The first addendum, titled “Soybean products exhibited by the American Soybean Association” (at Washington, DC, p. 120-24) lists the following companies and each of the soy products that they manufacture: American Lecithin Corp. (Atlanta, Georgia), Archer-Daniels-Midland Co. (Milwaukee, Wisconsin), Armstrong Paint and Varnish Works (Chicago, Illinois), Battle Creek [Food] Factory (Battle Creek, Michigan), The Blanton Co. (St. Louis, Missouri), Cereo Co. (Tappan, New York), The Davies-Young Soap Co. (Dayton, Ohio), Detroit Graphite Co. (Detroit, Michigan), Eastern Health Food Stores Association (Washington, DC), Funk Brothers Seed Company (Bloomington, Illinois), Harshaw Essential Foods, Inc. (Cleveland, Ohio), Keystone Macaroni Mfg. Co. (Lebanon, Pennsylvania), Kloss, Jethro (Takoma Park, Maryland: Fresh [soybean] milk. Pumpkin pie [soybean milk and soybean flour]. Soybean cheese. Soybean bread [20% soybean flour]. Soybean buns. Soybean sprouts. Soybean cake), Laucks, I.F., Inc. (Bloomington, Illinois—home office, Seattle, Washington), Madison Food Company (Madison, Tennessee; Vigorost, Cheese [Tofu], Soybeans canned with Tomato, Soybeans canned plain, Dixie Fruit Crackers), Mead Johnson and Co. (Evansville, Indiana; Makes Sobee [Infant Formula]), Oriental Show-You Co. (Columbia City, Indiana), Paintcraft Co. (Galesburg, Illinois), Prince Macaroni Mfg. Co. (Boston, Massachusetts), Purina Mills (St. Louis, Missouri; makes Cresol disinfectant, Purina turkey and growing fattening chow, Purina lay chow, Purina egg chowder, Purina breeder egg chowder, Purina fitting chow, Purina rabbit chow, Purina chick Growena chow, Purina 34% cow chow, Purina chowder, Purina bulky cow chow, Purina 24% cow chow, Purina pig and hog chow, Protena all mash starting and growing food), Shellabarger Grain Products Company (Decatur, Illinois), Soyex Company, Inc. (Nutley, New Jersey), Staley Sales Corporation (Decatur, Illinois), The Stamford Rubber Supply Company (Stamford, Connecticut), Dr. Roy Monier, President, Board of Managers, State Hospitals (Jefferson City, Missouri), United Drug Company (Boston, Massachusetts), Vi-tone Company (Hamilton, Canada), Woolsey Paint and Color Co., C.A. (Jersey City, New Jersey), Bureau of Chemistry and Soils, Department of Agriculture (Washington, D.C.). Page 120 adds: “The exhibit also contained some 200 soybean products, mostly foods, brought from the Orient by Mr. W.J. Morse, Senior Agronomist, Department of Agriculture, Washington, DC, U.S.A.” Note: Morse and P.H. Dorsett were in East Asia from 1929 to 1931, when they collected many samples of soybeans and soyfoods.

In the second addendum, recipes, the author notes that soy flour is widely used in diabetic diets. Two leading firms

who make soy flour in England and who also incorporate it in various products are: Soya Foods, Ltd., Rickmansworth, Herts, and Dietetic Foods Ltd. 124 Victoria St., London, S.W. 1. "The former specialize in Soyolk which is flour prepared on the principles laid down by Professor Berczeller; it is a mealy powder, fatty to the touch. The latter firm are the sole distributors in Great Britain of the well-known 'Heudebert' Dietetic Food products, a French concern which makes different kinds of diabetic breads." The following recipes are then given; * = Calls for Soyolk soy flour: Soybeans, southern style. Soybean salad. Roasted soybeans [like dry-roasted peanuts]. Soybean croquettes. Soybean soufflé. Stuffing for baked fish*. White sponge pudding*. Shortbread*. Madeira cake*. Soya soup à la Reine (uses Heudebert soya flour). Soya chocolate (with soya flour). Soya vegetable soup (with soya flour). Soya bean sprout salad.

Note: This is the earliest English-language document seen (Feb. 2000) that uses the term "soya bean sprouts" to refer to these sprouts. Address: M.D. (Scotch physician) England. Late medical officer to H.B.M. Legation, Peking, China. Lieut.-Colonel, Retired.

856. Institut International d'Agriculture (International Institute of Agriculture). 1936. *Le soja dans le monde* [The soybean in the world]. Rome, Italy: Imprimerie de la Chambre des Deputes, Charles Colombo. viii + 282 p. Bibliography, p. 276-82. No index. 25 cm. [90 ref. Fre] • **Summary:** A superb early work, containing extensive original information, looking at developments with soybeans and soyfoods country by country, worldwide. Contents. Preface (p. 1). A. Culture of soy (*soja*; p. 4): 1. Botanical description, selection, classification of the varieties. 2. Culture properly said. 3. Enemies and illnesses.

4. Culture in the various countries: 4a. The Americas (p. 38): Antigua, Argentina, Bermuda, Brazil, Canada, Chile, Colombia, Costa Rica, Cuba, Dominican Republic, Ecuador, USA (gives details on all varieties grown, and describes production, history, varieties, and cultural practices in North Carolina, Illinois, Indiana, Iowa, Maryland, Massachusetts, Mississippi, Missouri, New York, Ohio, West Virginia, Wisconsin, Conclusion), Guadeloupe, Guatemala, British Guiana, Dutch Guiana, British Honduras [Belize], Jamaica, Barbados, Martinique, Mexico, Montserrat, Peru, Puerto Rico, El Salvador, Trinidad and Tobago, Uruguay.

4b. Europe (p. 101): Germany, the Danubian countries, Austria, Spain, France, Great Britain, Hungary, Italy, Netherlands, Poland, Romania, Switzerland, Czechoslovakia, Turkey, USSR.

4c. Asia (p. 128): Ceylon, China and Manchuria, Cyprus, Federated States of Malaysia, British India (incl. Punjab, Bihar and Orissa, Burma, Berar, Madras Presidency, Bombay Presidency, Bengal (incl. Nepal, Bhutan, Sikkim, and the district of Darjeeling), Assam, North-West Frontier

Province, United Provinces), Netherlands Indies, Indochina (incl. Tonkin, Annam, Laos, Cambodia, and Cochinchine), Japan, Palestine, Siam.

4d. Africa (p. 146): French West Africa, Algeria, Belgian Congo, Cyrenaica, Egypt, Eritrea, Madagascar, Morocco, Mauritius (Ile Maurice), Reunion (Réunion), Rhodesia, Anglo-Egyptian Sudan, Tripolitania, Tunisia, Union of South Africa.

4e. Oceania (p. 153): Australia, Fiji Islands, Hawaii, New Caledonia, New Zealand, Philippines.

B. Utilization of soya (p. 158): 1. The soybean in human nutrition and in industry: Whole soybeans, chart of the uses of whole soybeans, use of soya in the green state (green vegetable soybeans), soy sauce (*dau-tuong* of the Annamites, or *toyo*, named shoyu by the Japanese, or *chou-yau* or *chiang yoo* by the Chinese), condiments and sauces based on soya in the Netherlands Indies (*tempe*, *ontjom*, *tempemori* and *tempe kedele* [various types of tempeh and onchom, p. 168-70]), *tao tjo* [Indonesian-style miso], *tao dji* [soy nuggets], *ketjap*, *ketiap benteng* [Indonesian-style soy sauce], soymilk (*le lait de soja*), yuba (*crème de lait de soja*), tofu (*le fromage de soja*) and fermented tofu (*des fromages fermentés*, made by Li Yu-ying near Paris), soymilk casein (*caséine du lait de soja*, for industrial use, including vegetable albumin, or galalithe [galalith]) [isolated soy protein], and artificial wool), soy lecithin (*lécithine de soja*), soy flour (*la farine de soja*, incl. soy bread, soy pastries, and soy cocoa).

2. Soy oil (p. 194): Food uses, industrial uses (including soaps, products resembling petroleum, paints, varnishes, linoleum, and artificial rubber), extraction, directory of U.S. manufacturers of materials and equipment for soybean processing, directory of U.S. and Canadian manufacturers of food products based on soya (*produits alimentaires à base de soja*, p. 205-06), directory of U.S. manufacturers of industrial soy products (p. 206-07).

3. Soybean in the feeding of domestic animals (p. 207): Forage, hay, silage, pasture, soybean seeds, the minerals in soybeans, soya as a feed for dairy cows, cattle, buffaloes, sheep, hogs, horses and mules, poultry.

4. Use of soya as fertilizer (p. 257). C. The trade of soya and of its by-products (p. 363): Production of soybeans in the principal countries, economic importance of soybean culture in the USA, soybean trade/commerce including tables of the major importers and exporters, and amounts traded annually in 1931-1934, price of soybeans, cost of production.

List by region and country of people and organizations that responded to a questionnaire sent by IIA (p. 273-76). Bibliography of main publications consulted, listed by region and country of publication.

Reunion (*Ile de la Réunion*): "The soybean (Le Soja) is only cultivated as an experimental crop, on a few square meters at the agronomic station" (p. 148).

Fiji (*Iles Fidji*): Soybean cultivation is not yet practiced in this colony; however soybean seeds are currently being imported in order to conduct a trial.

New Caledonia: In 1928 soybean cultivation was introduced to New Caledonia.

Note 1. This is the earliest document seen (Dec. 2007) concerning soybeans in Bhutan, Costa Rica, Dominican Republic, Ecuador, El Salvador, Guatemala, Israel, Jamaica, Madagascar, Morocco, New Caledonia, Palestine, Peru, or Réunion, or the cultivation of soybeans in Bhutan, Costa Rica, Dominican Republic, Ecuador, El Salvador, Guatemala, Israel, Jamaica, Madagascar, Mexico, the Middle East, Morocco, New Caledonia, Palestine, Peru, or Réunion. It is also the earliest document seen (Dec. 2007) concerning soybeans in connection with (but not yet in) Cyprus; it is stated that soybeans are not grown on the island of Cyprus. Soybean culture is not practiced in the Italian colonies of Eritrea (Erythrée, now part of Ethiopia) or Cyrenaica (Cyrénaïque, now part of Libya).

Note 2. This document contains the earliest date seen (June 2007) for soybeans in Bhutan, New Caledonia, or Réunion, or the cultivation of soybeans in New Caledonia (1928), or Bhutan or Réunion (1936) (One of two documents).

Note 3. This is the earliest French-language document seen (Jun. 2000) that mentions tempeh, which it calls “tempe” (p. 168). It notes that, in general, the indigenous people of the Netherlands Indies use soybeans mainly to make *tempe*, a product which, throughout central and eastern Java, takes the place reserved for *ontjom* in western Java. Tempeh is found in two forms: either in large flat cakes which are cut at the time of sale into small square morsels, or wrapped in folded banana leaves. A detailed description of the preparation of each of these two types of tempeh is given as well as another type of tempe, called *tempemori*, which is made with soybeans and coconut presscake.

Soybean culture is not known to be practiced in the following countries or colonies: Antigua, Barbados, British Honduras (renamed Belize in about 1975), Trinidad and Tobago. Address: Rome, Italy.

857. Read, Bernard E. 1936. Chinese medicinal plants from the “Pen ts’ao kang mu” of 1596. 3rd edition of a botanical, chemical and pharmacological reference list. Peking, China: Peking Natural History Bulletin. Sales Agent: The French Bookstore. xvi + 391 p. See p. 114-18.

• **Summary:** Contents: Introduction in Chinese. Introduction to the third edition (Shanghai 1935). Provincial abbreviations. Abbreviations for parts of plants. Bibliographical abbreviations (journals and books). Secondary references helpful to a study of Chinese materia medica. Comparative table of Western, Japanese, and Chinese dates (1868-1935). Table of classes, general, and

species for which references are listed. Index of Romanized Chinese names modified from Wade’s system. Index of common English names, with foreign names given in italics. Latin index.

References related to soybeans are subdivided as follows (p. 114-18, 256): Soybeans, black variety (var. *nigra*; the fresh hulls used in medicine are known as *Ta Tou P’i*). Soybean sprouts, black variety (Ta Tou Huang Chüan). Bean relish, black variety (Ta Tou Ch’ih). Bean ferment, black variety (Tou Huang; Natto in Japanese). Yellow soybean (*Glycine soja* S. et Z., var. *flava*; Huang Ta Tou). Soybean oil (Tou Yu). Soybean sauce, yellow variety (Chiang Yu; thick or thin). Soybean paste (Chiang). Bean curd, yellow variety (Tou Fu). White soybean (*Glycine soja*, S. et Z., var. *alba*). Soy sauce made with wheat flour (p. 256).

References for azuki beans (red mung bean, *P. mungo*, L. var. *subtrilobata*, Fr. et Sav. [HN. Br.]) are given on page 122. References for wheat gluten (Mien Chin) are given on page 256.

This book is largely a list of references relating to plants listed in the Pen Ta’ao Kang Mu. It is not a translation or summary of the latter work.

Note: This is the earliest English-language document seen that uses the term “the fresh hulls” to refer to soy bran. Address: PhD, Head of the Div. of Physiological Sciences, Henry Lester Inst. of Medical Research, Shanghai, China.

858. Rouest, Leon; Guerpel, Henry de. 1936. Le soja français et ses applications agricoles et industrielles [The French soybean: Its agricultural and industrial applications]. Chateauroux, France: G. Langlois. xxiii + 99 p. 28 cm. [42 ref. Fre]

• **Summary:** Contents: Preface, by L Brétignière (Prof. at Grignon, Member of the Academy of Agriculture). Preface to the first edition, by Louis Forest (1921). Introduction to this new edition: Soviet Russia and the soybean (*le Soja*; includes the story of Rouest’s stay in the Northern Caucasus, Russia, from 1930 to 1933), Germany and Poland take up the soya question, the canons [guns] of Germany versus the Manchurian soybean, a secret contract to provide the weapons of war, organization of a Polish bank in Manchuria, Germany cultivates soybeans in Romania and Bulgaria in preparation for the war, France and the cultivation of soybeans.

1. What is soja? 2. History of the propagation of soja: Introduction of the soybean into France and Europe, the soybean is cultivated in central Europe, in Austria, in 1875, in France the soybean is the object of numerous trials from 1876 to 1881, its cultivation worldwide, the study and acclimatization of soya become generalized.

3. Botanical characters of the soybean: And the varieties of soybeans. 4. Chinese varieties: The soybean in China, the production of soya in China in 1916 and 1917, production

of soya in the Far East during the year 1928, exportation of soya from the Far East to Europe.

5. Japanese varieties: The soybean in Japan, varieties of soya from Indochina and from other Asian countries. 6. The soybean in America: American varieties, cultivation of soybeans in Ohio, selection of soya using pure lines in Connecticut.

7. The soybean in Europe: Italy, Russia, France, French climatic zones for the cultivation of *Soja hispida*, the Atlantic zone, the continental zone, the Mediterranean zone and climate, can the soybean cultivated in all the French climates including those in the north, northeast, and northwest, speedy production of soybeans in view of agricultural production and of the creation of early varieties for the regions in north and northeast France.

8. Instruction for growing soja in France. 9. Soja in Manchuria. 10. Soja seeds. 11. Selection of soja. 12. Varieties of soja. 13. Different ways of planting soya seeds. 14. Soy yield. 15. Nitrogen fixation in soya seeds. 16. Tilling and preparing the earth. 17. Soja fodder. 18. Soja, striking and improving. 19. Harvesting soja grain. 20. Soja oil. 21. Soja oil-cake for animal feeding. 22. Vegetable milk, soja milk and industrial casein.

23. Soja in human food: Soy flour and its applications, soy bread with wheat, nutritional composition of soja compared to dry legumes, soy viewed as a dry legume to replace meat, comparative production of nutritive elements among the various legumes used for human food, comparative value in calories of the usual foods and of soja, preparation of soy soups and meals in compressed tubes, what varieties of soy can serve the special needs of human nutrition, Sojenta, potatoes stuffed with soy, force meat balls (*boulettes*) of rice and soy, bread of rice and soy, pudding of soy and rice, soy sprouts and their food value, fresh soy sprouts in a salad, soy sprouts with vegetables, soy preserves and confections, soy chocolate, soy coffee, soybeans conserved in containers, soy with smoked fish, soup with soy vegetable meat, soymilk soup, omelet with smoked soy vegetable ham, green soy sprouts, soy cake, soy force-meat fritters.

24. The utilization of soja in the Far East: Vegetable cheese (tofu), soy-based condiments, Japanese natto (2 types), Japanese miso, Chinese miso, soy sauce (*soyou* or *schoziou*), making soy sauce in Kwantung, China, making soy sauce in Japan, koji or molded rice.

25. The culture of soja in North Africa (Rouest has varieties that would grow and yield well in the French colonies of Tunisia, Algeria, and Morocco). 26. Opinions of some authors on soja. Conclusions. Bibliography on soja.

A small photo on the "Dedication" page shows Léon Rouest (born in Paris on 11 Nov. 1872).

Concerning soy in Russia (USSR) (p. 52-53): In Russia, the soybean has been known for quite a long time, specially in the Ukraine and Bessarabia, but it was never grown over

a large area, and was given a back seat (low priority) in agriculture until after the revolution of 1917. It was not until 1926-27 that cultural trials were conducted on farms in the state of Northern Caucasus (*d'Etat du Caucase du Nord*). In the regions of Rostov-on-Don (*Rostow-sur-Don; Rostov-na-Donu*), Eisk (near Krasnodar), Stavropol, Prim-Koumsk, Yessentuki / Essentuki in the Kuban and Kuban River area of the North Caucasus region of southern Russia, the yields were 11 to 16 quintals.

In 1927 there were 600 ha planted to soybeans, increasing to 17,000 in 1928, in the *kolkhoz* (collective) farms or the *sovkhoz* (state owned) farms.

In 1929-1930 and until 1932-1933 there were very laudable / praiseworthy efforts to propagate soybeans in favorable regions, especially in the North Caucasus, but the soils of this region, although they are very rich and well suited to soybeans are also very rich in bad weeds and the results obtained up to the present do not seem favorable. As I said earlier, the soybean is a technical plant of the intensive type which is well suited to the soil and climate of Russia, but is much less suited to the indolent character of peoples who are accustomed to cultivating only small areas. In spite of the remarkable efforts at mechanization, the peasants who submit to collectivization and who do not yet understand it very well, the cultivation of soybeans does not assume the importance hoped for. Address: France.

859. Sano, Kunio. 1936. Miso jôzô no eiyôgaku-teki kôsatsu. X. Miso jukusei-chû no shisuchin no shôchô [Nutritional observations on miso fermentation. X. Increase and decrease of cystin during ripening of miso (Abstract)]. *Nippon Nogekagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 12:A216. [1 ref. Jap]
 • **Summary:** Abstracted from *Jozogaku Zasshi* 14(6): (1936).

860. Tezuka, Kaneko. 1936. Japanese food. Tokyo: Maruzen Co. Ltd. 84 p. See p. 28. 20 Cm. Half-title: Tourist Library: 14. [Eng]

• **Summary:** The chapter titled "Common everyday food" (p. 22+) notes that the three breakfast dishes are boiled rice, *misoshiru* (bean-paste soup [miso soup]), and *kô-no-mono* (pickles). With them are served "shell-fish *tsukudani* (foods boiled down in soy [sauce]), *shiokonbu* (the laminaria boiled in brine and soy), *nori* (laver), *nimame* (boiled beans [soy]), various kinds of bean-paste [miso] dishes, pickled plums [umeboshi], etc." A brief description of how to make miso and miso soup is given (p. 24). Under "Dinner dishes" we read: The most simple of foods is bean-curd." Fresh raw fish, "cut into shining thin slices (*sashimi*) is served with fresh grated radish or horse radish, and eaten dipped in vinegar or soy."

The section titled "How Bean-curd is Made" (p. 28) states: "Tôfu (bean-curd) is made by soaking soy beans in

water, mashing them, straining the mass through cloth and solidifying with the addition of magnesium chloride. It is a very nutritive food. The mush left over after straining *tôfu* is called *u-no-hana* (deutzia flowers) [okara] and is used in cooking vegetables." A photo shows a "Vendor cutting bean-curd."

A photo (p. 64) shows a hall full of Buddhist priests dining at Soji-ji temple, Tsurumi, Japan. In Japan, March 24 and Sept. 24 are national holidays—Spring and Autumn Worship of the Imperial Ancestors. To worship all the Imperial Ancestors, the people hang out the Japanese flag and "to honor the spirits of their own ancestors, make *Inarizushi* (vinegar-spiced rice wrapped in fried bean-curd) and *botan-mochi* (boiled rice slightly kneaded and covered with [azuki] bean jam). They offer these to the spirits of the dead by placing them before the Buddhist altar in the home and sending them to the family temple and the homes of relatives."

The chapter titled "Japanese Cakes" notes that the two basic types are *higashi* (dried cake) and *namagashi* (undried cake). "*Namagashi* is made of [azuki] bean-jam for the most part. Bean-jam is just like a cream made of red beans and sugar. *Namagashi* is divided into *yôkan* and others." *Yôkan* is made of bean-jam gelled with agar (Japanese isinglass). A photo (p. 83) shows a bean-jam factory and show case of products.

Note 1. Editorial note signed: Board of Tourist Industry, Japanese Government Railways.

Note 2. This is the earliest English-language document seen (Oct. 2001) that uses the word "mush," or the term *u-no-hana*, or the term "deutzia flowers" to refer to okara.

Note 3. This is the earliest English-language document seen (March 2009) that uses the term "bean-paste" to refer to miso.

Note 4. This is the earliest English-language document seen (March 2006) that uses the term "bean jam" (or "bean-jam") to refer to sweet azuki bean paste [*azuki-an*].

Address: Prof., Japan.

861. Japanese American News Inc. / Nichi-Bei Shinbunsha. 1937. Nichibei jûshoroku [The Japanese American directory. No 33]. San Francisco, California: Nichi-Bei Shinbunsha. 585 p. Jan. 1. Index of cities. 23 cm. [Eng; Jap] Address: Ellis Street, San Francisco, California.

862. **Product Name:** Maru-sho brand Shiro-miso, Koji.

Manufacturer's Name: Tsuruda Company (Tsuruda Goshi-gaisha).

Manufacturer's Address: 1535 Laguna St., San Francisco, California. Phone: WE 6800.

Date of Introduction: 1937. January.

New Product–Documentation: The Japanese American Directory. 1937. p. 8 (directory; Importers of groceries. "Tsuruda Co.") and add (½-page; top 1/3 of ad is in English:

"Tsuruda Company. Importers, manufacturer & exporters. 1535 Laguna St., San Francisco"). Also Tsuruta Goshi Gaisha in San Jose. Miso & Shoyu manufacturer. 472 Josefa St.; Ballard 5539. Note: This company appeared in San Jose in 1936. The ad is divided vertically into halves; one for San Francisco, the other for San Jose. The company spells its name "Tsuruta" in the romanized directory but "Tsuruda" in English part of its ad. Same in 1938. p. 6 (directory).

863. *Los Angeles Times*. 1937. Japan: Japanese make ritual of dining—Harmony of color stressed in dainty servings. April 21. p. B16.

864. *Contemporary Manchuria*. 1937. Bean oil industry in Manchuria. 1(1):15-42. April.

• **Summary:** Contents: Methods of oil extraction: Wedge system (round cake), screw system (round cake), hydraulic system (round cake or plate cake; the plate cake system, which is the most advanced method of pressure extraction, is used only by Nisshin Oil Mills at Dairen and Anglo-Chinese Trading Company {Kabalkin Oil Mills} at Harbin), benzine-benzol system, alcohol system (recently developed by Central Laboratory of the SMRC and now utilized by the Manchuria Soya Bean Industry Company at Dairen). Characteristics of the various extraction methods (merits and demerits): The hydraulic system is gradually displacing the screw system, the alcohol extraction system is the best and it produces priceless lecithin as a by-product, most of the soybean oil mills in Europe use the benzine system. Varieties of bean cake: Round cake (6 types), plate cake, flake cake [soybean meal], refined bean cake (Soyalex; extracted with pure alcohol. Its use as a raw material for shoyu, miso, candy, or noodles adds a high degree of nutritive value). Utilization of soya beans (a chart on page 27 shows many uses): Uses of soy beans, uses of bean cake (as fertilizer, for manufacturing shoyu, for making bean flour {*kinako*}, as raw material for Ajinomoto, in making liquid paint {Solite as invented by Mr. Yosei Suzuki and manufactured by the Solite Company at Dairen}, as a raw material for various protein products {including sizing for paper}), uses of bean oil (food oil, lard substitute, butter substitute or margarine, paint diluent, soap, glycerine and fatty acid, waterproof material {Tantalus}, petroleum substitute, gum substitute and other), lecithin. Factory construction expenses.

In the Far East, the solvent extraction system is used by only 3 firms: (1) The Honen [Hohnen] Oil Manufacturing Company with mills at Dairen (capacity 200 tons/day), Naruo (200 tons), and Shimizu (610 tons); (2) the Nikka Oil Manufacturing Company with its mills at Wakamatsu (200 tons); and (3) the Manchuria Soya Bean Industry Company with its mills at Dairen (100 tons). The total capacity of these 3 companies is 1,310 tons/day, of which Honen has

77%. Their combined annual production of Flake Cake [soybean meal] is about 270,000 tons, which is negligible in comparison with the total amount of round-cake production in Manchuria.

The latest method of extracting oil from soya beans is by the use of benzine or benzol as chemical solvents. The Honen Oil Mills at Dairen is the only one which uses this method at present.

Candies and noodles are already being manufactured from soybean flour. An experimental station of the Department of Agriculture and Commerce has experimented with the use of Flake Cake in the manufacture of shoyu and obtained encouraging results in terms of cost and quality.

865. South Manchuria Railway Co. 1937. Bean oil industry in Manchuria. South Manchuria Railway Co., English Section. 37 p. April. 29 cm. See also original 1936 edition with same author and title. [Eng]

• **Summary:** Contents: I. Methods of bean oil extraction: Wedge system (round cake; the most primitive and small scale but still extensively used in remote interior districts), screw system (round cake; the most widely used method in Manchuria), hydraulic system (round or plate; the latter allows application of much greater pressure. Used only by the Nisshin Oil Mills at Dairen [capacity 150 tons/day of soybeans] and the Anglo-Chinese Trading Co. [Kabalkin Oil Mills] at Harbin, capacity 220 tons/day), benzine-benzol system (only used by Honen [Hohnen] Oil Mills at Dairen), alcohol system (a new process discovered by the Central Laboratory of the South Manchuria Railway Co. and now used by the Manchuria Soya Bean Industry Company at Dairen).

II. Characteristics of various extraction methods: 1. Comparison of wedge, screw, and hydraulic systems. 2. Comparison of round cake (hydraulic), plate cake, benzine extraction, and alcohol extraction systems: Constituent elements of bean cakes, merits and demerits of each type. Alcohol is considered the best. It gives the best quality oil and meal, and is the only system that “produces priceless lecithin as a by-product. The only demerit of this system at present is the high cost of production as compared with other systems. This is due to the large amount of capital required in the installation of machinery and plant and the necessity of using expensive alcohol as solvent.” p. 5.

III. Varieties of bean cake. 1. Round cake: This is the original Chinese bean cake, which comes in several specialized forms: Fodder bean cake used as feed, “Pien Ping” (untrimmed cake), “Kuang Ping” (junk wharf cake), dried round cake (patented by the Dairen Soya Bean Industry Research Inst.), crushed cake, miscellaneous cakes. 2. Plate cake (rectangular). 3. Flake cake (from solvent extraction). In East Asia only 3 companies and 5 mills use solvent extraction. Daily capacity of these mills is as follows: Honen [Hohnen] Oil Manufacturing Co.–Dairen

200 tons, Naruo 200 tons, Shimizu 610 tons. Nikka Oil Manufacturing Co.–Wakamatsu 200 tons. Manchuria Soya Bean Industry Co.–Dairen 100 tons. The total annual production of flake cake is about 270,000 tons and is negligible in comparison with round cake production. 4. Refined bean cake (“Soyalex”). Resulting from alcohol extraction, it is considered to be the best quality for use in foods (shoyu, miso, candy, noodles) or feeds.

IV. Utilization of soya beans. 1. Uses of soya beans (a chart shows many uses): Foodstuff, animal feed, refined oil, lecithin. 2. Uses of bean cake: Directly as fertilizer (it contains nitrogen, phosphoric acid, and potassium, but is being replaced by ammonia sulphate), and as or animal feed. Processed for making foods such as shoyu, miso, bean flour (“kinako”). To make Ajinomoto, Solite liquid paint, and various protein products such as paper sizing, celluloid substitute, or medicine. 3. Uses of bean oil: “The bean oil was used originally by the Chinese people for cooking, lighting, and lubricating (carts) purposes and the demand was limited within China. In less than 30 years, however, it began to occupy an important place in the world market.” The chief reasons are its relatively low cost and many potential uses for foods (lard substitute, butter substitute) or industrial products such as soap or paint, glycerine or fatty acids, waterproof material, petroleum substitute, gum substitute, etc. 4. Lecithin: Used for making leather, margarine, or restoratives. The alcohol extraction process produces lecithin, vitamins, and saponins as by-products. The yolk of an egg contains 7-10% lecithin. “The soyalex lecithin, obtained through the alcohol extraction method, is the most excellent lecithin produced through applied chemistry. It contains 3 to 10 times more lecithin than egg yolk and is more economical for general use.

V. Factory construction expenses: Machinery, installation, and building for a plant that can process 100 tons of soya beans per 24 hours. Screw system round cake, 102,880 yen. Hydraulic system round cake, 111,856 yen. Alcohol or benzine extraction, 719,365 yen.

Tables of statistics: Exports of soya beans, bean cake, and bean oil from 1926-1935: A. From individual ports (Dairen [by far the largest], Yingkou, Antung, Vladivostok, total). B. To various countries (Japan, Europe, China, USA, others, total). Value of exports in 1935 (M. yen; p. 36): Soya beans 130,053,055, beancakes 51,370,086, bean oil 20,132,208. Soya bean crop area and production in Manchoukuo, 1924-1935 based on statistics compiled by the Manchoukuo Dept. of Industry.

On the last page is written, Dr. Roy H. Akagi, S.M.R. Co., as if he were author.

Note: This is the earliest English-language document seen (March 2002) that uses the word “beancakes” to refer to ground, defatted soybeans.

Report of the Intergovernmental Conference of Far-Eastern Countries on Rural Hygiene. *International Conference of Far Eastern Countries on Rural Hygiene (Preparatory Papers)* Vol. 3, page 74-76. Held 3-13 Aug. 1937 at Bandoeng, Java. Published 8 Sept. 1937. Official No. C.H. 1235.

• **Summary:** In Chapter 4, titled “Nutrition,” section I discusses “Composition of food and methods of its preparation.” The soya bean and its uses in French Indo-China (today’s Vietnam) are discussed on pages 75-76. “Apart from rice and maize, one of the most important food crops in that Far East is the soya bean (*Glycine hispida*). This bean is rich in proteins and fatty matter, but has a very low carbohydrate content. Eaten in its natural state as a vegetable, or better still, in the form of a variety of appetising preparations in which the casein is partly disintegrated, the soya bean makes good the deficiency of fatty and nitrogenous matter in the native diet, which consists almost entirely of the rice carbohydrates.

“Its chief derivatives are nuoc-dâu, or soya milk; dâu-phu, a fresh soya cheese obtained by precipitating the casein of soya milk; dâu-tuong, or soya sauce, which is often used instead of nuoc-mam, especially in Tongking; and dâu-phu-chuc, or soya cream [yuba].

“Soya milk is a yellowish-white liquid with a slight smell of burnt bread and a peculiar flavor greatly appreciated by the Annamites. It is prepared by peeling the beans, pounding them in water, straining, and boiling up the resulting liquid.

“Soya cheese [tofu] appears in trade in the form of faintly yellowish-white rectangular cakes, weighing about 150 grammes each. Ten kg. of soya beans will produce 100 liters of milk, which in turn yield 300 cakes, or 45 kg., of cheese. This very cheap product, of which several thousand kilogrammes are sold every day in the Hanoi market alone, is eaten either raw with salad, or stewed with vegetables, or fried in oil.

“Soya sauce, or dâu-tuong, is a preparation obtained by fermenting a mixture of glutinous rice [*Oryzae sativa glutinosa*, called ‘nêp’ by the Annamites] and roasted soya beans. It is a condiment both salty and sweet, which frequently replaces nuoc-mam, a relatively dear food, especially in regions distant from the sea.

“Dâu-tuong is commonly found in commerce in the form of a heterogeneous mixture, consisting of a liquid (nuoc-tuong) in which floats a somewhat coarse paste called tuong-cai, made of incompletely powdered soya beans.

“Dâu-phu-chuc is prepared by drying the skin that forms on the surface of soya milk after prolonged heating. It is

sold in shiny, pale yellow, crinkly sheets, and smells like cow’s milk. It is a food rich in proteins and fatty matter, and is consumed by the Annamites in small pieces, either in soup, or in pork, beef, or chicken stew.”

Note: This is the earliest English-language document seen that uses the term “Roasted soya beans” to refer to soynuts. Address: Geneva, Switzerland.

868. **Product Name:** Miso, and Koji.

Manufacturer’s Name: KINA? (Asauki?) Miso & Koji.

Manufacturer’s Address: Box 207, Pakala, Waimea, Kauai, Hawaii.

Date of Introduction: 1937.

New Product–Documentation: Hawaiian Japanese Annual & Directory. 1936-37, Kauai p. 40. Asauki Kina? (from Okinawa prefecture), miso and koji maker, Box 207, Pakala, Waimea, Kauai, Hawaiian Islands.

869. **Product Name:** Miso, and Koji.

Manufacturer’s Name: Mafuji? / Kanto? / Chikafuji? (Toyosaburo) Miso & Koji.

Manufacturer’s Address: Box 43, Hanapepe, Kauai, Hawaii.

Date of Introduction: 1937.

New Product–Documentation: Hawaiian Japanese Annual & Directory. 1936-37, Kauai p. 32 Toyosaburô Mafuji? (or Kanto? Chikafuji?) (from Niigata prefecture), miso and koji maker, Box 43, Hanapepe, Kauai, Hawaiian Islands.

870. **Product Name:** Koji, and Miso.

Manufacturer’s Name: Mafuji? / Kanto? / Chikafuji? (Yoshikichi) Koji & Miso.

Manufacturer’s Address: Box 122, Kapaa, Kauai, Hawaii.

Date of Introduction: 1937.

New Product–Documentation: Hawaiian Japanese Annual & Directory. 1936-37, Kauai p. 8. Yoshikichi Mafuji? (or Kanto? Chikafuji?) (from Niigata prefecture), koji and miso maker, Box 122, Kapaa, Kauai, Hawaiian Islands.

871. **Product Name:** Koji.

Manufacturer’s Name: Takei Koji, Miso Seizo-gyo (Takei Koji & Miso Manufacturing Co.).

Manufacturer’s Address: Box 237, Kahului, Maui, Hawaiian Islands.

Date of Introduction: 1937.

New Product–Documentation: Hawaiian Japanese Annual & Directory. 1936-37, p. Maui 25. Shûji Takei (from Yamaguchi prefecture), Takei Koji, Miso Seizô-gyo [Takei Koji & Miso Manufacturing Co.], Box 237, Kahului, Maui. Note: They now make and sell koji and have a P.O. Box.

872. **Product Name:** Tofu.

Manufacturer’s Name: Ushijima (Takehachi) Tofu.

Manufacturer's Address: Ponahawai St., Box 1247, Hilo, Island of Hawaii.

Date of Introduction: 1937.

New Product–Documentation: Hawaiian Japanese Annual & Directory. 1936-37, Island of Hawaii p. 32. Takehachi Ushijima (from Kumamoto prefecture), tofu maker, Ponahawai St., Box 1247, Hilo, Island of Hawaii.

873. Bordas, Jean. 1937. *Le soja et son rôle alimentaire* [The soybean and its role as a food]. Paris: Hermann & Cie. 36 p. *Actualites Scientifiques et Industrielles*, No. 557. 36 p. [24 ref. Fre]

• **Summary:** Contents: Introduction. 1. Botanical characteristics and principal varieties. 2. Chemical composition of soya. 3. Alimentary physiology and the nutritional uses of soya: Seeds (energy value, protein, vitamins, use as a milk substitute), forage. 4. Different uses of soya: Agricultural, industrial (oil, casein, sterol), as human food (sprouts, tofu, fermented tofu, shoyu, miso, tuong of Annam, roasted soy coffee, soy bread for diabetics, the future of soya). 5. The economics of soya: Production, imports, exports. Conclusions. Address: Director, Station d'Agronomie et de Pathologie vegetale d'Avignon, France.

874. Kale, F.S. 1937. *Soya bean: Its value in dietetics, cultivation and uses. With 300 recipes.* 2nd ed. Baroda State, India: Baroda State Press. xxx + 375 p. Illust. (35 leaves of plates, described in a separate record). Index. 22 cm. 2nd ed. 1937. [66 ref]

• **Summary:** Contents: 1. Deficiencies in the Indian diet and soya bean as a means to rectify them. 2. History of the origin and growth of soya bean: Derivation of the word soya bean, origin of soya bean, literature, primitive man and soya bean, name of the plant, home of soya bean and its expansion, varieties of soya bean, the culture of soya bean is very remote (It "has been the chief article of diet in China for over 7,000 years."), reference of soya bean in old Chinese records, how and when soya bean became known to Europeans, soya bean in England (from 1890; J.L. North and Henry Ford), soya bean in France (from 1739), soya bean in Italy, soya bean in other countries of Europe, soya bean in United States of America, India and soya bean.

3. The use of soya bean: Importance of soya bean, dietetic importance, industrial importance, agricultural importance (Russia, Mussolini in Italy), medical importance, soya bean is alkalising in its effect ("Soya bean milk as well as its flour is used in foods for invalids and infants, like Nestle's food"), longevity and soya bean.

4. World trade in soya bean: Imports to Europe, production of soya bean in Manchuria (58% in North Manchuria), exports from Manchuria, oil and cake industry in Manchuria, soya bean production in Japan, in America, in Africa, in Australia, in Europe, in Java, in India, in other British possessions, estimate of world production of the

soya bean, the desirability of the expansion of soya bean cultivation, imports and exports of soybeans, soya bean oil, and soya cake—1913-1927: Denmark, Holland, United States, Great Britain, Japan, France, Russia, China, Germany, Norway, Korea. Source: International Institute of Agriculture, Bureau of Statistics, 1921, p. 420-21. A table (p. 38) shows statistics for world production of soybeans "as estimated by the leading firm of London soya bean dealers" for various years from 1923 to 1929. This includes individual statistics each year for China [incl. Manchuria], Japan, and USA. The world totals in tons are: 3,095,000 (for 1923-25). 3,397,000 (for 1926). 4,325,000 (for 1927). 6,000,000 (for 1928), and 6,570,000 (for 1929; incl. China 5,250,000; Japan 550,000; USA 250,000; Java & Dutch East Indies 120,000; Other Asiatic countries & Africa 400,000).

5. Botany of the soya bean plant. 6. Classification of soya bean. 7. Cultivation of soya bean. 8. Diseases and pests of soya bean. 9. Cultivation of soya bean in India. 10. The constituents of soya bean. 11. Soya bean milk. 12. Soya bean flour. 13. Industrial uses of soya bean. 14. Enriching soil by addition of nitrogen and use of soya bean as fodder. 15. Food requirement of the human body. 16. European and American soya bean recipes. 17. Diabetic dishes, Mahatma Gandhi's experiments at Magan Wadi and opinion of scientists on soya bean. 18. Chinese and Japanese soya bean dishes: Toffu [tofu] or soya bean curd: Digestibility, utilization, toffu khan, toffu nao, tze toffu (fried bean curd), chien chang toffu (thousand folds), hsiang khan, kori toffu (frozen toffu), preservation of toffu. Natto. Tokio natto and Kyoto natto etc. Hamanan natto [Hamanatto]. Yuba. Misso [miso]. Soya sauce. Soya bean confectionery. Roasted beans (Chinese).

19. Indian soya bean dishes: Hindustani dishes, Moglai dishes, Gujarati dishes, Maharashtrian dishes, Bengali dishes, Goa dishes, Tanjore dishes. Appendixes. 1. Acreage of soya bean in Manchuria during the last 5 years. 2. Total figures of export during last 5 years. 3. Bibliography. 4. Some opinions about the first edition of this book.

The preface begins: "This little book is written in response to innumerable inquiries I have had from time to time after the inauguration of the plantation ceremony of Soya Beans at the State Agricultural Experimental Station by H.H. the Maharaja Gaekwar of Baroda in November 1933.

"A few months after this a food exhibition was held in Baroda where many Soya Bean dishes—Indian, European and Chinese—were exhibited. The leading papers and journals all over the country spoke in very glowing terms about the Soya Bean dishes that were exhibited... Later on at the request of Messrs. Mitsui Bussan Kaisha Ltd., a leading Japanese Firm in Bombay, a Soya Bean Exhibition and Restaurant were run in the Japanese village at the H.O.H. fete. So keen was the interest and enthusiasm

evinced by the cosmopolitan public of Bombay that seats in the restaurant had to be reserved in advance. The presence of H.E. the Governor and Lady Brabourne and many Indian princes was an additional evidence of the ever growing popularity of the tasty Soya Bean dishes served there.

“At the closing of the H.O.H. fete many prominent people of Bombay requested me to continue the restaurant at a convenient place in the city, and asked me to open soya-bean milk centres for the children of the poor who could not afford to buy cow’s milk. Many were ready to finance any scheme that I would propose, but unfortunately my time was not my own as I had to attend to my duties in the State and could not take advantage of their generous offer.

“The Departments of Agriculture of the various provinces of India as well as many Indian States asked me to supply them with literature regarding the cultivation and the uses of this most useful bean. The Department of Commerce and Industry of the Government of Bombay inquired if I could furnish them with information about the machinery for the extraction of Soya-bean milk. Letters of inquiries from private individuals kept pouring in daily from all parts of India. All this has induced me to undertake the preparation and the publication of this book...

“From the number of experiments carried on in the Baroda territories and outside it, I feel sure that the Indian soil is most suitable for the cultivation of soya bean...

“The leading thought of the day in India is, ‘Village uplift,’ and ‘Rural reconstruction.’

“Baroda, 7th January 1936, F.S.K.

“Preface to the Second Edition: I feel grateful to the public for having given such a hearty reception to the first edition of my book. It is running into a second edition within a year...

“Now, Soya Bean Bakeries and Restaurants have been started in the city of Bombay and in many other towns in India, and Soya Bean products are exhibited in almost all the exhibitions...

“I feel highly thankful to His Highness the Maharaja of Baroda who gave me an opportunity last year of visiting Russia, where I have seen that seven to ten per cent. of Soya Bean flour was being added to the wheat flour in order to enhance the nutritive value of the bread. The Soya Research Institute at Moscow is making researches into the nutritive, industrial and economical values of Soya Bean. I have seen there the actual working of the Soya-bean milk extracting plant. They make casein out of Soya-bean milk. Soya-bean cream is sold in the market.

“I visited the dietetic clinics in England, France, Germany, Austria and other European countries, where doctors prescribe Soya Bean bread for diabetic patients. In Russia, rickets and consumption are treated by Soyolk extracted out of Soya Bean...

“France is growing Soya Bean on còlt de jura [sic, Côte d’Azur, on the Mediterranean?]. In England, through the

efforts of Mr. J.L. North, Soya Bean is realised as a field crop for the last two years.

“Paris, 3rd April 1937 (p. ix).” Address: Food Survey Officer, Baroda State, India.

875. Matsuyama, Masanori. 1937. Hatchô miso no shiro hanten ni tsuite [The white spots on Hatcho miso (Abstract)]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 13:A159. [1 ref. Jap]

• **Summary:** Abstracted from *Jozogaku Zasshi* 15:453 (1937).

876. Woertge, Karl Heinz. 1937. Entwicklung und weltwirtschaftliche Bedeutung der Sojabohnenerzeugung und -verarbeitung [Development and international economic significance of soybean production and processing]. Thesis, Friedrich Alexander University, Erlangen, Coburg, Germany. 119 p. 28 cm. [112 ref. Ger]

• **Summary:** Contents: Foreword. Part I: History and culture of the soybean. 1. History, natural requirements and technology of soybean production; chemical composition of the soybean. 2. Occurrence of the soybean and methods of production in various countries: Asia (Manchuria and China, Japan, Korea, Formosa, Dutch East Indies, other Asian countries incl. British India, Cochin China, Ceylon), America, Europe (Southeast Europe, Austria, USSR, France, Italy, England, Poland, Switzerland, Czechoslovakia, Germany), Africa and Australia.

Part II. Scale and global economic significance of soybean production in the main producing areas. 1. General overview of world soybean production: Production for seeds, for fodders. 2. Scale of soybean production in the main producing areas: Asia (Manchuria, Japan, Korea, Formosa, Dutch East Indies [Java and Madura/Madoera]), America, Europe (Southeast Europe, USSR).

Part III. Development and global economic significance of soybean processing. 1. Soybean processing possibilities: A. Processing soybeans to make foods: Asia (general, methods used in China and Japan to make vegetable-type soybeans and salads, koji, soymilk, shoyu [soy sauce], miso, natto, tofu, methods used in the Dutch East Indies), Europe (general overview, preparation of soybean meal, soymilk, coffee- and chocolate substitutes). B. The soybean as an oilseed: General, methods of obtaining the oil (in Asia, Europe, USA), use of soy oil (as human food, other). C. Obtaining lecithin from the soybean. D. Use of soybean press-cake for livestock feed. E. Use of the soybean meal for fertilizer. 2. World trade in soybeans, soy oil and soybean cake/meal (*Sojakuchen/Sojaschrot*): World trade in soybeans (Manchuria, Asia, Europe, USA), world trade in soy oil, world trade in soybean meal.

Closing remarks: The state of the world soybean market with special consideration for the current German

conditions. Appendixes and tables. Address: Nuereberg, Germany.

877. Yamaguchi, H.S.K.; Sakai, Atsuharu. 1937. Miso or bean-paste (Document part). In: H.S.K. Yamaguchi. 1937. *We Japanese*. Yokohama, Japan: Yamagata Press. 592 p. See p. 269-70.

• **Summary:** “It is generally believed in Japan that miso or bean-paste is responsible in a great measure for the generally sound physical health of the Japanese. It is indispensable to Japanese cuisine... What bread and butter is to a foreigner, boiled rice and bean-paste soup [miso soup] are to the Japanese...”

“The word ‘miso’ is of obscure derivation, but it is usually taken to mean ‘immature bean-soy.’ People often attribute it to the invention of Priest Kanshin, a Chinese Buddhist, who was naturalised in Japan during the Nara days (710-784). Priest Ingen (1591-1673), who introduced the Wobaku [Obaku] sect of Buddhism to Japan [and erected the Manpuku-ji temple at Obaku in 1661], and after whom the haricot beans are named ‘ingen,’ was such a great admirer of bean-paste that, it is said, he took its soup every day instead of a certain Chinese medicine that he had used many years...”

“The longer the paste is kept, it is believed, the better it tastes. In the rural districts, every farmer makes bean-paste for his own use, but in the urban districts it is supplied by the maker, and according to a report issued by the Government, Japan manufactured hundreds of million kilograms, valued at tens of million yen every year. A table gives the nutritional composition of Hatcho miso, Sendai miso, and Inaka miso. Other types of miso on the market are Aka (red) miso, Edo miso, and Shiro (white) miso.

“A few sayings about miso: Miso wo tsukeru = to put miso on (to make a mess of it). Temae miso = one’s own miso [tastes best] (all geese are swans). Miso no Miso kusaki wa jo-miso ni arazu = Miso savouring of miso is no good miso.”

Illustrations show: (1) Five men making miso in a traditional commercial shop. (2) A maid kneeling and preparing miso soup in a suribachi mortar with a long wooden pestle. Address: Manager, Fujiya Hotel, Miyanoshita, Japan.

891. **Product Name:** [Korean Soybean Jang / Miso {Tehn Jung Miso, Ten-Gan}].

Foreign Name: Ten Gan.

Manufacturer's Name: Park's Brand Products.

Manufacturer's Address: Vineyard Blvd., Kalihi Valley, Oahu, Hawaii.

Date of Introduction: 1938.

New Product–Documentation: Hawaii Directory of Manufacturers. 1973. p. 11. Park's Brand Products, Inc., Dba Park's Brand Kim Chee, 145 North King St., Stand 53, Honolulu, HI 96817. Tehn Jung (Mise) [Miso]. Note: This product is called "Mise" in all Hawaii Directories of Food Manufacturers, 1973-78. The company was not listed in any previous Directory of Manufacturers from 1953 to 1971. Shurtleff & Aoyagi. 1976. *The Book of Miso*. p. 240. 145 North King St., Stand 53, Honolulu, HI 96817. (It was later learned that this was not the plant but the main retail outlet). Hawaii Directory of Manufacturers. 1979-80. p. 11. The address has changed to 1712 Liliha St., Honolulu, HI 96817. The product is now called "Tehn Jung-Miso." They also make roasted sesame seeds. Letter from Takao Nihei. 1988. July 19. Says the address is now 1657 Liliha, Honolulu, Oahu, HI 96817. But the Honolulu Phone Directory shows the address as 3171 Waialae Ave., Honolulu, HI 96816. Phone: 808-733-1302.

Talk with Mike Irish, the owner. 1988. July 22. In March 1988 the company moved from the plant at Liliha St. to 3171 Waialae Ave. At the time they bought another kimchi company, Ham's kimchi. The King Street address was where the product was and still is sold. Most of it is sold there, with a little being sold at a couple of other Korean stores. The only soyfood product they make is Korean soybean jang (doen jang); he pronounces it "ten-jang" but spells it Ten-Gan on the label. He also makes kochu jang, the Korean hot chili paste, with sweet mochi rice as the base; it contains no soy. He also makes lots of kimchi. Parks Brand Products was founded in 1938 by a lady in a little store on Vineyard Blvd., in the Kalihi Valley on Oahu. Her maiden name was Park and her married name was Ko. Her company started out making kimchi, kochu jang, and soybean jang as their three main lines. She grew her own vegetables to make the kimchi. In 1973 they discontinued kimchi but made kimchi sauce in bottles. Mrs. Park's kids took over the company. When they wanted to retire, Mike bought the company from them in 1985. He is half Korean, half Irish. Mrs. Park/Ko died in 1987. He believes he is the oldest existing miso manufacturer in Hawaii. He is the largest Korean food manufacturer in the state and his biggest product is kimchi. He doesn't sell much of his soybean jang, largely because the price is about 2.5 times as much as most Japanese miso or imported Korean Jang. He sells it in small porcelain crocks as a specialty item. Note: In Honolulu/Oahu City Directories 1941-42, 1947-48, 1958-59 there is no listing for Parks Products. Letter from Michael P. Irish. 1988. Nov. 29. "We no longer produce miso (ten-gan) and I no longer have any old labels or articles about the product."

892. Sumi, M.; Tsuzuki, J. 1938. Ni, san shokuhin-chū no furabin (vitamin B-2) ryō (1) [The flavin (vitamin B-2) content of several foodstuffs (1)]. *Rikagaku Kenkyūjo*

Hokoku (Report of the Institute of Physical and Chemical Research) 17(12):1296-99. (Chem. Abst. 34:2939). [12 ref. Jap]

• **Summary:** The following foods contain the following percentage of moisture and number of units per 100 gm. The unit of measure is not known: Miso: Shinshu miso 50.5% moisture/28-35 units, sweet red miso 52.5%/12-63, Sendai red miso 54.0%/15-78, Farmhouse (Inaka) miso 53.0%/18-83, Sanshu Hatcho miso 48.5%/20-51, sweet white miso 53.0%/16-50. Shoyu 21-27 units. Shoyu presscake (kasu) 16%/710-753. Amazake 23-68 units.

893. Balzli, Hans. 1938. *Kleine Soja-Fibel. Geschichte, Anbau und Verwertung einer einzigartigen Nutzpflanze* [A little soybean primer. History, culture, and utilization of a unique useful plant]. Zurich and Leipzig: Albert Mueller Verlag. 85 p. Index. 15 cm. [26 ref. Ger]

• **Summary:** Contents: Foreword. Economic questions. Botanical. Historical. Chemical composition of the soybean seed. Utilization in East Asia: Koji, miso, shoyu, soymilk, yuba, tofu (*Sojakäese*, like Quark), soy oil and press-cake. Utilization in Europe and America: As fertilizer and feed, as food (soy flour, roasted soybeans, soy coffee, green vegetable soybeans (*den jungen Sojakern... wie junge grüne Erbse*), soy sprouts), and industrial products (incl. "soybean steel," an invention of Henry Ford). Medicinal significance. Cultivation and yield. Epilogue. Bibliography. Author-subject index.

In the chapter on History (p. 24), the author notes: "The poet Johann Heinrich Voss (lived 1751-1826) once said: 'Young Calcuttans... with your sharp soy sauce from Jakarta (*Junge Kalkuten... mit scharfer batavischer Soja*).' Then he adds to that the observation: 'Soy sauce (*Soja*) is a powerful sauce, which is prepared from soybeans (*Sojafasele*), Dolichos Soja, which originate in the East Indies and are subject to fermentation, together with brine and spice.'"

Balzli continues on page 25: "The *Deutsche Woerterbuch der Naturgeschichte* (German Dictionary of Natural History) contained in the *Allgemeinen Polyglotten-Lexikon der Naturgeschichte* (General Multilingual Encyclopedia of Natural History) by Philipp Andreas Nemnich (1793) contains the entry: 'Sojablume. Dolichos soja.' (Soya flower. Dolichos soja)."

"In the world-famous work *Geist der Kochkunst* (Spirit of the Culinary Art), the art historian C.F. von Rumohr (lived 1785-1843) also mentions soya in the second edition (1832, p. 155) and conjectures that the Garum sauce of the Romans was an imitation of the East Indian sauce (Sulze) made from soybeans (Soja)."

Page 29 reports that "During the war of 1870 (*des siebziger Krieges*, in which Bismarck of Germany defeated Napoleon III of France) the German head artillery man, O. Wehrman, saw in the botanical garden of Montigny-les-Metz a plant that was unknown to him. It was the soybean.

He took 4-5 seeds with him and planted them in early 1872 on his property / estate near Meissen (in Sachsen/Saxony, near Dresden in today's Germany). He harvested 80 to 100 seeds, with which he continued his investigations successfully for some years" [Note: Haberlandt (1878, p. 5) tells this same story].

On page 57 the author uses the term "Sojaspeisen" to refer to soyfoods. Address: Switzerland.

894. Photograph of the Yamajyu Shoyu & Koji Miso Co. factory in Hawaii. 1938.

• **Summary:** This 4 by 6 inch black-and-white photo was sent to Soyfoods Center in Sept. 1984 by William Higa of the Hawaiian Miso & Soy Co., Ltd. (1714 Mary St., Honolulu, Hawaii 96810). The original company made Shiro Koji Miso and Yamaju Shoyu. Standing by wooden kegs of miso are the founders Henry, Shinyei, and George Taru Higa. The company sign appears clearly over the factory door. Long, dark automobiles from the 1930s are parked at the left and right.

Note: A nice large print of this photo appeared on the front page of the *Hawaii Herald* on 7 Oct. 1983.

895. The analects of Confucius. Translated and annotated by Arthur Waley [from the Chinese *Lun yü*]. 1938. London: George Allen & Unwin Ltd. U.S. ed. 1966 Random House, New York. 257 p. Index. 18 cm.

• **Summary:** In the Analects (Scroll 2, Chapter 10) chiang appears in a section where the sage, Confucius, is discussing proper etiquette and social behavior, the wise choice of foods, and fasting: "Foods not accompanied by the appropriate variety of chiang should not be served. Rather than using only one to season all foods, you should provide many to ensure harmony with each of the basic food types. Make grains central to your diet. Use wine in moderation to welcome guests, but by no means should you get drunk and act foolish."

Confucius (lived ca. 551-479 B.C.) did not write the *Analects* (or any other works); they were compiled by his disciples 100 to 200 years after his death. Confucius appears from the Analects to be a private person who trained the sons of gentlemen in the virtues proper to a member of the ruling class. He lived and worked (teaching "the Way") in what today are the provinces of Shantung and Honan in eastern central China. Legge made the first popular translation of the *Lun yü* into English. Address: King's College, Cambridge.

896. Japanese American News Inc. / Nichi-Bei Shinbunsha. 1939. Nichibeï jûshoroku [The Japanese American directory. No 35]. San Francisco, California: Nichi-Bei Shinbunsha. 32 + 658 p. Jan. 1. Index of cities. 23 cm. [Eng; Jap]

Address: Ellis Street, San Francisco, California.

897. Loeb, August. 1939. The kitchen god returns to the Chinese home: And Chinatown, on this New Year's Day, pays its tribute to the cuisine for which it is known. *New York Times*. Feb. 19. p. 110.

• **Summary:** Dried chicken bones can be served “with sweet and pungent sauce or black bean sauce.”

Confucius taught the Chinese that the ideal dish should be one-third meat and two-thirds vegetables [i.e. non-meat].

Chow mein is not a particular dish, but rather a general term for fried noodles.

The great majority of Chinese who live in New York come originally from Canton. So their food represents that of southern China more than northern China.

Every Chinese meal begins and ends with tea.

Note: This is the earliest document seen (Oct. 2008) in all major U.S. newspapers digitized by ProQuest that uses the term “black bean sauce” to refer to a sauce made by crushing fermented black soybeans (soy nuggets). The new term appears in 1,338 documents between 1939 and the present, including this one in 1939, none in the 1940s, 6 in the 1960s, 21 in the 1960s, etc.

• **Summary:** To make nukamiso pickles, vegetables are put in a mixture of rice bran, salt, and water, then fermented and ripened. Miso is not typically used, but the bed has a consistency similar to that of miso. Inoue (1895) first analyzed nukamiso pickles and described their chemical components. Sawamura (1904) isolated a species of scum yeast and 4 species of bacteria from both fresh and old nukamiso. Address: Inst. of Zymomycology, Imperial College of Agriculture, Tottori, Japan.

910. A handbook of Philippine agriculture. 1939. Manila, Philippines: College of Agriculture, University of the Philippines. vii + 803 p. No index. 18 cm.
• **Summary:** On the title page: "Issued in commemoration of the thirtieth Anniversary." The University of the Philippines was founded in 1908. The Foreword (by L.B. Uichanco, Dean, College of Agriculture) states that its College of Agriculture opened on 14 June 1909, at which time "scientific Philippine agriculture was virtually nonexistent." The idea for the book originated with the former dean of the College of Agriculture, Dr. B.M. Gonzalez, before he was appointed president of the University of the Philippines. Soybeans and soyfoods are discussed extensively.

"Coffee adulterants" (p. 104), commonly mixed with ground coffee, include roasted ground corn, soybean, peanut, mungo, cashew, and sometimes ipil-ipil (*Leucaena glauca*).

In Chapter 1, "Field crops" is a long section titled "Peanut, soybean, cowpea" (p. 132-43). Contents of "Culture of soybean" (p. 134-41): Varieties. Preparation of the land. Planting. Cultivation. Harvesting and threshing. Yield. Green and yellow seeds of Ami soybean. Soybean sprouts. How to prepare—Soybean coffee, soybean cake [dessert, with baking powder], soybean milk, "tao-si" (salted soybean; Method furnished by Superintendent of the Davao Penal Colony), "toyo" or soy sauce.

The two main kinds of insecticides in 1939 (p. 223-31) were stomach poisons (which kill when eaten; incl. lead arsenate, calcium arsenate, Paris green) and contact poisons (incl. concentrated tobacco decoction, as in Black Leaf "40").

"Diseases of beans and other legumes (p. 319+) include downy mildew of soybean and rust of soybean.

A table (p. 448) gives the content of five vitamins found in various feeds incl. soybean seeds, soybean leaves, soybean meal, peanut meal, and peanut seeds.

"Leguminous silage" includes that from cowpea, soybean, and mungo [mung bean] (*Phaseolus aureus*). Tables give: (1) The "Average digestible nutrients in feeds" incl. soybean (p. 459, 462).

(2) The "Nutritive value of foods" incl. seaweeds (ararosp, *Gracilaria crassa*, p. 534), mungo sprouts (p. 536), green soybeans (p. 537), seguidilla or kalamismis (*Psophocarpus tetragonolobus*, fresh and sun-dried seeds, p. 538), soy products (p. 538-39) incl. soy sauce (toyo, Superior {Senkee and Co.}, Commercial), soy milk-boiled, soy residue (sapal), soy residue after second drawing of toyo, soy curd (toqua [tofu]).

(3) "Foods as sources of minerals" (calcium, phosphorus, iron; p. 580-81), incl. miso or soybean mush, soybeans-baked flour, soybeans-baked sprouts, soy curd or toqua, soy sauce or toyo (four brands: Solo, Great Eastern, Violin, Rooster), tahuri or soybean curd preserved in strong brine solution (solid portion).

(4) "Foods as sources of vitamins" (p. 593-94) incl. bean-asparagus or cigarillas (*Psophocarpus tetragonolobus*), bean-mungo (in pods or sprouts), bean-soy (dry, green, or leaves), peanut butter, seaweed, sesame (p. 601). Address: Manila, Philippines.

911. Fukai, Toshi. 1939. Shôyu oyobi miso [Soy sauce and miso]. Tokyo: Taiyokaku. 7 + 398 p. Index. 23 cm. [Jap]*
• **Summary:** The author was born in 1888. Address: Japan.

912. Matagrín, Am. 1939. Le soja et les industries du soja: Produits alimentaires, huile de soja, lécithine végétale, caséine végétale [Soya and soya industries: Food products, soy oil, vegetable lecithin, and vegetable casein]. Paris: Gauthier-Villars. x + 390 p. 18 cm. [300 ref. Fre]

• **Summary:** Contents: Introduction. 1. The agricultural, industrial, and commercial history of soya: Asiatic origins and propagation in Europe, soya in America (its cultivation and industries), soya in Europe, Asia, Africa, and Oceania (1936) (1. Admission of soya in the agriculture and industry of European nations (p. 35): Soya in France, soy industry and commerce in central and northern Europe {England, Germany, Holland, Denmark, Sweden, Poland, Austria and Hungary, Switzerland}, penetration of soya into southern Europe {Iberian peninsula, Italy, Balkan countries of Dalmatia, Istria, Yugoslavia, Greece (p. 47), Bulgaria, Romania, Ukraine}, the grandeur and decadence of soya in Russia. 2. Soya in modern Asia (p. 51): China and Manchuria, Japan, Korea, Formosa, French Indochina {Tonkin, Cambodia, Cochin China}, the British and Dutch Indies {Siam, Assam, Bengal, Burma, Ceylon, India, Straits Settlements [later Singapore] / Malacca}, western Asia {Turkestan, Persia (p. 57)}. 3. Soya in Africa and Australia (p. 57-58): South Africa, Rhodesia, Nigeria, Gold Coast [later Ghana], Cote d'Ivoire, Dahomey, Togo, Algeria, Tunisia, Morocco, Egypt, Australia {Queensland, New

South Wales, Victoria}, Tasmania, New Zealand, not yet in British New Guinea [later Papua New Guinea], Philippines, Java).

2. The botany and agronomy of soya: The plant, its names, its botanical characteristics, its varieties (original and created by selection), the cultivation of soya. 3. The general chemistry of soya: Chemical composition of the plant, structure and chemical composition of the beans. 4. Using soya in soyfoods and soyfood products: Whole soybeans (fresh, dry, sprouted, roasted and salted (*Fève grillée, fève salée de soja, fèves de soja salées*, p. 166-67), soynut butter (*un mélange rappelant les beurres végétaux*), soy coffee, soy confections, soy chocolate, soy sprouts), soymilk and tofu (*le lait et le fromage de soja*), okara (*pulpe résiduaire de la préparation du lait de soja*), fermented soy products (solid, paste, and liquid condiments; natto, miso, and shoyu [soy sauce]; kiu-tsee and lactic ferments), soy flour and bread. 5. The soy oil industry and products derived from it: Extraction and refining of soy oil, properties and use of soy oil. 6. The vegetable lecithin industry: Extraction of vegetable lecithin, properties and use of vegetable lecithin. 7. The vegetable casein industries and plastic materials based on soya: Soybean cakes and flours from which the oil has been removed, use of such cakes and flours, in the crude state, as a raw material for plastics, manufacture and use of vegetable protein, soybean cellulose for artificial silk, soya furfural and furfuraldehyde (phenolic resins). Conclusion: How to launch soya industries in France. important terms:

Note 1. This is the earliest French-language document seen that uses the terms *Fève grillée, fève salée de soja*, or *fèves de soja salées*, “roasted soy beans” to refer to soynuts.

