

Note: This is the earliest English-language document seen (March 2009) that uses the term “soy bean paste” to refer to miso, or that mentions “Edo miso” or “Sanshu miso.” Address: Iwasaki Food Research Lab., Tokyo, Japan.

662. Nishiwaki, Yasukichi. 1924. Soja-Bereitung mit *Oidium lupuli*, *Aspergillus oryzae*, und *Rhizopus japonicus* [Preparation of soy sauce with cultures of *Oidium lupuli*, *Aspergillus oryzae*, and *Rhizopus japonicus*]. *Zentralblatt fuer Bakteriologie. Series 2.* 63(1/8):28-30. Nov. 27. [2 ref. Ger]

• **Summary:** The author reports experiments concerning the production of soy sauce using three different types of mold: *Oidium* [one of the early names for *Neurospora* before the sexual stage was described in 1927], *Aspergillus* (the mold generally used in soy sauce production in Japan), and *Rhizopus* (the mold widely used to make tempeh). Surprisingly, the soy sauce fermented with *Oidium* was considered to be the best quality. It can also be used to make good quality miso. The quality of soy sauce made with *Rhizopus* molds was considered to be poor, and the yield of soy sauce was low. Onchom is not mentioned. Address: Professor, Technischen Hochschule zu Osaka, Japan.

663. Nishiwaki, Yasukichi. 1924. Biologische Untersuchungen ueber den Koji-Pilz des Okazaki-Hatchomiso-Koji und der Kaboch-Bana des Tome-Koji [Biological investigations on the koji mold of Okazaki Hatcho miso koji and the “orange flowers” of “tome koji”]. *Zentralblatt fuer Bakteriologie. Series 2.* 63(1/8):25-28. Nov. 27. [2 ref. Ger]

• **Summary:** “On Tome-Koji, a type of koji produced during the warmer times of the year, one can often observe that the surface is covered with a red- to reddish-yellow mycelium of mold. Because of its yellowish-red [orange] coloring, which is reminiscent of the Japanese cucurbit [pumpkin] named Kabocha, this koji is usually called *Kabochabana* (“Kabocha flower”). Japanese koji manufacturers ascribe no significance to the appearance of this mold and consider it harmless since the quality of the Tome or Miso made from this koji is not found objectionable. In the production of koji for Okazaki Hatcho Miso, a large quantities of this yellowish-red mold appear and, in fact, the manufacturers consider this type of koji as the best, since the Okazaki Hatcho miso made from it is regarded as the best.

“In 1911, through the friendliness of manufacturers Aoki, Hayakawa, Hattori, and Ito, I obtained samples of *Kabochabana*, which I investigated. I became convinced that the mold in question was a type of fungi imperfecti, the *Oidium lupuli* Matthews & Lott = *Monilia sitophila* Mont. (Saccardo).” Note: The genera *Oidium* and *Monilia* were later renamed *Neurospora*.

The author concludes that this mold is especially found on Hatcho miso koji. He notes that in 1901 Went reported that in Java, this mold plays an important role, because of its enzymes, in the production of ontjom, a good-tasting cake made by fermentation of peanuts. Address: Prof., Technischen Hochschule, Osaka, Japan.

664. Cullison, W.V. 1924. The soy bean and commerce. *Oil Miller* 20(3):17-18, 20-22. Nov. Reprinted from The Staley Journal.

• **Summary:** Contents: Introduction and history. Three methods of producing soybean oil: Old hydraulic method, extraction process using “light petroleum naphtha,” and by the Anderson Expeller mill (continuous process). Crude soy bean oil. Use of oil in hard soaps and paints. Soy bean meal: Soy bean flour as food. Food uses of soy beans in China and Japan: Soy bean or vegetable milk, tofu or soy bean curd, miso or soy bean paste, soy bean sauce (shoyu). Soy beans and the farmer: North Carolina led in acreage until 1923, when Illinois gained first place. Growing soy bean. history of the soybean, uses, methods of oil production, and uses for the oil and meal.

“The soy bean has been grown in the United States since 1804, under the names of Coffee bean, Japan pea, Soja, Soy, Soya and Stock pea. During the period of the Civil War the soy bean was used rather extensively in the southern States as a coffee substitute. For a considerable while seedmen sold certain varieties under the names Coffee Berry and Coffee Bean.

Note 1. This is the second earliest document seen (Nov. 2005) which states that soybeans were used as a coffee substitute during the Civil War in the United States.

“The demand and market for soy bean products, especially the oil, is here and now. Whether or not this demand will be filled by American grown beans, or by beans and oil imported from Manchuria depends upon the American farmer.”

A map shows where soy beans are produced in the USA. A flow sheet shows the basic steps in making soy bean oil, meal, and other chief products. A photo shows a line of expellers, powered by overhead belts, as they “extract soy bean oil.”

Note 2. This article says nothing about the A.E. Staley Manufacturing Company’s work with soybeans. Address: Research Chemist, A.E. Staley Mfg. Co., Decatur, Illinois.

665. **Product Name:** Maruman Shoyu, and Marua Shiro Miso.

Manufacturer’s Name: America Honolulu Shoyu K.K.

Manufacturer’s Address: Banyan St., Honolulu, Oahu, Hawaii.

Date of Introduction: 1924.

New Product–Documentation: Nihei. 1978. *Nippon Jozo Kyokai Zasshi.* 73(7):542-49. “Hawaii ni okeru Nihon-shu,

miso, shoyu no rekishi.” States that the company was founded in about 1924 by a merger of the Honolulu Shoyu Co. (1906, N. King St.) and the America Shoyu Jozo K.K. They are still in business, presently making miso.

666. Laxa, Otakar. 1924. Syrarstvi: Popis výroby a upravy syra jako potraviny [Cheese production: Production of cheese and its productivity as a food. 2nd ed., revised and enlarged]. Prague: Ceskolovenske Podniky Tiskarske a Vydavatelске. 539 p. See p. 522-24. Series: Zemedelska Knihovna, edited by Prof. Dr. Alois Velich. [Cze]

• **Summary:** In the section titled “Vegetable Cheeses” (p. 522-24), the author discusses tofu, natto, kori-tofu [dried frozen tofu], and miso. Address: Prof., Dr., Czechoslovakia.

667. Minami Manshû Tetsudô K.K. Kôgyô-bu. Nômu-ka. [South Manchuria Railway Co., Industrial Div. Bureau of Agriculture]. 1924. Daizu no kakô [Soybean processing]. Dairen, Manchuria: SMRC. 777 p. 30 cm. (Sangyo Shiryo 21). [250 ref. Jap]

• **Summary:** Name of company with diacritics is: Minami Manshû Tetsudô K.K. Kôgyô-bu. Nômu-ka. This important, major work was written by Yoshitane Satô. Contents: Photos (on unnumbered pages at the front of the book) show 16 scenes of soybean transportation, storage, and processing in Manchuria, as follows: (1) Mule drivers whipping mules trying to pull carts loaded with large sacks of soybeans over muddy roads. (2) Cylindrical osier storage bins for soybeans. (3) Row upon row of sacks of soybeans piled high in storage near docks. (4) Soy sauce being made in a courtyard; each earthenware jar is covered with a woven conical lid. (5) The inside of a huge and modern soy sauce plant. (6) Wooden kegs and glass bottles of Yamasa shoyu. (7) Soy sprouts growing in round woven baskets. (8-11) Soy oil being pressed using vertical screw presses [as an alternative to hydraulic presses]—four views. (12) Boilers used in a soybean mill. (13) A wooden barrel of soybean oil being sealed. (14) Soy oil packaged in many small containers, each surrounded by a wicker basket. (15) Round soybean cakes stacked high on railway flatcars. (16) The inside of a modern soy oil factory.

Contents: 1. Current status of soybean production and consumption: A. Production: Overview (p. 2), Japan (p. 4), Korea (p. 12), Manchuria (p. 16), China (except 3 eastern provinces, but including Eastern Inner Mongolia, p. 31), USA (p. 34), British colonies (p. 37), European countries (p. 40). B. Consumption: Japan (p. 41), Korea (p. 52), Manchuria (p. 57), China (p. 59), Dutch East Indies (Indonesia, p. 60), USA (p. 61), European countries (p. 63).

2. Characteristics of soybeans: A. From a physical sciences viewpoint (p. 67): Structure (overview, cotyledons, hypocotyl, seed coat), contents of each system (p. 70), appearance (p. 73; color, gloss, shape, size, hilum (*fusuma*) color, young plumule leaf color, ratio of seed to seed coat).

B. From chemical viewpoint (p. 82): General composition, structure of each component (p. 109; protein, oil, carbohydrate, ash/minerals, vitamins). C. Appearance and relationship between oil and protein content (p. 126): Oil and protein color related to color, glossiness, shape, size, hilum color, young plumule leaf color. D. Evaluating soybean quality (p. 140): Overview, key points (sizes, shapes, colors, glossiness, hilum color, young plumule leaf color, ratio of seed coat to seed, dryness of seed, volume, weight, smell, mixing of different varieties, ratio of imperfect seeds, amount of other types of seeds), collection of materials for testing, testing and evaluating commercial soybeans.

3. Soybean usage and processing (p. 175). A. One view of main usage of soybeans. B. Nutritional value of soybeans as food (p. 183): Nutritional value of soy protein. C. Processed soyfoods (p. 208): Soy sprouts (p. 208), natto (*itohiki nattô*, p. 212, Hamanatto, p. 224), types of tofu (regular tofu [*nama-dôfu*, p. 226], *kori-dofu* or *koya-dofu*, p. 240, aburaage, p. 245, tofu curds [*tofu nô*, p. 247], hard tofu [*tofu-kan*, p. 247], fragrant hard tofu [*kô-kan*, p. 248], *senchô tofu*, p. 249, fermented tofu [*nyûfu* or *funyû*, p. 249]), *tofu-p'i* or yuba (p. 256), soymilk and artificial cow's milk, p. 259, soybean flour raw, or roasted (kinako, p. 263), shoyu (p. 266; overview of miso and shoyu, Japanese traditional regular shoyu, p. 267, Japanese traditional special shoyu and tamari, p. 269, Chinese soy sauce, p. 272, recent shoyu research and development, p. 274), miso (p. 280; Japanese traditional regular miso, Japanese traditional special and processed miso, p. 282, Chinese miso, recent miso research and development, p. 285). D. Soybeans as feed or fodder (p. 287; green soybeans as feed, p. 290): Fresh forage, dried forage or hay. E. Soybeans as manure or fertilizer (*hiryô*, p. 297; in the Kaijô area of Manchuria, have been roasted and steamed, and mixed with compost, and used for green manure (*ryokuhî*) or soybean cake (*daizu kasu*). This method has also been used in the northeastern provinces (*Tohoku chiho*) of Japan in rice fields). F. Soybeans as oilseeds (p. 302). G. Use of soybean protein in industrial products (p. 304).

4. The soy oil extraction industry (p. 305): A. Methods of removing the oil (origins, traditional methods, hydraulic pressing, extraction method, p. 340). B. Advantages and disadvantages of each method (p. 348). C. The soy oil industry in Manchuria (p. 357): History of development, important places for soy oil on the Manchurian Railway, economic condition of the Manchurian oil industry (p. 420), oil extraction in Japan (history, p. 437, commercial factories, p. 442, development of these factories, p. 451).

5. Soybean meal or cake and its composition (p. 464). A. The varieties of soybean meal or cake and the composition of each. B. Evaluation of quality (p. 473). C. Soybean meal or cake as a fodder (p. 478): Feeding value and digestibility, incorrectness of the theory that there are bad effects from

feeding soybean meal or cake (p. 479). D. Soybean meal or cake as a fertilizer (p. 490). E. Soybean meal or cake as food (p. 504): Use as a raw material for shoyu production (p. 506), use to make soy flour (p. 509). F. Soybean meal or cake as a source of protein in industrial products.

6. Soy oil and its processing (p. 526). A. Characteristics of soy oil: Composition, physical characteristics (p. 535), chemical characteristics, testing and evaluating soy oil (p. 564), the quality of commercial soy oil products (p. 577). B. Refining soy oil (p. 587). C. The use and processing of soy oil (p. 631): Overview, refined soy oil as a food, substitute for salad oil, or for deep-frying oil, as an illuminant, as a cutting oil, lard substitute, margarine, in paints, soap, hardened oil, for waterproofing, substitute for petroleum oil, glycerin, fatty acids, stearine.

7. Exports and imports of soybeans, soybean meal or cake, and soy oil (p. 708). A. Manchuria. B. Manchurian exports. C. China. D. Japan. E. Korea. Appendix: Bibliography of soybeans (Japanese-, German, and English-language works; p. 748). List of photos.

Note 1. This is the earliest Japanese-language document seen (April 2001) that mentions fermented tofu, which it calls *nyûfu* or *funyû*.

Note 2. This is the earliest Japanese-language document seen (Feb. 4) that uses the term *itohiki nattô* to refer to natto. Address: Dairen, Manchuria.

668. Japanese American News Inc. / Nichibei Shinbunsha. 1925. Nichibei jûshoroku [The Japanese American directory. No 21]. San Francisco, California: The Japanese American News Inc. (Nichibei Shinbunsha). Jan. 1. Index of cities. 23 cm. [Eng; Jap]

• **Summary:** Published Jan. 1 by Nichibei Shinbunsha. Address: 650 Ellis St., San Francisco, California. Phone: Prospect 238 or 239.

669. **Product Name:** Miso.

Manufacturer's Name: Ooshima-ya Koji, Miso Seizo-sho [Ooshima Koji & Miso Manufacturing Co.].

Manufacturer's Address: 1627 3rd St., Sacramento, California. Phone: Main 5155-J.

Date of Introduction: 1925. January.

New Product–Documentation: The Japanese American Directory. 1925. p. N-157, N-164. 1627 3rd St., Sacramento, California. Phone: Main 5155-J. Ad (1/8 page) in 1925, p. N-165. All in Japanese. Ooshima-ya Shoten. Maker of koji and shiro miso (sweet white miso). Science applied and quality guaranteed. Ad (1/8 page) in 1926, p. N-151. Also in 1926 directory, p. N-155. But phone number is now Main 3274-W.

670. Ochse, J.J. 1925. Tropische groenten. Geteelde en in 't wild groeiende gewassen, die door de Indische bevolking worden gegeten [Tropical vegetables: Cultivated and wild

plants eaten by the Indonesian people]. Weltevreden: Uitgave en Druk Volkslectuur. 215 p. July. See p. 92-95. Illust. Also listed as series #686. [Dut]

• **Summary:** This is the original Dutch-language edition, which was revised in 1931 as *Indische Groenten* and translated into English in 1931 as *Vegetables of the Dutch East Indies*. Ochse lived 1891-1970. After describing the plant, the author notes that there are two varieties of soybeans: one is yellowish brown and the other is black. The first is used to make tempeh and tofu; the second to make kêtjap. Very popular soy products in the Indonesian market are tofu and firm tofu (*tahoe* and *takoöh*). Also discusses *tao tjo* (Indonesian-style miso; has a consistency like paste or porridge), *tao dji* (soy nuggets), *témpé*, and *ontjom*. The process for making each of these soyfoods is described.

Illustrations show: (1) A young soybean plant with leaves and pods (half size).

(2) A bamboo scaffolding or curing frame, in tripod form with 3 horizontal supports, used for drying bunches of soybeans.

Note: This is the earliest document seen (April 2001) that contains the word *takoöh*. Address: Buitenzorg [Bogor], Java.

671. Kaku, T. 1925. [Analysis of miso of Korea]. *Chosen Ikai* 55:317-; 56:495-. [Jap]*

672. Yamada, Masakazu. 1925. Yûki enki bunri ni "nafutooru" ô no ôyô ni tsuite ("jiamin" no shin bunri-hô) [Application of naphthol yellow to the isolation of organic bases (a new method for isolation of diamine)]. *Nippon Jozo Kyokai Zasshi* (*J. of the Society of Brewing, Japan*) 20(12):23-30. Continued in 1926. [Jap] Address: Jozo Shikensho Gishu, Japan.

673. Carqué, Otto. 1925. Natural foods: The safe way to health. Los Angeles, California: Carqué Pure Food Co., Inc. 359 p. Illust. Index. 20 cm.

• **Summary:** Contents: Part I: Fundamental facts about food and health. 1. The old and new conceptions of the cause of disease. 2. Drug medication, vaccination, and serum therapy. 3. Nature's healing factors: Sunlight, fresh air, exercise, rest, water, the importance of natural foods for life and health, why denatured foods (white flour, refined sugar, candies, etc) are injurious. 4. The constituents of food considered in the light of modern physiology and biology: Proteins, carbohydrates, fats and oils, cellulose, fruit acids are organic acids, organic salts, the alkaline or base-forming elements (iron, sodium, calcium, magnesium, potassium, manganese, and aluminum), the acid-forming elements (phosphorus, sulphur, silicon, chlorine, fluorine, iodine, bromine, arsenic), the vitamins. 5. Rational soil culture essential for the production of superior foods. 6. The

conservation of vital force (stimulants, narcotics, elimination of waste, quality of foods, prolongation of life, alkaline and acid-forming foods). 7. Why the calorie theory is misleading. 8. Fruit, man's best friend (the fruit of the tree, sulphured and unsulphured fruits). 9. Nuts–Nature's most concentrated foods. 10. Vegetables–Nature's blood purifiers (Great hygienic value of green leaves, proper soil fertilization most essential to vegetable culture, loss of organic salts in cooking, classification of vegetables–5 classes). 11. Cereals and legumes (Cereals falsely called "The staff of life," whole grain products are the best, the great waste of food elements by modern milling processes, legumes–an important food). 12. Milk and dairy products (Milk not a perfect food for adults). 13. Meat–the least essential and most expensive of all foods (the vegetarian alternative).

Part II: Practical dietetics. 14. How to live well on less food. 15. The feeding of infants and children (lactation, almond milk, soy bean milk). 16. The rational preparation of foods. 17. Rational food combinations (importance of simplicity of eating, the mono-diet and its advantages). 18. Simple and well balanced menus for all seasons. Appendix: Tables and statistics. A1. Analyses showing the amount of sodium, calcium and iron in foods. A2. Amount of food materials necessary to supply one ounce of protein. A3. Amount of calories contained in one pound and one ounce of 200 food products. A4. Average time required for gastric digestion of foods. A5. Annual consumption of sugar, soft drinks, salt, spices, coffee, tobacco, drugs, alcohol, etc., in the United States. A6. Regulations for the enforcement of the Food and Drug Act. Important information about chemical preservatives and artificial colors.

The Preface (and the book) begins: "Two powerful superstitions are impeding the welfare and progress of the human race. The one is the conviction that disease is an entity, a mysterious something that attacks us without warning from the outside, either in the form of germs or as inclemency of weather. The other–perhaps the more harmful of the two–is the belief that for each disease specific remedies must be found, such as drugs, serums, vaccines, glandular extracts, etc., and that, when we are afflicted, we have to submit to a specialist's treatment or even to the affected parts or organs."

The average individual tries "to shift the responsibility for his sins of omission or commission to some imaginary cause, rather than to hold himself accountable for the violation of nature's laws." There is "almost universal ignorance of the fact that disease is merely an effort on the part of nature or the universal life force to restore normal conditions in the organism. Our present system of commercialism has taken advantage of this situation by misleading people through clever advertising to persist in their errors in order to maintain the demand for drugs and serums, proprietary medicines,..."

Chapter 11, "Cereals and Legumes," briefly discusses many types of soyfoods–soy sprouts, milk, flour, tofu, soy sauce, and oil (p. 142). Page 196 discusses the use of soy bean milk and almond milk for feeding infants and children. Chapter 16, titled "The Rational Preparation of Foods," contains a long and detailed section on soy beans (266-71), with subsections on boiled soy beans, soy bean milk, tofu, soy sauce, and soy bean sprouts. Home preparation of each is described. Miso, yuba, natto, and hamananatto are also mentioned (p. 268). Soy-related recipes include: Baked soy beans (p. 269). Soy bean loaf. Soy bean croquettes. Soy bean bread (p. 270).

Chapter 9, about nuts, states: "The making of nut butters is not a difficult process. At present peanuts and almonds are chiefly used for this purpose... The blanching of peanuts and almonds is now done on a large scale by special machinery, and the blanched nuts can be procured in nearly all the larger cities." Break the blanched nuts into small pieces by running them through the Climax Grater or a food chopper. Put them into a moderately hot oven for a few minutes to make them dry and crisp, then run them through a tightly adjusted nut mill to create a "smooth, palatable nut butter." A large table (p. 122) compares the composition of various nuts and nut butters (almond butter, peanut butter) with meat, cheese, eggs, cow butter, and whole wheat bread. "The pecan contains the largest amount of fat, about 70%, closely followed by the hickory nut, brazil nut, filbert and pine nut, which all contain over 60% of fat. The pignolia imported from Spain ranks highest in the amount of protein, containing nearly 34%; the peanut comes next with 29.8%; the butter nut, almond, pistachio, all contain over 20% protein, excelling the best cuts of meat in that respect. The almond does not contain any starch as is, therefore, the nut best suitable for infants, especially in the form of almond milk." Chufa contains 3.5% protein and 31.6% fat.

The section titled "Fruit and nut confections" (p. 212-15) discusses and has recipes for natural candies and confections.

The section titled "How the American people deplete their vitality by their favorite poisons: The tremendous waste of our material wealth" (p. 328-43) discusses (p. 338-43): The amount spent in 1924 on each of 15 "adulterated foods and drinks and of poisonous stimulants and narcotics" (\$5,040 million) compared with the amount spent on foods and vegetables (\$850 million, or 16.8% as much). Refined sugar. Coffee. Tobacco. Condiments, etc. Alcoholic beverages. Drugs. Regulations for the enforcement of the Food and Drug Act (due to untiring efforts of Dr. Harvey W. Wiley, former chief of the Bureau of Chemistry, USDA). Sodium benzoate and sulphur dioxide. Salt. Saltpeter. Boric acid and borax. Saccharine. Mineral and coal tar dyes. Laxity in enforcement of the Pure Food Law.

On pages 344-47 is information about the Carque Pure Food Company (incorporated 1912) and its founder and

owner Otto Carque, including a brief biography of Otto, a list of leading Carque food products, and a full page photo of the company's new home at 729 Seward St., on 1 Oct. 1925 (2 story brick building).

The food products are arranged by groups: Fruits: Sun-dried and dehydrated, without bleaches or preservatives (Black mission figs, white Smyrna-type figs, prunes, dates, olives, raisins, apricots, peaches, pears). Nuts: Fresh, selected and unroasted (almonds, walnuts, Brazil nuts, pecans, pignolias, pistachios, peanuts). Confections: Of assorted fruits, nuts and honey, without sugar, salt, glucose or preservatives (delectables, fruit nuggets, Kandy-Andy). Stamina and laxative foods (Nut-Fruto, Prunola {prunes and olives}, fruit laxative). Nut butters: Ground from whole nuts, uncooked and unsalted (almond, nut cream, peanut). Cereals and products: Made from re-cleaned whole grain (wheat flour, yellow corn meal, brown rice, breakfast food, crackers). Miscellaneous (olive oil, strained honey, raw sugar, fig-cereal breakfast drink {instead of coffee}). Price list and descriptive circulars on request.

Note: This is the earliest English-language document (or book) seen (June 2004) with the term "Natural foods" in the title that also discusses soy. Address: Los Angeles.

674. Lecourt, Henri; Nachbaur, Albert. 1925. La cuisine Chinoise [Chinese cuisine]. Peking: Published by the authors. 141 p. (on double leaves-unnumbered). 26 cm. [Fre]

• **Summary:** The section titled "Sauces fermentés et condiments" notes that this 8th chapter is the indispensable complement to the preceding recipes, for it discusses the condiments and fermented sauces which are widely used in Chinese cuisine and which are included in almost all the recipes in this book. Here you will find the recipe for *mienn tsiang* (CC), a sauce of wheat flour fermented with salt, more commonly known as *t'ienn mi tsiang* [tien mian jiang].

Each person should be able to make the famous *ts'ing tsiang* (CC), also known as *tsiang yeou* [jiang-you; soy sauce], which is used in almost all the recipes mentioned.

The generic sauce is *tsiang* (CC) [jiang], which refers to a fermented sauce of soya or beans, a condiment used for seasoning. This product is the base of all fermented things.

675. Japanese American News Inc. / Nichibei Shinbunsha. 1926. Nichibei jûshoroku [The Japanese American directory. No 22]. San Francisco, California: The Japanese American News Inc. (Nichibei Shinbunsha). Jan. 1. Index of cities. 23 cm. [Eng; Jap]

• **Summary:** Soyinfo Center has only the pages mentioning soyfoods in the following cities in California: San Francisco, Oakland, San Jose, Sacramento, Fresno, Los Angeles. Plus Portland (Oregon), and Seattle (Washington). See individual directory entries and advertisements.

Published Jan. 1 by Nichibei Shinbunsha. Address: San Francisco, California.

676. Yamada, Masakazu. 1926. Yuki enki bunri ni nafutooru o no ôyô ni tsuite (jiamin no shin bunri-hô) [Application of naphthol yellow to the isolation of organic bases. (A new method for the isolation of diamines)]. *Nippon Nogeikagaku Kaishi* (*J. of the Agricultural Chemical Society of Japan*) 2(4):246-67. English abstract bound in the back. Vol. 2, No. 4. p. 39-41. [10 ref. Jap]

• **Summary:** The author applied to sake and shoyu the method proposed recently by A. Kossel and K.E. Gross (*Z. Physiol. Chem.*, 135, 167-74, 1924) for the isolation of arginine and aphthol yellow. He was able to obtain much crystalline precipitate in the shoyu, but none in the sake. This precipitate was easily recrystallized from boiling water in beautiful rosettes, which were found to be the mixture of the double salts of putrescine and cadaverine with the naphthol yellow. The precipitation in shoyu was caused by "salting out." The author also used naphthol yellow to precipitate bases (cadaverine picrate) from tamari shoyu, Hatcho miso, inaka miso, and natto. Address: Nôgaku-shi, Japan.

677. *Jozogaku Zasshi* (*J. of Brewing, Osaka*). 1926. Shojo: Seimai, daizu, komugi, mugiyasu, ômugi, seishu, shoyu, miso, tsukemono [State of commerce: Prices of rice, soybeans, wheat, rye, barley, refined sake, shoyu, miso, pickles]. 4(1):88-91. Aug. [Jap]

• **Summary:** Soybeans are used mainly in making tofu and fermented foods. Gives the price of soybeans at various places in Japan. Likewise gives prices of shoyu and miso at various locations.

678. *Jozogaku Zasshi* (*J. of Brewing, Osaka*). 1926. Shojo: Seimai, daizu, komugi, mugiyasu, ômugi, seishu, shoyu, miso, tsukemono [State of commerce: Rice, soybeans, wheat, rye, barley, refined sake, shoyu, miso, pickles]. 4(4):88+. [Jap]*

Address: He is head of the village. Kagawa-ken Sanpo Gunasa Mura.

680. Yamada, Masakazu. 1926. Yûki enki bunri ni "nafutooru" ô no ôyô ni tsuite ("jiamin" no shin bunri-hô. II.) [Application of naphthol yellow to the isolation of organic bases (a new method for isolation of diamine)]. *Nippon Jozo Kyokai Zasshi* (*J. of the Society of Brewing*,

Japan) 21(1):40-42; 21(2):23-33; 21(3):42-45; 21(4):27-31; 21(5):19-22. [11 ref. Jap]

Address: Jozo Shikensho Gishu, Nôgaku-shi, Japan.

681. Yamada, Masakazu. 1926. Yûki enki bunri ni “nafutooru” ô no ôyô ni tsuite (jiamin no shin bunri-hô) [Application of naphthol yellow to the isolation of organic bases (a new method for isolation of diamine)]. *Jozo Shikensho Hokoku (Report of the Brewing Experiment Station)* No. 94. p. 302-41. [11 ref. Jap]

Address: Jozo Shikensho, Gishu.

682. Allen, Paul W. 1926. Industrial fermentations. New York, NY: The Chemical Catalog Co., Inc. 424 p. See p. 123-27. Chap. 14, Soy-Bean Sauce Manufacture. [10 ref]

• **Summary:** Chapter 14. Soy-Bean Sauce Manufacturer. The chapter is chiefly a series of quotations from M. Church of the United States Department of Agriculture, on the preparation of soy sauce and the possibilities for the industry in the U.S. Other authorities are cited on the industrial applications of the fungus used in soy sauce. Address: Prof. of Bacteriology, Univ. of Tennessee.

683. Elsdon, G.D. 1926. The chemistry and examination of edible oils and fats, their substitutes and adulterants. London: Ernest Benn, Ltd. 521 p. See p. 188-95. Chap. XI, Soya Bean Oil. Also p. 98, 150. [14 ref]

• **Summary:** Contains quotations from various writers on the uses of the plant (M. Toch), the commercial uses and methods for obtaining oil and protein (Satow), chemical composition of the oil, composition of hydrogenated oil, and the nature of “soy” and “saké” oils and of soybean miso oil. Additional references are grouped at the end of the article. Many of the references in the article are from the *Journal of the Society of Chemical Industry*. Address: Lancashire County Analyst, England.

684. Mayerhofer, Ernst; Pirquet von Cesanatico, C. eds. 1926. Lexikon der Ernahrungskunde [Dictionary of dietetics]. Vienna, Austria: J. Springer. viii + 1205 p. Illust. 25 cm. [Ger]*

• **Summary:** Included in the long list are: Akamiso, miso, shiromiso, tofukasu [okara], daizu [soybeans], fu [dried wheat gluten cakes], kingyo-fu, kiri-fu, kiri-mochi [frozen and dried rice cake], ame [malt extract], mirin, aburage [tofu fried in vegetable oil], natto–Bohnenkäese, Tofu–Sojatopfen, Tonyu–Sojamilch [soymilk], azuki [small red beans], kwansen-fu, kinako–Sojabohnenmehl, geröstet, amasake [amazake]–unvergorener Sake, umeboshi, koritofu [frozen and dried tofu], midzuame [soft ame = rice syrup], shoyu–Sojasauce, yuba–eine Bohnenspeise. Note that a number of these terms are Japanese.

Note 1. This is the earliest German-language document seen that mentions amazake, which it calls “amasake.”

Note 2. This is the earliest document seen (Aug. 2002) in any language that uses the term *tonyu* (or *tônyû* or *tonyû*) to refer to soymilk.

685. Saito, Akio. 1926. [Chronology of soybeans in Japan, 1900 to 1926, last half of the Meiji period and all of the Taisho period] (Document part). In: Akio Saito. 1985. Daizu Geppo (Soybean Monthly News). Feb. p. 12-14. [Jap]

• **Summary:** 1901–Crushing of soybeans starts in Japan. Owada Seisakusho of Tsuruga, Fukui prefecture, Japan, starts making soy oil and soybean cakes using the press method (*assaku-ho*).

1901–Nakahara Kota is issued a patent on his process for making dried-frozen tofu indoors in a freezer (*jinko kôri-dofu*). This makes it possible to produce a good-quality product year round. This year there are 453 makers of dried-frozen tofu in Nagano. Nagano prefecture encouraged production of this product during the Russo-Japanese War as a side home industry.

1901–Soybean production in Japan reaches 525,000 tonnes, topping 500,000 tonnes for the first time.

1905–After Japan’s victory in the Russo-Japanese War, it is said that maybe, because of the victorious mood, tofu makers start to blow a horn while selling tofu.

1905–At about this time, soybean cake (*daizu kasu*) passes fish cake to become the main fertilizer for crops in Japan.

1905–Shin Sawamura (lived 1865-1931) discovers the main natto bacteria and names it *Bacillus natto* Sawamura.

1906–Neda Tadamasu of Akita prefecture develops a new type of soybean. Named the Akita, it is a cross between Shirosaya and Itoi’s Ani.

1907 March–Nisshin Mamekasu is founded (initial capitalization is 3,000,000 yen). The next year its soybean crushing plant in Dairen, Manchuria, starts to operate. In 1918 the company merged with Matsushita Mamekasu to become Nisshin Seiyu K.K.

1908–At about this time the retail price of tofu in Tokyo is 1 *sen*. The average cake of tofu weighs over 100 monme (1 monme = 3.7656 gm or 0.1325 oz), so over 376 gm. In 1982 the average price of tofu is 100 yen per cake and the average cake weighs 300 gm.

1914–The Mogi Saheiji family in Noda starts to sell shoyu in 1-sho bottles (1 *sho* = 1.805 liters or 3.81 pints). Before this time a ceramic sake bottle (*tokkuri*) was used.

1914–Yamada Hikozauro of Nagano prefecture succeeds in making dried-frozen tofu (*Koya-dofu*) for the first time in the *Shimi-dofu* area.

1915–From this year until 1919, the soybean oil industry in Japan is in a period of prosperity. In 1914 Japan produces 7,105 tonnes of soy oil and 92,325 tonnes of soybean cake. Just 5 years later, in 1919, these figures have risen about 13-fold to 30,658 tonnes of soy oil and 353,288 tonnes of

soybean cake. Soybean cake becomes very widely used in Japanese agriculture.

1918—The mayor of Tokyo, Tajiri Inataro, recommends that people eat low-fat soybean cake cooked with rice (*mamekasu meshi*) to protect themselves from the rapidly increasing price of rice; he himself eats this dish every day. Hiroetsu? Takako (a woman educator, lived 1867-1949) cooked soybean cake and rice (*mamekasu gohan*). Dr. Saei Tadasuke (1876-1959, a nutritionist) introduces an inexpensive meal (it costs 3 *sen* 5 *rin* for 5 people) using tofu and fish bones for breakfast and dinner at the Inexpensive But Nutritional Cookery Seminar (*Eiyo Anka Ryori Koshukai*). This year 30-50% of Japanese don't have enough to eat. The demand for beef tendons and okara increases. The price of high-quality meat increases faster than the price of tofu.

1919—Artificially cultured pure-culture natto starts to be used. Hanzawa Jun of Hokkaido University (1879-1972), using this method, invents a new "Sanitary Natto Container" (*Eisei Natto Yoki*) made of thin slabs of wood (*kyogi*). He also founds the "Natto Container Improvement Association" (*Natto Yoki Kairyo-kai*)

1919—Soybean production in Japan reaches 502,200 tonnes, and soybean imports rise to 168,000 tonnes. Production of soybean oil reaches 8,853,600 gallons or 33,573,000 liters, equal to that of rapeseed oil.

1919—A machine or kit for making tofu or soymilk easily at home (*katei tony-ki*) is marketed.

1920—Soybean production in Japan reaches a record 559,000 tonnes.

1920—Tsugano Akisaburo of Tokyo invents a quick method for fermenting shoyu (*shoyu sokujo-ho*). By adding salt water to soybean koji to make moromi, he is able to make shoyu in less than 10 days.

1922 April—The oil production department of Suzuki Shokai [which went bankrupt in 1922] becomes independent and founds Hohnen Oil Co., Ltd. (*Hohnen Seiyu*).

1923 Sept.—The Great Kanto / Tokyo Earthquake (*Kanto Daishinsai*) strikes. 70% of the miso factories in the area are burned down, causing a shortage of miso. But miso makers in other parts of Japan use this opportunity to ship their miso to Tokyo, and the people of Tokyo come to realize the good taste of miso made elsewhere in Japan.

1924—Kodama Shizutoshi? (or Shintaro) invents another quick method for fermenting shoyu (*shoyu sokujo-ho*) using acid or alkali to hydrolyze soybeans or soybean cake to make shoyu.

Note: This is the earliest document seen (April 2001) that mentions shoyu made by acid hydrolysis. Address: Norin Suisansho, Tokei Johobu, Norin Tokeika Kacho Hosa.

686. Takenobu, Y. 1926. Japan Year Book. Tokyo: The Japan Year Book Office. 626 + 162 p. Index.

• **Summary:** The total area of Japan proper is 147,652 square miles (382,861 square kilometers). Japan's population (as of Oct. 1925) was 59,736,704. A large area of Japan is very mountainous, and it is estimated that the cultivated area is about 6 million hectares. According to Prof. Shimizu of Keio University the population density per square kilometer of cultivated area in Japan is much larger than various European countries. Japan 969. Belgium 394. Italy 305. Netherlands 273. England 226. Germany 195. Switzerland 168. France 108. Spain 90.

In chapter 29, Agriculture, the section titled "Beans, potatoes and sweet potatoes" (p. 449) begins with a graph showing the production (in 1,000 koku; 1 koku = 180 liters) of these crops from 1921 to 1923, inclusive. Soybean production decreased from 4,261 koku in 1921 to 3,434 koku in 1923. The text continues: "Among subsidiary farm crops there is perhaps nothing that plays so important a part in the Japanese kitchen as soy beans. The three daily articles of diet for all classes, viz., soy [sauce], miso and tofu are manufactured with this bean either in part or wholly. The 'tofu' (bean curd) is one of the most popular articles of diet, being cheap and highly nutritious; the 'miso' makes Japanese soup and is used in various other ways. The 'soy' is indispensable in Japanese cooking. Then for extracting oils, as manure, and food for horses beans are equally important. The supply being insufficient, a large quantity comes in from Manchuria and Korea. In Japan, Hokkaido is the principal centre of the production. Red beans [azuki], also very extensively produced in the northern island, are used for making confectionery."

The section titled "Soy" [meaning shoyu or soy sauce] (p. 514) states: "For soy the prefecture of Chiba, which is contiguous to Tokyo municipality, heads all other places on the list as to output. Parched wheat mixed with salt and beans is a principal ingredient. The process is still far from scientific, requiring about 12 months before the liquid is ready for sale. It is also costly, as it does not much admit labor-saving appliances. To obviate these disadvantages have been tried several patented processes, but most of them have failed. In 1917 the leading soy manufactures of Chiba-ken combined and formed the Noda Soy Co., capital ¥7,000,000 p.u. with capacity of about 250,000 'koku' i.e. about 60 per cent. of the total output of the Prefecture."

A table (p. 514) shows production of sake, beer, and soy from 1919 to 1922 (year ending in March). Production of soy (in 1,000 koku) grew from 2,940 in 1919 to 3,268 in 1922. Address: Prof. at the Waseda Univ. and late of the "Japan Times".

687. Tetsudo Shounyukyoku. 1926. Shio satô shōyu miso ni kansuru chōsa [Survey concerning salt, sugar, shoyu, and miso]. Tokyo: Tetsudo Shoun'yū Kyoku. 1 vol. 23 cm. Series: Juyo Kamotsu Jokyō, no. 9. [Jap]*

• **Summary:** This is a Japanese government publication. Address: Japan.

688. Thom, Charles; Church, Margaret B. 1926. *The Aspergilli*. 1st ed. Baltimore, Maryland: Williams & Wilkins Co. ix + 272 p. See p. 64, 198-207. [250* ref]

• **Summary:** In this work, with its good bibliography, the authors “sought to bring together all of this taxonomic literature, as published before that date, and to present a critical opinion as to the proper relationship of the species described, whether retained in the genus or placed elsewhere. Some 350 names were thus accounted for, but the actual number of species accepted as known in culture or probably determinable from existing literature was given as 69 (p. 252). These were more or less arbitrarily considered in 11 groups.”

Chapter 6 titled, “Enzymic and fermentative activities of Aspergilli and their industrial significance” (p. 58-75) includes sections on koji (incl. Takamine, Taka diastase), diastase, protease, soy fermentation (incl. soy sauce), and miso (with 7 references). Address: Microbiological Lab., Bureau of Chemistry, USDA.

689. Togano, Meijiro. 1926. *Saishin shōyu miso jōzō-hō* [Principles of modern shoyu and miso brewing]. Tokyo: Jōzō Hyōron-sha. 1052 p. [Jap]*

690. Wagner, Wilhelm. 1926. *Die chinesische Landwirtschaft* [Chinese agriculture]. Berlin: Paul Parey. xv + 668 p. See p. 311-20. Illust. No index. 25 cm. [214 ref. Ger]

• **Summary:** The section on legumes contains a long subsection on the soybean (p. 311-20). Contents: Distribution in China. Types and varieties of soybeans. Chemical composition. Techniques of soybean cultivation. Utilization of soybeans: Chiang (*djang*; *Bohnensauce* [like soft miso]), soy sauce (*djang-yo* or *djang-yu*), and tofu (*dou-fu*; *Bohnenkäse*), firm tofu (*dou-fu-gan*; *getrocknete Bohnenkäsekeks*), yuba (*dou-fu-pi*; *Bohnenkäsehaut*), frozen tofu (*dung-dou-fu*; *gefrorener Bohnenkäse*), smooth soymilk curds (*dou-fu-nao*; *Bohnenkäsegehirn*), soy sauce residue (*djang-yu-dscha*; *Rueckstände der djang-yu*), tofu residue (*dou-fu-dscha*; *Rueckstände der dou-fu*; *okara*), soybean oil (*dou-yu*; *Bohnenöl*), soybean cake or meal (*dou-bing*; *Bohnenkuchen*; the latter two in northeast China). The section on oilseed cakes as fertilizers mentions soybean cake (p. 230). Soybeans are also mentioned as a summer crop in rotation with millets (p. 305).

The section on legumes also discusses (p. 320-21) peas (*Die Wintererbse*, *Pisum sativum L.*, *Wan-dou*), broad beans (*Die Pferdebohne*, *Vicia faba L.*, *Tsan-dou* or *Hu-dou*) and the two types of bush beans which are grown throughout China and distinguished by the color and size of the seeds (*Die Buschbohne*; {1} *Phaseolus mungo L.*, *Lü-dou*, and

{2} *Phaseolus radiatus*, *Tschi-hsiau-dou* [*chixiaodou*]). The *Lü-dou* is widely prized as a vegetable, often as 5-cm-long beansprouts (*dou-ya-dsi*), or in parts of the North they are used to make vermicelli (slender noodles).

The section on oilseeds contains subsections on rapeseed, sesame, and peanuts (p. 332-38). The section on textile plants discusses hemp (p. 358-60).

Bray (1981) describes that as “A full and systematic description of Chinese agricultural methods in their ecological and socio-economic context, based on the agronomist author’s personal experience and careful questioning of his students at the Sino-German High School in Qingdao.” Address: Abteilungsvorsteher bei der Landwirtschafts-Kammer fuer den Regierungsbezirk Wiesbaden in Wiesbaden, Germany. Frueher Dozent fuer Landwirtschaft und Abteilungsvorsteher der Deutsch-Chinesischen Hochschule Tsingtau (China).

691. Horvath, A.A. 1927. The soybean as human food. *Chinese Economic Journal* 1(3):298-309. March. [24 footnotes. Eng]

• **Summary:** Contents: Soybean milk for food: Introduction. Preparation of soybean milk. Properties (Yu-P’i is Chinese for yuba; Laxa). Market prices. Composition. Nutritive value. New methods in the manufacture of soybean milk (Prof. Laxa in Prague [Czechoslovakia], Li Yu-ying, Soyama). Some dietetical advantages and applications of the soybean milk. Condensed soybean milk and milk powder (Soy Lac soybean milk powder made in America by Chard). Soybean cake, soybean meal and soybean flour as material for soybean milk. Yu p’i and yu ba (yuba; also fu chu).

“In 1905, Li Yu-ying submitted a paper on the subject [of soybean milk] to the 2nd International Milk Congress in Paris, in which he emphasized that the introduction of soybean milk to Western countries ‘will be highly beneficial to public health as well as to the budget of the poor.’ Also by those who advocate and urge a vegetarian diet, a very strong case can be made for this Oriental substitute” (p. 298).

According to Prof. Laxa: “Soybean milk, supplemented with lactose and inoculated with a culture of yoghurt [yogurt] bacteria, coagulates at 40° C. in 4 hours and gives a curd-like acid mass” (p. 300).

“Market prices. In Peking soybean milk is sold in small bottles in portions of about 200-220 cc. labeled ‘Bean milk, a Chinese product, the most nourishing food, made by... For such a bottle, delivered daily, the big factories of Peking asked in 1925 \$1.00 (Mex.) per month. One liter of such milk costs, therefore, about 15 cts. (Mex.)... A fine soybean milk powder, called *Soy Lac*, has recently been prepared in America by Chard” (p. 300-01). Note: This company (Chard) was first referred to by Piper and Morse in 1916 in *USDA Bulletin* No. 439, “The soy bean, with special

reference to its utilization for oil, cake, and other products.” Soy Lac is mentioned again by Horvath on p. 307.

A table (p. 302) compares the composition of soymilk made in 3 locations (Tsinanfu, China; Peking, China; and Japan) with that of human, cow, and goat milk. Human milk has the lowest protein content (1.25%) and ash content (0.25%); soymilk has about the same protein content as cow’s milk (3.3%) but an ash content (0.40%) which is higher than that of human milk but lower than that of cow’s milk. Footnote: “To supplement the deficiency of the soybean milk in mineral constituents [such as calcium], it is recommended by von Noorden and Salomon to add to it the salt mixture of Pirquet, which consists of: sodium chloride, 0.3 gm.; potassium chloride, 1.1 gms.; calcium glycerophosphate, 1.7 gms.; magnesium lactate, 0.5 gm.; ferrum glycerophosphate, 0.1 gm. This mixture is called *Nemssalz*. If diluted in 1 liter of water it gives the same percentage of salts as in women’s milk” (p. 302).

“In Germany the Soyama factory (in Frankfurt) manufactures soybean fresh milk (mostly from soybeans), soybean normal cream, and also condensed bean milk and cream. Soyama bean milk looks like cow’s milk, contains the same constituents, even in larger amount and in a state of finer dispersion. Only its taste is different. According to Fuerstenberg, Soyama milk can be qualified as a special, very valuable dietetic nutrient. The high lecithin content of this preparation adds to its value too” (p. 306). A table (p. 306, based on the analyses of Dr. G. Popp of Frankfurt) shows the nutritional composition of 6 types of Soyama milk and cream preparations: Normal milk. Milk for diabetics. Milk for baking purposes. Normal cream. Cream for diabetics. Cream extra rich in fat (especially for diabetics). “According to von Noorden and Salomon, Soyama preparations may be kept as long as almond milk and Paranut milk. Soyama milk looks just like cow’s milk. By keeping, cream separates and it must be shaken before using” (p. 306).

“In using Soyama milk and cream preparations, v. Noorden confirms the following statement of Fischer (for vegetable milk in general): ‘1. In the stomach soybean milk gives a much finer flocculent precipitate than does cow’s milk, produced by acid or even rennet. 2. The ingestion of soybean milk results in a feebler (smaller) secretion of gastric juice; the period of secretion is also shorter. 3. The period of stay in the stomach of the finely flocculent precipitate of the soybean milk is shorter than that of the casein-fat coagulum of cow’s milk. 4. The peristaltic motion of the stomach is less after the ingestion of soybean milk and more coordinated than in the case of cow’s milk, as shown by X-ray investigation’” (p. 307).

“On the basis of these observations soybean milk is recommended by v. Noorden in cases of gastric and duodenal ulcer, states of peritoneal irritation, hypersecretory conditions of the stomach, disturbances of the motility of

the stomach, uric acid diatheses, kidney disturbances, conditions with edema where a food poor in sodium chloride is required, Basedow’s disease, cholecystitis, cirrhosis of the liver, diabetes, and in cases where a very nutritious diet is required” (p. 307).

“Soybean milk powder will undoubtedly have a successful future in the Orient as well as in European countries and the United States. Its great advantage in comparison with cow’s milk powders is its cheapness. Soybean milk powder can be easily stored and transported... It is believed that at present come of the commercial milk powders contain an admixture of soybean milk powder” (p. 307-08).

A table (p. 309) gives the nutritional composition of five types of yuba: Common yuba, Kyoto yuba, Shimada yuba, Peking yuba, and Fu chu. “In Japan, Kyoto and Nikko are noted for *Yu Ba*.”

Reprinted in 1927 as part of an 86-page monograph titled “The Soybean as Human Food” (Peking, China). Address: Dr., Peking Union Medical College, China.

692. Horvath, A.A. 1927. The soybean as human food. *Chinese Economic Journal* 1(4):415-25. April. [34 footnotes. Eng]

• **Summary:** Contents: Soybean curd (tofu) for food: Preparation and types (“The Chinese classical name for *tofu* is *li chi*, probably meaning ‘the morning prayer’”), historical, present state (of tofu in China), chemical composition, digestibility, utilization (incl. frozen tofu and fried tofu).

Fermented soybean products for food. Soy sauce: Kibiki and sobiki tamari, composition of various soy sauces. Natto. Miso. Conclusion. Bibliography.

Tofu–Historical (p. 416): “The manufacture of soybean curd (*tofu*) was started in China in 164 B.C., during the reign of the Emperor Han Wen, by a man named Liu An, the duke of Hwai Nan. Liu An was a great friend of the Buddhist monks, and it seems quite probable that he made this bean curd to provide a change or delicacy to break the monotony of the monastic ration (Adolph). *Tofu* was introduced into Japan from Korea for the first time during the Toyotomi government, and Buddhist priests and some other people used it for their daily food among others before it was generally used in Japan.

Tofu–Utilization (p. 418-19): “Both the composition and the digestibility of *tofu*, therefore, prove it to be a very nutritious food material. In the Orient *tofu* forms a very popular and almost indispensable dietary article for the Buddhist priests, as well as the strict adherents to Buddhism, who eat no animal food [i.e., are vegans]. A common saying in some parts of China terms ‘bean milk the poor man’s milk, and bean curd the poor man’s meat.’ *Tofu* is also called ‘the meat without the bones.’ Note: This is the earliest English-language document seen (Dec. 2008) that

contains the phrase “the meat without the bones.” Note that it refers to tofu and not to soybeans.

In Indo-China the daily consumption of *tofu* by an adult is about 3/4 of a pound. *Tofu* in its various forms is also used very extensively by all classes of Japanese. In the interior of the country where fish cannot be easily obtained, it is a most important source of protein.

“In the Orient *tofu* is eaten in a fresh condition simply with a little *shoyu*, though it is also frequently cooked in soup. Fried *tofu* is also a very popular article of food. Rape-seed oil, sesame oil or soybean oil are generally used in frying.

Tofu may also be prepared for preservation and transportation. For this purpose fresh *tofu* is cut into smaller pieces and exposed to severe cold weather, to remove the water by freezing, and is then dried in an oven. As this prepared it can be preserved for several years. When the *tofu* is frozen the water collects in fine needles of ice distributed throughout the mass. When the ice melts and the water runs out, it leaves the *tofu* porous and it may be easily dried. If it is not frozen, it is difficult to dry and the resulting material is dense and horn-like. The *tofu* also cooks very well if cooked in diluted soy sauce and smoked in the same manner as meat. The resulting product forms in the Orient the basis for the manufacture of various ‘artificial meat’ preparations.*” Footnote: *”In Germany, the Soyama factory prepared during the Great War [World War I] a meat supplement from soybeans. It was cheaper than beef, contained less carbohydrates and had a nutritive value of about 1500 Calories in 1 kilo.”

“In Peking, at the Kai Cheng Bean Products Company, various preparations manufactured from *tofu* may be purchased, such as different kinds of soybean meat, soybean sausages, etc. The company has established a restaurant in Peking (at 86 Morrison Street, the name is written in Chinese characters) where one can get a Chinese dinner of numerous dishes prepared mostly from soybean products (chicken meat, pork, ham and beef, manufactured from *tofu*). Also discusses Dr. Yamei Kin.

A note at the end of this April issue states: “A reprint of Dr. Horvath’s paper in booklet form may be obtained from the Bureau of Economic Information. Price \$1, Peking Currency.–Ed.” Thus, these six articles were reprinted in 1927 as part of an 86-page monograph titled “The Soybean as Human Food” (Peking, China). Address: Dr., Peking Union Medical College, China.

693. Horvath, A.A. 1927. The soybean as human food. Peking and Shanghai, China: Chinese Government Bureau of Economic Information. Booklet Series No. 3. 86 p. May. Reprinted from Chinese Economic Journal, Sept. and Nov. 1926, and Jan. to April 1927. No index. 21 cm. [38 ref]

• **Summary:** A very original and important book. Contents: Preface by Macey F. Deming, Tappan New York, from an

address at a meeting of the National Soybean Growers’, held at Washington, DC, Sept. 1925. Introduction. 1. General ingredients of the various Manchurian beans. 2. Composition of some Japanese soybeans and of the common American varieties. 3. Value of the soybean as food. 4. Soybean oil for food. 5. Refined soybean oil: As substitute for salad or frying oil, as substitute for hardened oil and lard (hydrogenation), in oleomargarine and vegetable butters. 6. Whole soybean as food: Immature or green soybeans, mature or dry soybeans, the digestibility of the boiled soybean seeds, boiled soybeans as a food of predominant importance in China, soybean coffee, soybean chocolate, soybean sprouts.

7. Soybean cake, soybean meal and soybean flour for food: Soybean press cake, soybean extraction meal, soybean flour (Berczeller, Soyama, Aguma, lecithin, Ehrhorn), Sojawurze (Suppenwurze, Maggi cubes), digestibility of soybean flour, value for infants, some medical aspects of the use of soybean flour, soybean flour in diabetes. 8. Soybean milk for food: Introduction, preparation of soybean milk, properties (incl. inoculation with a culture of yoghurt [yogurt] bacteria to give a curd-like acid mass), market prices, composition, nutritive value, new methods in the manufacture of soybean milk (Prof. Laxa in Prague [Czechoslovakia], Li Yu-ying, Soyama), some dietetical advantages and applications of the soybean milk, condensed soybean milk and milk powder (Soy Lac soybean milk powder made in America by Chard), soybean cake, soybean meal and soybean flour as material for soybean milk, yu p’i and yu ba (yuba; also fu chu).

9. Soybean curd (*tofu*) for food: Preparation and types (classical name is *li chi*), historical, present state (of *tofu* in China), chemical composition, digestibility, utilization. 10. Fermented soybean products for food. Soy sauce: Kibiki and sobiki tamari, composition of various soy sauces. Natto. Miso. Conclusion. Bibliography.

On page 9 we read: “An industry which promises to be of importance in a further utilization of the soy bean is the manufacture of ‘vegetable milk.’ At the present time a factory in New York State is being equipped for this purpose.” Address: Peking Union Medical College, China.

694. Gonzalez, B.M. 1927. Education and agricultural promotion in Japan. IV. Promotion of agriculture. *Philippine Agriculturist* 16(2):67-71. July. [1 ref. Eng]

• **Summary:** Contents: Introduction. Intensification of culture. Land reclamation. Land adjustment. Price regulation. Rice conservation. Agricultural experiment stations.

The Central Experiment Station was first organized in 1890 as an experimental farm of the Department of Agriculture. Address: Delegate from the Univ. of the Philippines and the Government of the Philippine Islands to the Third Pan-Pacific Science Congress.

695. Heyne, K. 1927. De nuttige planten van Nederlandsch Indië [The useful plants of the Netherlands Indies. 2 vols.]. The Hague, Netherlands: W. van Hoeve. 1450 p. See vol. 2, p. 789-90, 814-20. See also 3rd ed. 1950. [14 ref. Dut]

• **Summary:** Contents: Ontjom. Dagé. The soybean (Sojaboon, Kedele). Cultivation. Seeds. Utilization: Témpe [tempeh], tao hoe [tofu], tao koan [pressed tofu; doufu-gan], tao tjo [Indonesian-style miso], soja (kètjap). Address: Hoofd van het Museum voor Economische Botanica te Buitenzorg (Bogor).

696. Horvath, A.A. 1927. The soybean as stock feed and human food. *Vestnik Manchzhurii (Manchuria Monitor)* No. 8. p. 5-7. English edition. p. 13-23. Russian edition. [19 ref. Eng; Rus]

• **Summary:** A brief but good introduction to soybeans and soybean products including soybean meal, soybean flour, soybean oil, bean milk [soymilk], to-fu, frozen to-fu, soy sauce, and mizo [sic, miso] or tsiang [jiang].