Note 2. This is the earliest French-language document seen (April 2005) that mentions soynut butter, which it calls *un mélange rappelant les beurres végétaux*. Address: France.

913. **Product Name:** Tofu, Agé, Miso, Natto, Okara.

Manufacturer's Name: Harada Tofu, Zakka-ten.

Manufacturer's Address: P.O. Box 180, Fowler, California.

Date of Introduction: 1939?

New Product–Documentation: The Japanese American Directory. 1941. p. 283. Harada (Gonshiro) Tofu-ya (in Japanese). Harada, G., P.O. Box 180 (in English), Fowler, California. Phone: Not listed. This listing is in the “Residence” section, so the owner’s first name is Gonshiro.

Talk with Brad Kubota, owner of Fresno Tofu Co. 1990. Dec. 4. He has heard from Japanese-American old-timers living in Fresno that there were two tofu shops in Fowler before World War II. Fowler is located about 10 miles southeast of Fresno.

Letter from Masakazu Iwata of Montebello, California. 1995. In 1939 Gonshiro Harada (died 1943), an Issei (first-

generation Japanese immigrant to the USA) relocated from Fresno to Fowler, about 10 miles southeast of Fresno. There he and his wife and family (nine children) established the Harada Tofu Co. and manufactured such foods as tofu, kamaboko, agé, miso, natto, okara, and other related items, peddling them to the Japanese farmers in a broad area of Central California.

Note: This was apparently one of America’s first two commercial natto manufacturers. The other was Yonai Natto Seizô-sho in Los Angeles (see p. 328 of this 1941 volume).

914. Japanese American News Inc. / Nichibei Shinbunsha. 1940. Nichibei jûshoroku [The Japanese American directory. No 36]. San Francisco, California: Nichi-Bei Shinbunsha; The Japanese American News. 688 p. Jan. 1. Index of cities. 23 cm. [Eng: Jap]

• **Summary:** On p. 7, under “Food products manufacturers,” are listings (name, address, phone no.) in San Francisco for: Azumaya Co., Fujimoto Co., Umino Tofu Mfg., and Norio Co. On the facing page is a full-page ad for Fujimoto Co., importers, manufacturers & exporters, 246 Front St., San Francisco. The company makes miso, koji, and pickled salmon (*sake tsukemono*). They sell tofu ingredients (presumably soybeans and nigari). Address: 350 Ellis Street, San Francisco.

915. Schoffelmayer, Victor H. 1940. Research will bring soybeans to Texas, scientists declare. *Dallas Morning News*. Jan. 22.

• **Summary:** Photos show: (1) A man standing in a soybean field in Arlington, Virginia. (2) William Morse holding a box of black miso. (3) A farmer on a combine in Illinois. Address: Agricultural Editor of The News.

918. Noda Shoyu K.K. 1940. Noda Shôyu K.K. Nijûnen-shi [Twenty-year history of Noda Shoyu, Inc.]. Noda, Japan:

Noda Shoyu K.K. 733 p. Illust. No index. 22 cm. [Jap]
 • **Summary:** This is the first major history of Kikkoman, written largely by Mr. Morio Ichiyama. Contents: Preface. 1. History: Before the establishment of Noda Shoyu K.K. (Development of Shoyu Industry and Noda Machi, Noda Shoyu Jozo Kumiai, family trees and family traditions of the Mogi, Takanashi, Horikiri, Ishikawa), foundation of Noda Shoyu K.K., 20 years after the establishment. 2. Organization and management. 3. Plants (17): Korea, Jinsen?, Keijo plants. 4. Fermentation process: Special products (mirin, miso, sauce), testing center. 5. Business. 6. Cultural welfare facilities. 7. Connected enterprises: K.K. Noda Shoyu Ginko, Sobu Tetsudo K.K., Noda Transportation K.K., Gomei Company Senshukai, Foundational Juridical Perdon Kofukai, Manchuria Noda Shoyu K.K., Choshi Shoyu K.K.

Appendixes. Time table/chronology: Ranking of capital investments of shoyu producing companies in Japan, graph of yearly shoyu production in Japan, sales of shoyu, mirin, and miso by the company, sales of the company's shoyu comparing by area and also container, the company's shoyu exporting map, average sales of the company's shoyu, prices of raw materials of shoyu production, prices of shoyu in different type containers.

Pages 461-65 give an introduction to and description of each of the major brands produced by companies presently in the Noda Shoyu group. Under the Kikkoman brand, we learn that the producer of this brand of shoyu is the Saheiji MOGI family. It is said that the logo was designed by Manpei SARANUMA. It is said that the meaning and origin of the brand is as follows. The first "big army of God" in Japan was honored at a place named *Shimousa no Kuni, Kikkô mountain (Kikkô-zan), Katori Shrine (Jingu)*. The name of the mountain, Kikkô, was used in the brand. The tortoise (*kamé*) symbolizes long life and is thus a symbol of happiness. It is said that a tortoise lives for 10,000 [*ichi-man*] years. The grace with the tortoise is born shows high-class dignity with supernatural power.

Pages 466-480 show all of the shoyu brands (including minor ones) produced by companies in the Noda Shoyu group. For each brand, the name, year of introduction, quality rank, and area where sold are given. Early brands, those introduced before the start of the Meiji period (1868), are read from top to bottom, right to left.

The Saheiji MOGI line produced a total of 15 shoyu brands. The earliest was introduced in 1784. Early brands were: Kikkôman (Tenmei 2 = 1784), Kikkôdai (Tenmei 2 = 1784), Azumaichi (Tenmei 2 = 1784), Yamataika (Tenmei 2 = 1784).

The Shichirouemon MOGI line produced a total of 58 shoyu brands. The earliest was introduced in 1772. Early brands were: Kihaku (Anei 1 = 1772), Kagikashiwa (Anei 1 = 1772), Fujikashiwa (Anei 1 = 1772), Shôchikuba (Anei 1

= 1772), Kikkôkashiwa (Tenmei period = 1781-89), Hôzan (Kaei 2 = 1849).

The Shichizaemon MOGI line produced a total of 30 shoyu brands. The earliest was introduced in 1830. Early brands were: Kushigata (Tenpo 1 = 1830).

The Hyôzaemon TAKANASHI line produced a total of 39 shoyu brands. The earliest was introduced in 1772. Early brands were: Jôjû (Anei 1 = 1772), Betatakara (Anei 1 = 1772), Tachitakara (Anei 1 = 1772), Jigamisakari (Anei 1 = 1772), Fundonokina (Genji 1 = 1864), Fujitakara (Kaei 2 = 1849).

The Fusagoro MOGI line produced a total of 48 shoyu brands. The earliest was introduced in 1753. Early brands were: Minakami (Ansei 2 = 1855), Fujimasa (Hôreki 3 = 1753).

The Noda Shoyu Goshi Gaisha produced a total of 13 shoyu brands, the Keizaburo MOGI line produced a total of 7 shoyu brands, the Monjiro HORIKIRI line and the Kanzaemon YOSHIDA line each produced one brand, and the Nihon Shoyu K.K. produced 2 brands, but all were introduced after the start of the Meiji period (1868).

A section on exports (p. 650-) notes that it is not clear when direct exports of shoyu from Japan to the western world began, but at some time during the Bunsei (1818-1830) or Tempô (1830-1844) periods it was shipped to Holland along with other goods. In 1854 (at the start of the Ansei period, 1854-1860) an American ship came to Japan and during the stay they bought some Japan. Also during this same Ansei period it is said that special shoyu was made for export. Made by Sairinko SHIMAZU, it was bottled and shipped via Holland House (Oranda Yashiki) in Nagasaki.

Contains many photos and illustrations. Address: Noda, Japan.

919. Rabbit, James A. 1940. Rice in the cultural life of the Japanese people. *Transactions of the Asiatic Society of Japan* 19:187-257. Dec. Series 2. Plus 6 pages of unnumbered plates at end. A lecture delivered before the Asiatic Society of Japan, Nov. 1939.

• **Summary:** This is an in-depth article by an expert on the subject. Contents: Foreword. The sacredness of rice. The honorable rice throughout the year. Rice in Japanese literature. Rice and religion. Socio-economic influences.

Page 243: "Intercourse with foreign countries, limited as it was from the 16th to the middle of the 19th centuries, has not been without its influence on the national cookery, as is evidenced by the introduction of such exotic foods as *sukiyaki* or *gyûnabe* (beef and vegetables fried in a flat pan with *shôyu* sauce), *torinabe* (fowl and vegetables fried in a flat pan with *shôyu* sauce), tempura (fried in batter) and many other dishes which are still considered to be almost a part of the Japanese menu, particularly in the thousands of eating houses of the metropolitan cities."

Page 244: “The trinity which constitutes the bulk of Japanese daily fare consists of rice, *miso* (bean paste) [sic, soup], and *tsukemono* (pickled vegetables cured with salt or a mixture of rice bran and salt).”

On p. 245 is an interesting discussion of *genmai* (uncleaned rice [brown rice]). “This *genmai* with a generous mixture of wheat was for a long time the staple food among farmers... Although the superior nourishment of *genmai* is well known at the present time and has received much publicity, those who favor its universal adoption are looked upon as faddists, similar to the attitude toward vegetarians in western lands.”

Pages 256-57 discuss the origins, history, and present status of sushi. Today there are an estimated 1,500 to 1,600 sushi shops in Tokyo alone; in addition to these about 500 small stalls appear each night. Describes the arts of making and eating sushi. “After dipping it into a dish of *shōyu* (soya bean sauce), place the dripping sushi into your *kuchi* (mouth) without the loss of one drop of sauce and in such a manner that the fish side comes in contact with the tongue before the rice.” Address: Japan.

• **Summary:** In Chapter 8, titled “Yeast: Its manufacture, vitamins, and uses,” p. 155 states that soybeans, freed of bitter principles, sugar-beet juice, and various other substances have been proposed either to increase the yield of yeast or to act as the source of nutrient material (See Chrzaszcz and Janicki 1936).

Chapter 24 titled “The molds” (p. 339-57) discusses: Some important Aspergilli (members of the *Aspergillus flavus-oryzae*, especially strains of the *A. oryzae* series are of major industrial importance in the Orient [East Asia]). They are used to make sake, shoyu, miso, and *mizuame*, a sugar syrup made from rice (p. 350). Divisions of Penicillia (the genus Penicillium). The genus Rhizopus (used in the Amylo process for converting starches to sugars—see p. 48). Mold enzymes. Apparatus for cultivating molds. References on molds (42).

Chapter 32 titled “Mold enzyme preparations: Uses and products” (p. 419-24), has the following contents:

Introduction. Commercial amylase and its preparation. Koji and its preparation. Some mold products (in Japan): Soy sauce or shoyu, tamari, miso. The uses of mold enzymes (industrially): Amylases, invertase, proteases, and pectinase. The authors cite the industrial applications of members of the *Aspergillus flavus-oryzae* group especially strains of *Aspergillus oryzae*. Commercial amylase or diastase is marketed under a variety of trade names such as Taka-diastase, Kashiwagidiastase, Digestin, Polyzyme, Protozyme, and Oryzyme. These are generally mixtures of enzymes, however purified enzyme preparations (such as Taka-amylase) may be obtained.

Koji may also be used to make sake (rice wine) and shocho (distilled alcoholic liquor). “The use of *koji* in the United States was introduced by Takamine” (p. 420). Address: Cambridge, Massachusetts.

924. Sampaio, Sebastiao C. 1940. Soja [Soybeans]. Sao Paulo, Brazil: Tipografia Brasil, Rothschild Loureiro & Cia, Ltda. 43 p. Secretaria da Agricultura, Industria e Comercio do Estado de Sao Paulo. [20 ref. Por]

• **Summary:** Contents: Introduction: Soya. Botanical description. Varieties. Composition of the plant. Culture/cultivation. Enemies and pests. Improvement of the seeds: Improving the oil (*óleo dos graos de soja*), improving the cake and flour, other improvements. Commerce and trade.

This general book draws heavily on U.S. publications, including Piper and Morse, 1923. The section titled “other improvements” briefly mentions many food uses of soybeans, including vegetable-type soybeans (Easycook and Hahto), green vegetable soybeans (*Quando verdes... elas constituem ótimo legume verde*), soy sprouts, soy flour, soymilk (*leite de soja*), soy casein, soy cheese (*queijos e requeijos*) [tofu], shoyu, and miso. The Japanese colony in Sao Paulo makes shoyu in commercial quantities.

Note 1. This is the earliest Portuguese-language document seen (July 2001) that mentions green vegetable soybeans, which it describes as shown above.

Note 2. This is the earliest Portuguese-language document seen (Sept. 2006) that uses the term *óleo dos graos de soja* to refer to soybean oil. Address: 3a Seccao Tecnica do Departamento do Fomento da Producao Vegetal, Sao Paulo, Brazil.

925. **Product Name:** Best Canned Maruta Misozuke Daikon (Giant White Japanese Radishes Pickled in Miso).

Foreign Name: Maruta Misozuke Daikon.

Manufacturer's Name: Kawamura Yoheibei.

Manufacturer's Address: Honzaimoku-cho 3 chôme, Kyôbashi-ku, Tokyo-shi, Japan. Phone: Kyôbashi 1705..

Date of Introduction: 1940?

Ingredients: Daikon, miso.

New Product–Documentation: Photocopy of label (from canned product) sent to Soyfoods Center (in late 1981) by

Esta Keirn, formerly of Oriental Show-You Company (Columbia City, Indiana). Undated. Characters are read from right to left. Maruta is a registered trademark. Supplier to the Imperial Army and Navy (*Kunaishô Riku Kaigun Goyôtatsu*). Makers of “Homare zuke” products that help you to live for 10,000 years (*Homare zuke seizô moto*).

926. Fujimoto Shokai. 1941. Fujimoto Co.: Importers, manufacturers & exporters (Ad). In: The Japanese American News Inc. 1941. The Japanese American Directory (*Nichibei Jûshoroku*). No. 37. p. 6. [Eng; jap]

• **Summary:** Ad (full page). The top 1/5 of this ad is in English. They make Kanemasa brand miso, koji, and Japanese-style pickles (*tsukemono*). They sell raw materials for making tofu (presumably whole soybeans and one or more coagulants) and also sake. Address: 246 Front St., San Francisco, California. Phone: EXbrook 1756.

927. Ishimitsu Shoten. 1941. Ishimitsu (S.) Co. (Ad). In: The Japanese American News Inc. 1941. The Japanese American Directory (*Nichibei Jûshoroku*). No. 37. p. A-10 (near front). [Eng; jap]

• **Summary:** Ad (half page vertical). The top ¼ of this ad is in English. A direct import and export merchant, they sell grocery and household goods including shoes, plus Kikkoman shoyu (the Kikkoman logo is shown), miso and Ajinomoto. Address: 224 Commercial St., San Francisco, California. Phone: SUTter 2748.

928. Japanese American News Inc. / Nichibei Shinbunsha. 1941. Nichibei jûshoroku [The Japanese American directory. No 37]. San Francisco, California: The Japanese American News Inc. (Nichibei Shinbunsha). 720 p. Jan. 1. Index of cities. 23 cm. [Eng; Jap]

• **Summary:** Contents: Ads (in Japanese and English, p. A-1 to A-22). Directory of Japanese embassy, consulates, and legations in the USA and Latin America (in Japanese and English, p. A-22). Key addresses in Japan (in Japanese, p. A-23 to A-27). Index to the 1941 Japanese American Directory, by nation (USA and Latin America), and within nation by state, then by city (p. A-28 to A-31). One-page ad for Kirin Beer (p. A-32).

Directory by nation (USA and Latin America), and within nation by state, then by city (p. 1 to 686). There are many smaller ads on the lower half of quite a few directory pages, for a company listed on that page. For cities having many Japanese businesses (such as San Francisco and Los Angeles), a table of contents to the business in that city, organized alphabetically by type of business, is given in Japanese on the first page concerning that city (For example, Shokuhin seizô-sho = food manufacturers). Between pages 303 and 305 are 6 pages of ads (B-1 to B-6) for Japanese American companies located in Los Angeles. Publisher / publishing information (p. 686). A (in Japanese

and English, p. 687-688 + inside rear cover and rear cover). On the front cover (which is mostly in English and is at the “back” of the book) is an illustration of the Golden Gate Bridge, below which are America and Japanese flags with an illustration of the dome of city hall between them. In the center, vertically in Japanese characters is written *Nichibei Shinbun-sha*.

Note 1. Within each city, all businesses are listed under basic bold headings (in both Japanese and English) such as Food Products Manufacturers (where most soyfoods manufacturers are listed), Importers & Exporters, Importers & Groceries, Brewery, Rice Mill, Farm Produce Buyers, Seeds and Fertilizer Cos., Insurance Agents, etc. For each entry / listing is given the company name, address, and phone number; the company name is given in both Japanese characters and English (romanized), whereas the address and phone number are only in English. The last bold heading in each city is Residence; all people of Japanese ancestry are listed alphabetically by family name. For each person is given his or her name, address, and phone number. The full name is given in Japanese characters; the family name plus the first letter of the first name is given in English (romanized).

Note 2. For each major city, a table of telephone number prefixes is given on the first page for that city. For San Francisco, for example: AT = ATwater, BA = Bayview. CH = China. These are useful when dialing long distance using an operator. The many directory listings for soyfoods manufacturers and ads for soy-related companies are each given separately.

Note: We can find no entries for soyfoods makers in Latin America or other U.S. states. Address: 650 Ellis Street, San Francisco, California.

929. Roux, Charles. 1941. Le soja [The soybean]. *Revue Internationale du Soja* 1(1):4-20. Feb. [Fre]

• **Summary:** An introduction and overview. Contents: Introduction: Varieties, composition. Soybean cultivation. Feed, food, and industrial uses of soybeans.

The author has recently discovered a way of making petroleum from soybeans (p. 18). Address: Directeur General de l'Association Technique Africaine.

930. Roux, Charles. 1941. Le soya [The soybean]. *Revue Internationale des Produits Coloniaux et du Material Colonial* 16(181):8-25. March. [Fre]

• **Summary:** Contents: Introduction. Chemical composition. Cultivation. Food and industrial uses of soybeans: Incl. soymilk, tofu, soya casein, soy flour, soy bread, soy oil, soybean cake, green vegetable soybeans, fermented soy condiments (natto, miso, shoyu), roasted soy coffee, industrial uses, petroleum substitute.

Appendix A: Composition of various parts of the soybean plant: (1) Green—stems, leaves, pods. (2) Dry—

stems, leaves, pods. (Averages based on analyses by M. Lechartier). (3) Composition of soybean seeds: Whole seeds, cotyledons, embryos, seed coats (based on analyses by the Municipal Laboratory of Paris and the Laboratory of the Biological Society of the Far East [*la Société Biologique d'Extrême-Orient*]).

Appendix B. Composition of the seeds of various soybean varieties by various analysts: Steuf, Pellet, By Steuf: From Hungary, Yellow from Mongolia, From China, Chinese reddish brown. By Pellet: From China, from Hungary, from Etampes. By Giljaransky [Giliaranskii, Giljarinsky, Giljaranskii, Giljaranski, Gilyaranskii, Gilyaranskii]: Yellow from Russia, Yellow from China, Yellow from Japan, Black from China, Black from Japan, Green from Japan. By Lechartier: From Etampes, Etampes dry, Black, Black dry. By Jardin Colonial: Soja from Laos, Soja from Tonkin, Soja from China. By Schroeder: Reddish brown dry, Yellowish brown dry, Tumida pallida yellow. By König: Tumida castanea brown, Tumida Astrosperma [sic, Atrosperma] black.

Appendix C. (1) Composition of soybeans (maximum and minimum) compared with four other legumes. (2) Composition of soybeans and beef compared. (3) Composition of soy flour and wheat flour compared. Address: Director General of the Association Technique Africaine.

931. *Soybean Digest*. 1941. Hawaiians make many soybean foods. July. p. 8-9.

• **Summary:** Carey D. Miller, nutrition specialist at the Hawaii Agricultural Experiment Station, has described a large number of the soybean foods that Hawaiians make in Bulletin No. 68 of the Hawaii Station, "Japanese Foods Commonly Used in Hawaii" (1933). These foods include: Edamame (Green Soybeans; "The whole pod of the fresh green beans is placed in boiling salted water and cooked for about 25 minutes"), Tofu (Soybean Curd, incl. the residue known as "kirazu"), Aburage (Fried Soybean Curd), Miso, and Shoyu. A brief description is given of how each is made. Photos show: Three triangles of aburage on a dish. A dish of tōfu kasu (okara or kirazu).

932. *New Canadian (The)*. 1941. Shoyu supplies cut off—Local firm prepared to meet demand. Community consumes fifty thousand gallons annually. Aug. 22. p. 8.

• **Summary:** Mr. Teiichi Amano, head of Amano Bros. Ltd. makes Maruten brand shoyu bean-sauce, miso, and vinegar in his plant at 2141, 2135, 2131 Dundas Street, Vancouver, BC, Canada. In January 1941 he started to brew shoyu, which used to be imported from Japan before budget import restricts took effect. It must age for 7-12 months. His soybeans are imported from California. For 12 years he has made miso and vinegar, and in Japan his father and grandfather made shoyu. Mr. Amano estimates that shoyu

consumption in British Columbia exceeds 48,000 gallons/year. A photo shows the inside of the plant. Address: British Columbia, Canada.

933. **Product Name:** Marufuku Miso.

Manufacturer's Name: American-Hawaiian Soy Company.

Manufacturer's Address: 274 Kalihi St., Honolulu, Oahu, Hawaii. Phone: 808-841-8435.

Date of Introduction: 1941.

Wt/Vol., Packaging, Price: Later sometimes canned.

New Product—Documentation: Ad by American-Hawaiian Soy Company in Hui Manaolana. 1951. *Japanese Foods: (Tested Recipes)*. Honolulu, Hawaii. See p. 23. "Ask for Maru Fuku Brand Soy Bean Miso. 274 Kalihi St. Phone: 846455." Note: This same ad appears on the same page in the 1956 edition of this book.

Hawaii Directory of Manufacturers. 1953. p. 10. Miso (Soy bean paste). American-Hawaiian Soy Company, 274 Kalihi St., "Marufuku." Honolulu City Directory. 1965-66. p. 252. American Hawaiian Soy Co., Ltd. is the only miso manufacturer listed for this year. Hawaii Directory of Manufacturers. 1969. p. 16. Same address. Zip code is now 96817.

Nihei. 1978. *Nippon Jozo Kyokai Zasshi*. 73(7):542-49. "Hawaii ni okeru Nihon-shu, miso, shoyu no rekishi." States that America, Hawaiian Miso Shoyu Kaisha was founded by Kiko Yogi and Moshu Morita. Brand is Marufuku Miso. Address: 274 Kalihi St. Still in business. Wm. Higa. 1980. *History of Miso Companies in Hawaii*; Shurtleff & Aoyagi. 1983. *The Book of Miso*. 2nd ed. p. 234, 255. The company was founded by George Higa, Seiyu Inamine, Kiko Yogi, Moshu Morita. In 1947 George Higa left to form Hawaiian Miso & Soy Co. Harry Morita is present owner. Produces white miso, sometimes sold in cans, distributed by Mutual Trading Co. in Los Angeles.

947. Onuki, Motoi. 1942. *Chômi shokuhin* [Foods that are seasonings]. Tokyo: Yuzankaku. 233 + 6 p. 22 cm. [Jap]* Address: Japan.

948. Rouest, Antoine. 1942. *Le soja français* [French soybeans]. Argenton, France: Langlois. 48 p. Preface by J. Bordas. [9 ref. Fre]

• **Summary:** Contents: Preface, by L Brétignière (Prof. at Grignon, Member of the Academy of Agriculture). Preface to the first edition, by Louis Forest (1921). Introduction to this new edition: Soviet Russia and the soybean (*le Soja*; includes the story of Rouest’s stay in the Northern Caucasus, Russia, from 1930 to 1933), Germany and Poland take up the soya question, the canons [guns] of Germany versus the Manchurian soybean, a secret contract to provide the weapons of war, organization of a Polish bank in Manchuria, Germany cultivates soybeans in Romania and Bulgaria in preparation for the war, France and the cultivation of soybeans.

1. What is soja? 2. History of the propagation of soja: Introduction of the soybean into France and Europe, the soybean is cultivated in central Europe, in Austria, in 1875, in France the soybean is the object of numerous trials from 1876 to 1881, its cultivation worldwide, the study and acclimatization of soya become generalized.

3. Botanical characters of the soybean: And the varieties of soybeans. 4. Chinese varieties: The soybean in China, the production of soya in China in 1916 and 1917, production of soya in the Far East during the year 1928, exportation of soya from the Far East to Europe.

5. Japanese varieties: The soybean in Japan, varieties of soya from Indochina and from other Asian countries. 6. The soybean in America: American varieties, cultivation of soybeans in Ohio, selection of soya using pure lines in Connecticut.

7. The soybean in Europe: Italy, Russia, France, French climatic zones for the cultivation of *Soja hispida*, the Atlantic zone, the continental zone, the Mediterranean zone and climate, can the soybean cultivated in all the French climates including those in the north, northeast, and northwest, speedy production of soybeans in view of agricultural production and of the creation of early varieties for the regions in north and northeast France.

8. Instruction for growing soja in France. 9. Soja in Manchuria. 10. Soja seeds. 11. Selection of soja. 12. Varieties of soja. 13. Different ways of planting soya seeds. 14. Soy yield. 15. Nitrogen fixation in soya seeds. 16. Tilling and preparing the earth. 17. Soja fodder. 18. Soja, striking and improving. 19. Harvesting soja grain. 20. Soja oil. 21. Soja oil-cake for animal feeding. 22. Vegetable milk, soja milk and industrial casein.

23. Soja in human food: Soy flour and its applications, soy bread with wheat, nutritional composition of soja compared to dry legumes, soy viewed as a dry legume to replace meat, comparative production of nutritive elements among the various legumes used for human food, comparative value in calories of the usual foods and of soja, preparation of soy soups and meals in compressed tubes, what varieties of soy can serve the special needs of human nutrition, Sojenta, potatoes stuffed with soy, force meat balls (*boulettes*) of rice and soy, bread of rice and soy, pudding of soy and rice, soy sprouts and their food value, fresh soy sprouts in a salad, soy sprouts with vegetables, soy preserves and confections, soy chocolate, soy coffee, soybeans conserved in containers, soy with smoked fish, soup with soy vegetable meat, soymilk soup, omelet with smoked soy vegetable ham, green soy sprouts, soy cake, soy force-meat fritters.

24. The utilization of soja in the Far East: Vegetable cheese (tofu), soy-based condiments, Japanese natto (2 types), Japanese miso, Chinese miso, soy sauce (*soyou* or *schoziou*), making soy sauce in Kwantung, China, making soy sauce in Japan, koji or molded rice.

25. The culture of soja in North Africa (Rouest has varieties that would grow and yield well in the French colonies of Tunisia, Algeria, and Morocco). 26. Opinions of some authors on soja. Conclusions. Bibliography on soja.

A small photo on the “Dedication” page shows Léon Rouest (born in Paris on 11 Nov. 1872). Address: Directeur de la Station des Recherches Agronomiques d’Avignon.

949. *Manzanar Free Press (Manzanar Internment Camp, California)*. 1943. Manufacturing and industrial. March 20. p. 6.

• **Summary:** “‘Shoyu,’ or soy sauce, a necessary commodity of the Japanese began production in November to supply the center and other centers in the future. Since production began, 2000 gallons per month has been the total but since January this has been increased to 5,000 gallons. Foreman of this project is Nobutaro Nakamura.”

Production of bean sprouts [the type of seeds used is not mentioned; probably mung] began in late October. Production now averages 1,600 pounds a week. The foreman is Shigeji Tomita.

A project to make “tofu” is being contemplated, with Henry Toda as foreman. Also a project to make miso.

Note 1. Manzanar (literally “apple orchard”) was the name of the Japanese internment / concentration camp in the Owens Valley, Southern California (about 230 miles northeast of Los Angeles), during World War II. At elevation 4,000 feet, at the base of Mt. Whitney, it was extremely cold and dusty. Each of the ten camps was intended to be self-sufficient.

Note 2. This is the earliest document seen (June 2007) that mentions large scale production of soyfoods (soy sauce) in any Japanese internment camp during World War II.

950. O’Harra, Michaela 1943. Japs in Arizona camp create community in desert setting. *Arizona Daily Star*. Oct. 17. p. 1.

• **Summary:** The section titled “Food preparation” states about 1,350 evacuees prepared food for their people in the project’s mess hall. Rice is served twice daily. Most of the people, when questioned, say they don’t like the food. “They usually confess, however, a fondness for various pickled vegetables, pickled in salt rather than in vinegar, soy sauce and miso, a relish paste made of soy beans. These are being prepared now in the project.”

Note: Poston (also known as Colorado River) Relocation Center was the name of one of two Japanese internment camps in Arizona during World War II. Each of the ten camps was intended to be self-sufficient. Built on the Colorado River Indian Reservation (over the objection of the Tribal Council), it was the largest of the 10 internment camps operated by the War Relocation Authority (WRA), and the 4th largest community in Arizona. It was located in the southwest corner of Arizona.

951. Huebscher, Ad. 1943. *Die Soja: Ihre Kultur, Verwendung, Zukunft!* [Soya: Its culture, use, and future!]. Grenchen, Switzerland: Niederhaeuser. Published by the author. 52 p. Undated. Illust. with 18 line drawings. [Ger]

• **Summary:** Contents: Foreword. Soya—The dispenser of work and bread. Botanical description of the soybean. Cultivation and manuring of the fields. Seeds and sowing. Nutritional composition and food value. Harvest, storage and use as silage. Enemies of the soybean. Economic significance of the soybean. Preparation of the soybean for use as food. Soya minestra (an Italian dish, also consumed in Switzerland). Soya beefsteak. Soya cutlets. Tomatoes stuffed with soya. Soy sauces—Japanese shoya [sic, shoyu] and Shimoso. Vegetable cheese [tofu]. Miso-cheese. Natto cheese. Soy coffee. Soy flour (Soja-Mehle, made by Morga S.A. or Ennat-Kappel, Switzerland). Soya cakes. Soya salad. Green vegetable soybeans (*Soja-Gruengemuese*). Soya Muesli. Soya Kasha (*Soja-Kascha*, the newest food for soldiers, athletes, and heavy laborers. It consists of a mixture of soy flakes, rolled oats, corn flakes, sugar, salt, and powdered milk). Soymilk (The first soymilk in Europe was made in Paris in 1882). Soy yogurt (*Soja-Yoghurt*). Soy

cream for the tropics (*Soja-Crème-Tropenmilch*). Address: Dr. and veterinarian, villa Bel-Air, Corseaux (Vaud), Switzerland.

952. Mathews, R.H. comp. 1943. A Chinese-English dictionary. Revised. American ed. Cambridge, Massachusetts: Harvard Univ. Press. Published for the Harvard-Yenching Institute. xxiv + 1226 p. Index. 26 cm. [3 ref]

• **Summary:** This excellent dictionary, which romanizes Chinese words using the Wade-Giles system and arranged them in alphabetical order by sound, is a condensed version of the multi-volume dictionary by Giles, and a revised version of Mathews’ 1931 dictionary. Soy-related characters include:

Chiang (No. 661, p. 90)—Soy [sauce], pickled vegetables, pickled bean curd (*chiang toufu*) [fermented tofu].

Fu (No. 1930, p. 285)—Tofu.

Ju (No. 3144, p. 473)—Milk. The breasts; a teat, a nipple. To suckle. *Fuju* (“rotten milk”)—A milky preparation from beans. [Note: Probably fermented tofu].

Shih (No. 5805, p. 813)—Cantonese soy [sauce], salted beans [soy nuggets] eaten with rice, gruel, etc.

Tou (No. 6478, p. 939-40)—See No. 6481.

Tou (No. 6481, p. 940)—Beans, oil expressed from beans, young bean plants, bean stalks, bean flour, bean curd, dried cakes of bean curd usually flavored with soy, underlings = bean curd officials, soft hearted, bean sprouts [mung]—used as a vegetable, bean pods, soy [sauce], bean-cake, four kinds of soya beans (ta-tou, hei-tofu, huang-tou), (*Glycine hispida*).

Note: At Mao (No. 4357, p. 614, meaning “hair”) there is no entry for *Mao tou* = “green vegetable soybeans.” Address: China Inland Mission, Shanghai.

953. Nishino, Shoji. 1943. *Shôyu miso shokusu kikaku bunsekihô* [Methods of analyzing the standards of shoyu, miso and vinegar]. Osaka: Konno Shoten Shupan-bu. 109 p. 22 cm. [Jap]*

Address: Japan.

954. *Topaz Times (Topaz Internment Camp, Utah)*. 1944. Japanese Red Cross sends shoyu, miso. Jan. 29. p. 1.

• **Summary:** “Three hundred sixty barrels of shoyu and 1000 pounds of miso were received from the Japanese Red Cross, it was learned today. The foodstuffs, which arrived on the exchange ship, Cripsholm, last month, were relayed here from the Missoula Internment Camp in Montana.

“The community council is discussing plans for distributing the foodstuffs to the residents.”

955. Barthélemy, M. 1944. Contribution à l’étude du soya en France [Contribution to the study of soya in France].

Clermont-Ferrand, France: Jean de Bussac. 91 p. June 20. Based on his thesis, Strasbourg Univ., Faculty of Pharmacy. [34 ref. Fre]

• **Summary:** This is a published thesis, presented to the Faculty of Pharmacy at Strasbourg. Contents: Introduction. Part I: The cultivation of soybeans. 1. History of cultivation (its origin and importance). 2. Botanical characteristics. 3. Soybean cultivation in detail. 4. Conclusions. Part II: Chemical composition of soybean seeds. Proteins, lipids, oil and lecithin, carbohydrates (*glucides*), minerals, diastases, vitamins, sterols–soyasterol.

Part III: Utilization of soya as a food and in industry. 1. As food (nutritional value, whole soybeans, soy sprouts, roasted soybeans, soy coffee, condiments liquid and solid, soymilk, Li Yu Ying, products derived from soymilk {kefir, yogurt, tofu}, shoyu, miso, natto, soy flour, soy confections, recipes and formulas). 2. In industry: Oil, lecithin, cake. 3. Other uses of the plant.

Part IV: Laboratory work. 1. In human nutrition. 2. Animal feeds for the farm. 3. In industry. General conclusions. Address: Univ. of Strasbourg, France.

956. Matagrín, Am. 1944. Le soja: Culture et utilisations [Soya: Cultivation and utilization]. Paris: Gauthier-Villars. 72 p. Illust. No index. 28 cm. [Fre]

• **Summary:** Contents: Introduction: Why does soybean culture remain little known in France? 1. What is the soybean (*le Soya*)? Why should it be cultivated?: The plant and its varieties, the soybean (*la fève de soya*) and its general characteristics, alimentary interest in soya, agricultural interest in soya, industrial [non-food] interest in soya.

2. Soybean cultivation: The question of climate, choice of the variety to cultivate, choice and preparation of the land/soil, fertilizers for soya, soya in crop rotations, seeds, sowing, and seedlings, mixed cultures or intercropping, soybean vegetation and crop management, maturation, harvest, yield, and storage.

3. Use of the soya plant and its seeds: Soya in agriculture and livestock feeding, soya in human foods, recipes, industrial uses of soya, people and organizations connected with soya, contracts for growing soybeans in 1944. Table of contents.

The section on soya in human foods, based on the author's 5-6 years of personal experience, discusses, with recipes: green vegetable soybeans (*soya en légume vert*), whole dry soybeans (*soya en légume sec*), soy sprouts (*germes de soya*), fermented soy condiments (shoyu, miso, natto), soy flour (bread containing soy flour was made at Paris and even at Vichy in 1939), soymilk and tofu (*lait de soya et fromage végétal*), roasted soybeans and a coffee substitute (*soya grillé, substitut de café*), soy oil (*huile de soya*). Address: France; In 1946: Technical Consultant to Bureau Francais du Soja.

957. Yamazaki, Momiji. 1945. Tōa hakkō kagaku ronkō [East Asian studies/theses on fermentation chemistry]. Tokyo: Daiichi Shuppan K.K. han. 436 p. Published 20 March 1945. [160* ref. Jap]

• **Summary:** This remarkable work, published in a limited edition of 1,000 copies, was written by Dr. Yamazaki, a microbiologist, who graduated from the Department of Agricultural Chemistry, Tokyo University, in 1914. The book is a review of existing Asian literature on fermented foods, with a good bibliography. Dr. Yamazaki may have been employed by the laboratories of the Manchurian Railway.

Contents: Introduction: Preface, origin of alcoholic beverages, various alcoholic beverages of the world, summary. Chinese fermentation chemistry documents: Preface, Chinese ancient grains, Chinese ancient grain foods, Various types of Chinese-made koji, Various Chinese-made alcoholic beverages, summary. Japanese fermentation chemistry documents: Preface, Japanese land, inhabitants on Japanese land, Japanese New Stone Age culture, conclusions. Real papers: Japanese ancient foods, Various types of Japanese-made koji, Japanese-made various alcoholic beverages, summary. Korean fermentation chemistry documents: Preface, Korean produced grains, Various types of Korean-made koji, Various Korean-made alcoholic beverages, summary. Tables.

958. Dorsett, P.H.; Morse, W.J. 1945. Soys in the Orient. *Soybean Digest*. April. p. 10-12. Text of a letter written July 1930.

• **Summary:** Reprinted from: *Proceedings of the American Soybean Assoc.* 1930, p. 96-100. The article was originally titled "Soybeans in the Orient." One large photo shows Morse with several richly illustrated boxes of black miso [Hatcho miso]; smaller photos show abura-age (deep-fried tofu pouches), and tofu kasu (okara). Address: Dairen, Manchuria.

959. Shelledy, F.H. 1945. Japanese trade studies: Soybeans. *U.S. Tariff Commission, Special Industry Analysis* No. 13. 6 p. May. [3 ref]

• **Summary:** Contents: Foreword. Introduction and summary. Description and uses. Production. Imports. Post-war problems.

This "report is one of a number which were prepared during 1944 and 1945 for the Foreign Economic Administration..." Most of the data "were taken from official and semi-official Japanese sources." Errors and inconsistencies in these data have frequently been detected.

"Japan is not important as a world producer of soybeans. It is, however, normally the world's principal soybean importer. Its annual production during 1928-39 was only 10 to 14 million bushels. By comparison, the production in the

United States was 90 million bushels in 1939 and more than 190 million bushels in 1943 and 1944; the average annual production of soybean in Manchuria during the thirties was more than 150 million bushels annually.

“Prior to the present war Japan took most of the exportable surplus of Manchuria, the principal world exporter of soybeans, as well as substantial quantities from Korea, a country which produces almost twice as many soybeans as does Japan. During the 10 years 1928-1938, Japanese imports averaged 26 million bushels annually, approximately double its own production.”

“If an annual per capita consumption of 0.5 bushels [30 lb] of soybeans were to be maintained in Japan in the post-war period,” Japan would require a total supply of about 37 million bushels/year, based on a 1940 population of 73.1 million. An estimated 10-14 million bushels could be produced in Japan in the short term period after the war. The rest must be imported.

Uses of soybeans include miso, soy sauce or shoyu, and tofu. The main center of soybean production in Japan is the island of Hokkaido. The soybean is the principal oilseed imported into Japan.

Tables show: (1) Soybeans: Production, imports, exports, and apparent consumption, Japan Proper and Karafuto, 1928-39. Columns show: Production. Imports from Empire. Other imports. Total imports. Exports. Apparent consumption: Total and per capita. (2) Soybeans: Imports into Japan from principal sources, average 1928-32, annually 1933-39. The graph has two main parts: Quantity (1,000 bushels), and value (1,000 yen). Empire areas: Manchuria (incl. Kwantung), Korea, Formosa, total. Non-Empire areas. Grand total. Source: Monthly and annual returns of foreign trade of Japan, Korea, and Formosa. Address: U.S. Tariff Commission, Washington, DC.

960. Miller, Carey D. 1945. Thiamin content of Japanese soybean products. *J. of the American Dietetic Assoc.* 21(7):430-32. Aug. [10 ref]

• **Summary:** The approximate amount of thiamin retained in various soybean products is as follows: Raw soybeans, 100%. Soybeans pressure cooked for 60 minutes at 121°C, 26% (i.e., 74% of the thiamin is lost). Soybean “milk” (tonyu), 74%. Soybean curd residue (kirazu), 19%. Soybean curd (tofu), 18%. Tofu contains 54 mcg. thiamin per 100 gm. About 7% of the thiamin in tofu appears to be destroyed by the cooking process, about 20% remains in the residue (kirazu), and the remainder of the thiamin (almost 60%) is lost in the discarded liquid which drains off when the protein is precipitated and pressed. Aburage (a fried soybean curd) loss additional thiamin as a result of the cooking process. “Miso, made from cooked soybeans and fermented rice, is a relatively good source of thiamin,” containing about 130 mcg. per 100 gm. But since relatively small amounts are used, even by people who favor this

food, its contribution to the daily thiamin need is not great. Address: Nutrition Dep., Hawaii Agric. Exp. Station, Univ. of Hawaii, Honolulu.

961. Lautensach, Hermann. 1945. Korea: Eine Landeskunde auf Grund eigener Reisen und der Literatur [Korea: A geography based on the author's travels and literature]. Leipzig, Germany: K.F. Koehler Verlag. xv + 542 p. Illust. (black & white photos). Maps (part folding, part color). 24 cm. Series: Geographische Handbücher. [1038* ref. Ger] • **Summary:** A superb, scholarly work, with a huge bibliography, printed just as Germany was losing World War II.

Chapter 6, titled “The anthropogeographical character of ancient Korea” (p. 141+) contains extensive information about agriculture and food. Page 154: In wealthier sites, the farm buildings enclose a courtyard, to which an entrance gate gives access (Fig. 21e, p. 151). Some enclosures are so complete that a square courtyard results. In some corner or other of the courtyard stand the huge brown earthenware jars, in which soy sauce (*Sojabohnensosse*, jap. *shoyu*) is prepared and stored.

Page 176-77: In East Asia, after cereal grains, pulses / legumes are the next most important crop. In Korea, by far the most important is the soybean (*Sojabohne*, jap. *daitso* [*daizu*] = large bean) which makes few demands on the soil. Korea's climate is ideal for soybeans (Tanaka 1931, p. 18); it is even better than Manchuria's climate, because of the large amount of precipitation during the summer. Today, soybeans are an indispensable part of the various dry-field crop rotations. After planting of the paddies has finished, soybeans are planted on the ridges too; there they grow extremely well without being fertilized. Soybeans are grown throughout Korea, but least in the Kaema upland because of the warmth they require. In northern Korea, on dry fields, they are planted between the end of March and beginning of May. Toward the south, planting is delayed until the end of June. They are generally harvested in October, except in Chejudo, where they are not harvested until early November. Soybeans are the crop that is left standing the longest, and they are not harvested until their leaves have turned brown and started to fall.

Soybeans are used as a very nutritious food for both humans and horses. Also, cooked soybeans are used as a fertilizer for the rice paddies. Above all, though, the hot brown soy sauce (*Shoyusosse*), which is never lacking on any Korean or Japanese table, is made of them, using salt and pepper and a process of fermentation. Bean curd (*Käse*, jap. *tofu* [*tofu*]) and soybean paste (*Mus*, jap. *miso*) are also made of them.”

Page 180: The place of soybeans (*Soja*) in rotations, such as soya/hemp is mentioned. The winter crops consist of wheat, barley, or rye; the summer crops of soybeans, other beans or cotton. Page 181 mentions soybeans as a

summer crop. Page 196: Soybeans are planted on the bunds of the rice fields. Page 199. Those who farm in central Manchuria are likely to grow soybeans. Page 224: Soybeans are mentioned several times.

A fold-out map facing p. 400 shows the distribution of soybeans in Korea. They seem to be slightly more densely grown in the south than in the north.

Page 435: Soybean oil mills (*Sojabohnenmühlen*) are mentioned. Page 460: Discusses imports and exports of soybeans. The main beans exported from Korea to Japan are soybeans, amounting to a weight of 1.3 to 1.9 million dz. in 1939. Note: One dz (*doppelzentner*) = 100 kg. Exports to other countries was small. By comparison, Manchurian soybeans were exported to the northern harbors of Germany and England. In addition, a significant amount of Manchurian soybeans were imported to Korea (0.29 to 1.02 million dz.). Also, a significant quantity of soybean products made in Korea were exported to Japan (Soy oil up to 11,550 dz. and soybean cake up to 1.2 million dz.). Likewise, up to 3,210 dz of soy oil and up to 1.3 million dz of soya cake were imported to Manchuria from Korea.

Page 466-67: A comparison of soybean production in Korea and Japan is given. 85% of the imports of soy oil to Japan came from Korea.

Page 473. Soybeans are grown in the deep valleys of Korea.

Facing p. 144: A photo shows a man carrying a large, empty, pottery soy sauce jar on a rack on his back.

Hermann Lautensach lived 1886-1971. Korean place names are the old ones in the Japanese system. Address: PhD, Prof. of Geography at the University of Greifswald [northeastern Germany].

962. Löbbe, Henrique. 1945. *Cultura da soja no Brasil*. 7th ed. [Culture of soybeans in Brazil. 7th ed.]. Rio de Janeiro, Brazil: Directoria de estatistica da producao, Ministerio da Agricultura. 74 p. 2nd ed. was 1935. [Por] Address: Eng. Agronomo, Brazil.

• **Summary:** In the March/May issue (no. 6-8), page 113: “In Section 5, “Manufacturing,” a table titled “Bean paste ceiling price changes. Effective 10 February 1946 (yen/kan),” has 4 columns: Seller and product, Common, Best, New Price. The first product is “Rice or barley miso. 13.50. 14.50. 36.50.”

964. Stahel, Gerold. 1946. Foods from fermented soybeans as prepared in the Netherlands Indies. I. Taohoo, a cheese-like substance, and some other products. *J. of the New York Botanical Garden* 47(563):261-67. Nov.

• **Summary:** Contents: Introduction. Sprouts and milk from soybeans. Cheese-like products. How taohoo is made. Condiments made with *Aspergillus*.

In East Asia—as in Surinam—people have developed “means for overcoming the rather bitter taste of soybeans and their failure to cook soft. They have learned to ferment the soybeans with quick-growing fungi, thus making several palatable and wholesome foods.

“Most important of these foods are *taohoo* and *tempe*; also *taokoan*, a cheese made from *taohoo*; *taotjo*, a fermented paste-like condiment, and *ketjap*, which is soy sauce. Soybean milk is also made, but without a fungus, and sprouted soybeans are widely used by orientals.”

“In the Netherlands East Indies [later Indonesia] sprouted soybeans are called *tokolan* or *taogé*. They are one of the ingredients of every ‘rijst-tafel’ (rice table, or combination of rice dishes) and therefore are never lacking in the ‘passar’ (market). Even in our Paramaribo market *tokolan* is displayed every day.”

In China, soy milk is used in the same manner as cow’s milk. It is also consumed in the United States, though on a very limited scale. In the Netherlands East Indies, soy milk “is only slightly known as food, but it is produced in large quantities for the manufacturing of soy cheese, called *taohoo* or *tahoo*.”

The curd [tofu] “is either eaten fresh or baked in oil or lard. In China it is sometimes processed further into a kind of real cheese by impregnating the curd with turmeric and reducing the water content by heavier pressing. This cheese, called *taokoan* [Chinese: doufugan], has a yellow color and can be shipped abroad.”

“After *tempe* [made with *Rhizopus Oryzae*], *taohoo* is the most common form of soybean product eaten in the Netherlands East Indies. In China, it is the most important soy product. *Taohoo* is manufactured here in Surinam only on a very limited scale, by a single Chinese store-keeper close to the Paramaribo market-halls along the Surinam river. Twice daily, between 2 and 4 o’clock in the morning and again in the afternoon, he manufactures 11½ kilograms of *taohoo*, to be sold after 6 o’clock the next morning.” A detailed eyewitness description of the tofu-making process is then given.

Describes briefly how to make *taotjo* (a kind of paste) and *ketjap* (soy sauce) with *Aspergillus oryzae*, another fungus. *Taotjo* is not made in Surinam, but *ketjap* is. “To make *taotjo*, boiled soybeans are mixed with roasted meal of wheat or glutinous rice. The mass is wrapped in hibiscus leaves, which commonly harbor the *Aspergillus* fungus.” After 2-3 days the moldy mass is immersed in brine, where it is kept for several weeks. “Palm sugar is added at intervals. *Taotjo* must be made in the dry season, because every day it has to be brought outside into the sun and air for hours.” This dish is eaten in East Asia with the ‘rijst-tafel.’”

To make ketjap, soybean are boiled, cooled, then wrapped in hibiscus leaves—but without mixing in roasted meal. After fermenting for 2-3 days, the mass is immersed in brine, as with taotjo. Each day, for one to several months, it is exposed to the sun. A little palm sugar is added at intervals. Then the fluid is filtered off and the solid residue is cooked several times with fresh water to extract all the soluble material. “The fluid is then concentrated by slow boiling. Spices and other piquant materials are added, according to the *specialité de la maison*. These may include galangal, ginger, cloves, Jew’s ear fungus, and dried and ground fish and chicken meat.”

Photos show: (1) Chinese kitchen [shop] equipped with implements for tahoo manufacture, with hand-turned millstones, soybean mash flowing into cheesecloth bag hanging in wooden barrel, press, earthenware pot filled with brine for the “coagulation of the curd.” (2) Four pieces of fresh taohoo, four-fifths natural size. (2) Four pieces of freshly baked taohoo, four-fifths natural size.

Note: This is the earliest English-language document seen (Feb. 2004) that uses the word “taohoo” or “taokoan” to refer to tofu. Address: Agric. Exp. Station, Paramaribo, Surinam.

965. **Product Name:** Tofu, and miso.

Manufacturer’s Name: Aoki Tofu Co.

Manufacturer’s Address: Berkeley, California.

Date of Introduction: 1946.

New Product–Documentation: Leviton. 1983. Soyfoods. Summer. p. 35. “Profile: Azumaya Tofu Company.” Jack Mizono recalls that Aoki Tofu opened in Berkeley in 1946. The company made tofu and miso.

966. **Product Name:** Kanemasa Miso.

Manufacturer’s Name: Fujimoto Products & Co. (Fujimoto Shôkai).

Manufacturer’s Address: 302 S. 4th West, Salt Lake City, Utah.

Date of Introduction: 1946.

New Product–Documentation: Salt Lake City Directory. 1946. In Japanese: Fujimoto Shôkai. In English: Fujimoto Products & Co. (Mrs. Rae S. Fujimoto). Soy bean products. 302 S. 4th W. Her residence is at 343 N. 5th W. At same residence is Tsuya (a helper), Grace F. (sten), and Edward K. (whose wife is Rae S.), manager. 1949 Directory, same except that Grace F. is now office secretary. 1953 Directory. Fujimoto & Co. (Rae S. Fujimoto). Soy bean products. 302 S. 4th W. Edward K., manager. Rae S. Residence 343 N. 5th W. Note: Company is not listed in the 1944 Directory. 1945 directory is not on the shelf at Sutro Library, San Francisco.

Ad (¼ page) in Nichi-Bei Jiji Jushoroku [Japanese American Times Directory]. 1952, p. 461. The top 1/3 of this ad is in English: Fujimoto & Co., 302 So. 4th W. St., Salt Lake City, Utah. Phone: 4-8279. Japanese: Fujimoto

Shôkai. Their Japanese-style Kanemasa logo is shown. They sell Edo miso and koji. Directory entry p. 462, under “Stores.” English: Fujimoto Co.

Note: According to Shurtleff & Aoyagi. 1983. *The Book of Miso*. 2nd ed. p. 234. The earliest know miso company in the continental USA was founded by Mr. Genpei Fujimoto, and began operation in 1917. In 1942 it was the largest miso company in the continental USA. During World War II, in about 1943-44, because of the Japanese evacuation, it was shut down and moved to 302 South Fourth West, Salt Lake City, Utah. It was reestablished in Salt Lake City after the war by the son of the founder, Edward Kanta Fujimoto, and his wife, Shizue.

Presented at the First European Soy Congress, 16 March 1947. [Fre] Address: Professor, Princeton Univ., Princeton, New Jersey.

970. Leonard, Warren H. 1947. Barley culture in Japan. *J. of the American Society of Agronomy* 39(8):643-58. Aug. [2 ref]

• **Summary:** Contents: Introduction. Geographical distribution. Regional types and varieties. General cultural practices. Cultural methods on upland fields. Culture on paddy fields. Diseases and insect pests. Utilization. General summary.

Barley, one of the most important crops grown in Japan, is used for both food and forage. Almost all barley grown in Japan is the common six-row barley, *Hordeum vulgare*, as in the United States. In Japan, most of the crop is spring barley, seeded in the fall. The two basic types are covered barley and naked barley; about 60% of the crop is naked barley (which threshes free from the glumes, as does common wheat) and 40% covered. During the period 1936-1940, the cultivated area devoted to barley was about 14% of Japan’s arable land area. When the covered and naked types are included together, barley ranks second in acreage among all Japan’s cultivated crops, being exceeded only by

rice, which occupies 53% of the cultivated area. Barley is grown throughout Japan.

Table 6, titled "Uses of barley in Japan, 1942" gives the number of bushels and percentage for covered barley / naked barley for the following uses: Meal (eating use) 64.42% / 75.88%. Fodder or feed 22.83% / 14.36%. Seed 2.96% / 3.39%. Bean paste [miso] and soysauce 2.99% (1.032 million bu) / 6.03% (1.826 million bu). Beer 5.00% / -. Other uses (candy, medicine, yeast, etc.) 1.80% / 0.34%.

Note that both covered barley and naked barley are used to make miso and soysauce, but about 77% more naked barley is used in terms of bushels per year.

Barley is generally preferred to wheat for cooking with rice; it is pearled when used in this manner. Barley straw is used for straw braids, roof-thatching, litter, and mulches for vegetables.

Covered barley is grown almost exclusively in the United States, primarily for use as livestock feed and for malting. Address: Prof. of Agronomy, Colorado A. and M. College, Ft. Collins, Colorado.

971. Seiler, Hans G. 1947. Soja in der japanischen Kueche [Soya in Japanese cookery]. In: Dr. Wolfgang von Schuh, ed. 1947. Bericht Ueber die Erste Deutsche Soja-Tagung in Weissenburg, Bayern, 28-31 Aug. 1947. Heilsbronn bei Ansbach, Mittelfranken: Arbeitskreis fuer Landwirtschaft, Deutsche Arbeitsgemeinschaft Soja. 24 p. See p. 10-11. [Ger]

Address: Studienrat and Dr., Erlangen.

972. Rodrigo, P.A. 1947. Soybean culture in the Philippines. *Philippine J. of Agriculture* 13(1):1-22 + 5 plates. Third quarter. Summarized in Soybean Digest, May 1948, p. 41. [14 ref. Eng]

• **Summary:** Contents: Introduction. Description and history. Climatic and soil requirements. Varieties. Propagation. Preparation of the soil. Fertilizers and lime. Inoculation. Planting. Care of the crop. Harvesting and production: For day, for seed. Cost of production. Uses of soybeans. Diseases. "In the big cities in the Islands, many of the soybean products like soy sauce or toyo, tokua, tajuri, tojo [soymilk curds], miso, etc. are becoming more popularly used by the Filipinos, and will be more so as their nutritive values become more fully realized. Already, in some sections of the country where soybean is being grown, the seed is used either as a green or as a dry vegetable. The dried bean is roasted and is eaten offhand or is used in adulterating coffee, and the bean in the dough stage is boiled and eaten like peanut" (p. 2).

Table 1 shows annual imports (in kg) of soybeans and soybean products into the Philippines from 1929 to 1940, including dried beans, soy sauces, soybean meal, tausi (soy nuggets, salted), paste (miso), and total. Table 2 shows the value of these items (in pesos). In 1940 the imports of

greatest value were soy sauces (120,346 pesos), soybean meal (50,682), and tausi (20,280).

"In the Philippines, while the plant has been under cultivation since the Spanish regime [1571-1898], it has not gained much headway due mainly to the lack of a variety suitable for commercial planting, and perhaps due to want of interest among farmers" (p. 4-5). The Philippine Bureau of Plant Industry has, to date, introduced more than 200 soybean varieties to the Philippines from the USA, China, Japan, Hawaii, Java, and India, but it presently recommends only a few varieties for commercial planting. These include Ami, which has long been cultivated there and is well adapted to the varied soil and climatic conditions.

Based on the results of a number of years' trials in different regions of the Islands, the following varieties have been found to be productive: Yellow Biloxi Hybrid (introduced from Hawaii in 1936), Mis 28 E.B. Str. 3910 (introduced from India in 1937), Mis 33 Dixi (introduced from India in 1937), Head Green (introduced from the USA in 1935), and American Black. All of these varieties are good for May and June planting, and all but Yellow Biloxi Hybrid are good for September to December planting (dry season).

"In the Philippines, the green but fully developed pods are harvested, and the seed is cooked and eaten in practically the same way as lima bean or patani... In Lipa, Batangas, soybean in the dough stage is boiled in the pod and sold and eaten offhand" like peanuts. The more common soy products made in the Philippines are soy sauce or *toyo*, tokua [tofu], tausi [soy nuggets], and miso. "Soybean milk is being manufactured by the Bureau of Plant Industry in a limited scale and a big modern firm has started putting soybean milk and other products in the local markets" (p. 15-16).

Note: This is the earliest English-language document seen (Oct. 2008) that uses the word *tausi* to refer to soy nuggets. Address: Chief, Horticulture Research Section, Bureau of Plant Industry.

973. **Product Name:** Fuji Koji Miso.

Manufacturer's Name: Fuji Sake Brewing Company, Ltd. (Fuji Shuzo K.K.).

Manufacturer's Address: 539 Cooke St., Honolulu, Oahu, Hawaii.

Date of Introduction: 1947.

New Product-Documentation: Not listed in the index under miso in any Honolulu city directory from 1905 to 1966; Hawaii Directory of Manufacturers. 1953. p. 10. Miso (Soy bean paste). Fuji Sake Brewing Company, Ltd., 539 Cooke St. "Fuji." Nihei. 1978. Nippon Jozo Kyokai Zasshi. 73(7):542-49. "Hawaii ni okeru Nihon-shu, miso, shoyu no rekishi." States that Fuji Shuzo K.K. made Fuji Koji Miso. Address: 539 Cooke St., Honolulu. No longer in business. They started making sake in 1948 and closed the business in

about 1963. Wm. Higa. 1980. History of Miso Companies in Hawaii; Shurtleff & Aoyagi. 1983. The Book of Miso. 2nd ed. p. 234. The company, Fujii Miso Co., was founded ca. 1941-1954. No longer in business. Letter from Takao Nihei. 1988. July 19. The product was introduced in about 1947. The company closed in 1963.

974. **Product Name:** Maru-Hi Miso [Mellow White, or Red], and Shoyu.

Manufacturer's Name: Hawaiian Miso & Soy Co.

Manufacturer's Address: 1714 Mary St., Honolulu, Oahu, HI 96819. Phone: 87488. Later 808-841-7354.

Date of Introduction: 1947.

New Product–Documentation: Directory of the City and County of Honolulu. 1949. p. 354. Hawaiian Miso and Soy Co. (George T. and Henry T. Higa; Doris K. and Seiboku Kiyabu), Manufacturers of Miso and Soy. 1714 Mary. Tel. 87488. Hawaii Directory of Manufacturers. 1953. p. 10. Miso (Soy bean paste). Hawaiian Miso & Soy Company, 1714 Mary St. Honolulu City Directory. 1956. The company is the only miso manufacturer listed for this year. Nihei. 1978. Nippon Jozo Kyokai Zasshi. 73(7):542-49. "Hawaii ni okeru Nihon-shu, miso, shoyu no rekishi." States that Hawaiian Miso Shoyu Kaisha was founded by William Higa. Gives address. No founding date given. Still in business. Wm. Higa. 1980. History of Miso Companies in Hawaii; Shurtleff & Aoyagi. 1983. The Book of Miso. 2nd ed. p. 234, 240, 255. The company was founded in 1947 by George Higa Sr., William Higa, George Higa Jr., Hisako Higa, and Alvin Higa. They left American Hawaiian Soy Co. By the 1980s HMS was Hawaii's largest miso manufacturer, and the second largest in the USA with 512 tonnes/year in 1983. Ad in Hawaii Herald. 1983. Oct. 7. p. 5.

975. **Product Name:** Kokusui Miso.

Manufacturer's Name: Nichibeï Shuzo Kabushiki Kaisha, Ltd. (Japanese-American Sake Brewery).

Manufacturer's Address: 1965 Kamehameha Ave., Hilo, Island of Hawaii.

Date of Introduction: 1947.

New Product–Documentation: Hawaii Directory of Manufacturers. 1953. p. 10. Miso (Soy bean paste). Nichibeï Shuzo Kabushiki Kaisha, Ltd., 1965 Kamehameha Ave., Hilo, Hawaii. "Kokusui."

Nihei. 1978. Nippon Jozo Kyokai Zasshi. 73(7):542-49. "Hawaii ni okeru Nihon-shu, miso, shoyu no rekishi." States that Nichibeï Shuzo (Sake Brewery) K.K. makes Kokusui Miso. Address: Waiakea, Hilo, Hawaii. No longer in business. They started making sake in 1948 and closed the business in 1956. Wm. Higa. 1980. History of Miso Companies in Hawaii. Gives company name as Kokusui Miso Factory; No longer in business. Letter from Takao Nihei. 1988. July 19. The manufacturer was Nichibeï

Shuzo, not Kokusui Miso Factory. The product was launched in 1947. They closed in 1956. The company president was Kazuo Miyazaki.

976. Cole, A.B. ed. 1947. A scientist with Perry in Japan: The Journal of Dr. James Morrow. Chapel Hill, NC: University of North Carolina Press. 307 p.

• **Summary:** For background on Commodore Perry and the opening of Japan, see Fairbank, Reischauer, and Craig. 1973. *East Asia: Tradition and Transformation*, p. 327; a summary is given in this bibliography.

In 1854, Dr. James Morrow of South Carolina, agriculturist with the U.S. Perry expedition to Japan, East Asia, spent 18 weeks in Japan. He took seeds, plants, and scientific information from the USA to distribute as gifts for the shogun Tokugawa Iesada, and was instructed to collect the same and make observations, which he recorded in this journal. He explored the Great Liu Ch'iu (Okinawa), and sampled fried bean sprouts (we are not told what type [probably mung bean]) and soy sauce in "a little sauce of bean soy" in Canton (p. 48).

In April 1854 in Kanagawa, Japan, he "put in small papers more than two hundred papers of seed, and sent one of each kind to Mr. Allen, gardener of New York,—to Mr. Landreth, gardener in Philadelphia,*" (p. 155) (Endnote 89, p. 286: *"Probably Richard L. Allen, formerly of A.B. Allen & Co, dealers in agricultural implements in New York, and probably David Landreth of David Landreth & Son {David & Oliver Landreth & Thomas F. O'Neil} in Philadelphia."), "also to Mr. Buist, gardener in Philadelphia,—to Henry Gourdin, Esq., of Charleston,—and to Gen. Wade Hampton, of Columbia, South Carolina [a planter and congressman]. I sent the large Japanese papers to the Department of the Interior at Washington [DC].