“When boiled with gypsum or chlorate of magnesia bean milk curdles, and is known as ‘to-fu.’ Its constitution varies dependent upon the method of preparation employed. Fresh soy curd contains on the average, 8% protein and 3% fat. ‘To-fu’ when smoked or fried, owing to loss of water, becomes somewhat allied to meat, thereby substantiating the Chinese proverb that—‘to-fu is meat without bones.’ Frozen to-fu prepared during the cold season contains up to 50% protein. Bean curd is almost totally assimilated, and may be used in the preparation of a considerable number of European dishes, the recipes for which have been published by the U.S. Department of Agriculture. The Chinese prepare an unlimited number of dishes based upon this comestible, including artificial meat. In order to obtain the specific taste of meat, smoking soybean sauce is used.” Address: Manchuria.

697. Japanese American News Inc. / Nichibei Shinbunsha. 1927. Nichibei jūshoroku [The Japanese American directory. No 23]. San Francisco, California: The Japanese American News Inc. (Nichibei Shinbunsha). Index of cities. 23 cm. [Eng; Jap]*
Address: San Francisco, California.

698. Nadkarni, Krishnarao Mangeshrao. ed. and pub. 1927. The Indian materia medica. 2d ed. Bombay, India: K.M. Nadkarni. 5 + xviii + 1142 + clxix + lxxxviii p. Index. 20 cm.

• **Summary:** The body of this book (1142 p.) appears to be titled *The Indian Materia Medica with Ayurvedic, Unami & Home Remedies*. Soybeans are mentioned in three different places, almost as if each was thought to be different plant.

Page 313-14. “305. Dolichos Soja—(English—Soya bean, German—Soja bohne, Bengali—Gari kulaj, Hindi—Bhatwan,

Kumaon—Bhut) is a species cultivated in some part of India for its seeds which are eaten and which contain a high percentage of protein and fat.

Page 399: “396. Glycine Soja & G. Hispida are species (English—Soya bean, Hindi—Bhatwan, Bengali—Gari kulaj, Kumaon—Bhut, Eastern Terai—Khajuwa) met with on the tropical Himalayas from Kumaon to Sikkim and Khassia and Naga Hills. A decoction of the root is said to possess astringent properties.”

Page 803: “886. Soja Hispida or Glycine Soja (English—Soya bean; Soy-bean) has taken the place of meat in the diet of Chinese, Japanese and other Asiatics. Its notable characteristics are its large proportion of assimilable protein and fat, and its lack of starch and small content of sugar. Being so highly nutritious, it is not adapted for use as a side-dish, like ordinary vegetables, but, like meat, supplies a chief food. Among the preparations mentioned as common in China and Japan are ‘tofu’ resembling cottage cheese; ‘Shoyu or Soya’ which has been soaked to remove the skin and then boiled and seasoned; ‘Miso’ or soy-bean milk, prepared by soaking pulverized beans and straining; and ‘Natto’ obtained by fermenting the boiled beans. The lack of starch gives the beans favour as a diabetic food, and soy-bean meal and soy-bean bread have been prepared. The beans have been also tried as a coffee substitute—(Popular Science Siftings). For more particulars see also Dolichos Soja etc.”

Also mentions *Sesamum indicum* (p. 788-90). Sanskrit.—Tila. English—Gingeli. French—Sesame. German—Sesom [Sesam]. Hindi, Cashmeri, Punjabi & Bengali—Til. Mahrathi & Konkani—Teel. Telugu—Nuvvulu; Guvvulu. Tamil—Ellu. Canarese—Uru-Ellu. Malayali—Karuellu.

The author was born in 1864. A 3rd edition was published in 1955. First published in 1908 under the title “Indian Plants and Drugs.” Address: India.

699. Read, Bernard E.; Liu, Ju-ch’iang. 1927. Flora Sinensis. Series A. Volume 1. Plantae medicinalis Sinensis. 2nd ed. Bibliography of Chinese medicinal plants from the Pen Ts’ao Kang Mu... 1596 A.D. Peking, China: Dept. of Pharmacology, Peking Union Medical College. xi + 106 p. In collaboration with the Peking Laboratory of Natural History. [39 soy ref. Eng; chi]

• **Summary:** References related to soybeans are given in the chapter on Leguminosae under the genus *Glycine* on p. A.I.30. References are given for the soybean (*ta tou* or *huang ta to*), the wild soybean (*pai tou*), soy bean sauce (*chiang*), bean curd (*tou fu* [tofu]), bean ferment (*tou huang*), bean relish (*ta tou ch’ih* [soy nuggets]), and bean sprouts (*ta tou huang chüan*).

Also discusses kudzu (ko, 1: #372 “*Pueraria hirsuta* Schneid.”), which is reported to grow in the provinces of Chihli, Shantung, Kiangsi, Kwangtung, Chekiang and Hupeh. Address: 1. Prof. and Head of; 2. Asst. of. Both:

Dep. of Pharmacology, Peking Union Medical College, Peking, China.

700. Y.W.C.A. 1927. Chinese cook book Peking: Young Women's Christian Association. 41 p. 23 cm. [Fre]

• **Summary:** In the section on "Soups," (p. 3) is a recipe for Egg soup which calls for "Soy sauce (Chiang yu)" and "1 teaspoon epicurean powder (Ajinomoto powder, a Japanese powder procurable in bottles)."

On the same page, the recipe for Spinach soup calls for "Bean curd diced (1 piece 3 in. square). Add salt and chiang yu to 4 cups of boiling water... Be careful not to break the bean curd by stirring."

A recipe for "Bean curd soup" (p. 6) begins: "Buy *hsin tou fu* (new / fresh bean curd less than 6 hrs. old that has not been pressed into cakes)" [i.e. fresh soymilk curds].

In the chapter on "Meats" (p. 12), the recipe for Shredded beef calls for "Soy sauce" and "Black chiang yu." The recipe for Meat-vegetable dish to be served with Shao ping (p. 14) calls for "Tou Fu Kan (Dry bean curd [pressed tofu], 5 flat cakes, 2 inches in diameter)." The recipe for Spiced mutton (p. 14) calls for 2 tsp. "Soy bean paste."

On pages 39-41 is a "Vocabulary" with three columns: Name in English. Romanization of Chinese name (Wade-Giles) with accents. Name in Chinese characters. Soy related words: Bean curd-tou fu. Bean curd (dry)-tou fu kan. Bean curd pickled-chiang tofu fu. Soy bean paste-hei chiang. Soy bean oil [sic, sauce] (black)-hei chiang yu. Soy sauce-chiang yu. Address: Peking, China.

701. Makino, Tomitaro; Tanaka, Koichi. 1928. Nippon shokubutsu-Kazoku kensaku [A manual of the flora of Nippon]. Japan. 13 + 53 + 15 + 864 p. See p. 291. Illust. 19 cm. [Jap]

• **Summary:** Contains 212 illustrations. On page 291, under the genus *Glycine*, are mentioned two species: *Glycine Soja* Benth. (Japanese: *daizu*, *ô mame*, *miso mame*, *mame*) and *Glycine ussuriensis* Reg. et Maack. (Japanese: *tsurumame*, *nomame*).

See also: Peanuts (*Nankin mamé*, *Tojin mamé*, p. 282). Lupins (p. 282). Pueraria (*kuzu*, *mamekuji*, *makuzu*, p. 299). Sesame (*goma*, p. 529). Address: Japan.

702. Oshima, Kokichi. 1928. Protease and amylase of *Aspergillus oryzae*. *J. of the College of Agriculture, Hokkaido Imperial University* 19(3):135-244. March. [109 ref. Eng]

• **Summary:** Contents: Introduction. Methods used for the quantitative estimation of amylase and protease, a formula to determine digestibility, and precautions in the use of Van Slyke's method. Enzymes found in *Aspergillus oryzae*. Conditions influencing enzyme production. Properties of protease from *Aspergillus oryzae*. Properties of amylase

from *Aspergillus oryzae*. Disinfectants for preserving the amylase solution of *Aspergillus oryzae*. General summary.

"There are at least four large manufacturing industries in Japan, in the manufacturing process of which *Aspergillus oryzae* is of the first importance... The total yearly quantities of these products are approximately as follows: Sake (rice wine) 4,500,000 'koku' (=813,000 kilolitres). Shoyu (soy sauce) 5,000,000 'koku' (=902,000 kilolitres). Miso (soy cheese [paste]) 450,000,000 'koku' (=1,690,000 kilograms). Shochu (distilled alcoholic liquor calculated as 95% alcohol) 220,000 'koku' (=39,700 kilolitres)." Address: Chemical Lab., School of Fishery, Hokkaido Imperial Univ., Japan.

703. Grey, Egerton Charles. 1928. The food of Japan. Geneva: League of Nations, Health Organization. 161 p. May. Index. 22 cm. [82 ref. Eng; fre]

• **Summary:** Detailed information and analysis. Contents: Preface. 1. Quantity of food in Japan: Exports, imports, production and consumption of food in Japan in the year 1925. 2. Quality of food in Japan: Definition of quality. 3. Distribution of food in Japan: Natural and artificial distribution. 4. Chemical composition of Japanese foods as consumed: Methods of analysis. 5. Chemical composition of Japanese food as purchased. Appendices: I. Literature relating to the chemical and physical properties of the food of Japan, with list of authors. II. Food materials and the plants and animals serving as sources of food in Japan.

Table 7 (p. 25) shows the amounts of major foods consumed in Japan. The percentage of the total food consumed is: Rice 50.83%, barley 10.15%, potatoes 8.63%, wheat 6.63%, soy bean 4.76%, other beans 3.71%, other cereals 3.24%, fish 1.72%, seaweed 1.23%.

On page 54, the author discusses the "Alkalinity of the ash [of foods]. This figure is of considerable importance as indicating the capacity of the food material to produce alkali in the body." On pages 61-111 the author lists the nutritional composition of all major Japanese foods, grouped by food type: 1. Cereals and cereal products. 2. Legumes, pulses, and legume products. 3. Roots, greens, and other vegetables. 4. Mushrooms and seaweeds. 5. Fruits, nuts, and seeds. 6. Vegetable oils. 7. Other vegetable products. 8. Dairy products. 9. Eggs. 10. Meat and animal fat. 11. Fish. 12. Condiments, beverages, etc. The name of each food is given in both English and French, usually with a brief explanation.

In a table (p. 65-69), in category "II. Legumes, pulses, and legume products," the section titled "Fresh legumes" includes (p. 64-65): Edamame (Soy bean in pod) = *Fève de soya en cosse*. The section titled "Dry legumes (pulses)" includes (p. 64-67): Azuki (Small red bean) = *Petit haricot rouge*. Dainagon (Small red bean) = *Petit haricot rouge* Ao daizu (Soy bean [with green seed coat]) = *Fève de soya*. Kuro daizu (Black soy bean) = *Fève de soya noire*. Shiro

Daizu (White soy bean) = *Fève de soya blanche*. Rakkasei (Pea nut) = *Pistache de terre*.

The section titled “Bean products” includes (p. 66-69): Aburage (Fried-bean curd) = *Pâte de haricots frite*. Aka miso (Soy-bean paste) = *Pâte de fèves de soya*. Gammodoki (Fried-bean curd) = *Pâte de haricots frite avec mixture d'algues marines*. Kinako (Soy-bean powder) = *Poudre de fèves de soya*. Kori dofu = *Pâte de haricots séchée*. Namaage (Fried-bean curd) = *Pâte de haricots frite*. Natto (Fermented soy bean) = *Fève de soya fermentée*. Sarashian (Red-bean powder) = *Poudre de haricot rouge* [Sarashi-an from azuki beans]. Shiro miso (White soy-bean paste) = *Pâte blanche de fève de soya*. Tofu (Soy-bean curd) = *Pâte de fèves de soya*. Tofu kasu (Soy-bean residue) [okara] = *Déchets de fèves de soya*. To nyu (Soy-bean milk) = *Lait de fève de soya*. Yuba.

Also: Mushrooms and seaweeds includes (p. 73-75): Arame, Asakusanori [Asakusa nori], aonori, hijiki, kanten, kombu, mozuku, ogonori, tororo kombu, wakame. Fruits, nuts and seeds includes (p. 77): Asanomi (Hemp seed), Goma (sesame, white and black). Vegetable oils includes (p. 79): Daizu yu (Soy bean oil) = *Huile de fève de soya*.

Condiments includes (p. 92-93): Hamana natto [soy nuggets]. Kiriboshi (Dried daikon). Misozuke [miso pickles]. Narazuke. Shoyu [soy sauce]. Takuan (Pickled radish). Umeboshi (pickled plum) = *Prune confite*. Beverages includes (p. 92-93): Amazake. Mirin (fermented rice). Sake (Rice wine).

For each food, the following values are given in both English and French: Water, protein (N x 6.25), fat, carbohydrate, ash, calories, alkali value, total nitrogen, water-soluble nitrogen, phosphoric acid (anhydrous), sodium chloride (salt), water-soluble ash, water-insoluble ash, alkalinity due to soda and potash, alkalinity due to lime and magnesia, calcium oxide, ferric oxide, factor for converting to dry food.

Note 1. In Japan, the typical person is well aware of which foods are alkaline (*arukari-sei*) and which are acidic (*san-sei*). The alkaline foods are generally considered more healthful and health-protecting. For the alkaline values given by Grey for many basic Japanese foods, see *SoyaScan Notes*. 1991. Sept. 20.

Note 2. This is the earliest English-language document seen (March 2009) that uses the term “soy-bean paste” to refer to miso.

Note 3. This is the earliest English-language document seen (July 2001) that uses the term “Edamame” to refer to [green] soy beans in their pods.

Note 4. This is the earliest English-language document seen (Feb. 2004) that uses the term “kori dofu” to refer to dried-frozen tofu.

Note 5. This is the earliest English-language document seen (Dec. 2006) that uses the term “pickled plum” to refer to umeboshi salt plums.

Note 6. This is the earliest English-language document seen (Oct. 2008) that uses the term “Hamana natto” to refer to soy nuggets.

704. Togano, Meiji. 1928. Shôyu, miso oyobi kyarameru seizô-hô [Production methods for shoyu, miso, and caramel]. *Kojo Kenkyu-kai, Sokki-roku (Factory Research Society, Collected Notes)* No. 38. 46 p. July. [Jap]

• **Summary:** On this document, Kôjô Kenkyu-kai is translated as “Japan Workshop Committees Association;” They published this lecture. The author’s last name is romanized as “Tsugano.”

705. Wu, Hsien. 1928. Nutritive value of Chinese foods. *Chinese J. of Physiology, Report Series* No. 1, p. 153-86. July. Issue title: Metabolism. [7 ref. Eng; chi]

• **Summary:** The nutritive value of many Chinese foods (water, protein, fat, ash, crude fiber, carbohydrate, calories) is given (with the English name, scientific name, and name in Chinese characters), including the following: wheat gluten, sesame seed (p. 155), yellow soy bean, black soy bean (large or small), green soy bean, soy bean sprout (yellow or green), soy bean flour, soy bean curd, soy bean dregs [okara], bean curd (doufu-gan, boiled in salt and spices and partially dried), oil skin ([yuba], from boiled soy bean milk), bean curd skin ([yuba], dried, or rolled like bamboo), soft bean curd, soy bean milk (p. 156), smoked bean curd, sheet bean curd, fermented bean curd, pickled bean curd, soy bean (fresh) (Characters: hair + bean = mao tou), wild soy bean, red gram bean (red small bean, *Phaseolus mungo* [azuki bean], p. 157), cucumber pickled in soy bean paste (p. 175).

Condiments: Thick soy bean paste, thin soy bean paste, fermented soy bean, fermented bean (dried), thin soy bean sauce (white), thick soy bean sauce (white), thin soy bean sauce (black), thick soy bean sauce (black), soy bean sauce (“chemical”), sweet flour paste (p. 176).

Table 4 (p. 180) gives the calcium, phosphorus, and iron content of some Chinese foods in percentages of edible portion, including the following: Wheat gluten, job’s tear, yellow soy bean, black soy bean, red gram bean [azuki], green soy bean (fresh), soy bean flour, soy bean milk, bean curd (Southern style and Northern style).

Table 5 (p. 182) lists foods as sources of vitamins A, B, C, or D, including the soy bean (an excellent source of vitamin B).

Note 2. This is the earliest English-language document seen (Feb. 2004) that uses the word “doufu-gan” (or “doufu gan”) to refer to Chinese-style firm tofu. Address: Dep. of Biochemistry, Peking Union Medical College, Peking, China.

706. Dyson, G. Malcolm. 1928. Mould food of the Far East. *Pharmaceutical J. and Pharmacist (London)* 121:375-77.

Oct. 20.

• **Summary:** Discusses *Aspergillus* molds, soya sauce or shoyu, shoyu-koji, tane-koji, the shoyu-yeast (a strain of *Zygosaccharomyces*), the sodium salt of glutamic acid (which imparts a meat-like flavor to these purely vegetable preparations), *aji-no-moto*, red miso and white miso (*shiomiso*), natto, the protein-splitting powers of the enzymes secreted by the molds mentioned above.

Red soya cheese is a type of tofu. The ripened curd is immersed in a brine and the maturing is finished by a purple mold—*Monascus purpureus* (Went.)—which imparts a red color to the finished tofu.

Note: This is the earliest English-language document seen (Feb. 2007) that uses the term “soya cheese” or the term “Red soya cheese” to refer to fermented tofu. Address: Ph.D., A.I.C.

707. Takata, Riohei. 1928-1929. Miso jôzô no eiyô gakuteki kôsatsu. I. Miso gan chisso seibun no yôka teiretsu to sono riyû [Nutritional observations on miso fermentation. I. The inferior nutritional value of miso’s nitrogen compounds and the reason therefor]. *Kogyo Kagaku Zasshi (J. of the Society of Chemical Industry, Japan)* 31(9):811-20; 31(10):983-89. Sept/Oct; 32(4):495-97. May. English abstracts on p. 196B-199B, 233B-235B. (Chem. Abst. 23:5221). [2 ref. Jap]

• **Summary:** Describes nutritional experiments with rats. Address: Naimu-sho Eiyô Kenkyûsho, Kakô Shokuhin Kenkyûshitsu, Japan.

708. Dorsett, P.H.; Morse, W.J. 1928-1932. Agricultural explorations in Japan, Chosen (Korea), Northeastern China, Taiwan (Formosa), Singapore, Java, Sumatra and Ceylon (Log—unpublished). Washington, DC: USDA Bureau of Plant Industry. Foreign Plant Introduction and Forage Crop Investigations. 7,410 p. Unpublished typescript log. Illust. Partially indexed. 28 cm.

• **Summary:** Also called the “Log of the Dorsett Morse Expedition to East Asia” and (by the National Archives) “Dorsett-Morse Expedition to the Far East, 1929-31,” this is one of the most important documents ever produced on soybeans and soyfoods. It consists of 17 volumes of typewritten unpublished manuscript plus handwritten notebooks. Hundreds of photos are pasted on the pages, each with a number and a caption. The first quarter of the pages (to about page 2,500) are indexed, using 4 separate indexes. The only original and 2 microfilm copies were at the American Soybean Assoc. (St. Louis, Missouri), however as of Oct. 2004 they are on permanent loan to Special Collections at the National Agricultural Library (Beltsville, Maryland)—which also has 7 photograph albums that accompany the 7 log books. One photocopy of a microfilm copy is at the Soyfoods Center (Lafayette, California). One microfilm copy is at the National Archives in Washington, DC, in Records of the Bureau of Plant

Industry, Soils, and Agricultural Engineering, Record Group 54. See: “National Archives Microfilm Publication No. M840. Expedition Reports of the Office of Foreign Seed and Plant Introduction of the Department of Agriculture, 1900–1938.” Rolls 16-20, volumes 56-73. These microfilm rolls may also be available for viewing or duplication at one of the various regional branches of the National Archives (e.g. San Bruno, California).

A brief itinerary of the trip is as follows: 1929 Feb. 18–The party of 5 people leaves Washington, DC, for Los Angeles by train. It consists of Morse, his wife Edna, their daughter Margaret (age 7), Dorsett, and his daughter-in-law Ruth (Bobbie; the widow of Dorsett’s son, she served as Dorsett’s secretary and general helper). March 1–They sail from San Francisco to Yokohama on the S.S. *President Grant* of the Dollar Steamship Lines. March 29–Arrive in Yokohama, proceed directly to Tokyo, establish headquarters with rooms at the Imperial Hotel, and hire an interpreter, Mr. Suyetake, who works with them for the next 2 years. May 21–The Morses go to Hokkaido, the Dorsetts to Kyoto, by sleeper train. Morse returns to Tokyo. Aug. 17–The entire party arrives in Hokkaido and establishes headquarters in Sapporo to study soybeans. Oct. 8–Leave Hokkaido for the Northeast Provinces, then arrive in Tokyo on Oct. 15. Oct. 22–Arrive in Keijo (Seoul), Korea, then take many side trips. Note: 1929 Oct. 29–Great Depression begins in USA with stock market crash. Dec. 8–Return to Japan via Kyushu, then to Tokyo to study soyfoods. They buy and photograph many!

1930 April 1–Travel by steamer to Dairen, Manchuria, where they set up headquarters. Dorsett very sick from April 11 to June 11; almost dies of double pneumonia. Morse takes all notes. June 24–Morse takes a quick trip to northern Korea, via Mukden and Antung (Tan-Tung), to look for *Zoysia* grass. July 1–Returns to Manchuria via Mukden. July 21. Dorsetts leave for Peking by train; Morses and Mr. Suyetake stay in Dairen. Aug. 21–Morse party travels to northern Korea, staying in Heijo (Pyongyang / P’yongyang); takes a 4-day side trip to Seoul. Sept. 28–Morse returns to Dairen, Manchuria. Oct. 19–Morse party leaves Dairen, arriving in Peking the next day. Nov. 9–Morse party returns to Dairen. Nov. 30–Morse arrives in Harbin, north Manchuria, then passing through Mukden, returns to Dairen. Dec. 18–Morses leave Dairen for Japan, passing through Kobe on Dec. 21 and arrive in Tokyo on Dec. 23.

1931 Jan. 12–Travel to Kyoto, Himeiji, and Tatsuno Shoyu. Jan. 16–Visit Okazaki and Hatcho miso. Jan. 17–Return to Tokyo. Feb. 17–Morse party leaves Tokyo for the USA, arriving in San Francisco on March 4. March 15–Dorsett party leaves Peking for Tientsin, Shanghai, and Hankow. March 27. Dorsetts sail from Shanghai to San Francisco. Note: This is the log (unpublished) seen (Oct.

2001) that mentions soy. Address: Agricultural Explorers, from USDA, Washington, DC.

709. **Product Name:** Koji Miso, and Miso-Zuke.

Manufacturer's Name: Araki (Sotaro).

Manufacturer's Address: 45 Piopio, Hilo, Island of Hawaii. Phone: 579.

Date of Introduction: 1928.

New Product–Documentation: Directory of Honolulu and the Territory of Hawaii. 1928-29. p. 587. Araki Sotaro, General Merchandise, Wholesale and Retail, Manufacturers of Koji Miso and Miso-Zuke. 45 Piopio, Hilo, Island of Hawaii. Tel. 579. P.O. Box 461.

710. Hara, Tetsukazu; Takada, Ryohei. 1928. Miso ni kansuru kenkyū [Studies on miso]. *Eiyo Kenkyūjo Hokoku (Report of the Imperial Government Institute for Nutrition)* 2:262-339. [Jap]

Address: 1. Gishi; 2. Gishu. Both: Eiyo Kenkyusho.

711. Japanese American News Inc. / Nichibei Shinbunsha. 1928. Nichibei jūshoroku [The Japanese American directory. No 24]. San Francisco, California: The Japanese American News Inc. (Nichibei Shinbunsha). Index of cities. 23 cm. [Eng; Jap]*

Address: San Francisco, California.

712. Maliareffsky, G.I. 1928. Preparation of Chinese soy bean sauce in North Manchuria. *Vestnik Manchzhurii (Manchuria Monitor)* No. 1. p. 11-12. English edition. [Eng]

• **Summary:** Combined with the Russian text, this 10-page document contains 15 black-and-white photos. Discusses the process, technology, and equipment used to make fermented soy sauce in Manchuria in the late 19th and early 20th centuries. Photos show: Materials used. The Li-tung Company at Fushiatien. Boiler house with vats where beans are dried for fermenting. Earthen pots containing corn 'miso' during fermentation. Coopers shop where vats are made. Rye of making into koji. Grinding stones for crushing rye koji. The wood press. Address: Harbin, Manchuria.

713. Nippon Joyukai. 1928. Jōzō ronbun-shū [Collected dissertations on fermentation]. Tokyo: Nippon Joyukai Shuppan-bu. 943 p. [Jap]*

714. *Time*. 1929. Lion-tiger-wolf. 13(14):11-12. April 8.

• **Summary:** "Manna, marmalades, and malt, sarsaparilla, sand and salt;... Madder, miso, rattan mats, bricks and brooms and baseball bats..."

Republican members of the Ways & Means Committee of the U.S. House of Representatives are considering what items should be included in the forthcoming Hawley-Smoot Tariff Bill. Over the past 45 days, public hearings have

brought to this chamber 1,200 witnesses, who have given 11,000 pages of printed evidence concerning changes they would like to see in the 1922 Tariff Act. But President Hoover wanted tariff revisions limited to agricultural products and a few other special but as yet unnamed commodities.

Note: This is the earliest known reference to "miso" in *Time* magazine.

715. Dorsett, P.H.; Morse, W.J. 1929. Miso in Japan (Document part). In: P.H. Dorsett and W.J. Morse. 1928-1932. Agricultural Explorations in Japan, Chosen (Korea), Northeastern China, Taiwan (Formosa), Singapore, Java, Sumatra and Ceylon. Washington, DC: USDA Bureau of Plant Industry, Foreign Plant Introduction and Forage Crop Investigations. 7,410 p. Unpublished log.

• **Summary:** Pages 1009-10 (14 May 1929, Tokyo). "Copied from Mr. Morse's diary. In the afternoon we went to Matsuzakaya store to look over bean products and as a result we secured seventeen different soybean products. We found that they had 20 different forms of miso, a product which we think may have possible value at home."

Page 1053 (2 May 1929, Tokyo, Japan). A photo shows a natural sized picture of a small wooden box of miso. The Japanese name is given but is illegible. Page 1054. Photo of a small wooden box of "Kansai miso." It is made in the Kansai district [the Kyoto-Osaka area] and is used in making miso soups. Page 1068. Photo of a "small wooden box of 'Edomiso' which is made in the Tokyo District. Miso which is quite salty is used in making soups. In the city, miso soup is used for breakfast, which in the country miso soup is used for lunch and supper." Page 1070. Photo of a small wooden box of "Shiromiso" [shiro miso], meaning white miso. "This form contains rice and is used in making miso soup."

Page 1202 (26 May 1929, Sapporo, Japan). Mr. Morse visited the Hokkaido Agricultural Experiment Station at Kotoni. Mr. Takatsugo Abiko explained that "The soybeans grown in Hokkaido are used entirely for food purposes such as natto, bean curd, green vegetable bean, soy sauce, miso, bean paste and roasted beans."

Page 2004 (29 July 1929). Morse visited the Saitama Experiment Station at Urawa, Saitama prefecture. Met Mr. Tadashi Hashigawa, who is in charge of the soybean work of this prefecture, which is third in soybean acreage in the Japanese Empire. His main work is developing varieties to be used for making soy sauce, tofu, miso, and natto. This station grows about 50 varieties, nearly all yellow-seeded and medium in size.

Page 2445-46 (19 Sept. 1929). Visited the Tokachi Branch Experiment Station in Hokkaido. Met Mr. Seiji Kawase and Yoshio Fujine. 60% of the crops grown in Hokkaido are legumes; of these, field beans are first, followed by soybeans, then field peas. The Tokachi district

is very well adapted to soybean culture. There are five grades of soybeans plus a special grade for beans that will be used for soy sauce, miso, etc. Of the 1,837,325 bushels of soybeans produced in Hokkaido, 58% is exported [to outside of Hokkaido] and 42% is consumed in Hokkaido as follows: Miso 9%, soy sauce 9%, seeding 6%, tofu and other products 18%. In 1923 Hokkaido was Japan's leading soybean producing region with 17% of the nation's production, followed by Ibaragi 5%, Saitama 5%, Nagano 4%, Kumamoto 4%, Aomori 4%, Niigata 4%, etc.

Page 3230 (10 Dec. 1929, Kyoto). "We then went to a Natto manufacturing place near an old temple known as Daitokuji. Here we tried out a kind of natto [Daitokuji natto = soy nuggets] which we think might take with the American people, also miso, both are different from any we have previously seen. A detailed account of the manufacture of these products is to be found in our special report concerning the soybean and its products." Address: Agricultural Explorers, from USDA, Washington, DC.

716. Takata, Ryôhei. 1929. Miso jôzô no eiyogaku-teki kôsatsu. VI. Daizu no shisuchin ganyû teido [Nutritional observations on miso fermentation. VI. Cystine content of soybean]. *Kogyo Kagaku Zasshi (J. of the Society of Chemical Industry, Japan)* 32(4):495-97. May. [2 ref. Jap] • **Summary:** Nutritional experiments with rats. Address: Naimusho Eiyo Kenkyusho, Kako Shokuhin Kenkyushitsu, Japan.

717. Takata, Ryôhei. 1929. Miso no kaihatsu-sei seibun [On the volatile substances in miso]. *Kogyo Kagaku Zasshi (J. of the Society of Chemical Industry, Japan)* 32(7):628-29. July. [Jap] Address: Naimusho Eiyo Kenkyusho, Kako Shokuhin Kenkyushitsu, Japan (Kôgaku-shi).

718. Morse, W.J. 1929. Letter from Dr. [sic] Morse. Tokyo, Japan, July 20, 1929. *Proceedings of the American Soybean Assoc.* 2:50-52. Tenth annual field meeting. Held 22-23 Aug. at Guelph, Ontario, Canada.

• **Summary:** This letter from W.J. Morse was read before the 1929 convention of the American Soybean Association at Guelph, Ontario, Canada. This is the first annual ASA meeting he has missed. He begins with a brief description of the "Oriental Agricultural Exploration Expedition" headed by Mr. P.H. Dorsett and himself. They plan to study soybeans in Japan first. "The largest soybean section is the Island of Hokkaido which has an acreage of 215,212 [planted to soybeans] and produces 3,184,245 bushels of beans" [yield = 14.8 bushels/acre].

"On our arrival and after establishing headquarters in Tokyo, we first began to look up varieties which we might send back to the United States for the 1929 planting. We succeeded in packing up about 100 lots which are now

growing in the variety plots at Arlington Farm [Virginia]. In hunting out this seed, we were very much surprised to find the soybeans listed with the garden beans and as garden beans. For the most part these are grown as green vegetable beans. These sorts are black, brown, greenish yellow, and yellow seeded varieties of early, medium, and late types. Some of the yellow seeded varieties are listed as most suitable for bean curd, soy sauce, miso, natto, and confectionery purposes, such as sweet bean paste, candied beans, roasted beans (like our peanuts), and sugared beans." Note: Azuki beans, rather than soybeans, are usually used to make "sweet bean paste" in Japan.

"It is amazing, the extent to which the soybean is used for food in Japan. Whether or not it can be used in the United States in all of the ways used here is extremely doubtful, that is for human food." There is no doubt that American soybeans will be used mostly to produce oil and oil meal. "It may interest you to know that the beans produced in Japan are used entirely for human food, green manure, and planting purposes. The grain varieties have seed of higher quality than those produced in Manchuria and are not used for oil and oil meal production as [are] the beans of Manchuria. The great soybean oil and meal production of the Orient is confined almost entirely to Manchuria.

"Another thing which surprised us greatly was the extent to which soybeans are used for green manure purposes in the rice paddies." The plants are turned under in the mud after water has been run into the paddies.

"Another extensive use of the soybean is for bean curd, or tofu, which is manufactured only... in small shops scattered about the cities and country villages. This curd is used in many ways, being the meat of the poorer classes. It is used, however, quite generally in making bean-curd soup [miso soup with tofu] which is sometimes served at breakfast and nearly always at supper. The bean curd is peddled about from house to house by men with two tubs suspended from a bamboo pole over their shoulders. The sound of the little horn of the bean curd man as he announces his coming has become quite a familiar sound to our ears as we go along the streets or hear him pass under our office windows.

"Soy sauce is manufactured on a very large scale and is universally used by the Japanese, rich and poor. We have had the pleasure of visiting the large experimental laboratory of an experiment station given wholly to soy sauce and saké experiments. In Hokkaido we visited a soy sauce factory, the buildings of which covered several acres. In one of the curing vat buildings where the mash is allowed to cure for about 18 months, we counted ninety large vats.

"Soybeans are used to a very considerable extent for confectionery purposes. The large black, brown, and green seeded varieties are used in making sweet bean paste which is put up in small thin slabs and then done up in very

attractive packages. Roasted beans, similar to our roasted peanuts, may be found at nearly all confectionery stores. Roasted beans are also sugar coated and others are sprinkled with small pieces of sea-weed during the roasting, which gives an appearance of mottled beans (rather a familiar sight to our mid-west farmers). Then, there are the candied beans, that is, beans which have been boiled in syrup.

“Miso and natto are two forms of bean foods in which the beans are first cooked and then treated with certain bacteria [sic, microorganisms]. Miso is used largely in soups which are consumed at breakfast. Both of these foods are quite largely used.

“Other products used for food are roasted soybean flour, soybean vermicelli, pickled green beans in the pod, yuba—the film produced by boiling soybean milk, and dried frozen bean curd.” Note 1. This is the earliest English-language document seen (Feb. 2004) that uses the term “dried frozen bean curd” to refer to dried-frozen tofu.

Note 2. This is the earliest English-language document seen (Dec. 2005) that contains the term “roasted soybean flour.”

“Another surprising thing is the very extensive use of the soybean as a green vegetable bean. As early as May, small bundles of plants with full grown pods were seen on the market. At the present time the market is virtually flooded with bundles of plants with full grown pods, the seeds of which are also full grown. The pods are boiled in salt water and the beans eaten from the pods.

“During the past two weeks we have visited large sections near Tokyo where soybeans are grown for green vegetable purposes. The beans are grown in rows 2 feet apart and in 95 per cent of the cases there are other crops planted between the bean rows, such as early cabbage, onions, lilies (for the edible bulbs), late varieties of soybeans, late plantings of soybeans, and other early truck crops.” Address: USDA, Washington, DC.

719. Dorsett, P.H.; Morse, W.J. 1929. Miso in Chosen (Korea) (Document part). In: P.H. Dorsett and W.J. Morse. 1928-1932. Agricultural Explorations in Japan, Chosen (Korea), Northeastern China, Taiwan (Formosa), Singapore, Java, Sumatra and Ceylon. Washington, DC: USDA Bureau of Plant Industry, Foreign Plant Introduction and Forage Crop Investigations. 7,410 p. Unpublished log.

• **Summary:** * = Best photos. Page 2965 (14 Nov. 1929). Again visited the Shariin Agricultural Experiment Station near Shariin and met Dr. Takahashi, the director, who demonstrated the common Korean practice of planting soybeans in 4' hills on ridges among the other crops. “In the afternoon we visited a nearby village and tried photographing scenes and operations in the making of soybean mash balls for the home manufacture of soybean miso and soy-sauce. Photos (p. 2966-67) show women planting soybeans on the side of ridges using a small, short-

handled hoe. Photos (p. 2968-69) show close-up views of “Tenjan [doen jang = Korean soybean jang], soy sauce, and Kanjan [kan jang = Korean soy sauce]; back row, left to right, two balls of freshly made bean mash, on the right, two made three weeks or more ago, these are pretty well cracked and covered with mould.”

Note 1. Each ball is wrapped in straw which is joined and twisted at the top.

Note 2. This is the earliest document seen (March 2009) that uses a Korean name for Korean-style soybean jang (miso), or that uses the word “Tenjan” to refer to Korean-style soybean jang.

Same photo but with a crock of miso in the back. Photo of Korean planting soybeans using a large plow and oxen. Photos (p. 2972-75). * Pouring boiled soybeans into a wooden mortar at Shariin. Crushing the soybeans with a “wooden pestle for use in making miso balls for the growing of curing bacteria.” A nearby view of the same. A Korean woman in traditional dress working the mashed beans into balls in a large bowl placed on the ground. Balls in the background, more than 3 weeks old, are full of molds and bacteria. A nearby view of the new and old miso balls wrapped in rice straw.

Note: The various types of traditional Korean miso and soy sauce are made from a dried soybean koji called *meju*, which is prepared in much the same way as Japan's *miso-dama*. The word *jang* is closely related to the Chinese word *chiang* [pinyin: *jiang*]. Traditional Korean miso and soy sauce contain no wheat, rice, barley, or other grain. For details, see *The Book of Miso*, 2nd ed, by Shurtleff & Aoyagi (1983, p. 245-47). Address: Agricultural Explorers, from USDA, Washington, DC.

720. Pierson, J.L. trans. 1929-1963. Man'yoshu. Leiden (Leyden): E.J. Brill Ltd. 20 Vols. See vol. 16, p. 44. [Eng] • **Summary:** This is the only translation of the entire Man'yoshu.

721. **Product Name:** Maruten Miso.

Manufacturer's Name: Amano Miso Seizo-sho (Amano Brothers).

Manufacturer's Address: 2141 Powell St., Vancouver, BC, Canada. Phone: High. 5526 L.

Date of Introduction: 1929.

New Product-Documentation: Hokubei Nankan—The North American Times Year Book. 1936, p. 254. Amano Miso Seizô-sho. Mr. Teiichi? (or Otokazu? or Kuniichi? or Chikakazu? or Tsugikazu?). 2141 Powell St., Vancouver, BC. Phone: High. 5526 L.

The New Canadian. 1941. Aug. 22. p. 8. “For 12 years Mr. [Teiichi] Amano has been in the business of making Japanese miso.”

Vancouver City Directories. 1952-66. The first listing is 1952: Amano, T. Co. (T. Amano). Soya sauce and rice paste

manufacturers. 1139 E. Hastings St. In 1955 the occupation had changed to manufacturers, importers, and exporters.” In 1966 it was: Amano, T., Co. Ltd. (T. Amano, president). Importers. 1139 E. Hastings.

Interview with George Tsuchiya, general manager of Amano. 1981. Nov. 24; Shurtleff & Aoyagi. 1983. *The Book of Miso*. 2nd ed. p. 234. “There were several semi-commercial makers of miso and shoyu in Canada, in the Vancouver area, prior to World War I, and at least one commercial miso manufacturer was in the area prior to 1927. In that year [sic, in 1929] Mr. T. Amano started Amano Brothers. p. 255. Listed as T. Amano Co. Ltd., 1139 E. Hastings St. In 1982 the T. Amano Co. was making a red miso and a sweet white miso.”

Talk with Michael Weiner. 1987. Dec. 16. Amano is presently the largest manufacturer of miso in Canada. They may soon break ground for a large, new miso and soy sauce plant.

Note: This is the earliest known commercial miso product made in Canada.

722. **Product Name:** Miso.

Manufacturer’s Name: Chonan (Rosaku) Miso Manufacturer.

Manufacturer’s Address: 707 Kilauea St., Hilo, Island of Hawaii.

Date of Introduction: 1929.

New Product–Documentation: Directory of Honolulu and the Territory of Hawaii. 1928-29. p. 594.

Hawaiian Japanese Annual & Directory. 1936-37, p. Island of Hawaii p. 2. Ryôshaku Chônán (from Fukushima prefecture), koji manufacturer, 707 Kilauea, Hilo, Island of Hawaii.

723. Kinoshita, Asakichi; Inoue, E.; Aomori, Y. 1929. Miso oyobi miso-yo kome kôji no futsû seibun narabini sono tôkaryoku [The nutritional composition of miso and of rice koji used in miso, and the saccharifying power of the latter]. *Nippon Jozo Kyokai Zasshi (J. of the Society of Brewing, Japan)* 24(7):77-79. [Jap]

Address: Jozo Shikensho 1. Gishi 2-3. Kenshu-in.

724. Ferrée, Christian Johan; Tussaud, J.T. 1929. *The soya bean and the new soya flour*. London: William Heinemann (Medical Books) Ltd. xi + 79 p. Illust. No index. 22 cm. Revised translation from the Dutch by C.J. Ferree and J.T. Tussaud of *Die Sojaboon en Duurzaam Sojameel*. [29 ref] • **Summary:** Contents: Foreword, by Sir Wm. Arbuthnot Lane, President of The New Health Society. Preface, by C.J. Ferrée (London). 1. Introduction. Literature. Name of the plant. Origin. Botanical particulars. Assimilative power of the soya plant. Inoculation. Soil requirements. Production and cost. 2. General ingredients of the various Manchurian beans. Composition. The value of soya protein. Vitamin in

the soya bean. Digestibility of the soya bean and its products. 3. Use in China and Japan: Bean sauce, soy, or shoyu, Chinese chiang (paste), tou-fu or beancurd, beans consumed as a table vegetable, bean refuse and bean cake are used as a fertiliser and for fattening hogs, bean oil is used as an illuminant (where it has not been superseded by kerosene), as a substitute for lard in cooking, and as a lubricant for greasing axles and parts of native machinery, miso and natto. First imports into Europe. Exports during the last five years from China and Japan. Imports during the last five years into Europe and America. The increasing rate of its cultivation. Manchuria–Production. Estimate of the world’s production of the soya bean. London the principal market. Future importance.

4. America. Australia. South Africa. Other British possessions and protectorates. Java (Dutch East Indies). Europe. 5. Unsuccessful experiments with soya flour. Ordinary soya flour. Extracted soya flour. Dr. L. Berczeller’s discovery. The new soya flour. Comparison with other cereal flour and other foods. Comparison in price with other cereal flour and other foods. Comparison in price of soya protein compared with other cereal foods. Comparative analysis of cereals. 6. Soya milk. Vegetable casein. Lecithin. 7. Increase in food value. Savings. Industrial application in foodstuffs. The importance of Dr. L. Berczeller’s soya flour for the food industry. Soya flour and the food laws. Uses of soya flour in: Bread, pastry, cake, biscuits, confectionery, sausages, infant foods and food for invalids, cocoa, chocolate, soup cubes, pudding flour. Uses in the kitchen. Soya flour recipes (for flour made using the Berczeller process), soya flour for diabetics, recipes for diabetics.

The Preface states: “In the following pages the writer has endeavoured to give an account of the numerous uses to which the soya bean has so far been put, and to visualise its future service to humanity through the means of a totally new and practical process by which this legume... may in future be used as an important article of food for general consumption throughout every quarter of the globe.

“In compiling the details relative to the soya bean flour, with which this brief summary principally deals, he trusts that he has succeeded in giving sufficient data to enable the reader to fully realise its value as a staple food from the economic point of view, as well as from the more domestic standpoint, so that the important fact may be fully realised that a new foodstuff of a very valuable nature... has now been brought within the reach of all nations to serve them in a most practical manner as an economic article of food.”

The book includes statistics on the imports and exports from 1923 to 1927 of “soya beans, soya oil, and soya cake in various countries including China, Japan, England, France, Germany, Holland, Norway, Denmark, Sweden, and USA.

The “new soya flour” is that developed by Dr. Berczeller. This book repeatedly praises that flour. “A few years ago Dr. Laszlo Berczeller, a Hungarian physiologist in Vienna, succeeded scientifically in finding a method which enables us to prepare from the soya bean a digestible and pleasantly flavoured flour without detracting from its nutritive value, and this method entirely succeeds in preserving all the good qualities contained in the bean itself. Physiological experts and analysts withhold no praise, as the following extracts will show: -” There follow words of praise from: (1) Dr. Alfred Schwicker, M.P., Royal Hungarian State Institute, Central Depot for Experimental Chemistry. (2) Dr. Stefan Weisser, King’s Counsellor, Royal Veterinary Physiological Experimental Station, Budapest. (3) Prof. A. Durig., The Physiological Institute, University of Vienna.

Marakujew (1928) estimates the production of soya beans in “Manchuria at 6 million tons at the utmost, the production of the whole of China at 16 million tons, and he is led to this figure by the conclusions of the Economic Bureau of the South Manchuria Railway, which estimates that the Manchurian crop in 1927 amounted to 37.1 million koku (5.88 million English tons), of which 2.6 million tons originated from South Manchuria, 3.3 million tons from North Manchuria” (p. 32). A table (p. 33) gives estimated world production of soya beans from 1923 to 1929 (6.6 million tons, forecast). The leading producers in 1929 (in million tons) are: China 5.250. Japan 0.580. USA 0.250. Java and Dutch East Indies 0.120. Other Asiatic countries 0.400. A soya milk factory was recently established in Denmark (p. 54). Although this book contains a bibliography of 29 references, most are very incomplete.

Photos show: (1) A soybean plant with roots, pods, and leaves. (4) Nodules growing on soybean roots. (5) One pod and seed each from inoculated and uninoculated soybean plants. (7) An immense field of soya beans in Manchuria. (8) Soya beans awaiting shipment, in house-shaped stacks under tarps, at Dairen. (13) Seeds of the most important varieties of soya beans now grown in the United States. (10) Two horses and a farmer cultivating a field of soybeans. (11) Harvesting soya beans. (12) Well selected, clean soybean seeds.

A map (frontispiece) shows where soybeans are cultivated worldwide. An illustration (p. 2) shows Shen-Nung, “The Heavenly Farmer,” reproduced from a print in a Vienna museum. One bar graph compares the nutritional composition of soya flour with that of cereals and animal products, and other foodstuffs (p. 13), another compares the calories (p. 46), and a third compares the cost of 1,000 calories (p. 48). • **Summary:** The soybean (p. 128-70). Contents: Introduction. Name, place of origin and history. Description of the plant: Systematic, morphology, varieties, selection. General conditions for growth: Climate, soil. Cultivation of the plant: Planting, care. Harvest and storage. Composition and products. Utilization: As a fodder plant, as a coffee substitute, industrial non-food uses, as a food (as a green vegetable, soy sprouts, soy chocolate, soymilk, casein, tofu and soybean quark {*tofu oder Sojabohnenquark*}, natto {*Buddhistenkäse*}, hamananatto, yuba, miso, shoyu or soy sauce {*Sojasauce*}). Production and trade.

Concerning green vegetable soybeans, the author states: “Three-quarter ripe soybean seeds yield a good, green vegetable (*Dreiviertelreife Sojabohnen geben ein gutes, gruenes Gemuese*).” Address: PhD, Titularprofessor an der Eidgenoessischen Technischen Hochschule, Zurich, Switzerland.

• **Summary:** Page 572: “... which is taken for breakfast in almost all houses of the country, and is very nutritious. Now, in this country, about 57,000,000 kwanme of miso are produced in the miso-making factories a year, and its value is estimated at about 32,000,000 yen. Miso is white or reddish brown...”

Page 578: “In strict signification, however, miso is distinguished into two classes, in one of which kome (rice) - koji or mugu (barley or rye) - koji is used with steamed soya bean and salt as raw material, and in the other soya-bean, koji and salt only are used. The former is ordinary miso, called *kome-miso* or *mugi-miso* respectively according to the use of *kome-koji* or *mugi-koji*, and Edo-miso and Sendai-miso belong...”

728. *Economist (London)*. 1930. Japan.–Gold standard–Prices–Foreign trade–Money. 110(4,506):23-24. Jan. 4.

• **Summary:** “From our correspondent. Tokyo, December 10.” Japan is preparing to return to the gold standard. Wholesale prices continued to move downward last month.

But Japanese prices are still about 20% higher than British or American prices. "The higher Japanese price level is accounted for largely by such 'sheltered' goods as red beans [azuki], miso, dried bonito, Japanese paper, mattings and tobacco (Government monopoly), prices of which, in most cases, are kept high for special reasons" (p. 24, col. 1).

Page 3974-75 (Feb. 21). Visit Sendai Miso Jozo Jo, Sendaitenai, Oimachi, Tokyo. "Learned that much of their miso for local consumption is only aged for a week or ten days to two weeks, but that Miso for export trade to Canada, the United States and other countries is aged much longer, a year or more. This concern uses annually about 50,000 bushels of soybeans and an equal amount of rice for making Miso—plus 25,000 pounds of salt. Their yearly output is about 12,000,000 pounds. The wooden casks used to pack the Miso contain 200 pounds net weight and sell wholesale at Yen 10.00 to 13.00 per cask. For shipment abroad they use the standard 4½ gallon soy sauce wooden cask. It has a capacity of about 40 pounds and sells delivered at San Francisco at Yen 2.50 to 3.00 per cask."

Pages 3978-79. Photos taken at Sendai Miso Jozo in Tokyo show: (1) Steamed rice spread on out rice straw mats in a wave pattern covering the entire floor of a large room.* After cooling, rice bacteria (Koji [sic, koji starter]) is added, and after three days the malted rice is mixed with boiled or steamed soybeans in the making of soybean miso. (2) Miso mashing tubs (*usu*) used for mashing boiled soybeans when making miso.* Each tub is made from a hollowed tree trunk and first used by Lord Governor Date in the "Year of Kaiei" about 300 years before the start of the Meiji Period (in 1868). Note: Daté Masamune (DAH-tay Mah-sah-MU-nay; lived 1567-1636) of Sendai was the first Japanese to make miso in a factory, starting in the early 1600s.

Page 4022, 4024 (Feb. 23). Photos: A slice of large white Japanese radish (*daikon*) which has been preserved in soybean miso. Thin sugared cookies [rice crackers] named *Satou Miso Senbei*, in which soybean miso has been mixed.

Pages 4082-86. Photos of handsome boxes of miso with labels each purchased in the food department of a large department store in Tokyo. (1) Box (4½ by 6 inches) of Kinzanji Miso. "Kinzanji is the name of a temple in Kyoto and this miso was first concocted by a priest in this temple."

(2) Box (4½ by 6 inches) of Saikyo Miso. “A form of white miso sweetened, and containing a large amount of rice.” (3) Box of *Wasabi miso*, Japanese horseradish mixed with miso. (4) Box of *Tori miso*, which has chicken meat in it. (5) Box of *Goma miso*, which has sesame seeds mixed in.

Page 4140. Photo of rice bacteria (koji [sic, koji starter]) from T. Aseda Miso Factory, Tokyo, Feb. 28. Name: *Kuroban Moyashi*. Used in the production of miso malt [rice koji]. The contents of this package will inoculate 5 koku (25 bushels) of rice. Price: 0.35.

Pages 4313-22 (12 March 1930). Went to Shimbashi Station and took the electric tram for Oimachi, Tokyo, to visit the Sendai Miso Jozoyo Miso factory. Photos: (1) Interior of miso mixing room. Bean crusher and mixer were invented by this company. (2) Shipping room, where casks of miso are weighed and loaded into trucks for delivery.* (3) Large soybean steamer with live steam. (4) 300 year old *usu* for crushing soybeans. (5) View of a room full of wooden miso tanks/casks [vats] curing from above the top of the vats.* The top of each vat is weighted with rocks. Each room contains more than 80 vats. Each cask is about 7 feet high and 8-10 feet in diameter. The miso is aged here for a year or more. The company has several such rooms. (6) Soybean steamer in operation. (7) A large pile of rice koji ready to mix with an equal amount of cooked soybeans. To the right is a portion of a small wooden mixing tub with bamboo hoops. (8) Two wooden casks [kegs] of miso, packed and ready to ship to San Francisco, California.* “They have considerable trade there for this product.” (9) A cooper at the Sendai Miso Factory seated on the ground and making bamboo hoops for hooping miso casks.*

Page 4344-45 (March 10). Photos: (1) Small box and label of white miso (*Shiro miso*) made from polished rice and soybeans. Purchased from Mikonaya Miso Co., Tokyo. The three characters are written horizontally from right to left. White miso is not used as extensively as red miso. It is “used on special occasions in soups and eaten as cheese with other foods. White miso is much more expensive than red and has more rice in it.” (2) Small circular box of rice koji from Mikawayaya Miso Co. Can be used to make white miso or sake-rice wine.

Page 4390-91 (20 March 1930, Tokyo). Photos: (1) Boxes of the various ingredients used in making Sendai Miso. From left to right: Dry soybeans, soaked soybeans, polished rice, steamed rice, steamed rice with koji and salt, rice mould (koji), salt mixed with steamed soybeans and moulded rice, finely ground soybeans, coarse miso one week old, coarse miso one year old. “These were received from the Sendai Miso Factory, Tokyo, Japan, March 20, 1930.” (2) Vegetables preserved in red soybean miso. The vegetables are Japanese white radish (*daikon*), cucumber, burdock root, small vegetable melon [*uri*] and egg plant [eggplant].

Page 4444-45 (23 March 1930). Photos at the Sendai Miso Factory, Tokyo: (1) Steamed soybeans cooling on a floor in a wave pattern. “After the beans are cooled, they are mixed thoroughly with molded rice [koji] and salt (shown in the background in a mixing machine). The mixture is placed in large curing vats and allowed to cure for about three months.” (2) A second view of the same room from a different angle. Address: Agricultural Explorers, from USDA, Washington, DC.

731. Dorsett, P.H.; Morse, W.J. 1930. Miso in Japan (Document part). In: P.H. Dorsett and W.J. Morse. 1928-1932. Agricultural Explorations in Japan, Chosen (Korea), Northeastern China, Taiwan (Formosa), Singapore, Java, Sumatra and Ceylon. Washington, DC: USDA Bureau of Plant Industry, Foreign Plant Introduction and Forage Crop Investigations. 7,410 p. Unpublished log.

• **Summary:** Page 6820 (21 Dec. 1930, Kobe, Japan. Mr. Morse’s notes). “Mr. Saito at Dairen had advised us that there were many places in Kobe where meat was preserved in soybean miso.” Had no difficulty in finding three such places, where “we found the men busy in packing meat in white miso. In the Kobe and Kyoto districts white miso is manufactured quite extensively. Small meat shops are the only establishments putting up the miso-preserved meat. For this product beef is used and white miso. Small slices of beef about the size of the palm of the hand and about ¼ inch thick are placed on a layer of miso (about ¼ inch thick), then a layer of miso and another layer of meat. About 1½ pounds of beef are packed with miso in each tub which sells for two yen. The meat is best after being preserved in miso about 7-10 days and does not keep well after two weeks except in rather cold weather. Miso preserved meat is always boiled. White miso is always used for preserving fish and meat (beef) while red miso is used for preserving vegetables, the red miso being considered too salty for meat. Several meat shops were visited and we always found the same products and same methods of preserving the beef. Apparently this product is very popular in the Kobe district. At one of the shops we were advised that there are some miso-meat preserving places in the Tokyo district.” Photo: Small tubs of miso preserved meat displayed in front of a meat shop in Kobe.

Pages 6822-23 (22 Dec. 1930, Kyoto, Mr. Morse’s notes). At the Imperial Agricultural College they met Isawo Namikawa, Professor of Horticulture, who said that Kyoto is noted for several special soy products such as white miso, soy sauce, and natto. Kyoto soy sauce is lighter in color, not so heavy, and not quite as salty as soy sauce made in other parts of Japan. “In looking around Kyoto in our little spare time we saw no places where meat is preserved in miso.”

Pages 6931-32 (7 Jan. 1931). Morse went to the Imperial Department of Agriculture in Tokyo and met the director, Mr. A. Manabe, who provided information,

statistics, and recent publications on soybean acreage, production, utilization, and industries in Japan, Chosen [Korea], and Taiwan. These are the most complete yet received. Mr. Manabe stated that soybean acreage and production is gradually decreasing in Japan proper. This is due mainly to the increased acreage of more intensive farming, especially truck crops and rice. However the acreage of soybeans for green manuring purposes is increasing rapidly, especially in the southern half of the main Island and Kyushu Island.

Japan proper produces more than 2,500,000 koku of soybeans but uses over 7,500,000 koku; the difference is imported from Chosen and Manchuria. The soybeans imported from Manchuria are "are of much lower quality than beans from Japan proper and Chosen and are used primarily for the manufacture of soy sauce, miso, bean oil and bean cake. The beans from Japan proper and Chosen are utilized primarily for food, such as bean curd (Tofu), confections, flour and green vegetable beans. The following table gives the ratio in percent of soybean utilization in Japan:

Miso 22.7%. Soy sauce 22.7%. Bean oil and bean cake 21.6%. Bean curd [tofu] 15.4%. Green vegetable beans 0.8%. All other food uses 6.0%. Feeding purposes 6.2%. Green manure 2.5%. For planting [seed] 1.6%. Miscellaneous uses (other than food) 0.5%. Note: These figures total 100%. Thus, 22.7% of the soybeans used in Japan are used to make miso, 22.7% are used to make soy sauce, 21.6% are crushed to make soybean oil and cake, etc.