Appendix G (p. 228) shows a list of seed bought in Simoda [Shimoda] Bay in large quantities in April 1853 (1854?) [sic, probably 1854]. Included are "Small red Beans (soya) [azuki?]," and "Black beans (another variety)."

Appendix H (p. 228-30) contains a "List of seed presented to me [Morrow] by the Japanese gentleman who was the principal in making the treaty & collected by himself as he said with great pains. These were principally from Yeddo [Edo, today's Tokyo] and Conagowa" [Kanagawa; an important port in 1854, a town north of Yokohama and a prefecture whose capital is Yokohama]. Included in the list of 56 plants are "Dolichos pease (green), Red Beans, Black pease, Red pea—Dolichos, and Small red Bean (soya) [azuki?]."

A photo (frontispiece) facing the title page shows Dr. James Morrow. Note: Morrow's soybean seeds were sent to the Commissioner of Patents, whence they were distributed to farmers, and planted from 1855 on.

977. Fritzsche, Curt. 1947. *Die Sojabohne: Anbau und Verwertung* [The soybean: Cultivation and utilization]. Lueneburg [near Hamburg], Germany: Metta Kinau Verlag Nachf. 48 p. Series: Kurzschriften fuer Landwirtschaft, Gartenbau und Siedlung. 11. [Ger]

• **Summary:** Contents: Introduction. 1. Origin of the soybean (in Asia and Europe, including the work of Haberlandt in central Europe, plus instructions for making Chinese-style chiang, soy sauce, and tofu). 2. Description of the soybean. 3. The culture of the soybean. 4. Diseases and enemies of the soybean. 5. The economic significance of the soybean: As a food, as an oilseed, and in applied science/industry. 6. Advantages of the soybean: For the farmer, for the economy. 7. Effect of soybean culture on the national diet. 8. Tested recipes for the household. Conclusion. Address: Friedersdorf & Berlin.

978. Liang Shih-chiu. ed. 1947? *A new practical Chinese-English dictionary*. The Far East Book Co. Ltd. See p. 1037-38. [Eng; Chi]

• **Summary:** Gives the Chinese characters and their pronunciation for the following soy-related terms: Soybean cake; bean curd; a semi-transparent film formed on the surface of soybean milk; a store where bean curd is made for sale; spiced and dried bean curd; soybean cheese; legume; (said of girls) in teens; the pods of beans or peas; soybean milk; fermented beans in paste form; residue of soybeans in making bean curd; fermented and seasoned soybeans; pisolite [bean + stone]; legumin; bean sprouts as a vegetable; soybean oil. Address: Editor in Chief.

979. Lockwood, Lewis B. 1948. Re: Request for information available on the production of foods by fermentation, particularly from soybeans: Soya sauce, miso paste, and soya cheese. Letter to A.K. Smith in Shanghai, China, April 1. 2 p. typewritten.

• **Summary:** Attached is Smith's 7-page response from the Metropole Hotel, Shanghai, China, dated 7 June 1948. He gives details on the processes for making miso, katsuobushi, and soy sauce. "The questions on soy sauce were answered largely by Mr. Kung and Mr. C.T. Siao of the National Bureau of Industrial Research, 1313 Szechum Road, N. Shanghai, China. The questions on miso were answered by Quo Sih Gwan, a Chinese worker that has spent a number of years in Japan. No one around Shanghai knows anything about miso." Address: NRRL, Peoria, Illinois.

980. Morse, W.J. 1948. Soybeans yesterday and today. *Foreign Agriculture* 12(5):91-95. May. Summarized in *Soybean Digest*, June 1948, p. 32.

• **Summary:** A good overview of soybeans and their history in China, Manchuria, Korea, and Japan (the principal regions of world soybean production), plus thoughts on their relatively recent introduction to the Western world.

"In China, the soybean is one of the leading and most ancient of crops, ranking fifth in extent of culture and occupying about 9% of the total cultivated area. Although grown everywhere in China, about 60% of the soybean acreage and production is confined largely to 3 northern Provinces, Shantung, Kiangsu, and Honan. China consumes practically all its production, estimates indicating 55% for food, 27% for oil extraction and other purposes, 10% for stock feed, and 8% of the total cultivated area of Manchuria and is a dominating factor in the life of that country. As a cash crop, it provides fully half the total volume of freight handled by Manchurian railroads. Estimates have indicated that from one-third to two-thirds of the production of soybeans was exported; 15 to 20% utilized for food, feed, and planting; and the remainder processed for oil and oil meal.

"Korea occupies third place among the soybean-producing countries of Asia. Acreage and production are confined largely to the central and northern areas, because southern Korea, growing chiefly cotton and rice, seems less well adapted to soybean-seed production. The entire seed production is used for food, stock feed, export, and planting, none being used for oil extraction.

"Japan, although a large producer of soybeans, has consumed all its own production and imported large quantities of seed from Manchuria and Korea. Since World War I, production of soybeans in Japan has decreased to some extent, more emphasis being placed on the greater production of rice. The proportion of soybeans used by Japan for various purposes was: Miso (soybean-rice fermented paste), 22%; soy sauce, 22%; oil and oil cake, 21.5%; bean curd, 15.5%; confections, 7.2%; forage, 6.2%; green manure, 2.5%; seed, 1.8%; green vegetable beans, 0.8%; and miscellaneous 0.5%.

"In the Soviet Far East the soybean is said to be one of the chief industrial crops and in some districts to constitute 20% of the cultivated area. Acreage and production have increased markedly since 1926, especially in the Khabarovsk territory.

"Previous to 1935 soybean oil in the United States was utilized chiefly in soap, paint, and varnish. Since that time, however, 70 to 85% of the soybean-oil supply has been used in the food industries... The soybean has become one of the most valuable, if not the most valuable, of China's gifts to the Western World."

Photos show: (1) Manchurian soybean in bags being loaded on a freighter at the Dairen wharves for shipment to European oil mills. (2) Two horses pulling a plow, and a 2nd man planting soybeans on ridged rows in Manchuria. (3) Soybean plants growing along the edges of rice paddies, as is common in oriental countries; the green beans will be used for home consumption. (4) Two Korean men threshing soybean plants in a courtyard with bamboo flails. "In Korea, as well as in many other oriental countries, bamboo flails

are used in threshing soybeans.” (5) A man with a sickle in a field of dried soybean plants. “Soybeans are harvested by hand in all the soybean-producing countries of the Orient.” (6) A combine harvesting soybeans in the USA. It has “been one of the important factors in the economic production of soybeans in the United States.” (7) “General view of a Chinese oil-mill yard in Manchuria, showing mill, storage of soybeans in osier bins, and steel tanks.” Address: Principal Agronomist, USDA Div. of Forage Crops and Diseases, BPI [Bureau of Plant Industry], SAE [Soils and Agricultural Engineering], ARA, Beltsville, Maryland.

981. Smith, A.K. 1948. Manufacturing soya-paste in Peiping No. 2 plant (China). Unpublished manuscript, written in China. 1 p. June 18.

• **Summary:** To make soya-paste: Boil soya beans. Mix in the following ratio: 10 kg wheat flour to 15 kg soya beans. Pulverize the mixture, then ferment for 20 days. Put into crockeries [earthenware crocks] in an open field and mix in salt-water, using either (a) strong salt water: 30 kg containing 8 kg salt to 15 kg of substance, or (b) weak salt water: 40 kg containing 8 kg salt to 15 kg of substance. Expose to the sun-shine for 3 months to quicken the finishing process. If it rains during this time, cover the crocks. Stir the contents of the crocks every day. After 3 months, the soya-paste will be ready for sale. Thus the whole process takes about 4 months. The product is typically made during the summer. This shop makes 150,000 kg (300,000 *chin*) of soya-paste per year. There are nearly 100 soya-paste manufacturers in Peking. Soya beans with thin husks [seed coats] are better than those with thick for making this paste. Soya beans grown in the village of P’ang-ku-chuang, near Peking, are preferred. Three samples are enclosed.

Note 1. This Chinese soya-paste is different from Japanese miso in many ways: (1) It is made with wheat flour, rather than rice or barley. (2) The koji is made with soybeans coated with wheat flour. (3) The fermentation takes place outdoors, during the summer, in earthenware crocks.

Note 2. This is the earliest English-language document seen (March 2009) that uses the term “soya-paste” to refer to miso. Address: Traveling in China; Normally at NRRL, Peoria, Illinois.

982. Smith, Allan K. 1948. Manufacturing of soya-sauce. Peiping, China. 1 p. June 18. Unpublished typescript.

• **Summary:** Part one, titled “Method of manufacture of Soya-sauce,” describes nine steps used at Peiping No. 2 plant. To begin: Roast separately, 150 kg soya beans and 100 kg wheat. Mix and ferment for one week. Then mix with salt water, put in outdoor “crockeries,” and allow to stand for months. “However, the longer the better. The colour and taste of the sauce become better in sunshine than

indoors.” Stir daily, filter out the liquid when done, and boil. Yields 500 kg of soya-sauce. “As the condiment the licorice plant is used to sweeten the sauce. (Sugar is too expensive).”

“(1) Nearly 400 soya-sauce manufacturers in Peiping. (2) The manufacturing shop we visited is making soya-sauce and soya-paste at the same time. (3) This shop has the history of 40 years. (4) Besides soya beans and wheat, the following are used as materials for making soya-sauce: barley, soya cake and wheat bran. Sample No. 18. is soy sauce taken from this plant.” Address: Peiping, China.

983. Smith, Allan K. 1948. Re: Visits to plants in China making soy sauce, soy paste, and soy cheese. Letter to Drs. K.B. Raper and L.B. Lockwood, Northern Regional Research Laboratory, Peoria, Illinois, June 23. 1 p. Typed, without signature (carbon copy). [Eng]

• **Summary:** “I am enclosing further information on soy sauce and soy paste processing. The samples listed by numbers on the descriptions will eventually reach you I hope. In visiting this plant I had two interpreters.”

Note: This is the earliest English-language document seen (March 2009) that uses the term “soy paste” to refer to miso or to Chinese-style miso.

“I have visited two other soy sauce plants but am not reporting on them at this time. One of these is the Peiping Municipal Soy Sauce Plant which operates much like the pilot plant in Shanghai. I have also visited a sauce plant that claims to have been operating for more than 400 years in the same family and a soy cheese [fermented tofu] plant that has been operated by the same family since the latter part of the Ming Dynasty [mid-1600s]. I doubt if they have changed much in all that time. All of the samples will be in the mails soon... I may have to take some of them back to Shanghai to get them started.” Address: Hotel Wagon Lets, Peiping, China.

984. Smith, A.K. 1948. Re: Making soy sauce and soy paste in China, incl. samples. Letter to Drs. Kenneth Raper and Louis Lockwood, Northern Regional Laboratory, Peoria, Illinois, June 23. 1 p. Address: Traveling: At Hotel Wagon Lets [Lits], Peiping, China; Normally at NRRL, Peoria, Illinois.

Oriental farming practices. *Soybean Digest*. May. p. 24-26, 28, 30.

• **Summary:** Contents: IV. Japan: Introduction. Production of miso. Soy sauce in Japan. Monosodium glutamate. Trends in soy sauce production.

"The Kikkoman Shoyu Co. Ltd. was founded in 1764. This is the largest soy sauce plant in Japan and probably the largest in the world for making a fermented type sauce. The annual shoyu production at Noda has been as much as 23 million gallons, consuming 30,000 tonnes (11 million bushels) of soybeans, 27,000 tonnes of wheat, and 29,000 tonnes of salt. The Noda city factory includes 8 brewing plants, 1 barreling plant, 6 auxiliary plants for the construction of barrels and other materials used in their process, and a research laboratory with a staff of more than 30 workers. The factories of Noda city are spread over 2,333 acres of land... The koji is made in wooden trays about 14 by 24 by 4 inches deep. There are 1,500 cement fermenting tanks in one plant. For a good grade of soy sauce, the mash is fermented for 8-12 months. But owing to the current pressing need for the sauce, the fermenting period is now often shortened to 3 months." Address: Northern Regional Research Lab., Peoria, Illinois.

991. Smith, Allan K. 1949. Oriental methods of using soybeans as food: With special attention to fermented products. Notes on Oriental farming practices. *USDA Bureau of Agricultural and Industrial Chemistry*. AIC-234. June. 40 p.

• **Summary:** Page 1 states: "The text of this bulletin, with slight revisions, is as it appeared serially in *The Soybean Digest*, issues of February through June, 1949, although many additional photos appear herein. It is processed with the publisher's permission." Note: An enlarged 65 page edition was issued in July 1961.

Photos show: (1) Nine people in a field cultivating soybean with hoes near Nanking, China. All of these workers but one are women. July 1948. (2) "The three-man shovel, Korean version of the turning plow. The motive power is supplied by the man holding the ropes." (3) A man and donkey threshing wheat with a stone roller. (4) A water buffalo and man pumping water from the rice fields. All parts of the pump and elevator are made of wood. Near Nanking, China, July 1948. (5) Windmill used for pumping water. The sails or vanes are mats woven from grass. (6) Children with baskets of soybean sprouts and inflated Chinese national currency in the market place at Canton, China. Aug. 1948. (7) Soybean milk for sale on the streets of Canton, China. Aug. 1948. It is in bottles, carried using a shoulder pole. (8) A wedge press for oilseed operations at Canton, China. Preformed disks of the flaked or ground meal are inserted in the slot and turned clockwise in the hollow log; pressure is applied with wooden wedges. July 1948. (9) Equipment for steaming soybeans preparatory to

making soy sauce. Steam is passed upward through the wooden tanks from a boiler beneath. Peiping, China. 1948. (10) Soy sauce preparation. Steamed soybeans are placed in woven baskets or trays for 3 to 7 days to permit the growth of the mold *Aspergillus oryzae*. Nanking, China. July 1948. (11) Many earthenware jars for soy sauce production in a courtyard surrounded by houses. "Following the growth of a thick mold on the soybeans, they are mixed with parched and cracked wheat and placed with salt solution in earthenware jars for fermentation, which lasts 3 months to 2 years. Soy paste [chiang] is fermented in a similar manner but it contains less water and the fermentation period is about 3 months. Shanghai, China. Aug. 1948." (12) "Soybean curd and vegetables displayed for sale in market place, Seoul, Korea. Aug. 1948." (13) Squares of soybean curd covered with white mold on round, woven bamboo trays. "This is the first step in making soybean cheese. Canton, China, Aug. 1948." (14) Two rows of large hydraulic presses in the mill of the China Vegetable Oil Company, Shanghai. June 1948. 992. Smith, Allan K. 1949. Oriental uses of soybeans as food: With attention to fermented products. Notes on Oriental farming practices. *Soybean Digest*. June. p. 15-18, 20, 22.

• **Summary:** Contents: V. With Raymond E. Culbertson. Korea: With attention to fermented products. Introduction. Breeding work. Topography. Land use. Soybean varieties. Climatic relations. Soils of Korea. Cultural practices. Marketing. Soybeans as foodstuff. Soya sauce. Green pods on the bush. Bean sprouts. Parched beans. Curd (soybean curd [tofu]) and milk. Kochuchang. Other uses.

Concerning food uses of soybeans in Korea: "Soya sauce:... is found on the tables of all Koreans, where it is used quite generally on rice, sukiaki [sukiyaki], fish, chicken, and other meats and for the flavor it adds to the soup. It is a very popular appetizer. Most families make soya sauce and are allocated 2.7 kilograms of salt per person annually for this purpose. Yearly consumption is about 6 liters per person. In addition to homemade soya sauce, a supply is also available from many small factories making it. There are more than 10 plants in Seoul, the capital city. Making soya sauce in the home starts about January or February. It is the custom at this time to take a batch of beans and boil them in water until soft, following which they are mashed and formed into a ball, placed in a rice-straw bag and hung up in a heated room to ferment for a 3-month period. Following fermentation, the ball is cut open, broken into pieces and allowed to dry in the sun. When dry, water and salt are added, inoculant (yeast) introduced and the mixture allowed to stand in an earthen crock 2 to 3 months. The liquid is then poured off, boiled about 2 hours and filtered, following which it is considered to be sauce. The sediment remaining in the crock is known as paste. This is used primarily for making soup. In both home and commercial production of soya sauce parched and browned wheat or barley is frequently used in conjunction with the soybeans.

"Green pods on the bush: It is common practice to market early beans on the bush. The plants are pulled, dirt shaken from the roots and the leaves removed. The braches are tied with a string (usually hemp) and the plants are taken to market where they are sold by the bunch. The housewife prepares them for eating by picking off the pods and boiling, and the plant stem is used for fuel.

"Bean sprouts: Bean sprouts are much in demand especially during the winter months. They are used in combination with meat, Chinese cabbage, spinach, turnips, soups and various other cooked dishes. Sprouts are nourishing and supply much-needed vitamins to the Korean's usual polished rice diet. In some instances the beans are left on the sprouts, in others they are removed. The beans are sprouted in central places and usually peddled in two-wheeled, man-drawn carts. Sprouting requires about a week. They are sold on a weight basis.

"Parched beans: For parching, soybeans are simply placed in a pan over a fire and heated slowly until the skin breaks and part of the beans are slightly blackened. They

are eaten like peanuts or mixed with other foods. Most varieties are quite palatable and well liked for parching.

“Curd and milk: Soybean milk is consumed in Korea but not so extensively as in China. The milk is made in a manner similar to the Chinese method which was described in an earlier report.

“A large percentage of the soybeans’ growth in Korea are consumed as soybean curd. In addition to the huge quantities made at home, curd is also made in literally hundreds of small factories. In Seoul alone there are more than a hundred. Small units, which on the average employ five men, can work up about 10 bushels of soybeans daily.

“Kochuchang: Practically every Korean family makes kochuchang. Boiled [soy] beans are mashed and hung up in sacks to cure well for 2 or 3 months. This material is then broken up, dried in the sun, and ground to a fine powder, usually in an old type hand-operated stone mill. Red peppers are ground fine, the lot is mixed and salt and water added, then it is allowed to stand in crocks 2 to 3 months. To prepare kochuchang for the table, it is taken from the crock and boiled with the addition of ground meat and sugar, if the latter is available.”

Note: This is the earliest (and only) English-language document seen (March 2009) that uses the word “kochuchang” to refer to Korean-style red pepper and soybean paste (miso). Address: Northern Regional Research Lab., Peoria, Illinois.

993. Chatfield, Charlotte. 1949. Food composition tables for international use. *FAO Nutritional Studies* No. 3. 56 p. Oct. [158* ref]

• **Summary:** A table on page 11 shows “Food composition in terms of retail weight (“as purchased”) for soybeans and various soybean products: Whole seeds, dry; Flour, full fat (seed coat removed); Flour, low fat—grits, flakes (partially defatted); Curd, tofu (yield 3.5); Fermented beans—Japanese natto; Fermented beans—Chinese tsiang [chiang]; Soybean milk (yield 7.5); Paste, miso (made with small amounts of rice or other starchy materials) (yield 2.5); Shoyu sauce (yield 3.5). The following are given for each product: Calories per 100 gm, percentage of protein and fat, and yield from 1 kg of soybeans.

Similar but expanded information is given on p. 25, including carbohydrate, fiber, ash, and refuse. Address: Nutrition Div., FAO, Rome, Italy.

994. *Vegetarian News Digest (Los Angeles)*. 1949. Health in the news: The soy bean—wonder food of many uses. 1(9):21. Sept/Oct.

• **Summary:** “Allan K. Smith of the Northern Regional Research Laboratory, Peoria, Illinois, recently returned to the United States from the Orient where he learned of countless uses for soy beans. In China, Japan and Korea he found soy beans being fermented, ground, and processed in

various ways. In its motherland, Smith discovered, the soybean is a source of flour and cake, oil, bean sprouts, vegetable milk, various sauces and pastes, curd, cheese, and several other foods.” Describes how soy milk is made in China. One restaurant that Smith visited prepared more than 25 different dishes from soybeans.

995. Brant, Burl. 1949. CARE packages use soy products. *Soybean Digest*. Nov. p. 39.

• **Summary:** “Since April 1948, when the Japanese Food Package for CARE was developed, two soybean products have been continuously included in those packages. They are soy sauce, known as ‘shoyu’ and a bean curd [sic] preparation, known as ‘miso.’” Both the miso and shoyu shipped to Japan were made in the USA. The annual production of shoyu in America is estimated at about 500,000 gallons. The shoyu sent to Japan is made by blending traditional fermented shoyu with HVP soy sauce. Address: Asst. Executive Director, Cooperative for American Remittances to Europe, Inc. (CARE).

996. Kagawa, Aya. 1949. Japanese cookbook (100 favorite Japanese recipes for Western cooks). Tokyo: Japan Travel Bureau. 162 p. Illust. (line drawings, and color-, and black and white photos). 19 cm. Series: Tourist Library No. 11.

• **Summary:** Contents: Preface. General remarks (The why of Japanese food, its nutritive value, table utensils, an ordinary meal, meals for guests, table etiquette, kitchen utensils, how to cut up fish and vegetables, glossary {incl. aburaage, miso, shoyu, tofu}). Japanese cookery: Table of measures, soups, boiled foods, broiled foods, fried foods, saucepan foods, steamed foods, *hitashimono* (boiled greens in soy [sauce]), aemono (dressed vegetables), vinegared foods, sliced raw fish (sashimi), rice foods, sushi (vinegared rice foods), pickles, seasonal menus, New Year’s foods, Girls’ Festival foods. How to make Japanese cakes (incl. bean paste from red beans).

Many recipes call for “shoyu” [soy sauce]. Soy related recipes: Scrambled egg soup (with shoyu or Worcester sauce, p. 42). Tofu and Japanese leek soup (p. 49). Miso soups (p. 50-51). Broiled egg-plants (with miso, p. 70). Beef sukiyaki (with tofu, p. 79-80). Fish stew (with tofu, p. 81). Odamaki mushi (with yuba, p. 85). Boiled greens in soy (p. 91-92). Dressed food with white sesame [seeds] and vinegar (and aburaage {fried beancurd}, p. 96). Dressed carrot and kidney beans in pod (with tofu, p. 97).

On p. 14 we read: “Soy beans are used very much in Japanese food; especially in hilly regions where fish is scarce, or in vegetarian menus (in connection with Buddhism). Beans are not only simply boiled but eaten in various ways. They are made into tōfu (beancurds), aburaage (fried tōfu), nattō (steamed and fermented beans), shōyū. miso, [azuki] bean-paste used in cakes, etc.” Key flavorings are miso, shoyu, sugar, and vinegar. Sake, mirin,

dashi and ajinomoto (seasoning powder) are also important. “Seaweeds are usually eaten dry. Nori (seasoned laver), kombu (tangle), wakame (lobe leafed undaria), hijiki (spindle-shaped bladder-leaf), and so on, are rich in iodine,…”

“Our special thanks are due to Dr. R.H. Blyth, professor of Gakushin University, who translated the original Japanese manuscript into English.” Aya Kagawa was born in 1899. The book was first published in December 1949. The almost identical 9th printing appeared in April 1955. Only the color photos were changed (upgraded) by 1955. Address: M.D. and president of Joshi Eiyô Tanki Daigaku (Women’s Nutrition College), Tokyo, Japan.

997. Mogi, Masatoshi. 1949. *Shōyu miso* [Shoyu and miso]. Tokyo: Daiamondo-sha. viii + 283 p. [4] p. of plates. Illust. 19 cm. [Jap]

• **Summary:** The first four pages of this book contain 10 small photos relating to shoyu production and 10 relating to miso production. Contents: I. Shoyu. Commercial products: 1. History of shoyu (p. 3). 2. Varieties of shoyu (p. 8). 3. Supply and demand of shoyu (p. 25). 4. Quality of shoyu (p. 28). 5. Containers used for shoyu (p. 36). Production: 6. Fermented shoyu (*Jōzō shoyu*) production method (p. 40). 7. Amino-san shoyu production method (p. 90). 8. Semi-chemical shoyu production method (p. 108). 9. Methods of preventing formation of undesirable mold on and gas in bottled shoyu (kabi, p. 110). 10. About steaming equipment (*jōki kikan*) in the shoyu plant (p. 115). Industry: 11. Structure of the shoyu industry (p. 123). 12. The structure of selling and buying of shoyu (p. 141). 13. Supply and demand for shoyu, and the future of the industry (p. 149).

II. Miso. Commercial products: 1. History of miso (p. 173). 2. Supply and demand for miso (p. 175). 3. Varieties of miso (p. 179). 4. Standards for miso (p. 188). 5. Nutritional composition of various types of miso (p. 189). 6. Storing miso (p. 191). Production: 7. Regular miso production methods (p. 193). 8. Methods of making miso using substitute raw materials (p. 223). Industry: Structure of the miso industry (p. 245). 10. Financial condition of the miso industry (p. 254).

The author was born in 1907. Address: Brewing Lab., Noda Shoyu Co. Ltd., Noda-machi, Chiba-ken, Japan.

998. Saito, Akio. 1949. [Chronology of soybeans in Japan, 1927 to 1949] (Document part). In: Akio Saito. 1985. *Daizu Geppo* (Soybean Monthly News). Feb. p. 14-15. [Jap]

• **Summary:** 1927 Sept. 15–Noda Shoyu [Kikkoman] has the longest strike in pre World War II Japan. The labor system becomes more modern and employer-employee problems start to be handled in new ways.

1928–The production of soy oil reaches 38,000 tons, passing rapeseed oil which is 30,000 tons. Soy oil is now Japan’s leading vegetable oil.

1931 Sept.–Japan invades Manchuria, using the Mukden incident as a pretext. 1932–Japan attacks China. By early 1932 Japan had conquered all of Manchuria.

1932 Feb.–The Rikagaku Kenkyujo in Tokyo makes salt-free shoyu for the first time.

1935–At about this time, systematic cultivation of soybean seeds begins.

1938–The average retail price of good quality shoyu is 62 *sen* for 18 liters (10 *sho*).

1938 Sept.–The *Kokusaku Daiyohin Fukyu Kyokai* is founded. This organization encourages the substitution of less expensive or more abundant ingredients in shoyu, such as barley for rice, millet or barn yard millet grass (*hie*) for barley, or the chrysalis of a silkworm for soybeans and wheat in making HVP shoyu (*amino-san shoyu*).

1939–The first soybean is registered in Japan; it is named “Ministry of Agriculture and Forestry, Number 1” (*Norin ichi-go*).

1939 Dec.–The Japanese government puts its energy into controlling the rising prices of rice, miso, shoyu, salt, matches, fresh produce, etc. (i.e. essential foods for daily life).

1940 March–The “Central Price-Fixing Organization” (*Chuo Bukka Inukai*) sets ceiling prices for the following to control inflation: soy oil, soybean cake, Japanese soybeans mixed with Manchurian soybeans, salted salmon, salted trout, dried nori, and eggs.

1940 April–The “Price Setting Central Committee” (*Kakaku Keisei Chuo Inukai*) decides to use a ticket (rationing) system for ten items including rice, miso, shoyu, salt, matches, charcoal, and sugar.

1940 June–The Ministry of Agriculture and Forestry (*Norinsho*) and the Ministry of Commerce and Industry (*Shokosho*) proclaim the new revision of the regulation for controlling excessive profits (*Borikoi Nado Torishimari Kisoku Kaisei*), and on responsibility relating to prices.

1940 Sept.–Even though people are under control, summer resorts become crowded and people take home rice and miso and souvenirs. The government asks them not to do this.

1940 Oct.–The Japan Soybean Control Corporation (*Nihon Daizu Tosei K.K.*) and the Cooperative Soybean Products Marketing Corporation (*Daizu Seihin Kyohan K.K.*) are founded.

1941 June–The home use food oil ticket (rationing) system starts.

1941 Dec. 7–Japan attacks Pearl Harbor. War with the USA begins. 1942 Feb.–The ticket rationing system starts for miso and shoyu.

1943 June–The regulations for emergency food production are decided. They start to use unused lands for production of various small grains and legumes (*zakkoku*).

1943 Nov.–A record book rationing system is established for tofu, to ensure fair distribution.

1945 Aug. 14—Japan surrenders to the USA in World War II after atomic bombs are dropped on Hiroshima and Nagasaki (Aug. 6 and 9).

1945—Because of unusually cold weather, Japan's soybean production drops dramatically, resulting in one of the smallest crops since 1878. It is only 170,400 tonnes, 36.3% lower than the previous year.

1947—The production of shoyu this year is only 1,868,500 *koku*. Since there is not enough shoyu, a lot of substitute shoyu and powdered shoyu (*kona shoyu*) appear; neither of these two products are regulated.

1947 May 3—A new constitution is adopted in Japan in which the country renounces the right to wage war, the emperor gives up claims to divinity, and the Diet becomes the sole law-making authority.

1948 Oct.—At about this time, the food situation in Japan starts to improve. Address: Norin Suisansho, Tokei Johobu, Norin Tokeika Kacho Hosa.

999. *SoyaScan Notes*. 1949. Chronology of the macrobiotic movement in North America, 1949-1966. 25 Jan. 1995. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** 1949—Michio Kushi, a student of George Ohsawa, arrives in New York City from Japan, in connection with the World Federalist Movement. He writes letters back to Japan, and Ohsawa reads them to his students.

1951—Aveline Tomoko Yokoyama falls in love with Michio's letters, wins a trip to America by being the best seller of Ohsawa's newspapers, and meets Michio in New York.

1952, early—Herman Aihara, age 32, arrives in America, and settles in New York City. As early as March 1952 he was selling macrobiotic foods in New York; he imported them from Ohsawa in Japan.

1953—Michio Kushi and Aveline Tomoko Yokoyama are married in New York.

1955 Dec.—Herman Aihara and Chiiko (Cornellia) Yokota are married in New York.

1950s, late—Zen Teahouse, the first macrobiotic restaurant in the USA, is started in New York City by Alcan Yamaguchi with carpentry help from Herman Aihara. It was located at 317 Second Ave. and consisted of a small (4-table) main room containing a kitchen. Miso and shoyu were served regularly. This restaurant was later renamed Paradox.

1959 Nov. or Dec.—George Ohsawa arrives in America for the first time, staying in New York City with Herman Aihara, his closest associate. After a week he flies to California to find a source of short-grain brown rice; he locates Koda Brothers, but also gives lectures in San Francisco and Los Angeles. After one week in California, he returns to New York City.

1960 Jan.—Ohsawa presents the first of three series of lectures designed to introduce macrobiotics, and the philosophy and medicine of the Orient, to America; each for ten nights during January, February, and March of 1960 at the Buddhist Academy in New York City. During these lectures his first work in English is published, a mimeographed edition of *Zen Macrobiotics*. He and the Aiharas duplicated and bound these in the Aiharas' apartment, then sold them at the lectures for \$0.50. He also lectured at the Universalist Church, The New School for Social Research, Columbia University, and New York City College (See: *Macrobiotics: The Art of Longevity and Rejuvenation*, p. 188-89).

1960 July—Ohsawa returns to America (after a trip to Europe) and lectures daily for two months at the first American macrobiotic summer camp at Southampton, Long Island, New York. Mrs. Lima Ohsawa, aided by Cornelia Aihara, gives macrobiotic cooking classes. Many people attend, especially writers, actors, artists, musicians, and intellectuals.

1960—To serve this growing interest, a tiny restaurant named Musubi is started in Greenwich Village and run by Alcan Yamaguchi, Romain Noboru Sato, Junsei Yamazaki, Herman Aihara, and Michio Kushi. In late 1961 Musubi was moved to 55th Street.

1960—The first macrobiotic food store (combined with a gift shop), named Ginza, is started by Herman Aihara.

1961 Jan.—The Ohsawa Foundation of New York is established on 2nd Avenue by Irma Paule, Michio Kushi, and friends. Michio and Herman Aihara were the first two presidents.

1960, late—Herman Aihara starts publishing *Macrobiotic News*, a magazine consisting mainly of Ohsawa's lectures.

1961 summer—Ohsawa comes to America again for the second macrobiotic summer camp, this time in the Catskill Mountains at Wurtsboro, New York. Lima Ohsawa and Cornelia Aihara give cooking classes. After the camp, at the time of the Berlin Wall crisis (August 1961, before the Cuban missile crisis of Oct. 1962), Ohsawa feared that a nuclear war might be near. He urged his followers to leave New York and find a place that was safer from radioactive fallout and good for growing rice. After extensive research, they chose Chico, California.

1961 Oct. 1—Thirty two people (11 families) arrive in Chico from New York City in a caravan of vans, buses, and station wagons. Among the active people in the group were Bob Kennedy, Herman Aihara, and Dick Smith.

1962 March 6—The group in Chico establishes a new food company named Chico-San as a retail store and an import and wholesale business. It was capitalized with \$10,000. In addition to a line of whole-grain products, they soon began to import a variety of macrobiotic foods from Ohsawa in Japan. The first store and food plant (they made sesame salt or *gomashio* and repackaged foods) was in the

basement of a small hearing aid shop in Chico. It became the first macrobiotic food production company in the USA.

1962 Christmas—George Ohsawa visits Chico and lectures on macrobiotics.

1963—Ohsawa lectures in Boston, New York City, and at the third macrobiotic summer camp at the University of California at Chico. Lima Ohsawa and Cornelia Aihara gives cooking classes. In Chico, he suggests that the group try making rice cakes. He sends them a rice cake machine from Japan and production began in the fall of 1963. Rice cakes soon became Chico-San's first really popular and successful product.

1963—The first edition of *Zen Cookery*, a book of macrobiotic recipes, is published by the Ohsawa Foundation in Los Angeles.

1963 Sept.—The Kushi family moves to Cambridge, Massachusetts (101 Walden St., on the outskirts of Boston to the northwest) Michio stops all his outside business activities and directs his full attention to teaching macrobiotics.

1964 summer—Ohsawa lectures in California at the fourth macrobiotic summer camp at Big Sur. Lima Ohsawa and Cornelia Aihara gives cooking classes. 1965—The macrobiotic movement in America, though small, is growing rapidly. Ohsawa lectures again in California at Mayoro Lodge, near Pulga.

1965—Michio Kushi organizes the first East West Institute out of his home in Cambridge and begins teaching macrobiotics, cosmology, and cooking to mostly young people.

1965—The second edition of Ohsawa's *Zen Macrobiotics* is prepared and published by Lou Ohles of the Ohsawa Foundation in Los Angeles. It contains much more information (including much more about soyfoods) than the original 1960 mimeographed edition.

1965—*You are All Sanpaku* by William Dufty is published.

1965 Nov. 9—Beth Ann Simon, a young heroin addict from New Jersey, dies while following a strict macrobiotic diet. This is the movement's first major setback. Ohsawa and the macrobiotic diet receive much adverse publicity, and the incident brands macrobiotics among many in the medical and health professions as a dangerous and extreme form of food faddism. The image was hard to get rid of. The U.S. Food and Drug Administration closes the New York branch of the Ohsawa Foundation, run by Irma Paule.

1966 April 23—George Ohsawa dies unexpectedly in Tokyo, Japan, at age 72—just as his teaching is beginning to spread rapidly in the West. The cause of his death: a heart attack, perhaps caused by filarial parasites he had picked up at Lambarene, Gabon.

1966 April—Erewhon opens as a tiny (10 by 20 foot) retail store downstairs at 303-B Newbury Street in Boston.

1966, summer—Michio Kushi begins to lecture each Monday and Wednesday evening in a back room of the Arlington Street Church in Boston. These talks were supplemented by cooking classes with Aveline Kushi in Brookline.

1000. Nakajima, Iwao; Kato, Junichi. 1950. Kôji-kin ni yoru nama denpun no shôka ni tsuite [On the digestion of raw starch by the koji mold *Aspergillus oryzae*]. *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 28(6):220-21. June. [Jap]

Address: Nihon Daigaku, Nôgaku-bu, Japan.

1001. Miso Manufacturing Experiment Administration Committee. 1950. Miso jôzô shiken hôkoku [Report of the experiments on miso manufacturing, May 1950]. *Shokuryo Kenkyujo Kenkyu Hokoku (Report of the Food Research Institute)*. No. 4. p. [iii] + 1-84 + 1-90 + 1-32. Sept. English translation (32 p.) is bound at the end of Issue No. 4. [Jap; Eng]

• **Summary:** The first three parts of this article (177 p.) are in Japanese and the last part (32 p.) is a detailed English summary.

Contents (English summary): 1. The circumstances which led to make the miso manufacturing experiments: The general aspects of raw materials for miso, the circumstances which led to set about the experiment work.

2. Experiment methods and experimental results: The experiment methods, marking by means of functional testing (frequency curve, analysis of variance and minimum differences required for significance among average marks, discussion), chemical analysis (raw materials, chemical analysis of defatted soy-beans, non-defatted soy-beans, and corn-meal, denaturation of protein in defatted soy-beans, enzymic digestion of defatted soy-beans), finished goods (miso) (general analysis, correlation between the analytical results and the functional testing results, nitrogenous compounds, judgment for finished goods by dividing into 3 grades, analysis made by excluding the disparity among manufacturing plants, judgment for the results of finished goods, by manufacturing plants (minimum significant difference—2.39).

3. Conclusions: Premises, 50% koji products, 100% koji products, 150% koji products.

4. Discussion. 5. Appendix—Experiments on a laboratory scale: Object of experiments and outline thereof, koji-making experiment, conclusions.

In the years before World War II, annual consumption of soybeans in Japan was not less than 1,000,000 tonnes (metric tons), of which 300,000 tonnes were grown in Japan and the remainder was imported from Manchuria and Korea. Out of this 1,000,000 tonnes, about 700,000 tons are estimated to have been consumed as foods or seasonings; approximately 250,000 tonnes were used as raw materials

for miso, which is one of Japan's most important seasonings.

Concerning miso consumption in the years just before World War II, exact figures are not available, but it can be roughly estimated at about 150 million *kan* (1 *kan* = 8.27 pounds), or a little more than 2 *kan* (ca. 16.5 lb) per person per year.

In those days, miso was made to suit public tastes in the various regions of Japan, and there were various kinds of miso according to the region. Miso can be grouped into three basic types: soy-bean miso (*Mame miso*) salty miso, and sweetish miso. Describes briefly how each of the three types was made. One table (p. 2) shows the ingredients used to make each of these three types: (1) Soy-bean miso: Soy-beans 10 *koku* = 1,800 liters. Salt 110 *kan* = 909.7 lb = 413.5 kg. Ripened miso 1,000 *kan* = 8,270 lb = 3,759.1 kg.

(2) Salty miso: Soy-beans 14.0 *koku* = 2,250 liters. Milled rice or milled barley 7.0 *koku* = 1,260 liters (made into koji). Salt 185 *kan* = 1,530 lb = 695.4 kg. Ripened miso 1,650 *kan* = 8,270 lb = 3,759.1 kg.

(3) Sweetish miso: Soy-beans 12.8.0 *koku* = 2,304 liters. Milled rice or milled barley 15.7 *koku* = 2,826 liters (made into koji). Salt 94 *kan* = 777.4 lb = 353.4 kg. Ripened miso 1,700 *kan* = 14,059 lb = 6,390.5 kg.

As late as 1941, due to food shortages, miso was brought under Japanese government control; from that time until the end of the war, miso production gradually decreased. Starting in about 1944 only one type of miso was made for all the regions of Japan—a type of salty miso. 100 *kan* of miso was made using 34 *kan* of soy-beans, 16 *kan* of milled rice or barley, and 15 *kan* of salt. Efforts were made to shorten the fermentation time by using a quick ripening method [a heated or warm environment].

At the end of World War II, Japan was unable to import soy-beans from Manchuria [and, to a lesser extent, Korea]. This dire soybean shortage led to a sharp decrease in miso production; Japan started to use defatted soybean meal and defatted soy flour (imported from the USA) in place of whole soybeans, and sweet potatoes or imported corn instead of some rice or barley, to make miso. The quality of miso dropped. The experiments described in this report represent an attempt to improve miso quality scientifically, mainly by investigating how to use defatted soybean meal to make better quality miso. Address: Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo, Japan.

1002. *Soybean Digest*. 1950. Japan shifts from whole beans to meal. Nov. p. 24.

• **Summary:** Two pie charts show Japanese usage of soybeans in 1940 and 1948. In 1940 the Japanese were consuming about half of their 562,000 tonnes of soybeans as whole soybeans used to make various foods such as shoyu, miso, and tofu. But by 1948 nearly all their soybeans were being used in the form of soybean oil meal, especially

to make miso, shoyu, and amino acids. Consumption of miso and shoyu have greatly increased, while other uses (especially tofu) have shrunk.

“During the 10 years preceding the end of World War II, Japan imported an average of about 700,000 tons of soybeans, chiefly from Manchuria. This inflow of soybeans was stopped almost entirely immediately after the war, which resulted in critical protein and oil supplies. But imports since then have increased, overcoming the extreme shortage. About 80 percent of total soybean imports during 1946-48 were from the U.S.”

1003. Nakazawa, Ryoji. ed. 1950-1964. *Hakkô oyobi seibutsu kagaku bunken-shû* [Bibliography of fermentation and biological chemistry]. Tokyo: Nihon Gakujitsu Shinkokai/Hirokawa Publishing Co. 11 volumes. In European languages and Romanized Japanese. [500 soy ref. Eng; Jap]

• **Summary:** Contains extensive, excellent bibliographies on the following soy-related subjects (listed here alphabetically): Amazake (p. 139, only 2 references). Kôzi (Koji) (p. 398-410). Mirin (p. 464-65). Miso (p. 465-68). Natto (p. 8-9). Natto bacteria (p. 9-10). Penicillium (p. 210-63; see p. 240 for tempeh and ontjom). Rhizopus (p. 81-97). Soybean and soybean cake (p. 271-77). Syôyu [Shoyu] (p. 436-49). Tôhu (p. 498, only 3 references, all for nonfermented tofu). Each bibliography lists the documents in approximately chronological sequence. An unnumbered page near the beginning titled (in Japanese characters only) *Shuyô Inyo Bunken* [Main Periodicals Cited] lists 51 such periodicals, of which 12 are in Japanese. Of these twelve, all have the title written in Chinese characters, with an English translation, and a Chinese plus a romanized abbreviation of the Japanese title. Two examples: No. 2. *Nippon Nogei Kagaku Kaishi*. J. Agr. Chem. Soc. Japan [J. of the Agricultural Chemical Society of Japan]. *Nô-ka*. No. 4. *Nihon Jozo Kyokai Zasshi*. J. Fermentation Association Soc. Japan. *Zyô-Kyô*. Note that much of the romanization throughout these 11 volumes is based on a system that is no longer used. Nakazawa was born in 1878. Address: Japan.

1004. Photograph of the T. Amano Co. in Vancouver, British Columbia, Canada. 1950. Vancouver, British Columbia, Canada.

• **Summary:** This black-and-white photo, sent to Soyfoods Center in 1981 by T. Amano Co. of British Columbia, shows the front of a small, modern building. A floor-to-ceiling panel of glass bricks are to the left of the main door near the center. Over the door, in large letters is written: “T. Amano Co.” On the right front window, partly covering venetian blinds, in smaller letters, we read on five lines: “T. Amano Co. Manufacturers—Soya sauce & rice paste [miso]. Oriental food products. Importers & exporters.” Address: Vancouver, British Columbia, Canada.

1005. Adachi, Isamu; Sakurai, Shigeru. 1950. *Nihon shokumotsu-shi* [History of Japanese foods]. Tokyo: Yuzankaku. 480 p. [Jap]

• **Summary:** Best book seen on the history of Japanese foods. The following appears in chapter 8. Edo Period:

“Amazake and Shirozake (p. 375-76). In ancient times there was Kozake and hitoyo-zake (one-night sake). They became known as amazake at a later date. But kozake was different from subsequent amazake; sometimes it was made using sake instead of water in the fermentation. The term ‘amazake’ first appeared in the literature of the Keicho period, which started in A.D. 1596. Later, during the Kan-ei period (1624-1630) there was Shirakawa Amazake.

“In Rokujo, in Kyoto, the Yamashiro-zake was very old and famous. Within the city of Edo (today’s Tokyo), in the Yokayama-cho section, during the Temmei period (1781-89), Sangoku Ichi Amazake was sold. After taking it home, the consumer would add an equal amount of boiling water to the amazake and stir while simmering. The names Sangoku Ichi (three countries are one) and Shirayuki (white snow) came from the fact that it was sold in a container with a plum flower crest drawn on it (*umebachi*) and also Mt. Fuji was drawn in the shop. This was because the goddess of the Mt. Fuji shrine is named *Konohana Sakuya Hime* (“Tree Flower Blooming Princess”); she got pregnant overnight. Since amazake was known as “one-night sake” in ancient times it was connected with this goddess.

“Amazake used to be sold only in winter. Around the Bunka period (1804-1817) it was sold year-round. There were 5-6 amazake shops in Edo (Tokyo). Among them, the one in front of the Asakusa Honganji temple was famous. Although at that time amazake was sold during the summer, it later returned to being a winter drink.”

1006. Coorengel, G.B. 1950. *Katjang kedelai* [The soybean]. Jakarta: Balai Pustaka. 34 p. 20 cm. [Ind] Address: Jakarta, Indoensia.

1007. Feng, Doreen Yen Hung. 1950. *The joy of Chinese cooking*. New York: Greenberg. 227 p. Illust. Index. 24 cm.

• **Summary:** The section on “Ingredients” describes each basic ingredient, and gives the Cantonese name plus Chinese characters, including: (1) “Soya sauce” (*jeung yow*) is an absolutely essential basic ingredient. It “can nowadays be found in almost all neighborhood delicatessen or grocery shops” (p. 21). (2) “Bean sprouts” (*dow ngaah*). “They are usually golden yellow in color and possess a strong flavor and a rather crunchy texture.” An illustration shows these sprouts, which appear to be soybean sprouts (p. 22-23).

(3) Two types of dried yuba (*fooh jook* and *tiem jook*), both illustrated. When soya bean milk is boiled, it separates into various layers; “the rich cream that rises is called *fooh jook*, and the settling sediment is called *tiem jook* [sweet

yuba]. When dried, they look like stiff boards glazed with enamel, but after they have been cooked they become creamy and gelatinous. *Tiem jook* is used in fish dishes; while *fooh jook* is usually cooked in soup” (p. 30-31).

Note: This is the earliest English-language document seen (Oct. 2008) that uses the term *fooh jook* to refer to yuba, or the term *tiem jook* to refer to yuba—specifically to the thicker, sweeter, less expensive bottom yuba, called *ama-yuba* in Japan.

(4) Chinese sauces (*jeung*) come in bottles or cans (p. 32): (4a) Soya sauce (*jeung yow*) is an almost black sauce made from soya beans. The best substitute is Maggi. (4c) Bean-curd cheese (*fooh yü*) [fermented tofu] “Grayish-white little cubes of pressed bean-curd fermented in strong wine.” It may be used in cooking. (4d) Bean-curd cheese, Eastern style (*naam yü*) [fermented tofu]. Fermented in a brick-red sauce, it is usually used for cooking. (4f) Tiny black fermented beans (*dow see*) [soy nuggets]. In cooking, these are generally crushed and used to season other strong-smelling ingredients such as fish. They add “a delightful spiciness to the sauce.” (4g) A famous red sauce (*hoy sien jeung*) [Hoisin sauce]. This famous red sauce is often used in cooking shellfish and duck; it is widely served with Peking roast duck. There follows a description (p. 33) of how to make bean-curd cheese from fresh bean curd. (5) Oils and fats, incl. vegetable oils like soya bean oil, peanut oil, or sesame oil.

Note 1. This is the earliest English-language document seen (March 2007) that uses the terms “Bean-curd cheese” or “fooh yü” or “naam yü” to refer to fermented tofu.

Note 2. This is the earliest document seen (Sept. 2008) that mentions Hoisin sauce, whose Chinese name is *hai-hsien chiang* (Wade-Giles) or *haixian jian* (pinyin). Its main ingredient is soybeans.

Soy related recipes include: Pig’s feet soya bean soup (*Jüh gerk fooh jook tong*, with yuba, p. 80). Oyster sauce bean curds (*Ho yow dow fooh*, with fresh bean curd, p. 155). Many other recipes use soya sauce as a seasoning.

Note: This book was first published in 1950 by Greenberg in New York City (227 p., 24 cm). It was next published in 1952 by Faber and Faber in London (227 p., 23 cm). Grosset & Dunlap (1954) appears to be the third.

1013. Morse, W.J. 1950. History of soybean production: 5. World distribution (Document part). In: K.S. Markley, ed. 1950. Soybeans and Soybean Products. Vol. I. New York: Interscience Publishers or John Wiley & Sons. xvi + 1145 p. See p. 10-14.

• **Summary:** "The production of soybeans, which for many centuries was confined to the countries of Asia, spread rapidly after World War I to the western world, and since World War II practically all leading nations have become more and more interested in the culture and production of the crop. Agricultural experiment stations throughout the world have become engaged in the development of varieties suited to their soil and climatic conditions through introduction, selection, and hybridization. Successful results have been obtained in many countries and, in a few, acreage and production have increased to the extent that the crop has become an important factor in that nation's agriculture. This is especially true of the United States, Netherland Indies, Rumania, U.S.S.R., Austria, Bulgaria, and Poland.

"The principal zones of soybean production in the Orient are China, Manchuria, Korea, and Japan. In Manchuria, the soybean occupies about 25% of the total cultivated area and is a dominating factor in the economic life of the country. As a cash crop it provides fully half the farm income in the north and more than half the total volume of freight handled by the railroads. It is estimated that from one- to two-thirds of the production of soy beans is exported; 15 to 20% is utilized for food, feed, and planting, and the remainder is used for oil extraction.

"In China, the soybean is one of the principal and most ancient of crops, ranking fifth in extent of culture and occupying about 9% of the total cultivated area. Although grown everywhere in China, about 60% of the soybean acreage is confined to three northern provinces, Shantung, Kiangsu, and Honan. China consumes practically all of her production, estimates indicating more than 50% for food, 27% for oil extraction and other purposes, 10% for stock feed, and 8% for planting.

"Korea occupies third place among the soybean-producing countries of Asia. Acreage and production are confined largely to central and northern Korea, as southern Korea, which grows principally cotton and rice, seems to be less suited to the successful production of soybeans. The entire Korean production is used for food, stock feed, planting and export, and none is used for oil extraction.

"Japan, although a large producer of soybeans, has consumed all her production and has imported large quantities from Manchuria and Korea. Acreage and production of soybeans in Japan have decreased since World War I and greater emphasis has been placed on increased production of rice. The proportions of soybeans used by Japan for various purposes are: 'miso' (soybean-rice fermented paste), 22%; soy sauce, 22%; oil and oil cake, 21.5%; soybean curd [tofu], 15.5%; confections, 7.2%; forage, 6.2%; green manure, 2.5%; seed, 1.8%; green vegetable beans, 0.8%; and miscellaneous, 0.5%.

"In the Soviet Far East, the soybean is said to be one of the chief industrial crops and in some districts constitutes 20% of the cultivated area. Acreage and production have increased markedly since 1926, especially in Khabarovsk territory, the largest seed-producing area.

"South of China, the soybean is cultivated to some extent in the Netherland Indies, India, Siam, Cochin China, Philippines, and Australia. Until 1932, the production of soybeans in the Netherland Indies was not sufficient to meet the domestic demand. Since then, acreage and production have gradually increased until soybeans began to be exported to Holland about 1936. The soybean has been widely cultivated for a long time by the natives of the hilly regions from the borders of Afghanistan eastward to Burma, to northern Siam, and French Indo-China. The crop in India has been grown for its forage and food value rather than for commerce. Although successful results have been obtained in some of the provinces with varieties of good oil content, the growing of the crop as an oil seed does not appear to have been popular with the native farmers. In Australia successful results with American varieties have greatly increased acreage and production, especially in the states of Queensland, New South Wales, and Victoria.

"Although attempts to grow soybeans in European countries have extended over many years, it is only within the past few years that there has been any appreciable production. At present, production is confined largely to

European U.S.S.R., Bulgaria, Yugoslavia, Austria, Rumania, and Czechoslovakia, production being largest in Rumania, Bulgaria, and Yugoslavia. In the development of adapted varieties, some progress has been made in Sweden, Poland, Netherlands, and Hungary. Because of the economic importance of the soybean, scientists of the U.S.S.R. have carried on extensive experiments with it, especially in the development of adapted varieties and utilization. At present, the principal areas of production are Ukraine, Moldavia, and certain regions in the North Caucasus.

“Experiments have been conducted with the soybean in nearly all regions of Africa but as yet it is an unfamiliar crop to the majority of African farmer. It has been grown successfully in the upland, midlands, and coastal districts of Natal [South Africa] and throughout Gambia, Nigeria, Egypt, the Gold Coast Colony, and also in the corn- and cotton-growing districts of the Belgian Congo.

“Although the soybean has been the subject of considerable experimental work in practically all countries of the Americas, little progress has been made in commercial culture except in the United States and Canada.”

Note: This is the earliest document seen (Dec. 2007) that clearly refers to soybeans in Afghanistan, or the cultivation of soybeans in Afghanistan. This document contains the earliest clear date seen for soybeans in Afghanistan, or the cultivation of soybeans in Afghanistan (long before 1950). The source of these soybeans is unknown. Address: 6809 Fifth St. N.W., Washington, DC; formerly Principal Agronomist, Div. of Forage Crops and Diseases, Bureau of Plant Industry, Soils, and Agricultural Engineering, USDA, Beltsville, Maryland.

1014. Pan Ku. 1950. *Han Shu* [The Han dynasty book]. Translated and edited by Nancy Lee Swann. In: *Food and Money in Ancient China: The Earliest Economic History of China to A.D. 25*. *Han Shu* 24 with related texts *Han Shu* 19 and *Shih-chi* 129. Princeton. [Chi]

• **Summary:** See Nancy Swann 1950. Address: China.

1015. Swann, Nancy Lee. trans. 1950. *Food and money in ancient China: The earliest economic history of China to A.D. 25*. *Han Shu* 24, with related texts, *Han Shu* 91 and *Shih-Chi* 129. Princeton, New Jersey: Princeton University Press. 482 p. Plus unpaginated Chinese text at end. [1 ref. Eng]

• **Summary:** This translation of the ancient Chinese book titled *Han Shu* contains extensive annotation and footnotes by the author. The *Han Shu*, written by members of the Pan family (father, son, and daughter), is one of China’s most important early historical works, rivaled only by its great predecessor and model, the *Historical Record (Shih-chi)* written by Ssu-Ma Ch’ien and his father, Ssu-Ma Tan, completed between 100 and 90 B.C. Pan Ku (A.D. 32-92),

the son, to whom the work is generally attributed, inherited his father’s writings. The book is basically a treatise on certain economic phases of the Western/Former Han period (206 B.C. to A.D. 8; HS 24AB) together with sketches of 41 rich merchants and wealthy industrialists (HS 91). It is similar in many ways to the *Historical Record*.

Page 419 notes that “the poor only had soybeans to chew and water to drink.”

The section on the “Wealth of Ch’in Han Times” (*Han Shu* 91), which describes the period from about 250 B.C. to A.D. 24, it is stated (p. 434): “[Whoever in] market towns and commercial metropolises [sold] annually [any one of the following categories to the specified quantity] was also equal [in wealth with the head of a great hereditary] family *chia* of a thousand chariots. 1. Liquor, a thousand brewings. 2. Pickles and sauces *chiang-yu*, * a thousand jars. 3. Sirups *chiang***, a thousand jars. 4. Slaughtered cattle, sheep, and swine, a thousand [animals including] skins.”

The square brackets are in the translation. This is sections 91:7a/4 and 8b/1 of the original Chinese text. The authors two footnotes, indicated here by asterisks, read as follows: * “Consult *Li-Chi* 2:23b, *Sacred Books of the East*, xxvii, 79. The west has learned of the sauce under the Japanese pronunciation *soy*. It is a ‘black, thin liquid, having an agreeable saltish flavor (Stuart 191-195). There are several forms, such as that made from wheat or barley flour, and from various kinds of beans. It is the universal sauce of the Chinese and Japanese, and is to be distinguished from bean relishes *shih*, HS91:11b/5.”

** “Chiang, consult *Li-Chi* 2:24a, *SBE* xxvii, 79. The *Chou Li* listed four drinks and sirups (5:16a), and also six drinks and sirups (5:24b), and in both lists *chiang* is included. Commentators gave opinions that *chiang* was obtained in part from meats.”

On page 459, in the section on “Nos. 26-32. Seven Wealthy Men of the Capital,” we read that Fan Shao-weng (no. 31), and Wang-sun Ta-ch’ing (no. 32), were both merchants of bean relishes [*shih*, soy nuggets]’ they lived in the city of Ch’ang-an. Address: Princeton, New Jersey.

1016. Zakkoku Shorei-kai. 1950. *Daizu no kenkyû* [Soybean research]. Tokyo: Sangyo Tosho. 268 p. [Jap]

• **Summary:** Pages 174-85 discuss: 1. Roasted soybeans (*irimamé*). 2. Cooked whole soybeans and ground soybeans (*nimamé*, *udemamé*, *mamé-zuri*). Soaked soybeans (*hitashi-mamé*). 4. Uncooked ground soaked soybeans (*goto* and *go*). 5. Ground soybean paste molded into shapes (*uchigo*, *gotsu-dotsu*, and *jinda tofu*). 6. A mixture of soybean paste and rice molded into a stick shape (*mamé-shitogi*). 7. Goto miso and Goto miso soup (*Goto misoshiru*). 8. Various kinds of natto. 9. Miso. 10. Miso soup. 11. Roasted soy flour, and soybean flour (*kinako* and *tofun*). 12. [Soy] bean sprouts (*moyashi*). 13. Soybeans soaked in their pods (*mamé-tsuke*).

Note: This is the earliest document seen (Nov. 2008) that mentions *jinda* or *jinda tofu*.

1017. Bening, W. 1951. First published report on soybeans. It was written in Germany in 1712. *Soybean Digest*. March. p. 20-22.

• **Summary:** This book was the *Amoenitatum Exoticarum* (“Exotic Novelties”) by Engelbert Kaempfer. The book, itself, is located in a locked glass case at the Engelbert Kaempfer Museum, in the dreamy medieval town of Lemgo, Germany, where Kaempfer was born on 16 Sept. 1651. When he died, he left behind his extensive diaries, drawings, and manuscripts, some of which are still among the rare materials of the British Museum in London. Kaempfer had a lifelong desire to travel abroad and an “unbelievable capacity for learning foreign languages... An amateur in almost all fields of science, with profound knowledge in medicine, botany, and pharmaceuticals, at the age of 32 Engelbert managed in 1713 to be engaged as secretary to the Royal Swedish Ambassador Extraordinary on a special mission to Persia. And some years later, after many story book adventures, he was assigned as surgeon in the colony of the Dutch East India Company in Japan.”

The author then gives an English-language translation of what Kaempfer wrote about the soybean. “This [Dutch East India] company operated at that time the only European colony in Japan. It was licensed by the emperor of the country. The colony was hermetically sealed from the country and its inhabitants. Laws were extremely severe on foreigners as well as the natives.

“Kaempfer, whose only wish was to study the country and its population, despaired. Yet under these hard circumstances, he wrought the masterpiece of his life. His open character and untroubled friendliness to all, and his extraordinary gift of learning languages overnight, opened to him the minds and hearts of the Japanese people...”

“Engelbert Kaempfer in those prison years on the little island of Deshima, laid the foundation of western science in Japan.

“When Engelbert returned to Lemgo 10 years after he had left home, he wrote his *Amoenitates Exoticae* in the difficult Latin language of those times.”

Photos show: (1) Kaempfer’s book, opened to the illustration of a soybean plant. (2) Dr. W. Bening, “a German nutritionist and soya expert, who has been connected with the program for improvement of the German diet with soy foods.” (3) The outside front of the Engelbert Kaempfer Museum near Lemgo. Address: PhD.

1018. Mogi, Masatoshi; Nakajima, Shigeji; Iguchi, Nobuyushi; Yoshida, Fumihiko. 1951. *Kyôka miso no kenkyû*. I. *Furabin seisan ôki kôji-kin ni yoru miso shijô shiken* [Studies on fortified miso (Fermented soybean paste)]. I. Trial brewing of miso with a riboflavin-producing

strain of *Aspergillus oryzae*]. *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 29(8):302-310. English-language summary on p. 44 of this issue. [11 ref. Jap; eng]

• **Summary:** (1) Out of 121 strains of *Aspergillus oryzae* taken from many kinds of miso and koji starter (*Tané-koji*), eleven strains which produced riboflavin comparatively well were selected by means of culturing in Pfeffer’s solution. (2) A strain that produces the most riboflavin was selected from these 11 strains by manufacturing soy-bean and rice malts.

(3) A sort of fortified miso was made on trial by using this strain, and it produced 3 times the ordinary amount of riboflavin in “rice Miso” and 2.4 times the amount of riboflavin in wheat Miso. Note: This is the earliest English-language document seen (Feb. 2009) that uses the term “rice miso” to refer to miso having rice and soybeans as its main ingredients. Address: Brewing Lab., Noda Shoyu Co. Ltd., Noda-machi, Chiba-ken, Japan (Noda Sangyo Kagaku Kenkyujo).

1019. *New York Times*. 1951. News of food: Dried minnows among the exotic foods, mostly Japanese, sold at grocery here. Oct. 23. p. 32.

• **Summary:** About Joe Oyama’s Oriental Food Shop at 2791 Broadway (at 107th St.) in New York City. The many Japanese foods he sells include: (1) Pickles of “cucumber in bean paste” [miso]. (2) Burdock root, which is “sometimes fried in bean oil seasoned with red pepper and soy sauce.” (3) “Gomoku-no-moto—a combination of [diced] carrots, bamboo shoots, lotus roots, fried bean curds [agé], and Japanese mushrooms.”

During World War II he shipped parcels of such foods as rice, soy bean paste [miso], and pickled radishes [daikon] “to the Japanese-Americans, who comprised the famed 442d Regimental Combat Team.”

1020. Burnett, R.S. 1951. Soybean protein food products. In: K.S. Markley, ed. 1951. *Soybeans and Soybean Products*. Vol. II. New York: Interscience Publishers or John Wiley & Sons. xvi + 1145 p. See p. 949-1002. [125 ref]

• **Summary:** Contents: 1. Soybean flour, grits, and flakes: Introduction, early history, types of soybean flour—standard definitions, amount of soybean flour and related products produced, methods of manufacture, soybean flour in bread, soybean flour in other baked goods, soybean flour in the meat industry, soybean flakes in breakfast foods, soybean flakes and derived peptones as brewing adjuncts, miscellaneous uses of soybean flour. 2. Isolated and modified soybean proteins: Aerating agents for confections and related products, neutral spray-dried soybean protein [isolates], soybean protein in [whipped] toppings, soybean protein and flour in confections, soybean protein and flour in ice cream, soy sauce, monosodium glutamate from

soybeans, soybean vegetable milk, tofu, miso, yuba, and other Oriental soybean foods (incl, natto and Hamanatto).

The soy flour industry in the U.S. has grown steadily in recent years. Deliveries of soy flour "from the years 1930 to 1940 averaged about 25 million pounds annually. The deliveries have increased considerably since 1940 partly as a result of an increase in domestic use and partly as a result of deliveries of soybean flour to various government agencies, largely for export. In 1941, Federal purchases amounted to about 10 million pounds of soybean flour. In 1943, the amount increased to 170 million pounds when large shipments were made to Great Britain and the U.S.S.R. under lend-lease. Purchases of soybean flour by the Federal government decreased for several years, but increased in 1946 to an estimated 200 million pounds under the UNRRA [United Nations Relief and Rehabilitation Administration] program. Total soybean flour deliveries for 1946 were approximately 380 million pounds. In the domestic market the bakery industry was the largest consumer. About 40% of the domestic sales of soybean flour were for bakery use. Since the Bureau of Animal Industry has legalized the use of soybean flour as a binder in meat products, about 20% of domestic sales are to the sausage industry. The balance is used in prepared dough mixes, macaroni, candy, and in institutional feeding.

"In 1947, domestic sales of soybean flour were over 60 million pounds. This amount, plus government purchases and exports, amounted to about 415 million pounds. Two-thirds or more of the present domestic consumption of soybean flour is by the bakery, meat processing, and pet foods industries." In 1942-43, the amount of full-fat soy flour produced in the USA was roughly 40% of the amount of defatted. In 1944-45 it was about 49%, but thereafter the percentage dropped rapidly to only 5% in 1946-47.