Page 6937 (10 Jan. 1931, Tokyo, Notes by Mr. Morse). Spent most of the day in the Shinjuku district looking up soybean products. "More String Natto in rice straw packages was observed in this section than any we have visited. At the stores we found considerable quantities of fish preserved in white miso and also fish preserved in sake mash. The latter is said to keep much longer than the miso preserved fish and if it keeps long enough might afford a good article of export to the United States, for undoubtedly it would prove far less harmful than some of the products [alcohol] now used in violation of the 18th amendment... Nearly all food stores carried a variety of vegetables preserved in red miso."

Page 6943 (12 Jan. 1931, Kobe). Visited a large miso meat preserving place that packs 5,000 to 6,000 tubs of miso preserved meat yearly. The proprietor said that about 3,000,000 tubs are sold each year in the Kobe district. The small tubs, costing 70 sen each, hold about 2 pounds of beef. The Kobe district is noted for its fine quality of beef. Photos (p. 6946-47) show these small flat tubs.

Page 6945-46 (Jan. 13, Kyoto). Visited a large miso factory, where both red and white miso are made. White miso is manufactured quite extensively in the Kyoto and Kobe districts; it keeps only about 1 month in the summer, but about 3 months in the winter. A table shows the most

famous forms of miso made in Japan: Sendai miso—red. Kanto miso—red. Okazaki miso—black. Country miso—red. Kinzanji miso—red. White miso—white.

Pages 7003-04 (Jan. 19, Tokyo, Morse's notes). "At evening supper we had for dinner beef preserved in white miso. After broiling, the flavor of the meat reminded one of that of the sugar cured hams of the Southern States. The meat had been cured just eight days and was well flavored through."

Page 7116 (Jan. 29). In a letter to Dorsett in Peking, Morse states that the broiled, miso preserved beef was "delicious" and tasted like ham. "I also had some white miso preserved fish. Although it was good, I did not care nearly so much for it as I did the beef." Address: Agricultural Explorers, from USDA, Washington, DC.

732. Morse, W.J. 1930. Soybean utilization. *USDA Farmers' Bulletin* No. 1617. 27 p. Jan. Revised 1932.

• **Summary:** Contents: Introduction. Soybeans for human food: Dried beans ("The Easycook and Hahto varieties, however, cook fully as soft as other beans." Also used as a substitute for coffee or for salted peanuts), green or vegetable beans ("The Hahto and Easycook varieties have been found especially valuable for use as green beans"), soybean flour, soybean oil, soy sauce, soybean sprouts, soybean vegetable milk ("used so extensively in China." Also mentions the residue [okara]), soybean curd. Soybeans for livestock: For swine, dairy cattle, beef cattle, sheep, poultry. Soybeans for oil: Methods of processing beans for oil, utilization of soybean oil. Soybean meal: Soybean meal for human food, soybean meal for stock feed, for swine, for dairy cattle, for beef cattle, for poultry. Soybean meal as a fertilizer. Miscellaneous uses of soybean meal. Soybeans for hay: Soybean hay for dairy cattle, for beef cattle, for horses and mules, for sheep, for swine, for poultry. Soybeans for pasturage: Swine, sheep, or poultry on soybean pasturage. Soybeans for silage. Soybeans for soilage [green crops for feeding confined animals; a term first used in 1928]. Soybeans for soil improvement. Soybean straw: Feeding value, and fertilizing value of soybean straw.

"Soybean milk in the form of a powder is a commercial product in some European countries, and in parts of the United States it has been used in special feeding cases" (p. 5). "In many cities in the United States having a large oriental population fresh bean curd may be found in the Chinese and Japanese markets" (p. 6).

Photos show: (1) Six men steaming soybeans while making miso in Japan. (2) Muffins made from wheat flour and soybean flour. (3) Making soy sauce in a Chinese courtyard. (4) Grinding soybeans with a stone mill to make soybean milk in China. (5) "Blocks of freshly made bean curd, 'tofu,' as sold in the markets of the Orient." (6) Loading soybean oil in tanks at a soybean oil mill, Harbin, Manchuria. (7) Soybean cakes awaiting shipment at a

Manchurian port. (8) Hogs in a field of soybeans. (9) “Pasturing soybeans and corn with sheep is a common practice in the Corn Belt states.” (10) Corn and soybean plants growing together for use as silage; a boy is standing by the plants. (11) “A fine growth of soybeans to be used for soiling.” Address: Senior Agronomist, Office of Forage Crops and Diseases, Bureau of Plant Industry, Washington, DC.

733. Dorsett, P.H.; Morse, W.J. 1930. Re: Miso. Letter to Mr. Knowles A. Ryerson, Foreign Plant Introduction, Bureau of Plant Industry, USDA, Feb. 15. 2 p. Typed, without signature (carbon copy).

• **Summary:** A detailed discussion of the importance of miso in Japan. Location: National Archives, College Park, Maryland. Record group 54–Bureau of Plant Industry, Soils and Agricultural Engineering. Subgroup–Div. of Forage Crops and Diseases. Series–General Correspondence, 1905-29. Box 93–Morse–Napier. Folder–Morse, W.J.–#4 F.C.I. Address: The Imperial Hotel, Tokyo, Japan.

734. Morse, W.J. 1930. Utilizacion de la soya [Utilization of soya]. *Cuba (Santiago de las Vegas). Estacion Experimental Agronomica, Circular No. 69.* 40 p. May. Translation by Emma L. Sena of USDA Farmers’ Bulletin 1617. [Spa]

• **Summary:** In the introduction, Ing. Francisco B. Cruz, Director of the Agronomic Experimental Station, E.C., praises an imported soy oil named “Aceite comestible de Soya.” A full-page ad for this product (just before p. 36), apparently with the brand name Excelsior, is also shown. Address: USDA, Washington, DC.

735. Kellogg, John Harvey. 1930. Soybeans as human food. Paper presented to the American Soybeans Grower’s Association, Sept. 11. 20 p.

• **Summary:** Dr. Kellogg shows that he has an excellent knowledge of the world literature on soybeans and soyfoods, much of which he summarizes in this speech. “Many years ago (1899), the United States Department of Agriculture, called upon me to undertake the preparation of a vegetable meat. The Assistant Secretary, Dr. Charles Dabney, wrote me, suggesting that the navy bean might be used for the purpose. I found, however, as I expected, that this legume was not suited to the purpose. At that time the soybean was not grown to any extent in this country, I was wholly unacquainted with it, and so naturally sought to find in nuts, especially the peanut, a solution of the problem, and succeeded in producing a vegetable meat, Protose, of which several thousand tons have since been made and consumed. But the introduction of the soybean renders quite unnecessary any other substitute for flesh meats.” The author discusses his belief that primitive man subsisted wholly upon plant products (i.e. ate a vegan diet “according to Prof. Elliot of Oxford University, Prof. Ami of Montreal,

and other distinguished paleontologists”), and the nutritional value of soybeans and their basic-ash quality. “All meats yield a highly acid ash. The excess of acid in these foods produces a lowering of the alkalinity of the blood and tissue fluids when they are freely used, a condition which is known as acidosis.” He also discusses soya sauce (which is now being manufactured in the USA), miso (which like soy sauce has a flavor resembling that of the osmazomes found in meat and meat sauces), roasted soy nuts (resembling roasted peanuts), pressure cooking whole soybeans, adding soy meal (flour) to breads, soymilk being distributed in bottles in parts of China and Japan, soy cheese [tofu], and the many health benefits of soy milk described in the medical literature, the many health problems caused by consuming flesh foods.

“Von Noorden, the world famous German physician, has demonstrated that the soy bean is of very great service in changing the intestinal flora.” Note: This is the earliest document seen (June 2003) concerning soy and changing the intestinal flora. It is also the earliest document seen (June 2003) that uses the phrase “changing the intestinal flora” in connection with soy.

“In spite of the frantic efforts of vested interests to promote the uneconomic live-stock industry, it will no doubt gradually disappear as a true science of agriculture is developed and the country becomes more densely populated. The conversion of vegetable into animal protein by feeding to steers and pigs, is one of the most wasteful of all human activities. Armsby has shown that 100 pounds of digestible vegetable protein are required to produce 3 pounds of meat protein...”

Discusses Stefansson’s absurd so-called meat-eating experiment, which was really a publicity stunt. Stefansson took no more than 20% of his calories in the form of lean or muscle meat. The rest of his diet was fat. “Excessive meat consumption is one of the begetting sins of the people of this country. Our per capita meat consumption is 5 ounces per day, just 5 times that of Italy (1.0 oz.) and ten times that of North China (0.5 oz.), while the average native of South China eats no meat at all, and is one of the hardest and most industrious of workers.”

“Thanks to the efforts of our efficient Plant Introduction Bureau, the soybean is beginning to get a start toward recognition and appreciation in this country; but it is evident that a plant possessed of such superlative values and such astonishing versatility and adaptability should receive far more serious attention than has heretofore been given it by the agriculturalists of this country... There can be no doubt that it is destined to play a large part in the feeding of America’s millions...”

Note: This is the earliest English-language document seen that uses the term “soy nuts” to refer to soynuts. Address: Battle Creek, Michigan.

736. Morse, W.J. 1930. La utilizacion de la soja en diversas industrias [The utilization of soya in various industries]. *Hacienda (La) (Buffalo, New York)* 25:298-301. July; 25:347-49. Aug; 25:394-96. Sept. [1 ref. Spa]

• **Summary:** This is a translation of USDA Farmers' Bulletin 1617, but with excellent new illustrations. Contents: Introduction. Soybeans in the human diet: Whole dry soybeans, green vegetable soybeans, soy flour, soy oil, soy sauce, soy milk, tofu (*cuajada de soja*). Soybeans in the feeding of domestic animals. Soy oil: Extraction, use. Soybean cake: as a human food, as a livestock feed, as a fertilizer. The value of soybean forage. Soybean in silage. Soya as green forage. Soybeans for the improvement of soils. Soybean straw.

This article contains many interesting photos: 1. A man with a hand turned stone mill in China grinding soybeans to make soymilk. 2. Soybean cakes stacked and partly covered with tarpaulins at a port in Manchuria. 3. Earthenware vats used for making soy sauce in a courtyard in China. 4. Steamed soybeans being cooled to make miso in Japan. 5. Soybeans intercropped with corn. 6. Manchurians outside a soy oil factory in Dairen. The equipment was installed by the French Oil Mill Machinery Co. 7. Carrying round soybean cakes in a cart at the same factory. 8. A soybean mill at Yokohama, Japan. 9. An Anderson Expeller for the extraction of soy oil. 10. A tractor pulling rotary disks for cultivating soybeans in the USA. 11. Harvesting soybeans with a tractor in the USA. 12. A tractor pulling a harvester-thresher combine in the USA. Address: USDA, Washington, DC.

737. Morse, W.J. 1930. Soybeans in the Orient. *Proceedings of the American Soybean Assoc.* 3:96-100. Eleventh annual field meeting. Held 10-12 Sept. 1930 in Illinois.

• **Summary:** This letter was written by William Morse on 20 July 1930 from Dairen, Manchuria, to Dr. W.L. Burlison, President of the American Soybean Growers Assoc. at the University of Illinois. It describes the travels of Dorsett and Morse as agricultural explorers for the USDA, studying soybeans and soyfoods, in Manchuria, Japan (Hokkaido and Tokyo), and Korea (Seoul).

"It is recalled that last season the use of the soybean as a green vegetable was described. Throughout the season, it was found that the green vegetable was a very popular food with the Japanese from one end of the Japanese Empire to the other. The vegetable soybean is classed as a garden bean and as such is extensively grown by the Japanese truck farmers."

The authors were in Hokkaido from mid-August until early October, and they visited all the principal soybean sections. "The Obihiro station in the eastern part of the island [of Hokkaido] is conducting the most extensive work in breeding and variety testing. We succeeded in collecting a very large number of varieties and selections of this

northern region as well as information on culture, harvesting, threshing, insect pests, and diseases. To supplement this material, we obtained a large number of still and motion pictures of very interesting scenes of the Hokkaido soybean industry."

They arrived in Korea on 20 Oct. 1929 and established headquarters at Keijo (Seoul). "We found Korea to be a most interesting country and different from anything we had seen in Japan. One of the most amazing things was the extent to which soybeans are grown. Almost equally amazing was the large number of native Korean soybean varieties we found in the various sections and at the experiment stations. At the Suigen Experiment Station, they have more than one thousand native Korean varieties and selections under test. The authorities were very generous and gave us samples of each. In addition to this collection, we obtained a few hundred samples from Korean farmers, grain merchants on village market days and from village and city grain dealers. The Korean Department of Agriculture added about 300 samples to our collection by obtaining seed of the principal varieties from the village agricultural societies in each of the prefectures of Korea.

"Altho the Koreans do not use the soybean as extensively for food as do the Japanese, considerable quantities are used and in quite different ways. The beans are used principally boiled with other grains such as millet or kaoliang. They are also used in making miso and soy sauce, but these products are made quite differently from those of Japan or China. Soybean sprouts are found very abundantly in all of the markets and at all of the small food stores. The beans produced in Korea are for the most part excellent quality and are largely shipped to Japan for the manufacture of miso, soy sauce, bean curd, and natto. Soybeans when soaked with chopped millet or kaoliang straw are used universally for feeding oxen and cows, the common work animals of Korea.

"We left Korea about the first week of December [1929] for our Tokyo headquarters and collected seed samples and products as we went along. From the latter part of December until the latter part of March, we put in full time collecting soybean products and learning of their use and manufacture. We succeeded in collecting a large number of interesting products, as the Japanese use the soybean very extensively in their daily diet. In the making of cakes, candies, and numerous other confections, the roasted soybean is used in a similar manner to the peanut in America. Of course, soy sauce, miso, bean curd, and natto are the principal soybean products and the ones most extensively used. As an example of the large use of miso, which is used as a breakfast soup with vegetables and also in preserving fish, vegetables, and meat, we visited three large miso factories in the Tokyo district and found that each produced about one million pounds of miso yearly. In

addition to these three large factories, there were numerous small factories scattered throughout the same district.

“As the planting time was approaching in Manchuria, we left Tokyo the latter part of March and arrived in Dairen, Manchuria, the first of April... This country is the real land of the soybean and Dairen, the real city of the soybean. In 1929, 29.2 percent of the total cultivated area of Manchuria was devoted to the growing of soybeans, producing more than 178,000,000 bushels of seed, thus leading all other crops in acreage and production. The Port of Dairen handles about eighty (80) percent of the exports of beans, bean cake, and bean oil.

“The planting season for soybeans in Manchuria begins about the first of May... We had rather expected to find a large number of products made from beans, bean cake, and bean oil but our findings thus far have been very meager. The oil is used in the manufacture of soaps, paints, lard substitutes, and salad oils, but only a very few factories are engaged in producing these products. The beans are used chiefly for oil and oil cake, but during the last three or four years, the demand of European mills for beans has had a serious effect, not only on the Dairen soybean oil mills, but also on the oil mills throughout North and South Manchuria. In Dairen, at the present time, only about forty-five soybean mills are active during the crushing season, whereas four years ago there were about ninety. The oil cakes are for the most part shipped to the Japanese Islands for feed and fertilizer (chiefly fertilizer), to China and the East Indies for fertilizer, and to America and Europe for cattle and poultry feed.”

“With this letter we are sending some lantern slides illustrating various scenes of the soybean industry in oriental countries... With best wishes for a most interesting and successful 1930 meeting.”

Note 1. This is the earliest English-language document seen (Feb. 2004) that uses the term “vegetable soybeans” (not preceded by the word “green”) to refer to green vegetable soybeans.

Note 2. This letter was reprinted in *Soybean Digest* (April 1945, p. 11-12). Address: USDA, Washington, DC.

738. Dorsett, P.H.; Morse, W.J. 1930. Soybean chiang in Manchuria and China (Document part). In: P.H. Dorsett and W.J. Morse. 1928-1932. Agricultural Explorations in Japan, Chosen (Korea), Northeastern China, Taiwan (Formosa), Singapore, Java, Sumatra and Ceylon. Washington, DC: USDA Bureau of Plant Industry, Foreign Plant Introduction and Forage Crop Investigations. 7,410 p. Unpublished log.
• **Summary:** * = Best photos. Page 4620 (2 May 1930, Hsiungyaocheng, Manchuria). The South Manchuria Railway agricultural experiment station here is testing about 60 soybean varieties under the direction of Mr. Kaneyasu Hisatake [Japanese name], agricultural engineer. “About 90% of the soybeans planted in this area consists of a

greenish yellow variety called *Te-cha-chin* which is used for oil and is also utilized by the farmers for bean curd, miso, and other food purposes.” Page 4641-42 (May 8, Kungchuling, Manchuria). Mr. Kanda [Japanese name] is director of the Kungchuling experiment station.

Kungchuling is the center of a very extensive soybean growing section and the experiment station is doing much work with the improvement of native [indigenous/domestic] soybean varieties. Over 500 varieties are under test yearly and more than 2,000 varieties have been experimented with. “The great range in size, color, and shape of the seed was very interesting.” Visited “some Chinese stores where Chinese soybean miso and soy sauce were sold. The Chinese miso is more liquid (like a thin paste) than the Japanese and not ground, but both taste very much alike.”

Page 6252-55 (23 Oct. 1930, Peiping, China). Went to the “pickle factory of Chang Shun Kung, where we got information about soybean jam [jiang], pickles, etc.” Photos taken at the factory of Mr. Chuang Shun Kung: (1) “View across soybean jam and pickle jars covered with matting.” Factory buildings in the background. (2) “Looking along a portion of a line of large earthen jars filled with soybean jam [jiang].* These jars hold about 800 catties of jam.” (3) Same factory. Mr. W.J. Morse standing by the end jar in one of the rows of jars.* (4) “The end and half the length of a dry brick of wheat and soybeans, curing stock for Chinese jam made of soybeans.” This product is used in making soy sauce and three forms of soybean jam or paste. Chinese name *Ton chih* [sic, *Tou chih*] meaning “salted beans” [soy nuggets]

Pages 6339, 6344-45 (3 Nov. 1930, Peiping, China. P.H. Dorsett’s notes). “After tiffin we went to the soy sauce, soy jam and pickle establishment of a Mr. Wang in the outer city to the southwest. This establishment is some 300 years old and many of the large earthen glazed jars are of the age of the establishment.” Photos of Mr. Wang’s Lan Hsin Chai Soy Sauce Factory: (1) “View from the northeast corner of the compound just in front of the soy sauce processing room, looking over the large earthen jars of jam [jiang], pickles, etc.” Some jars are covered with reed grass matting or conical lids.* (2) Another view from the southwest corner of the compound.

Note: This is the earliest English-language document seen (July 2003) that uses the term “soybean jam” or “soy jam.” Address: Agricultural Explorers, from USDA, Washington, DC.

739. Dorsett, P.H.; Morse, W.J. 1930. Pickled soybean curd, red and white [Fermented tofu] (Document part). In: P.H. Dorsett and W.J. Morse. 1928-1932. Plant Introduction and Forage Crop Investigations. 7,410 p. Unpublished log.

• **Summary:** Page 6264 (24 Oct. 1930). While in Peiping, China, P.H. Dorsett writes: "... went to Hsi Tan Pailou Street in the northwestern part of the city before tiffin where we found a number of kinds of bean curd... We got a number of still and motion pictures, also quite a collection of soybean products which we hope to get photographed during the afternoon."

Page 6270. A photo shows several small crocks (about 15 cm {5.7 inches} in diameter) in a small carrying case. Dorsett names them "Pickle: soybean curd, white and pink... Peiping, China... Red chiang tofu and white chiang tofu... Chinese name 'Tu ju' meaning 'curd milk.'"

Page 6271. A photo shows two crocks of about the same size, one with a tied paper lid, the other open at the top. "White pickled beancurd. Peiping, China... Chinese name, chiang tofu (white). Small blocks of bean curd placed in jar of rice wine and salt. Jar sealed and placed in sun, where curd cures for a year."

Page 6272. A photo shows two crocks of about the same size, one with a tied paper lid, the other open at the top. "Pink bean curd pickled... Peiping, China... Chinese name, chiang tofu (red). Small blocks of bean curd placed in jar of rice wine and salt with red rice [angkak] (produced by fungus growth). Jar sealed and placed in sun, where curd cures for a year."

Note: This is the earliest English-language document seen (Feb. 2007) that uses the terms "pickled beancurd" or "White pickled beancurd" or "chiang tofu" or "Red chiang tofu" or "White chiang tofu" or "Tu ju" to refer to fermented tofu. Address: Agricultural Explorers, from USDA, Washington, DC.

740. **Product Name:** Miso, Koji.

Manufacturer's Name: Igarashi Miso, Koji Seizo-sho.

Manufacturer's Address: P.O. Box 254, Loomis, California.

Date of Introduction: 1930.

New Product–Documentation: The Japanese American Directory. 1930. p. 199.

741. **Product Name:** Miso.

Manufacturer's Name: Noguchi Miso Seizo.

Manufacturer's Address: 119 Lake St., Salinas, California. Phone: 634.

Date of Introduction: 1930.

New Product–Documentation: The Japanese American Directory. 1930. p. 140. Also in 1934 directory, p. 141. In Japanese: Noguchi Miso Koji Sei (zō) sho. In English: 119 Lake St. Phone has changed: 834.

742. **Product Name:** Miso, Koji.

Manufacturer's Name: Sacramento Miso, Koji Seizo-sho.

Manufacturer's Address: 215 M St., Sacramento, California. Phone: MAin 4018-M.

Date of Introduction: 1930.

New Product–Documentation: The Japanese American Directory. 1930. p. 165.

743. Fujimoto Shokai. Fujimoto Co. 1930. Fujimoto Co.: Importer, manufacturer, exporter (Ad). In: The Japanese American News. 1930. The Japanese American Directory (*Nichibei Jūshoroku*). No. 26. p. A-11. [Jap; Eng]

• **Summary:** Ad (full page). The top ¼ of this ad is in English. Fujimoto Shokai's factory (238 Jackson St.) makes Kanemasa brand shoyu, miso, koji, and Japanese-style pickles (*tsukemono*). The San Francisco Branch (Shiten; 1640 Post St.) also imports and exports Japanese- and Western-style foods and goods. Main office cable address: "Fujimoto" San Francisco. Address: Factory: 238 Jackson St.; Office: 1640 Post St. Both: San Francisco, California. Phone: Factory: DOuglas 1216. Imports: WEst 0733 & 0734.

744. Japanese American News Inc. / Nichi-Bei Shinbunsha. 1930. Nichibei jūshoroku [The Japanese American directory. No 26]. San Francisco, California: Nichi-Bei Shinbunsha. 765+ p. Index of cities. 23 cm. [Eng; Jap]

• **Summary:** Most entries in this directory give the company name in Japanese characters, followed by the address and phone number (if any) in English. There are many smaller, vertical ads on the lower half of quite a few directory pages, usually for a company listed on that page. Most are either mostly or entirely in Japanese.

Contents: Ads (full- or half-page, in Japanese and English, p. A-1 to A-34). Table of contents of Japanese businesses in San Francisco, organized by type of business (p. 3). Directory of northern California (in Japanese and English, p. 3-394). Table of contents of Japanese businesses in Los Angeles, organized by type of business (S-19). Directory of Los Angeles, Southern California, and all other U.S. states (p. S-1 to S-340).

On the front cover (which is mostly in English and is at the "back" of the book) is an illustration of the dome of city hall. In the center, vertically in Japanese characters is written *Nichibei Shinbun-sha*. The many directory listings for soyfoods manufacturers and ads for soy-related companies are each given separately. Address: Ellis Street, San Francisco, California.

745. Shi, Shenghan. 1930. Ch'i-min yao-shu [Ch'i-min yao-shu (6th century Chinese agricultural encyclopedia)].

Reprinted by Commercial Press, Shanghai, China. [Chi]* Address: China.

746. *Los Angeles Times*. 1931. Why import soy? We can grow this bean to perfection. Jan. 11. p. J6.

• **Summary:** This article seems to be based on: Morse, W.J. 1927. "Soy beans: Culture and varieties." *USDA Farmers' Bulletin* No. 1520. 34 p. April. It begins: "Californians are accustomed to thinking of the soy bean as a cover crop. It is interesting to note that in its native land, Manchuria, this use of the soy bean is of small importance." There the soy bean is used mainly as a food product; only the by-products, such as bean cake and straw, are used as fertilizer.

Food products include a paste [jiang], fermented for about 2½ months, soy [sauce], bean curd [tofu], dry bean curd cakes, bean curd wafers, flour, and "milk." The expressed oil is used locally mainly for illumination [in lamps]. The better grades are used for cooking and the poorer grades for lubricating, for making printer's ink and varnish, and "as a waterproofing material in the manufacture of cloth, paper umbrellas, and lanterns.

The bean cake is used to fatten pigs and cattle. In Japan, the cake is used as a fertilizer for mulberry trees and rice fields. "In Manchuria the cake is crushed and mixed with oil and arsenic and placed on the roots of trees to poison insect pests." This insecticide is used to kill the pests that injure the wild trees where silkworms live.

The soy bean was grown in the United States as early as 1804, but only as a curiosity. In Europe it was mentioned as early as 1790. The soy bean first became known worldwide during the war between Russia and Japan [1904-05]. During the war, the many troops quartered in Manchuria created a large demand for soybeans as food. Local farmers increased their acreage. But after the war they found they had a surplus that was far too great for the demand in the local market or the Orient. The price dropped and a trial shipment was sent to London. The timing was perfect, since English vegetable oil mills were running part time because of a small crop of cottonseed and the failure of linseed in the USA and the Argentine. For the rest of that season, the English mills ran full time on soy beans.

747. Morse, W.J. 1931. Visit to Kyuemon Hayakawa Miso Co. in Okazaki, Japan (Document part). In: P.H. Dorsett and W.J. Morse. 1928-1932. *Agricultural Explorations in Japan, Chosen (Korea), Northeastern China, Taiwan (Formosa), Singapore, Java, Sumatra and Ceylon*. Washington, DC: USDA Bureau of Plant Industry, Foreign Plant Introduction and Forage Crop Investigations. 7,410 p. See p. 6997-7000. Unpublished log.

• **Summary:** W.J. Morse took notes and photos of his visit to Okazaki on 16 Jan. 1931. He was told by an innkeeper in Okazaki that there are "two factories in Okazaki making the famous Okazaki black miso... We found the Kyuemon Hayakawa Miso Co. factory about 3 miles from the inn. The master of the factory took us through the plant and explained each step of manufacture. Okazaki miso is made entirely from soybeans while other forms of miso are made

from rice and soybeans. It takes twenty months to cure black miso. This company sells about 50,000 kan yearly.

"Okazaki miso keeps indefinitely and is used in making soups and preserving vegetables. At breakfast at the inn this morning we had black miso soup and found it had a much better flavor than red miso soup. The black miso is also sometimes used in making forms of soy sauce [tamari] by adding water."

Photos (p. 6999-7000) show: A large wooden cask or tub filled with Okazaki black miso and held together by many wide braided bamboo hoops. The cask is several feet taller than the miso maker (wearing an apron with a crest symbol or *mon* on the front) standing next to it. The top of each cask is piled high with about 1,200 pounds of stones to weight the miso (3 photos).

Page 7031 (17 Jan. 1931, Tokyo). In a letter to Dorsett in Peiping, China, Morse comments on the two factories making black miso in Okazaki.

Page 7053 (27 Jan. 1931). Morse notes in a cover letter accompanying two parcels sent from the American Consulate in Tokyo to Mr. K.A. Ryerson, Foreign Plants, B.P.I. [Bureau of Plant Industry], Washington, DC: "Of the products the most interesting is the famous Okazaki Black Miso under [product] numbers 6670 and 6671 which were obtained on a recent trip to Okazaki to learn the process of manufacture. This form of miso is the only one made wholly from soybeans as other forms are made with soybeans and rice. Black miso has been made at the same factory for about three hundred years and no improvements have been made in the methods of manufacture." Address: Agricultural Explorers, from USDA, Washington, DC.

748. William Morse examining four wooden boxes of Okazaki miso [Hatcho miso] at Hayakawa Kyuemon Shoten in Okazaki, Japan, 16 Jan. 1931 (Photograph). 1931.

• **Summary:** This 6½ by 8½ inch black-and-white photo has been dated from the log of the Dorsett-Morse Expedition (p. 6997). There are three rectangular wooden boxes and one round wooden box. Three of the four are closed and on the front of each is an illustration showing a man with a raised sword on a bridge in Japan; a young boy is at his feet. On one pillar of the bridge is written in large Japanese characters "Yahagi Hashi," since the Yahagi River flows underneath it.

Note 1. According to *The Book of Miso* (Shurtleff & Aoyagi, 1976, p. 219): "A Kabuki drama tells of how Hideyoshi Toyotomi (1536-1598), the child of poor farmers in central Japan's Aichi prefecture, rose to become one of Japan's most powerful feudal lords. When only ten years old, the child is said to have fallen asleep one night on a bridge near his home, wrapped only in a straw mat. A famous robber passing over the bridge scornfully kicked the urchin, who awoke and intrepidly grabbed the man's spear commanding him to stop such cruelty. The robber,

impressed with the boy's courage, decided to raise him as his own son. In the play, the straw mat bears the trademark of one of the nearby Hatcho miso shops where it was used to prepare koji. Historians cite the incident to prove that Hatcho miso was being made as early as 1546." On one pillar of the bridge is written in large Japanese characters "Yahagi Hashi."

Note 2. No trademark can be seen on the straw mat on the front of the Hatcho miso boxes in this photo. Perhaps the story was created after 1931.

749. Tihon, L. 1931. A propos d'une variété nouvelle de soja O-too-ton [Concerning a new variety of soybean, O-too-ton]. *Bulletin Agricole du Congo Belge* 22(1):120-23. March. [Fre]

• **Summary:** "The management of the plantations has sent us, in the chemical laboratory [at Leopoldville, Belgian Congo], a rather important sample of seeds of the soybean variety O-too-ton [Otootan], recently introduced from Atlanta, Georgia, USA, to the botanical garden at Eala. At the time of a former shipment of two other varieties, we have pointed out in the report of our studies (10 October 1928) the interest in this legume and given some generalities concerning its cultivation and possibilities for various uses." Tables compare O-too-ton with the former two varieties (Jaune [yellow] and Violette) in terms of size, weight, chemical composition, and mineral content. A detailed analysis of the oil of the yellow soybean is given.

The author then discusses the physiological value of the soybean and its by-products. It contains about twice as much protein as locally-consumed beans and much more oil. It can therefore help in improving the diet of the indigenous people, which is deficient in protein (*albuminoides*). It is also a rich source of vitamin E and other key nutrients. As noted in the author's previous report, the people of East Asia use the soybean to make a milk, a curded milk (probably tofu), and various fermented foods such as miso and soy sauce. Various studies have shown the milk to be very nutritious and digestible.

"The information given above has been, in large part, extracted from the *Bulletin de la Société d'Hygiène alimentaire et d'Alimentation rationnelle de l'homme* (Vol. 18, no. 1, 1930)."

Note: This is the earliest document seen stating that vitamin E is found in soybeans. Address: Director, Laboratoire de Chimie, Leopoldville [Congo Belge].

750. *Official Record of the U.S. Dept. of Agriculture (The)*. 1931. Plant explorer brings back new soybean varieties from Orient. 10(15):113. April 11.

• **Summary:** The content of this article is identical to that of USDA's press release of March 28. However, a photo shows William J. Morse "with some of the soybean products he

obtained in the Far East." Morse was looking at four boxes of Hatcho miso, one of which was open.

751. Horvath, A.A. 1931. The soy bean as human food. *Industrial and Engineering Chemistry, News Edition* 9(9):136. May 10.

• **Summary:** Contents: Historical background. Properties and uses. Growing interest in soy bean preparations in different countries. Soya foundation proposed.

This article begins: "The soy bean is a plant of early cultivation in China. Its use dates back to the beginning of China's agricultural age under the Emperor Shen Nung. It is mentioned in the *Ben Tsao Gang Mu*, the ancient 'Materia Medica' written in the year 2838 B.C. This bean is remarkable for its richness in oil (average 20 per cent), protein (average 40 per cent), and ash (average 5.5 per cent), and the almost complete absence of starch.

"Since time immemorial the soy bean has been the most universal article in the Chinese dietary. It is also extensively used for food in Korea, Japan, Indo-China, the Philippine Islands, the Dutch Indies, Siam, and India. The Chinese make practically no use of dairy products, and the bulk of the people consume a very meagre amount of meat. Yet, in spite of this, they have lived for centuries on what appears to be a remarkably well-balanced diet by the use of the soy bean."

Also discusses: Soy bean milk, tofu, miso, chiang, Worcestershire sauce ("liquid soy sauce... when spiced, is sold under the label 'Worcestershire sauce.'"), W.J. Morse of the USDA, soyfoods in Europe, Prof. Berczeller, and work at the Physiological Institute of the University of Vienna under Prof. Durig and Dr. Wastl.

"In Russia, the soy bean is fondly called 'our young revolutionary Chinese ally.' 'Plant soy beans and you plant meat, milk, egg omelets,' is the newspaper cry. Efforts have been made all year to introduce soy bean dishes to restaurants and homes. A Soy Institute was recently organized in Moscow, as well as a special exhibition of soy foods at which 130 varieties of soy dishes, including cutlets, pastry, salads, candy, and beef, were shown. A dinner, prepared entirely of soy beans, was served to representatives of trade unions, factories, Red Army, and the Soviet press. The food was unanimously declared excellent..."

"Soya foundation proposed: There are reasons to expect that the United States will become the leader in introducing the soy bean in the daily diet of the white race. An important step should be the establishment of a soya foundation in order to promote the creation of a national soya food research institute." Address: Health Section, Bureau of Mines, Pittsburg, Pennsylvania.

752. Takata, Ryohei. 1931. Miso jôzô no eiyôgaku-teki kôsatsu. VII. Shihan miso-chû no kô tahassei shinkei-en B

bitamin [Nutritional studies on miso fermentation. VII. Vitamin B, the antipolyneuritis factor, in commercial miso]. *Jozogaku Zasshi (J. of Brewing, Osaka)* 9(8):584-87. Aug. [10 ref. Jap]
Address: Kôgaku-shi, Japan.

753. Harada, Taichi. 1931. Preparation of *Aspergillus oryzae* enzymes. *Industrial and Engineering Chemistry* 23(1):1424-27. Dec. [29 ref]

• **Summary:** *Aspergillus oryzae* enzymes are widely used in the food and textile industries in the Far East. They are used to make soy (Shoyu) sauce, miso, and saké. The source of the enzymes [koji] contains two important enzymes—diastase and protease. This paper describes “certain properties of *Aspergillus oryzae* enzymes which were obtained by Takamine’s method” (described in this journal, 1914). Address: Dep. of Biochemistry, New York Post-Graduate Medical School, Columbia Univ., New York, N.Y.

754. Morse, W.J. 1931. Utilization of soybeans and soybean products in Oriental countries. *J. of the American Society of Agronomy* 23(12):1067. Dec. Presented as part of Symposium on Soybeans. Leader: W.J. Morse.

• **Summary:** Manchuria, the largest soybean-producing country in the world, had a production of more than 5,000,000 tons of which more than 400,000 tons were used for food, 253,000 tons for feed, and 225,000 tons for seed. The remainder, more than 4,000,000 tons, was used in the production of oil and oil meal and for export. Japan in 1929 used over 39,000,000 bushels of soybeans of which only 13,000,000 bushels were grown in Japan proper, the difference being imported from Manchuria and Korea. The following shows the various ways in which this large amount of beans was utilized by the Japanese people: Miso, 22.7%; soy sauce, 22.7%; soybean oil and oil cake, 21.5%; bean curd, 15.4%; confections, 6.1%; forage, 6.2%; green vegetable beans, 0.8%; green manure, 2.5%; seed, 1.6%; miscellaneous, 0.5%.

Note: This is the earliest document seen (Oct. 2001) that gives industry or market statistics on green vegetable soybeans by geographical region. Address: USDA, Washington, DC.

Address: Ellis Street, San Francisco, California.

759. Ochse, J.J. 1931. Vegetables of the Dutch East Indies. Buitenzorg (Bogor), Java: Archipel Drukkerij. xxxvi + 1005 p. See p. 366, 389-93, 398, 407-08, 732, 943-71. An entirely revised and greatly enlarged second edition of his *Tropische Groenten* (1925). Translated by Mr. C.A. Backer. Illust. 25 cm. Index. [10 ref. Eng]

• **Summary:** This translation (by Mr. C.A. Baker, the reputed ex-Botanist for the flora of Java) of Ochse’s classic “may be taken as an entirely revised and much enlarged second edition of ‘*Tropische Groenten*’ (Tropical Vegetables), which booklet was published in July 1925.” The author, a Dutchman who confined his research to Java and Madoera, described the tempeh-making process in detail, saying that the mold used was *Aspergillus oryzae* and that it was obtained from a former batch of tempeh.

Page 366 discusses ontjom (tépépé boongkil in Javanese), tetépépé, and dagè, all made from peanuts. Page 372 notes that the pigeon pea (*Cajanus cajan*) can be used to make tépépé bosok.

Pages 389-93 discuss the soya bean, which has various names in local languages. Malay: Katjang djepoon or Kedele. Javanese: Dekeman or Dekenan, Dele, Demekan, Gadele, Kedele, Kedoongsool, or Dangsool. Sundanese: Kadele, Katjang booloo, Katjang djepoon, Katjang kadele. Madura: Kadhele, Kadhellee, or Kedeleh. A description of the plant is given.

Illustrations show: (1) A young soybean plant with leaves and pods (half size). (2) A bamboo scaffolding or curing frame, in tripod form with 3 horizontal supports, used for drying bunches of soybeans.

Soybeans come in two main forms: Light yellowish-brown seeds, and black seeds. The latter are used to make *ketjap* (Indonesian soy sauce). “Of the ripe seeds *pélas* (Jav.) is made, by mixing them with grated young coco-nut [coconut], salt, and other ingredients. The mixture is wrapped in a banana leaf and steamed.

“The seeds can also be roasted and afterwards pounded. The *boobook* [*bubuk*, roasted soy flour], *boobook* or *boobookan* (Jav.) is eaten in the shape of powder, usually with the addition of lombok and other ingredients.

“The seeds are mixed with a porridge of rice-meal and water and afterwards fried in coco-nut oil. This dish is called *rempeyek* (Jav.). It consists of brown slices in which the black *kedele*-seeds are scattered. *Rempeyek* is eaten either as a delicacy or with the rice table. “Témpé [tempeh, p. 391] is a much used product. In East- and Central-Java it takes the same place as the *ontjom* in West-Java. It is prepared in much the same way as *ontjom*, the reaction is brought about by the same fungus, *Rhizopus Oryzae*, Went et Prinsen Geerligs, which is transmitted by *ragi*. The seeds are cooked and, after they have cooled, put in a basket. By stirring, rubbing and even by treading, coupled with repeated washing with fresh water, one tries to remove the testa from the seeds. When this has been done, the seeds are put on hurdles (*sasak*) covered with banana- or waroo-leaves. Now the so-called *beeang*, i.e. rests of the fungus used for a former batch, is sprinkled over them and the mass is turned over on other *sasaks*. The *témpé*-cakes treated in this way are kept within doors and after two or three days the fungus has spread sufficiently for giving a light grey colour to the cakes, which then are soft and dry and ready for use. They are sold on the markets either cut into small pieces or divided at pleasure, according to the amount of money the buyer wishes to spend. *Témpé* is used, fried, in the *sayor* or prepared with all sorts of ingredients.

“Other products for the native market are *tahoo* [tofu] and *takoäh* [pressed tofu; Chinese: doufugan]. Both are eaten either boiled or cut into small slices, fried and added to *gado-gado* or, lombok rawit being added, as a side dish.

“For the preparation of *tahoo* or *takoäh* the seeds are soaked, ground fine, boiled and pressed through a cloth. The juice which is pressed out is mixed with salt, vinegar, coco-nut milk or with unburned gypsum (so-called *batoo tao*), imported from China. By this treatment a white gelatinous mass is formed, which, after cooling, can be cut into pieces.”

“Wet *tahoo* does not keep well for a long time. For this reason it is soon made into *takoäh*. For this purpose the *tahoo* is cut into pieces, folded in pieces of cloth, pressed in order to remove part of the water and next boiled in a decoction of *koonir* [turmeric]. The product obtained in this way has an intense yellow color and is a much relished delicacy, especially with lombok rawit [fiery dwarf chilies].”

Taotjo [Indonesian-style miso] is a porridge made of soybeans and rice meal. The soybeans are soaked, dehulled (the testa removed), cooked, and left to cool. Then they are mixed with the meal of rice (regular or glutinous), which has been previously roasted. “The porridge obtained in this way is poured on winnows (*tampah* [winnowing trays]) covered with waroo-leaves, sprinkled with *ragi* or *beeang*, probably of *Aspergillus Wentii*, Wehmer, and covered with leaves. The filled *tampahs* are piled on each other and left alone till the cakes are very mouldy. Then they are dried in

the sun, soaked in brine and mixed with sirup of *arèn* [sugar palm] and with *tapè* [*tapai*; a sweet fermented cake] of rice and glutinous rice. Next the porridge is placed out of doors. After the seeds have become soft by this treatment, which takes three or four weeks, the *taotjo* is ready for use.

“*Taotjo* must be boiled, otherwise the smell is too strong. It is eaten with cooked or raw vegetables. It is used for dressing some dishes of meat or fish, whilst it is also a material of which diverse side dishes are made.”

Note 1. This is the earliest English-language document seen (March 2009) that uses the word “*taotjo*” to refer to Indonesian-style miso.

“According to De Bie (1901), *tao djee* [*tao dji*; *doushi*, *douchi*] is *taotjo* alternating with layers of cooked whole *kadelè*-seeds. This stuff is put into a pot or basin with some salt and boiled arèn-sugar. The mass is left to itself during a few days till the *taotjo* has become pervaded by the salt and the sugar and has assumed a uniformly brown colour. Note 2. *Tao djee* [*doushi*] is soy nuggets, which are not the same as *Taotjo* [Indonesian-style miso]. De Bie (1901) seems to have made a mistake.

“Of the black *kadelè*-seeds *soya* [soy sauce] is made, exclusively by the Chinese and the natives. First the seeds are cooked in a strong solution of salt. After diverse manipulations the cooked seeds are mixed with arèn-sugar and so-called soya-condiments and the mixture is concentrated till the salt begins to crystallize. By diluting this product with more or less water one obtains the diverse qualities of *kètjap* or *soya* found in commerce.”

The “Pemimpin Pengoesaha tanah” of 15 Jan. 1915 lists various ingredients that can be used with black soybeans in making *ketjap*. “Young seedlings, obtained, like *taogè* [*taugé*, soy / bean sprouts], by fermenting, are called *ketjambah kedele*; they are cooked and eaten as *petjel* (Jav.) with the rice (*ganteng*, Jav.)”

“Finally young leaves of *Kadele* can be eaten, raw or steamed, as *lalab*.

Page 398 describes *dagè* and *témpé bengook* made from these seeds of the velvet bean (*Mucuna pruriens*). Roasted tempeh are also discussed.

Pages 407-08 states that the seeds of the *Katjang oji* (rice bean) can be used for the preparation of tempeh.

Pages 414-15 state that, when they have no soybeans, the Chinese use mung beans (*Katjang eedjo*) to make tofu and takoah, but they are most widely used to make mung bean sprouts (*taogè*). Page 634 mentions *témpé bosok* (overripe tempeh) made with the foul-smelling bruised leaves of the plant *Paederia foetida*. Page 732 also mentions overripe tempeh.

Note 2. This is the earliest English-language document seen (Dec. 1998) which contains detailed information about tempeh, or which refers to tempeh as “*témpé*.”

Note 3. This is the earliest English-language document seen (Feb. 2004) that uses the word “*tahoo*” or the word

“takoäh” to refer to tofu. Address: Buitenzorg (Bogor), Java, Indonesia.

760. Ochse, J.J. 1931. Indische Groenten [Vegetables of the Dutch East Indies]. Buitenzorg (Bogor), Java: Department Landbouw. 1004 p. See p. 388-92. [10 ref. Dut]

• **Summary:** For details, see the English-language translation, also published in 1931.

Under soybean utilization, the following food products are discussed in detail on pages 390-92: Tempeh (*tèmpè*), tofu (*tahoe*) and firm tofu (*takoä*), Indonesian-style miso (*taotjo*), soy nuggets (*tao dji*), and Indonesian-style soy sauce (*kètjap*). “Témpé is a much used product. In East- and Central-Java it takes the same place as the ontjom in West-Java. It is prepared in much the same way as *ontjom*, the reaction is brought about by the same fungus, *Rhizopus Oryzae*, Went et Prinsen Geerligis, which is transmitted by *ragi*.”

On pages 943-970 is an alphabetical “List of Vernacular Names of Objects, Properties or Actions.” For example: Kedele oongaran (p. 390, Jav.) is a soybean plantation on a sawah, immediately following the paddy [rice] harvest. Kedele apeetan (p. 390, Jav.) is the second harvest of the year or the second plantation in the same year of Kedele (soybeans; Glycine Soja). Address: Buitenzorg (Bogor), Java.

Afdeling Landbouw. p. 5-30, 177-78. [1 ref. Dut; eng]

• **Summary:** “Annually Java requires considerable quantities of the soybean, about one half of which is imported... On Java the soybean is used principally for the preparation of soy sauce (*soja of ketjap*), tahoe, tempe, and taotjo (various dietary preparations). Our investigations have proven that the Java-grown soybean can be used for making ketjap, tahoe and tempe just as effectively as the imported soybean. In western Java the manufacturers of soy prefer the imported article, those in central and eastern Java prefer the home-grown bean. This preference, which must be attributed chiefly to habit and conservatism, is also partially to be ascribed to the fact that in western Java but little of this article is grown, whilst in central and eastern Java the production is much more considerable, which causes the former region to be more dependent upon the imported article than the latter districts. For the preparation of tahoe a certain preference is indeed shown for the imported bean, in view of the greater keeping properties of the article prepared therefrom; nevertheless, the soybean grown on Java is also widely used for that purpose. The same holds good for the preparation of tempe, where the imported article is preferred chiefly on account of its larger size. Generally speaking, the imported kinds of soybean are preferred for the preparation of tahoe and tempe because they satisfy to a greater extent the demands of the manufacturers, and also because they are readily obtainable. Taotjo, however, is practically exclusively prepared from the imported bean.

“The general conclusion is that the imported soybean can be replaced, if not entirely, at a rate to a very great extent by the soybean grown on Java, thus indicating that the furtherance of its cultivation in this country can only be of advantage...

“The principal import harbours are Semarang [Central Java], Sourabaya [Surabaya], Tandjong Priok, Tjilatjap, and

Cheribon.” Address: 1. fd. Hoofd van Afdeeling Handel te Buitenzorg; 2. Vakkundig Ambtenaar bij de Afdeeling Handel, Java.

De voedingswaarde der sojaboon en enkele daaruit bereide specifiek Indische voedingsmiddelen [The food value of soybeans and some specifically East Indian foods prepared from them]. *Landbouw (Buitenzorg, Java)* 7(9):705-40. March. English-language summary, p. 759-61. Also in: Dutch East Indies Dept. of Agriculture..., ed. 1932. Kedelee. Buitenzorg, Java: Departement van Landbouw, Nijverheid en Handel.

Afdeeling Landbouw. p. 139-74, 193-95. [48 ref. Dut; eng] • **Summary:** Discusses the composition of the soybean. “In contrast with Manchuria, where it is a common article of diet, the soybean is rarely used as such in these parts; but by means of various operations, among which is the action of certain fungi, several products are prepared from it.

“These products, such as *tempe kedele*, *taotjo*, *tahoe*, *taokoan* and *ketjap* are important items in the native diet. Except for the last mentioned, the preparation of these products is such that the albumins are preserved practically intact, so that, especially in *tempe*, as we were able to point out, the biological albumin value is very high...

“*Soymeal*, which is prepared by removing the husks and then pounding what is left, has the drawback that it tastes somewhat bitter and, in consequence of the high percentage of fat, soon becomes rancid... Berczeller, however, seems to have succeeded in obtaining an improved soy meal...

“Finally, in discussing the importance for the native diet of these beans and the products prepared from them, the author arrives at the conclusion that it is especially the albumins that are important, the people being practically vegetarian and these foods being, in addition, rich in carbohydrates.

“Thus the author expresses his approval of the fact that of late years the *Department of Agriculture, Industry and Commerce* has advocated the growing of the soybean and the consumption of the products prepared therefrom.”

Note 1. This is the earliest English-language document seen (the summary) (Sept. 2005) that contains the word “soymeal,” which apparently refers to whole (full-fat) soybean flour.

Note 2. This is the earliest document seen (April 2001) that contains the word *taokoan*. Address: Hoofd van het Analyseelaboratorium te Buitenzorg, Java.

• **Summary:** Contents: Introduction. *USDA Farmers’ Bulletin* No. 1617, by W.J. Morse. Botanical characteristics of the soybean. Composition and food value of the soybean. Products derived from soya eaten by humans: Tofu, soy oil,

soyhu [soy sauce] (called “soy” in English), soy flour, soy sprouts, miso, natto. The use of soya as forage. Industrial uses of soy oil and cake. The soybean in western Europe: Hansamuehle in Hamburg, Germany; Englehardt & Cie. in Frankfurt, Germany (making powdered soymilk, soy caseine, soy lecithin, etc.); Soybean cake used for animal feed in England, Denmark, Holland, Sweden, and—above all—in Germany, where more than 2 million tons/year are consumed.

768. Krauss, F.G. 1932. Soybeans, their culture and uses in Hawaii. *Hawaii Agricultural College, Extension Service, Agricultural Notes* No. 24. 4 p. June 21.

• **Summary:** Contents: Introduction. Cultural methods. Fertilization. Inoculation. Time to plant. Distances to plant and rate of seeding. Varieties. Harvesting. Soy beans for soil improvement.

“The soy bean is destined to become an important supplementary crop in Hawaii’s increasingly diversified agriculture.” “As human food, the soy bean may be cooked either green or dried like snap or shell beans, and as such offer possibilities for canning commercially. The mature seeds are also ground into culinary meals and bolted for flour. The Orientals utilize vast quantities of soy beans for the manufacture of a number of nutritious and highly-priced foodstuffs, including the well-known tofu, miso, and soy sauce. The Japanese of Hawaii import about \$70,000 worth of the beans annually from Japan for the above purposes, the manufacture of which could be greatly extended if the soy bean were grown locally. A considerable amount of soy bean cake meal is also imported for poultry and dairy stock feeding. It is estimated that Hawaii could consume to advantage at least a half million dollars worth of soy bean products annually if the crop were grown extensively enough.”

• **Summary:** The Preface begins: “Those who have been following the development of events in Manchuria since the fateful September of 1931 will not fail to understand in what circumstances we have compiled this volume... The last issue, which was the first published, appeared in November, 1931, while Manchuria was in a chaotic condition, but the manuscripts for it were completed before the Sino-Japanese dispute over Manchuria occurred in September.” There was the establishment of Manchuokuo in March, the signing of the Japan-Manchuokuo protocol in September, and the despatch [dispatch] of the League [of Nations] Commission of Enquiry and the publication of its report.”

Chapters 2 and 3 give a Japanese version of the history of Manchuria, in four periods, from 311 B.C. to the present, and of its administration.

In Chapter 7, “Agriculture,” the section on “Agricultural products” contains tables: (2) Agricultural production of 9 major crops in 1930 (incl. soya beans) in three provinces, total, Kwantung Leased Territory and South Manchuria Railway (S.M.R.) Zone, and grand total. (3) Cultivated area classified by crops, 1930. (4) Production of ordinary crops, 1924-1930. (5) Cultivated area of ordinary crops, 1924-1930. (6) Production index of ordinary crops, 1924-1930. (7) Index number of cultivated area of ordinary crops, 1924-1930. (8) Percentage of production and cultivated area of ordinary crops, 1924-1930. (9) Production and cultivated areas of ordinary crops classified by districts, 1930. (10) Value of exports of agricultural products (Haikwan taels), raw products and manufactured goods. (11) Exports of agricultural products (metric tons and Haikwan taels), 1921-1930. (12) Exports of principal agricultural products classified by destination (metric tons and Haikwan taels), 1930. (13) Amount of soya beans and cereals consumed in the three eastern provinces, 1930 (as food, fodder, or seed; in South and in North Manchuria). (14) Percentage of

agricultural products shipped to the markets (in South and North Manchuria). Map of distribution of crops [and railways] in Manchuria (p. 111). Sub-section titled “Soya beans” (p. 110-12). A photo (facing p. 112) shows Soya bean at Tailai, piled in sacks near a railway. The soybean is the principal resource of Manchuria in terms of both production and acreage. In recent years, the annual production has reached more than 5 million tons, which is 60% of world soybean production.

Chapter 12, “Industry,” includes table (6) Manufacturing production in the Kwantung Lased Territory and the S.M.R. Zone, 1926-1930 (both volume and value). Products include [soya] bean oil, [soya] beancakes, miso, and soy [sauce]. In Section 2, “Oil and fat industry” is a subsection (p. 188-97) titled “Oil milling” with these contents: Introduction. Diagram of utilization of soya beans. History. oil extraction methods, table (7) “Beancake producing capacity of oil mills per 24 hours, 1925-1931” (in major cities), table (8) “Beancake production in Manchuria (1,000 pieces), 1926-1930, in major cities and regions, table (9) “Exports of beans and bean oil from Dairen, Antung, Yingkow and Vladivostok, 1920-1931,” table (10) “Exports of soya beans, beancake and bean oil (1927-1931),” table (11) Exports of beancake classified by ports, 1929-32,” table (12) “Export of beancake classified by destination, 1929-1931” (Japan gets 62%), table (13) “Export of bean oil, 1931, by destination, “Solidified bean oil industry” [hydrogenated], table (14) “Production of solidified bean oil (by the Dairen Oil Fat Manufacturing Co., established 1916).” Miso and soy [sauce] manufacture (p. 230).

In Chapter 15, “Foreign trade, table (9) shows the “Quantity and value of exports at Manchurian ports (Value in H.K. taels). The main exports are soya beans, other beans, maize, kaoliang, and millet. The ports are Antung, Dairen [the main port for soya beans], Newchwang, Harbin Aigun, Hunchun, and Lungchingtsun. The main destination countries are British Empire, USA, Germany, France, Russia, Other countries, Total, Chinese ports, Grand total. Note that Japan is not mentioned; it is probably concealed within “Other countries.” The source of the statistics in table 9 is: Research Office of S.M.R. Co. *Trade Returns of North China*, 1930 and previous issues.

A large fold-out map at the end of the book shows all of Manchuria, incl. province boundaries, railways, steamer routes, and cables.

• **Summary:** Contents: Introduction (preliminary notes). Part I: Cultivation and applications of soya. Chart of utilization of the soybean seed. Agronomic notes and details on soybean cultivation. Part II: Soya as a food. Nutritional value, soya as a vegetable (green vegetable soybeans; *Soja, como verdura*), soy sauce (*salsa de soja*), soymilk (*leche*), condensed soymilk (*leche concentrada/condensada*), powdered soymilk (*leche en polvo*), fermented soymilk (*leche fermentada*), soy cheese (*queso de soja*) [tofu], soy casein (*caseina de soja*), soy flour (*harina de soja*), soy bread (*pan de soja*), Soyolk (soy flour made by Dr. Berczeller), whole-grain soy bread (*pan integral*), soy flour

tablets (*comprimidos*), pastries, biscuits, puddings, etc. (*pasteles, bizcichos, puddings*), soy oil (*aceite de soja*), fermented soy products (*productos de la soja fermentada: natto, miso, shoyu*), confectionery products (*productos de confiteria*), chocolate (*chocolate*), coffee (*café*), soy ferments/enzymes (*fermentos de soja*), products made by Caséo-Sojaïne (*Caseo-Sojaina de Paris*). Soy as a livestock food. Appendix.