Concerning soybean flakes and derived peptones as brewing adjuncts (p. 974-77): "Soybean flakes and grits have been employed by the brewing industry to improve the body and flavor of beer, to increase foam stability, and to stimulate yeast growth.

"Improvement in foam stability and flavor can also be attained by adding directly to the finished beer a hydrolyzed soybean protein which has been broken down to the peptone and proteose stage...

"The early history of the use of soybean products as whipping agents is of interest since this work stimulated the development of processes which eventually led to the production of the present soy albumens. In 1939, Watts and Ulrich pointed out that an active whipping substance could be prepared from solvent-extracted soybean flour in which the protein had not been heat denatured, by leaching it at the isoelectric point of the protein. This extract was found to whip more readily and to a much greater volume than suspensions of the original flour... The active principle in the whipping substance prepared by Watts and Ulrich was

probably the nonprotein nitrogenous material present in the soybean flour which is soluble at the isoelectric point of the protein."

Tables show: (155) Soybeans used in the production of low-fat and full-fat flour and grits (1942-1947, 1,000 bushels). (156) Peroxide value of fat extracted from pastries stored at -17.8°C. (0°F.), containing different percentages of soybean flour for periods of 0-6 months. (157) Analysis of uncooked liverwurst emulsion and of processed (water-cooked) sausage containing added soybean flour and water. (158) Losses in cooking liverwurst containing added soybean flour and water. (159). Analysis of frankfurter emulsion and of smoked sausage made with 3.5% of various binders. (160) Losses in smoking frankfurters made with 3.5% of various binders and after consumer cooking. (161) Effect of the addition of soybean peptone on volume and life of foam on beer. (162) Composition and pH of soybean albumens. (163) Composition of ice creams containing soybean flour. (164) Comparison of soybean milk with cow milk. One sample of cow's milk is compared with 4 samples of soybean milk (probably Oriental) and 3 samples of modern U.S. soybean milk reconstituted (Soyalac for infants, all purpose Soyalac, Soyagen canned from Loma Linda Food Co., California).

Figures show: (199-201, p. 981) Comparison of whipping ability of egg albumen and soybean albumen in different proportions and combinations. (202) Flow sheet for the acid hydrolysis process used in making HVP soy sauce. Address: Protein By-Products Research, Research and Technical Div., Wilson & Co., Inc., Chicago, Illinois.

1021. Hui Manaolana Foundation (formerly Niji-no-Kai). 1951. Japanese foods (Tested recipes). Honolulu, Oahu, Hawaii: International Institute, Y.W.C.A. 122 p. Illust. (some colored). Index. 24 cm.

• **Summary:** The Hui Manaolana was formerly named Niji-no-Kai and is affiliated with the International Institute of the Y.W.C.A. The book was inspired by Mrs. Isaac M. Cox (Catherine E.B. Cox), an educator and volunteer advisor to the Y.M.C.A. Almost all the recipes in this book have been submitted by members of the group, and that woman's name appears next to the recipe title. Shoyu is called for in many recipes.

Following a preface and an introduction, the recipes are organized by type. The many interesting ads related to soyfoods, scattered throughout the book, are cited elsewhere. Helpful hints (p. 12): "To prevent tofu from crumbling, soak in salted water for a while before using." On p. 15 are 4 menus each for breakfast, lunch or supper, and dinner. Soups: Chiri (Fish & tofu soup). Kenchin (Vegetable soup with tofu). Basic miso soup. Satsuma jiru (Miso soup with chicken & vegetables). Oio fish dumplings in miso soup. Miso soup with long rice. Rice: Azuki meshi

(Rice with red beans). Sekihan (Steamed azuki rice). Inari zushi (Sushi rice in aburage).

Fish and seafoods: Ebi no teriyaki (Barbecued shrimp). The sauce consists of: 3/4 cup shoyu, 1 teaspoon gourmet powder [Ajinomoto], 1/2 cup sugar, 1 teaspoon grated ginger, 1 clove garlic [crushed]. Mix well). Katsuo no miso yaki (Tuna broiled with miso sauce). Katsuo teriyaki (Broiled fresh tuna). Meat and chicken: Sukiyaki (with tofu). Pork and tofu. Tofu: Gan modoki [Ganmodoki]. Ankake tofu (Boiled tofu with thick sauce). Tofu with crab meat egg roll. Tofu tempura. Okara (Bean curd residue dish). Iri dofu. Okara nira (with aburage). Yudofu with goma [sesame] miso sauce. Fried tofu cooked in miso. Koya dofu (Frozen soybean curd cooked in shoyu).

Vegetables: Kiriboshi and aburage. Nikomi oden with yakidofu. Cabbage with mustard & miso sauce. Shira ae—Watercress (With tofu dressing). Shira ae (Vegetable with tofu sauce). Daikon sumiso ae (Turnips in miso). Nikomi oden (Vegetables with miso). Nishime (with tofu). Nasu no shigiyaki (Fried eggplant with miso sauce). Negi—nuta (Green onions with miso sauce). Green pepper—miso yaki. Kuromame (black soybeans). Noodles: Kitsune udon (With aburage). Relishes: Konbu no tsukudani (Seasoned seaweed). Tekka miso (Fried miso with gobo). Kaibashira no tsukudani (Scallops cooked in shoyu). Shoyu turnips. Desserts: Many with kanten, azuki beans, and azuki koshi an (Sweetened bean paste).

Glossary (p. 97-98) includes: Aburage (fried bean curd). An (red bean paste). Azuki (red beans). Edamame (soybeans). Fu (gluten cake). Gourmet powder (monosodium glutamate). Kanten (gelatin made from agar-agar). Karashimiso (mustard miso). Kinako (yellow soy bean powder). Kirazu (bean curd residue). Konbu (seaweed). Kuromame (black soy beans). Miso (fermented rice and soy beans). Nori (sea weed). Okara (bean curd residue). Shirae (vegetables with mashed tofu). Shoyu (soy sauce). Sumiso (vinegar and miso sauce). Sushi. Tare (thick shoyu sauce). Tempura (fritters). Teriyaki (barbecue). Tofu (bean curd). Ume (pickled plum). Wakame (sea weed). Yakitofu [yakidofu, broiled or grilled tofu]. Address: International Institute Y.W.C.A., Honolulu, Hawaii.

1022. Law, James Thomas. 1951. Law's grocer's manual. 4th ed. Edited and revised by W.G. Copsey. London: William Clowes and Sons, Ltd. xv + 814 p. See p. 467, 510. Illust. 22 cm. With a foreword by W.R. Austen Hudson, M.P., F.G.I.

• **Summary:** Page 467, under the heading "Soy bean," discusses soy sauce, tofu, natto, miso, and soy milk. Page 510 gives more details on tofu and describes (quaintly and inaccurately) how to make this "fresh bean cheese." "The beans are soaked in water for 3 or 4 hours, cooked, and reduced to a paste. The milky fluid is strained through a coarse cloth to remove stalk and fibre [okara], and when

cooled is precipitated by the addition of crude salt. The precipitate, which is rich in protein and fat, is then kneaded and pressed into cakes called fresh Tofu. They are then dipped into a solution of curcuma." Address: W.G. Copsey is Secretary of the Inst. of Certified Grocers; Hudson is President of the National Assoc. of Multiple Grocers.

1023. Murakami, H.; Okuyama, K.; Sugita, S. 1951. Kôji no kenkyû. II. Jôzô kôjikin no sentaku (1) Shôyu jôzô kôjikin [Studies on koji. II. Selection of Aspergilli for the Japanese brewing industry (1) Aspergilli for shoyu brewing]. *Nippon Jozo Kyokai Zasshi (J. of the Society of Brewing, Japan)* 46(12):483-77. [13 ref. Jap; eng]

• **Summary:** Aspergilli were selected from shoyu brewing (14 strains), miso (14), amasake (9), sake (6), submerged culture for amylase production (5), and submerged culture for protease production (5). This report describes how to select Aspergilli for shoyu brewing and their classification by availability for shoyu brewing.

1024. Riley, John W., Jr.; Schramm, Wilbur. 1951. The Reds take a city: The Communist occupation of Seoul, with eyewitness accounts. New Brunswick, New Jersey: Rutgers University Press. xiv + 210 p. See p. 82-83. Index. 21 cm.

• **Summary:** Narratives by eminent Koreans, translated by Hugh Heun-wu Cynn (of New York City). The chapter titled "Treatment of reactionaries" (p. 80+), the personal story of Chul-Hoe Koo (one of Korea's best-known newspaper reporters) explains that a Communist functionary from the Police Office had come to his house and told him to come with to the Security Police Office, where he was questioned and accused of being a reactionary and a "traitor to the nation." After taking him down to the basement, his examiner wrote up his case (p. 82-83). "Breakfast had been skipped, but after a while we were given a ball of bean and barley and a chestnut-size doen-jang [bean cheese of salty taste]. Suddenly, while we were eating, an examiner got up and savagely slapped the face of the man next to me. 'Aren't you going to tell the truth, you scoundrel?' he yelled."

Note: This is the earliest English-language document seen (March 2009) that uses the word "doen-jang" (or doen jang) to refer to Korean-style soybean jang (miso). Address: 1. Sociologist, Rutgers Univ., Air Force team.

1025. Tawada, Shinjun. 1951. Okinawa yakuyo shokubutsu yakukôzan [Medicinal uses of Okinawa pharmaceutical plants. 2nd ed.]. Naha, Okinawa: Kyûyôdô. 178 p. See p. 90. Illust. 1st ed. 1931. [Jap]

• **Summary:** Page 90 discusses: "Daizu (mame, miso mame). *Glycine max* Merrill. Toofu maami, ufuchijaa ufuchizaa." This book is handwritten in Japanese, with the names of the plants given in Latin. It discusses the uses of

many species, which are systematically arranged. Mimeographed in Okinawa. Address: Japan.

1026. **Product Name:** Kanemasa Edo Miso, and Koji.
Manufacturer's Name: Fujimoto Products & Co. (Fujimoto Shokai).
Manufacturer's Address: 302 S. 4th West, Salt Lake City, Utah. Phone: 4-8279.
Date of Introduction: 1952. February.
New Product–Documentation: Ad (¼ page) in Nichi-Bei Jiji Jushoroku [Japanese American Times Directory]. 1952, p. 461. The top 1/3 of this ad is in English: Fujimoto & Co., 302 So. 4th W. St., Salt Lake City, Utah. Phone: 4-8279. Japanese: Fujimoto Shôkai. Their Japanese-style Kanemasa logo is shown. They sell Edo miso and koji. Directory entry p. 462, under “Stores.” English: Fujimoto Co.

1027. **Product Name:** Miso, and Shoyu.
Manufacturer's Name: Nakamura Miso Shoyu Jozo Gaisha (Nakamura Miso-Shoyu Mfg. Co.).
Manufacturer's Address: 1935 Ararahoe St., Denver, Colorado. Phone: TA. 6773.
Date of Introduction: 1952. February.
How Stored: Refrigerated.
New Product–Documentation: Nichi-Bei Jiji Jushoroku [Japanese American Times Directory]. 1952, p. 485. Under “Food Products.” In Japanese: Nakamura Miso Shôyu Jôzô Gaisha. In English: Nakamura Miso-Shoyu Mfg. Co., 1935 Arapahoe St., Denver, Colorado. Phone: TA. 6773.

1028. Nichi-Bei Jiji Shinbunsha / Nichi Bei Times. 1952. Nichibei jiji jûshoroku [Japanese American Times directory]. San Francisco, California: Nichi-Bei Shinbunsha. 500+ p. Index. 22 cm. [Eng; Jap]
• Summary: An index at front of book is alphabetical by states, and within each state, alphabetical by city name. Telephone prefix abbreviations are spelled out on the first page of each city, e.g., YU = Yukon. Includes ads for Yamato Sukiyaki, 717 California St., high class restaurant (p. 17) and Soko Hardware 1698 Post St., San Francisco. They also import (p. 18). Address: 1375 Eddy St., San Francisco, California.

1029. *Los Angeles Times*. 1952. International flavors spark Hawaiian food. March 2. p. E11.
• Summary: Take your wife to Hawaii and you may come home with an international cook, who has a knowledge of ajinomoto, Japanese shrimp tempura, teriyaki steak on bamboo skewers, seaweed salads, or charcoal-broiled octopus covered with miso sauce.

At the Honolulu YMCA, a full five-week course of cooking classes costs \$5 plus a \$5 lab fee.

1030. Nakano, Masahiro; Matsuura, Shinji. 1952. [Research on koji starter (*tane-kôji*). III. On the rate of germination of the mold spores]. *Shokuryo Kenkyujo Kenkyu Hokoku (Report of the Food Research Institute)* No. 6. p. 157-60. March. English-language summary bound at the end of No. 6, p. 30. [Jap; eng]

• Summary: The hourly rate of germination for koji starter mold spores was examined by the direct counting method, as reported in part I, and the so-called “active spore numbers” were calculated. Nine samples of koji starter were examined: For miso (4), shoyu (3), and shochu (3), and each was given a code letter, M, S, and T respectively in the figures 1-9.

Conclusions: (1) Germination starts at about 3 hours and arrives at a stationary phase at about 6 hours in practical koji making; at this stage no control of mycelium growth is required. (2) There are products with rapid or with slow germination according to the blends of the makers. (3) Distinct differences in “active spore numbers” were found. In practice, the greater the “active spore numbers,” the smaller the amount of koji starter required for making koji. Address: Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo, Japan.

1031. Breirem, Knut. 1952. Oscar Kellner (May 13, 1851–September 22, 1911). *J. of Nutrition* 47(1):3-10. May.
• Summary: “It is generally accepted that German science in the period 1850 to 1914 was of very high standing... During this period Germany was a Mecca for students seeking advanced training in the physiological and chemical sciences.” F. Honcamp has stated that in German agricultural chemistry, there were three great pioneers or pathfinders: Liebig, Hellriegel, and Kellner.

Oscar Keller was born in Tillowitz, Silesia, on 13 May 1851. Note: Today [2001] this small town, called Tulowice, lies in southwestern Poland. He fought in the Franco-German war [Franco-Prussian War] in 1870-71, then finished high school and went to the universities in Breslau and Leipzig to study the basic sciences, especially chemistry. An extremely diligent young man, he got his Ph.D. in the short space of three years from the University of Leipzig. His first scientific paper was published in 1874. As a young doctor Kellner became an assistant in animal chemistry at the Agricultural Academy of Proskau (Silesia).

In 1876 Kellner went to Hohenheim at Stuttgart (Württemberg). Here he became an assistant to Prof. Emil Wolff, who was of Danish origin. Before coming to Hohenheim Wolff had been the first director of the experiment station Möckern (Moeckern), at Leipzig, the first agricultural experiment station in Germany—erected in 1851, the year Kellner was born. Kellner began to study feed evaluation, a field in which he later became the master.

In 1880, at age 29, he was invited to the Imperial University of Tokyo as a professor of agricultural chemistry.

He stayed in Japan for 12 years and left a strong mark on the foundations of agricultural chemistry in Japan. In Japan, he married a Japanese woman. In 1892 he was called back home to Germany to become director of the agricultural experiment station at Moeckern. In 1905 the first edition of his book, *Ernaehrung der landwirtschaftlichen Nutztier* (*The Feeding of Livestock*) was published. Many subsequent editions were published, the 10th in 1924. An English translation was published in 1910. He was also the editor of *Biedermann's Centralblatt für Agrikulturchemie* and *Die Landwirtschaftlichen Versuchsstationen*. Endowed with a strong personality and a love of work, he accomplished a great deal. He died in the autumn of 1911 of a heart attack at age 60.

An excellent full-page portrait photo shows Oscar Kellner. Note: While in Japan, he wrote three original and important articles each on miso and koji from 1889 to 1895. Address: Royal Agricultural College of Norway, Div. of Animal Nutrition, Vollebakk, Norway.

1032. Inamori, Shôjiro; Inamori, Michisaburo. 1952. Karushiumu kyôka miso no kenkyû. I. [Studies on calcium fortified bean-paste (miso). I. Experiment of brewing the bean-paste fortified by adding calcium carbonate]. *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 30(9):370-74. Sept. English-language summary on p. 39. [9 ref. Jap; eng]

• **Summary:** For fortification with a calcium salt, calcium carbonate is the most suited. When added at a level of less than 1%, it exerts no influence on the quality of the finished product. Address: Inamori Laboratory, Inamori & Co., Japan.

1033. Mogi, Masatoshi; Nakajima, S.; Iguchi, N. 1952. Kyôka miso no kenkyû. II. Shigaisen shôsha ni yoru miso kôji-kin no furabin seisan ni tsuite [Studies on fortified bean-paste (miso). II. On the riboflavin production by ultraviolet-induced mutants of *Aspergillus oryzae*]. *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 30(9):363-69. Sept. English-language summary on p. 39. [10 ref. Jap; eng]

• **Summary:** By treating the most excellent strain of *Aspergillus oryzae* (described in a previous report) with ultraviolet rays, 743 mutants were obtained. The authors classified them into 13 types. Of these mutants, 19 strains which produced exceedingly large amounts of riboflavin were selected culturing in Pfeffer's solution. Four strains produced 3 times as much riboflavin as the parent strain in soybean koji and 3 strains twice that of the latter in rice koji. A fortified miso, made by using the most abundant riboflavin producing strain, contained twice as much riboflavin as that made with the parent strain. Address: Noda Industrial Science Lab. Japan (Noda Sangyo Kagaku Kenkyujo).

1034. Nakano, M.; Ebine, H. 1952. Eiyô kyôka miso no kenkyû. I. Karushiumu kyôka miso [On the manufacture of enriched miso. I. Enrichment with calcium]. *Shokuryo Kenkyujo Kenkyu Hokoku (Report of the Food Research Institute)* No. 7. p. 155-62. Sept. English-language summary p. 22-23. [5 ref. Jap; eng]

• **Summary:** Precipitated light calcium carbonate is suitable both technically and economically as a calcium source. Up to 1% can be added to the miso without a noticeable change in the smell or taste. Details of the procedure for adding the calcium carbonate during the miso-making process are given. It is added after the koji starter to the steamed rice. Address: Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo, Japan.

1035. Nakano, Masahiro; Ebine, Hideo. 1952. Eiyô kyôka miso no kenkyû. II. Bitamin kyôka miso [On the manufacture of enriched miso. II. Enrichment with vitamins A, B-1 and B-2]. *Shokuryo Kenkyujo Kenkyu Hokoku (Report of the Food Research Institute)* No. 7. p. 163-66. Sept. English-language summary p. 23. [6 ref. Jap; eng]

• **Summary:** Concentrated cod liver oil was used as the source of vitamin A; it was used as a homogenisate with the gelatin solution. Vitamins B-1 and B-2 were added in crystalline form. These vitamins were dissolved in the "pitching water" and added to the initial stage of ripening. Changes in the content of each vitamin were then examined.

Vitamin A content decreased rapidly. The initial 5,000 I.U. [International Units] had decreased to 1,700 I.U. after 10 days and to only a trace after 30 days. Vitamin B-1 content decreased somewhat, whereas vitamin B-2 content increased, and this showed in vitamin B-2 production in the koji mold. The fates of these vitamins were the same whether they were added alone or in combination. Their addition did not decrease the quality of the miso. Address: Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo, Japan.

1036. Tamura, Gakuzo; Kirimura, J.; Hara, H.; Sugimura, K. 1952. Bisei-butsu teiryô-hô ni yoru miso no amino-san sosei ni tsuite [The microbiological determination of formation of amino acids in "miso"]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 26(9):483-85. Dec. 10. [3 ref. Jap; eng]

• **Summary:** The amino acid composition of Hatcho miso (ratio of soybeans:rice is 10:0; fermentation time 2-3 years), Sendai miso (10:2; 1 year), and Edo miso (10:12; 6 days) were determined using a microbiological method, and are listed in detail. Little decomposition of essential amino acids during fermentation was found. Address: 1-2. Dep. of Agricultural Chemistry, Faculty of Agriculture, Univ. of Tokyo; 3-4. Shokuryo-cho, Shokuryo Kenkyu-jo.

1037. Lockwood, Lewis B.; Smith, A.K. 1952. Fermented soy foods and sauce. *Yearbook of Agriculture (USDA)* p. 357-61. For the year 1950-51. Crops in Peace and War.

Address: Tokyo, Japan.

1043. David-Perez, Enriqueta. comp. and ed. 1953. Recipes of the Philippines. Philippines: Published by the author. Printed by Capitol Publishing House, Inc. (Philippines). 124 p. Illust. by S. Serna. No index. 23 cm.

• **Summary:** Almost all the recipes in this book have Filipino names, with no English translation of those names. A surprisingly large number contain soyfoods, especially *toyo* (soy sauce). The glossary (p. 121-23) states: Miso is miso—a paste made of fermented rice and soy beans. Tajure is “fermented soy beans, caked” [fermented tofu]. Tausi is “fermented [black] soy beans” with salt [soy nuggets]. Tokua is “soy bean curd” [tofu]. Toyo is Filipino-style soy sauce. Recipes followed by an asterisk (*) call for toyo.

Soy-related recipes include: Chicken relleno-I * (p. 15). Chicken pastel * (p. 27). Lengua (with soy sauce, p. 20). Morcon * (p. 21). Pancit molo * (p. 22). Adobo * (p. 24). Arroz caldo with chicken (with 3 tbsp. patis or soy sauce, p. 28). Bañgus en tocho-I (with 1 cube tajure, p. 34). Bañgus en tocho-2 (with 2 tbsp. each tajure and tausi, and 1 cake tokua cut into pieces 3/4 inch long and 1/8 inch wide, p. 35). Bulanglang-1 (with 1 cup tokua, cubed and fried, p. 38). Burong isda (with 1 tbsp. angkak-fermented red rice, p. 39). Sauce for pipi-an (with 1 small jar peanut butter, p. 41). Escabecheng apahap (with 4 pieces tokua, p. 46). Escabeche-Macao style * (p. 71). Escabeche with papaya * (p. 48). Fritada * (p. 50).

Kari-karing pata (with ½ cup ground toasted peanuts or peanut butter, p. 51). Lengua estofada * (p. 53). Lumpia labong-Bamboo shoot (with 5 bean cakes-tokua, p. 55). Lumpia sauce (with ½ cup toyo sauce, p. 56). Lumpia with papaya * (p. 56). Lumpia with peanuts (with 2 squares tokua-diced, 2 tbsp. toyo-soy sauce, and 1 cup ground peanuts, p. 57). Lumpia with ubod-2 (with 2 cakes tokua, and toyo to taste, p. 58). Meat balls with “sotanghon” * (p. 59). Menudo de rabo * (p. 60). Miso-tomato sauce (with 2 tbsp. miso-soy bean paste, p. 61). Paksiw na pata * (p. 64). Paksiw-pork (with soy sauce, p. 64). Paksiw na lechon

(with 3 tbsp. soy sauce, p. 65). Pancit guisado * (p. 65). Pancit “luglug” (with ½ cup soy bean cake—tokua—cut into small cubes, p. 66). Pork tapa * (p. 72). Umba (with 2 tbsp. toyo and 1 heaping tbsp. tausi, p. 80). Pastillas de mani (with 1 can ground peanuts, p. 89).

A glossary at the end contains brief definitions of uncommon ingredients. Definitions of the soy-related ingredients above are taken from this glossary. Angkak is “red-colored grains of rice used as coloring for fermented fish.”

Note 1. This is the earliest English-language document seen (Feb. 2009) that uses the word *tajure* to refer to fermented tofu, or the word *misu* which refers to miso.

Note 2. On the title page is printed “4th printing—May 1956.” Address: P.O. Box 3288, Manila, Philippines.

1044. Chatfield, Charlotte. 1954. Food composition tables: Mineral and vitamins, for international use. *FAO Nutritional Studies* No. 11. 117 p. March. [539* ref]
Address: Nutrition Div., FAO, Rome, Italy.

1045. Katsui, Goichiro; Takata, Ryohei. 1954. Bitamin A kyōka miso no seizō ni kansuru kenkyū. I. Jukusei miso ni kuwaerareta bitamin A no anteido [Studies on the preparation of miso, fortified with vitamin A. I. Stability of vitamin A added to the ripened miso]. *Bitamin (Vitamins, Kyoto)* 7(3):229-232. March. [5 ref. Jap]
Address: Dep. of Industrial Chemistry, School of Engineering, Univ. of Kyoto.

1046. Kay, Tutu. 1954. Wiki wiki kau kau. Honolulu, Hawaii: Watkins Printery, Ltd. 77 + [2] p. Illust. 22 cm. [Eng]

• **Summary:** Cover text: “Quick cooking recipes from Hawaii.” Contains a glossary of Hawaiian words, a brief history and: “How to have a luau, make a lei, sew a muumuu, speak Hawaiian, and entertain simply.”

Soy-related recipes: Meat sticks (with “shoyu sauce,” p. 15). Deviled macadamia nuts (with Worcestershire sauce, p. 19). Lorie Bachran’s spareribs, a la apricot (with shoyu, p. 22). Taylor Mercer’s filet de boeuf flambe (with “shoyu sauce,” p. 23). Suggested dinner menus: Japanese miso soup and sukiyaki (p. 24). Abalone with cucumber (and shoyu, p. 25). Meat sticks (with “Soy Sauce,” p. 26). Hot buttered abalone (with shoyu, p. 27). Note: Many other meat, poultry and fish dishes are also seasoned with shoyu or Worcestershire sauce.

Sukiyaki (with tofu and shoyu, p. 54). Address: [Hawaii].

1047. Thorpe, Jocelyn Field; Whiteley, M.A. 1954. Soya bean. In: J.F. Thorpe and M.A. Whiteley. 1937-1956. Thorpe’s Dictionary of Applied Chemistry. 12 vols. 4th ed.

London, New York, Toronto: Longmans, Green & Co. See vol. XI, p. 46-48. 23 cm. [15 ref]

• **Summary:** The section titled “Soya Bean” has the following contents: Introduction. Composition of soya beans. Soya-bean products: Oil, cake and meal, flour, milk, soy sauce (“known in Japan as ‘Shoyu’ and in the west under such names as ‘Worcester Sauce,’...”), miso, tofu, immature soya beans, roasted soya beans (eaten like peanuts), coffee substitute, chocolate substitute. Agricultural uses (green fodder, hay, silage, bean pods and straw). Sir Jocelyn Field Thorpe lived 1872-1940.

1048. Thorpe’s dictionary of applied chemistry. 4th ed. Revised and enlarged. Vol. XI. Soil-Z. 1954. London, New York, Toronto: Longmans, Green and Co. x + 1145 p. See p. 46-48. Illust. Index. 23 cm. [16 ref]

• **Summary:** The entry for “Soya bean” (p. 46-48) was written by A.W. Marsden, M.Sc., D.I.C., A.R.C.S., F.R.I.C., Director, Commonwealth Bureau of Dairy Science, Shinfield, near Reading, England. Contents: Introduction. Composition of soya beans. Soya-bean products: Oil, meal, flour, soya-bean “milk,” soy sauce, Worcestershire sauce, miso, tofu, immature soya beans (eaten, after shelling and cooking, just like green peas), sprouts, roasted soya beans (eaten like peanuts), coffee substitute, chocolate substitute. Agricultural uses. Soya bean oil (see Vol. IX, 27a, 29a, 53c, 55c). Address: London, England.

1049. Valignano, Alessandro. 1954. Sumario de las cosas de Japón (1583). Adiciones del Sumario de Japón (1592). Editados por José Luis Alvarez-Taladriz [Summary of the things of Japan (1583). Additions to the Summary of Japan (1592), edited by José Luis Alvarez-Taladriz]. Tokyo, Japan: Sophia University. xix + 205 p. + 346 p. 26 cm. Series: Monumenta Nipponica Monograph No. 9. [230 ref. Spa]

• **Summary:** This book consists of two separate books by Valignano bound as one; each is paginated separately. In the 1st book, on page 93, the author mentions that he bought the necessary provisions, rice, miso, dried fish, etc. Footnote 240 gives a long definition of *misso* (sic, miso) in Italian from *Saverio Orientale*, by Bernardino Ginnaro (1641, Naples).

An appendix near the end of the 2nd book (published in 1592; see p. 317-330) begins with a Treatise on how they own land and calculate rents in Japan. It starts (p. 318) with a reference to “Principio [1601-1603], c. 6.” In a long footnote on p. 320, he states: “To measure rice, wheat, barley, *Goma* [sesame seeds, used to make oil], *Mame* (see below), *Abura* (vegetable oil), *Saque* [saké], etc. they use certain measures such as the shaku, go, sho, to, koku, etc.” Looking in more detail at the entry for “*Mame*,” after the word, we read (in square brackets), the Chinese character for “bean” followed by the Portuguese words ‘Feijoes, ou graos de Iapao’ ib. [VJP 150],...” This means that the word

“Mame” means beans or Japanese beans. They are described in the VJP which, according to the abbreviations section at the front of this book (p. xix) means “Vocabulario de la Lingoa de Iapam. [Nagasaki, 1603-1604]. This is the famous first dictionary of Japanese in a European language, Portuguese, compiled by the Jesuit mission in Japan, and published by the Jesuits in Nagasaki in 1603-04. If we look on page 150 of that dictionary, we do indeed see: “Mame. Feijoes, ou graos de Iapao.”

Note 1. Today, the word Japanese “mame” has two meanings: (1) Beans [generically, all types]. (2) A soybean. When the word *mame* is the first part of a compound word, it usually refers specifically to the soybean: *mameabura* is soybean oil—more commonly called *daizu abura*; *mamekasu* is soybean meal—more widely called *daizu kasu*; *mamemaki* is the ceremonial scattering of roasted soybeans at Setsubun. Therefore: It cannot be stated clearly that the soybean is mentioned on this book, or that the concept of a soybean, apart from beans in general, was clear to the author. However given this context of how foods are measured, we think it is more likely that he was referring to beans in general than to one particular type of beans. If he wanted to refer specifically to soybeans, they are clearly mentioned as *Daizzu* in the VJP dictionary which he cites! *Daizzu* [Daizu, the Japanese word for soybeans] are defined as: “Mame. Graos, ou feijoes de Iapao.”

Note 2. *Principio* is an abbreviation (see p. xvii) that refers to a book titled *Libro Primero del principio y progreso de la Religion christiana en Jappon...* by Padre Alexandro Valignano of the Company of Jesus, 1601. Manuscript in the British Museum.

About the author: On p. 2-3 we read: The padre Alessandro Valignano (ca. 1539-1606) of the Society of Jesus [Jesuit] visited Japan three times, 1579-1582 (during the rule of Oda Nobunaga, who died in 1582), 1590-1592 (during the rule of Toyotomi Hideyoshi, who died in 1598), and 1598-1603 (during the rule of Tokugawa Ieyasu, who died in 1616). The fruit of his first trip was the *Sumario*, published in 1583, of his second trip was the *Adiciones del Sumario*, published in 1592, and of his third trip was the *Apologia de la Compañia de Jesûs de Japón y de la China* (1598) and the *Principio y progreso de la religion cristiana en Japón*.

His three visits correspond to three very important periods in Japanese history, in the transition from decentralized feudalism to centralized feudalism or from feudal anarchy to feudal order: the period of Azuchi (Nobunaga), of Momoyama (Hideyoshi), and of Tokugawa (Ieyasu). His writings capture magnificently the history of these 3 periods.

Because he is a Christian and a Jesuit father (Roman Catholic), his main interest is in religious affairs in Japan.

Brief biography: Valignano was an Italian missionary. 1566—He entered the Society of Jesus. 1574—Traveled to

Portuguese India. In Asia, he helped to develop missionary work in Goa, Macau, and especially Japan, where he supported the mission with a share of the silk trade, developed a native clergy, and saw Christianity grow to some 300,000 adherents.

1052. Millstein, Gilbert. 1955. On a Sunday in Chinatown. *New York Times*. Feb. 27. p. SM22-23, 53.

• **Summary:** A fascinating study of New York City’s Chinatown on a typical Sunday. It takes place on Mott Street, and Pell, Doyers, Bayard, and the Bowery; there the Chinese gather to talk, shop, visit, and eat. People typically enjoy a late breakfast, which is large and with many dishes, including “*dow foo sui mei* (bean curd and meat bun).” One may also visit a coffee shop, tiffin house, or noodle shop. When finished, “the Chinese then goes to his family association. The outstanding family associations in Chinatown are those of the Chins, the Lees, the Wongs, the Ngs, the Leongs, the Chus,…” Chinese laundrymen may visit their laundrymen’s association.

While visiting Chinatown, visitors can buy “brown bean sauce, black bean sauce,... soy sauce,... and oyster sauce.”

1053. Takahashi, Jusaku. 1955. 2, 3 no bitamin B-12 no shigen ni tsuite. I. [Studies on several sources of vitamin B-12. I.]. *Eiyô to Shokuryo (J. of Japanese Society of Food and Nutrition)* 8(2):25-27. March 11. [Jap]

• **Summary:** A significant amount of vitamin B-12 is found in natto and miso, although little is found in the whole soybeans from which these products are made. The amount of B-12 in soybeans and various soyfoods is as follows (measured in nanograms per 100 gm): Fresh whole dry soybeans 8, Tengu natto (sold commercially) 83, Shinshu miso 170, Shinshu miso (boiled for 15 minutes) 170, Shinshu miso (boiled for 30 minutes) 162.

When natto is stored at 30°C, vitamin B-12 is slowly lost. It drops from 83 nanograms per 100 gm when fresh to 49 nanograms per 100 gm after 3 days.

• **Summary:** A protein-rich food product is prepared from sweet or white potatoes by addition of organic and inorganic nitrogen sources followed by cultivation with microorganisms. The product contains large amounts of vitamins and proteinaceous components and can be used as a food or as an ingredient in the production of soy sauce (at 60%) or miso (at 30%). Address: Gifu-ken, Inaba-gun, Numa-machi?, Okan 698, Japan.

1059. Fujisawa, Shinkichi. 1955. Shokuhin moshiku wa shōyu, miso shikomi genryō to shite tekisuru butsuruyō no seizō hōhō [Food product for brewing of soy sauce or fermented soybean paste]. *Japanese Patent* 30-4443. June 28. 2 p. (Chem. Abst. 51:13311c). [Jap]

• **Summary:** Soybeans or defatted soybeans are hydrolyzed with acid or alkali, neutralized, mixed with fish meal or

pressed cake of chrysalis and inorganic nitrogen sauces, cultured with slime bacteria, and fermented with yeast. Address: Gifu-ken, Inaba-gun, Numa-machi?, Okan 698.

1060. Strayer, George M. 1955. Why Japan wants clean soybeans. Blow to U.S. exports to Japan. *Soybean Digest*. Dec. p. 4-5.

• **Summary:** “Japan is a country of over 80 million people. Total area is about the same as California. Only a very small part is tillable.”

“Last year Japan imported a total of about 750,000 metric tons of soybeans (27.5 million bushels). About 250,000 tons were crushed in oilseed mills. The remainder went directly into foods usage, producing soy sauce, soybean paste [miso], and soybean curd [tofu]. Over 90% of the flakes from the soybean crushing at the oil mills went to these same food plants.

“Soybeans are the life blood of Japan. They are an absolute necessity, for they are the food of the people. They are used directly, not indirectly, as is our soybean meal in the form of livestock products.

“There are over 3,000 vegetable oil mills in Japan, all except about 30 of them small community plants. Only 33 are on the list to receive imported soybeans. There are over 6,000 manufacturers of soy sauce in Japan. There are over 50,000 manufacturers of tofu or soybean curd, and there are several thousand small manufacturers of soybean paste or miso.

“These small plants do not and cannot have cleaning facilities. They must use the soybeans as they come. They prefer domestic beans, second choice is Chinese beans, and next come our beans. Why? Only one answer—foreign material. Their reaction is exactly as would be yours under similar conditions. They merely ask—why can you not sell us clean soybeans?”

The Japanese are importing more and more soybean from Red China. The Ministry of International Trade and Industry (MITI) favors increased trade with China. “Authorized imports of soybeans [to Japan] to 335,000 metric tons. Of these, 203,000 metric tons were allocated directly to oil mills and food manufacturers. They may be purchased on a global basis—wherever the buyer can buy at the lowest price and find acceptable supplies. Oil millers will favor U.S. beans because of higher oil content, while food manufacturers will probably buy Chinese beans when available.

“The remaining 132,000 tons were allocated to import firms. If a firm had a record of U.S. imports during the previous year the quota for that firm is based on 50% of the tonnage handled. But if a firm imported Chinese soybeans during that same period, the firm’s quota is based on 100% of that tonnage.

“As soon as I discovered the content of the allocation I called it to the attention of embassy officials here in Tokyo,

and a protest was filed with the Japanese government. However, at this writing much more work remains to be done.

“As closely as can be figured about 9 million bushels of soybean business was lost by the U.S. in this one allocation.

A large photo shows George Strayer standing behind a podium, addressing a room full of men seated in chairs. A movie projector is visible in the center aisle. The caption reads: “Strayer addressing meeting of 110 representatives of the soybean industry in Japan at the University Club in Tokyo Nov. 14. Invitations were issued by W.D. Termohlen, Agricultural Attache in the American Embassy, to the leadership of oilseed crushers, miso, soy sauce and soybean curd associations of Japan. At his side is H. Nakamura of Honen Oil Co., who served as interpreter. Mr. Nakamura was a Fulbright scholar in the United States during the 1954-55 university year.”

Note 1. This article was written by Strayer in Tokyo, where he is conducting a marketing study for the U.S. Department of Agriculture.

Note 2. This is the earliest document seen (March 2001) concerning the activities of the American Soybean Association in Asia, in East Asia, or in Japan. This is also George Strayer’s first trip to Japan.

1061. Morohashi, Tetsuji. 1955-1960. *Daikanwa jiten* [Chinese-Japanese historical dictionary]. Tokyo: Taishukan Shoten. 12 vols. + index (alphabetic by phonetic Japanese pronunciation). Cites earliest references (usually in Chinese documents) for Japanese words. [25+ ref. Jap]

• **Summary:** This is widely regarded as one of the greatest Chinese dictionaries. Volume 11, pages 394-95. The following pronunciations of Chinese words may not be correct. (33) Sho. Hishiomiso. Incubate rice or barley or beans, etc. Let them ferment and add salt to make these. (35) Chiang Yuan. Miso and shoyu shop. The shop where miso, shoyu, and pickles are sold. (36). Shoko. A big earthenware pot in which hishio is kept. (37). Shokyū. Shishibishio in a hot soup. (39). Chiang tsai. Miso pickled vegetables. (40). Shosho. Miso and shoyu craftsmen. (41). Shosui. Soup or porridge (Zosui) cooked with miso. Ruiju Meibutsuko, Shakuso orai. (42). Shosei. Hishio with flavor. (43). Shotsui. Hishio pot. (45). Chiang fang. Miso and/or shoyu shop. See (35). (46). Shobutsu Hishio. (47). Hishio no kame. Hishio vat. (48). Chiang-yu. Chinese soy sauce. Cooked soybeans, roasted barley and salt are fermented. The liquid is extracted; a salty seasoning, also called shitaji or murasaki.

1062. Yokoyama, Yoshikuni; Takahashi, J.; Miura, K.; Kawarai, H. 1955. Miso oyobi shōyū no bitamin B-12 ganryō ni tsuite [Studies on vitamin B-12 in miso (fermented bean paste) and soy (sauce)]. *Utsunomiya Daigaku Nogakubu Gakujutsu Hokoku (Bulletin of the*

College of Agriculture, Utsunomiya University) 2(3):411-12. [5 ref. Jap; eng]

• **Summary:** The vitamin B-12 content of miso and soy sauce was biologically tested using the microorganism *Euglena cracilis* var. *bacillaris*. The content differs by product type. Miso ranged from 83-316 m gamma% (probably 0.083-0.316 micrograms/100 gm) and shoyu averaged 450 m gamma% (probably 0.450 micrograms per 100 gm). In miso, the highest level was found in salty Edomiso (316) and the lowest level (83) in Sendai miso made at Utsunomiya University. Address: Utsunomiya Univ.

1063. Griffin, Stuart. 1955. Japanese food and cooking. Rutland, Vermont, and Tokyo, Japan: Charles E. Tuttle Co. 167 p. Illust. No index. 19 cm.

• **Summary:** This basic introduction by an American contains about 70 Japanese recipes. The best known of these in the USA is Sukiyaki. The chapter titled “Ingredients” states (p. 3-4) that ingredients available in the USA include “*fu*, or wheat gluten; *tofu*, or bean curd; *yuba* or dried bean curd [sic]; and *udon*, or macaroni... sugared red beans [azuki],... bean paste squares and jellies, seaweed rice-cakes, pained with *shoyu* sauce.” Sauces and flavorings are very important to Japanese cookery. “Foremost among these is *shoyu*, or soy sauce, made from wheat or barley, soybeans, salt, and water A dark, inky, thirst-provoking liquid, it is similar to that found in Chinese restaurants. The wheat is grilled in a big iron pan until burnt-brown in hue. It is then crushed. [Soy] Beans are boiled in an adjacent cauldron, with a heavy weight on the lid. Boiling lasts three to five hours, then the fire is put out, and the beans are kept in the kettle overnight. Steaming may be used as a method of bean preparation. This process lasts for five or six hours. The grilled wheat and boiled beans are mixed and placed in a malt-room [sic, koji room] where malt seed [sic, koji starter] are added The mixture turns to malt [koji] in a few days. Salt water is put over the malt and left for a few more days, being stirred occasionally until fermentation takes place. This over-all mixture is pressed, and the [soy] sauce obtained is bottled.

“*Miso* is another necessity. This is a mixture of malt [koji], salt, and mashed soybeans, the liquor of which is drained off in tubs and allowed to ferment. *Miso* will be discussed later in the soup chapter” (see p. 64). Soy sauce and Aji-no-Moto are frequently mentioned. Soy-related recipes: Chirashi-zushi (with beancurd, p. 31-34). Sashimi (with shoyu, p. 36-41). Miso soups (p. 49, 64-69). Bean curd soup (p. 52-53). Roasted on a plough (sukiyaki with bean curd, p. 70-81). Vegetables, white sesame & vinegar (salad, with “1 *aburaage*, a kind of fried Japanese bean curd,” p. 1124-25). Shoyu spinach (salad, p. 134). Turnips in shoyu (p. 134-35). Sweet soy beans (a festival dish at New Year’s, p. 154-55).

Also mentions: Red rice (with azuki beans and glutinous rice, p. 17-18). Norimaki-zushi (sushi wrapped with nori, p. 27-30). Red bean cake (*yokan*, with bean paste, made from red kidney beans, and agar-agar, p. 145-46). Red kidney bean soup cake (*shiruko* [with azuki beans and mochi], p. 148-49). Bean & jam cake (*kuzumanju*, [with azuki bean paste and kuzu], p. 150-51). Address: [Japan].

1064. Ichiyama, Morio. ed. 1955. *Noda Shōyu keizai shiryō shūsei* [Economic and statistical data about the Noda Shoyu Co.]. Noda, Japan: Noda Shoyu Research Dept. 126 p. No index. 21 cm. [Jap; dut; eng+]

• **Summary:** Much of this information describes the development of Kikkoman and its predecessors during the Edo period. Pages 61-63 give information on early Dutch exports of shoyu from Japan. Bibliographic references are given for shoyu export documents, all written in old Indonesian Dutch (which is quite different from old Dutch of the same period), from 1668 to 1776 (Kanbun 8 to Anei 5) located at the Waran Bunsho-kan (Japanese-Dutch Document House at The Hague, Netherlands).

1. Copy of a letter dated 17 Dec. 1668, written by the governor, Balthasar Bort, and the Council of the Moluccas [Malacca? Malaccas?] near Ceylon to Ryklof van Goens. To: India, Southeast Coromandel area. To Coromandel: Sake 30 kegs (*taru*) and shoyu 12 kegs.

2. Copy of a letter dated 13 Feb. 1670 (Kanbun 10), written by the governor Antehong Pavilioen and the Council of Negapatonam. This is an order form for goods needed by the company, plus some other things. India, East Coast Ceylon island, northwest of opposite shore. Order from Japan: Sake 30 kegs, shoyu 12 kegs, miso 6 kegs.

3. Original general letter dated 13 Feb. 1677 by the Governor General and the Council of the Dutch East Indies from Batavia [today's Jakarta] (Northern part of India, east Coast Madras). To Coromandel: Palliacatta, Various types of Japanese shoyu 17 kegs.

4. Original general letter dated 13 Feb. 1679 (Enhō 7) by the Governor General and the Council of the Dutch East Indies. (India west north corner Surat). To Surat: Shoyu 4 kegs.

5. Original general letter dated 11 Dec. 1679 by the Governor General and the Council of the Dutch East Indies, from Batavia. To Coromandel: Miso 1 keg, shoyu 10 kegs, oil 8 kegs. To Ceylon: Shoyu 20 kegs, sake 2 layered kegs–6 kegs, miso 2 layered kegs = 20 kegs.

6. Original general letter dated 29 April 1681 (Tenwa 1) by the Governor General and the Council of the Dutch East Indies, from Batavia. Coromandel: Shoyu large keg(s) (ōdaru)–half kegs (handaru). Ceylon: Shoyu large keg(s) (ōdaru)–three-quarter kegs.

7. Memorandum, dated 8 Jan. 1681, concerning a list of merchandise imported by ship [from Japan] on Chinese junks and ships from other foreign countries in Tonkin.

Offerings to the former king: Sake 5 kegs, shoyu 10 kegs. Offerings to the assistant king (fuku-ō): sake 5 kegs, shoyu 10 kegs.

8. Copy of a letter dated 14 March 1683 (Tenwa 3) from the Governor and Commissioner, Jacob Joris Pitch, and the Council of Palliacatta near Batavia. Sake: large keg(s), half keg(s). Shoyu: large keg(s), half keg(s). Miso: 6 kegs.

9. Copy of a letter dated 20 Jan. 1699 from governor Govert van Hoorn and the Council of Malacca. Ceylon: Sake 2-layer kegs–6 kegs. Shoyu 2-layer kegs–8 kegs. Miso 2-layer kegs–2 kegs. Bengal: Shoyu 5 kegs, miso 5 kegs. Nagapatnam [probably Nagapatinam, a seaport town in southeast Tamil Nadu, in south India, on the Coromandel Coast 160 miles south of Madras]: Sake 2-layer kegs–3 kegs. Shoyu 3 kegs.

10. Thunberg's *Travels in Japan (Nihon Kiko)* published in 1796 noted in 1776 (Anei 5) that the Japanese do not export much tea to the surrounding countries since Japanese tea is quite inferior in quality to tea from China. However the Japanese make shoyu that is far better than Chinese shoyu, and many kegs of shoyu have been shipped to Batavia [Jakarta], India, and Europe. The Dutch in Japan discovered how to use heat to prevent over-fermentation of shoyu. They boiled the shoyu in an iron cauldron, then bottled it and sealed the mouth with painting pitch (*rekisei*). Shoyu heat-treated in this way will retain its strength and can then be used in making various sauces.

Note: In various of the above reports, shoyu was written as Zoya or Soya; sake was written as Saky with an umlaut (2 dots) over the “y,” and miso was written as Miso. These products were listed along with other Japanese goods. It is clear that these things were exported from Japan ports in India.

Also includes: Regulations of the Tokyo Shoyu Company (1881), p. 89-91. Address: Noda Shoyu, Noda, Japan.

1065. Jelliffe, D.B. 1955. Infant nutrition in the subtropics and tropics. *World Health Organization Monograph Series (Geneva)* No. 29. 237 p. [313 ref]

• **Summary:** Contents: Introduction. 1. Evolution of infant feeding in the Western world. 2. Present infant-feeding practices in the subtropics and tropics. 3. Present status of nutritional disease among infants in the subtropics and tropics. 4. Methods of improving infant feeding in the subtropics and tropics. 5. Prevention of kwashiorkor. Acknowledgements. Annexes: 1. Summary of suggested methods of infant feeding in the subtropics and tropics. 2. Questionnaire for use in investigating methods of infant feeding. Illustrations. References. Index.

In the chapter titled “Prevention of kwashiorkor,” pages 160-62 review and discuss the use of the soya bean to prevent protein deficiency in infant nutrition: (1) Soya-bean emulsion is “also known as soya ‘milk.’” Work in the USA,

Philippines, Hong Kong, Thailand, and Indonesia is discussed. (2) Soya-bean curd, “also known as soya ‘cheese’” [tofu], is rich in calcium but is lacking in the vitamin-B complex. “Nevertheless, it can be an extremely valuable food, and, according to Platt (personal communication) is far superior to other soya products in infant feeding.” (3) Fungus-digested soya beans or tempeh from Indonesia contains vitamin B-12 and is not expensive. It is very digestible and can be ground up and added to steamed rice for feeding older infants. (4) “Miscellaneous. Various other prepared soya products are of great nutritional value, but are probably unsuitable for infants.” These include miso and soy sauce. “A simple method of preparation which requires further investigation is that of grinding the roasted beans into a flour, which can be added to gruels or soups. The roasted bean is certainly palatable but its digestibility for children is unknown, as is the effect of roasting on the trypsin inhibitor and on the amino-acid composition.” Address: WHO Visiting Prof. of Paediatrics, All-India Inst. of Hygiene and Public Health, Calcutta. Formerly, Senior Lecturer in Pediatrics, University College of the West Indies, Jamaica. Nutrition Consultant, World Health Organization.

1066. Noda Shoyu K.K. 1955. Noda Shōyu Kabushiki Kaisha Sanjugonen-shi [Thirty-five-year history of Noda Shoyu, Inc.]. Noda, Japan: Noda Shoyu K.K. 865 p. Illust. No index. 28 cm. [Jap]

• **Summary:** This is the second major history of Kikkoman, written largely by Mr. Morio Ichiyama. Concerning the Mogi Saheiji family line (p. 107): The third generation Mogi in this line started a shoyu brewing business in 1782. The trademark, first used in 1784, is identical to the Kikkoman trademark used today; it was designed by Manbei SARANUMA, who was a grain merchant. Earlier in 1784 another trade mark named Kikko-dai was used briefly.

In the section on exports (p. 560), subsection “Development of exports,” it is written that shoyu was allowed to be exported during the period of Japanese isolation (*sakoku*) that started in the early 1600s (early Tokugawa period). According to Dr. Iwao, whose source of information was the Hague Library in the Netherlands (*Waran Haagu Bunshokan*; probably Nederlandse Vereniging van Bibliotheecarissen, Documentalisten en Literatuuronderzoekers (NVB)), in 1668 the Japanese sent 12 kegs of shoyu to Coromandel, India (a coast region of southeast India on the Bay of Bengal), in 1670 to the island of Ceylon, in 1677 to Coromandel again, in 1679 and 1681 to Surat in northwest India and to Coromandel, in 1681 to Tonkin (part of French Indochina from 1887, today in North Vietnam) where 10 kegs of shoyu were offered to both the ex-king and the vice-king, and in 1699 shoyu was shipped [by Dutch merchants] (together with sake and miso) to Ceylon, Bengal, and Nagapattinam (a seaport town in

southeast Tamil Nadu, south India, on the Coromandel coast, 160 miles south of Madras). Shoyu was written as “Zoya” or “Soya.” Sake was written as “Saky” with two dots over the “y.” And miso was written as “miso.” These exported products were sold at various places in India.

Pages 453-56 discusses the *Mankin Sangyotai* or *Bankin Sugiwai Fukuro* (1731 or 1732), noting that koji starter (*moyashi*) was now being made specifically for shoyu. Sake is made mostly during the cold season (*kanzukuri*). Shoyu should be fermented during the summer (*dōyo shikomu*) and pressed at the end of fall.

Pages 529-30 discuss the size of the wooden kegs *taru* in which shoyu was shipped and retailed. During the Tokugawa or Edo period (1600-1868) the kegs typically had a capacity 8 *sho*; since 1 *sho* = 1.80 liters or 0.476 gallons, a typical shoyu keg had a capacity of 14.40 liters or 8.568 gallons. And they typically contained 7.5 *sho* of high-class shoyu or 7 *sho* or regular/low-class shoyu. Starting in the year Meiji 1 (1868), a keg with 9 *sho* capacity was introduced. Then in Meiji 33 (1900) a larger size keg (called the *ō-dara-zumé*) was introduced; its capacity is not given. A keg of half this capacity (called the *ō-dara no handaru*) was also introduced. Contains many photos and illustrations.

Note 1. *Webster's New Geographical Dictionary* (1988) defines Coromandel Coast as a coast of southeast India from Point Calimere north to the mouths of the Krishna River. It has a low shoreline with no good harbors. The chief ports are Nellore, Madras, Pondicherry, Cuddalore, Tranquebar, and Nagapattinam.

Note 2. This document contains the earliest clear date seen (Jan. 2001) for soybean products (Japanese shoyu) in Ceylon (today's Sri Lanka; 1670), or Tonkin (today's North Vietnam; 1681); soybeans as such had not yet been reported. Address: Noda, Japan.

1067. Takahashi, Jusaku. 1955. [Some sources of vitamin B-12]. *Eiyo to Shokuryo (J. of Japanese Society of Food and Nutrition)* 8(2):49-51. (Chem. Abst. 54:18813. 1960). [Jap]*

1068. Strayer, George M. 1956. We must remember, U.S. soybeans are food for the Japanese. *Soybean Digest*. Jan. p. 8-10.

• **Summary:** This is the first in a series of reports by the editor covering his recent marketing study for the USDA in East Asia. Above all, Japan wants clean soybeans from the U.S., with less foreign material. New U.S. standards allow No. 2 soybeans to contain up to 2% foreign material. U.S. standards classify all particles of soybeans which go through a 8/64-inch round hole screen as foreign material. Manchurian standards classify such broken particles of soybeans as unsound soybeans but not as foreign material. An estimated half of U.S. foreign material is these broken

particles—which still end up making adequate soy products. “Because Manchurian [soy] beans have for years arrived with a foreign material content of ½% or less, the approximately 3,000 oil mills, 6,000 soy sauce plants, 5,000 soy paste [miso] plants and the 50,000 tofu or soybean curd plants in most cases do not have cleaning facilities... The role played by milk, meat, and eggs in the diets of America is taken by soybeans in the diets of Japan.” The industries that uses soybeans are well organized, and each has its own trade association.

Photos show Strayer with the heads of the Yokkaichi oil mill and the Japan Oil and Fats Manufacturers Assoc., the plant of the Hohnen Oil Co. at Shimizu which processes only soybeans into edible oil, glue, flour, and flakes for miso and tofu production (capacity 300,000 tons/year), K. Sugiyama, chairman of the board of Hohnen Oil Co. receiving a medal, and examining soybeans at Takeya miso plant.

1069. Baens-Arcega, Luz; Marañon, Joaquin; Palo, Macario A. 1956. Proteolytic enzyme from a Philippine strain of *Aspergillus oryzae* (Ahlburg) Cohn. *Philippine J. of Science* 85(2):189-201. June. [7 ref. Eng]

• **Summary:** Strains of the mold *Aspergillus oryzae* are used in Japan to make shoyu, miso, mizuame [rice syrup], and sake, and used in the manufacture of commercial enzymes such as Takadiastase, Polyzyme, Digestin, Oryzyme, and Kasiwagidiastase.

The authors isolated several protease-forming yellow-green molds. By repeatedly culturing the isolates in copra meal and rice bran media, one was found to produce protease of excellent digestive potency as evaluated by the Oshima and Church method. Optimum temperatures for protease production was 27°C in copra meal and 22 to 27°C in rice bran.

“The potency produced by the Philippine strain of *A. oryzae* in copra meal is 3 times that of the most efficient *A. oryzae* and 2 times that of the *Aspergillus effusus* type cultured in wheat bran by Oshima and Church.” Address: Inst. of Science & Technol, Manila, Philippines.

1070. Walley, Ersel. 1956. The Japanese-American Soybean Institute: Soybean marketing development program project No. 2. *Soybean Digest*. July. p. 12-13.

• **Summary:** Under agreement with the USDA’s Foreign Agricultural Service, the American Soybean Association is charged with carrying out a year-round soybean marketing development program in Japan. This is the first such project to be conducted by an American commodity group in foreign sales promotion—so there were few guidelines or examples of how to proceed.

Walley went to Japan and initiated the first project, the soybean exhibit at the Osaka Trade Fair. The next project was the formation of this institute [JASI]. Mr. Shizuka

Hayashi was hired as managing director. He “enjoys unusual respect and prestige throughout the entire Japanese soybean industry. He speaks and writes English excellently.” He has devoted most of his life to oils and fats, and has visited the United States.

The Japanese members are the manufacturers of oil and fat, miso, tofu, and shoyu, plus the fat and oil importers-exporter associations.

Photos show: (1) Walley and Hayashi. (2) Signs above the American soybean exhibit at the Osaka Trade Fair. A large round sign shows two pods filled with soybeans plus soybean leaves at the top. Two rectangular signs read “Soybeans” in Japanese and English.

Note: According to a report titled “The Evolution of the Market Development Programs and the Public / Private Partnerships,” by the U.S. Agricultural Export Development Council (USAEDC) concerning the cooperator program: “The first cooperative agreement was signed with the National Cotton Council in 1955, followed quickly by one with the Oregon Wheat Council. Soon the agreements expanded to include tobacco, soybeans, dairy, millers, poultry and rice in 1956, followed by prunes, raisins, Florida citrus, Sunkist (California / Arizona), canned peaches, red meat, tallow and grease, hides and skins in 1957 and Northwest apples and pears and a small feed grains project in 1958.” Address: Special Representative and Past President of the American Soybean Assoc.

1071. *Chicago Daily Tribune*. 1956. Have you heard? For housewives only. Sept. 9. p. K12.

• **Summary:** The House of Eng is one of four local Cantonese restaurants owned and operated by Mr. Eng. The barbecued ribs he serves as appetizers are delicately flavored. “Those ribs, Mr. Eng tells me, are marinated overnight in black bean paste, flavored with a touch of garlic and a bit of Chinese liquor.”

Note: This is the earliest document seen (Sept. 2008) in all major U.S. newspapers digitized by ProQuest that uses the term “black bean paste.” It probably refers to what we call “black jiang” (*hei jiang* or *hei douban jiang* in pinyin). Apparently this paste is thicker than the popular “black bean sauce.” The new term appears in about 40 documents between 1956 and the present, including this one in 1956, none in the 1960s, about 9 in the 1970s etc.

1072. Takahashi, Jūsaku. 1956. Bitamin B-12 kyōka shokuhin ni kansuru kenkyū. I. Shokuhin-chū bitamin B-12 no anteido ni tsuite [Studies on the fortification of some foods [incl. miso and soy sauce] with vitamin B-12. I. On the stability of vitamin B-12 in foods]. *Bitamin (Vitamins, Kyoto)* 11(4):385-88. Oct. 25. (Chem. Abst. 51:15816i). [11 ref. Jap; eng]

• **Summary:** The change of vitamin B-12 content in enriched miso, soy sauce, jam, and cream during storage

and heating was tested by a microbiological method using *Euglena gracilis* var. *bacillaris*.

Vitamin B-12 added to miso was relative stable during storage for 30 days; 89% remained at 3-5°C and 35-59% remained at 30°C. However vitamin B-12 added to soy sauce was relatively unstable during storage; only 75% remained at 30°C.

Vitamin B-12 added to miso was relative stable during heating; only 6% was degraded after 30 minutes at 100°C. However vitamin B-12 added to soy sauce was so unstable on heating that 28-54% was degraded after heating for 12-30 minutes at 100°C. In short, the enrichment of soy sauce with vitamin B-12 seems unsuitable. Address: Faculty of Agriculture, Utsunomiya Univ., Utsunomiya, Japan.

1073. Ebine, Hideo; Nakajima, Michie; Nakano, Masahiro. 1956. Eiyō kyōka miso no kenkyū. V. Misoshiru kanetsu ni saishite bitamin-rui no sonshitsu ni tsuite [On the manufacture of enriched miso. V. Loss of vitamins during preparation of miso soup]. *Shokuryo Kenkyujo Kenkyu Hokoku (Report of the Food Research Institute)* No. 11. p. 111-12. Oct. [5 ref. Jap]
Address: Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo, Japan.

1074. *Los Angeles Times*. 1956. Diet clue to cause of heart disease. Nov. 11. p. C2.

• **Summary:** In the last 25 years in Hawaii, there has been a large increase in the incidence of fatal heart attacks. After studying the hearts of persons who have come to autopsy, Dr. Nils P. Larsen of Honolulu suspects that this is because Hawaiians, whose income has risen significantly during this time, have been consuming much more “butter, cream, eggs, and milk” than before.

In Japan, the village of Narusawa, at the foot of Mt. Fuji, had the lowest rate of rejection of military conscripts during World War II; the villagers there lived largely on “soybean soup.” Note: Probably miso soup.

In Mukojima, another village, the people have the greatest longevity of any village in Japan. About 8.4% of the population are over 70 years of age. The diet of Mukojima, which is described, includes noodles made from sweet potatoes, azuki beans, small fish, seaweed, carrots, and pumpkins.

1075. Hayashi, Shizuka. 1956. The work of the Japanese-American Soybean Institute. *Soybean Digest*. Nov. p. 20.
• **Summary:** This Institute was established in May 1956. The initial work has concentrated on a study of the condition of soybean from the USA and other countries when they arrive in Japan. Additional studies have been made of the shoyu and miso industries in Japan.

The Japanese soybean crop this season has been a poor one, estimated now at about 170,000 tons, far below the

earlier estimate of 220,000 tons. These domestic soybeans are preferred by makers of miso, shoyu, tofu, glue, and feeds. To make up the total requirements of 954,130 tons, some 784,130 tons must be imported. This includes 10,000 tons of Brazilian soybeans and at least 86,000 tons of Chinese soybeans—both depending on the price.

New-crop U.S. soybeans purchased by Japan are estimated as follows: 60,000 tons for October shipment, 110,000 tons for November shipment, and 30,000 tons for December shipment. Total: 200,000 tons. The average price is about \$112 to \$113/ton, C&F Japanese ports. A small photo shows Shizuka Hayashi. Address: Managing Director, JASI, Tokyo.

1076. Lee, T.Y.; Chung, K.S. 1956. [Research on soybean paste. II. Effect of moisture content on quality of soybean paste during its storage]. *Bulletin of the Scientific Research Institute (Seoul, Korea)* 2:67-72. [Kor]*

• **Summary:** The soybean paste should contain less than 30% moisture. Address: Section of Food and Nutrition, The Scientific Research Institute M.N.D. Korea, Seoul, Korea.

1077. Park, T.W.; Kim, S.C. 1956. [Research on soybean paste. I. On the optimum drying conditions of soybean paste]. *Bulletin of the Scientific Research Institute (Seoul, Korea)* 2:65-67? [Kor]*

• **Summary:** Soybean paste is one of the main Korean foodstuffs. Address: Section of Food Engineering, The Scientific Research Institute M.N.D. Korea, Seoul, Korea.

1081. Ohsawa, G. 1956. Guide pratique de la médecine macrobiotique d'Extrême-Orient: Pour ceux qui ont bien étudié la philosophie dialectique pratique [Practical guide to the macrobiotic medicine of the Far East: For those who have studied well the philosophy of practical dialectics]. Centre Ignoramus, 26 rue Lamartine, Paris 9^{eme}, France. 82 leaves. 28 cm. [Fre]

• **Summary:** After Ohsawa arrived in France (Feb. 1956) he published this work in a stenciled edition. It was only sold or given as a present to students who had obtained “the fifth level (dan) of practicing the U.P. (Universal Principle).” On page 17, under the heading “Macrobiotic Pharmaceutical Preparations,” we find No. 9: Miso and fried miso. And on page 80 is a 1-page explanation about miso. This book was translated into English and first published in August 1973 as a part of “Practical Guide to Far Eastern Macrobiotic Medicine.”

Note: This is the earliest document seen (Jan. 2009) in which George Ohsawa mentions miso—or any other soyfood product. Address: Paris.

1082. Ohsawa, George. 1956. The philosophy of Oriental medicine (The book of judgment). New York, NY: Ohsawa Foundation. 171 p. 19 cm. 2nd ed. 1960. [7 ref]

• **Summary:** Ohsawa is trying to express a nondualistic worldview, its many forms of practice or application, and its manifestation in the field of time as pairs of opposites. The Preface begins: “I wrote this book from the beginning of November until the end of November, 1955, in French Equatorial Africa in Dr. Schweitzer’s hospital at Lambarene [Gabon], and from January 1 to January 13, 1956, at the Protestant Mission Station at Andende, in that old house where Dr. Schweitzer began his work in the year 1913...”

“The aims of this book: 1. To point out the dialectical, universal, simple and useful Unique Principle of science and philosophy, of all the great religions and of all Far-Eastern civilization. 2. To show the biological, physiological, medical, educational, sociological and logical application of the Unique Principle. 3. To present especially Far-Eastern medicine in the light of the Unique Principle. 4. To reveal the Unique Principle in all its glory as the principle of infinite freedom and eternal peace.

“The Unique Principle of the Far-East is exceedingly simple and extraordinarily practical... It is the ‘conception-constitution’ of Life and the Universe” (p. 3). It “is a manifestation of universal love, or the supreme judgment, embracing all the antagonisms and transforming them into oneness, and distributing the eternal joy of life to all, forever” (p. 4).

“Since the publication of my first book in French, *Le Principe Unique de la Science et de la Philosophie*

l'Extrême-Orient (at Vrin’s, Paris, 26 years ago [1931]), I have always worked in the same direction—for universal understanding. I left Japan forever about the end of my sixtieth year (October, 1953) to see my friends and the great man of the world, whom I believed would understand the Unique Principle, and the practical dialectics thereof. Note: The order of words in the title of Ohsawa’s first book in French was actually *Principe Unique de la Philosophie et de la Science d'Extrême-Orient*.

“I hope the Unique Principle will become as well known as the art of flower arrangement, Chinese medicine, ‘Acupuncture,’ Bonsai, Bobkei, Zen Buddhism, and the theory of Judo-Aiki” [Aikido] (p. 4).

“Until the end of my life I shall always be traveling with my wife, showing how to master this practical dialectics, universal logic, and order of the universe; the very key to the Kingdom of Heaven that will establish infinite freedom, eternal happiness, and absolute justice everywhere.” “I live in Europe, chiefly in France, six months of each year, and the rest of the time I shall visit other countries on this planet” (p. 5).

Contents: Preface. Introduction: The physics and metaphysics of yin and yang. 1. Medicine or faith? 2. The Unique Principle—a practical and dialectical classification: Yin (centrifugal) and Yang (centripetal) are always relative, the form, the weight, the color, about water, the chemical composition, the geographical point of view, the taste, conclusion, Dente, Yin and Yang classification.

3. The Unique Principle of the science and philosophy of the Far East. 4. Man’s origin. 5. Far Eastern medicine. 6. Order of the Universe and man’s constitution. 7. Supreme judging ability. Appendixes.

“In the Far East, thousands of years ago, medicine evolved from perfect symptomatic medicine to prophylactic [preventive] medicine; then from prophylactic to the yogic (or religious) art of health...” (p. 13). Western medicine is analytical, empirical medicine; it is a modern superstition (p. 19). “I am going to show you the identity of faith (realization of the order of the universe, or Oneness, the absolute—infinite—eternal) and the highest medicine” (p. 20).

Soy paste [miso] is a very Yang “vegetable paste, prepared with a 20 to 30% volume of salt, which will keep for at least three years” (p. 35).

“How can one, having two new-born twin dogs, make one become very vicious, restless, aggressive, and the other easy, friendly, quiet and patient? Answer: I will feed one with a diet including 20 to 30% of meat or fish, and the other a vegetarian diet with 60% or more cereals... If racing together, the non-vegetarian would lead for the first mile or so, but afterwards, the vegetarian would forge ahead” (p. 36).

“Vegetarian peoples are rather of philosophical and religious mind, inclined to meditation, aesthetics, literature and poetry. The non-vegetarian ones, on the contrary, are

strongly inclined to so-called mechanical and industrial progress, and to colonization too. There have been no vegetarian people in world history who colonized other people by force (militarily or economically). From the beginning, the Japanese people were vegetarian until the introduction of Occidental civilization fifty years ago at the time of the Russian-Japanese war" [1904-05]. After that they "became utterly uprooted. The Japanese spirit was lost, as well as the whole of its tradition. To some degree they have allowed themselves to be colonized, spiritually and physiologically" (p. 37).

There are 7 stages of Yin-Yang classification of food. The 7th or highest is "all-embracing supreme judgment. All food products must be free of chemical fertilizer and insecticides (both very Yin), since they destroy not only the natural quality of the food, but also, sooner or later, those who eat it." The key complementary antagonism between Na [sodium] and K [potassium] was discovered by a Japanese doctor, Sagen Isiduka [Ishizuka], 70 years ago." He cured hundreds of thousands of incurable people. "When he died his funeral escort was over two miles long" (p. 38-39).

The greatest master of the Unique Principle was Lao-Tse [Laozi]. It is a polarizable monism (p. 41). "Everything is composed of two fundamental forces, Yin and Yang. They are seemingly antagonistic, but actually they are complementary" (p. 43).

"Every year about July or August, for almost twenty years, I have organized a 'New School' where the students learn the theory and practice of the method to establish good health following the tenets of the Unique Principle" (p. 44).

"But what is education? Present-day education, so-called, is nothing but phonographic remembrances of the mass production of professionals, technicians, engineers or teachers. In short it is a preparation for slavery" (p. 47). It is really indoctrination. There are two important types of education: pre-natal and post-natal. But a real teacher is able to make men free and happy forever (p. 48-50). Knowledge of the Unique Principle is called *Do* in Japan and *Tao* in China; it is the Great Way, and following it is called *gyo* [spiritual practice] (p. 50-52).

All food is of vegetal origin; it ultimately comes from plants (p. 62). "Cow's milk is intended for the nourishment of calves... There is no reason for man to live upon the milk of the animal, which is biologically and intellectually inferior to him" (p. 67).

Illness is an alarm, sent by the Infinite to tell us that we are violating the Order of the Universe (p. 77). "The world is dialectical. Quality is influenced by quantity. The world of materiality and relativity is very complex in its expression and phenomena. It appears like an anarchic chaos, but a dialectical law rules it: the 'Unique Principle' or Yin-Yang law." Man is the masterpiece of creation. He is

happy who has made up his mind to live in accordance with the Unique Principle (p. 82).

"About thirty years ago, I brought acupuncture to Europe and was the first practitioner of it there." "I was at the same time, the first importer of the art of flower arrangement and of the theory (or spirit) of Judo (Juzutsu [Jujutsu])." Both have become popular in today's Europe. "But few people are interested in the *Do [Tao]* of Judo and Kado, which is their philosophy" or "Unique Principle." The *Do* of Judo has also been forgotten in Japan (p. 88-89).

"The individual soul and the universal soul are one and the same thing, the infinite" (p. 156). On the last 2 pages of the book are important addresses in New York City (Ginza, Azuma) and Japan (Nippon C.I. in Tokyo), and Centers in Europe (France, Belgium).

Note: This is the earliest English-language document seen (June 2000) written by Ohsawa, who lived 1893-1966. Address: 1. Lambarene, French Equatorial Africa [Gabon]; 2. Ohsawa Foundation, 331 Riverside Dr., New York City, New York (Secretary Aihara, 44, W. 96th St., New York City, USA).

1089. Hayashi, Shizuka. 1957. Tofu takes large volume of soybeans. *Soybean Digest*. Aug. p. 26-27.

• **Summary:** “There are approximately 45,000 tofu manufacturers in Japan, of which about 23,000 are members of the Tofu Association. There is one large factory in Osaka, the largest in Japan, which consumes 2 tons of soybeans a day.” In 1957 Japan will use 1,070,000 tons of soybeans, including approximately 350,000 tons for shoyu, 230,000 tons for miso, 160,000 tons for tofu, and 120,000 tons for other foods. But the Tofu Association says 308,000 tons will be used for tofu.

Note: This is the earliest English-language document seen that gives the number of tofu manufacturers in Japan, and statistics on the amount of soybeans used for making tofu in Japan. Address: Japanese-American Soybean Inst., Tokyo, Japan.

1090. United States Department of Agriculture. 1957. USDA announces study to promote wider use of U.S. soybeans in Japan (News release). Washington, DC. 1 p. Sept. 12. USDA 2775-57.

• **Summary:** “The U.S. Department of Agriculture announced today that it will send a specialist to Japan to work with private trade groups and Government officials there to promote wider and more direct use of United States soybeans in Japanese diets.

“Although this country has been exporting about 20 million bushels of soybeans annually to Japan in recent years, only a relatively small quantity of the beans have been used in making such food products as ‘tofu’ and ‘miso,’ which utilize the whole soybean and not just the oil or the meal.

“Tofu and miso are a primary source of protein in the Japanese diet. The former is a custard-like curd eaten in soups, and the latter is a paste eaten in many food preparations.

“Dr. A.K. Smith of USDA’s Northern Utilization and Development Division Peoria, Illinois, will go to Japan to study the reasons for the Japanese preference for their own

and Chinese soybeans in the manufacture of products such as tofu and miso. His purpose will be to determine what differences exist between Japanese and Chinese soybeans and American soybeans, and why they occur. He also will seek to determine how foods can be made from United States soybeans which will be more acceptable to the Japanese.

“Success in his investigation can mean a broader market for United States soybeans in Japan.

“USDA’s Foreign Agricultural Service and the American Soybean Association of Hudson, Iowa, for some time have been conducting an overall program to promote the market for United States soybeans in Japan. That program has been expanded to include USDA’s Agricultural Research Service, which has made Dr. Smith’s services available.” Address: Washington, DC.

1091. *Cotton Gin and Oil Mill Press*. 1957. Study will promote U.S. soybeans. Sept. 21.

• **Summary:** About A.K. Smith’s upcoming trip to Japan.

1092. *Southwestern Miller*. 1957. U.S. seeks soy food uses: Dr. A.K. Smith of Department of Agriculture goes to Japan to discover reasons for preference for other beans. 36(30):56. Sept. 24.

• **Summary:** About Dr. A.K. Smith’s upcoming trip to Japan.

1093. Hayashi, Shizuka. 1957. The Japanese-American Soybean Institute. *Soybean Digest*. Sept. p. 33-34, 36.

• **Summary:** Subtitle: “The Japanese know the quality of U.S. soybeans is improving. Mr. Hayashi expects every Japanese family to include soybeans in the daily diet as a result of the Institute campaign.”

“Membership in the Japanese-American Soybean Institute [JASI] is made up of the Japanese Oil Processors Association, the Japan Soy Sauce Association, the Japan Miso Industry Association, the Japan Tofu Association, and the Oil and Fat Importers and Exporters Association—in other words all groups connected with the soybean industry in Japan. The American Soybean Association is also a member of the Institute.

The Institute carries out a variety of research and educational programs. Under the initial agreement, JASI was established in April 1956 for a period of 1 year with a total budget of \$75,000; it began functioning on 1 May 1956. Each of the Institute’s main projects and contracts signed during the first year is described. The production of a movie film, approved by USDA’s Foreign Agricultural Service (FAS), is now in progress. “This will be a documentary colored film in three rolls of about 24,000 feet long. The theme of this film involves grammar school children working on a special subject of soybeans in their practical science room.”

Before JASI was established, most Japanese did not realize that soybeans were grown in the U.S.—except on a small scale. “Before the war [World War II] we knew that Manchuria, China, was the only major soybean growing country. I was in Manchuria for more than 10 years before the war as an exporter of soybeans to Europe and Japan. We [Japan] imported about 1.5 millions tons of soybeans annually from China. Production in China was then around 6 million tons. In 1948 I visited this country [USA] and was surprised to learn for the first time of America’s huge production of soybeans. After the war when Japan was still under the SCAP’s [Supreme Commander Allied Powers = General Douglas MacArthur] control, soybeans were not available from China. It was then that Japan received soybeans from America for the first time in history. It is since then that Japan has gradually become familiar with American [U.S.] soybeans.

“However, soybeans coming into Japan right after the war were very bad. They contained enormous amounts of foreign material, worm-eaten damaged beans, broken beans; besides sizes were irregular and color was bad. The quality of American beans was so bad that it gave Japanese users the impression that U.S. soybeans were not comparable with Chinese soybeans. Everywhere we went we received complaints of foreign material.” No makers of miso or tofu wanted to buy them.

Now, a year after JASI was established, the situation has improved. Everybody in the soybean industry now knows about U.S. soybeans, and knows their quality is improving. JASI sends these people a newsletter, the *Soybean Digest Late News*, translated into Japanese. A photo shows Shizuka Hayashi. Address: Managing Director, JASI, Tokyo.

 • **Summary:** About Dr. Allan K. Smith’s upcoming trip to Japan. A portrait photo shows Dr. Smith.

1096. Hayashi, Shizuka. 1957. Miso maker switches to U.S. beans. *Soybean Digest*. Nov. p. 24-25.
 • **Summary:** A week-long soybean promotional program was held in the city of Sendai in September. The Institute participated in the name of the “Food Life Improvement Association.” The speaker was J. Sasaki [probably of Sendai Miso Shoyu], vice president of the All Japan Miso

Assoc. The biggest miso maker in the district and one of the largest in Japan, he also manufactures shoyu, and he has been using U.S. soybeans only since the early part of this season. Why? More uniform and consistent quality, less purple colored beans, lower price, larger quantities of the same variety available. Address: Managing Director, Japanese-American Soybean Inst., Tokyo, Japan.

1097. Shi, Shenghan. 1957-1958. *Qimin yaoshu jinshi* [Modern Chinese edition of the *Qimin Yaoshu* (Ch’i-min yao-shu)]. Peking, China: Science (Kexue) Press. 4 volumes. [Chi]*

• **Summary:** A key modern edition of this classic. Going chapter by chapter, Shi Shenghan first gives the original classical text, followed by his translation and interpretation of it into modern Chinese, so that it can be read and understood today. In addition to these parallel texts, he has added extensive bibliographic commentaries and technical discussion.

This edition is extremely useful for the reader (like most scholars today) who is not competent in classical Chinese. However, it is not as scholarly or as up to date as the 1982 edition by Miao Qiyu (W.-G. Miao Ch’i-Yu). Address: China.

1098. **Product Name:** [Kikko Miso—Japanese Style Sweet White Miso and Barley Miso].

Foreign Name: Miso Kikko (Shiro Miso and Aka Mugi Miso).

Manufacturer’s Name: Fabrica de Siyau Kikko Sociedad de Responsabilidad Limitada.

Manufacturer’s Address: Av. Colombia 171, Pueblo Libre, Lima, Peru. Phone: 32-3754.

Date of Introduction: 1957.

How Stored: Shelf stable.

New Product—Documentation: Company history form filled out by Marco Kamego, a present owner of Kikko Corporation S.A. 1997. Dec. 29. Miso Kikko (both *shiro miso* {sweet white miso made with rice} and *aka miso* {red miso made with barley}) were both introduced in 1957. These products may have been the world’s first miso made with common beans (*Phaseolus vulgaris*) instead of soybeans. In 1960 the company first began using soybeans instead of common beans. They still make *shiro miso* (sweet white miso) fermented for 5 months, but have discontinued red miso due to lack of demand.

1099. Lee, T.Y. 1957. [A study on carotene. II. Variation in carotene content of red pepper and its processed foods (kochojang) during storage]. *Bulletin of the Scientific Research Institute (Seoul, Korea)* 2:15-22. [Kor]*

• **Summary:** Red pepper sauce can retain as much as 90% of their carotene content after one year storage. This may be due to the presence of antioxidants in the sauces. Address:

Section of Food and Nutrition, The Scientific Research Institute M.N.D. Korea, Seoul, Korea.

Address: Noda Inst. of Scientific Research Lab., Chiba.

1101. Mogi, Masatoshi. 1957. [Some problems of making miso]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 31(6):A72-A74. [29 ref. Jap]

Address: Noda Inst. of Scientific Research, Noda, Japan.

1102. Onishi, Hiroshi. 1957. Studies on osmophilic yeasts. III. Classification of osmophilic shoyu and miso yeasts. *Noda Sangyo Kagaku Kenkyusho (Report of the Noda Institute for Scientific Research, Japan)* 1:30-35. Reprinted from Bulletin of the Agricultural Chemical Society of Japan 21(3). [13 ref. Eng]

• **Summary:** Most of the salt-tolerant yeasts isolated from soy sauce and miso belonged to *Saccharomyces rouxii*. Some of them produced luxuriant pellicles (surface films) on culture media containing sodium chloride, but pellicles were not formed on salt-free media. A new variety was isolated from these yeast species: *Saccharomyces rouxii* Boutroux var. *halomembranis* nov. var. A few strains were identified as *Saccharomyces acidifaciens* (Nickerson) Lodder et Kreger-van Rij. Two new species were also described: *Torulopsis halophilus* nov. sp. and *Torulopsis nodansis* nov. sp. These two species showed high salt tolerance, especially the former, which was a facultative halophile.

In a 1952 monograph titled *The Yeasts: A Taxonomic Study*, by J. Lodder and N.J.W. Kreger-van Rij, the subgenera *Zygosaccharomyces* is no longer recognized. In this classification almost all of the *Zygosaccharomyces* known as the osmophilic yeasts were included in only two species and one variety, *Saccharomyces rouxii* Boutroux, *Saccharomyces rouxii* Boutroux var. *polymorphus* Lodder and Kreger-van Rij, and *Saccharomyces mellis* (Fabian et Quinet) Lodder and Kreger-van Rij. For example, *Zygosaccharomyces major*, *Z. soya*, *Z. salus*, and *Z. japonicus*, known as soy yeasts, were all included in one species, *Saccharomyces rouxii*. Address: Japan.

1103. Onishi, Hiroshi. 1957. Studies on osmophilic yeasts. III. Classification of osmophilic soy and miso yeasts. *Bulletin of the Agricultural Chemical Society of Japan* 21:151. Bound in the back of *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)*. [Eng]*

Address: Japan.

1104. Segi, M.; Fukushima, I.; Fujisaku, S.; Kurihara, M.; Saito, S.; et al. 1957. An epidemiological study on cancer in Japan. *GANN* 48(Supplement):1-63. *

• **Summary:** Concerning stomach cancer: Consumption of miso soup or miso was associated with a decreased risk of stomach cancer.

Note: This is the earliest document seen that suggests there may be cancer-preventing substances in soybeans.

1105. Miyamoto, Kazuo. 1957. A nisei discovers Japan. Tokyo: Japan Times. [x] + 282 + [4] p. See p. 181. Illust. Port. No index. 20 cm.

• **Summary:** The author, a physician and American citizen, lived with his wife and two children for two years in Japan between 1937 and 1939 “just after the beginning of the China Incident.” He spoke and wrote Japanese fluently.

Page 7: On 29 Sept. 1937, after just arriving in Japan, they enter Tokyo. He notes that prices are high, protein consumption is therefore insufficient, and the general population seems undernourished. Beans, including soya beans, ought to be used more extensively. Except for misoshiru [miso soup] and natto, they are apparently not widely used. He suggests that the government welfare department develop and publish soy recipes for the health of the people.

Page 48: On 8 Feb. 1938 on a trip into Yusawa, Niigata, in northeastern Japan, he went skiing. For lunch at a inn he had “natto with lots of onions to erase the odor.”

On a train from Ueno station, Tokyo, he has breakfast in the diner of miso-shiru [miso soup], tsukemono [pickled vegetables], and rice for 25 *sen*.

Page 129: In Aomori at the hotel for breakfast they enjoy delicious eggplant fried in butter with shoyu, pepper, and pieces of chiso [beefsteak leaves].

Page 171: At Aoyama hot springs in Hokkaido, caught in a blizzard, he has a bento [Japanese box lunch] from the hotel that includes miso-shiru.

Page 181: On 21 March 1938 they are at the port of Shimonoseki, Japan (in southwestern Honshu, just north of Kyushu, in Yamaguchi prefecture, facing the Tsushima Strait). He notes that many people pass through this port on their way to Chosen [Korea] and Manchukuo [Manchuria].

Shimonoseki is known for its *fugu* or balloonfish (also called globefish or swellfish) for it is here that the largest catch in Japan is taken each year.

They found an eating place, Fujitomo, that served the delicacy. The raw sliced meat was arranged on a huge platter in three rows of semi-circles, so thinly sliced that it was transparent. “The above were dipped in a sauce prepared with murasaki, lime and onions. Tai, considered the king of fishes, must be allotted second place to this delicacy...”

Note 1. The word “murasaki” means purple in Japanese, and is still used in sushi shops and other specialty eating

places to refer to soy sauce.

Note 2: This is the earliest English-language document seen (March 2008) that uses the word “murasaki” to refer to soy sauce.

The balloonfish is so poisonous it can kill a person; the toxin is contained in the ovaries. “At Shimonoseki, the season comes to an end at the end of March for then the spawning season begins and the danger of poisoning becomes greater.”

Page 201: On a trip to Korea he enjoys *manul zany*, garlic pickled in shoyu.

In April 1955, the family returned to Japan to visit new relatives. Near Furukawa, in northeastern Japan, they inspected a “miso and shoyu factory.”

Also discusses: Nori (p. 128). Wakame (seaweed, near Idzu / Izu) (p. 276). Address: Honolulu, Hawaii.

1106. Yamada, S. 1957. [Manual of the fermented food industries of Japan]. Tokyo. [Jap]*

1107. Tsukada, Toyoaki; Yamada, Yasuo. 1957? Frozen tofu (dehydrated tofu). Japan. 4 p. Undated. 28 cm. [Eng]

• **Summary:** This is a report on the Misuzu plant in Nagano City and the Daiya plant in Suwa City, Nagano prefecture, Japan. “The name ‘frozen tofu’ is somewhat misleading as the final product is a dried cake with the approximate dimensions of 2½ x 2 x ¾ inches. The freezing of the tofu is a step in the process which develops certain desirable elastic property to the wet cake. It becomes like a sponge.

“The frozen tofu plants at Nagano and Suwa had essentially the same process but the Suwa plant was the more modern of the two in respect to engineering equipment. The Suwa plant had two completely separate units for making tofu, each one approximately the size of the Nagano plant.

“The Nagano plant reported they had used quite a few American soybeans until two years ago when they changed to Chinese soybeans. In his opinion the best frozen tofu is made from Nagano beans but Nagano raises insufficient soybeans to supply the demand. The qualities desired in this product are good color and smoothness (including gloss) and bland flavor. In his process the American soybeans give equal color and smoothness but not flavor to the Chinese beans. American soybeans process as well as other beans. Some soybeans have a soft smooth taste whereas others leave a taste on the tongue. They described Brazilian soybeans as good for making tofu but not for miso. American soybeans give a high yield.

“The owner of the Suwa Plant said they could use up to 20% American soybeans in their process without loss of quality in their product.

“These frozen tofu plants operate on a large scale, of the order of 5-10 tons of beans per day. The frozen tofu process is much more readily adaptable to large scale operation than

fresh tofu. All fresh tofu plants are small and usually process in the range of 100 to 200 pounds of beans per day. Because of the wide difference in scale of operation the retail price of frozen tofu is the same or even a little less than fresh tofu. While the frozen tofu plants have adopted more modern equipment than any of the other food processing plants, there is still much room for further modernization and improvement in efficiency of operation.

“The owner of the Suwa Plant recognizes the need for further research and development and made the following suggestions in the order indicated.

“1. Improve the freezing process—to produce an elastic type material in less time.

“2. Use of centrifuges for classification of original extract and also perhaps to concentrate the curd. Dorr thickener should be considered at the stage.

“3. Mechanization of trimming the tofu cakes to size and shape. Common problem to all frozen tofu makers.

“He did not make any suggestions on where research should be done, but mentioned of a certain person in Osaka Prefectural Institute of Industrial Promotion, Dr. K. Nakajima, who specializes in frozen tofu chemistry. Also mentioned Irie Co. of Osaka, which he suggested as a place for developing trimming and packing equipment. Following is a flow diagram of the process for making frozen tofu.” Address: 1. Director, Misuzu Co., Nagano City; 2. Director, Daiya Co., Suwa City. Both: Nagano prefecture, Japan.

1109. Smith, Allan K. 1958. Use of United States soybeans in Japan. *USDA Agricultural Research Service*. ARS-71-12. iii + 36 p. April. April. Illust. 28 cm. Typewritten.

• **Summary:** An extremely well researched, interesting document based on a survey conducted in 1957 in Japan. Contents: Definitions of Japanese food products.

Introduction. 1. Problems of Japanese food processors in using U.S. soybeans: Food production problems, foreign material, broken and dark-colored soybeans in exports. 2. Analysis of the problems. 3. Research proposals. 4. Miso: Processing, uses, production, composition. 5. Tofu and its modifications: Processing fresh tofu and frozen tofu, aburage. 6. Natto. 7. Hamanatto. 8. Kinako. 9. New products research: Soybean “milk,” fermented cheese, soybean flour and isolated protein for foods, isolated soybean protein. Acknowledgments.

A graph on the front cover (and on p. 6) shows soybean production in the USA from 1938 to 1957 (in millions of acres harvested). Photos show: (1) Drying soybeans before threshing in Japan. (2) Manually operated threshing

machine. (3) Power operated threshing machine. (4) Modern small-scale equipment for cleaning soybeans and grading for size. (5) Straw weaving equipment. Straw bags are used for soybeans, rice, and other farm products. (6) Cooling roasted soybeans and hand cleaning for making kinako. (7) Soybean varieties: Lincoln, White Hilum Iwate, and Acadian (six photos, showing each variety wet and dry). (8) Wooden vats used for fermenting miso; each stands a little taller than a man, and is bound with 4 bamboo hoops. (9) Miso in wooden tubs [kegs] ready for market. (10) Hand assembly of wooden tubs for shipping miso and shoyu. (11) Stone mill for wet grinding of soybeans to make tofu. (12) A modern tofu shop, with boiler, pressure cooker, filter, and precipitation vat. Photos 11 and 12 courtesy of Sugiyama Chemical Research Inst., Tokyo. (13) Deep fat frying of tofu for making aburage. (14) Wooden kegs used for fermenting hamanatto. Stone weights are used to compact the beans during fermentation.

Other figures: (1) Flow diagram of the miso manufacturing process (incl. koji). (2) Table showing total production of miso in Japan (about 1957) as reported by All Japan Miso Industrial Association. Factory made miso consists of: Rice miso 379,000 tonnes (metric tons), barley miso 146,000 tonnes, soybean miso 58,000 tonnes, total factory made 583,000 tonnes. Homemade miso of all types is 391,000 tonnes (67% of factory made). Total factory and home made: 974,000 tonnes. Ingredients used in this grand total: Soybeans 361,000 tonnes, rice 115,000 tonnes, barley 58,000 tonnes, salt 159,000 tonnes. (3) Table showing nutritional composition of rice miso, barley miso, and soybean miso. (4) Table showing composition of sweet miso, salty miso, and enriched miso. (5) Diagrammatic sketch of equipment used in making fresh tofu. (6) Flow diagram of a frozen tofu factory.

Note: The author was in Japan from Oct. 24 to Dec. 24, 1957. The principal localities visited were: Tokyo, Yokohama, Tochigi City, Nagano, Matsumoto, Suwa, Hamamatsu, Nagoya, Kyoto, Osaka, Fukuoka, Kumamoto, Nagasaki, and Sendai. His trip was sponsored by the Agricultural Research Service and the Foreign Agricultural Service of the USDA, and the American Soybean Association (Hudson, Iowa).

Note: This is the earliest document seen (July 2000) that mentions “barley miso”—a type of miso made with barley koji, soybeans, and salt. Address: Head of Meal Products Investigations, Oilseed Crops Lab., NRRL, Peoria, Illinois.

1110. *Journal Star (Peoria, Illinois)*. 1958. Two Japanese scientists here to study soybean processing. Oct. 30. p. A-5. • **Summary:** A large photo shows C.W. Hesseltine and A.K. Smith of the USDA Northern Utilization Research and Development Division [NRRL], and visiting Japanese scientists Tokuji Watanabe and Kazuo Shibasaki. The two Japanese scientists have arrived in Peoria to start a year’s

search for ways to increase the use of U.S. soybeans in Japanese foods—especially tofu and miso. The studies will be conducted under an agreement between the Agricultural Research Service (ARS), the USDA’s Foreign Agricultural Service, and the American Soybean Association. The research is part of USDA’s research and development program to find new outlets for U.S. farm crops.

Dr. A.K. Smith of the Northern Division spent several months in Japan last year studying soybean utilization. He found that Japanese prefer U.S. soybeans for oil-mill processing, which accounts for about half of all Japanese soybeans. The other half is used to make traditional foods, and only a limited quantity of U.S. soybeans are used in this way.

“Dr. Shibasaki is an associate professor in the department of agriculture chemistry at Tohoku University, Sendai, Japan, and an adviser of Miyagi Prefecture Miso and Shoyu Industry Association.

“Mr. Watanabe is chief of the grain processing section of the Food Research Institute, Ministry of Agriculture and Forestry.”

Note: Soyfoods Center owns a copy of this black-and-white photo (8½ by 11 inches); it was a gift of the USDA National Center for Agricultural Utilization Research (Peoria, Illinois), which owns the photo.

1111. Hayashi, Shizuka. 1958. U.S. study by Japanese scientists [Kazuo Shibasaki and Tokuji Watanabe]. *Soybean Digest*. Nov. p. 23.

• **Summary:** Two Japanese scientists are now at USDA’s Northern Utilization Research and Development Division at Peoria, Illinois, where they are investigating the use of soybeans from the USA and other countries in making tofu and miso in Japan.

The two men are: (1) Kazuo Shibasaki, age 41, associate professor at the department of agricultural chemistry, Tohoku University. (2) Tokuji Watanabe, age 41, chief of section of grain processing, Food Research Institute, Japanese Ministry of Agriculture and Forestry. They arrive in Peoria Oct. 18.

“They are working under the joint soybean market development project of USDA’s Foreign Agricultural Service and Agricultural Research Service, and the American Soybean Association” [ASA]. Their living expenses during their 9 months stay in the USA will be paid by ASA. “And their traveling expenses to the United States and back will be paid by the Japanese American Soybean Institute from funds allocated under the market development project.” Address: Japanese-American Soybean Inst., Tokyo.

1116. Asai, Toshinobu; Arima, Kei. 1958. Summaries of papers presented by Prof. Teizo Takahashi and Prof. Kin-ichiro Sakaguchi. Tokyo: Kasai Publishing. 206 p. The lengthy front matter is unnumbered. [584 ref. Eng; jap]

• **Summary:** This work was compiled and published by “The Committee of Commemorative Meeting of 35 Year’s Anniversary of Professor Kin-Ichiro Sakaguchi.” Contents: Foreword, by T. Asai. Chronology of the professional career of Teizo Takahashi (1875-1952; he was Prof. Sakaguchi’s teacher). Chronology of the professional career of Kin-ichiro Sakaguchi (1897-1958). A brief review of the

researches of Prof. Teizo Takahashi (mainly with saké). A brief review of the researches of Prof. Kin-ichiro Sakaguchi. Prof. Takahashi has 190 references, and Sakaguchi has 394 references. Address: Tokyo, Japan.

1117. Chicago Shimpō, Inc. 1958. Chicago Japanese American directory. Chicago, Illinois: The Chicago Shimpō, Inc. 30 cm. [Eng; jap]

• **Summary:** In Japanese characters at the top left of the cover: *Nikkei-jin Shikago Jushoroku*. This directory, which sells for \$1.00, also contains many space ads. On the cover is a photo of the Chicago skyline behind a public park in which there is a white band shell (a bandstand having at the rear a sounding board shaped like a huge concave seashell) and in the distance a fountain.

Page 14: Half-page ad for: “Pacific Trading Co. General importer and exporter. 884 W. Erie St., Chicago 22, Illinois. They also have offices in Los Angeles (119 S. Central Ave.) and New York City (57-10 38th Ave.). Items they import include Kikkoman shoyu, Ajinomoto, and rice.

Page 15: Half page ad for Aji-no-moto (Tokyo, Japan) titled “Mother knows best.” “When it comes to cooking food with hearty, old-fashioned flavor, mother knows best—she always seasons with Aji-no-Moto.” “99+% pure monosodium glutamate.”

Page 19: 1/8 page ad for: “Tanaka Tofu Mfg. Co., 1358 N. Clark (rear). WH 4-3938.” The top 30% of the ad is in English; the rest is in Japanese. Same page: ¼ page ad for Fujimoto & Company, 302 South 4th West, Salt Lake City, Utah. Tel. EMpire 4-8279. Illustrations show: (1) The company’s Kanesho brand; (2) A Japanese woman kneeling behind a porcelain mortar (*suribachi*), holding a wooden pestle (*surikogi*), and using it to grind miso until it is smooth. The top 25% of the ad is in English; the rest is in Japanese. The company also makes and sells koji.

Page 46: Under “Food manufacturers” and again under “Food markets and groceries” are listings (entirely in English) for Tanaka Tofu Mfg. Co. at the address and phone shown above. Plus: “After 2 pm call DI 8-9703.”

Talk with Karl Matsushita, director, Japanese-American National Library in San Francisco. 2008. Feb. 1. He thinks these directories were first published after World War II. His library has only one volume of this periodical published in 1985; he does not know when the first volume was published. The War Relocation Authority (WRA), after World War II, pushed Japanese to relocate in Chicago and the Midwest, where they felt there would be less anti-Japanese sentiment. Address: 1310 N. Wells St., Chicago 10, Illinois. Phone: Whitehall 3-2326.

1118. Dean, R.F.A. 1958. Use of processed plant proteins as human food. In: A.M. Altschul, ed. 1958. *Processed Plant Protein Foodstuffs*. New York: Academic Press. xv + 955 p. See p. 205-47. Chap. 9. [99* ref]

• **Summary:** Contents: General considerations: Early sources of protein for human food, competition for food between man and his domestic animals, vegetarianism and vitamin B-12, protein requirements (of children, of adults). Plant proteins now in use: Foods that can be prepared in the home (cereals, legumes {incl. groundnuts, soybean}, sunflower seed, sesame), plant foods used after factory processing (cereals, legumes, sunflower seed meal, cottonseed meal). Other forms of plant food: Plankton, algae, food yeast, leaf proteins (p. 237-38). Future extensions of the use of plant proteins: The theoretical basis of selection, assessment of the value of foods intended for human consumption, practical measures for the future.

In 1957 some 160,000 tons of soybeans were used to make tofu in Japan. "Magnesium or calcium salts are the precipitants of the curd from the soybean milk; the product is eaten by nearly every family in Japan with its breakfast miso-soup."

During World War II, the attempt was made to introduce soya as a food crop to Uganda. But "no instruction was given in the necessary details of preparation, with the result that the crop was very reasonably declared inedible by the Africans. They retain a violent prejudice against it and are suspicious that it has been added to any food, such as yellow corn meal, that they find distasteful.

"One of the most interesting methods for making soya edible has evolved in Indonesia and was described in full by Van Veen and Schaeffer (1950). It takes advantage of the ability of the mold *Rhizopus oryzae* to grow on the bean and alter its constituents... The product made from soya is called *tempeh kedele* (kedele = soybean)." Details of the production process are given. A description of natto and its composition is also given (p. 218).

The section on algae gives detailed information on chlorella, a type photosynthetic single-cell protein. As early as 1954, Morimura and Tamiya in Japan were experimenting with the used of powdered *Chlorella ellipsoidea* in foods. Note: This is the earliest document seen (Aug. 1997—one of two documents) that mentions the use of algae or other photosynthetic single-cell protein as food.

The section on leaf proteins (p. 237-39) begins: "Protein synthesis is one of the chief activities of the leaf, and proteins are comparable to animal proteins in their amino acid composition (Lugg 1949). The young leaf is especially rich in protein..." Pirie (1953) has suggested a process for recovering the leaf protein from the fibrous residue left after mechanical separation; the protein is usually very difficult to free. Pirie (1953) has also described the likely structure of an efficient plant. "There are also obvious possibilities in such abundant and little-used material as the leaves of sugarcane, cassava, and bananas" (p. 238-39).

The section titled "Sesame" (p. 219-20) states that the Zande people of southwestern Sudan steep the seeds in

water for a few minutes, then pound them lightly to loosen the outer coat. They then dry the seeds and the outer coat is sieved or winnowed away. The seeds are then roasted and ground to a paste, which is sometimes used to make a sauce (Culwick 1950). "The use of sesame as a sweetmeat or condiment is fairly widespread in the Near East. A sweetmeat called *tahinya* or *tahina* is made in the Gezira [Sudan] by cooking the roasted seeds in sugar; sometimes the seeds are crushed before the cooking, and sometimes not" (Culwick 1951). Describes how to make the condiment. Address: Medical Research Council, Mulago Hospital, Kampala, Uganda.

1119. Kawamura, Wataru. 1958. Miso enkaku-shi [History of miso]. Tokyo: Zenkoku Miso Kogyo Kumiai. 817 p. Illust. 22 cm. [96 ref. Jap]

• **Summary:** The definitive work on the subject. Pages 187-213 list all early Japanese books mentioning miso, with a summary of what each says about it. Contents: Preface. Part 1. Tradition of miso (p. 1-228). Chronological table of miso history. Introduction (p. 1). Outline (p. 9). 1. Transportation in China and Japan in ancient times (p. 19). 2. Jiang in China (p. 29). 3. Jiang in the *Ch'i-min yao-shu* (p. 37). 4. Ancient Japan (p. 50). 5. The *Kojiki*, the *Nihonshoki* and miso (p. 55). 6. The Asuka and Hakuho periods (p. 66). 7. The Nara period (710-784 A.D., p. 72). 8. The Heian period (794-1160, p. 85). 9. The Kamakura period (1185-1333, p. 106). 10. The Muromachi period (1338-1573, p. 125). 11. The Momoyama period (1568-1600, p. 148). 12. The Edo period (1600-1868, p. 158). Appendix 1. Collections of old miso information (p. 187-213). Appendix 2. Old miso cookery (p. 215-228; recipes names and general descriptions of how to prepare them but with no amounts given).

Part 2. Local folk records of miso (miso in various prefectures from Hokkaido to Kagoshima-ken, p. 229-461).

Part 3. History of miso regulation (p. 463-815). 1. Early history of regulation (p. 463). 2. Intensification of regulation during World War II (p. 468). 3. National Miso Industry Association (p. 477). 4. Economic regulations and the new economic systems (p.494). 5. Regulatory activities of the Federation (p. 520). 6. Enforcing the *ichigen-teki* regulation (p. 543). 7. Organizing the system of production and supply (p. 555). 8. Methods of doing business (p. 567). 9. Regulation guidelines for processing miso (p. 582). 10. Consolidation of businesses (p. 622). 11. The Emperor's visit (p. 638). 12. Regulation of the controlled companies (p. 641). 13. Management after the war (p. 665). 14. Pressing conditions of miso and food (p. 694). 15. Discontinuance of *kokka sodo in ho* (national order of total mobilization, p. 723). 16. Start of the public organization for food rationing (p. 729). 17. Effect of food rationing on miso (p. 747). 18. Discontinuance of the public organization ("Kodan," p. 765). 19. National Miso Industry Association

(p. 728). 20. Today's miso fermenting technology (p. 798).

21. Conclusion.

Note: A translation of this book into English would yield many heretofore hidden treasures for English speakers.

Address: Miso teacher, 2-4-7 Kugenuma, Tachibana, Fujisawa-shi, Kanagawa-ken 251, Japan.

1120. Koyanagi, Tatsuo; Sato, Mitsuko. 1958. Miso no eiyô zôkyô ni kansuru kenkyû. I. Soruburu tenka miso-chû no B-12 oyobi mechionin ganryô [Studies on the enrichment of "miso". I. Vitamin B-12 and methionine contents of "miso" fortified with viscera solubles]. *Eiyo to Shokuryo (J. of Japanese Society of Food and Nutrition)* 10(6):269-71. [4 ref. Jap; eng]

• **Summary:** The fish viscera solubles were added before fermentation. If less than 2% by weight, no fishy smell appeared in the final product.

1121. Motoyama, Tekishu. 1958. Inshoku jiten [Encyclopedia of food and drink]. Tokyo: Heibonsha. 604 p. Illust. 27 cm. [Jap]

• **Summary:** Includes listings for the following soy-related terms: Aburage (deep-fried tofu pouches), aemono (Japanese-style salads), agedashi-dofu, daizu (soybeans), dengaku, fu (wheat gluten; but the term "seitan" is not listed in this book), ganmodoki (tofu burgers), gisei-dofu, goma-dofu (sesame tofu), goma-miso (sesame miso), inari-zushi, iri-dofu (scrambled tofu), kenchin-jiru, miso, namemiso, natto, oboro-dofu (soymilk curds), oden (stew), okara, shira-ae (tofu salad), shoyu, sukiyaki, tekka, teriyaki, tofu, tonyu (soymilk), tsuto-dofu, unohana (okara), yakimiso (broiled miso), yuba.

Separate entries, with detailed information, are given for some of the above word or terms.

1122. Motoyama, Tekishu. 1958. Inshoku jiten: Tekka miso [Encyclopedia of food and drink: Tekka miso (Document part)]. Tokyo: Heibonsha. 604 p. See p. 396. [Jap]

• **Summary:** Tekka miso is a type of finger-licking-miso (*name miso*). Ingredients (like roasted soybeans, chopped burdock root, etc.) are mixed into a regular red miso, then add to your own taste, gingerroot, sugar, and/or barely malt syrup (*ame*). Finally everything is sautéed / cooked [often for quite a while] in sesame oil.

Some gourmets love to have this special miso made with added minced red chili peppers to make it a little spicy.

1123. Richards, Janet; Richards, Charles. 1958. Basic Chinese and Japanese recipes. 3rd ed. rev. and expanded. San Francisco, California: City Lights Books. 75 p. Index of recipes. 17 cm.

• **Summary:** Contents: Introduction (General. For epicures, vegetarians, and dieters). Chinese recipes. Japanese recipes. General information: Buffet, party foods & hors d'oeuvres.

To brew tea. Special imported ingredients. Where to get ingredients & equipment.

Introduction: "Most of the recipes in this book appear constantly on the menus of the Chinese and Japanese restaurants of San Francisco, New York, and a few other cities that have a population segment with Chinese or Japanese ancestry." Many recipes call for "soy sauce" and up to 1 teaspoon "MSG powder."

The section "For epicures, vegetarians, and dieters" states: "Of the special foods of the Orient, the most versatile is the soy bean. The number of widely differing foods made from soy beans is very large, including bean thread, noodles, soy sauce, soy milk with its derivatives such as dofu, the fermented nam yu and fu yu of China and miso of Japan. Western food technology has also added to the list."

Soy-related recipes—Chinese: Lo han chai (with dofu and seaweed, p. 19-21). Dofu with oyster sauce ("1 block of Japanese tofu, or 2 cakes of Chinese tofu," p. 22). Steamed fish with dofu (p. 29-30). Chicken in soy (with 1 cup soy sauce, p. 31-32). Chinese sauce [commercial]: Foo yü (sharp thick sauce [fermented tofu]). Jeung yow (soy sauce).

Note: This is the earliest English-language document seen (Feb. 2007) that uses the terms "nam yu" or "fermented nam yu" or "Foo yü" to refer to fermented tofu.

Japanese recipes: Miso soup (with tofu. Miso is "fermented soy beans," p. 48). Konbu salad (with soy sauce, p. 49). Egg plant with miso (p. 50). Turnips in soy (soy sauce, p. 50). Misoyaki (p. 54-55). Joints of chicken teriyaki (with Teriyaki sauce, p. 56). Beef sukiyaki (with tofu, p. 59-60). Beef teriyaki (cook on a hibachi, p. 60). Teriyaki sauce (p. 61; Ingredients: ½ cup table syrup {light cane molasses}, 1 quart shoyu {high quality Japanese soy sauce}, 3/4 lb. sugar, 2 pieces dashi konbu {dried kelp} 6 inches long, ½ teaspoon MSG powder, 2 tablespoons sake). Quick teriyaki sauce (p. 61; Ingredients: 3/4 cup soy sauce, 3 tablespoons sake {or sherry}, ¼ cup sugar, 1 teaspoon grated ginger, ½ tsp. MSG powder). Buta dofu (with "soy bean curd," p. 63).

Special imported ingredients (p. 68-71): Japanese—Canned foods: Bean curd, prepared black soy beans. Packaged foods: Miso (the light variety, fermented soy bean paste). Bottled foods: Fuyü (Chinese bean cake; Order top quality such as Quong Hop brand). Shoyu (soy sauce; Order top quality such as Kikkoman, Higeita, or Marukin). Chinese—Bottled foods: Soy sauce. Black beans (Dow Shee; for black bean sauce).

1124. Shih, Shêng-han. 1958. A preliminary survey of the book *Ch'i Min Yao Shu*: An agricultural encyclopaedia of the 6th century. Peking, China: Science Press. iv + ii + 107 p. No index. 21 cm. 2nd ed. 1962. [Eng]

• **Summary:** A discussion in English of the contents and significance of this key Chinese agricultural work. Contents: Preface. The Book *Ch'i Min Yao Shu*. Analysis of its source books. Part I: Original material in the *Ch'i Min*

Yao Shu. Realisation of the importance of proper choice of season and soil. Cultivation of cereals. Culinary vegetables (Chiang ts'ai or soya hydrolysate conserves, p. 53-54). Fruit trees. Timber woods. Other economic plants (fiber crops, tinctorial plants). Animal husbandry. Domestic economy: Food processing (refining table salt by recrystallization, preparation of fine starch from cereal, saccharification of starch to prepare "barley sugar," fermentation [alcoholic fermentation, acetic fermentation, chiang {incl. soybean chiang; protein hydrolysates, p. 84-87}, shih {soy nuggets, interrupted and melanised protein hydrolysates, p. 87-88}, tsü {pickles, lactic fermentations from intrinsic carbohydrate}, cha {pickles, lactic fermentation from added carbohydrates}, lo {cheese lactic fermentation with casein}], fu and lah [jerked and salted meat]), other technical instructions for commodities of daily life (detergents {saponins}, extraction of pigments from bastard-saffron, dyeing with vegetable pigments, heating to accelerate "drying" of oils, glue-making, preparation of cosmetics). Part II: The influence of the *Ch'i Min Yao Shu* on agricultural science in China. Epilogue. Address: PhD (London), Prof. of Plant Physiology, Northwestern College of Agriculture [Wukung, Shensi], China.

1125. Tamiya, Hiroshi. 1958. The koji, an important source of enzymes in Japan. In: Proceedings of the International Symposium on Enzyme Chemistry; Tokyo and Kyoto. Tokyo: Maruzen Co. Ltd. 541 p. Held 15-23 Oct. 1957 in Tokyo and Kyoto, Japan. See p. 21-24. [17 ref]

• **Summary:** "Etymologically the word Koji is an abbreviation of Kabi-tachi meaning something like 'Bloom of Mold,' and, as a matter of fact, the essential part of Koji is the mold *Aspergillus oryzae*, which is grown on steamed rice or other cereals and sometimes on steamed pulses. In the brewing of the Japanese rice-wine saké, Koji has long been used as the 'malting' agent to convert rice starch into fermentable sugar."

It is "no exaggeration to say that the dietary life of Japan cannot exist without Koji or the mold *A. oryzae*. At present the foods and drinks processed with this agent are being consumed at the rate of about 1,000 million U.S. dollars each year, and the taxes taken from it run up to more than 500 million U.S. dollars each year, which is as much as 20 per cent of the total national budget of our country [Japan; Sakaguchi 1957].

"Historical documents show that Japan learned the use of Koji from China more than 1700 years ago... But the real understanding of the nature and the mode of action of Koji became possible only in the latter half of the 19th century when our country opened her door to Western civilization. It was with the initiation of scientific studies of Koji at this dawn of a new age that enzymology in Japan made its start.

"Soon after the Meiji Restoration in 1868, some governmental colleges were established for conducting

higher education of western science and technology. As the teaching staff of these colleges a number of scientists were invited from Western countries. The mold *A. oryzae* was first isolated from Koji in 1878 by a teacher of natural history from Germany, Dr. Ahlburg*, and the fact that the mold has a strong diastatic activity was first made clear in 1881 by a teacher of applied chemistry from England, Dr. Atkinson **. (Footnote: *Ahlburg, H., and Matsubara, S., *Tokyo Iji-Shinshi* 24, 12 [1878].) (Footnote: **Atkinson, R. W., *Tokyo Imp. Univ., Sci. Dept.* 6,1 [1881]; *Proc. Roy. Soc.* (London) 32,299 [1881].)"

The first Japanese scientist to become deeply interested in Koji was Jokichi Takamine. He "eventually succeeded in increasing considerably the diastatic activity of the mold. Having heard that the malting process using mold activity had never been practiced in occidental countries, an ambitious idea occurred to him, the idea of introducing the method into those countries, and with this idea he went to America in 1890. The demonstration he made there was a successful one, but unfortunately his project could not be realized due to the strong opposition of the manufacturers of malt. Undeterred by this failure he soon started an entirely new project, again using Koji-mold, but this time preparing from it a drug having a strong digestive activity*. The procedure he adopted was to grow Koji-mold on [wheat] bran, and to extract the mixture with water, from which the enzymes were precipitated with alcohol. The drug was named Takadiastase after his name Jokichi Takamine, the name which gained world-wide fame not only from this brilliant invention, but also through his later discovery of the adrenal hormone, adrenaline. (Footnote: *Takamine, J., U.S. Patent, 525823, 525825 [1894].)

"As Takadiastase gradually found a larger market, this commercial preparation or its origin *A. oryzae* also became a popular material for the study of enzymes in biochemical laboratories. The more it was investigated, the more varieties of enzymes were found in it. Since the early twentieth century it thus became one of the most popular research objects used in the study of enzymology*. (Footnote: *Tamiya, H., and Morita, S., *Bibliographie von Aspergillus*, *Botan. Mag.* (Tokyo) 43, No. 506 [1929] to 44, No. 524 [1930].)" Address: The Inst. of Applied Microbiology, Univ. of Tokyo and Tokugawa Inst. for Biological Research, Tokyo, Japan.

• **Summary:** Page 10: tautjo [Indonesian-style miso], tauge [soy sprouts].

1127. Hayashi, Shizuka. 1959. Seek suitable U.S. food varieties [of soybeans]. *Soybean Digest*. Jan. p. 25-26.

• **Summary:** “Nagano prefecture with about 320 miso manufacturers is the largest miso producing area in Japan. Its annual output is approximately 140,000 tons, more than one-fourth of the total Japanese production. Nagano miso is popularly known as ‘Shinshu miso.’ It is lighter in color than the miso produced in other areas.”

Miso made from U.S. soybeans sells for a lower price than that made from Japanese or Chinese soybeans. “The biggest objections to U.S. soybeans were that they contained morning glory seeds, corn and other foreign material not found in beans of other origin. U.S. soybeans take much longer time in cooking to obtain the required softness. Due to the extra time required in steaming the color of the miso produced becomes darker. Further, the irregularity in size of the U.S. soybeans causes unevenness in softness when they are cooked. Broken beans are objectionable for this reason. Above all, the ‘taste’ of the soybeans after they are cooked is claimed to be unsatisfactory as compared with other beans, and this affects the sweetness or flavor of the miso produced.”

Japanese miso makers used to import significant amounts of soybeans from China, but since the breakoff in trade between Japan and China last April, Chinese beans are no longer imported to Japan. So manufacturers of miso and tofu will have to rely more on U.S. soybeans. “Even the largest frozen (dried) tofu makers in the Nagano area are using U.S. soybeans.” They met recently in Nagano city to discuss ways of getting better quality soybeans from America. A photo shows Mr. Hayashi speaking at this meeting. Address: Managing Director, Japanese American Soybean Inst., Nikkatsu International Building, No. 1, 1-Chome, Yuraku-cho, Chiyoda-ku, Tokyo, Japan.

1128. Nakano, Masahiro. 1959. Miso to shōyu [Miso and shoyu]. *Shokuhin Kogyo (Food Industry)*. Feb. p. 45-57. [19 ref. Jap]

• **Summary:** One graph shows miso production in Japanese factories from 1930 to 1955, and total and total supply in Japan from 1950-55. The difference between factory production and total supply would be accounted for by home production or imports. Factory production was about 590,000 tonnes (metric tons) from 1930 to 1940. It dropped during World War II, reaching a low of 200,000 tonnes in 1947. By 1955 it had recovered to about 500,000, but total supply was about 900,000 tonnes.

A second graph shows shoyu production in Japanese factories from 1930 to 1955 and total supply in Japan from 1950 to 1955. Factory production was about 1,040,000 tonnes from 1930 to 1940. It dropped during World War II, hitting a low of about 400,000 tons in 1947. By 1955 it had risen to about 1,180,000, surpassing the pre-war high of about 1,080,000. Total supply in 1955 was about 1,350,000. Thus in 1955 total miso supply was about 180% of factory production, whereas total shoyu supply was about 14%

more than factory production. Miso factory production never surpassed its pre-war high. After the war, 35% of the miso and 15% of the shoyu was homemade, but thereafter it has decreased steadily. The rest of this article is mostly about the nutritional benefits of miso and shoyu.

Miso and shoyu were developed because of our need for salt. In the West, salt was also important. The Latin word for salt is salsa [actually, sal], and this word is the origin of the word salary, the payment for workers. The word sauce also stemmed from sal. Address: Shokuryo Kenkyujo Hakko Shokuhin Bucho.

1129. Nakano, Masahiro. 1959. Miso [Miso]. *Shokuhin Kogyo (Food Industry)*. Feb. p. 5-7. [Jap]
Address: Shokuryo Kenkyujo Hakko Shokuhin Bucho.

1130. Ohsawa, George. 1959. La philosophie de la médecine de l'Extrême-Orient: Le livre de jugement suprême [The philosophy of East Asian medicine: The book of supreme judgment]. Paris: Librairie Philosophique J. Vrin. 207 p. Feb. 16. No index. 20 cm. [Fre]

• **Summary:** The author's name on the title page is given as “Nyoiti Sakurazawa (Ohsawa).” Contents: Foreword. Dedication: To my dear Dr. A. Schweitzer. Preface (written by G. Ohsawa on 18 Jan. 1956 at the station of the Protestant Mission at Andéndé, French Equatorial Africa (A.E.F.)). 1. Introduction: Medicine or faith? 2. A practical and dialectical classification. 3. The unique principal of science and the philosophy of East Asia. 4. The origin of man. 5. The medicine of East Asia. 6. The order of the universe and the constitution of man. 7. The supreme faculty of judgment. Appendixes: I and II. Practical guide to East Asian medicine: Gives addresses in France, Germany, Switzerland, Belgium, USA (Michio Kushi, 420 W. 119th St., New York 27, New York), Brazil (Tomio Kikuchi, rua Fugandes, 154, Liberdade Centro, Sao-Paulo), Japan (Nippon C.I., 8 Kasumi-cho, Minato-ku, Tokyo).

On p. 46 Ohsawa mentions miso (*la pâte de soya, de blé ou de riz, pâte tout-à-fait végétale,...*).

Note 1. This is the earliest document seen (Jan. 2009) concerning the soyfoods movement in Latin America; Tomio Kikuchi was a pioneer in Brazil.

Note 2. This is the earliest document seen (Oct. 2005) that mentions Michio Kushi.

1131. Yoshii, Hisao; Ishihara, Akiyoshi. 1959. [Studies on soybean koji. I. On the protease activities of miso-dama koji]. *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 37(3):110-13. English-language summary on p. 12 of this issue. [9 ref. Jap; eng]
Address: Inst. of Food Technology, Aichi prefecture, Japan.

1132. Kalnay, Francis. 1959. Soybean has all the answers (or nearly all). *House Beautiful* 101:174-75, 207-12. May.

• **Summary:** The opening 2-page spread contains photos of many commercial soyfood products available in America at the time: Dr. Fearn's Soy-O pancake flour (one with whole wheat and soya, and the other with just wheat and soya), Pure soya bean powder, and Soya bean granules, Wuest's soya-protein bread, Wuest's cookies, Wel-Pac kinako [roasted soy flour], Yamasa shoyu, Kikkoman shoyu, Oliver Tonkatsu Sauce (Tonkatsu are breaded pork cutlets), Hain soy oil (cold pressed), Amoy soy sauce, Prosperity soy sauce, Golden Sang Chan soy sauce, Madison Zoy-Koff, Hime aka-miso (Pacific Trading Co.), Hime yakidofu, Hime frozen bean curds, Delicious Edamame (Packed by Tokai Kanzume Co. Ltd., Nagoya, Japan), Quong Hop & Co. bean cake [tofu], Schiff soy lecithin, Oriental food shop black soybeans, Climax wheat and soy pure egg noodles (The Pfaffman Co., Cleveland, Ohio), and Prince Veta-Roni (Mezzani or Spaghetti; Prince Macaroni Co.).

The subtitle reads: It's a choice gourmet food. It's as nutritious as vitamin pills. It comes in a dozen forms and makes a hundred dishes.

The author uses soy-related words in a very modern way: "Have you ever noticed the way people who know food pronounce the simple word 'soy'? Their facial expression changes instantly, and their tone of voice turns positively lyric. There are two serious reasons for their extraordinary respect for a bean so little and so innocent. The soybean is enormously rich in protein. This wealth of protein is apparent in both quality and quantity... And because soy oil is high in unsaturated fatty acids, it fits well into today's popular low-cholesterol diets.

"In our country soy is relatively new... Soy is the most versatile legume imaginable... The glittering star in soy's troupe of players is soy sauce (also called soya and shoyu)... The soy food industry is still in its infancy in the U.S. Yet the variety of soy products available is impressive."

Note 1. This is the earliest publication seen (April 2001) that mentions Quong Hop & Co. in connection with tofu.

Note 2. This is the earliest English-language document seen (Aug. 2003) that contains the term "soya-protein" (or "soya-proteins").

1133. **Product Name:** Hime Brand Aka-Miso.

Manufacturer's Name: Pacific Trading Co. (Importer, Distributor). Made in Japan.

Manufacturer's Address: San Francisco, Los Angeles, New York.

Date of Introduction: 1959. May.

New Product–Documentation: Francis Kalnay. 1959. House Beautiful. May. p. 174-75. "Soybean has all the answers." Photo of the label.

1134. Claiborne, Craig. 1959. Food: Oriental fare. Another Chinese restaurant opens—Menu lists cellophane-wrapped fowl. *New York Times*. June 19. p. 16.

• **Summary:** This is a review of the Chinese restaurant Esther Eng (1085 Second Ave., near 57th St., Manhattan, New York City). One appetizer is listed on the menu "as cellophane wrapped chicken. To prepare it, small bits of chicken are marinated in a mixture of hoisin sauce and peanut butter, wrapped in cellophane and deep-fried. Hoisin sauce is an inscrutable mixture of spices and plums."

Note: This is the earliest document seen (Sept. 2008) in all major U.S. newspapers digitized by ProQuest that uses the term "hoisin sauce," which is typically sold in bottles or cans and has soybeans as its main ingredient. The new term appears in 805 documents between 1959 and the present, including this three in 1939, 17 in the 1960s, etc.

1135. Hayashi, Shizuka. 1959. Miso makers protest F.M. in U.S. beans. *Soybean Digest*. June. p. 26.

• **Summary:** On May 9, all 49 directors of the All Japan Miso Industry Association signed a petition protesting the unacceptably high levels of foreign material [F.M.] in U.S. soybeans exported to Japan. The greatest problems are with corn, morning glory seeds, and split beans. Morning glory seeds must be picked out (usually by hand) and burned in accordance with Japanese food and hygiene laws. Address: Japanese American Soybean Inst., Nikkatsu International Building, No. 1, 1-Chome Yurakucho, Chiyoda-Ku, Tokyo, Japan.

1136. Williams, Robert R.; McGanity, William J.; Combs, Gerald F.; Kertesz, Z.I. 1959. A nutrition survey of the armed forces of the Republic of Korea. *J. of Nutrition* 68(Supplement 1):1-80. June. See p. 12-13. [42 ref]

• **Summary:** An endless variety of soups (which are thick like U.S. stews) are served, mostly in winter; they usually contain some soy products. Seaweed is a delicacy, used in cooking or served with soy sauce. A recent survey based on food disappearance, conducted by the USDA Foreign Agricultural Service, calculated average civilian calorie intake at about 2,058 per day, of which 81% comes from cereals, 5% from meat, fish, eggs, and milk, 4% from oilseeds, oils and fats, 4% from white and sweet potatoes, 2% from fruits and nuts, 1.6% from vegetables and seaweed, and 1% from sugar (p. 8).

The typical formula for Korean Army soup, in grams per man for one meal, is: Cabbage 70, soybean curd [tofu] 30, soybean mash [probably soybean paste, doen jang] 30, large white radishes [*daikon*, *Raphanus sativus*] 30, red pepper mash [kochu jang] 10, salt 10, onion 3, melchi (small dried fish) 2, and red pepper powder 1 (p. 9).

The section titled "Soybeans and soybean products" (p. 12-13) states: "Soybean products are extensively used in the Korean diet and by the ROK Armed Forces." Soybean curd (Japanese: tofu), which is precipitated with calcium or magnesium salts, is used almost daily in making thick soups. It is also "fried in deep fat and used in a composite

ROK Army food called 'seasoned vegetable and bean curd' containing small fish (12%), soy sauce (23%), bean curd (25%), seaweed (16%), dry radish (14%), and red pepper, sugar, and cottonseed oil. This latter product was observed in one ROK Army mess only."

Soybean sprouts are a favorite and very nutritious civilian food in Korea, but their "use in troop feeding is limited, presumably because of the low germination of the soybeans available at the time of our visit."

Fermented soybean sauce is a widely used and nutritious seasoning.

"Seasoned soybeans are a delicacy much liked by Koreans and obtained by boiling soybeans in sweetened soybean sauce. The weight proportions used in the preparation are said to be cooked and roasted soybeans 70%, soybean sauce 25%, and sugar 5%.

"Soybean mash [doen jang] and pepper mash [kochu jang] are fermented foods popular in this part of East Asia." First barley koji is made. "The barley is then milled together with cooked soybeans and salt, and fermented in concrete tanks for about 3 months. The finished paste-like product is rich in Amino acids and protein and is extensively used directly and in cooking. Pepper mash is a similar preparation which contains in addition 10% powdered red pepper." Address: National Institutes of Health, Bethesda, Maryland.

1137. Iwashita, Seishichi. 1959. [Studies on the spoilage by acid increase (sampai) of miso. III. Composition of the volatile acids of sampai miso and normal miso]. *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 37(7):264-67. July. English-language summary on p. 25 of this issue. [3 ref. Jap; eng]

Address: Asahi Chemical Indust. Co., Japan.

1138. Claiborne, Craig. 1959. Fit for a Kentucky colonel. *New York Times*. Aug. 2. p. SM35.

• **Summary:** Bourbon is so named because it was first distilled from corn in Bourbon County, Kentucky. Contains five recipes that call for Bourbon as an ingredient. One of the recipes, titled "Lamb kebabs hoisin" calls for "½ cup hoisin sauce,... 1 teaspoon soy sauce," etc. The two sauces are used in a marinade for the meat.

1139. Hayashi, Shizuka. 1959. Japanese users react to U.S. beans. *Soybean Digest*. Aug. p. 34.

• **Summary:** "The fact that soybean in Japan are used 100% as food should by now be well realized by those in the soybean industry as well as by the growers. It has been repeatedly emphasized that soybean trade between the United States and Japan is to be based on the complete understanding of this fact."

One of the first projects of JASI "was to find out the causes of the unpopularity of U.S. soybeans among the

Japanese users, especially the manufacturers of soybean products." The major complaints concern excessive "foreign material, broken beans, irregularity of sizes, and mixture of different varieties received. All these problems have been time and again called to the attention of interested parties in the United States." Considerable improvement has been made but there is still work to do. "The writer believes in the very near future specific varieties can be chosen for different food manufacturers and business will be done on the basis of [those] specific varieties.