“As early as 1918 a Spanish public official, Don Julio de Palencia, the Spanish Consul in Shanghai, sent the State Department (*Ministeria de Estado*) a magnificent report specifying the great attention that representatives of the principal countries of the world were giving to this crop [the soya bean], and the relevance that it would have in the agricultural economy of the future. What a pity that Spain has been the only civilized country to ignore the study of the soya bean and its exploitation on a large scale” [p. 5].

“Finally we must make public our thanks to the spokesmen of this foundation/board (*Patronato*) for the special work they have done in writing this booklet: Don José Maria de Soroa, secretary of the Special School for Agricultural Engineers (*Escuela Especial de Ingenieros Agrónomos*), and Dr. Don José Abadal, chief of the Bureau for the Inspection of Pharmaceutical Services of the Ministry of War (*Negociado de la Inspección de Servicios Farmaceuticos del Ministerio de la Guerra*)” [p. 6].

“In 1917 the Spanish Consul in Shanghai, Don Julio Palencia, sent to the State Department a study on cultivation of soya, proposing that tests be done to acclimatize this valuable crop to our country.

“In Motril and later at the southern agricultural station of Malaga, the agricultural engineer D. Arsenio Rueda has been cultivating soya for the past 10 years [i.e. since 1923] in plots of 5 ares [1 are = 100 square meters], obtaining 60 liters (each liter weighing 780 gm) in each one.

“The white as well as the black varieties give good results, though the white ones do best. The seeds have been distributed to farmers who have noticed that, even though at first the goats that were given them as food rejected them, after a few days of getting used to this grain preferred them to such an extent that one must avoid growing this plant near the herd’s path lest the herd be attracted and devour it all.

“Although soya is a legume which draws many nutrients out of the soil (*esquilmante*), it has according to Mr. Rueda, sufficient interest since it allows usage of terrains where field beans cannot be used due to the invasion of the pest called *Orobanche speciosa*, commonly called ‘Jopo.’ This parasite does not attack soya...

“Besides the quoted trials, it have been more than 25 years since soy has been grown in Spain with success due to the interest and zeal that in their patriotic work, the agricultural engineer Mr. Eduardo Noriega undertook with his partner, Mr. Ortiz, on the farm of ‘Jerez.’

“He was successful during many years using the yellow and black varieties, later on also cultivating it in the Spanish central region.

“We think it useful also to state in writing the following data about soy grown by Dr. D. Jose Abadal in Lerida during the years of 1925-1926.

“The experiment was done only out of curiosity, with the intention of seeing if it could be grown in said province. Japanese seeds of the hirsute soy variety, yellow seed, used as food for diabetes, were used. The planting was done in a garden with seeds that had been soaked for ten hours, with no more care or fertilizers than those used for all the existing plants of that garden. The terrain of course was one of easy irrigation and located in Lerida where it is very hot all during the summer.

“This brief essay demonstrates that soy can be grown in irrigated terrain in very hot places and with little care.

“Fifteen years ago, the agricultural Engineer D. Jesus Andreu, in the province of Pontevedra [in the northwest corner of Spain, just north of Portugal, bordering the Atlantic ocean], did some tests with good results on growing soy as a forage plant.

“We also have news, though not concrete, of other successful tests done in the provinces of Madrid and Toledo.” Address: 1. T.C. Farmaceutico Militar; 2. Ingeniero Agronomo e Ingeniero Sanitario, Spain.

783. Orosa, Maria Y. 1932. Soybeans as a component of a balanced diet and how to prepare them. *Manila (Philippines) Bureau of Science, Popular Bulletin* No. 13. 53 p. [16 ref]

• **Summary:** Contents: Introduction. The cooking of soy beans (89 Filipino recipes, p. 7-35), incl. roasted soy beans, soy-bean soups etc.—most recipes use whole soybeans, but quite a few use tofu (*tokua*), soy sauce (*toyo*), soy-bean flour, or soy-bean milk, and a few use *tahuri* (brine fermented tofu) or soy-bean sprouts. Some common foods made from soy beans and methods of preparing them (p. 35-53): Soy-bean milk, condensed soy-bean milk, soy-bean milk powder, soy-bean casein, soy-bean curd (tofu; *tokua* or *toqua*). *Tahuri* or *tahuli* (fermented tofu). Frozen tofu. Bean curd brains or *tofu nao*. Dry bean curd or *topu khan* (tofu-kan, dipped in burnt millet sauce and rubbed with fine salt). Fragrant dry bean curd. Thousand folds (thin layers of fresh tofu pressed in cheesecloth. “On standing, the thousand folds mold and develop a meatlike flavor. This is fried in sesame oil and served in place of meat”). Fried bean curd. Soy sauce (called by the Chinese “ch’au yau,” or drawing oil; or “pak yau” or white oil” by the Japanese “shoyu”; and the Filipinos, “toyo”). Natto. Hamanatto (p. 49). Yuba. Miso. Soy-bean flour. Soy-bean oil (used in the manufacture of lard and butter substitutes; also in paints, printing inks, etc.). Soy-bean meal. Soy-bean coffee. Soy-bean sprouts.

Note 1. This is the earliest English-language document seen (Oct. 2008) that uses the term “soy-bean casein” (or “soy bean casein” or “soybean casein”), probably to refer to soybean protein.

“When and by whom the soy bean was first introduced into the Philippines, no one can ascertain. The Filipino people have long known some important soy-bean preparations, such as soy sauce, or ‘toyo,’ bean curd, or ‘tokua,’ fermented bean curd or ‘tahuri,’ not knowing that they were prepared from this bean. The seed is known in some parts of the Philippines, where it is grown, as ‘utao.’”

“The main object of this pamphlet is to encourage the Filipino people to use more soy beans, and preparations made from them as food” (p. 3-4).

“Soy beans are grown in some parts of the Philippines. According to Doctor Roxas, Director of the Bureau of Plant Industry, 2,481 tons were grown in Batangas in 1921 and 4,218 tons, in 1930. However, the importation of soy beans in 1924 was 4,657 tons. Doctor Roxas says that soybeans can be grown in all parts of the Philippines” (p. 6).

“Immature soy beans may be cooked in the same way as lima beans (*patani*)” (p. 7).

“The soy-bean curd was first produced by Whai Nain Tze, before the Christian Era and was introduced into Japan from China by the Buddhists. It was introduced into the Philippines by the Chinese and has become a very popular food in Manila and in places where there are Chinese who manufacture it for sale. ‘Tokua’ on account of its high fat, protein, and mineral content, is called by the Chinese as ‘meat without bone,’ or ‘the poor man’s meat.’” The Chinese use burnt gypsum (about 1.5% by weight) as a coagulant. In some cases, the curds are wrapped in individual pieces of fine cheesecloth about the size of a small handkerchief, then pressed lightly for a few minutes. They are “unwrapped, spread on shallow bamboo trays (*bilao*) and partially dried at room temperature. Then they are dipped in a weak solution of turmeric to coat the outside in light yellow coloring. Some manufacturers soak the small cakes of curd in brine solution for a short time, then dip them in a solution of burnt sugar or molasses and bake them slightly before putting them on the market.” 100 gm of dry soybeans typically yield 350 gm of tofu (*tokua*) (p. 41).

The section titled “‘Tahuri’ or ‘Tahuli’” begins with 2 paragraphs and ends with a table very similar to those from Gibbs and Agcaoili (1912): “‘Tahuri’ is manufactured in China and exported to the Philippines in large stone jars or in small tin cans. There are some ‘tokua’ manufacturers in Manila that manufacture ‘tahuri’ for local consumption. Those that are imported from China are preserved in strong brine solution and the cakes are broken during the shipment so the liquid becomes like a thick emulsion containing pieces of the cured curd.” It then contains a new paragraph: “In Manila, the Chinese method of manufacture is to pack the large pieces of soy-bean curd, about 5 inches long, 4

inches wide, and 2.5 inches thick, with much crude salt, in empty gasoline cans. The curd is allowed to cure for a period of several months. During the curing period the bean curd changes from white to a brownish yellow color and develops a peculiar salty flavor to which the Chinese and many Filipinos are educated” (p. 42). Note 2. No information about a fermentation microorganism or process is given.

“The bean curd brains known to many Filipinos as ‘tojo’ is the unpressed soy-bean curd. The method of making ‘tojo’ is almost the same as the method used in making ‘tokua’, only that a smaller amount of the coagulating agent is used, and the very soft but solid mass formed is left undisturbed in the wooden container until used. The Chinese used to peddle this preparation in a wooden pail-shaped container, through different parts of Manila, but on account of the Philippine Health Service regulations, this product is now sold in the markets only. / “The ‘tojo’ is served with a few tablespoonfuls of medium thick brown-sugar syrup, which gives it flavor, the ‘tojo’ being almost tasteless. Sometimes it is eaten with sweet oil, sauce, and vinegar, or with finely cut meat and spices.” (p. 43).

“Dry bean curd: The fresh bean curd when dipped in burnt millet-sugar sauce and rubbed with fine salt will keep longer than the ‘tokua’ and is called ‘topu khan.’ This preparation is usually eaten in soups.”

Fragrant dry bean curd or *hsiang khan* (“fragrant dry”) has the consistency of smoked sausage. “It is made by subjecting the fresh bean curd to great pressure, which eliminates much of the water content. The pieces of semidry curd are soaked in a weak brine solution in which is dissolved burnt millet-sugar and to which is added powdered spices. The curd is then dried to hardness. This preparation keeps indefinitely and is used in soup making and in vegetable dishes” (p. 43).

Note 3. Cruz and West (1932, p. 78) state that as part of a campaign by the Bureau of Science to encourage the Filipino people to use more soy beans, Miss Orosa “has made excellent cakes, cookies, puddings, sauces, soups, custards, ice cream, and other tasty preparations from Philippine soy beans.”

Note 4. The author pioneered the branch of the branch of the Home Extension Service in which home demonstrators helped women in solving their home problems. She started the organization as a food preservation unit under the Bureau of Science in 1923, starting with six home demonstrators that she herself trained. That group became the forerunner of the Home Extension Service in the Philippines. For details on her work see: In: *A Half Century of Philippine Agriculture*. Manila, Philippines: Liwayway Publishing. p. 236-37.

Note 5. This is the earliest English-language document seen (Nov. 2003) that contains the word “meatlike.”

Note 6. This is the earliest English-language document seen (Oct. 2008) that uses the word “Hamanatto” to refer to soy nuggets. Orosa’s description of Hamanatto is based on that of Sawa (1902). Address: Chief, Div. of Food Preservation, Bureau of Science, Manila.

784. Hansen, Louis A. 1933. The soy bean as human food. *Life and Health* 48(2):21-23, 27. Feb. Also in J. of the Jamaica Agric. Soc., March 1933, p. 147-50.

• **Summary:** This is a good introduction to the soybean, based largely on information provided by Dr. A.A. Horvath (until recently of the health section, U.S. Bureau of Mines) and William J. Morse (senior agronomist at the USDA Bureau of Plant Industry). Discusses: History of the soy bean in Asia (especially China), nutritional benefits, soy bean flour, soy bean milk, and soy sauce.

Photos show: (1) Two men standing in a field of tall soybeans. (2) A person grinding soybeans with a stone mill to make soy bean milk in China. (3) A “Chinese courtyard with pots of fermented soybeans and brine from which the well-known soy sauce is made.” (4) Steamed soy beans about to be made into miso in Japan.

Note: In 1968 Hansen wrote a book titled *From So Small a Dream*, about Madison College (Madison, Tennessee), which pioneered soyfoods in the United States.

785. Suzuki, Tsuneya. 1933. Miso jôzô-chû ni okeru gan chisso-butso nakanzuku gurutamin-san no zôgen ni tsuite (zoku) [The increase and decrease of nitrogenous substances, especially glutamic acid, during miso fermentation (appendix)]. *Jozogaku Zasshi (J. of Brewing, Osaka)* 11(2):135-38. Feb. [4 ref. Jap] Address: Kôgaku-shi, Japan.

786. Sayer, M. Wynne. 1933. Soybean (*Glycine hispida* Maxim.). *Agriculture and Live-stock in India* 3(5):470-74. Sept. [10 ref]

• **Summary:** Contents: Introduction and history. Economic importance of the soybean. Cultivation. Green fodder for cattle. Green manure. Standard varieties of soybean of the Pusa Farm.

“Green Fodder for cattle: The soybean has been tested here [on the Pusa Farm] for a number of years against other important leguminous crops such as meth (*Phaseolus aconitifolius*), cowpeas, and guar. The results of 12 years trials from 1917-18 to 1928-29 are given below.” Soybeans yielded 1,166 lb/acre of grain and 7,453 lb/acre of “green stuff.”

Note: This article contains the following sentences and phrases which are of linguistic interest: “Soybean is a monsoon crop” (p. 470). “... by growing soybean mixed with maize...” “Soybean has been tested here for yield” (p. 471). “In India, soybean is considered one of the best fodder crops” (p. 472). “Soybean occupies an important place in

the grazing cycle.” In standard American or British English, the word “soybean,” in each of these examples, would be preceded by the word “the.” Address: Offg. Imperial Agriculturist.

787. Iwamura, Iwao. 1933. Biochemical studies on miso, fermented soybean paste. I. *Bulletin of the Agricultural Chemical Society of Japan* 9(7-9):118-31. Bound in the back of Nippon Nogei Kagaku Kaishi (J. of the Agricultural Chemical Society of Japan). [Eng]

• **Summary:** The author conducted experiments with Sendaimiso, then with Shiromiso, Yedomiso, Inakamiso, and Hatchomiso. Miso protein, when added to a rice diet, has a high supplementary value. It has a somewhat higher supplementary value than “kōridōfu (frozen soy-bean curd)” but somewhat lower than fish protein.

Note: This is the earliest English-language document seen (March 2009) that uses the term “soybean paste” to refer to miso, or that mentions Sendaimiso, Yedomiso, Inakamiso, or Hatchomiso (spelled that way). Address: Agricultural Chemical Lab., Tokyo Imperial Univ., Komaba, Tokyo, Japan.

788. Miller, Carey D. 1933. Japanese foods commonly used in Hawaii. *Hawaii Agric. Exp. Station, Bulletin* No. 68. 43 p. Nov. See p. 1-10, 28-43. [18 ref]

• **Summary:** Contents (p. 1-10): Introduction. Soybean products. Edamame (green soybeans). Tofu (soybean curd). Kirazu (tofu residue) [okara]. Tonyu (soybean “milk”). Aburage (fried soybean curd). Miso (fermented rice and soybeans). Natto (fermented soybeans). Shoyu (soybean sauce). Koji (fermented rice). Pages 24-15: Kinoko (mushrooms). Fu (gluten cakes). Goma (sesame seeds).

Pages 28-43 (Ingredients and nutritional composition of prepared foods or recipes): Miso soup with tofu. Miso soup with wakame. Miso soup with daikon. Miso soup with milk. Tofu soup with lemon. Tofu shoyu soup. String bean shirae [shira-ae] (with tofu and miso). Carrot shirai. Konnyaku shirai. Eggplant with miso. Green onions with miso. Fish cakes with miso. Sesame seed sauce for vegetables (with shoyu). Nishime (with shoyu). Nigome (with aburage and shoyu). Kirazu with vegetables (with okara, aburage, shoyu). Noodles (somen or udon, with shoyu). Vinegar sauce for sushi. Inari-sushi (with aburage and shoyu). Maki-sushi. Appendix: Composition of some Japanese foods used in Japan.

Concerning edamame: “The Japanese use several varieties of fresh green soybeans. In Honolulu whole plants are purchased from the vegetable market. The pods are removed from the plants, placed in boiling salted water, and boiled for about 25 minutes. They are then drained and cooled, and the beans are kept in the pods until eaten. Often children eat them out of bags as they would candy. The fresh green soybeans appear to be an excellent food. They

are good sources of calcium, phosphorus, and iron, yield a basic ash, and, as compared with other fresh vegetables and fruit, have a remarkably high protein content. Vitamin tests in progress at the nutrition laboratory of the Hawaii Agricultural Experiment Station show that the cooked beans are very good sources of vitamins A, B, and G. The more general use of green soybeans should be encouraged in the home, and their consumption may be increased by selling them in school cafeterias.”

Concerning Kirazu (tofu residue): “Kirazu, or the residue of the soybeans left when tofu is made, has a crude fiber content of 3 to 4 percent, contains 4 to 5 percent of the protein of the beans, more than 1 percent of the fat, and 5 to 6 percent of the carbohydrate. Only a small part of kirazu is used for human food in Hawaii, by far the greater part being used as hog feed. Kirazu, however, is a utilizable, inexpensive food and might be more generally used than it is... Kirazu is used in combination with vegetables, or with fish, or dried shrimp, and seasonings.”

Concerning natto: Describes the process for making natto on a commercial scale in Honolulu. After cooking (without soaking) for about 8 hours in a large iron kettle, the “beans are thoroughly drained and placed on paper plates covered with wax paper. The plates are stacked one above another in large wooden boxes, covered with rice straw mats, and kept at a temperature of approximately 30°C. for 35 to 36 hours, when the product is ready for use... The fermented product is covered with a gray, slimy substance that forms strings or threads when the beans are pulled apart, indicating good quality... Although no molds or yeasts are added to the cooked soybeans, O.N. Allen, of the botany department of the University of Hawaii, who examined several samples of fresh natto from Honolulu, found 2 molds, 4 bacteria, and an aspergillus present. The enzymes of some of these organisms probably caused the conversion of a small part of the protein to simpler substances.”

Photos show the following (each food accompanied by its Japanese name written in both Chinese characters and *katakana*): Edamame, in the pods on the plant, and shelled in a dish. Tofu kasu [okara] on a plate. Tofu on a dish. Soymilk in a glass. Three triangles of aburage on a dish. Miso on a dish. Natto in a white rectangular commercial paper tray about 3½ by 6 by 1 inch deep. Koji on a plate.

Note 1. This is the earliest English-language document seen (July 2001) that uses the term “fresh green soybeans” to refer to green vegetable soybeans.

Note 2. This is the earliest English-language document seen (Oct. 2001) that uses the Japanese word *kirazu* to refer to okara.

Note 3. This is the earliest document seen (July 2003) that mentions commercial natto production in Hawaii.

Note 4. This is the earliest English-language document seen (Feb. 2004) that uses the word “strings” or “threads” in

connection with natto. Address: Specialist in Nutrition, Honolulu.

789. Sakurai, Yoshito. 1933. Miso no seibun ni tsuite. III. Yûri shibô-san oyobi saponins [On the constituents of miso. III. Free fatty acids and saponins]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 9(12):1326-30. Dec. [4 ref. Jap]

• **Summary:** Free oleic, linoleic, linolenic, stearic, and palmitic acids are present. Nine kg afforded 4 gm of the calcium salt, melting point 264-266°C, of a saponin, melting point 232°C, identical with soybean saponin. Address: Nôgaku-shi, Tokyo Daigaku Nôgaku-bu, Nôgei Kagaku Suzuki Kenkyû-shitsu.

796. Wakayama, Harutarô. 1933. Chihô-teki ichi miso no bunseki hôkoku [Report on an analysis of miso from various parts of Japan]. *Ryoshoku Kenkyu (J. of the Institute of Dietary Science)* No. 88. p. 629-31. [Jap]
Address: Zaidan Hojin Ryoshoku Kenkyu-kai.

797. Japanese American News Inc. / Nichibei Shinbunsha. 1933. Nichibei jûshoroku [The Japanese American directory. No 29]. San Francisco, California: The Japanese American News Inc. (Nichibei Shinbunsha). Index of cities. 23 cm. [Eng; Jap]*
Address: San Francisco, California.

798. Morse, W.J. 1933. Soybeans now a major crop in United States; Few grown before 1898. *Yearbook of Agriculture (USDA)* p. 198-205. For the year 1933.

• **Summary:** Contents: Variety adaptation. Variety utilization (incl. bean curd, bean milk, soy sauce, miso (bean paste), bean sprouts, green vegetable beans, bean flour, roasted beans, bean confections, beverages, oil and meal, special fermented bean products). Soybean oil and meal industry. Soybean meal. Soybean oil. Soybeans for human food. Soybeans as an export crop.

“Variety adaptation: The Virginia, Laredo, Manchu, and Biloxi have a greater range than most other varieties. The Virginia, Mansoy, and Harbinsoy varieties excel on the less productive types of soil, while on better soils the Mansoy and Harbinsoy give inferior results.

“Since the Department of Agriculture began to introduce soybean varieties more than 7,000 samples of beans have been collected from Japan, Chosen [Korea], Manchuria, China, Taiwan (Formosa), Java, Sumatra, and India. There are more than 2,000 distinct types in this large collection, ranging from 75 to more than 200 days in reaching maturity. At present about 40 varieties are generally grown in the United States.”

“In Japan, where the soybean is used extensively as a green vegetable, more than 60 varieties, ranging in maturity from 75 to 160 days and differing in flavor, are grown solely for this purpose. The soybean is used in the United States primarily as forage, being preserved either as hay or silage, or cut and fed green as soilage, and is also pastured extensively with hogs and sheep.” Address: Bureau of Plant Industry, Washington, DC.

799. Japanese American News Inc. / Nichibei Shinbunsha. 1934. Nichibei jûshoroku [The Japanese American directory. No 30]. San Francisco, California: The Japanese American News Inc. (Nichibei Shinbunsha). Index of cities. 23 cm. [Eng; Jap]

• **Summary:** Published Jan. 1, 1934. Address: San Francisco, California.

800. **Product Name:** Koji, Miso.

Manufacturer's Name: Kawano Shokai (Kawano Co).

Manufacturer's Address: 215 M St., Sacramento, California. Phone: Capital 5116W.

Date of Introduction: 1934. January.

New Product–Documentation: Ad (1/8 page) in The Japanese American Directory. 1934. p. 168. Makes Shira shika [White deer] brand koji and miso. Note: This company has the same address and phone number as Sakara-fu (Sacramento) Joji, Miso Seizô-sho. See p. 169 (directory).

801. Nakayama, Shuhei. 1934. Miso jôzô no eiyô kagaku-teki kosatsu. IX. Miso gan-chisso seibun no hakumai tanpakushitsu ni taisuru hosoku kôka [Nutritional studies on miso fermentation. IX. Supplementary effect of miso protein on the protein deficiency in rice]. *Jozogaku Zasshi (J. of Brewing, Osaka)* 12(1):6-14. Jan. [8 ref. Jap] Address: Osaka Teikoku Daigaku Kogakubu, Jozogaku Kyoshitsu, Takada Kenkyushitsu, Japan.

802. Nishida, Kôtârô. 1934. Kagoshina-ken Oshima-chihô tokusan no sotetsu denpun oyobi sotetsu miso [On cycad miso or sotetsu miso, a specialty product of the Oshima area of Kagoshima prefecture, made from the starch of the sago palm]. *Jozogaku Zasshi (J. of Brewing, Osaka)* 12(4):271-77. [6 ref. Jap]

• **Summary:** The tree called cycad or sago palm in English (*Cycas revoluta* Thunb.), is called sotetsu in Japanese. Address: Nôgaku-shi, Kagoshima Koto Norin Gakko Nogeikagaku Kyoshitsu, Japan.

803. Mogi, Masatoshi. 1934. Miso jôzô ni kansuru saikin no kenkyû ni tsuite. I. [Research on the bacteria involved in the manufacture of miso. I.]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 10(9):983-96. Sept. English-language summary in Bulletin of the Agricultural Chemical Society of Japan 12:52-53, bound at the back of Nippon Nogeikagaku Kaishi. [20 ref. Jap; eng] • **Summary:** The value of miso production in Japan in recent years is more than 20 million yen per year. Address: Brewing Laboratory, Noda Shoyu Co. Ltd., Noda-machi, Chiba-ken, Japan.

804. Yamaguchi, H.S.K.; Garis, Frederic de; Sakai, Atsuharu. 1934-1950. We Japanese: Being descriptions of many of the customs, manners, ceremonies, festivals, arts and crafts of the Japanese, besides numerous other subjects. Yokohama, Japan: Yamagata Press. 592 p. 889 illust. Index. 21 cm.

• **Summary:** “Written with great style, this work brings traditional Japan to life in a way that no contemporary guide book can, explaining all the curious features of daily life in Japan.” This is a combination of 3 books. Book I (p. 1-183), written by Frederic de Garis for H.S.K. Yamaguchi, was first published in Dec. 1934. Book II (p. 183-375), written by Atsuharu Sakai for H.S.K. Yamaguchi, in June 1937. Book III (p. 377-592), with the same authorship as Book II, was first published in June 1949. All contain entertaining information on Japanese culture and foods.

They discuss: Red rice (*sekihan*, with azuki beans, p. 36). The Broken Needles Mass or Hari-Kuyo (p. 160, needles are stuck into tofu on Feb. 8 or Dec. 8), Sukiyaki (p. 264-66, incl. its origin and history), sembei (p. 267, senbei or rice crackers, incl. shoyu), Miso or bean-paste (p. 269-70), Shoyu or Japanese soy (p. 271-73, incl. Kikkoman, Higeta, Yamasa, Kagi-Yamasa, and Marukin logos and wooden kegs), Sekihan and hot water (p. 292, azuki beans as part of a taboo for Japanese girls), Setsubun or Bean-Throwing Ceremony (p. 554-55, mame-maki held on setsubun).

Note: This is the earliest English-language document seen (March 2009) that uses the term “bean-paste” (not preceded by the word “soy” or “soya”) to refer to miso. Address: Manager, Fujiya Hotel, Miyanoshita, Japan.

805. Hara, Tetsukazu; Wada, Fuki. 1934. Miso ni kansuru kenkyû. II. Jukusei katei ni okeru miso tanpakushitsu yôka no hendo [Studies on miso. II. Changes in the nutritional value of miso proteins during ripening]. *Eiyo Kenkyujo Hokoku (Report of the Imperial Government Institute for Nutrition)* 6(2):29-41. [9 ref. Jap] Address: Eiyo Kenkyusho: 1. Gishi; 2. Gishu.

• **Summary:** Acetic, lactic, and succinic acids are identified. Amounts of ethyl ether-soluble free acid were small. Acidity is probably due to acid phosphates. Address: Tokyo Teikoku Daigaku, Nôgaku-bu.

820. Adachi, Isamu; Sakurai, Shigeru. 1934. *Nihon shokumotsu-shi [History of Japanese foods]*. Tokyo: Yuzankaku. 480 p. [Jap]

• **Summary:** This is the best book seen on the history of Japanese foods. The following soyfoods are discussed: Firm tofu, soymilk and okara (p. 290-91; discusses the *Teikun Orai* by Iseno Teijo, tofu-kan, tofu-jiru = soymilk, setsurun-sai = okara), yuba (p. 336), shoyu and tofu (p. 370-71), unohana (okara, p. 377), tofu and natto (p. 382-83).

821. *Manchoukuo Year Book (The)*. 1934. [Soya beans]. 1934. p. 267-79, 399-409, 466. Published by Toa-Keizai Chosakyoku (East-Asiatic Economic Investigation Bureau), Tokyo. [Eng]

• **Summary:** Page 466 shows miso and soy sauce production in Manchuria. The 17 Japanese-run plants make 2,800 tonnes of miso and 4,550 tonnes of soy sauce. The 44 Manchurian-run plants make no miso and 1,381 tonnes of soy sauce. The number of factories in each major city and the capital assets of the companies are listed. Dairen is the main center of Japanese miso and soy sauce production, followed by Mukden, then Port Arthur. Hsinking is the main center of Manchurian soy sauce production.

822. Iwamura, Iwao. 1935. Biochemical studies on "miso", fermented soybean paste. II. Influence of temperature upon the ripening of "miso". *Bulletin of the Agricultural Chemical Society of Japan* 11(1):1-7. Jan. Bound in the back or front of *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)*. [8 ref. Eng]

• **Summary:** "In order to ascertain the influence of temperature upon the ripening of 'miso,' 5 series of samples

were kept for fermentation at 55°, 35°, 27-32°, 25° and 15-25°C respectively. The samples taken at different intervals were analyzed and at the same time the chemical changes during the steeping and boiling of the soybeans were determined.