A list gives the specifications for soybeans desired by Japanese oil processors (6 specs), miso manufacturers (3 specs), shoyu makers (3), tofu makers (2), frozen tofu makers (1), kinako makers (3), and natto makers (3). For example, for miso: (1) Soybeans with white hilum with rich protein content and of big size are preferred. (2) Soybeans should be stored separately by varieties. (3) Foreign material, especially seeds of other plants, sand and stones should be eliminated.

And for tofu: (1) Soybeans should be rich in protein content with thin seedcoat. (2) Soybeans should be free from foreign material, especially that of poisonous seeds of other plants.

A photo shows Shizuka Hayashi tasting miso made from the U.S. soybean varieties Dorman, Mamloxi, and Jackson at the Inamari miso factory in Shizuoka city. Arthur Rollefson, U.S. assistant agricultural attache, is also shown. Address: Japanese-American Soybean Inst., Tokyo.

• **Summary:** This articles focus on soya at Yangambi in the Belgian Congo. Content: Introduction. Climatic adaptation: Comparison of the climates in Harbin (central Manchuria) and Yangambi (near the equator), photoperiodic and thermal characteristics of soybeans, comparative study of the behavior of soya at Yangambi and its main zones of cultivation, eco-climatic chart of soya, classification of soybeans (*des sojas*) into fundamental climatic types and

directives for the realization of their introduction to Yangambi. Selection: Classification of the soybean varieties, genetics, and selection. The cultivation of soya. Characteristics of the seed and its utilization: Composition of the seed, Oriental preparations based on soya (soy sprouts, soymilk, tofu, natto, Hamanatto, yuba, miso, soy sauce or shoyu), soy oil and by-products, soybean cake, use of soya in the West. A glance at soybean production. The situation in the Belgian Congo.

The author identified a number of soybean varieties adapted to different ecological zones in the tropics, which helped soybeans spread to tropical countries, especially in Africa. Address: Assistant à la Division des Plantes Vivrières de l'INÉAC, à Yangambi [Belgian Congo].

1142. Smith, Allan K. 1959. Research on the increasing use of U.S. soybeans in Japan. *Soybean Digest*. Sept. p. 62-65.

• **Summary:** "In 1956 the American Soybean Association in collaboration with the Foreign Agricultural Service of the U.S. Department of Agriculture started a market development program on soybeans in Japan."

Late in 1957 Dr. Smith "spent 2 months in Japan studying the products and processes where U.S. soybeans are competing with Japanese and communist Chinese beans." He found that the traditional foods of Japan are processed from whole soybeans, whereas in the USA the use of whole soybeans has, until recently, "received no commercial recognition for food, feed, or industrial application. Also the traditional food processors of Japan value the protein more highly than the oil which is the reverse of the emphasis in this country."

The results of Dr. Smith's investigations were published in April 1958 under the title "Use of United States soybeans in Japan." "The problems raised by the Japanese are briefly summarized as follows: 1-Composition: It was generally stated that Japanese soybeans are higher in protein than our soybeans. 2-U.S. soybeans are slower to absorb water than Japanese beans and absorb water unevenly. 3-Our soybeans cook unevenly and consequently they may not support uniform fermentation. 4-Products from U.S. soybeans are darker in color than those made from Japanese soybeans. 5-Food products from U.S. beans do not have as good a flavor as from Japanese soybeans. 6-The Japanese do not like the amount of foreign matter, split and broken beans, and other crop material in U.S. soybeans.

Following Dr. Smith's investigation in Japan, a research project was initiated at the Northern Regional Research Laboratory in Peoria, Illinois. The immediate objectives of the project are: 1-To investigate the reported differences between U.S. and Japanese soybeans and to evaluate their significance. 2-To compare approximately 30 U.S. and 6 Japanese soybean varieties in miso and tofu, two most important Japanese foods, and to determine which U.S. varieties are suitable for making these foods. 3-To study the

processing methods used by the Japanese and to modify their processes for better adaption [adaptation] of our soybeans to their use...

"Two Japanese scientists, Tokuji Watanabe and Kazuo Shibasaki, accepted invitations to come to the Northern Laboratory to work on these projects."

In the 9 months that Dr. Shibasaki and Mr. Watanabe spent at the NRRL they made progress on all the 6 problems listed, though the project is still underway. They found two U.S. soybean varieties, Jackson and Lee, that make tofu very similar to that made from Japanese soybeans. Other promising varieties are Blackhawk, Comet, Dorman, Ottawa, Mandarin, and Acme.

"Composition: It was reported, and generally assumed to be true, that Japanese soybeans were higher in protein and lower in oil than U.S. soybeans. We have accumulated data (all on a moisture-free basis) to determine whether this report is true. Table 1 shows the protein and oil content of eight Japanese soybean varieties grown in various parts of Japan during 1957 or 1958. The name often indicates the area grown: Aomori, Hokkaido Akita, Kumamoto, Miyagi, Nagano, Hagi-Dani, Hokuho, and White Hilum Iwate. These 8 Japanese varieties contained an average of 40.5% protein and 17.2% oil in 1957 and 42.3% protein and 16.8% oil in 1959.

Table 2 shows the protein and oil content of 15 U.S. [and Canadian] soybean varieties grown in various parts of the USA during 1956, 1957 or 1958: Acme, Adams, Blackhawk, Chippewa, Clark, Comet-1, Comet-2, Dorman, Dortchsoy, Harosoy, Hawkeye, Jackson, Lee, Lincoln, and Norchief. These 15 U.S. varieties contained, on average, 41.8% protein in 1956, 40.1% in 1957, and 40.7% protein and 20.2% oil in 1958. Comparing these two tables, Dr. Smith concludes that U.S. and Japanese soybeans contain about the same amount of protein, but that U.S. field-type soybeans contain about 3.7% more oil than Japanese soybeans.

Table 3 shows the maturity group, protein and oil content, and weight in grams of 100 seeds for 33 recommended U.S. and Canadian varieties. This data is based on Cooperative Uniform Soybean Tests. These 33 varieties are grown in all the major soybean growing areas of the USA; Groups 00 to IV inclusive are grown in the North Central States, approximately north of Cairo, Illinois, to northern Minnesota; groups V to VIII inclusive are grown south of Cairo. The 33 varieties, sorted by ascending maturity group, and within each group alphabetically by varietal name are: Acme (00, Canadian), Crest, Flambeau, Capital (0), Comet, Grant, Mandarin, Norchief, Blackhawk (I), Chippewa, Adams (II), Harosoy, Hawkeye, Lindarin, Ford (III), Lincoln, Shelby, Clark (IV), Perry, Scott, Wabash, Dorman (V), Dortchsoy, S-100, Hood (VI), Ogden, CNS-4 (VII), Jackson, Lee, Bienville (VIII), Improved Pelican, J.E.W. 45 [Wannamaker], and Yelanda. This table

shows that the oil content increases slightly as one moves from north to south

Smith then discusses garden- or vegetable-type soybeans. “U.S. vegetable soybeans: There is no clear definition for distinguishing the field-type from the garden-type beans. The distinctive features of the garden beans are in their superiority in flavor, texture, and ease of cooking—properties that make them preferred for food use... Most of our so-called vegetable-type soybeans we are growing in this country are Japanese garden varieties that came directly from that country; the Kim and Kanrich were developed in this country. Serious disadvantages of garden-type beans which restrict production are the tendency to shatter from the pods when ripe and the consequent large loss with mechanical harvesting... the yields of some varieties are also lower than for field beans. It has been stated frequently that the garden-type bean is higher in protein and lower in oil than the field type.

Table 4 shows the protein, oil, weight of 100 seeds in grams and hilum color for 14 “garden-type soybeans” on a dry basis. The source of the data for all the varieties except Kanrich, Kim, and Easycook is the University of Illinois Bulletin 453 by J.W. Lloyd and W.L. Burlison 1939 [“Eighteen varieties of edible soybeans: Their adaptability, acceptability, culture and characteristics”]. “For these data the protein values are no higher than for present-day field types and the oil values are only 0.77% lower” than typical field types soybeans shown in table 3. The weight in grams of 100 seeds, in descending order of seed weight and size, is as follows: Hokkaido 31.9, Funk Delicious 31.7, Willomi 31.1, Jogun 29.9, Emperor 29.7, Giant Green 29.4, Kim 28.7, Imperial 28.4, Kanrich 27.3, Fuji 25.9, Illington 25.9, Higan 23.4, Bansei 21.2, and Easycook 16.2.

Conclusion: It “appears that claims for high protein values for garden type soybeans may be exaggerated.” A portrait photo shows A.K. Smith.

Note 1. This is the earliest document seen (Dec. 1998) concerning the breeding or selection of soybean varieties for food use—in this case tofu for Japan.

Note 2. This is the earliest English-language document seen (Oct. 2001) that mentions “garden-type soybeans” or “vegetable-type soybeans.” The two terms as synonyms. Address: NRRL, Peoria, Illinois.

1143. *New York Times*. 1959. Food news: No tipping allowed in Red China. Oct. 26. p. 32.

• **Summary:** Mr. Gerald Clark, a Canadian, and author, and a correspondent for the Montreal Star, has just returned from China. He said that his favorite dish was Peking duck, a specialty of that city.

“It’s really something,” he said. The ducks are specially fed and spend the latter part of their short lives tethered. It seems cruel, but the result is an unusually tender and succulent dish. After roasting, the duck is carved into very

thin slices covered with wonderfully crisp skin. The pieces are wrapped pancake fashion in a ‘doily’ made of wheat flour, and dipped in hoisin sauce and scallions.”

1144. Richard, C. 1959. Le chao: Fromage de soja fermenté, salé et alcoolisé [Chao: A fermented soy cheese, containing salt and alcohol]. *Societe des Etudes Indochinoises, Bulletin (Saigon)* 34(3):317-24. Oct. [14 ref. Fre]

• **Summary:** Contents: Introduction and types of soyfoods in Vietnam. Preparation of Chao. Chemical composition. Culinary uses of Chao: In vegetarian diets, in regular diets. Summary.

Chao, a “cheese analog,” is widely consumed in Vietnam. It is prepared as follows: Coagulate soymilk with vinegar or nigari. Press the tofu well, cut it into cubes or parallelepipeds from 2 to 4 cm on a side, and let it dry on mats for 20-24 hours. Salt it and leave it for 24-48 hours. Then wash the tofu cubes to remove the excess salt. Put the cubes in pots of glazed stoneware with rice wine; leave for 20 days. Photos show: (1) Tofu in its earthenware pot. (2) Overhead view of the cubes of chao surrounded by the brining liquor. Note: The author makes no mention of fermentation, but it probably happened while the tofu.

A table gives the chemical composition of five samples of Chao sold in South Vietnam. They contain on average: moisture 76%, salt 11%, alcohol 5%, protein 7%, oil 3.5%.

Culinary uses: In Vietnam, Chao—a true food condiment—serves to season various dishes and to aromatize or perfume (*aromatiser*) certain sauces. Because of its slightly tart and salty taste, it is much prized by vegetarians, for this soya cheese (*fromage de soja*) contains only vegetable proteins (*protéines végétales*). In vegetarian diets, it is incorporated into rice dishes and rice-based soups, and often accompanies various vegetables—such as cucumbers. Because of its low price, it is often used in place of *tuong* sauces—which are also made by enzymatic fermentation of soybeans. Among the upper classes in Vietnamese society, Chao is mixed with pimento, vinegar, sugar, and oil to make a tasty condiment called *Chao tói ớt*, which is used to enhance the taste of dishes that contain no meat or fish. On the 1st and 15th days of each month, when Buddhists eat no meat, garlic, or onions, they enjoy this tasty condiment.

In regular diets, one usually adds sugar, salt, oil, and pimento. The condiment thus obtained is used to add aroma to roasted or broiled meats, rice noodles, and various legumes. Sometimes it is used as a basting sauce for small pieces of chicken or pork. Address: Docteur en Pharmacie, Chef de Laboratoire, Institut Pasteur de Saigon.

• **Summary:** UNICEF stands for the United Nations International Children's Emergency Fund. Appendix 3 (p. 48-51) titled "Data on some nutritious food products that have been developed in Asia and the Far East," discusses Saridele, groundnut extract curd [tofu made from peanut milk], Indian Multipurpose Food (MPF, developed by CFTRI), miso, natto, and tempeh.

"Saridele" is the name that has been given to a spray-dried soybean extract combined with an extract of sesame, or peanut, with or without the addition of malt. Vitamins and calcium are added to saridele in order to make its nutritive value similar to that of cow's milk or to enhance its nutritive value. Flavorings such as vanilla or chocolate are also used, which make the product highly acceptable.

"A plant having a capacity of about 800 kg./day has been erected in Indonesia with the financial assistance of UNICEF and the technical assistance of FAO. Saridele is manufactured from a mixture of soybeans and decorticated sesame in the proportion of 4:1. Malt extract from maize may be used to replace 50% of the cane sugar used. Soybean and sesame are soaked for about six hours and then disintegrated finely, together with 7 volumes of hot water. The slurry is stirred vigorously and then filtered. The filtered liquid is heated under pressure for 10 minutes at 120°C., then flashcooled and formulated with Vitamin A, in oil solution, and malt, if desired. The formulated liquid is homogenized, concentrated in a vacuum evaporator to about 22% solids, then spray-dried. The powder finally is sifted and blended with finely ground cane sugar, and calcium carbonate, riboflavin, ascorbic acid and Vitamin B₁₂ added; the mixture may be flavored with vanilla or chocolate." A table compares the nutritional composition of whole dried

cow's milk and Saridele (based on a leaflet from Saridele Ltd., Indonesia). Address: FAO, Rome.

1155. **Product Name:** [Barley Miso].

Manufacturer's Name: Lima Foods.

Manufacturer's Address: Edgar Gevaertdreef 10, B-9830 Sint-Martens-Latem, Belgium.

Date of Introduction: 1959.

New Product–Documentation: Letter from Pierre Gevaert. 1981. Nov. 19; Shurtleff & Aoyagi. 1983. *The Book of Miso*. 2nd ed. p. 233. Probably the first commercial miso company in Europe, they made natural barley miso from 1959-1966, then restarted in Jan. 1981. In late 1981 they were making 1,200 kg/month at plants in Belgium and France.

Note 1. This is the earliest record seen (Jan. 2009) for Lima Foods of Belgium.

Note 2. This is the earliest known commercial soy product made in Belgium, or made by a major European soyfoods company that was still active in Europe during the 1990s.

• **Summary:** Chapter 20, titled “Mainly About Food,” notes (p. 162-63) that sukiyaki is “cooked with soy, water, sugar, vegetables, bean curd...” And sashimi is “dipped in soy...”

“Miso is indispensable in Japanese cookery and is a paste made from beans and fermented rice, used for soups—particularly at breakfast, for preserving, and also as a condiment.”

Buddhism was well established in China and Korea by the fourth century and was introduced into Japan between A.D. 500 and 600. Note: It may very well be that the cultivation of soybeans and their use in food, including fermented foods, were then introduced into Japan.

1158. Egami, Tomi. 1959. *Typical Japanese cooking*. 1st ed. Translated by V.A. McKenzie Skillman. Tokyo: Shibata Publishing Co. Ltd. Exclusive distributors: Japan Publications Trading Co., Ltd (Tokyo). [viii] + 146 p. Illust. (incl. color photos by Yoshikatsu Saeki). Index. 27 cm.

• **Summary:** Foods marked with an asterisk (*) are exported from Japan to the USA. Many recipes include “soy sauce” and monosodium glutamate (Ajinomoto). Soy related recipes include: Aburage * (“fried soy bean curd”—4 recipes). Broiled soy bean curd [*yakidofu*] (3 recipes). Suki-yaki, Yasainabe, Osechi). Chu-miso paste * (“made from soy beans, salt and rice malt [koji], seasoning for miso soup”—2 recipes). Ganmodoki * (“fried soy bean curd and vegetables”—Nikomi oden). Nama-age (“half fried soy bean curd”—Boiled vegetables). Okara (“soy bean curd leftovers”—Yoshino sushi). Red miso paste * (“made from soy beans, salt and rice malt [koji], seasoning for miso soup”—2 recipes). Soy bean (3 recipes). Soy bean curd * (14 recipes, incl. Gizeidofu / Gisei-dofu, p. 39). Soy bean powder * [kinako] (2 recipes; Kinakomochi, Kushi dango). Soy sauce (“Kikkoman”). White miso paste (“made from soy bean, salt and rice malt [koji], seasoning for miso soup”—2 recipes). Worcestershire sauce (Skewer nibblers).

Other interesting recipes include: Amazake. Azuki-sarashian (“red bean powder”—7 recipes). Black sesame seed (in Sekihan). Mochi rice. Red bean [azuki] (Sekihan). Rice cake (“made of mochi rice”). Seaweeds (kanten / agar-agar, kombu / konbu, nori / green laver & purple laver, wakame). White sesame seed. Yamaimo (“Japanese yam”). Tomi Egami was born in 1899. Address: [Japan].

1159. Ogata, Sohaku. 1959. *Zen for the West*. London: Ryder, for the Buddhist Society. 182 p. Illust. Index. 22 cm. [2 ref]

• **Summary:** In the chapter titled “Life in a Zen monastery,” the section on “Food” states that the meals are very simple. Breakfast consists of gruel and pickles. Lunch is rice mixed with barley, miso soup, and pickles. The evening meal is the same as breakfast. On special occasions, an extra dish will be added. Note: The monastery diet is free of animal products (vegan).

Sôhaku Ogata lived 1901-1973. In Japan, he was professor of Zen Buddhism at Hanazono University. During 1956-57 (during President Dwight Eisenhower's second term) he was invited by the U.S. government to be a Fulbright exchange professor and to deliver lectures on Zen Buddhism at Washington University (St. Louis, Missouri) and at the University of Michigan (Ann Arbor). Before returning to Japan, he visited England, The Netherlands, Belgium, Switzerland, France, Germany, Italy, and Monaco; he gave lectures on Zen and Japanese culture in many cities and towns. Address: Shokokuji Zen Monastery, Kyoto, Japan.

1160. Prescott, Samuel Cate; Dunn, Cecil Gordon. ed. 1959. Industrial microbiology. 3rd ed. Revised by Cecil Gordon Dunn. New York, NY: McGraw-Hill Book Co., Inc. 942 p. Illust. Index. 23 cm.

• **Summary:** Chap. 41, titled "Mold enzyme preparations: Uses and products" (p. 666-83) discusses: Mold enzymes: Submerged culture method, continuous tray method for producing mold enzymes, rotating drum method for producing mold enzymes (described by Underkofler et al. 1947), glucose oxidase, uses of mold enzymes (proteases, fungal enzymes). Some mold products: Use in Japan and China, soy sauce (koji from *Aspergillus flavus-oryzae*, Chinese soy sauce, preparation of the "kojies," chemical soy sauce), soy sauce yeasts, tamari, miso, koji. The section on patents (p. 682) cites 15 patents by J. Takamine yet (amazingly) Takamine's name does not appear in the extensive index at the end of the book—though he is considered by some to be the father of industrial microbiology.

The amylo process and a modified amylo process are discussed on pages 864-66. The amylo process is used primarily for converting starch to sugar by the use of selected molds (*Mucor*, *Rhizopus*), some of which have the ability to produce small quantities of alcohol from sugar.

Soy is also discussed on the following pages: Soybean oil and meal are used in the production of vitamin B-12 by *Streptomyces olivaceus* (p. 485-86). In the production of pentonic acids, several drops of soybean oil were used as an antifoam agent (p. 508). In the production of sodium gluconate, small amounts of soybean oil could be used as an antifoam agent, though they decreased the sugar utilization to an impractical value. (p. 594). L-Glutamic acid can be produced in a number of ways. One is by the hydrolysis of wheat gluten, soybean cake, or other protein-rich food material (p. 713-16). The commercial process now being used in Japan employs sweet potatoes as the chief raw material in a one-stage fermentation process with a strain of *Micrococcus* (p. 712-13).

In the chapter on Saccharifying Agents, Takamine is discussed in the section on "Mold bran" (p. 844). "Takamine, in 1914, advocated the use of mold enzymes

(from *A. oryzae*) in the distilling industry. Studies were carried out in distilleries in Canada using his mold-bran preparation (*Taka-koji*) in place of malt to saccharify grains. Although the yields of alcohol obtained through the use of mold bran were reported to be higher than those obtained through the use of malt, the process was not adopted."

A table (p. 857) lists 19 sources of microbial amylase, including Taka-Diastase, made by Parke, Davis & Co., and Alase, made by Takamine Lab. Also in this chapter, in the section on submerged culture of mold amylases, a table (p. 859) shows that soybean meal is used as a protein source in the production of dextrinizing enzyme by *Aspergillus niger* NRRL 337. Address: 1. Sc.D., Prof. of Industrial Biology (Emeritus), Former Head of the Dep. of Biology and Public Health and Dean of the School of Science, MIT; 2. Assoc. Prof. of Industrial Microbiology in the Dep. of Food Technology, MIT (Massachusetts).

1161. Tsuji, Kaichi. 1959. Misoshiru sanbyaku rokujû-go nichi [Miso soup 365 days a year]. Tokyo: Fujin Gaho-sha. 157 p. Illust. 26 cm. [Jap]*

• **Summary:** The author was born in 1907. Address: Japan.

1162. *Soybean Digest*. 1960. USDA research may put more U.S. soybeans in Japanese foods. Feb. p. 20-21.

• **Summary:** Photos show: (1) A.K. Smith, NRRL chemist, and Tokuji Watanabe, visiting Japanese scientist, examining a cake of tofu. (2) Watanabe wet-grinding soybeans to be used in making tofu.

In 1959 Japan imported an estimated 35 million bushels of U.S. soybeans, almost 10 times the quantity imported in 1950. "About half the soybeans used in Japan are eaten as traditional foods, most of which are made in processes that begin with whole soybeans... Recognizing that Japanese whole-bean processors use limited amounts of our soybeans, Dr. Smith recommended studies of U.S. beans in Japanese food processes. The work began at the Northern Utilization Research and Development Division [NRRL] in Peoria, Illinois. Research on miso was performed by Dr. Hesseltine, NRRL microbiologist, working with Kazuo Shibasaki, on leave from Tohoku University, Sendai, Japan. Research on tofu was conducted by Dr. Smith and A.M. Nash of Peoria, working with Tokuji Watanabe, on leave from the Japanese Ministry of Agriculture and Forestry.

"Japanese processors say our beans absorb water, cook, and ferment more unevenly than their own. They also object to foreign matter, split and broken beans, and other crop material in our beans and to the color and 'beany' flavor of products made from them... U.S. soybeans, introduced from the Orient, have for 25 years been bred for yield, oil content, pest resistance, and similar characteristics but not for food processes that begin with whole beans—about half the total use in Japan."

1163. *Cotton Gin and Oil Mill Press*. 1960. USDA research with Japanese foods shows promise for U.S. soybeans: May mean greater exports. 61(6):65. March 19.

• **Summary:** U.S. soybeans are not widely used in Japanese food processes that start with whole beans—even though total Japanese imports of U.S. soybeans in 1959 were estimated at 35 million bushels—almost ten times as many as imported in 1950. Recognizing this, Dr. A.K. Smith of the Agricultural Research Service, recommended studies of U.S. soybeans in Japanese food processes at the Northern Utilization Research and Development Division, Peoria, Illinois. About half of the soybean used in Japan are eaten as traditional foods, and the other half are crushed to make oil and meal. Most U.S. soybeans are crushed. About 20% of the soybeans are used to make miso.

Dr. Clifford Hesseltine and Dr. Kazuo Shibasaki developed a new miso process in which the soybeans are cracked into grits. A photo shows Dr. Tokuji Watanabe (on leave from Japan's Ministry of Agriculture) and A.M. Nash of the Northern Division as they work with typical Japanese equipment and study the process of making tofu from U.S. soybeans.

1164. Hayashi, Shizuka. 1960. Public relations seminar by JASI. *Soybean Digest*. March. p. 20.

• **Summary:** At this seminar JASI taught Japanese manufacturers of soybean [food] products how sales of these products can be much increased through the use of public relations, including marketing research. "This is particularly true of marketing new products." Previously, these very manufacturers have lacked interest in public relations because they "have been enjoying a reasonably profitable business under the funds allocation system, which has afforded them a sort of protection."

At JASI's first seminar on PR and marketing, held recently in Tokyo, about 40 companies and organizations from various parts of Japan participated. "There were two lectures. The first was by Professor Naoyoshi Horikawa on public relations and top management. The other, by T. Shimizu, was on sales promotion. Never in the history of the soybean industry [in Japan] has there been a gathering like this where the so-called 'big shots' of leading organizations sat side by side at the table."

A table shows estimated consumption of soybeans (S) and soybean meal (SM) during 1961 as planned by the Japanese government (tonnes = metric tons). The totals are 1,467 million tonnes of soybeans and 707,000 tonnes of soybean meal. Details: Oil processing: 928,000 S. Livestock feed: 303,000 SM. Tofu and fried tofu: 280,000 S + 20,000 SM. Shoyu: 29,000 S + 200,000 SM. Miso: 130,000 S + 50,000 SM. MSG: 73,000 SM. Other miscellaneous foods: 20,000 S + 40,000 SM. Frozen tofu: 40,000 S. Natto: 30,000 S. Other uses: 21,000 SM. Kinako: 10,000 S.

A large photo shows about 13 Japanese men seated at a long table at JASI's recent public relations seminar. The name and position of each man is given. They represented the following organizations: Miso Association. Tatsuno Shoyu. Shoyu Association. Frozen Tofu Association. Masuko Miso. Address: Managing Director, Japanese American Soybean Inst., Nikkatsu International Building, No. 1-Chome Yurakucho Chiyoda-Ku, Tokyo, Japan.

1165. *Shinshu Miso Kenkyusho Kenkyu Hokoku (Report of the Shinshu-Miso Research Inst.)*. 1960—. Serial/periodical. Shinshu Miso Kenkyusho, 469-6 Nakagosho, Nagano-shi 380, Japan. Vol. 1. March 1960 Annual. [Jap; eng]

• **Summary:** Initially titled *Reports of the Shinshu-Miso Research Institute*. It is now titled *Report of the Shinshu-Miso Research Institute*. It is published in March every year. A 1-year subscription sent by surface mail in 1989 cost \$8.00. Address: Nagano-shi, Japan. Phone: 0262-28-1221.

1166. Hayashi, Uichi. 1960. Nattô ni kansuru kenkyû. XI. [Studies on natto. XI. Manufacture of miso (soybean paste) utilizing natto]. *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 38:258-60. [7 ref. Jap; eng] Address: Osaka Municipal Hygienic Laboratory, Japan.

1167. McLendon, Winzola. 1960. He steers true culinary course now: Gourmet Marshall. *Washington Post*. July 28. p. C10.

• **Summary:** Vice Admiral William Marshall, who divides his time between New York City and Virginia, loves gourmet cooking. He went to cooking school in Yokohama, and today his favorite recipes have Oriental overtones. "He has learned the culinary value of a dash of soya or a bit of hoisin."

He gives several of his favorite recipes including: "Hoisin sauce, a venison marinade." This recipe for the marinade calls for "½ cup Hoisin sauce (comes from Hong Kong, may be purchased in any oriental specialty shop...),... 1 dash Soy Sauce." Mix all seven ingredients to make the marinade.

"Venison in hoisin sauce: Marinate venison in Hoisin sauce [mixture] for 48 hours, turning occasionally."

1168. Hayashi, Shizuka. 1960. Discuss problems of soybean usage. *Soybean Digest*. July. p. 26.

• **Summary:** Japanese "soy food manufacturers" were addressed by Charles Elkinton, U.S. agricultural attache. During fiscal year 1959 the total quantity of soybeans used by Japanese crushers and food manufacturers amounted to 1.2 million metric tons or 46.7 million bushels, up 12% over the previous year. Japan's total imports during fiscal 1959 were 1,073,477 metric tons of which 1,010,444 metric tons came from the USA.

The total amount of soybeans used by Japanese food manufacturers is as follows, in metric tons. Makers of tofu and frozen tofu used 340,000 tons in 1959/60 rising to 370,000 tons in 1960/61. Shoyu makers used 218,400 tons in 1959/60 rising to 220,537 tons in 1960/61. Miso makers used 186,400 tons in 1959/60 rising to 177,180 tons in 1960/61.

Oil processors crushed 768,870 metric tons or 28,218,000 bushels in 1958/59. A photo shows “Japanese soy food manufacturers,” seated on cushions on tatami mats at two long tables, as they are addressed by Charles Elkinton. Address: Managing Director, Japanese American Soybean Inst., Nikkatsu International Building No. 1, 1-Chome Yurakucho, Chiyoda-ku, Tokyo, Japan.

1169. Smith, Allan K.; Watanabe, Tokuji; Nash, Arlo M. 1960. Tofu from Japanese and United States soybeans. *Food Technology* 14(7):332-36. July. [8 ref]

• **Summary:** Most of the U.S. soybeans exported to Japan are processed for oil and meal that are used for making food products. A survey conducted in 1957 in Japan by A.K. Smith (“Use of U.S. soybeans in Japan,” published April 1958) indicated that at least 25 million bushels of whole soybeans were used in making traditional Japanese foods such as miso, tofu, and natto, and that the Japanese wished to use more.

This paper describes pilot plant investigations comparing U.S. and Japanese soybean varieties to determine which U.S. varieties make the best tofu. Lee and Jackson varieties appeared to make tofu equal in yield, flavor, texture, and color to Japanese soybeans. “When such varieties are known to U.S. exporters and Japanese importers, more soybeans may be exported to Japan ‘identity preserved’ at some increase in cost over the U.S. No. 2 yellow beans” (p. 332-33).

Note: This is the earliest document seen (July 2001) that uses the term “identity preserved” to refer to soybeans. Address: 1. NRRL, Peoria, Illinois; 2. Food Research Inst., Ministry of Agriculture and Forestry, Tokyo, Japan.

1170. *House Beautiful*. 1960. Japan. Aug. Entire issue. *

• **Summary:** This entire issue of *House Beautiful* was devoted to Japan. The editors found Japanese cuisine to be the best of the 29 countries they had visited. Concerning miso they write: “Some ingredients basic to their cuisine we literally have no counterpart for: such a one is miso, a paste made from soy beans that may be sweet or salty or red or white, and can make a dressing for green vegetables, a marinade for meats, or the filling body of a soup. All delicious!”

1171. Hayashi, Shizuka. 1960. The Japanese American Soybean Institute: We can supply the Japanese market with

another 26 million bushels of soybeans if we seriously desire it. *Soybean Digest*. Sept. p. 31-32, 34.

• **Summary:** Contents: Introduction. Severe criticism (of U.S. soybeans by soybean users in Japan, and work to overcome this bad impression). Next on the consumption and import of soybeans. Now about the future outlook. Possibility of cutting down cost of oil prices. Price of soybean oil can be reduced. Soybean meal as a mixed feed has a big potential market. Soy flour expected to increase.

Before World War II “the soybean requirements of Japan were taken care of mostly by soybeans from Manchuria and China. Soybean oil and low-quality soybean meal were imported into Japan from Manchuria for use mostly as fertilizer.” Whole soybeans were used for make shoyu and miso, and for crushing.

“The Japanese soybean industry has stepped into a new era since the war. The crushing industry has been shifted from Manchuria to Japan and it has developed quickly to the present important and prosperous stage. With expanded crushing capacity, the need for soybeans has increased and the major part of the requirements has been supplied by soybeans from the United States, with only a limited quantity from China.”

“The break in trade between China and Japan since 1957 has given a chance for U.S. soybeans” to overcome their bad image in Japan.

“Consumption of various soy foods has shown substantial increase” and so have total soybeans imports into Japan, and the U.S. percentage share of total imports. Table show: (1) Consumption of soybeans and oils in Japan (metric tons), annually from 1955-56 to 1960-61, for tofu and frozen tofu (increased from 319,000 to 370,000), miscellaneous (increased from 167,000 to 214,000), shoyu (increased from 248,000 to 272,000), oil mills (increased from 505,000 to 760,000), and per capita daily (increased from 7.52 gm to 10.80 gm). (2) Imports of soybeans to Japan (metric tons) annually from 1955-56 to 1959-60. In 1955-56: Total 767,099. From USA 571,612. U.S. share of total 74.5%. In 1959-60: Total 1,073,477. From USA 1,010,444. U.S. share of total 94.1%.

“Soybeans have now become the largest item volumewise of all U.S. agricultural products imported into Japan.” They now top cotton, which had been the largest. Of all U.S. imports to Japan, soybeans are the second largest after scrap iron. This shows that the market development for U.S. soybeans in Japan has been successful—even under the present controlled currency allocation system which limits imports.

Four years ago the expression “P.R.” [public relations] was known by very few people and there was little investment in P.R. in Japan. Today almost everyone in Japan knows what P.R. means. As an example of this change among soybean groups, the Miso Association had no budget for P.R. activities 3 years ago. Today its budget for fiscal

year 1960 contains approximately 32 million yen or \$90,000 for this purpose. "The same can be said of shoyu, tofu, and other groups." The "Shoyu Association has decided to send a team of 7 top executives of the leading shoyu makes to the United States in October 1960 to study the soybean industry. They are doing this at their own expense but with the cooperation of American Soybean Association.

The total investment in the soybean market development program in Japan over the past 4 years by Foreign Agricultural Service has been \$425,000 and the contribution by various Japanese groups has been about \$257,000 in cash and services combined.

A 1958 survey showed that the 1,368 oil mills in Japan were operating at 36.8% of capacity. This low percentage is due to the fact that 1,210 oil mills (about 90% of the total) are small factories with a daily processing capacity averaging 10 metric tons; they produce oil mainly from domestic rapeseed at low efficiency.

"If the import of soybean becomes free under the "Automatic Allocation system it is obvious that soybean oil production will be concentrated in the larger oil mills (61 crushers) occupying 85% of the nation's total daily extraction capacity of 8,289 tons. This will bring down the price of edible oil for Japanese consumers. A table shows that 159,000 tons of oil are made in Japan from domestic materials as follows: Rapeseed oil 65%. Fish and whale oil 25%. Rice bran oil 6%. Hog grease 4%. Since Japan has little possibility of increasing oil production from domestic raw materials, it must rely on imports. The price of domestic rapeseed is supported by Japan's government.

Another table shows the rapid growth in production of "concentrated feed" in response to the government's policy to encourage livestock production and the dairy industry. In 1955 it was 509,279 metric tons, rising to 1,310,098 tons in 1958, with 2,000,000 projected for 1960. The percentage of soybean meal used in mixed feeds has been about 4.5% because of the priority given to miso, shoyu and other food industries. However the Livestock Bureau has been requesting an increase in the import of soybeans for feed. Hayashi ends by estimating potential import growth of 700,000 metric tons or 26 million bushels, and by urging U.S. soybean growers to seize the opportunity. "If more funds for market development become available, first preference should be given to soybeans to meet the need for more oil, for more soy flour in bread, and for soybean meal as animal feed."

Photos show Shizuka Hayashi and Hiroshi Nakamura (delivering Hayashi's speech). Address: Managing Director, Japanese American Soybean Inst., Tokyo.

1172. Aljat, -. 1960. Food & utilization of food resources (Indonesia). In: Proceedings of the Fourth Pan Indian Ocean

Science Congress. Section G. Human Ecology. See p. 65-68. Held 14-24 Nov. 1960 at Karachi, Pakistan.

• **Summary:** Gives detailed instructions for making the following soybean products: tempeh (tempe, soya-cake, moulded), tofu (tahu, soya curd, coagulated with gypsum/sakow powder), miso (taotjo), and sweet Indonesian soy sauce (Ketjap, made with black soybeans). Also describes how to make onchom (ontjom) from peanuts, plus krupuk, and lempers. Table 1 compares the nutritional composition of powdered Saridele and cow's milk. Table 2 compares the amino acid composition of various mixtures containing soy.

Note: This is the earliest English-language document seen (Feb. 2004) that uses the term "soya curd" or the word "tahu" to refer to tofu. Address: Nutritional Inst. Labs., Djakarta, Indonesia.

1173. Prawiranegara, Dradjat; Ravi, Ihsan el. 1960. Food & utilization of natural food resources (Indonesia). In: Proceedings of the Fourth Pan Indian Ocean Science Congress. Section G. Human Ecology. See p. 55-63. Held 14-24 Nov. 1960 at Karachi, Pakistan.

• **Summary:** This is a relatively early publication by an Indonesian author on soyfoods, especially tempeh. The first author's name is incorrectly listed on the document as simply Dradjat or Dradjet. "Protein rich food. Soya beans: In order to increase the protein consumption of the people more soya bean should be made available, and soya products should be popularized and manufactured on large scale." After praising the nutritional properties of soybeans, the authors continue: "In order to render soya protein utilizable, both destruction of the cell walls and heat treatment are necessary. Crushing the beans such as in the manufacture of soya milk and 'tahu' or the action of fungi which partly digest and break the cell wall such as the case with 'tempeh' are means of improving the nutritional value of soya. All these foods are heat treated both during the manufacture and on preparation for the table, and the enzyme inhibitors are destroyed. Tempeh, tahu [tofu], tautjo [Indonesian-style miso], ontjom, soya milk, etc. [are excellent foods. A meal] which gives the maximum biological value contains soya proteins and rice protein in the ratio of about 2.3. Therefore an adult who receives little or no animal food should get 15 or 20 gm soya protein with his rice. A medium size family should get 75 to 100 gm of soya protein. Unfortunately, soya preparations such as tempeh and tahu are comparatively expensive. For example 100 gm of soya protein in the form of tempeh costs about 5 rupiahs. This is why it is necessary to find a simple way of using unprocessed soya beans. The preparations of 'fried soya' is one such way. Fried soya is simply prepared as follows. Soya is soaked overnight in water with a little salt added, ground to a paste. The stuff is pleasant smelling, and tastes good. It can be used in many different ways, both in adults and in children's food. It costs little, compared to

tempeh or tahu, and its nutritional value is high, specially when mixed with rice or corn. It is certain that the introduction of fried soya to the Indonesian family's daily diet will appreciably improve the nutritional status of the people. Three times as much soya protein can be consumed for the price paid for tempeh or tahu. Recent work on tempeh (which is soya bean product subjected to the action of certain fungus) have shown that the product is of a higher nutritional quality than heat-treated soya bean. Apparently the fungus growth on the soya favourably alters the biological value of its protein. More work is needed on the subject in order to find out the reason for such improvement. It was suggested that tempeh should be investigated as infant food. (P. Gyorgy's recent report to W.H.O. Protein Advisory Group).

Note: This is the earliest English-language document seen (March, 2009) uses the word "tautjo" to refer to Indonesian-style miso.

"'Saridele' is an imitation milk of vegetable origin. It is made from soya sesame combination. It is available as spray-dried powder. The composition is similar to cow milk powder. Animal trials have shown that the protein of the product is somewhat inferior to cow milk, but the biological value improves considerably when mixed with rice. Trials with infants showed that Saridele is well tolerated by older infants and it is a valuable addition to the diet after the age of 6 months. In case of emergency, when no cow milk is available, saridele may be used as food for infants over 4 months of age (will be published by Children Dep. Medical School, Univ. Indonesia)." A table lists gives the nutritional composition of soybeans, tempeh, tofu, fish flour, fresh cassava leaf, and dry cassava leaf. Address: 1. M.D., M.P.H., Director, National Nutrition Inst., Dep. of Health, Djakarta; 2. FAO Food Chemist.

1174. USDA ARS Northern Utilization Research and Development Division, Peoria, Illinois. 1960. Definitions of foreign foods of current interest (Brochure). Peoria, Illinois. 4 p. 28 cm.

• **Summary:** The first section, titled "Japanese foods from soybeans" (p. 1-2) includes: Aburage, frozen tofu, Hamanatto, kinako, koji, kori tofu, miso, monosodium glutamate (a seasoning compound first isolated from soy sauce), nama-age, natto, satsumage, soybean milk or tonyu, soy sauce or shoyu, tofu, yaki-dofu, yuba.

The second section, titled "Indonesian fermented foods" (p. 3-4) includes: Arak, ketjap (soy sauce made with black soybeans), ontjom, ragi, sajur asin, tapé ketan (fermented glutinous rice), tapé katella (fermented arrowroot), tempeh (or témpé or témpé kedelé), tuwak. Address: Peoria, Illinois.

• **Summary:** This is facsimile edition of the original 1603 edition, the second earliest dictionary of the Japanese language compiled by Europeans.

Soy-related terms in this dictionary include: Abura ague [Abura-agé]. Aburidôfu. Amazaq [Amazake]. Cabe [Tofu]. Côji [Koji]. Daizzu [Daizu]. Dengacu [Dengaku]. Fanben [Hanben]. Icchô. Mame. Graos, ou feijoes de Iapao [Soybeans]. Miso [made with rice]. Misocoxi [Misokoshi, a miso strainer]. Misoya [A shop which sells miso]. Misoyaqijiru [Miso-yaki-jiru, a soup made with grilled miso and diced tofu]. Misôzzu [probably a soup seasoned with miso resembling Zosui]. Nattô. Nattôjiru. Tofu. Tofuya [A shop which makes and sells tofu]. Tamari. Vdondôfu [Udon-dôfu]. Xôyu [Shoyu, or soy sauce]. Yudôfu. Address: Nagasaki College of Japan.

1180. Joya, Mock. 1960. *Things Japanese*. Tokyo: Tokyo News Service, Ltd. 782 + xlv p. Index. 21 cm.

• **Summary:** In Chapter 7, titled "Food, 'Sake' and Tobacco" (p. 275-331) the following may be of interest: Asakusa-nori (includes shoyu), azuki (incl. soybeans, tofu, miso, shoyu, natto), bento and kashi, cattle, chameshi, chawan-mushi ("somewhat similar to Western custards." Make katsuobushi (shaved dried bonito) soup stock, cool, pour into individual *chawan-mushi* bowls (each has a cover). Mix in an equal quantity of beaten eggs. Add additional flavoring ingredients, cover, and steam until set. "One of the few Japanese dishes that resemble Western dishes in taste").

Chazuke, cooking, daikon (incl. miso), drinking cups and customs, eel-eating day (eels are broiled, steamed, then put in a specially prepared shoyu and broiled again), ginnan (ginkgo nuts), gobo (burdock, incl. miso soup and shoyu), gohan (boiled rice), kabayaki (eel), kamaboko, kashi (confections and sugar), katsuo-bushi (incl. shoyu), kawarasebei (incl. miso), konnyaku, manju, matsutake mushrooms, menrui (noodles, incl. soba, udon, shoyu), mikan (mandarin oranges), misoshiru (miso soup, incl. tofu, shoyu, tekka-miso, tai-miso, yuzu-miso, wakame), mochi, mochi-tsuki (pounding), myoga (*Zingiber mioga*), oden (with tofu, miso, and shoyu), one-sided fish, red rice (*sekihan*, made with azuki = red beans), ringo (apples), sakana (fish, incl. shoyu and tofu), sake drinking, sake eating, sashimi (incl. shoyu and mirin), satsuma-imo, seaweeds (sea vegetables), shinja (new tea), shoyu (Japanese-style soy sauce; per capita consumption is nearly 4 gallons a year), snake eaters, soba (incl. shoyu), souvenir cakes, sugar, suimono (clear soup, incl. miso and shoyu), sukiyaki (incl. tofu and shoyu), sushi (incl. Inari-zushi made with fried tofu), sweets in season, tea varieties, tea water, tempura (incl. sesame oil and shoyu), tobacco tradition, tofu (incl. bitter/nigari, yaki-dofu, aburage, ganmodoki, Koyadofu, fried tofu, hiyayakko, sukiyaki, dengaku, miso, misoshiru, shoyu), tokoroten (kanten, tengusa), tsukemono (pickles, incl. miso), umeboshi, wasabi (incl. shoyu), yasai (vegetables), yokan, and yonaki-soba. Note: Different types of yokan (yōkan, a paste made of azuki beans and sugar) include: mizu-yokan (soft azuki-bean jelly) and mushi-yokan (steamed yokan). Yokan-iro is a liver or rusty color.

Other subjects related to soy: Home cures (p. 66-67, for burns, apply the white of an egg or shoyu). Setsubun (p. 119, incl. mame-maki or throwing roasted soybeans). Brother mountains (p. 192, the most loved one, Fudo-iwa, was fed azuki or red beans but the unloved Gongen-yama was fed soya beans). Fox messengers (p. 207-08, aburage or fried tofu). Kuyo (p. 373-74, incl. hari-kuyo or mass for broken needles—but tofu is not mentioned). Azuki (p. 276-77). Red rice (*sekihan*, p. 303). Lunar calendar (p. 400, setsubun and bean throwing). Bamboo (p. 410, incl. bamboo shoots served with shoyu). Hi-no-kami (p. 474, incl. amazake). Sacred rice (p. 504, incl. setsubun and throwing roasted soybeans). Shoulder-chipped Jizo (p. 517, concerns the stone statue of Jozo at the Kiunji Temple, Tozaki-machi, Bunkyo-ku, Tokyo, and foxes and a tofu shop). Inari-san (p. 616-17, Inari-sushi and aburage). Address: Japan.

1181. Korea: Its land, people, and culture of all ages. 1960. Seoul, Korea: Hakwon-Sa. 718 p. See p. 114, 602. Illust. (part color). No index. 26 cm.

• **Summary:** This large book contains a comprehensive view of Korean history and culture, with each chapter written by

one or more Korean specialists and illustrated by hundreds of photos. Unfortunately, the book has no index.

A photo on an unnumbered page inserted 2 pages after p. 112, titled “Jars for food storage” shows a Korean woman with several of these jars. The caption reads: “Every home prepares such various earthenware jars for storing food such as soy-bean-sauce, doenjang (soy-bean-paste), kochujang (pepper sauce) and kimchi.

Note: This is the earliest English-language document seen (March 2009) that uses the word “doenjang” to refer to Korean-style soybean jang (miso).

In the section on “Agricultural products,” table 3 (p. 246), titled “Food supply and demand schedule for Fiscal 1959 throughout South Korea” gives the requirement for “Soybean sauce and cakes” as 768,000 *sok*. Under supplies, the “Bean crops of 1958, estimate, were 1,291,000 *sok*. An Appendix, (p. 714) shows that 1 *sok* (a unit of capacity) = 180.391 liters or 47.600 gallons.

The section titled “Food and dwelling,” under “The main and side dishes states (p. 602): “Other essential foods are bean paste and soybean sauce, both of which are used to make soup and flavor other side dishes of all kinds. The bean paste and the soybean sauce are as a rule prepared at each home. The beans are first cooked, then mashed and rolled into balls about 5 inches in diameter. The balls are then fermented for several days, finally to be immersed in salt water, to turn the salt water into soybean sauce. The residue balls of the fermented beans, on the other hand, become the soybean paste. Being for the most part prepared at home, rather than mass produced in factories on a commercial basis, the soybean sauce and bean paste of each house taste different. Since the two home-made foods find their way into almost all kinds of side-dishes, to be mixed with meat, seafoods, and vegetables, the soybean sauce and [soy] bean paste have a decisive say in the taste of all the foods prepared at each particular home.”

Chapter 17, “Literature: An outline of Korean literature, its heritage,” includes a discussion of many early works.

An excellent “Chronology chart of Korean history compared with world history” appears on pages 715-18. At the rear is a color fold-out map of Korea.

1182. Ma, Nancy Chih. 1960. Mrs. Ma’s Chinese cookbook. Rutland, Vermont; Tokyo, Japan: Charles E. Tuttle, Publishers. 178 p. Illust. 27 cm. [1 ref]

• **Summary:** About the author: Because she was born in a Manchurian banker’s family, she never had the opportunity to prepare even a single Chinese dish while in China. Only after her arrival in Japan did she become enthusiastic about learning how to prepare Chinese dishes. She did most of her study in Hong Kong. In 1957 her first Chinese cookbook, *Chugoku no Katei Ryori* [Chinese Home Cookery] was published in Japan by Fujin no Tomo. This book is a translation of the Japanese edition.

The section “Sizes and amounts of ingredients” (p. 15-16) mentions “Bean curd,” which is called *tou fu* in Chinese and *tôfu* in Japanese.

The section “Spices and flavourings” (p. 17-18) mentions: “Bean paste (*mien chiang* in Chinese, *miso* in Japanese): Thick, syrupy paste made from soy beans and used for added flavor in such dishes as Pancake Rolls.” Monosodium glutamate (and its many names). Soy sauce.

Recipes include: Braised salmon with soy beans (soak 1 cup dry soy beans overnight, p. 49). Fish with bean curd (with 2 cakes bean curd, cut into 1-inch squares, p. 49). Chilled bean curd with shrimp (p. 56). Braised shrimp with bean curd (p. 58). Bean curd with ground beef and chili peppers (and soy sauce, p. 76). Bean curd with sliced pork and chili pepper sauce (and bean paste {*mien chiang*}, p. 85). Molded steamed bean curd (p. 90). Pressed bean curd with assorted meat (p. 112-13). Braised bean curd (p. 116). Bean curd paper sheet rolls (with 3 rolls dried bean curd {*tou fu pei chüan*} in Chinese, dried yuba in Japanese, p. 118). Spiced soy beans (with 3 cups green soy beans, unshelled [edamamé], p. 126). Pancake rolls (with bean paste {*mien chiang* in Chinese, *miso* in Japanese}, p. 133. Note: These rolls are used in many different recipes).

The section titled “Foodstuffs” (p. 171-72) is a glossary of major Chinese ingredients, with the name of each given first in English (they are arranged in alphabetical order), then in Mandarin (Wade-Giles), then in Chinese characters. These foods include: Bean curd, *Tou fu*. Bean paste, sweet, *Tou sa* (“bean + sand.” Note: This appears to be azuki bean paste). Oil, soybean, *Tou yu*. Soy bean paste *Chiang*. Soy beans, green *Mou tou* [*Mao tou*]. Soy beans, dried *Ta tou*. Soy sauce *Chiang yu*. Address: [Japan].

1183. Ohsawa, George. 1960. *Zen macrobiotics*. New York, NY: Ohsawa Foundation. 103 p. Undated.

• **Summary:** The book begins: “Two ways to happiness through health. Happiness is the goal of everyone in the world. But what is happiness?... In the Orient happiness was defined by sages some thousands of years ago as consisting of five factors, as follows: 1. The first fundamental factor of happiness is joyfulness, an amusing, interesting, brilliant and healthy longevity. 2. The second, not to be worried about money. 3. The third, instinctive capacity to avoid accidents and difficulties that would cause premature death. 4. A loving realization of the order of the infinite universe at all levels. 5. Not to become the first as you will become the last. But try to become the last so that you will become the first forever.

“... School education is completely unnecessary, and even detested. All great men are autonomous and self-made...”

“With the conception of Principal Food and that of secondary food clearly distinguished, people of the Orient could live a happy, free and peaceful life from the beginning

up to the importation of the brilliant Occidental civilization, more or less violent, with its industrial and scientific instruments... The Principal Food should occupy at least 60% of your eating.”

There are now Ohsawa Foundations in New York, Paris, Brussels, Tokyo. All recipes in this book are numbered. Soy-related recipes include: 117. Boiled soy beans with miso (the soy beans are first roasted until they pop). 118. Boiled beans (“Boil soy beans until tender. Seasoned with soy sauce and salt. Boil until liquid is gone. Prepare black beans in the same way.” Note 1. Later writings by Ohsawa show that by “black beans” he meant black soy beans, *Kuro mame* in Japanese). 119. Gomoku beans (boiled soy beans with vegetables). 120. Gozu soup (Gôjiru; ground soaked soybeans with vegetables). 121 and 122. “Aduki” beans. 159. Hiziji with age (seasoned with “soyu” [sic, shoyu]). 160. Hiziki and soybean (seasoned with syoyu [shoyu]).

Miso and syoyu preparation. Both miso and syoyu should be of traditional preparation. 201. Sauce miso (miso-tahini sauce). 202. Miso cream. 203. “Muso” (miso and tahini with minced orange peel). 204. “Miso” soup. 205. Carrot and onion au “miso.” 206. Vegetable au miso. 207. “Oden” au miso. 208. Buckwheat “dango” au “miso.” 209. “Miso-ae.” 210. “Tekka” no. 1 (miso with minced yang vegetables—lotus root, burdock root, ginger—fried in sesame oil until very dry. Good for all yin diseases).

Syoyu. Recipes 212-221 are seasoned with “syoyu” (shoyu, traditional fermented soy sauce). “Use the traditional syoyu in all cooking (vegetables and fish). Syoyu diluted with a little water is very good for ‘Sasimi’ [sashimi] and fried oyster, ‘Tempura’, fish ‘Sukiyaki’, ‘Tohu’ ([tofu] vegetable cheese of soya beans), etc.”

803. “‘Tohu’ plaster. Squeeze ‘tohu’ (white soya bean cheese) add 10% of flour; stretch this directly on the front or any part painful with inflammation. All pain or inflammation will go away soon.” Note 2. This book does not use tofu in any recipes, probably because Ohsawa considered it too yin. However Ohsawa was the one person most responsible for introducing the word “tofu” to popular American culture; his later writings and especially his students and admirers spread the word to the four corners of the United States.

Note 3. This is the earliest macrobiotic document seen that mentions tofu.

Note 4. This is the earliest English-language document seen (July 2000) that mentions “Tekka” (spelled that way, which is now the proper romanization) or that gives a recipe for making it.

Note 5. This is the earliest English-language document seen (March 2006) that uses the word “aduki” beans to refer to azuki beans. This spelling was subsequently widely used, but only in macrobiotic publications.

Also discusses: In the section on “Egyptian beans” (p. 30): Pois “chiche” (chickpeas, basic preparation by boiling).

- “Beignet” pois chiche (deep-fried balls of mashed chickpeas mixed with flour). Pois chiche croquette (chickpea croquettes). Address: USA.

1197. Diser, Gleason M. comp. 1961. Glossary of soybean terms. *Soybean Blue Book*. p. 61-64.

• **Summary:** This is the first glossary with this title in the *Soybean Blue Book*. However in the first *Blue Book* (1947, p. 17-19) there was a somewhat similar section titled “Terminology: Definitions and product descriptions for the soybean industry.”

The following terms are defined in this glossary:

Soybean(s), soybean processor, soybean processing (solvent extraction, mechanical pressing, hydraulic pressing), soybean oil, crude soybean oil, edible crude soybean oil, refined soybean oil, edible refined soybean oil, hydrogenated soybean oil, degummed soybean oil, winterized oil, technical grade refined soybean oil, soybean fatty acids, soybean soapstock, acidulated soybean soapstock, soybean lecithin, break material, sludge.

Soybean products: Ground soybeans, soybean hay meal, soybean flakes, 44% protein soybean oil meal, dehulled soybean flakes, 50% protein solvent extracted soybean oil meal, soybean proteins, soy flour, soy grits, soybean oil meal, defatted soy flour, low-fat soy flour, high-fat soy flour, full-fat soy flour, lecithinated soy flour, protein, isolated protein, toasting. Oriental soy foods: Soy sauce (shoyu), soy milk, miso, frozen tofu, aburaage, kinako, namaage, ganmodoki, tempeh, natto, yuba, moyashi (soybean sprouts). Address: Archer-Daniels-Midland Co., Minneapolis, Minnesota.

1198. Shurpalekar, S.R.; Chandrasekhara, M.R.; Swaminathan, M.; Subrahmanyam, V. 1961. Chemical composition and nutritive value of soyabean and soyabean products. *Food Science (Mysore, India)* 10(3):52-64. March. Published in 1961 as a 32-page book by the Soybean Council of America in Hamburg, Germany. [178 ref]

• **Summary:** Contents: Introduction. Chemical composition and nutritive value. Soyabean oil. Carbohydrate in soyabean. Minerals in soyabean. Vitamins in soyabean. Factors affecting nutritive value: Trypsin and growth inhibitors, heat processing, other factors. Digestibility and biological value: Animal experiments, supplementation with sulphur amino acids, human feeding experiments. Supplementary value to other food proteins. Processed foods from soyabean: Soyabean milk, dried milk substitutes from soyabean, malt foods containing soyabean, soyabean flour, multipurpose food (fortified soyaflour), dehydrated soup mixture, balanced food, soyabean protein isolate. Fermented soyabean products: Soy sauce, tofu or soyabean curd, miso, natto, tempeh. Conclusion.

Note 1. This is the earliest document seen (Jan. 2001) from India that mentions tempeh.

Note 2. This is the earliest English-language document seen (Aug. 2003) that contains the term “soyabean protein” (or “soyabean proteins”).

Note 3. This is the earliest English-language document seen (Aug. 2003) that contains the term “soyabean protein isolate” (or “soyabean protein isolates”). Address: Central Food Technological Research Inst. (CFTRI), Mysore, India.

1199. Kawakishi, Shunro; Hirano, Susumu; Yoshii, Hisao. 1961. Mamemiso, tamari jōzō ni okeru yūki-san. I. Miso-dama kōji-chū no yūki-san [Organic acids formed in the process of brewing soybean miso and tamari. I. Organic acids of soybean koji (miso-dama)]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 35(4):347-50. April. [11 ref. Jap] Address: Aichi-ken Shokuhin Kogyo Shikenjo.

1200. Yoshii, Hisao; Kawakishi, Shunro; Hirano, Susumu. 1961. Mamemiso, tamari jōzō ni okeru yūki-san. II. Mamemiso jōzō-chū no yūki-san no ugoki [Organic acids formed in the process of brewing soybean miso and tamari. II. Changes in amounts of organic acids during miso brewing]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 35(4):351-54. April. [5 ref. Jap] Address: Aichi-ken Shokuhin Kogyo Shikenjo (Aichi Inst. of Food Technology).

1201. Smith, Allan K.; Wolf, Walter J. 1961. Food uses and properties of soybean protein. I. Food uses. *Food Technology* 15(5):4-6, 8, 10. May. [34 ref]

• **Summary:** Contents: Summary. Introduction. Commercial soybean protein fractions. Soybean foods: Soybean varieties (garden varieties vs. field varieties, main differences between them, U.S. soybean breeding program). Trends in protein requirements (worldwide protein shortage). Soybeans and fractions used in food: Whole soybeans, defatted soybean meal, isolated proteins, protein concentrate (called “protein concentrate 70” in the summary), Gelsoy.

Whole soybeans may be baked or boiled, or used to make sprouts, fresh or dried tofu, vegetable milk (or “soybean milk”), yuba, and many fermented food products, including “miso or soy paste, natto, hamanatto, shoyu (soy sauce), tempeh, and some less important foods.”

“Protein concentrate: Extraction of dehulled and defatted meal with dilute acid (pH 4.5) removes soluble sugars, nonprotein nitrogen, and other low-molecular weight components and a small amount of protein. The flavors are also mostly removed in the extract or in drying. The dried concentrate contains about 70% protein unless soybeans containing above-average protein are used.

“This product, having a manufacturing cost between that of soy flour and isolated protein, has been introduced recently into the food industry. This protein concentrate is a combination of the acid-precipitated protein plus the residue normally obtained in isolating the acid-precipitated protein... A protein concentrate can also be made by

extraction of SOM [soybean oil meal] with about 70% ethanol at 50°C or higher. This type of product is finding its place in the food industry.”

Note: This is the earliest English-language document seen (Dec. 2005) that uses the term “protein concentrate 70” or the term “protein concentrate” to refer to a product containing 70% protein on a dry-weight basis. Address: NRRL, Peoria, Illinois.

1202. Hayashi, Shizuka. 1961. Soybeans in the nutrition of Japan. *Soybean Digest*. June. p. 31.

• **Summary:** “Japan, with a population of 95 million people on a land area smaller than that of the state of California, is confronted with the problem of how best to feed its population. With the population increasing at a rate of 1 million annually, the problem perhaps will become permanent. According to 1959 government statistics, the following amounts of soybeans (in tonnes or metric tons) were used to produce oil and soyfoods in Japan: Crushed for oil 840,583, tofu 318,150, shoyu (soysauce) 217,686, miso 173,933, frozen tofu 40,000, natto 35,000, kinako [roasted soy flour] 13,000.

Japan uses 420,000 tonnes of soybeans that are grown domestically and 1 million tonnes imported from the U.S. Of the 26.7 gm of fats and oils available to each Japanese daily, 7.6 gm (28%) is supplied by soybeans. Of the 67.7 gm of protein available to each Japanese daily, soybeans provide 10.6 gm (15.7%).

“Meat is not only scarce but the price is too high to meet the daily needs of average people. Annual per capita meat consumption in the United States is 237 pounds while in Japan it is only 2.3 pounds.” “The Japanese intake of fats and oils is less than 10 pounds per capita in comparison with about 50 pounds in western countries.”

“The Japanese live too much on carbohydrate foods. Rice eating must be minimized and more protein foods eaten. The obvious conclusion is the increased consumption of soybeans.”

Note: This is the earliest document seen (Dec. 2001) that contains industry or market statistics for natto by geographical region. Address: Managing Director, Japanese American Soybean Inst., Nikkatsu International Building., No. 1-chome Yurakucho, Chiyoda-ku, Tokyo, Japan.

1203. Namiki, Mitsuo; Okazawa, Y.; Matsuyama, A. 1961. Miso oyobi shōyu no gamma-sen shōsha. I. Miso no waki ni taisuru shōsha kōka [Gamma irradiation of miso and soy sauce. I. Radiation effects on “waki” (generation of gasses) of miso]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 35(6):528-33. June. [5 ref. Jap]

• **Summary:** Miso generates gasses during storage at high temperatures. This phenomenon called “Waki” is a disadvantage for commercial packaging. Irradiation reduces this gas generation. Address: 1-2. Inst. of Physical and

Chemical Research; 3. Dep. of Agricultural Chemistry, Faculty of Agriculture, Univ. of Tokyo.

1204. Okazawa, Yoshishige; Namiki, M.; Matsuyama, A. 1961. Miso oyobi shōyu no gamma-sen shōsha. II. Biseibutsu ni taisuru shōsha kōka [Gamma irradiation of miso and soy sauce. II. Radiation effects on microorganisms]. *Nippon Nogeikagaku Kaishi (J. of the Agricultural Chemical Society of Japan)* 35(6):533-40. June. [16 ref. Jap]

Address: 1-2. Inst. of Physical and Chemical Research; 3. Dep. of Agricultural Chemistry, Faculty of Agriculture, Univ. of Tokyo.

1205. Nakamura, Hiroshi. 1961. The Japanese soybean market. *Illinois Agricultural Economics* 1(2):7-13. July.

• **Summary:** Contents: Introduction. Soybeans in the Japanese diet. Patterns of soybean consumption. Changes in tastes and preferences. Preferences for types of soybeans. Supply of soybeans to Japanese market. Soybean production in Japan. Future of soybean consumption in Japan. Japanese government import policy.

Table 1 shows “Soybean supply and consumption in Japan, 1934-1936 average and 1950-1959.” Vertical columns show domestic production, imports, crushings, used as whole soybeans, and percent of imports from United States. By 1951, 95% of imports were coming from the USA.

Table 2 shows total and per capita consumption (in kg and lb) of miso, shoyu, and edible oils (all types) in Japan, 1934-1936 average and 1950-1959. In 1957, compared with the 1934-36 average, per capita consumption of miso is 19.62 lb (down 14.4%), shoyu is 30.20 lb (down 0.8%), and edible oils is 7.05 lb (up 350% from 1.98 lb).

“In Japan, soybeans are considered a food grain like rice and wheat and, in fact, serve as an important source of protein supply in the Japanese diet. Total annual consumption exceeds 1,500,000 metric tons; but as production in Japan is only 400,000 tons, more than a million tons of soybeans are imported each year, mostly from the United States. Of all the agricultural exports of the United States to Japan, soybeans today occupy the most important position, amounting to nearly 100 million dollars per year.”

1206. Shibasaki, K.; Hesseltine, C.W. 1961. Miso-I. Preparation of soybeans for fermentation. *J. of Biochemical and Microbiological Technology and Engineering* 3(2):161-74. July. [3 ref]

Address: NRRL, Peoria, Illinois.

1207. Smith, Allan K. 1961. Oriental methods of using soybeans as food. With special attention to fermented products and notes on Oriental farming practices. *USDA*

Agricultural Research Service. ARS-71-17. 65 p. July. Illust. 27 cm.

• **Summary:** Contents: Part I: China. Introduction. Farming conditions in China. Oilseed production. Soy sauce in China. Sweet flour paste—Tien mien chang [chiang]. Soybean or vegetable milk (incl. Willis Miller and the Henningsen Produce Co. in Shanghai). Yuba. Soybean curd or tofu. Soybean cheese [fermented tofu]: Chee-fan (“cheese” + “small cube”), tsüe-fan (“drunken cheese”), hon-fan (“red cheese”). Fen-T’iao from mung beans. Fermented soybeans [soy nuggets]. Vinegar fermentation process.

Part II. China—Chinese Institutions. Henry Lester Institute (in Shanghai; Dr. Bernard Read). Academia Sinica (headquarters in Nanking). China Vegetable Oil Corporation (CVOG, Shanghai). The China Oils and Fat Industries Ltd. (Shanghai). National Bureau of Industrial Research. Catholic University (Fu Jen, at Peiping). Yen Ching University (Peiping). Agriculture Experiment Station (Peiping).

Part III: Japan. Introduction. Production of miso in Japan. Soy sauce in Japan. Trends in soy sauce production. Part IV: With Raymond E. Culbertson. Korea. Introduction. Breeding work. Soybean varieties. Climatic relations. Soils of Korea. Topography. Land use. Cultural practices. Marketing. Soybeans as foodstuff. Soy sauce. Acknowledgment.

Page 19 states: “The China National Government has taken an active interest in soybean milk for use by its army. Mr. Willis Miller, with offices and business connections with the Henningsen Produce Company in the Dollar Building (7th Floor) at 51 Canton Road, Shanghai, had just completed, at the time of my visit, the building of a soybean milk plant for the Chinese Government. The process is patterned after that of the International Nutritional Laboratories at Mt. Vernon, Ohio, for making a powdered or spray-dried milk. Mr. Miller also was supervising the installation of a vegetable canning plant for the same purpose.”

The text of this bulletin was previously published, serially, with slight revisions, in *Soybean Digest*, from Feb. to June 1949. Address: Northern Utilization Research and Development Div., Peoria, Illinois.

1208. Spilsbury, Calvin A. 1961. Japan’s oilseed and fats and oils industry. *USDA Foreign Agricultural Service. FAS M-120. iv + 52 p. Oct. Illust. 28 cm. [9 ref]*

• **Summary:** Contents: Introduction. Summary. The fats and oils industry: Total supply of fats and oils, edible fats and oils industries (oilseed crushing and refining industry, rice bran processing, margarine and shortening, oilseed food industries), industrial fats and oils (the soap industry, paint and protective coating industry). Domestic production of oilseeds and oil-bearing materials: Soybeans (farm income

and management, research), rapeseed, other oilseeds, rice bran, marine oils, including whale, animal fats. Foreign trade: Soybeans, other oilseeds, marine oils, animal fats, oilcake and meal, trade controls. Demand and price: Price supports. Consumption. Marketing and market development: Marketing vegetable oils, marketing oilseeds (storage, inspection, soybeans, rapeseed), market development. Bibliography. No names of Asian crushers are given.

Japan’s margarine and shortening production in 1960 was 88,600 metric tons, nearly 4½ times that of 1950... Margarine production in 1960 was 43,000 tons. Shortening production was only 41,600 tons in 1960. The margarine and shortening industry in Japan consists of 26 manufacturers, but a large percent of plant capacity is found in only a few plants: 4 plants have one-third of the industry capacity, which is around 400 metric tons per 8-hour day... 67% of the oils used to make margarine and shortening in Japan are animal and marine oils, with whale oil being the most widely used (26% of the total) followed by tallow and lard (21%), then fish oil (20.0%). Palm oils comprise 19.0% of the total and vegetable oils 14.0%.

Concerning oilseed food industries (p. 17-20), in 1960 some 532,218 tonnes (metric tons) of soybeans were used directly as foods or manufactured into foods in Japan. Substantial amounts of peanuts and sesame seeds were also so used. “The Japanese American Soybean Institute in Tokyo is actively promoting U.S. soybeans for food uses and has promoted soybeans as the meat of the field because of the excellence of their amino acids.” Note: This is the earliest document seen containing the phrase “the meat of the field.” Notice that it refers to soybeans and was apparently coined by an American organization in Japan.

“More soybeans are used directly for food than are grown in Japan, and the cake and meal from an additional 420,000 tons of soybeans are now used each year. The main soybean foods are: Miso, shoyu, tofu, aburaage (fried tofu), frozen tofu, natto, kinako, monosodium glutamate (extract of fermented soybeans and rice used as a seasoning compound; a low-grade shoyu is a by-product), tonyu (soybean milk, cooked water-extract of soybeans, not widely produced in Japan at the present time).

Miso: There are about 3,200 to 3,800 miso plants in Japan, and a large amount of home-made miso is also produced. “About 117,600 tons of soybeans and 52,300 tons of defatted soybean meal (expeller cake is thought to be the best) are required by this industry. Miso consumption is estimated at 28.9 grams per capita per day.” Domestic Japanese soybeans, such as white hilum soybeans from Aomori are preferred to U.S. beans, which cook unevenly because of their hard seed coats.

Shoyu: There are about 5,000 producers; some have very large plants but many are small. Per capita consumption is about 3 gallons per year. This requires about

18,500 tonnes of soybeans and 155,000 tonnes of defatted soybean meal per year. A small amount of soybean oil (about 1,000 tonnes/year) is skimmed off the top of shoyu and used for a cutting oil. The cake that remains after pressing out the shoyu contains 4% salt, but it is an ideal hog feed as well as a fertilizer. Around 80,000 to 100,000 tonnes a year are produced. A taru (4½ gallons) of shoyu wholesales for about \$3.60. A large volume of soy sauce is now being exported to the USA.

Tofu: There are around 50,000 small tofu plants in Japan. Their demand for soybeans is large and increasing. In 1960 production of tofu and aburaage required 254,800 tonnes of soybeans and 20,000 tonnes of defatted soybean meal. More soybeans and meal are used to make tofu than any other food in Japan, followed by shoyu, then miso. About three-fifths of the soybeans used are imported. In 1960 production of frozen tofu required 27,100 tonnes of soybeans.

In 1960 about 22,800 tonnes of soybeans were required to make natto, 6,200 tonnes to make kinako, 64,800 tonnes of defatted soybean meal were required to make monosodium glutamate, and 10,000 tonnes of soybeans plus 30,000 tonnes of defatted meal were required to make other soybean food products [such as whole soybeans, soybean milk, etc.]. Address: USDA Fats and Oils Div.

1209. Tung, Ta-Cheng; Huang, P-C.; Li, H-C.; Chen, H-L. 1961. [Composition of foods used in Taiwan]. *J. of the Formosan Medical Assoc.* 60(11):973-1005. Nov. 28. [27 ref. Chi; eng]

• **Summary:** Gives the nutritional composition (food calories, moisture, protein, fat, carbohydrate, fiber, ash, calcium, phosphorus, iron, vitamin A, thiamine, riboflavin, niacin, and ascorbic acid) of 384 foods commonly used in Taiwan. In the section on "Legumes, seeds, and nuts," the following soy products are included: Black bean (hei tou, black soybean; 37.1% protein, 15.2% fat), miso, soy bean (huang tou), soy bean curd (toufu), soy bean curd cake (toufu kan), soy bean curd cake, spiced (wu-hsiang toufu kan), soy bean curd cake, strip, soy bean curd, clot (toupai, yuba), soy bean curd, fermented, soy bean curd, fried (yu toufu), soy bean curd, pickled (furu, hu-zu), soy bean, fermented (tou chi), soy bean milk (tou nai), soy bean extracted residue (okara). Address: 1-3. Dep. of Biochemistry, College of Medicine, National Taiwan Univ., Taipei, Taiwan, China; 4. Taiwan Provincial Hygienic Lab.

1210. Hesseltine, C.W.; Shibasaki, K. 1961. Miso. III. Pure culture fermentation with *Saccharomyces rouxii*. *Applied Microbiology* 9(6):515-18. Nov. [6 ref]
Address: 1. NRRL, Peoria, Illinois; 2. College of Agriculture, Tohoku Univ., Sendai, Japan.

1211. *Soybean Digest*. 1961. A.K. Smith of Peoria Lab on trip to Asia. Nov. p. 7.

• **Summary:** Dr. A.K. Smith, head of meal products investigations, oilseed crops laboratory, Northern Regional Research Laboratory (Peoria, Illinois), left Oct. 15 on a 2½ month trip to India, Japan, and Indonesia. "Dr. Smith will survey research laboratories in the countries to determine those that are qualified to do food research and development on soybeans, soybean products, and related agricultural products under the P.L. 480 program." In Japan, he will visit trade associations to encourage the use of U.S. soybeans in Japanese foods.

Research is needed in six areas: Use of soy flour to supplement bread and cereal products. Manufacture of soybean protein. Use of tempeh. Production and nutritional value of soy milk. Production of low-salt miso for feeding babies. Comparison of U.S. soybean varieties in commercial production of tofu. A portrait photo shows Smith.

1212. *Soybean Digest*. 1961. 4-H club girl wins with Japanese meal. Nov. p. 18.

• **Summary:** Joan Ruths, a 17-year-old 4-H club girl from Waterville, Minnesota, won a blue ribbon at the Minnesota State Fair for her demonstration titled "Entree Tofu Steak." She prepared and served a complete Japanese meal. Among the many dishes on her menu made from soybeans were miso soup, aburaage (deep-fried tofu), and soy milk. Joan closed her presentation by saying: "Soybeans for our nation's economy, food for millions, and peace for the world."

1214. Sano, Tamotsu. 1961. Feeding studies with fermented soy products (natto and miso). *National Academy of Sciences, National Research Council, Publication No. 843*. p. 257-68. Progress in Meeting Protein Needs of Infants and Preschool Children. [31 ref]

• **Summary:** The author developed a natto powder, low-salt miso powder, and an autoclaved soybean powder for use in combatting infant malnutrition in underdeveloped countries. Since 1957 Dr György has been studying these soybean foods in collaboration with the author in hopes of increasing their use in infant diets. The natto powder had a higher content of essential amino acids than the soybean powder. Natto powder gave the best results in growth studies on rats, but the increase in body weight was not as great as when the rats were fed skim milk at the same protein level. The miso powder decomposed into a rancid state and thus was unsuccessful. Address: President, Tohoku Kosai Hospital, 10 Motoyagura-cho, Sendai, Japan.

1215. Shibasaki, K.; Hesseltine, C.W. 1961. Miso. II. Fermentation. *Developments in Industrial Microbiology* 2:205-14. [1 ref]

• **Summary:** “In a search for ways to increase the use of U.S. soybeans in traditional Japanese foods,” uses soy grits from specific soybean varieties to make Shinshu Miso and Sendai Miso. The varieties were Chippewa, Adams, Lincoln, Clark, Harosoy, Hawkeye, Hokkaido-Akita, Iwate, Miyagi, Nagano, Chinese. Address: 1. College of Agriculture, Tohoku Univ., Sendai, Japan; 2. NRRL, Peoria, Illinois.

1217. *SoyaScan Notes*. 1961. Overview of total miso production in Japan (1934-36, 1952-61). Source: *Shokuhin Kanri Tôkei Nenpo* (Food Industry Statistics Annual Report). [1 ref]

• **Summary:** These statistics are from a bundle of documents found in the Kikkoman *kura* in Noda, Japan. Mark Fruin donated a photocopy of all the documents to Soyfoods Center. Statistics are given each year for miso, vinegar, sauce, tomato ketchup, monosodium glutamate, and mayonnaise (from 1952 -1961).

Miso production grew from 596,996 tonnes (metric tons) in 1934 to a peak of 600,750 tons in both 1935 and 1936. No statistics are given from 1937 to 1951, years of disaster for Japan, ending with defeat in World War II.

Starting again, production grew from 381,713 tonnes in 1952, to a peak of 530,078 in 1956, then decreased slowly to 482,357 tonnes in 1961.

1218. *SoyaScan Notes*. 1961. Overview of factory production of miso in Japan (1930-1961). [1 ref]

• **Summary:** These statistics are from a bundle of documents found in the Kikkoman *kura* in Noda, Japan. Mark Fruin donated a photocopy of all the documents to Soyfoods Center. Statistics are given each year for miso in 1,000 *kan*, where 1,000 *kan* = 3,750 kg. Farmhouse and home production are not included. Miso production grew from 157,196 in 1930 to a peak of 160,200 in both 1935 and 1936, then fell gradually to 150,221 in 1940, 128,60 in 1942, 140,226 in 1943, and 129,679 in 1944. Then, as Japan was clearly losing the war, it plunged to 77,495 in 1945, 69,887 in 1946, and an low of 50,264 in 1947. In the postwar years, as Japan began to recover, it increased to 94,468 in 1948, dropped to 66,510 in 1950, then began steady growth—101,790 in 1952, rising to a peak of 198,779 in 1956. Then it began to decrease slowly to 180,884 in 1961.

1219. Paddleford, Clementine. 1962. Japanese dishes making hit in U.S. *Los Angeles Times*. Feb. 8. p. C12.

• **Summary:** New York–Japanese foods are everywhere in neighborhood and specialty shops throughout America.” This week the writer sampled 50 Oriental delicacies. “The basic Japanese food exports remain with us always the king crab meat, the Mandarin orange, the white tuna fish. Old friends are also the seasonings, Japanese Shoyu sauce, rice wine vinegar, the ajinomoto which is the monosodium glutamate to enhance the natural food flavors of meat, poultry, fish and vegetables.” Also mirin, instant rice with seaweed, and *yuechizuke* which is “egg plant in soya bean paste” [miso].

Note: This is the earliest English-language document seen (March 2009) that uses the term “soya bean paste” to refer to miso.

“The Japanese soy sauce called shoyu is claimed more delicate than the Chinese version. Delicious for gravies and barbecue sauces.” Address: Herald Tribune News Service.

1220. *New York Times*. 1962. Japanese foods are available here. March 29. p. 26.

• **Summary:** Gives five Japanese recipes—most calling for monosodium glutamate. The recipe for “Bean soup” [miso soup] calls for “three tablespoons soy bean paste” [miso] and an unspecified number of “cubes of tofu (bean curd).”

1221. **Product Name:** Chico-San Soybean Puree (Barley Miso).

Manufacturer’s Name: Chico-San Inc. (Importer). Made in Japan.

Manufacturer’s Address: Chico, California.

Date of Introduction: 1962. March.

New Product–Documentation: *Health Food Business Review*. 1968. July. p. 44-45. “Soy bean puree: Miso.” Miso is repeatedly called “Soybean Puree” in this article. A table gives the nutritional composition of “Barley miso” (based on Yamada 1957, p. 44).

Midwest Natural Foods Distributors, Inc. 1972. Catalog and price list. Nov. 1. Ann Arbor, Michigan. 58 p. See p. 7. “Miso Soybean Puree.” 8 oz or 16 oz.

Chico-San Products. 1973. July. p. 13. “Soybean puree (Miso).” This is barley miso. Same publication, 1981. Jan. p. 13. They now import and sell mugi, kome, and hacho miso.

Shurtleff & Aoyagi. 1983. *The Book of Miso*. 2nd ed. p. 236. Chico-San was founded in March 1962, in Chico, California. One of their first products was traditional miso, imported from Japan and distributed widely under their label.

Chico-San Cracker Barrel. 1984. Oct. p. 1. Chico-San “was the first natural foods company to import miso into America.”

1222. Shibasaki, K.; Hesseltine, C.W. 1962. Miso fermentation. *Economic Botany* 16(2):180-95. June. [32 ref]
 • **Summary:** The role of miso in the Japanese diet is reported. The *Aspergillus oryzae* strain used for miso and sake has high amyolytic as well as proteolytic action. (That used for soy sauce has high proteolytic action). In miso fermentation, the koji starter is prepared by inoculating trays of cooked rice and vegetable ash. After good growth, the fungus is dried without killing its spores. Cooked soybeans are mixed with rice, salt and the koji starter. Chemical changes during fermentation are reported. Many microorganisms are present in miso. Address: 1. College of Agriculture, Tohoku Univ., Japan; 2. NRRL, Peoria, Illinois.

 • **Summary:** Nutritive value of soybean products. Address: Bonn.

1224. Nagafuge, Emilio. 1962. Los productos alimenticios derivados de la soya [Food products derived from the soybean]. *Tierra (Mexico)* 17(9):678. Sept. [Spa]
 • **Summary:** Contents: Preface. Soymilk. Soy cheese [tofu]. Soy flour. Soy oil. Soy lard and butter (*Manteca y mantequilla de soya*). Soy sprouts (*Los brotes de soya*). Soy sauce. Miso.

Note: This is the earliest Spanish-language document seen that uses the term *mantequilla de soya* to refer to margarine. Address: Mexico.

1225. *Foreign Crops and Markets (USDA Bureau of Agricultural Economics)*. 1962. Japan to implement soybean agreement. 85(26):18. Dec. 24.

• **Summary:** "Japanese importers are preparing to implement the agreement to buy 150,000 metric tons (5.5 million bushels) of soybeans from Communist China for 1963 delivery (*Foreign Crops and Markets*, December 17, 1962). Procurement of the first half of the quantity, or 75,000 tons, was to be committed by December 15, and the other half by January 15.

"The Japan-Communist China Trade Council had sent notices to all principal soybean users asking each to specify the quantity of beans each firm would guarantee to buy. If the total exceeded 75,000 tons for the first portion, there would be pro-rata sharing."

"It was expected that the miso (soybean paste) manufacturers would take as much as they could use, since Chinese beans have traditionally been favored for miso making. However, their annual capacity is only about 100,000 tons (3.7 million bushels). The oil crushers, on the other hand, are reluctant to buy the Chinese beans... As the oil content of the Chinese beans is lower than that of U.S.

beans, the crushers do not want to pay an equal price. The Chinese had refused, at least until recently, to concede (about \$7 per ton differential was requested) on this point. Whether the crushers will 'cooperate' despite this disadvantage is unknown."

Note 1. This is the 2nd earliest English-language document seen (May 2001) that contains the word "Teri-yaki" (or "Teriyaki"). The text reads: "In *Teri-yaki* rich sauce which gives a sheen to ingredients is used as seasoning. *Teri-yaki* is preferred for fatty ingredients."

Note 2. This is the earliest English-language document seen (July 2003) that uses the Japanese word "gomashio" to refer to "sesame salt."

Note 3. This is the earliest English-language document seen (March 2006) that uses the term "red bean paste" to refer to sweet azuki bean paste [*azuki-an*].

1229. Hayashi, Shizuka. 1962. Problems involved in increasing world-wide use of soybean products as foods in

Japan. In: USDA Northern Regional Research Laboratory, ed. 1962. Proceedings of Conference on Soybean Products for Protein in Human Foods. Peoria, IL: USDA NRRL. iii + 242 p. See p. 200-06.

• **Summary:** Contents: Price. Quality. Margarine and shortening. Mayonnaise. Miso, shoyu, tofu. Soybean meal. Soy flour. Soy milk. Frozen tofu. Food sources of Japan.

The 400,000 tons of soybeans produced in Japan are used for foods. From approximately 1 million tons of imported soybeans, Japan produces 150,000 tons of oil and 700,000 tons of meal. "Japanese oil consumption is the poorest [i.e. lowest = best] among the world nations. We need to consume oil at more than 5 times the present quantity to reach the level of the western countries." In 1952 Japanese consumption of edible oils was 7.52 gm per person per day, increasing to 11.52 gm in 1960. Soybean oil supplies about 30% of Japan's total oil supply. The main obstacles to greater consumption are price and quality (due to flavor reversion). The leading oil is rapeseed oil. The main oils used in margarine and shortening are fish oil (35.8% of total), beef tallow (25.4%), whale oil (10.0%), and coconut oil (8.0%).

New developments with traditional Japanese soy foods include: Dried, powdered miso in instant form is now available. Soybean meal is now the main ingredient in shoyu, rather than whole soybeans. A few soy milk plants have been erected and bottled soy milk is now sold in the market in limited areas. A certain culture is used to eliminate the beany flavor. Today, soybeans and soybean products provide the average Japanese with 10.6 gm/day of protein (16% of total protein consumption of 67.7 gm), and 7.6 gm/day of fat (28% of total fat consumption of 26.7 gm). During the period 1934-38, average Japanese protein consumption was 54.9 gm per person per day and fat consumption was 13.2 gm (less than half what it is today). Address: Managing Director, Japanese American Soybean Inst., Nikkatsu International Building, Room 410, No. 1, 1-Chomo Yurakucho, Chiyoda-Ku, Tokyo, Japan.

1230. Hesseltine, C.W. 1962. Research at Northern Regional Research Laboratory on fermented foods. In: USDA Northern Regional Research Laboratory, ed. 1962. Proceedings of Conference on Soybean Products for Protein in Human Foods. Peoria, IL: USDA NRRL. iii + 242 p. See p. 74-82. [9 ref]
Address: Head, ARS Culture Collection Investigations, Fermentation Lab., Northern Utilization R&D Div., Peoria, Illinois.

on Soybean Products for Protein in Human Foods. Peoria, IL: USDA NRRL. iii + 242 p. See p. 93-98.
Address: Director, Foreign Research and Technical Programs Div., USDA, Agricultural Research Service, Washington 25, DC.

1232. Miyashita, Akira. 1962. Kôri-dôfu no rekishi [History of dried-frozen tofu]. Tokyo: Japanese National Frozen Tofu Association (Zenkoku Kori-dofu Kogyo Kyodo Kumiai Rengokai). 591 p. Illust. No index. 28 cm. [Jap]

• **Summary:** This is the most comprehensive work ever published on the subject. Unfortunately there are few references to sources. However on page 48 is a list of early documents (mostly scrolls and books) in which Kori-dofu is mentioned, as follows: 1624-1643 *Ryori Monogatari*, and *Kebukiso*. 1648-1651 *Teitoku Bunshu*. 1688-1703 *Wakan Shojin Ryori-sho*, and *Honcho Shokukan*. 1711-1715 *Toryu Setsuryo Ryori Taizen*. 1716-1735 *Ryori Komoku Chomisho*. 1748-1750 *Ryori Sankai-kyo*. 1772-1780 *Shinsen Ryori Kondate Burui-shu*. 1781-1788 *Tofu Hyakuchi*, and *Tofu Hyakuchin Zokuhen*. 1801 *Ryori Shinan Taizen*, and *Honso Komoku Keimo*. 1804-1817 *Nihon Ryori-ho Taizen*. 1818-1829 *Shojin Ryori-tsu*, *Ryori-tsu*, and *Shojin Ryori Kondate-shu*. 1830-1843 *Toyo Kondate Ryori Hayashikumi*, and *Ryori Dokukeiko*. 1848-1853 Morisada Manko (essays).

Concerning the origin of Shimi-dofu (p. 38-39), there is a legend that Takeda Shingen taught how to make Shimi-dofu as well as miso. The areas where Takeda Shingen lived and where Shimi-dofu is sold are about the same, so it seems likely that there is some connection. In the early Edo period (p. 41), when a money economy became more common among the people, Shimi-dofu became a side business for many farm households in the area. In 1638 in *Kefukiso?* (*Haikai-shu*), there was a mention of *Matsumaekoku Kan-dofu*, which is Shimi-dofu.

Contents: 1. Origin of kori-dofu. 2. Production of kori-dofu in the Edo period. 3. The group of kori-dofu makers in Kuzushiro of Kishu and the monopoly of selling kori-dofu in Hasa Yama-han and Ishikawa-han. 4. The leaping progress of production of kori-dofu during the Meiji period. 5. The great European war [World War I] and the natural koya-dofu industry. 6. Shinshu Koya style kori-dofu marching out to Kansai. 7. The invention of kori-dofu which expands and softens. 8. The height of prosperity of the artificial freezing method and the downfall of natural kori-dofu. 9. Kori-dofu after the Pacific Ocean war [World War II]. 10. The group of kori-dofu production workers from Tajima who work away from home. 11. Present-day kori-dofu production business. Appendix. Postscript.

1233. Ono, Fumie. 1962. Try a Japanese dish. Tokyo: Bokusui Publishing Co. 110 p. Index. 21 cm. *

• **Summary:** Contains about 70 Japanese recipes.

1234. Shih, Shêng-han. 1962. A preliminary survey of the book *Ch'i Min Yao Shu: An agricultural encyclopaedia of the 6th century*. 2nd ed. Peking, China: Science (Kexue) Press. x + 107 p. No index. 21 cm. First ed. 1958. Third ed. 1974. [Eng]

• **Summary:** A discussion in English of the contents and significance of this key Chinese agricultural work. Contents: Preface. The Book *Ch'i Min Yao Shu*. Analysis of its source books. Part I: Original material in the *Ch'i Min Yao Shu*. Realisation of the importance of proper choice of season and soil. Cultivation of cereals. Culinary vegetables (Chiang ts'ai or soya hydrolysate conserves, p. 53-54). Fruit trees. Timber woods. Other economic plants (fiber crops, tinctorial plants). Animal husbandry. Domestic economy: Food processing (refining table salt by recrystallization, preparation of fine starch from cereal, saccharification of starch to prepare "barley sugar," fermentation [alcoholic fermentation, acetic fermentation, chiang {incl. soybean chiang; protein hydrolysates, p. 84-87}, shih {soy nuggets, interrupted and melanised protein hydrolysates, p. 87-88}, tsü {pickles, lactic fermentations from intrinsic carbohydrate}, cha {pickles, lactic fermentation from added carbohydrates}, lo {cheese lactic fermentation with casein}], fu and lah [jerked and salted meat]), other technical instructions for commodities of daily life (detergents {saponins}, extraction of pigments from bastard-saffron, dyeing with vegetable pigments, heating to accelerate "drying" of oils, glue-making, preparation of cosmetics). Part II: The influence of the *Ch'i Min Yao Shu* on agricultural science in China. Epilogue. Address: PhD (London), Prof. of Plant Physiology, Northwestern College of Agriculture [Wukung, Shensi], China.

1235. Shih, Shêng-han. 1962. Chiang (Document part). In: Shih Shêng-han, ed. 1962. A Preliminary Survey of the Book *Ch'i Min Yao Shu: An Agricultural Encyclopedia of the 6th Century*. 2nd ed. Peking, China: Science (Kexue) Press. x + 107 p. See p. 83-86. [Eng]

• **Summary:** The term *jiang* has no equivalent in most European languages. Microorganisms which are alcoholic starters include a number of molds that can hydrolyze various proteins into component amino acids and amides (such as asparagine and glutamine), resulting in a good taste or relish. This hydrolysis of proteins is the basic principle for preparing *jiang*.

The history of *jiang* has been traced back to the *Analects of Confucius (Lunyu)*. By the Han dynasty it was sold commercially together with grain-based wines, vinegar, and other liquids, so it must have been produced on a rather large scale.

For making *jiang*, as for wine, it is important to have good pure cultures of the fermentative microorganisms first. This culture was named *huangyi* (yellow coating), *mai yuan* (wheat-must), or *huangzheng* (yellow mold). Steamed wheat

grains were used as the starting material, culture medium, or substrate; kept in a warm and humid place, they soon served as a good growth medium for spores of the mold floating in the air or attached to the leaves of *Phragmites* or *Xanthium* used to cover the steamed grains.

After about a week (during the hottest month of summer) a yellow coating of sporangia or sporangiophores would appear on the surface, indicating that the starter for making *jiang* (*jiangqu*) was ready. The yellow coating, which also contains spores, is the essential substance for starting the fermentation.

Chapter 70 in the *Qimin Yaoshu* gives descriptions for preparing various kinds of *jiang*, from both animal products (meat, fish, crustaceans) and soybeans. In ancient times, most *jiang* was made from animal products: Brief recipes for making meat *jiang*, fish *jiang*, and soya *jiang* (also called "soya-hydrolysate") are given. Address: Prof. of Plant Physiology, Northwestern College of Agriculture, China.

• **Summary:** Eighteen kinds of amino acids were observed in three types of miso. Address: Shokuhin Sogo Kenkyujo, Tokyo, Japan.

1238. Brandemuhl, William. 1963. Soybean history: Aspects of Buddhist influence. Anthropology Dept., University of Wisconsin, Madison. 15 p. Jan. Unpublished manuscript. 28 cm. Summarized as "Early Soybeans Were Spread by Buddhists" in *Soybean Digest*, July 1963, p. 21. [52 ref]

• **Summary:** This research paper (which is not a thesis) was prepared for Anthropology 150a, taught by Dr. R.J. Miller. Contents: Purpose of study. Method of study. Botanical history: Naming the soybean, the *Glycine ussuriensis* case, other genetic evidence, claim on the origin of the soybean. Initial utilization. Botanical dissemination. Soybean history—non-botanical: Legend, recorded Chinese soybean history, concluding notes on soybean origin and cultivation

history. Buddhist influence on the development of the soybean: Soysauce or shōyu, miso, tofu, natto, ancient soybean food products, the soybean grows.

“Another principal concern of this paper is the Buddhist connection to soybean development. The introduction of soybeans, although an approximation at the very best, coincides quite closely with the spread of Buddhism in Japan. As shown later, Buddhism has a very close connection with soybean history and in many product sectors of soybean development, may have created or at least popularized them” (p. 1).

“Contrary to the above statement I submit the following data which I believe can easily be documented: 1. Emperor Sheng-nung is a mythical character (letter from Herbert W. Johnson, Research Agronomist, USDA / ARS Crops Research Div., Beltsville, Maryland, 30 Aug. 1962). 2. Emperor Shen-nung was a legendary character who cannot be pinpointed to a date of 2838 B.C. (letter from Jung-pang Lo, Research Asst. Prof., Far Eastern and Russian Inst., Univ. of Washington, 6 Sept. 1962). 3. Shen-nung is a mythical ruler, never living at the date attributed to him or at any other date (letter from Edward H. Schaefer, Professor of Oriental Languages, Univ. of California, Berkeley, 6 Sept. 1962). 4. A work attributed to Shen-nung is called *Shen nung pen Ts'ao Ching* but since it contains many Han Period facts (around the beginning of the Christian era) it is believed to be a Post-Han work. This work is first mentioned by T'ao Hung-ching (who edited it) early in the 6th century A.D. (Jung-pang Lo). 5-6. The *Pen Ts'ao Kang Mu* was written by L. Shih-chen (1518-1593) in A.D. 1596 or 1597 (Jung-pang Lo, Schaefer)... 9. The word 'Shiyu' cannot be found in Chinese dictionaries. The name for the soybean in China being 'Ta-tou,' meaning big bean (Jung-pang Lo).”

“Concluding notes on soybean origin and cultivation history: *The Book of Poetry* (Shih-ching) mentions boiling shu (pulse) and the *Erh-ya* (a Chou period lexicon, authorship attributed to Confucius or his disciples) mentions Jung-shu. Kao yu, the commentator, remarked that the Jung-shu (pulse of the Hu people) which was also known as Ta-tou (the soybean). Jung was a term used by the Chinese in the Chou period for the non-Chinese people of the North and Ju was a term used by the Chinese people of the North and West. This would seem to indicate that the soybean was introduced to China from the non-Chinese people of the North. Also supporting this is the *Chou-shu* by Hsi meng, in which there is a reference to Shan-jung shu (pulse of the Jung people of the mountains). A commentator explains that the Shan-jung were tribes in the Northeast (Manchuria).

“The Kuang-Tzu contains a passage saying that after Duke Huan of Chi (7 B.C.) defeated the Shan-jung the Jung-shu came to be known throughout China. Chia su-hsieh (5 A.D.) in his book *Ch'i-min Yao-shu* (Ts'tung-shu Chi-ch'eng, editor) quoted the *Shen-nung pen Ts'ao* as

saying that Ta-tou (the big bean) was the Hu-Tou (Hu peoples' bean) which Chang Ch'ien brought back from his exploration of central Asia in the first century B.C., there being two varieties. In the Han period both Ts'ui shih and Fansheng in their books on farming techniques mention cultivation of the Ta-tou and its use in famine relief. The *Pen Ts'ao Kang Mu* (1596), mentioned earlier, has a long discourse on the medical properties of the Ta-tou (Jung-pang Lo).”

“Buddhist influence on the development of the soybean: Although references to the Buddhist influence on soybean development are particularly sparse I believe Buddhism deserves credit for initiating the spectacular expansion of soybean utilization in Japan which triggered utilization in the rest of the world. The Buddhist connection is certainly true if oil utilization is excluded. Below lie the reasons for my belief.

“Buddhism was introduced into Japan around 500-600 A.D. (Bush 1959, p. 28-29). Among the priests the traditional hate of flesh was present and agriculture of the field type was encouraged by the government (Tezuka 1936, p. 13). The introduction of soybeans fits well into this historical development. The recent finding of soybean seed in *Shōso In* (Japan) which was established in the Nara era for the storing of legumes of that era that were introduced from China (Nagata 1960, p. 97) proves as does the record of ceremony and taxation system of the Nara era (Nagata, p. 75) that soybeans did exist in Japan at that time.

“Soysauce or more properly shōyu, the now renowned Japanese flavoring, is said to have originated during the Chou dynasty (1134-246 B.C.) (Komiya 1955, p. 14) and was introduced into Japan when Buddhism was being established although not becoming popular until 1300 (Joya 1951, p. 31-33).

“Miso, soybean paste, is a much used breakfast and soup dish in Japan that was introduced to Japan from China or Korea (Horvath 1927, p. 83). It was definitely used by the priests when they first entered Japan, in fact they popularized it among their new vegetarian converts (Joya, p. 21-23).

“An ancient Chinese book states that the Philosopher Hamintze, a prince of the Han dynasty, was the inventor of Tofu or soybean curd (Horvath, p. 6) while another source attributes the tofu innovation to the Chinese Philosopher Whai Nain Tze (Piper & Morse 1923, p. 234). The manufacture of soybean curd (tofu) was started in China in 164 B.C. during Emperor Hwai Wen's reign by Liu An, duke of Hwai Nan. Liu An was a great friend of the Buddhist monks and it seems quite likely that he made this bean curd to provide a change or delicacy to break the monotony of the monastic ration. Note: Whai Nain = Huainan. Liu An was the duke (*tze*) of Huannan. So all of these people are one and the same person.

Tofu was introduced into Japan from Korea for the first time during the Toyotomi government (Horvath, p. 73) and was undoubtedly introduced into Japan from China by the Buddhists (Piper & Morse, p. 234) being used for their daily food before it was generally used (Horvath, p. 73).

“The true Buddhist monk was carried through the period of childhood growth on a rather heavy diet of bean curd (Horvath, p. 17). Even the naming of soybean curd has its esoteric connotations as the Classical Chinese name for tofu is Li chi which probably means morning prayer (Horvath, p. 72).

“Natto, a sort of vegetable cheese prepared from soybeans has long been used by the Buddhists and is now used extensively by the Japanese (Piper & Morse, p. 224).

“Buddhism seems to have been a major reason for the development of Japan for main soybean products. With the existence of these products Japan opened the world to soybeans.” Address: Univ. of Wisconsin, Madison, Wisconsin.

1239. Senti, F.R. 1963. Soybeans—Their future as a food and feed crop. *Soybean Digest*. Jan. p. 16-20.

• **Summary:** “A thorough survey of the present and potential markets for both the oil and meal fractions of the soybean.” Discusses food uses of soybean oil, fats and oils used in margarine (1946-61; graph), sources of high-protein concentrates or livestock and poultry feeds (1937-61; graph), polyunsaturated fatty acids in the U.S. diet, feed and food uses of soybean meal, growth in oilseed meal consumption, tofu, miso, tempeh, UNICEF’s clinical trial with soy beverage for infants in Taiwan, Public Law 480 and soya. To date 12 projects sponsored by the NRRL and funded by P.L. 480 on various food aspects of soybean utilization have been activated in Italy, Spain, Scotland, Finland, Israel, and Poland.

Figure 1, “Fats and oils used in shortening (1946-61)” is a graph showing that in 1945, soybean oil was the main oil used, followed by cottonseed oil, with animal fats a distant third. In 1961 soybean oil is still the leader (47.6% of total fats used), followed by animal fats (33.3%), then cottonseed oil (16.7%).

Figure 2 is a graph showing that per capita consumption of liquid edible oils increased from about 6.2 lb in 1945 to 11.2 lb in 1961.

Figure 3, “Fats and oils used in margarine (1946-1961)” is a graph showing the total increasing from about 450 million lb in 1946 to about 1,350 million lb in 1961. In 1946 soybean oil and cottonseed oil each accounted for about 50% of the total oil. In 1961 soy oil accounted for about 78% of the total, followed by cottonseed oil and corn oil. Address: Director, NRRL, Peoria, Illinois.

Sogo seiseki to butsuri kagaku bunseki kekka no kentô [Results of the third annual inspection of miso (1960). I. Relation of organoleptic test and chemical or physical analysis]. *Shokuryo Kenkyujo Kenkyu Hokoku (Report of the Food Research Institute)* No. 17. p. 179-201. March. [4 ref. Jap; eng]

• **Summary:** Samples of 226 miso varieties, collected from throughout Japan, were subjected to organoleptic tests, and both physical and chemical analysis. Organoleptic tests revealed that miso made from whole soybeans was superior to that made from soybean flakes or from a mixture of whole soybeans and flakes. Miso made from Japanese soybeans was superior to that made from soybeans imported from the USA or China.

Most miso graded as excellent or good conformed to the following formula: $N = 0.1 (5S-R)$ where N is the weight of ordinary salt (NaCl), R is the weight of rice or barley, and S is the weight of soybeans. Address: Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo, Japan.

March. [6 ref. Jap; eng]

• **Summary:** 257 miso samples, collected from throughout Japan, were subjected to organoleptic tests, chemical analysis (including moisture, sodium chloride, acidity I, acidity II, and glutamic acid), physical analysis (pH and color), and microbiological counts. Seven conclusions are given.

(1) As observed in the 3rd annual inspection, Japanese soybeans showed general superiority to imported soybeans as a raw material for making miso. Note, however, that samples of miso made from U.S. soybeans and graded as excellent or good, increased in number during the past year. Imported soybeans can even be used successfully to make bright colored miso. However, soybean flakes are not yet considered a suitable raw material for making miso of good quality.

(3) Miso of high moisture content was graded as poor in consistency.

1250. McEachern, Margaret. 1963. Symphony of sounds tells time in Tokyo: Centuries-old street calls. *Christian Science Monitor*. May 25. p. 15.

• **Summary:** Tokyo—The Japanese housewife doesn't need a clock to tell the time of day. She only needs to listen to the distinctive calls from her street.

"The day begins with the call, 'Natto... natto... in a high, youthful voice. That's the 'commercial' of the teen-age boy making his rounds with fermented beans. This little delicacy, if you haven't visited Japan, is tasty and nourishing. The housewife uses these beans in soup, flavored with soy sauce, served over rice. The Japanese are probably the only people who like soup in the morning.

"'Misoshiru' [miso soup], the common breakfast food, consists of 'miso,' or fermented [soy] bean soup, with vegetables and fish."

"Late afternoon brings the eerie sound of a horn announcing the bean-curd [tofu] salesman. This vendor carries his produce in wooden buckets attached to a long bamboo pole." A photo shows housewives shopping in Tokyo.

• **Summary:** Contents: Introduction (world food shortages). Technological assistance (by NRRL). Oriental traditional foods: Tofu, shoyu or soy sauce, miso or soy paste, monosodium glutamate, natto and kinako, soy beverage, tempeh (tempe). Recent food developments. Address: NRRL, Peoria, Illinois.

1253. *Hartford Courant (Connecticut)*, 1963. Today we look for new ideas from the Japanese. Aug. 11. p. 1D.

• **Summary:** A glimpse of home life in postwar Japan, with six photos and an illustration of a mother with a baby on her back and a child standing beside her. A typical day's menu for a middle class family is: "Breakfast: bean paste [miso] soup, rice, pickled vegetables and seaweed, Tofu, which is a bean curd, like custard, and green tea."

The evening meal, usually served Japanese style, includes "cooked or pickled vegetables, tofu bean curd custard, a clear soup and some fresh fruit... washed down with many tiny cups of green tea."

1254. Mitani, Kazuma. 1963. Edo shōbai zu-e [Illustrations of merchants, artisans and peddlers during the Edo period in Japan]. Tokyo: Seiabo. 271 p. Illust. No index. 20 x 27 cm. [Jap]

• **Summary:** A stunning book, filled with large, lovely illustrations (mostly wood-block prints or line drawings) from the Edo period (1600-1867) in Japan. Soy-related illustrations:

(1) A tofu shop (p. 18), showing a man sitting on a wooden lever-press pressing the soymilk out of cloth straining bag while his wife, with a baby on her back, turns a hand-turned stone mill that grinds soaked soybeans into a smooth puree, which falls into a wooden tub. Large blocks of tofu are shown immersed in cold water in a sort of

wooden sink, with a tofu knife on top. In the background, up a step inside the house, an elderly person is deep-frying tofu.

(2) A tofu seller (p. 19), walking in the street with two wooden tubs of tofu at both ends of a shoulder pole. He is wearing getas on his feet and a large round straw hat.

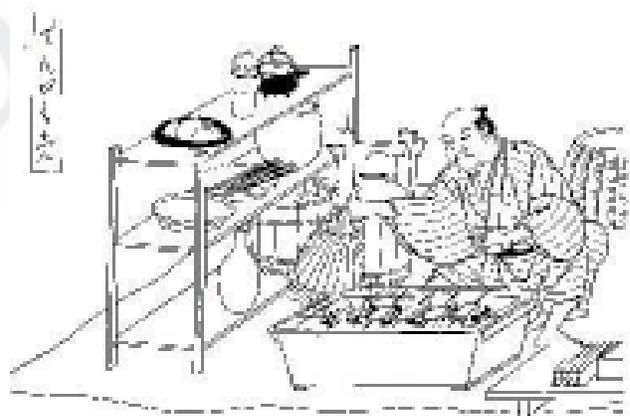

(3) A shoyu seller (p. 23), walking in the street from door to door with several layers of wooden tubs at both ends of a shoulder pole and a kerchief over the head.

(4) A man in a shop with Kinzanji hishio in wooden vats of various sizes, each bound by braided bamboo hoops (p. 26).

(5) A woman in a kimono (p. 26), serving two cups of amazake.

(6) A man selling dengaku (p. 28), skewered tofu above hot coals in a brazier. He is fanning the coals and hunkering behind the brazier.

(7) A seller of oden (p. 29). He is standing, resting on the shoulder pole, which rests atop two tall boxes.

(8) A man making Inari-zushi (p. 49) at a street stall. An illustration below the roof shows a fox running.

(9) A man selling woven bamboo baskets and miso strainers (*zaru ya miso-koshi*) (p. 210).

(10) A woman with a child on her back as she walks (p. 239), selling edamame (green vegetable soybeans) in a basket.

The author collected these illustrations from many sources; the source of each is given in an "accompanying source book"—which we have been unable to locate. He re-drew each of the old originals, but tried to be true to the

original. He eliminated a few things that he felt were not needed in some illustrations and added a few more things to others to make them clearer for today's readers. There are no illustrations that he created. Most of the originals are from the mid-Edo period, especially the Kansei, Bunka, and Bunsei eras (1789-1830), with 2-3 things from the Kyoho period (1716-1735).

To make this book he went to many libraries, archives, and other places where historical documents are kept; he was helped by many other people. He was born on 15 March 1912 (Meiji 45). He graduated from Tokyo Bijutsu Daigaku. Nihon ga-ka (Tokyo Fine-Arts Univ., Japanese Art Dept.). He is a member of the Bijutsu Shuppan Renmei (Art Related Publishing Bureau). He presently lives at Setagaya-ku, Tokyo. The book has a detailed table of contents, but no index. Address: Japan.

1255. *Soybean Digest*. 1963. Japan miso team visits U.S. Nov. p. 22.

1256. Standal, Bluebell R. 1963. Nutritional value of proteins of Oriental soybean foods. *J. of Nutrition* 81(3):279-85. Nov. [18 ref]

• **Summary:** Hawaii imports 680-907 metric tons/year of soybeans from the United States mainland and most of it is used for food. "Oriental soybean products are used daily by all nationalities in Hawaii. They constitute important items in the diet. All soybean products used in these islands, e.g., tofu, natto, miso, shoyu, and sprouts, are prepared from the matured beans by the methods using in Japan and China. A certain amount of the beans is grown locally and picked green for use as will be described later" (p. 279).

The commercial process for making each product is described. Concerning natto: "The preparation had a characteristic cheesy odor which attracted flies and apparently stimulated the appetite of rats. Agar smears of the preparation show that it contained an almost pure culture of gram-positive rods in long chains, without spore formation for 2 days at 31°C. Three brands of natto were available.

The Net Protein Utilization (NPU) values, at 10% protein in the diet for rats, were determined to be: powdered whole egg (control) 90.4, *edamame* (green soybeans; "picked green and used as a vegetable") 72.2 (the highest of any soyfood in this study), tofu 65.0, [soy] bean sprouts 56.0, natto 44.4, and mung bean sprouts (*Phaseolus aureus* Roxb.) 35.6. Address: Dep. of Nutrition, Hawaii Agric. Exp. Station, Univ. of Hawaii, Honolulu.

1257. Keaton, Clyde. 1963. Japan: An expanding market for soybeans. *Foreign Agriculture* 1(51):9. Dec. 23. Address: Asst. Agricultural Attaché, Tokyo, Japan.

1258. Diamant, Yehudah; Ilani-Feigenbaum, Yaacov; Pinsky, Elijah; Lakser, Shoshana; Shor, Fruma. 1963. The preparation of Japanese-type miso for human consumption by fermentation of defatted soybean meal. *Israel J. of Chemistry* 1(3a):184-85. Dec. [1 ref]

• **Summary:** The use of defatted soybean flakes, "the protein-rich residue remaining after commercial oil extraction from the whole soybean," in place of whole soybeans, gave a product which compared favorably with Japanese miso and with miso prepared locally from whole soybeans. Address: Dep. of Biochemistry, The Bar-Ilan Univ., Ramat-Gan, Israel.

1259. Chung, J.; Cho, B.; Lee, C. 1963. Studies on the composition of kochujang. *Hanguk Nonghwa Hakhoe Chi (J. of the Korean Agricultural Chemical Society)* 4:43-46. [Eng; Kor]*

• **Summary:** Soyfoods and their nutritional value are discussed on pages 65-67, incl. soymilk (*leite de soja*), tempeh, miso, tofu, shoyu, and natto. Address: Universidade do Recife, Instituto de Fisiologia e Nutricao.

1261. Mei, Yu Wen; Adams, Charlotte. 1963. 100 most honorable Chinese recipes. New York, NY: Thomas Y. Crowell Company. xi + 140 p. Illust. by Wen Mei. Index. 24 cm.

• **Summary:** Contents: Introduction. Chinese ingredients. Chinese cooking utensils and Western equivalents. Some tips on Chinese cookery. Menu for a Chinese dinner party. Daily dishes. Cold wine dishes. Hot wine dishes. Main dishes. Soups. Rice dishes. Desserts. General recipes. Mail order shops. Geographical locations of honorable recipes.

This is a collection of the greatest classical recipes of China. All five major "schools" of Chinese cooking are represented: Shanghai, Peking, Yang Chow (120 miles northwest of Shanghai; pinyin: Yangzhou; Wade-Giles: Yang-chou), Szechuan, and Canton. Yu Lin Chuan, one of Old China's most renowned restaurateurs, has selected these recipes, all of which were translated by his daughter, Yu Wen Mei, and carefully tested by Charlotte Adams—to ensure ease of preparation by American homemakers.

The chapter on "Chinese ingredients" describes the following soy-related ingredients: Agar-agar, bean curd (fresh, or fermented), Hoisin sauce, laver (seaweed), red beans [azuki] (tiny beans used for making sweet bean paste), sesame oil, soy bean paste (very salty, or lightly salted). Hoisin sauce is "A delicious, thick, dark-brownish-red condiment, often used as an ingredient in cooked dishes, also as a side-dish sauce for dipping" (p. 2).

The chapter titled “Some tips on Chinese cookery” states (p. 7). Peanut oil is the preferred type of oil. If food is truly fine, “there is no reason whatsoever to add monosodium glutamate to it, and you will note that it is required in none of the recipes.” “We strongly suggest that you buy imported soy sauce by the quart. The soy sauce made here is much saltier than that which comes from Hong Kong, and its use therefore alters the recipes.” Many recipes are seasoned with soy sauce or soy bean paste

Soy-related recipes: Shrimp and bean curd (Yang Chow; p. 24). Crabmeat and bean curd soup (p. 94). Shrimp ball, ham, and bean curd soup (p. 103). Red roast pork (Yang Chow, with soy sauce; p. 113). Almond bean curd (Peking; p. 121). Red bean paste I and II (p. 127-28).

Note: This is the 2nd earliest document seen (Sept. 2008) that mentions Hoisin sauce. Address: New York City.

1262. Onishi, Hiroshi. 1963. Osmophilic yeasts. *Advances in Food Research* 12:53-94. [150+* ref]

• **Summary:** Since the word “osmophilic” was first used by von Richter (1912) for the group of yeasts that can grow well in an environment of high osmotic pressures, a large number of yeasts showing sugar- and salt-tolerant properties have been described.

Soy sauce mashers differ significantly from other brew mashers in their high content of sodium chloride (about 18%) and nitrogen (1.0 to 1.5% as total nitrogen). Thus, in Japan, osmophilic yeasts have been investigated mainly for “effective utilization in the soy sauce and miso paste industry.”

Soy [sauce] yeasts and miso yeasts: The first report on soy [sauce] yeasts appeared in 1906, when Saito isolated 5 strains of salt-tolerant yeasts from soy sauce mashers in the Choshi district and classified them into *Saccharomyces soya*, *Zygosaccharomyces japonicus*, *Pichia farinosa*, *Mycoderma* sp., and *Torula* sp. Subsequently, many taxonomic studies were carried out on soy yeasts (Mitsuda, 1910; Nishimura, 1910; Kita, 1911; Ishimaru, 1935). However, none of these observations explained which yeast played an important role in the ripening of soy mashers. Takahashi and Yukawa (1911) showed that *Zygosaccharomyces major* and *Zygosaccharomyces soja* were useful in ripening soy mashers, giving the characteristic taste and flavor through their fermentation. *Zygosaccharomyces japonicus* and *Zygosaccharomyces salsus* were shown to be harmful because they were the main cause of the formation of pellicles leading to deterioration of the commercial quality. This work has been believed to give the most reliable information on both microbiological and applied aspects of soy yeasts.

“As for miso yeasts, extensive and detailed studies were conducted by Mogi (1938-1942). Unlike soy sauce, miso pastes were commercially produced in great variety with different raw materials and various contents of NaCl. Mogi

described many new species of miso yeasts belonging to *Saccharomyces*, *Zygosaccharomyces*, *Debaryomyces*, *Hanseluna*, *Pseudohanseluna*, *Pseudohanseluna*, *Pichia*, *Zygopichia*, *Torulopsis*, *Pseudomycoderma*, and *Pseudomonilia*. Among them, the dominants were *Saccharomyces*, *Torulopsis*, *Zygosaccharomyces*, and *Zygopichia*, and the last two were found chiefly in miso paste of relatively high salt content.”

Salt tolerant yeasts, especially *Saccharomyces rouxii*, play an important role in soy sauce and miso fermentation in Japan. They play a key role in creating the characteristic flavor and taste, and when added, can shorten the ripening period of the mash while improving its quality. Especially with semichemical soy sauce, involving acid hydrolysis of the soybeans, it is very important to add yeasts that cause vigorous fermentation of the mash, which improves the flavor and taste.

But osmophilic yeasts can also cause food spoilage—especially the dry white pellicles or films that form on the surface of (usually raw) soy sauce, and may cause gaseous fermentation. These pellicles are caused by the growth of film-forming yeasts such as *Saccharomyces rouxii* var. *halomembranis* and *Pichia*; the result is deterioration of soy sauce quality. “This spoilage cannot be seen in well-matured soy sauce of good quality, because it contains yeast-static compounds.”

Note: This is the earliest document seen (June 1999) that mentions the yeast *Zygosaccharomyces rouxii* in connection with soy sauce or miso. Address: Noda Inst. for Scientific Research, Noda-shi, Chiba-ken, Japan.

1263. Sato, Makoto. ed. 1963. Kuki, hishio, misho, miso, shōyu nado ni kansuru shiryō [Historical documents about soy nuggets, hishio or chiang, misho, miso and shoyu]. Noda: Noda Kofukai Toshokan. 230 p. Illust. No index. 28 cm. [189 ref. Jap]

• **Summary:** Reprints of 189 old documents on shoyu and miso, and their progenitors, in chronological sequence. The alternate title is “Shoyu miso shiryō shusei.” Makoto Sato was born in 1907. Address: Head, Kofukai Library (Kofukai Toshokan Cho).

1264. Sato, Makoto. ed. 1963. Shōyu miso shiryō shūsei [Collected historical documents about shoyu and miso]. Noda: Okikazekai Toshokan. 230 p. 22 cm. [Jap]*

• **Summary:** See the other entry for Sato 1963. Address: Japan.

1265. Tanaka, Heihachi; Nicholas, Betty. 1963. The pleasures of Japanese cooking. Englewood Cliffs, New Jersey: Prentice Hall, Inc. viii + 247 p. Illust. Index. 22 cm.

• **Summary:** Contents: Introduction. 1. A chat about Japanese food: Seasonings and flavorings, table settings and utensils, kitchen utensils, etiquette, cooking and serving a

Japanese meal. 2. Appetizers. 3. Soups. 4. Broiled dishes. 5. Steamed dishes. 6. Saucepan foods. 7. Fried foods. 8. Salads. 9. Vegetables. 10. Rice and noodle dishes. 11. Thirst-quenchers. 12. Desserts. 13. Festival foods. Glossary [of Japanese foods and utensils]. List of retail outlets for Japanese food products (national chains and alphabetically by state in the USA).

The book begins (p. 1): “To many Westerners, the cuisine of Japan consists almost entirely of *sukiyaki*, *tempura*, rice and soy sauce. Nothing could be further from the truth.”

Vegetables “are harvested at the height of their season,” when tender and full of flavor, then cooked lightly and used (for example) “as an ingredient in *misoshiru* (thick soup [miso soup]) or pickled” (p. 3).

“If one were to single out the most important vegetable cultivated in Japan it would be the soybean. For this legume,... is such a versatile food that it is served in some manner at practically every Japanese meal.

“In the hilly interior of the country where fish is scarce, or in the vegetarian menus of the Buddhists, soybeans are called the ‘fish of the field’ and relied upon as a valuable source of protein. A favored way of preparing the green soybean is simply to boil and hull it. Dried soybeans are ground [sic], soaked in water, cooked and mashed, sieved through silk, and finally cooked again to produce bean curd or *tofu*.

“Steamed and fermented beans become *natto*. *Miso*, a bean paste made by boiling soybeans, mashing them, adding wheat ferment [sic] and salt and allowing this mixture to ferment for several months, lends itself to use in countless dishes. *Moyashi*, the tender young sprouts of the soybean, are cultivated on indoor racks to conserve precious space in the fields.” In a few days, a single cup of soybeans will produce 3-4 pounds of succulent sprouts (p. 3-4).

“Queen of Japanese seasonings is *shoyu* or soy sauce, a dark, red-brown, thirst-provoking liquid made from wheat or barley, soybeans, salt and water. *Shoyu* is loved by the Japanese for its piquant flavor and its use is so extensive that almost no dish is conceivable without it.” A brief history of *shoyu* and its forerunner, *hishio*, and the process for making *shoyu* are given. *Shoyu* “mash is allowed to ferment and mature naturally for a full eighteen months when it is pressed and the sauce obtained pasteurized to become refined *shoyu*.”

“Another multi-purpose seasoning and foodstuff is *miso*, a paste made from fermented rice and soybeans.” Most *miso* “lasts for years without spoiling or deteriorating. There are two types of *miso*—red and white. Both are widely used in Japan but western palates seem to prefer the white type. Both are highly nutritious and are used in literally hundreds of ways: as a seasoning, a main dish and the basis of many hearty, potage-type soups” (p. 5-6).

“For centuries [sic] Japanese cooks have used a dashi of *aji-no-moto*, a seaweed or vegetable protein derivative, to intensify the natural flavors of the foods they cooked. Translated, *aji-no-moto* means “essence of taste” (it is often referred to as taste powder) because the minute white crystals heighten the inherent flavors of foods,... but lending no flavor of their own” (p. 6).

Yakimono are broiled foods. “Flavor broiling includes *yakitori* (broiled chicken), *teriyaki* (fish marinated in a sauce containing *shoyu* and then broiled),... Miso-broiling is used for such vegetables as eggplant as well as for fish or meat” (p. 13).

“Inasmuch as *shoyu*, or soy sauce, is such an all-important seasoning and is called for in almost every Japanese recipe, it should be noted that the use of genuine *shoyu* is quite essential. Most other soy sauces, while excellent for other types of cuisine, really don’t do justice to Japanese cooking” (p. 19). Also discusses wasabi, sesame seeds, sesame oil, *katsuobushi*, *konbu*, sake, and various mushrooms (p. 20-22).

“*Tofu*, or soybean curd, is such a versatile foodstuff—it may be boiled, fried, steamed, sautéed or marinated—that it is included as an ingredient in many recipes in this cookbook. Fresh *tofu* is sold in cakes; refrigerated, it will keep about one week. It is also available in cans and, while the processed product is not quite as tender as the fresh, it does make a satisfactory substitute. The consistence of *tofu* resembles thick custard and it should be handled carefully to avoid breaking and crumbling. Western taste buds seem to find *tofu* bland and a bit flavorless, but when deftly sauced it is very delicious—and also nutritious. Note: *tofu* must not be overcooked or it will toughen and develop a rubbery texture” (p. 24).

Recipes include: Norimaki-Sushi (with nori, *shoyu*, and sashimi). Tiny *teriyaki* (ingredients: 2 pounds beef tenderloin, 1 cup *shoyu*, 3/4 cup water, 1/2 cup mirin, 3/4 cup honey, 1 clove garlic, crushed, and 1 one-inch piece fresh gingerroot, grated; p. 46). Liver *tsukudani* (with *shoyu*; p. 55). Fish and *tofu* stew (p. 69). Oyster *miso* (p. 71). Vegetable and noodle *miso* (p. 72). Shrimp or prawn *miso* (p. 73).

Chapter 4 is titled “Broiled foods.” “... almost all cooking in Japan is done over a charcoal fire,...” “Without a doubt, the most popular of all broiled dishes with the Japanese people is *yakitori*, or broiled chicken... Almost as popular as *yakitori* is *teriyaki*, usually fish marinated in a *shoyu* sauce, arranged on long skewers, and then broiled over charcoal. *Teriyaki* means ‘glaze broiled’—*teri* meaning ‘shiny’ and *yaki* ‘broiled’ or ‘roasted.’ Actually any meat may be *teriyaki*,” but all have in common “the marinade of *shoyu*, sake, and sugar” (p. 75-76). Recipes include: Salmon *teriyaki*. Shrimp *teriyaki*. Stuffed beef *teriyaki* (p. 88-90). *Shoyu* marinade basting sauce (p. 93). *Sukiyaki* (with *tofu* and *shoyu*; p. 110). *Tempura* sauce (with *shoyu*, p. 121).

Fried tofu with sauce (p. 127). Pickled seaweed (with konbu and shoyu, p. 140). Sesame-shoyu dressing (p. 151). Vegetables with tofu sauce (p. 154). Cabbage with mustard-miso sauce (p. 157). Eggplant with miso sauce (p. 164). Azuki meshi (red beans and rice; p. 181). Domburi soboro (with tofu; p. 182-83). "Red bean paste (sweetened)." Ingredients: "2 cups red beans (azuki). 2 cups sugar. 2 teaspoons salt." (p. 203.) Also called "sweetened red bean paste" (p. 200; Jap. *azuki an*; p. 200-203). Yokan (with "1½ cups strained red bean paste"—*koshi-an*; p. 204). Hikishamanju (Bean jam buns with strained red bean paste; p. 207). Shiruko (Red bean soup [azuki] with rice cakes {mochi}; p. 209). Zoni (Rice cake soup, with mochi; p. 215-16). Sweetened soybeans (for New Year's, p. 217-18).

The glossary includes *abura-age*, *azuki* ("red beans"), *azuki-an* ("red bean paste"), *daizu* (soybean), *ganmodoki*, *kanten*, *konbu*, *konnyaku*, *miso* (aka miso, shiro miso), *misoshiru*, *mochi*, *mochigome*, *mochiko*, *nori*, *shiru-miso*, *shoyu*, *teriyaki*, *tofu*, *wakame*, *yakidofu*.

Note: This is the earliest English-language document seen (March 2006) that uses the term "sweetened red bean paste" to refer to sweet azuki bean paste [*azuki-an*] or that uses the term "strained red bean paste" to refer to strained azuki bean paste [*koshi-an*]. Address: 1. Head Chef, Japanese Cuisine, Japan Airlines.

1266. Teriyaki and sushi: Selected 72 recipes. 1963. Elmsford, New York: Japan Publications Trading Co. 58 p. Illust. Index. 21 cm.

• **Summary:** On title page: "Compiled by the Japanese cooking companions." The 12th printing was Jan. 1976. Contents: Rice dishes (incl. How to cook delicious sushi rice, *oshi zushi*, *norimaki*). Vermicelli dishes (incl. *tsukejiru*, *kakejiru*, *somen*, *soba*, *udon*). Soups. Broiled dishes (incl. *teriyaki*). Marinated dishes. Boiled dishes. Steamed dishes. Fried dishes. Casseroles. Tart dishes. Pickles. Confectionery. Glossary. Note: Brands promoted in the recipes throughout this book, by appearing in large boldface type, are: Kikkoman soy sauce. *Aji-no-Moto*, *Manjo mirin* (sweet rice wine).

Soy-related recipes include: *Kenchin-jiru* (with "½ tofu (bean curd) (1/3 lb)," p. 17). *Miso soup* (with 4 tbsp. bean paste (miso)" and "2 *aburage*," p. 19). *Konnyaku* (devil's tongue) and carrots with white bean curd paste dressing (with tofu, p. 29-30). *Bean curd with liquid starch* (with tofu, p. 32). *Meat and vegetables in aburage-bags* (with "2 large *aburage*, p. 34). *Bonito cooked with bean paste* (with miso, p. 35). *Steamed squid* ("stuffed with tofu and vegetables," with "1 tofu (bean curd)," p. 38-39). *Sukiyaki* (with "2/3 lb. broiled bean curd," p. 46). *Yudofu* (with "1 lb. bean curd," p. 47). *Yosenabe* (with "1/3 lb bean curd," p. 47).

The recipe titled simply "Teriyaki" (p. 22) states: "Teriyaki is fish or meat marinated in a mixture of mirin and

saké, sugar and soy sauce and roasted directly over fire. This method of roasting is most suited for oily fish, fish with thick meat, chicken and beef." The sauce contains: "2 tbsp. Kikkoman soy sauce, 2 tbsp. *Manjo mirin*, 1 oz. ginger, and sweetened vinegar (mixture of 1 tsp. vinegar, 1 tsp. sugar, and a few shakes of salt)" (p. 22-23).

The Glossary (p. 47) includes: "Aburage—fried soy bean curd. An—[azuki] bean jam [also called 'red bean jam' in index]. Miso—bean paste. Misozuke—pickles in bean paste. Tofu—bean curd. Yudofu—boiled soy bean curd."

1267. Umeda, Isao. 1963. *Shōyu* [Soy-bean sauce]. Tokyo: Sankyo Shuppan K.K. 232 p. Index. 28 cm. Final technical report. USDA P.L. 480. Project UR-A11-(40)-C. [95 ref. Jap]

• **Summary:** Contents: Part I. 1. Raw materials. 2. Treatment of raw materials. 3. Making koji. 4. *Moromi*: Fermentation (*shikomi*), methods of fermentation, mixing, ripening (*jukusei*), research on ripening, microorganisms in *moromi*. 5. Pressing out the shoyu. 6. Refining (*seisei*): Method of heat treatment (or pasteurization; *hiire*), changes during heat treatment, flavor, composition (*seibun*) of regular shoyu and of special shoyu [*tokushu*], methods of analyzing shoyu.