“It has been confirmed that the fermentation at 55°C proceeds most rapidly, attaining the maximum after 8-12 days; at a lower temperature the fermentation proceeds more slowly, thus needing 15-25, 20-30 and 40-60 days of ripening at 35°, 25° and 15-25°C respectively. The amount of ammoniacal nitrogen and free acid was comparatively large at 35°C.

“It has also been observed that the ripening of ‘miso’ is much accelerated by the enzyme action of ‘koji.’ By the steeping of the soybeans the increase of reducing sugars and free acids is noticeable and by boiling them some proteins, reducing and non-reducing carbohydrates are dissolved in water.” Address: Agricultural Chemical Lab., Tokyo Imperial Univ., Komaba, Tokyo.

823. Sakurai, Yoshito; Iwamura, Iwao. 1935. Miso no seibun. V. Bitamin B ni tsuite [The constituents of miso. V. Vitamin B]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 11(4):272-83. April. [12 ref. Jap]

• **Summary:** The vitamin B-1 and B-2 contents are determined. During ripening B-2 remained unchanged. Address: Tokyo Teidai Nogakubu (Inst. of Dairy Science), Konai Ryoshoku Kenkyukai.

824. Sakurai, Yoshito. 1935. Miso no seibun. VI. Futatabi jukusei-chû no henka ni tsuite [The constituents of miso. VI. On the changes during the fermentation of twice-fermented miso]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 11(5):349-54. [3 ref. Jap]

• **Summary:** Discusses Edo miso. The acid taste of miso is due to organic acids soluble in ethyl ether. Address: Tokyo Teidai Nogakubu (Inst. of Dairy Science), Konai Ryoshoku Kenkyukai, Nôgaku-shi.

825. Honda, Shigejiro. 1935. Shiro-miso seizô-hô [Method of making white miso]. *Japanese Patent*. Sept. 30. Toku Ko (Published Examined Patent Applied), No. 4096, Sept. 30. [Jap]
Address: Kojima-cho 12 Banko, Muromachi-dori Ichi-jo agaru, Kamikyo-ku, Kyoto-shi, Japan.

826. Iwamura, Iwao. 1935. Biochemical studies on “miso”, fermented soybean paste. III. On the effect of cystine upon the nutritive value of miso. *Bulletin of the Agricultural Chemical Society of Japan* 11(9):128-34. Sept. Bound in the back or front of *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)*. [8 ref. Eng]

• **Summary:** The nutritive value of the miso-protein, when used as a supplement to a rice diet for albino rats, is increased by addition of cystine. For young rats the optimum amount of cystine is about 0.1% (> 0.5% is harmful), but for adult rats 0.5% is favorable. Address: Agricultural Chemical Lab., Tokyo Imperial Univ., Komaba, Tokyo.

827. **Product Name:** Koji Miso.

Manufacturer’s Name: Asahi-Kooji.

Manufacturer’s Address: 26 Nawahi Lane, Hilo, Island of Hawaii. Phone: 2442.

Date of Introduction: 1935.

New Product–Documentation: Directory of Honolulu and the Territory of Hawaii. 1934-35. p. 516. Asahi-Kooji (Mr. Kaku Tatsuo). Kooji Miso and Noodles. Nawahi Lane rear Kwong See Wo Hilo. Tel. 2442. P.O. Box 84. He continues to be listed until 1938-39.

828. *Economisch Weekblad voor Nederlandsch-Indie*. 1935. Invoer van sojaboonen, soja en taotjo [Import of soybeans, soy sauce and taotjo (Indonesian-style miso)]. 4(28):1082. [Dut]

829. Hama, Masakazu. 1935. Ichijuku miso no seizô-hô [Method of making fig miso]. *Japanese Patent* 113,099. In Toku Ko, No. 2704. July 1. [Jap]
Address: Miyawaki-cho 426-1, Takamatsu-shi, Japan.

830. Iwamura, Iwao. 1935. Miso no eiyô-ka ni taisuru kenkyû. II. Kome no tanpakushitsu ni taisuru miso no tanpakushitsu no hosoku-teki kachi ni oyobosu shisuchin no eikyô [Research on the nutritional value of miso. II. Effect of cystine on the supplementary value of miso protein for rice protein]. *Ryoshoku Kenkyu (J. of the Institute of Dietary Science)* No. 105. p. 151-58. [7 ref. Jap]

• **Summary:** The amount of cystine in 100 gm of fresh miso was: Shiromiso (sweet white miso) 64.2-67.2 mg, Yedomiso 45.4-85.6 mg, Sendai miso 50.9-86.6 mg, and Hatcho miso 93.4-103.2 mg.

831. **Product Name:** Miso.

Manufacturer’s Name: Jinzo Fukuda Miso. Later renamed Fukuda Miso Factory (Fukuda Koji, Miso Seizo-sho).

Manufacturer’s Address: 395 Buckle Lane (Later: North Vineyard), Honolulu, Oahu, Hawaii.

Date of Introduction: 1935.

New Product–Documentation: Directory of Honolulu and the Territory of Hawaii. 1934-35. p. 169. “Fukuda Jonzo Miso, 395 Buckle Lane. Note: Is this the origin of the Fukuda Miso Factory, which doesn’t seem to be listed in any Hawaii directory?”

Nihei. 1978. *Nippon Jozo Kyokai Zasshi*. 73(7):542-49. "Hawaii ni okeru Nihon-shu, miso, shoyu no rekishi." Says: "Fukuda Koji, Miso Seizo-sho was located at N. Vineyaro [sic, N. Vineyard], Honolulu." No year of founding or founder are given. Wm. Higa. 1980. *History of Miso Companies in Hawaii*. Mr. Fukuda sold this company in about 1938 to Taro Higa, who made it (at the same location) into the Yamajyu Shoyu & Koji Miso Co.; Shurtleff & Aoyagi. 1983. *The Book of Miso*. 2nd ed. p. 234. Company started by Mr. Fukuda. No longer in business.

[Jap]

833. Oota, Kiyoshi. 1935. Shiro miso jukusei-chû no seibun no henka narabini sono sanpai genshō ni tsuite [On the changes of constituents during ripening of sweet white miso (shiro miso) and on the sour putrefaction]. *Kwa* No. 16. p. 13-. [Jap]*

• **Summary:** An abstract of this article appeared in *Nippon Jozo Kyokai Zasshi (Journal of the Brewing Society of Japan)* 30(8):73-74 (1935).

834. **Product Name:** Miso.

Manufacturer's Name: Yamada (Shigeo) Miso.

Manufacturer's Address: Paia, Maui, Hawaiian Islands.

Date of Introduction: 1935.

New Product–Documentation: Directory of Honolulu and the Territory of Hawaii. 1934-35. p. 632. Yamada Shigeo Miso. Paia [Maui]. 1947-48 Directory, p. 392. Honolulu Miso & Shoyu Factory (Shigeo Yamada). Wholesale Miso & Shoyu. 405d Buckle Lane. Tel. 66254. Which see.

835. **Product Name:** [Light House brand Soy Sauce, Chiang, Fermented Tofu].

Foreign Name: Jiang-yu, Dou-jiang, Furu.

Manufacturer's Name: Yeo Hiap Seng.

Manufacturer's Address: 410 Outram Road, Singapore 3, Singapore.

Date of Introduction: 1935.

How Stored: Shelf stable.

New Product–Documentation: Letter from Alan Yeo of Yeo Hiap Seng. 1982. April; YHS news release 1990. Oct.; Letter from Charles Yeo of Yeo Hiap Seng. 1984 and 1991. Yeo Hiap Seng started in China in 1900. In 1935, during the Japanese invasion of China, when life was difficult and unsettled in Fukien [Fujian] province, Yeo Keng Lian sent his eldest son, Yeo Tian In, to Singapore to investigate possibilities there. The son founded the Yeo Hiap Seng Sauce Factory at 410 Outram Road, Singapore 3. He was

joined shortly by the rest of the family. The company continued to make the same three fermented soy products that it had made since 1900 in China. In 1947 the growing business was moved into larger quarters at 950 Dunearn Road, its present location. The move out of China was a wise one, for in 1949 the three Yeo Hiap Seng plants in Fukien were taken over by the Chinese Communists. By the mid-1940s, Yeo's quality soy sauce was a common sight in Singapore.

Note: This is the earliest known commercial soy product made in Singapore, or in Southeast Asia.

836. Crespí, Luis. 1935. La soja y su cultivo [The soybean and its cultivation]. Spain. 32 p. Series: Catechisms for Farmers and Cattlemen/Stock-Farmers (*Catechismos del Agricultor y del Ganadero*). 17 cm. [Spa]

• **Summary:** Contents: I: Cultivation of the soybean (*la soja*; p. 3-18): 1. Description of the plant. 2. Origin of the soybean. 3. Varieties of soybeans (*Variedades de sojas*): Early maturing, semi-late, late. 4. Needs of the soybean: In water, in soil, in fertilizer. Fixation of nitrogen from the air in soybeans. 6. Place in the rotation. 7. Preparatory work. 8. Planting: Carrying out the sowing, the necessary seeds, depth of planting. 9. The seeds sprout. 10. Cultural care. 11. Maturity. 12. Diseases (*enfermedades*). 13. Harvest: As a forage plant, as a producer of seeds. 14. Yield.

II: Applications of the soybean (p. 19-28). 1.

Composition of the plant: Composition of soybean forage, composition of the seeds, composition of the straw (*la paja*). 2. The soybean in the feeding of animals: As a forage plant, as a plant that produces seeds, soybean cakes (*tortas de soja*), soybean straw. 3. The soybean as a human food. 4. Industrial products from the soybean (from the oil: paints and varnishes, soap). 5. The soybean as a fertilizer.

III: Geographic distribution: 1. Worldwide cultivation of the soybean. 2. The soybean in Spain.

The soybean as a human food (p. 27): The seed is rich in protein. Whole soybeans (*Semillas de soja*) can be used like French beans and peas, mature and dry, and toasted like peanuts. The first two leaves of very small soybean plants (*Plantitas de soja*) can be used in salads or cooked. Soy flour can be used in bread, pastries, biscuits, or diabetic diets. Condiments, widely used in China and Japan, include natto, miso, tou-chiang, and shoyu. One can make soymilk (*leche de soja*), and use it to make soy cheeses (*quesos de soja*). The seeds of certain varieties can be roasted to make substitutes for cocoa or coffee.

Soybean cultivation worldwide (p. 29-30): In France, starting in 1880, the house of Vilmorin, started selling the variety Etampes. Also in 1880, the soybean was cultivated in Portugal in the Botanical Garden at Coimbra (in west central Portugal).

"The soybean in Spain (p. 30): Thirty five years ago [i.e. in 1900] my father tried cultivating soybeans in Pontevedra.

[Note: Pontevedra is a province and city in the northeast corner of Spain, just north of Portugal, on the coast of the Atlantic Ocean. The city is near the mouth of the Ria de Pontevedra, at about 42.4° north latitude]. For two consecutive years, and using seeds of the variety Etampes from the House of Vilmorin seedsmen, he obtained identical results: excellent vegetation, but a small yield of seeds because the plants failed to fully mature.

“More than thirty years ago [i.e. before 1905], the count of San Bernardo tried growing the soybean, with excellent results, on his estate “El Alamillo,” at Ecija (near Seville).

“In 1910 the soybean was cultivated by Mr. Noriega in Jerez (near Cádiz {Cadiz}), and the results obtained seem to indicate that the harvest was of medium size due to the poor condition of the seeds; but the plant responded brilliantly, showing healthy growth and resistance to the drought.

“In 1917 the ambassador of Spain stationed in Shanghai forwarded to the Commercial Information Center of the Spanish Secretary of State three varieties of soybean seeds: small black, yellow, and green. These seeds were very probably used in cultural trials, even though we do not know the results that were obtained. In the same year Mr. Juan Abril reported in the periodical *Revista Ibérica [Iberian Review]* of his successful soybean trials conducted in Tortosa (in Tarragona province [in northeastern Spain]).

“Finally, during the years 1914 and 1915, Mr. Santiago F. Valderrama, the brigadier general from Artillería [Artillery], conducted soybean cultural trials in Montilla (in Córdoba / Cordova province).

“To his cultivation and enthusiastic encouragement of the cultivation of this plant in Spain, we owe the photograph on the cover of this little instruction book. It shows the top of a mature soybean plant grown by him in Montilla. Two more generations of soybean plants were cultivated in the same locality.”

Illustrations (line drawings) show: (1) Leaves of the soybean and the common bean (*judía = Phaseolus vulgaris*) (p. 4). (2) Flowers of the soybean and the common bean. (3) A soybean stem, with 3 leaves and 2 pods; an opened soybean pod showing 3 seeds (p. 5). (4) An uprooted soybean plant, showing nodules on the roots, and abundant pods (p. 12). (5) Comparison of two soybean plants, with and without nodules. The one with nodules is larger and has many more and larger pods (p. 13).

Note: This is the earliest document seen (Feb. 2001) concerning soybeans in Portugal, or the cultivation of soybeans in Portugal. This document contains the earliest date seen for soybeans in Portugal, or the cultivation of soybeans in Portugal (1880 at the botanical garden in Coimbra). The source of these soybeans is unknown. Address: Catedrático de Agricultura de Instituto-Escuela, Spain.

837. Japanese American News Inc. / Nichibei Shinbunsha. 1935. Nichibei jūshoroku [The Japanese American directory. No 31]. San Francisco, California: The Japanese American News Inc. (Nichibei Shinbunsha). Index of cities. 23 cm. [Eng; Jap]*
Address: San Francisco, California.

838. Morphy, Marcelle. comp. and ed. 1935. Recipes of all nations. New York, NY: William H. Wise & Company.
• **Summary:** Soy is mentioned frequently in the chapter on Japan. “One sauce reigns supreme in Japan—*Shoyu*, which replaces salt in many dishes and which is used in the cooking of almost everything: soup, fish, poultry, meat, and vegetables. It is the popular condiment with cold fish or meat and is added to salad dressing. It is made from the Soya bean seeds, wheat, and pure salt, and has a pleasant and distinctive flavor, unlike that of any of our European bottled sauces.”

Soy-related recipes include: Misoshiru (miso soup with tofu and miso, p. 755). Misozuke (fish with red or white bean curd and red or white miso, p. 758). Seki han (with azuki beans, p. 759). Suki yaki (beef and vegetables, with tofu and shoyu, p. 761). Yokan (Japanese cakes with azuki beans, p. 762). Misso (miso, homemade with soya beans, malt, and salt, p. 763). Tofu (dried bean curd, p. 763).

Miso is said to be made as follows: “The proportions are 1 bushel of Soya beans, 1 bushel of malt, and 3 bushels of salt. The beans are squeezed and mixed with the malt and salt and kept in a cask for 6 months to mature.”

Concerning tofu: “Cubes of tofu are frequently mentioned in Japanese recipes. Tofu is made by soaking the dry beans in water for a day, pounding them in a stone mortar, straining into square molds and mixing with brine. They are then boiled till they become hard and firm.”
Address: Countess.

839. Murasaki, Lady (Shikibu). 1935. The tale of Genji. A novel in six parts. Translated from the Japanese [Genji Monogatari] by Arthur Waley. 2 vols. Boston and New York: Houghton Mifflin Co. 1135 p.

• **Summary:** Lady Murasaki Shikibu’s brilliant 11th century novel colorfully describes the florescence of art and literature in Japan during the Heian period (794-1185). More specifically, these “amorous adventures of the peerless prince Genji” describe the life of Heian court nobility. Reischauer and Fairbank (1960, p. 516-17) call this “the greatest work of all Japanese literature.” Fairbank, Reischauer, and Craig (1973) state: “The greatest work [of Heian literature] was the massive *Tale of Genji* by Lady Murasaki [born ca. 978], which recounts with great psychological subtlety and aesthetic sensitivity the life and loves of the imaginary Prince Genji, and in the process gives us a detailed picture of the court life of the time. The *Tale of Genji* has exerted immeasurable literary influence

throughout Japanese history and in Arthur Waley's masterful translation has become one of the great world classics."

The Kodansha Encyclopedia of Japan says of the *Genji Monogatari* "By general repute the supreme masterpiece of Japanese prose literature. Written in the early 11th century, when prose literature scarcely existed in the West, it has been called the first great novel in the literature of the world. A very long work, upwards of 1,000 pages in translation, or some three-quarters of a million words, it has an essentially simple plot, describing the life and loves of an erstwhile prince known, from his family name, as 'the shining Genji,' and, after his death, the less successful loves of a youth who passes before the world as his son, but is in fact the grandson of his best friend.

"The earliest surviving texts are fragmentary, from late in the Heian period (794-1185), and it is only from the medieval period (13th -16th centuries) that complete texts can be put together. The absence of a holograph manuscript and the absence as well of detailed information about the author, a court lady known as Murasaki Shikibu, means that no final answers can be given to questions concerning the circumstances of composition. From evidence in the work known as *Murasaki Shikibu nikki* (Murasaki Shikibu Diary), it does not seem possible to deny that at least a part of the work is from the hand of Murasaki Shikibu, or that at least a part of it was written before she entered court service, in the first decade of the 11th century. From the Sarashina Nikki, the diary or memoirs of another court lady, it seems equally certain that a long prose work, approximately the length of the present *Genji*, had been completed and widely circulated by the end of the first quarter of the 11th century." Address: Kyoto, Japan.

840. **Product Name:** Asahi Miso.

Manufacturer's Name: Asahi Miso Seizo-sho.

Manufacturer's Address: 519 East 1st St., Los Angeles, California. Phone: VAndike 5702.

Date of Introduction: 1936. January.

New Product-Documentation: The Japanese American Directory. 1936. p. 356 (1/10-page ad, all in Japanese) and p. 374 (directory). Also in 1937, p. 320 (directory) and p. 320 (1/12 page ad). Also in 1938, p. 348. Also in 1939, p. 339.

The Japanese American Directory. 1940. p. 326-27. Asahi Miso Seizô-sho (in characters), Asahi Miso Mfg. Co. Listed in the category "Foodstuff Factory." Also in 1941, p. 328.

Note: Hokubei Miso Seizô-sho was at this address in 1930.

841. Japanese American News Inc. / Nichibei Shinbunsha. 1936. Nichibei jûshoroku [The Japanese American directory. No 32]. San Francisco, California: The Japanese

American News Inc. (Nichibei Shinbunsha). Jan. 1. Index of cities. 23 cm. [Eng; Jap]

• **Summary:** Soyinfo Center has only the pages mentioning soyfoods in the following cities in California: San Francisco, Oakland, San Jose, Sacramento, Fresno, Los Angeles. Plus Portland (Oregon), and Seattle (Washington). See individual directory entries and advertisements. Published Jan. 1 by Nichibei Shinbunsha. Address: San Francisco, California.

842. **Product Name:** Miso, Koji.

Manufacturer's Name: Tsuruda Goshi-gaisha (Tsuruda Limited Partnership) (Miso, Koji).

Manufacturer's Address: 345 E. Second St., Los Angeles, California. Phone: MUTual 1057.

Date of Introduction: 1936. January.

New Product-Documentation: The Japanese American Directory. 1936. p. 374 (directory). Note: This company may be a branch of the Tsuruda Kyodai Goshi-gaisha (Miso, Shoyu) now operating in San Jose at 472 Josefa St. The company names are quite similar, yet the Los Angeles company does not use the Maru-sho / Marusho brand (which seems surprising) and does not make shoyu.

843. Mogi, Masatoshi. 1936. Miso jôzô ni kansuru saikin no kenkyû. II. [Studies on the microorganisms in the manufacture of "miso." II.]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 12(5):367-77. May. English-language summary in Bulletin of the Agricultural Chemical Society of Japan 12(5):54-55, bound at the front of Nippon Nogeikagaku Kaishi. [1 ref. Jap; eng]

• **Summary:** The soluble breakdown products of starch and protein in miso may be produced equally well by bacteria or by koji molds. Three experiments were made using the aerobic bacteria isolated from miso: (1) Diastatic and starch liquefying power. (2) Liquefying power of gelatine (all the bacteria liquefy gelatine). (3) Liquefying power of "Tofu" (The degrees of liquification are not always parallel to the liquefying power of gelatine). Address: Nôgakushi, Brewing Laboratory, Noda Shoyu Co. Ltd., Noda-machi, Chiba-ken, Japan.

844. **Product Name:** Miso, and Koji.

Manufacturer's Name: Kushi Shoyu Miso, Koji Seizo-sho.

Manufacturer's Address: 8150 East Marginal Way, Seattle, Washington. Phone: GL 1241.

Date of Introduction: 1936. June.

New Product-Documentation: Hokubei Nenkan-The North American Times Year Book. 1936, p. 60. Mr. Tanejiro Kushi, and Mr. Toyosuke Kushi.

845. Sano, Kunio. 1936. Miso jôzô no eiyôgaku-teki kôsetsu. X. Miso jukusei-chû no shisuchin no shôchô [Nutritional studies on miso fermentation. X. Increase and decrease of cystin during miso ripening]. *Jozogaku Zasshi (J. of Brewing, Osaka)* 14(6):499-505. June. [14 ref. Jap] Address: Osaka Teikoku Daigaku, Kôgaku-bu, Jozogaku Kyoshitsu, Takada Kenkyu-shitsu (Hokoku #49), Japan.

846. Iwamura, Iwao. 1936. Biochemical studies on "miso," fermented soy-bean paste. IV. On the effect of cystine upon the nutritive value of "miso-protein" when fed to albino rats as a supplement to rice. *Bulletin of the Agricultural Chemical Society of Japan* 12(7):78-88. July. (Chem. Abst. 30:7153). Bound in the front of Nippon Nogei Kagaku Kaishi (J. of the Agricultural Chemical Society of Japan). [16 ref. Eng]

• **Summary:** "The amount of cystine in 100 gm of fresh miso was as follows: Shiromiso 64.2, Yedomiso 45.5, Sendaimiso 50.9, Hatchomiso 93.4 mg." The content of cystine in various kinds of fresh "miso" is 0.064-0.10% and in polished rice 0.037-0.055%. The "miso" diet is slightly deficient in cystine for growth of rats. Address: Agricultural Chemical Lab., Tokyo Imperial Univ., Tokyo.

847. Ramsbottom, J. 1936. The uses of fungi. *British Assoc. for the Advancement of Science, Annual Report*. Sept. 9-16. p. 189-218. See p. 206-08, 212. 106th year.

• **Summary:** This was an address to Section K (Botany) of the British Association for the Advancement of Science at Blackpool, Sept. 10, 1936. Discusses: Koumiss (effervescent drink), Egyptian Leben, Arrack, Japanese koji, shoyu, tamari, and miso, fermented tofu.

"There is a wide range of oriental foods produced by fermentation with *Aspergillus*. Chinese curd, To-fu, is made from soy-bean milk fermented with mould and ripened in brine. The curd is cut into squares which soon become covered with fungus. They are then placed in brine for further ripening. The curd is canned as white or red squares in a salty liquid."

In Japan, four large industries are built on the use of *Aspergillus oryzae*. Their approximate total yearly output is as follows: Saké (rice wine) 812,000 kiloliters, shoyu (soy sauce) 902,000 kiloliters, miso (soy cheese) 1,690,000 kilograms, and shocho (distilled alcoholic liquor) [sic, shochu or shôchû, cheap spirits] 39,700 kiloliters. The annual value of all the fermentation industries is approximately £40,000,000.

"Molds of the genus *Penicillium* play a large part in the ripening of the Camembert-Brie, and the Roquefort-Gorgonzola-Stilton series of cheeses. Milk is first coagulated with rennet or dried calf-stomach linings." Also: Mycorrhiza, Takadiastase, production of glycerin and yeasts in Germany during World War I. Address: O.B.E., President of the Botany Section.

848. Russell, Lindsay. 1936. Beneficent soybean. *New York Times*. Dec. 6. Section 4. p. 8.

• **Summary:** Russell believes that "John Havens, a miller in Beaufort County, was the first to bring the soybean to North Carolina, and the experiments of August Heckscher resulted in bringing the soybean to the attention of the Midwest." Note 1. Russell (who is probably wrong) does not say when Havens first brought soybeans to North Carolina or from whom he obtained his soybeans. Note 2. The city of Washington is the capital of Beaufort County, in eastern North Carolina on the Pamlico River. The Havens Oil Co. in Washington, North Carolina, first crushed soybeans in 1916 (C.B. Williams, Dec. 1916; E.G. Funk, 1949).

Although the soybean originated in China, "it remained for Japan to vastly extend the use of the soy bean and introduce it to the world... In 1905 Japan turned the South Manchurian Railway into a Department of Agriculture and started a drive to develop the soy bean..." Also mentions tofu (also called "milk curd") and "mesu" (probably miso) "a six-month ferment and substitute for lactic acid milk." Address: Wilmington, North Carolina.

853. **Product Name:** Yamajyu Shiro Koji Miso.
Manufacturer's Name: Yamajyu Shoyu & Koji Miso Co.
Manufacturer's Address: 395 Buckle Lane, Honolulu, Oahu, Hawaii. Phone: 68772.
Date of Introduction: 1936.

New Product–Documentation: Directory of the City and County of Honolulu. 1938-39. p. 614. Yamaju Shoyu & Koji Miso Co. (Taro Higa). Soy & Miso Manufacturers. Wholesale and retail. 395 Buckle Lane. Tel. 68772. Note: Taro Higa had the Yamajifu Shoyu & Koji Miso Co. the previous year. Wm. Higa. 1980. History of Miso Companies in Hawaii; Shurtleff & Aoyagi. 1983. The Book of Miso. 2nd ed. p. 234. The company was purchased by George Higa (Bill Higa's father) from Mr. Fukuda; Oda. 1983. Hawaii Herald. Oct. 7. Letter from Takao Nihei. This was company was founded in 1936 and had this name at the time it was founded. It was later renamed Hawaiian Miso Shoyu Co.

854. Cheng, Shao-ching. 1936. Shanghai Restaurant Chinese cookery book. London: Published by the proprietors of The Shanghai Restaurant. 4 + 102 p. 19 cm.
 • **Summary:** The recipe for “Dow see jeung (Salted black bean paste)” states (p. 5): “Dow See (salted black beans). Small piece garlic.

“(a) Soak the salted black beans in warm water for 10 minutes. (b) Pound the salted black beans and the garlic together into a fine paste.”

Note: This is the earliest English-language document seen (Oct. 2008) that uses the term “Dow See” to refer to Chinese-style soy nuggets.

855. Gray, George Douglas. 1936. All about the soya bean: In agriculture, industry and commerce. London: John Bale, Sons & Danielsson Ltd. ix + 144 p. Introduction by James L. North. Late curator, Royal Botanic Gardens, Regent's Park, London. Index. 28 cm. [19 ref]

• **Summary:** A comprehensive, early work on the soybean. Gray was a Scotch physician. Contents: 1. Introducing the soya bean. 2. The soya bean plant and its cultivation. 3. The soya bean as food: Dietetics, immature green beans, mature dried beans, soya bean coffee, soya bean chocolate, soya bean sprouts, soya bean milk, soya bean flour (incl. Berczeller flour, Soyvita bread made by Messrs. Wm. Beattie, Ltd., Glasgow), bean curd [tofu], soy (also called soya bean sauce, Chinese bean sauce, or shoyu), miso, fermented bean curd (p. 66-67). 4. Soya bean oil. 5. Soya bean trade. 6. The soya bean in agriculture.

Addenda: Soya bean products in the USA. Dieting and recipes. Statistics. India. Bibliography.

In the chapter on “Soya bean oil” we read (p. 75): “In England, the bean oil trade is carried on by the following firms:—The British Oil and Cake Mills Ltd., the ordinary shares of which are held by Lever Bros., Ltd., so that they are a branch of Unilever, Ltd.

“The Hull Oil Manufacturing Co., Ltd., Hull, now merged in the foregoing concern.

“The Premier Oil Extracting Mills, Ltd., Hull.

“Messrs. Wray Sanderson & Co., Hull.

“The Medina Refinery Ltd., Deptford, London.

“Messrs. J. Bibby & Sons Ltd., Liverpool.

“The Erith Oil Works Ltd., Erith” [Kent].