Part II: Special subjects. 1. Substitute raw materials: Substitutes for soybeans, for wheat, for both soybeans and wheat (copra meal, wheat bran [*fusuma*]). 2. *Tamari shoyu* and *usukuchi shoyu*: *Tamari* and soybean miso, *usukuchi shoyu*. 3. Secondary products (*fukuseihin*): *Shoyu presscake* (*shoyu kasu*), *shoyu oil*, *soybean soak water*, ? *eki*, use of koji spores. 4. *Kegs (taru)*. 5. Semi-fermented shoyu #2 (*Shinshiki nigo*): Research on its production. Address: Nōgaku Hakase, Tokyo Daigaku Nōgaku-bu, Tokyo, Japan.

1268. Ohsawa, George. 1963? *Macrobiotics: The art of longevity and rejuvenation*. Boston, Massachusetts: Eastern Technical Publications. 218 p. Undated. Index. 17 cm.

• **Summary:** Contents: Foreword: Two ways to happiness through health. Preface: Health to peace. Books by the same author (7 in French, 9 in Japanese, one in English, plus 4 periodicals). 1. *Macrobiotics and Oriental medicine*. Why I have written this book. What is the philosophy of the Far East? 2. What is my therapy? Unhappiness, illness, crime. Incurable disease. Three categories of cure. What we must not cure. *Satori*. Courage, honesty justice. Tolerance. 3. The six main conditions of health and happiness. 4. Nothing shall be impossible to you. You should have infinite freedom. You must be your own doctor. 5. Ohsawa's macrobiotic cuisine. 6. Principal foods. 7. Secondary foods (p. 72-103): *Nituke*, soup (lotus root *ankake*, *kuzu* gruel, cracknel *yuba*), pie, *gyoza* (*piroshiki*), *chapati*, *jinenjo* (wild potato, *tororo*). Egyptian beans (*chick peas*, *pois chiche*), beans (boiled soy beans with miso, *gomoku* beans, *goziru* [*gojiru*] soup, *aduki* beans), corn, *aduki* (*ogura* vermicelli), *goma-tohu* [sesame tofu], *aemono* (salads), varieties (chou

farci, buckwheat crepe), wild vegetables, seaweeds (shi kobu [shio kombu], kobu maki, fried kobu, musubi kobu, kobu soup, matsuba kobu, salmon head kobu-maki, hiziki with lotus root, hiziki nitsuke, hiziki with “age,” hiziki and soybean, gomoku hiziki, hiziki rice), wild plants (dandelion leaves or root, aozu (wild spinach), fuki), miso and tamari preparation (sauce miso, miso cream, muso [miso with tahini and orange peel], miso soup, carrot and onion au miso, vegetable au miso, oden au miso, buckwheat dango au miso, miso ae, tekka no. 1 and 2), syoyu [shoyu] (sakura rice, sauce au shoyu, sauce au sesame, bouillon au shoyu, ositasi [ohitashi], oatmeal cream, potage oatmeal, sauce bechamel a la sauce shoyu, mayonnaise a la sauce shoyu, sauce Lyonnaise; “Shoyu diluted with a little water is very good for Sasimi [Sashimi = raw fish] and fried oyster, tempura, fish Sukiyaki, tofu (vegetable cheese of soya beans), etc.”), beverages (rice tea, wheat tea, dandelion coffee, Ohsawa Coffee (Yannoh; incl. roasted and ground rice, wheat, aduki, chick peas, and chicory), Kokkoh (incl. roasted rice, glutinous rice, oatmeal, soya beans, and sesame seeds), Mu tea, syo-ban (coarse green tea with soy sauce), kuzu [cream, with shoyu] (“A good drink for everyone.”), aduki juice, radish [daikon] drink no. 1 and 2, ransyo (one beaten egg + 50% of traditional Ohsawa shoyu), soba tea, umeboshi juice, ume-syo-kuzu, special rice cream).

8. Special dishes. Desserts. 9. Yin and Yang. 10. Macrobiotic suggestions for various symptoms of disease: General suggestions (by disease), macrobiotic external treatment (tofu plaster, soya bean plaster, Dentie). 11. Specific curative dietary suggestions: Examples of diseases and their macrobiotic treatments. 12. Kokkoh: Macrobiotic food for baby. 13. On cooking. Salt. Folk medicine. Your history. Appendix: The case of Mr. E. (Cure in 10 hours). “Pro-forma death certificate of the American World Empire and its Gold Dynasty.”

Ohsawa centers and friends (p. 217-18): England (Trustin Foods, London; Mrs. R. Takagi, London), France (Centre Ignoramus, Longue Vie, Guenmai [Genmai = brown rice], Yamato, Ohsawa-France; all in Paris). Germany (Miss M. Arnoldi, Heidelberg; Dr. P. Martin, Munich; Dr. Henning, Hamburg), Italy (Miss H. Onoda, Rome; Mrs. Baccolis, Rome), Japan (Nippon Centre Ignoramus, 8 Kasumi-cho, Minato-ku, Tokyo; Shinsekai, Osaka), Brazil (Casa Longavida, Sao Paulo), Sweden (Miss Ilse Clausnitzer, Stockholm), USA (Ohsawa Foundation, 61 W. 56th St., New York; Ohsawa Foundation, P.O. Box 238, Chico, California; Chico-San, Inc., 64 Fifth Ave., Chico, California; Musubi, 61 W. 56th St., New York—Macrobiotic restaurant).

This book is undated, but it contains clues as to when it was published. On page 190 is reference to an article in *Time* magazine dated 7 March 1960 about the sad state of health in the United States. Then on page 189, Ohsawa states: “Upon my arrival in the United States last November,

I began my lectures on the philosophy and medicine of the Orient. I gave some in Los Angeles and San Francisco [California], but mostly in New York institutes and schools such as the Universalist Church, The New School for Social Research, Columbia University, New York City College, and the American Buddhist Academy. I have postponed my departure twice. But I am very happy as I have confirmed my assumption: marriage between paradoxical philosophy of the Orient and the materialistic techniques of precision of American science, which must be realized for the infinite freedom of Man and for world peace” (p. 189).

Note 1. These lines almost certainly describe Ohsawa’s first visit to the United States. He arrived in November 1959 and stayed well into 1960.

Note 2. This is the earliest document seen (Feb. 2005) that mentions “Kokkoh” (or “Kokoh”), a milk alternative containing soy, developed and used by macrobiotics.

1269. Claiborne, Craig. 1964. How to solve an Oriental eating puzzle: Learn Chinese, adopt a relative, or get to know the waiter. *New York Times*. Jan. 21. p. 20.

• **Summary:** New York City is probably home to more Chinese restaurants than any city in the world outside of China, Formosa and Hong Kong. Yet knowing what to order in a previously undiscovered Chinese restaurant remains a daunting problem. Two recent visits to the Harbin Inn (2637 Broadway, at 10th St.) proved the point. His second visit, in the company of Mrs. Grace Chu, the expert on Chinese cuisine and cookbook author, was a vastly better experience. He enjoyed “chicken splendidly complemented with crisp walnuts and flavored with hoisin sauce,...” Mrs. Chu explained the above lessons to be learned—and added the importance of ordering in advance.

1270. André, Émile. 1964. Sur l’utilisation des graines de soja dans l’alimentation humaine par les populations d’Extrême-Orient [On the dietary utilization of soya beans in the Far East]. *Oleagineux* 19(1):37-39. Jan. English-language summary p. XXVIII. [1 ref. Fre; eng]

• **Summary:** The author gives the results of his research on lipoxidase, initially inspired in early 1931 by a young Chinese student M. Kiawo Hou. He also discusses soymilk (lait de soja or téou-jou), tofu (fromage de soja or téou-fou), yuba (téou-fi), soy oil (huile de soja), soy sauce (tsing yeou), miso (miso de soja), and soy sprouts (germes de soja). The residue from making tofu and soymilk (okara) is fed to poultry and pigs. Soya oil is made by an archaic process that is very inefficient. “The residue, not perfectly separated from the oil, is consumed by the poorer classes.” Address: France.

1271. Hayashi, Shizuka. 1964. Japan team would like to see annual U.S. tour. *Soybean Digest*. Jan. p. 30.

- **Summary:** A nine-man Japanese miso team toured the USA early in the fall of 1963 at the invitation of the American Soybean Association. They hope such U.S. tours can take place each year. This first overseas mission of the Japan Miso Industrial Cooperative left Tokyo on Sept. 7 and returned Oct. 17 after a round-the-world trip. Tokubei Tanaka, president of the Association, headed the mission. Address: Managing Director, Japanese American Soybean Inst.

Browning of bottled soy sauce during storage]. *Shokuryo Kenkyujo Kenkyu Hokoku (Report of the Food Research Institute)* No. 18. p. 154-57. March. [8 ref. Jap; eng]
• **Summary:** The color of pasteurized soy sauce was relatively stable compared with that of raw (unpasteurized) soy sauce, and it was protected from browning at 38°C for 1 month by bottling and storing in an oxygen-free environment.
Bottled soy sauce can be prevented from browning by storing it at a temperature below 20°C [68°F, or by refrigerating it].

Shokuryo Kenkyujo Kenkyu Hokoku (Report of the Food Research Institute) No. 18. p. 67-69. March. [4 ref. Jap; eng]

• **Summary:** Soybeans were fermented with *Rhizopus oryzae* for 60 hours at 30°C, then vacuum dried and ground to a powder. The solubility of protein and the rate of amino-nitrogen to total-nitrogen were 20% and 2% respectively, indicating that protein hydrolysis slightly exceeded that of koji-beans, but was far less than that of natto.

Peroxide value of fat and oil in tempeh stored for 3 months at room temperature was only 1.3 M.E./kg, whereas that of cooked and dried soybean powder and that of natto powder stored under the same conditions were 71 M.E./kg and 38 M.E./kg respectively. This fact shows that tempeh has antioxidative property comparable to that of miso. Address: Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo, Japan.

1282. Ohta, Teruo; Ebine, H.; Nakano, M.; Hieda, H.; Sasaki, H. 1964. Nattô-kin o riyô suru daizu hakkô shokuhin ni kansuru kenkyû. II. March. [2 ref. Jap; eng] Address: Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo, Japan.

1283. Komiya, Akira. 1964. The shoyu industry in Japan. *Soybean Digest*. May. p. 43-44.

• **Summary:** Table 1 (which does not include data from farm villages) shows the average yearly expenses for seasonings per household in Japan: 1. Refined sugar 19.7% of total expenses. 2. Shoyu 18.3%. 3. Miso 14.3%. 4. Luxury items 13.1%. 5. Edible oils 9.4%. 10. Margarine 2.3%. 11. Salt 2.0%.

Table 2 shows the quantity and value of shoyu produced in Japan from 1958 to 1962 (according to 3 different sets of data). According to the Japan Shoyu Association, the amount has increased from 1,117,800 kl in 1958 to 1,160,750 kl in 1962, an increase of 4%.

Shoyu has been used daily as a seasoning in Japanese for 800 years [i.e. since about 1164]. Five reasons are given to explain why it is “now becoming a daily necessity.” Foreigners like to use shoyu for barbecue and Sukiyaki. Address: Managing Director, Japan Shoyu Assoc.

1284. Norin Suisan-sho, Nosan Engei Kyoku, Hatasaku Shinko-ka. 1964. Daizu ni kansuru shiryô [Statistics concerning soybeans]. Tokyo, Japan. 26 cm. [Jap]

• **Summary:** This yearly report, published by Japan’s Ministry of Agriculture, Forestry, and Fisheries (MAFF), is

packed with detailed statistics on soybean production, trade, and utilization in Japan. Address: Tokyo, Japan.

1285. *Soybean Digest*. 1964. China promotes soybean trade in Japan. July. p. 29.

• **Summary:** “For the first time since 1955, Mainland China is holding trade fairs in Japan to promote soybeans and other farm products.” Chinese soybeans have a lower oil content than American soybeans, and sell for about \$10/ton less. Through this year in Japan, they have been used mostly in the production of miso.

1286. Smith, A.K. 1964. The Mount Fuji meeting. An international symposium on oilseed protein foods. *Soybean Digest*. Aug. p. 18-20.

• **Summary:** The symposium, sponsored by the International Institute of Food Technology, was held on May 11-15 at the Mt. Fuji Hotel, Lake Yamanaka, Japan. “The 85 technologists participating in the program represented 20 countries and included 30 from Japan and 20 from the United States. An additional 26 technical observers represented the Japanese food industry.” “The Mount Fuji symposium was a historic occasion for the advancement of oilseed protein foods, being the first time an international conference was devoted solely to this subject.”

“Dr. Y. Sakurai of Tokyo University and George F. Stewart of the University of California, Davis, were co-chairman for the meeting. Dr. T.M. Anson, assisted by others, developed the program. Dr. Masahiro Nakano was chairman of a committee to collect and display oilseed protein foods.”

“Soybeans, peanuts, cottonseed, sesame, and coconut were the five oilseeds included in the program as sources of food proteins. Because of their long history and extensive use for food, soybeans were the topics of a major part of the papers and discussion.”

“Among the newer developments in the Orient, K.S. Lo of Hong Kong reported on his successful commercial operation in the daily production of 24,000 cases of soybean milk in his two plants. His milk is made from well-washed and dehulled soybeans. It contains about 3% protein, 2-3% fat, and 5-7% carbohydrates, with added vitamins and calcium. Mr. Lo’s methods for marketing soymilk are unique; he is also a large dealer in bottled soft drinks, and he markets soy milk as a soft drink. His milk competes with soft drinks rather than with other forms of milk or other health foods. Regardless of his method of marketing, he feels that the product is serving an important nutritional function in the Hong Kong area.” Note: Vitasoy is once again being fortified with vitamins and calcium.

Dr. Tokuji Watanabe of the Food Research Institute reported on new ways of making tofu, such as “packed or bagged tofu” which is increasing in popularity. The soymilk is coagulated with calcium sulfate inside a polyethylene or

vinylidene chloride plastic bag followed by heating in a water bath. This new process saves time and labor. Several plants are now producing 20,000 bags per day. Tofu is now also being freshly prepared in the home from spray-dried soy milk, coagulated with calcium. "More than 285,000 metric tons of soybeans and 65,000 metric tons of soybean meal are consumed annually for making fresh tofu in Japan, and because of low cost and high food quality, its consumption is said to be increasing.

Concerning miso, koji is now being made by a continuous method in 20-inch deep metal trays. Miso soup is now sold in a dried form. Shoyu production consumes 250,000 metric tons of soybeans of the equivalent as meal.

"The use of soy flour and grits in the United States for edible purposes was estimated at 200 million pounds and in England at 40 million pounds. The largest use of soy flour in the United States was estimated at 50 million pounds for bread and other baked products. In England, most soy flour is the full fat, enzymatic active type and is used at about 0.75% for improving color and flavor of baked goods."

"While isolated soybean protein for industrial uses has been produced since 1937, the production for food protein dates only from 1959. The production of industrial protein is carried on by two U.S. producers and annual production was estimated to be in the range of 40-50 million pounds. Four U.S. companies were reported to be producing or engaged in extensive research on isolated protein for food uses. The newest to be manufactured is referred to as a protein concentrate. It is prepared by washing soy flakes either with 80% alcohol or with water at the isoelectric point of the protein (pH 4.5). The concentrates must contain 70% protein whereas the isolate is 95% or more. The largest use of the isolate and concentrate is in comminuted or ground meat products, also referred to as sausage-type meats. Soy protein concentrate can be legally used in sausage-type meats up to 3.5% of the finished product." Address: NRRL, Peoria, Illinois.

1287. Hardjo, Suhadi. 1964. Pengolahan dan pengawetan kedelai untuk bahan makanan manusia [Soybean processing and preservation for human consumption]. Paper presented at Seminar Kedelai (Soybean Seminar, Rapat Kerdja Kedelai). 14 p. Held 28-30 Sept. 1964 at Bogor, Indonesia. [Ind]*

• **Summary:** Describes several methods of processing and preserving soybeans in Indonesia, including the production of tempeh, tofu (tahu), soy sauce (kecap), tauco (soybean paste), koji, and soybean flour.

Note: This is the earliest document seen (March. 2009) uses the word "tauco" (spelled in that way) to refer to Indonesian-style miso.

1288. Kobatake, Yoshiki; Matsuno, N.; Tamura, E. 1964. Daizu kakô shokuhin no tanpakushitsu no ei-yô-ka

[Nutritional value of protein in Japanese soybean products]. *Eiyogaku Zasshi (Japanese J. of Nutrition)* 22(5):173-77. Sept. [7 ref. Jap]

• **Summary:** The Biological Value of tofu was 68.5, and dried-frozen tofu (kori-dofu) was 69.1. Both values indicate high nutritional quality. Even higher protein quality was observed in okara, a by-product of tofu. Its Biological Value was 84.9, though its absorption rate was 78.4%. The value for casein was 80.1, for salt-free miso 73.2, for low-salt miso 70.7, and for freeze-dried low-salt miso 60.5. Address: Division of Biochemistry of Nutrition, National Institute of Nutrition.

1289. *Foreign Agriculture*. 1964. Japan now using U.S. soybeans in food. 2(46):7. Nov. 16.

• **Summary:** More than 10% of the nearly 49 million bushels of U.S. soybeans exported to Japan during the 1963 marketing year went into the production of three staple foods—shoyu, tofu, and miso. Until 6 years ago, Japan imported no soybeans from the U.S. for food manufacture—all U.S. imports were processed into oil and meal.

1290. **Product Name:** [Kikko Mensi—Fermented Whole Soybean Seasoning].

Foreign Name: Mensi Kikko.

Manufacturer's Name: Fabrica de Siyau Kikko Sociedad de Responsabilidad Limitada.

Manufacturer's Address: Av. Colombia 171, Pueblo Libre, Lima, Peru. Phone: 32-3754.

Date of Introduction: 1964.

How Stored: Shelf stable.

New Product—Documentation: Company history form filled out by Marco Kamego, a present owner of Kikko Corporation S.A. 1997. Dec. 29. This product is similar to soybean miso.

1291. Hesseltine, C.W. 1964. Fungi and fermented foods (Abstract). *Abstracts of the 10th International Botanical Congress*. p. 55-56.

• **Summary:** "In the Western World, the least understood field of industrial mycology is the nonalcoholic food fermentations." For the last 5 years, the author's laboratory has been investigating miso and tempeh. The 5 objectives of the research are outlined. Address: NRRL, Peoria, Illinois.

1292. Sakurai, K. 1964. The role and significance of soy bean foods in Japan. University of Tokyo. Unpublished manuscript. *

Address: Tokyo, Japan.

1293. Akizuki, Tatsuichiro. 1964. Taishitsu to shokumotsu: Kenkô e no michi [Physical constitution and food: The path to health]. Nagasaki: Published by the author. 40 p. 22 cm. [Jap]

• **Summary:** Contents: Introduction. The medical science of one's physical constitution. One's physical constitution. Foods. Nutrition. Food products. Miso. Components of miso. Protein. Fat. Minerals. Bacteria. Medical considerations. Conclusion.

Dr. Akizuki, director of the Saint Francis Hospital in Nagasaki, was born with a congenitally weak constitution, and has devoted his career to researching the use of food as preventive medicine. He has placed special emphasis on a holistic (rather than symptomatic) approach to healing, and on traditional natural foods native to Japan. "I feel that miso soup is the most essential part of a person's diet... I have found that, with very few exceptions, families which make a practice of serving miso soup daily are almost never sick... By enjoying miso soup each day, your constitution will gradually improve and you will develop resistance to disease. I believe that miso belongs to the highest class of medicines, those which help prevent disease and strengthen the body through continued usage... Some people speak of miso as a condiment, but miso brings out the flavor and nutritional value in all foods and helps the body to digest and assimilate whatever we eat... I use and have deep respect for modern medicines such as antibiotics and modern surgical techniques, yet they must only be employed when absolutely necessary. Of prime importance is the development of a strong constitution through proper eating. The basic condition of a person's constitution determines whether or not he will be only mildly and temporarily affected by diseases, or be seriously and chronically affected."

In 1945, when the atomic bomb fell on Nagasaki, Dr. Akizuki's hospital—located only one mile from the epicenter of the blast—was left in ruins. Fortunately, he and his nurses and co-workers were not in the building and were uninjured. Throughout the following 2 years, though, Dr. Akizuki and his staff worked daily in prolonged close contact with fallout victims in areas of Nagasaki which were heavily damaged and highly radioactive. Nevertheless, neither he nor his associates suffered from the usual and expected effects of radiation. Dr. Akizuki was extremely interested in this phenomenon, which he hypothesized may well have been due to the fact that he and his staff had been drinking miso soup regularly. But he felt that only a thorough scientific study of the phenomenon could provide the full answer.

One might ask, "Why did Dr. Akizuki wait 17 years to write this book?" Dr. Hideo Ebine (10/89) says, "I think he was very busy even after the war, taking care of many atomic bomb survivors and ordinary patients as a clinician, reconstructing the destroyed hospital, and writing the book *Nagasaki Genbakuki* (Diary of the Nagasaki Atomic Explosion), and so on. Dr. Akizuki is not a typical western type physician. His philosophy somewhat resembles that of macrobiotics, based on the use of food and diet to overcome

disease. He examined the results of his treatment for 30 working staff of his hospital affected by radiation, and many patients who suffered directly from the atomic explosion before his confidence in the results of his treatment was obtained." Note: An abridged, undated edition, edited by Kawamura Wataru and titled *Taishitsu wa Shokumotsu de* [Your physical constitution depends on what you eat] was published by the Japanese National Miso Association. Address: Saint Francis Hospital, Nagasaki.

1294. Carletti, Francesco. 1964. My voyage around the world. Translation from the Italian [of *Ragionamenti*, 1594-1606] by Herbert Weinstock. New York, NY: Pantheon Books. Div. of Random House. xv + 270 p. See p. 110. [1 ref]

• **Summary:** This is the English-language translation of the 16th century Florentine merchant Carletti (lived 1573?-1636). In the section titled "Second Account: The East Indies" (p. 93+), in the chapter titled "First chronicle of the East Indies" he states (p. 99) that he arrived in Japan in June 1597 at Nagasaki. On page 110 he discusses rice miso, which he calls "*misol*." For details see the 1606 entry for Francesco Carletti. Address: Florence, Italy.

1295. Japan Dietetic Assoc. Corp. (JDAC). 1964. [Standard composition of Japanese foods]. Tokyo: Daiichi Shuppan K.K. 124 p. [Jap; Eng]

• **Summary:** The basic source of information on the nutritional composition of all Japanese foods.

1296. Nagasawa, T.; Tamura, T.; Fujiyama, R.; Kawakami, K. 1964. Miso ni tenka shita bitamin A ryokuka no shôchô to sono misoshiru-chû no anteisei ni tsuite [Potency of vitamin A palmitate added to home-made miso (soybean paste) and cooked miso soup]. *Eiyo to Shokuryo (J. of Japanese Society of Food and Nutrition)* 17(3):185-87. [Jap]

1297. Nichols, Teal. ed. 1964. Zen cookery. Chico, California: The Ohsawa Foundation. 83 p. Index. 22 cm. A second edition appeared in 1965.

• **Summary:** This is the first macrobiotic cookbook written by an American, and its influence was profound.

"Acknowledgements: Our heartfelt gratitude goes to Lima Ohsawa, the foremost authority on Macrobiotic Cookery, without whose patient assistance and teaching this book would not have been possible. Many of the recipes appearing in Zen Cookery are from her collection in an earlier edition of Zen Macrobiotics. The Editor wishes further to thank the following people for recipes, suggestions, and invaluable comments: Joanne Hirsh, Dorothy Salant, Nina Bauman, Cornelia Aihara, Penny Smith, Shayne Oles, Betty Kennedy, and Jane Andrews."

“Zen Cookery is a collection of recipes gleaned from the files of many people, all of whom have adjusted their salt intake to suit their own needs. Their recipes reflect this.”

Contents: 1. Grains. 2. Noodles. 3. Vegetables. 4. Soups. 5. Sauces. 6. Salads. 7. Inspirations from around the world. 8. Special dishes. 9. Miso soy bean paste. 10. Tamari soy sauce. 11. Breads. 12. Pancakes and crepes. 13. Pie doughs. 14. Desserts. 15. Beverages.

Note: This is the earliest English-language document seen (July 2006) that contains the term “tamari soy sauce.” It is also the earliest English-language cook book seen that contains the word “tamari” or the term “tamari soy sauce.”

Each recipe is numbered. Recipes mentioning soy in recipe name (and a few other recipes introducing foods new to the USA): 2. Rice with tamari soy sauce. 3. Rice with aduki beans. 4. Rice & aduki pudding. 7. Sesame rice. 9. Rice with chick peas (garbanzo). 21-28. Buckwheat recipes. 34. Bulgur. 48. Buckwheat noodles in soup (Soba with kombu). 50. Buckwheat noodles with fried bean curds [tofu]. 54. Buckwheat noodles with miso sauce. 55-56. Buckwheat noodles in kuzu sauce. 61. Udon with aduki. 62. Carrot sesame nituke [nitsuke]. 75. Scallion nituke with miso (soybean paste). 76. Carrot and onion nituke with miso. 77. Onion nituke with miso. 78. Vegetable miso stew. 79. Boiled pumpkin with miso. 80. Vegetable sauces with kuzu arrowroot (and tamari soy sauce).

81. Vegetables with tamari soy sauce and tahini. 98. Jinenjo (5 recipes). 101. Miso-vegetable relish. 102. Aduki beans, black [soy] beans, chick peas. 105. Baked chick peas. 106. Buckwheat-aduki pancakes. 107. Udon with aduki beans. 108. Chestnut-aduki gelatine. 109. Chick pea party dip (with tahini and tamari). 110-118. Sea vegetables (kombu, nori, hiziki, wakame, most with tamari). 119. Clear broth (with tamari). 122. Tamari-vegetable broth. or stock. 123. Miso soup (2 types). 124. Creamed miso soup. 125. Root vegetable soup with miso. 131. Soybean soup. 134. Wakame soup (with miso). 149. Sesame sauce. 150. Miso sauce. 151. Miso salad dressing. 152. Thick tamari soy sauce. 153. Tahini tamari soy sauce. 154. Onion tahini sauce (with tamari). 172. Wakame salad.

189. Clam miso. 190. Scallop miso-lemon. 203 Miso spread [with tahini]. 204. Miso sauce [with tahini and orange rind]. 205. Sauce for vegetables [with black sesame and miso]. 206. Scallion miso. 207. Miso salad dressing. 208. Miso-vegetable relish. 209. Miso soup. 210. Udon with miso sauce. 211. Rice porridge with miso. 212. Deep fried miso balls. 213. Carrots and onions miso. 214. Vegetables miso. 215. Tekka (2 types). 216. Tea with tamari soy sauce. 217. Tamari broth. 218. Stringbeans. 219. Dried radish (daikon). 220. Shredded sea vegetables (hiziki). 221. Thick tamari soy sauce. 222. Tahini-tamari sauce. 223. Vegetables with tahini-tamari soy sauce. 234. Aduki muffins. 238. Miso spread (for sandwiches). 239. Tahini-tamari spread. 246.

Buckwheat aduki pancakes. 272. Aduki pudding. 273. Chestnut-aduki gelatine. 274. Kantan jello (with agar).

291. Grain Milk (Kokkoh [Kokoh]; a finely ground combination of roasted rice, glutinous rice, oatmeal, soybeans, and sesame seeds). 294. Tea with tamari soy sauce (syo-ban).

Note 1. This is the earliest document seen (Feb. 2005) that mentions Kokkoh (or Kokoh), a grain milk introduced by macrobiotics.

Note 2. Tofu, amazake, and seitan are not mentioned in this book. 287 is Ohsawa Coffee (Yannoh) and 288 is Dandelion Coffee.

Note 3. This is the earliest document seen (June 2000) that mentions the use of miso in a salad dressing (Nos. 151 and 207).

Note 4. In 1985, when writing a revised edition of this book titled *The First Macrobiotic Cookbook*, Herman Aihara wrote that this 1964 edition, published by the Ohsawa Foundation of Chico, California, was first the edition of the various subsequent and very influential books with this title.

Note 5. This is the earliest document seen concerning Herman or Cornelia Aihara and macrobiotics (or soyfoods).

Note 5. Along with soyfoods, this cookbook (and its many successors) also introduced numerous other basic Japanese foods such as aduki [azuki] beans (3-4, 102, 106-08, 234, 272-73), sea vegetables of all types, and soba. Address: Chico, California.

1298. Ohsawa, George. 1964. *Le Zen macrobiotique; ou, L'art du rajeunissement et de la longévité* [Zen macrobiotics, or the art of rejuvenation and longevity]. Paris: Librairie Philosophique J. Vrin. 212 p. [Fre]*

• **Summary:** The author (lived 1893-1966) lists his name on the title page as “Georges Ohsawa (Nyoiit Sakurazawa).”

1299. Takagi, Heiji; Fujiyama, R.; Nagasawa, T. 1964. *Nōka jika jōzō miso no hinshitsu ni kansuru kenkyū*. III. Hissu amino-san kōsei ni tsuite [Studies on the qualities of home-made miso (soybean paste) used by farm families. III. On the essential amino acid composition]. *Eiyo to Shokuryo (J. of Japanese Society of Food and Nutrition)* 17(3):181-84. [8 ref. Jap; eng]

Chiramin no ganryō ni tsuite [Studies on the qualities of homemade miso (soybean paste) used by farm families. II. On the tyramine content]. *Eiyo to Shokuryo (J. of Japanese Society of Food and Nutrition)* 17(2):123-25. [3 ref. Jap; eng]

1301. Watanabe, Minoru. 1964. *Nihon shokuseikatsu-shi* [History of Japanese food culture]. Tokyo: Kichikawa Kobunkan. 330 p. Illust. Index. 21 cm. [Jap]

• **Summary:** Amazake (p. 43), tofu (p. 3, 129), natto (p. 147), miso (p. 3, 88, 102, 130, 149, 203-05, 241, 288, 301, 314), shoyu (3, 149, 202, 241, 301).

Amazake: There were two types of fermented foods in Japan prior to the 8th century A.D.: The sake line and the hishio (*chiang*) line. The sake line used mainly rice as an ingredient but barley (*mugi*), broomcorn millet (*kibi*), glutinous mountain yam (*yama imo*), and fruits were also used. The hishio line led to miso and soy sauce. Both the early Japanese classics *Kojiki* (A.D. 712) and the *Nihon Shoki* (A.D. 720) mention sake. From burial mound tombs created during the period A.D. 300 to 600 have been excavated groups of stone burial objects which are thought to be sake making implements. The earliest sake was made from glutinous rice (*mochi-gome*); it was quite sweet, thick, and glutinous/sticky, and was called “one night sake” (*hitoyo-zake*). It was thick like today’s amazake base before it has been diluted, and was probably served on tree leaves and eaten, rather than being drunk as a beverage. After the arrival of foreigners in Japan bringing brewing methods, regular rice started to be used to make drinks with a high alcohol content. Salty and/or pungent condiments (*karami*) were also added. Japanese cedar or cryptomeria (*sugi*) or bamboo leaves may have been used as preservatives. All of these beverages were thick grogs, not clarified sake. Moreover, unlike in later eras, they were not used to add color/pleasure to people’s daily life. Rather they were used mainly at religious festivals and ceremonies.

1302. *Daizu ni Kansuru Shiryo (Statistics on Soybeans and Soyfoods in Japan)*, 1964—. Serial/periodical. Tokyo: Norin-sho, Engei Kyoku, Tokusan-ka (Japan Dep. of Agriculture, Forestry, and Fisheries). Annual. 26 cm. [30 ref. Jap]

• **Summary:** This annual publication of the Ministry of Agriculture, all in Japanese, is the single best unified source of statistical information on soybeans and soyfoods in Japan. By the 1970s the name of the publishing organization had changed to Norin Suisan-sho, Nosan Engei Kyoku, Hatasaku Shinkoka. The average length of a volume was 146 pages in the 1960s, increasing to 170 pages in the 1980s.

Table of Contents for the 1984 Edition reads: I. Finding where soybeans fit (in Japanese agriculture) (p. 1). 1. Changes in the size of area of the cultivated fields (p. 1). 2. Changes in usage of land (p. 2). 3. Changes in the rate of usage of cultivated fields (p. 6). 4. Converting rice fields to other crops (p. 7).

II. Production trends (p. 14). 1. Results of production (p. 14). 2. Present status of management (p. 28).

III. Grant money system (p. 56). 1. Outline of grant money system for soybeans and rapeseeds (p. 56). 2. Changes in the standard price of soybeans and the amount of soybeans subject to the grant money (p. 58). 3. Results of

the regulated sales of soybeans (p. 59). 4. Monthly changes in the price of soybeans (p. 60). 5. Standards of inspection of soybeans (p. 62). 6. The present status of inspecting and ranking soybeans (p. 66).

IV. Outlines of the budget of the countermeasure of promoting the production of soybeans (p. 70). 1. Changes in the budget (p. 70). 2. Outline of budget of soy-related items in 1984 (p. 72). 3. The present status of enforcement of the enterprises (p. 82).

V. Varieties of soybeans (p. 86). 1. Table of the soybean varieties which were registered as Norin Bango (agriculture & forestry number) (p. 86). 2. Table listing the main existing varieties (p. 96). 3. Table of the varieties which each prefecture recommends (p. 102). 4. The status of planting different varieties of soybeans (p. 104).

VI. The present status of management techniques of cultivation (p. 109). 1. The season of soybeans in the main producing prefectures (p. 109). 2. Outline of the national association of promoting the improvement of management of beans in 1983 (p. 112).

VII. Trend of demand for soybeans (p. 132). 1. Changes in the demand for and the rate of self supply of soybeans (p. 132). 2. The status of demand for soybeans by year (p. 133). 3. Changes in the amount of soybeans imported for food use and the amount of soybeans used in various items (p. 133). 4. The results of production, shipping, and the usage of raw materials of miso and shoyu (p. 136). 5. The status of consumption of processed soybean products (p. 140). 6. Nutrients of soybeans and soybean products (= soyfoods) (p. 144). 7. Long term view (p. 150). 8. Changes in the rate of making soybeans as merchandise (p. 150). 9. The status of the production of soybeans in main producing countries (p. 151). 10. Changes in the amount of soybean production in the USA (p. 152). 11. The amount and the price of exported soybeans of main exporting countries, by countries (p. 153). 12. The amount and the price of imported soybeans of the main importing countries, by countries (p. 154). 13. The Japanese import situation for soybeans, by years and countries (p. 156). 14. The imported amounts, exported amounts, and the domestic prices by years (p. 162). 15. Changes in the soybean tax (p. 164).

1303. Matsumoto, Kenji. 1965. Miso shōyu no aji [The flavor of miso and shoyu]. *Nippon Jozo Kyokai Zasshi (J. of the Society of Brewing, Japan)* 60(1):30-33. Jan. [Jap] Address: Nihon Jozo Kyokai.

1304. Yoshikawa, Seiji. 1965. Miso no aji [The flavor of miso]. *Nippon Jozo Kyokai Zasshi (J. of the Society of Brewing, Japan)* 60(1):34-37. Jan. [Jap] Address: Norinsho Shokuryo Kenkyujo.

1305. Wolf, Walter J. 1965. Chemistry of soybean proteins. Paper presented at National Dairy Products Corp.,

Glenview, Illinois. 17 p. Feb. 4. Typed, without signature (carbon copy).

• **Summary:** This lecture is a “broad review of current knowledge with emphasis on chemical properties which may be important in food properties of soy proteins.” It included 20 slides, each described briefly in a “List of slides” at the end of the paper.

Correspondence in connection with this lecture shows: (1) That Dr. Wolf and Dr. H.L. Wang of the NRRL were each invited by Dr. Hugh Mottern (Manager, Long Range Planning) to present papers on Feb. 4; expenses will be paid by NDPC—which appears to be related to Kraft Foods. The title of Dr. Wang’s talk will be “Fermented Soybean Foods” and she will discuss primarily [fermented] soybean cheese, tempeh, and miso. Initially Mottern asked Dr. Wolf to give a seminar on full-fat soy flour, but that was later broadened to soy proteins. NDPC is currently having a series of seminars on soybeans and soybean products (8, 11, and 18 Jan. 1965; 1 Feb. 1965). Address: Northern Regional Research Lab., Peoria, Illinois.

1306. Ilany-Feigenbaum, Jacob. 1965. The proteolytic enzymes of Japanese koji and Taka-diastrase. *J. of Food Science* 30(1):148-50. Jan/Feb. [10 ref]

• **Summary:** Israeli research on reduction of time for fermentation of Japanese miso or Israeli miso-type products. Address: Dep. of Biochemistry, Bar-Ilan Univ., Ramat-Gan, Israel.

1307. *Chemurgic Digest*. 1965. Special fermentations to produce new food products. March. p. 2.

• **Summary:** Discusses the work of the Northern Regional Research Laboratory with tempeh and miso. Dr. C.W. Hesseltine is in charge of the Laboratory’s culture collection, one of the largest, most complete, and most industrially important in the world. It contains more than 8,000 microorganisms, all kept under refrigeration.

1308. Ebine, Hideo; Shimokawa, Katsuyoshi; Katayanagi, Teruko. 1965. Sodium aluminum chloride no miso henshoku bōshi kōka [Application of sodium-aluminum chloride as anti-browning reagent of miso]. *Shokuryo Kenkyujo Kenkyu Hokoku (Report of the Food Research Institute)* No. 19. p. 154-55. March. [2 ref. Jap; eng] Address: Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo, Japan.

1309. Ebine, Hideo; Shimokawa, Katsuyoshi; Katayanagi, Teruko. 1965. Tokoferōru no miso henshoku bōshi kōka [Application of tocopherols as anti-browning reagent of miso]. *Shokuryo Kenkyujo Kenkyu Hokoku (Report of the Food Research Institute)* No. 19. p. 151-53. March. [7 ref. Jap; eng]

• **Summary:** Tocopherols (prepared from soybean oil foots as a by-product of soybean oil production) are very effective anti-browning agents. Moreover, their addition does not lower the overall quality of the miso Address: Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo, Japan.

Miso manufacturing employing “tane koji” (koji starter) including freeze-dried *Pediococcus soyae* and *Streptococcus faecalis*]. *Shokuryo Kenkyujo Kenkyu Hokoku (Report of the Food Research Institute)* No. 19. p. 110-20. March. [10 ref. Jap; eng]

• **Summary:** Note: This is the earliest document seen (Jan. 2009) which mentions that *Streptococcus* bacteria are involved in the miso fermentation. Address: Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo, Japan.

1315. Ito, Hiroshi; Ebine, Hideo. 1965. Miso no nyûsan-kin no kenkyû. VII. Aruginin no bunkai [Studies on lactic acid bacteria in miso. VII. Hydrolysis of argenine]. *Shokuryo Kenkyujo Kenkyu Hokoku (Report of the Food Research Institute)* No. 19. p. 121-26. March. [13 ref. Jap; eng] Address: Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo, Japan.

1316. Ito, Hiroshi; Ebine, Hideo; Ramachandra Rao, T.N. 1965. [Manufacturing miso that is high in protein or low in salt. I. Investigation of the manufacturing process]. *Shokuryo Kenkyujo Kenkyu Hokoku (Report of the Food Research Institute)* No. 19. p. 137-40. March. [1 ref. Jap; eng] Address: Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo, Japan; 2. Central Food Technological Institute (CFTRI), Mysore, India.

1317. Mogi, Masatoshi; Iguchi, N. 1965. Showa 39 nendo no shôyu, miso no kenkyû gyôseki [Accomplishments of shoyu and miso research during 1964 (Including HVP semi-fermented soy sauce and other related substances)]. *Nippon Jozo Kyokai Zasshi (J. of the Society of Brewing, Japan)* 60(3):218-39. March. [440 ref. Jap] Address: Noda Sangyo Kagaku Kenkyusho.

1318. Ohta, Teruo; Kamada, Hidemoto; Ebine, Hideo; Ramachandra Rao, T.N. 1965. Indo-san mame rui o genryô to suru hakkô shokuhin no seizô. II. Teishokuen miso no seizô [Manufacturing fermented foods from Indian pulses. II. Manufacturing low-salt miso]. *Shokuryo Kenkyujo Kenkyu Hokoku (Report of the Food Research Institute)* No. 19. p. 141-46. March. [5 ref. Jap; eng] • **Summary:** Seven varieties of Indian pulses were tested; Bengal gram gave the best low-salt miso. All pulses must be dehulled. The ratio of dehulled pulses to rice (which was made into koji) was 2 to 1. Address: 1-3. Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo, Japan; 4. Central Food Technological Research Inst., Mysore-2, India.

1319. *Soybean Blue Book*. 1965. Japanese American Soybean Institute. p. 10.

• **Summary:** Gives the address, name of the managing director, structure, sources of funding, purpose and goals, and major accomplishments in chronological order. The institute was formed in early 1956.

1963—"The Institute arranged for the testing of 27 U.S. soybean varieties for their suitability for production of tofu and miso by the respective associations."

1320. Abbott, J.C. 1965. Protein rich foods from oilseeds: Economic aspects. *P.A.G. News Bulletin* No. 5. p. 19-38. April. [15 ref]

• **Summary:** Table 1 lists annual consumption (in metric tons) of oilseed protein foods in some main consuming areas. Column 1: Miso, tofu, tempeh and other fermented or cooked soybean products: Mainland China 3,736,000. Japan 2,536,000. Indonesia 200,000. South Korea 160,000. Taiwan 153,000. Hong Kong 15,000. Malaya 15,000. Singapore 15,000.

Column 2: Soy milks: Singapore and Malaya 1,300 metric tons, Hong Kong 1,000.

Note: This is the earliest document seen (Sept. 2002) that contains industry or market statistics for soymilk by geographical region. Address: Chief, Marketing Branch, FAO Headquarters, Rome, Italy.

1321. Hesseltine, C.W. 1965. A millennium of fungi, food, and fermentation. *Mycologia* 57(2):149-97. March/April. [38 ref]

• **Summary:** A landmark, widely cited work on indigenous fermented foods. Interestingly, it makes no mention of amazake, or kanjang (Korean soy sauce). Contents: Tempeh. Ragi. Sufu (describes process, mentions pehtzes and the mold *Actinomyces elegans* NRRL 3104). Thamnidium (meat tenderizer and flavor enhancer from the mold *Thamnidium elegans*). Miso. Shoyu (incl. tamari. "In China, shoyu is more of the tamari type, that is, more soybeans are used and less wheat,..."). Tea fungus. Ang-Kak (p. 179-81). Advantages of fermenting foods. The future of food fermentations.

The glossary gives brief descriptions of aga-koji, akakoji, amylo process, anchu, angkak, angkhak, ang-quac, anka, ankak, arack, arak, arrack, atsumandie, awamori, bagoong, bakhar, beni-koji, benikoji, braga, brom, busa, chao, ch'au yau (Chinese name for shoyu), chee-fan (a type of Chinese cheese or sufu), chiang (Chinese equivalent of miso), chicha, Chinese cheese (sufu), Chinese red rice (angkak), chiu-chu (Chinese yeast), chiu-niang (Chinese term for koji), chou [ch'ü] (Chinese equivalent of koji), dahi, dawadawa (made from African locust bean—*Parkia filicoidea*; soy is not mentioned), dhokla, dosai, fermentation of citron, fermented fish, fermentation of maize, fermented minchin (wheat gluten), fermented soybeans ("a Chinese food prepared from small black soybeans." See A.K. Smith 1961 [soy nuggets]), fish paste, fish sauce, fish soy, fu-yu, fu-yue, fuyu (see sufu [fermented tofu] for all 3), ginger beer plant, grib, hamanatto, hon-fan [fermented tofu], hongo, hung-chu, idli, injera, jamin-bang, java yeast, jotkal, kaffir beer, kanji, katsuobushi, katyk, kefir, ketjap, kimchi, kishk, kisselo mleko, koji, kombucha (tea fungus fermentation), kome-miso, kuban, kumiss, kumys, kushik, kushuk, kvass, kwass, kyoku-shi, lao-chao, leben, lebeny, levain of khasia, levain of sikkin, lontjom, magou, mahewu, maize fermentation of the maoris, mazun, medusen tee, meen, meitauza, meju (fermented soybeans of Korea), mén, mien (Chinese yeast), mirin, mish, miso,

moromi, mugi miso, murcha, nappi, nata, natto, ngapi, nuoc-mam, nukamiso, ontjom, patis, paw tsay, peh-khak, pehtze, peujeum, peyem, poi, prahoc, pulque, raggi, ragi, ranu, red pepper sauce, red rice, red sufu, sajur asin, saraimandie, sekihan, shiro koji, shottsuru, shoyou, sho-yu, shoyu, soja japonais (shoyu), sonti (a rice beer wine of India), South African fermented corn, soy, soybean cheese [fermented tofu], soy sauce, sufu, su fu [both fermented tofu], sweet flour paste, taette, tahuli, tahuri [both “Philippine fermented soybean curd”], takuwan, tamari, tane koji, tao-cho [taotjo], taokoan [pressed or firm tofu, not fermented], tao dji (see taotjo {sic}), tao-si ([soy nuggets]; see Handbook of Philippine Agriculture. 1939. p. 132-43), tao-tjung, tao-yu, taotjo, tapej, tape ketan, tape ketella, tarhana, tea beer, tea cider, tea fungus, teekwass, teeschwamm, tempe, tempeh, tempeh bongkrek, tempeh kedele, thamnidium, thumba, tibi, tien mien chang [chiang], tojo, tokua, torani, tosufu, toyo, trassi, tsue fan, tuwak, uri, u-t-iat, wunder pilz, yen-tsai.

Note 1. This is the earliest document seen (Feb. 2007) that mentions *Actinomucor elegans* in connection with sufu [fermented tofu]. In 1966 Hesseltine describes it as the best mold for use in making this fermented food.

Note 2. This is the earliest document seen (July 2000) that mentions “mugi miso”—a type of miso made with barley koji. By the mid- to late-1960s, macrobiotic companies in the USA were importing barley miso from Japan and labeling it “Mugi Miso.”

Note: This is the earliest English-language document seen (Feb. 2007) that uses the terms “fuyu” or “fu-yue” to refer to fermented tofu.

Photos show: (0) Clifford W. Hesseltine (portrait). (1-3) *Rhizopus oligosporus* mold, used to make tempeh (3 views). (4) Skewered cubes of sufu in an incubator, with one skewer of uninoculated tofu cubes and three rows of tofu inoculated with *Actinomucor elegans* showing luxuriant growth of mold. (5) Cubes of Chinese cheese [fermented tofu] removed from brine. (6) Dilution plate of tane koji showing different types of *Aspergillus oryzae*. Address: NRRL, Peoria, Illinois.

1322. *Soybean Digest*. 1965. Expect “entirely new foods” from Asian fermentations. May. p. 26-27.

• **Summary:** One of these new foods may be a tempeh-like product made from wheat, Dr. C.W. Hesseltine, retiring president of the Mycological Society of America, told that group at its annual meeting. USDA’s Northern Utilization Research Laboratory is making a broad effort to find new outlets for American farm products. “Scientists at Peoria [Illinois] began studying the use of U.S. soybeans in foods such as Indonesian tempeh and Japanese miso more than 5 years ago. They have supported contract research on fermented foods in foreign laboratories for the past 2 years... The retiring president discussed research and

processing of six fermented foods. Among them were tempeh and miso.” A photo shows Dr. Hesseltine.

1323. Sano, S. 1965. [Production of a dry fermented soybean paste]. *Japanese Patent* 11,358. June 7. 2 p. [Jap]*

1324. *Soybean Digest*. 1965. Research leads to a new food market for soybeans. June. p. 16.

1325. *Yin Yang—The Unique Principle (Chico, California)*. 1965. Miso. 5(6):8. June. [1 ref]

• **Summary:** This magazine is the same as *The Macrobiotic Monthly* and *The Macrobiotic*. It started as *Macrobiotic News* in 1960 in New York. After being moved to Chico, California, it was renamed *Yin Yang*.

“Miso, a traditional... Contains a nutritional analysis of barley miso from S. Yamada’s *Manual of the Fermented Food Industries of Japan* (1957, Tokyo. p. 44).

Miso has long been recommended as one of the basic elements of the Macrobiotic way of eating. Individuals who use it every day have found it remarkable in health-promoting qualities—a valuable aid in instances of general weakness, anemia and iron deficiency. “Miso is a mixture of soybeans, barley, salt and water—cooked and then aged for at least eighteen months.” Address: Ohsawa Foundation, P.O. Box 238, Chico, California.

1326. Claiborne, Craig. 1965. Saga of Jim Lee: From Vienna sausage omelet to Chinese woks. *New York Times*. July 22. p. 20.

• **Summary:** His recipe for Foh opp (Chinese roast duck) calls for “¼ cup mein seen diung (yellow bean paste, available in Chinese grocery stores). ¼ cup hoi sin diung (black bean paste [hoisin sauce; hai hsien chiang], available in Chinese grocery stores)... 2 tablespoons dark soy sauce (available in Chinese grocery stores).”

His recipe for Bok sui ngui (Poached sea bass, Chinese style) calls for “1 tablespoon dark soy sauce. 1 tablespoon light soy sauce.”

A photo shows Jim Lee, a ceramist, teacher and cookbook author, standing by a wok in his kitchen.

1327. De, Sasanka S. 1965. The present state of protein-rich food development in Asia and the Far East. *J. of Nutrition and Dietetics (India)* 2(3):166-76. July. [23 ref]

• **Summary:** Gives an excellent account of soymilk production in Asia during the mid-1960s and a brief history of the FAO/WHO/UNICEF/Protein-rich food program. “The First International Conference sponsored by FAO, WHO and Josiah Macy Jr. Foundation (New York) held in Jamaica in 1953, discussed the biological, technical and pathological aspects of protein malnutrition. The next Conference on ‘Human protein requirements and their fulfillments in practice’ held in Princeton in 1955 under the

same sponsorship, gave detailed consideration to the testing of new protein rich foods before their use in child feeding was recommended.

“The Protein Advisory Group (PAG) was established by the Director-General of WHO in 1955 to ‘act on behalf of WHO in rendering advice to FAO and UNICEF on the safety and suitability for human consumption of proposed new protein-rich foods.’ The PAG... became a tripartite FAO/WHO/UNICEF Protein Advisory Group in 1961.”

Soybean milk: “In 1939, K.S. Lo established a firm known as ‘Hong Kong Soyabean Products’ to produce sterilized bottled soya milk. The two plants of the firm in Hong Kong produce 12,000 cases (24 x 7-oz. bottles per case) a day.”

Also discusses miso, natto, tempeh, full-fat soya flour, soya presscake and meal, groundnut protein isolate. Address: Regional Office for Asia and Far East, FAO, Bangkok, Thailand.

1328. Kamada, H.; Ebine, H.; Nakano, M. 1965. Natto to miso genryo toshite no daizu hinshitsu [Evaluation method of the quality of soybean employed for natto and miso manufacturing]. *Nippon Jozo Kyokai Zasshi (J. of the Society of Brewing, Japan)* 60(7):620-23. July. [8 ref. Jap] Address: 1. Karepisu [Calpis] Shokuhin Kenkyujo.

1329. Kushi, Michio; Fulton, Robert E.; Blum, Cecil. eds. 1965. *Macrobiotics study report: The way of life according to the order of the universe. Vol. 1.* Cambridge, Massachusetts. East-West Institute. 41 p. 27 cm. [4 ref]
 • **Summary:** Contents: Seven principles of the order of the universe. Twelve theorems of the unifying principle (both inside front cover). Editorial, by the 3 editors. Cigarettes and cancer, by George Ohsawa (age 73), founder, world macrobiotic movement [Conclusion: smoking cures cancer]. The new discovery of the transmutation of the atom, by Michio Kushi, Director, East West Institute [he has given numerous lectures for the past 8 years in New York, Boston, Philadelphia [Pennsylvania], and Washington, DC; discusses Louis Kervran and Sanehide Komaki]. My conclusions in biological research, by Kikuo Chishima, M.D., Prof., Gifu Univ., Japan. Thoughts of man, by Michio Kushi. Love, by George Ohsawa.

What is macrobiotics?, by Roger E. Fulton, Cambridge, Massachusetts. Order of the macrobiotic diet (from No. 7 to No. -3). One week’s menu (No. 7) for health and happiness, by Aveline Kushi (p. 29-30); includes miso soup, azuki beans, bulgur with tahini sauce, and sesame rice. Sakura meshi (rice with tamari). “1. Grain: Brown rice, whole wheat, buckwheat,... azuki beans. “2. Seasoning: Sea salt, tamari (soy sauce), miso (soy bean paste), gomashio (roasted sea salt and sesame seeds mixed), kuzu, umeboshi (salted plums), sesame oil, corn oil. 3. Beverage: Grain coffee, bancha tea, mu tea, dandelion tea, etc.” Note 1. This

is a vegan menu. Note 2. This is the earliest English-language document seen (Dec. 2006) that uses the term “salted plums” to refer umeboshi salt plums.

EWI news (a chronology of events from Sept. 1964 to the present). Miraculous events [and cures]. Leprosy cured in Argentina. Testimonials. Open letter to Dr. Frederick Stare, Harvard School of Public Health, by Simone Billaudeau. George Ohsawa’s schedule (May to Aug. 1965). Literary contributions. Financial contribution and subscription. Announcement: 1965 Macrobiotic summer camp. Useful addresses: USA, Brazil, Argentina, Sweden, Belgium, France, Germany, England, Spain, Italy, India, Japan. Key CI = Centre Ignoramus. E = Editor. R = Restaurant. MC = Macrobiotic Camp. MF = Macrobiotic Foods. MFF = Macrobiotic Foods Factory. OC = Ohsawa Center. OF = Ohsawa Foundation. Classification of yin and yang (inside rear cover). Poem titled “Wind chimes” by Cecil Blum on rear cover (11 June 1965).

EWI News: 1964 Sept.—After the Macrobiotic Summer Camp on Martha’s Vineyard, Michio Kushi and his family moved from the Island to Cambridge, Mass. For the previous year, Mr. Kushi’s lectures were conducted almost every month in Boston at the Mattson Academy of Karate. George Ohsawa was also in Boston and Martha’s Vineyard in 1964. In Sept. 1964, East-West Institute was incorporated as a non-profit educational establishment. Mr. David Levin and Mr. Ramsay Wood initiated it with several others. Address: East-West Institute, 101 Walden St., Cambridge, Massachusetts.

1330. Findlay, W.P.K. 1965. Fermented foods. *British Vegetarian*. July/Aug. p. 282-83. [1 ref]

• **Summary:** In 1964 at the Botanical Congress in Edinburgh, Scotland, an American mycologist, Dr. C.W. Hesseltine, gave a fascinating account of the studies he has made of foods fermented with molds. A full account of his work has just been published in *Mycologia*. 1965. 57(2): March/April. This is a summary of that article, focusing on tempeh, sufu or Chinese cheese, miso, and shoyu or soy sauce. Address: D.Sc.

1331. **Product Name:** Mugi Miso.

Manufacturer’s Name: Infinity Foods (Importer). Made in Japan.

Manufacturer’s Address: New York.

Date of Introduction: 1965.

New Product–Documentation: Shurtleff & Aoyagi. 1983. *The Book of Miso*. 2nd ed. p. 236-37. Howard Rower’s Infinity Foods, founded in the mid-1960s, was an early macrobiotic importer of miso. By April 1966 the company was selling it to Erewhon in Boston.

Ad in East West Journal. 1971. 1(16):10. For The Infinity Co. in New York City shows an infinity symbol, within which is written: “Nothing added, nothing removed.”

The text for the ad reads: “We’ve been here since 1964, milling flour and selling Umeboshi. Now we have absolutely guaranteed organic produce. Contact us for more information: N.Y.C. 925-2082.”

1332. [Report on the present status of the miso industry]. 1965. Norinsho (Japanese Ministry of Agriculture and Forestry). [Jap]*

1333. Arimoto, Kinitaro; Sakurai, Yoshito. 1965. Food and nutrition in Japan. In: Martin S. Peterson and Donald K. Tressler, eds. 1965. *Food Technology the World Over*. Vol. II. South America, Africa and the Middle East, Asia. Westport, Connecticut: AVI Publishing Co., Inc. ix + 414 p. See p. 359-94. Illust. Index. 24 cm. [13 ref]

• **Summary:** This chapter, after the Introduction, is divided into two parts: 1, titled “Nutrition (p. 360-74)” by Arimoto, and 2, titled “Food technology” (p. 374-94)” by Yosito [Yoshito] Sakurai. In Part 1, table 110, “Food supply in Japan” includes average statistics on soybeans, miso, and shoyu in kg/year and gm/day for 1944-1948, 1961, and 1961. in kg/year for the three periods: Soybeans: 3.5, 5.4, and 5.0. Miso: 10.6, 8.1, and 7.7. Shoyu: 15.9, 13.0, and 11.1. Source: Ministry of Agriculture and Forestry, Balance Sheets. Surprisingly, supplies were greater for each during and immediately after World War II than in the early 1960s.

Table 116, “Intake of foods classified into food groups and type of work (gm per capita per day), 1963” gives statistics for the entire nation, agricultural households, and non-agricultural households, as follows: Soybeans: 1.3, 1.7, 1.0. Miso: 25.1, 30.1, 22.5. Soybean products: 37.3, 29.9, 41.5. Seaweeds: 4.6, 4.2, 4.7. Shoyu: 26.2, 30.0, 23.6. Soybean products as a source of high quality protein are discussed (p. 366).

Part 2 begins with a section on “Rice” (p. 374-77) which notes that rice supplies half the calories in the Japanese diet. Japan produces all of the rice it needs—about 13 million tons. Imported rice (about 150,000 tons) is used only as a raw material in confections and miso. Japan imports most of its soybean from the USA and China, and these soybeans are processed by characteristically Japanese methods to make tofu, miso, and shoyu (p. 377).

Animal husbandry is not widely practiced in Japan, largely because the land is hilly with few grazing lands. Thus most beef, pork, and chicken are imported. The production of cow’s milk is gradually increasing; it is now 27 million hectoliters.

Packaging of foods has changed greatly during the past decade. Packaged foods are now common. Shoyu and miso, once sold by the measure, are now sold in bottles and plastic bags, respectively. Table 128 (p. 378), titled “Supply of raw materials and food consumption of their products in 1959 (Japan)” shows the following for soybeans (in metric tons = tonnes). Soybeans—Domestic supply: 410,000 tonnes.

Imports: 1,000,000 tonnes. Miso consumption: 850,000 tonnes. Shoyu: 1,280,000 tonnes. Tofu: 640,000 tonnes. Aburaage 170,000 tonnes. Natto 60,000 tonnes. Meat 330,000 tonnes. Fishery products: 6,170,000 tonnes.

The section titled “Soybeans” (p. 380-86) has the following contents: Introduction. Miso, shoyu, natto, tofu, koritofu (dried tofu) [dried-frozen tofu], yuba. Photos show: (1) Shoyu brewing in tanks in a large factory. (2) Pressing and washing of tofu in koritofu manufacture in a large, modern factory. (3) Aerial view of a large, modern plant for koritofu production. (4) The thawing operation in making koritofu. (5) The drying operation in making koritofu. Address: 1. PhD, Director, National Inst. of Nutrition, Tokyo, Japan; 2. PhD, Prof., Dep. of Agricultural Chemistry, Faculty of Agriculture, Tokyo Univ., Tokyo, Japan.

1334. Brandemuhl, William. 1965. Soybean utilization in Japan. San Francisco, California. xxii + 478 p. Unpublished manuscript. 28 cm. [189 ref]

• **Summary:** A superb, in-depth, pioneering study, based on extensive original field research in Japan. It is carefully documented with hundreds of original interviews and published sources properly cited in two different lists of sources (numerical and alphabetical) Contains 30 tables and 190 excellent photos—including 7 of the author.

Table of contents: Preface. Notes. List of tables. List of figures. Map. Part I: Background. 1. The soybean: Birth and spread (legend, botanical inception, Nagata’s theory of origin, spread to Japan and beyond, the American story).

Part II: Japan’s production and supply of soybeans. 1. Japan the country and supply of domestic soybeans (Japan the country, domestic soybean production, planting and harvesting, marketing domestic soybean). 2. Importation of Red Chinese soybeans (background, mechanics, advantages, and prospects). 3. Importation of U.S. soybeans (history, method and mechanics of importation, the American shippers, concluding comments on importation). 4. Distribution (use in brief, super-wholesaler, wholesaler, retailer wholesaler, Japan’s grain exchange).

Part III: Soybean utilization in Japan. 1. Utilization of soybeans for oil and meal (oil crushing history, soybean source, delivery of soybeans, the crushing industry, liberalization of soybean oil and meal, oil utilization in Japan, meal utilization in Japan). 2. Tofu (history, use of soybeans, manufacture, the tofu factory, marketing tofu products, recently developed tofu products, tofu as food, concluding comments). 3. Miso (importation, home production of miso, quantity of miso produced, soybean used for producing miso, kinds of miso, fermentation time, comparison of miso firms, manufacturing, packing and marketing, price, instant miso, use of miso, miso consumption outlook). 4. Shoyu (introduction, production and manufacturers, manufacture, raw materials, preparation

of raw materials for natural shoyu, preparation of materials for chemical method shoyu, preparation of materials for mixed method shoyu, fermentation, filtering and pressing, sterilization, bottling, price, use of shoyu, miscellaneous shoyu products, concluding comments). 5. Natto (description, history, Daitokuji natto, the natto industry, consumption, natto soybeans, processing, making cost and price, marketing, use of natto, problems, new ideas and natto products). 6. Frozen tofu (history, development, frozen tofu soybeans, processing, freezing, defrosting, drying, treatment with ammonia and packing, marketing, preservation, use). 7. Kinako. 8. Yuba (history and development, the plight of the yuba industry, soybeans for yuba, manufacture, classification of yuba, use). 9. Tsukudani and nimame (description, soybean tsukudani, nimame). 10. Hamanatto (history, manufacture, use). 11. Edamame. 12. Moyashi (manufacture, use). 11. Miscellaneous products (fermented soybean curd, MSG, confectionary products, other products). Conclusion. Sources (numerically arranged). Sources (alphabetically arranged).

Tables: 1. U.S. soybean production, 1924-1963. 2. United States, Red China, and world production of soybeans (bushels), 1950-1963. 3. U.S. soybean importation, exportation and amount processed for oil and meal, 1924-1963. 4. U.S. exportation of soybeans (1,000 bushels) total, by continent, and to six largest importing countries, 1958-1962. 5. Japan's soybean acreage, production, and merchandising rate. 6. Japan's importation of soybeans, total, and Red China's portion, 1945-1963. 7. Japan's total importation of soybeans and U.S. portion, 1945-1963. 8. Soybean usage in Japan, 1963. 9. Japan's processing of oilseeds, 1963. 10. Crushing capacity of selected Japanese oilseed crushers. 11. Eight largest crushers of soybeans and amount of soybeans crushed per month in 1963. 12. Total quantity of soybeans crushed in Japan, 1950-1963. 13. Japan's daily per capita intake of edible fats and oils. 14. Japan's consumption of edible fats and oils, 1945-1961. 15. Use of soybean meal. 16. Chemical composition of tofu and aburaage. 17. Quantity of soybeans and soybean meal used for tofu-aburaage productions (all Japan), 1950-1963. 18. Miso production and quantity of soybeans and soybean meal used, 1950-1963. 19. Composition of miso. 20. Daily per capita consumption of miso in Japan, 1950-1963. 21. All Japan production of shoyu and use of soybeans and soybean meal, 1950-1963. 22. Composition of shoyu. 23. Yearly per capita consumption of shoyu, 1950-1963. 24. Composition of natto. 25. Production of frozen tofu and use of soybeans. 26. Composition of frozen tofu. 27. Yearly per capita consumption of frozen tofu. 28. Composition of kinako. 29. Composition of yuba. 30. Monosodium glutamate production and use of soybeans and soybean meal. Continued.

This typed manuscript was sent to Soyfoods Center in July 2004 by Tomoko Brandemuhl, the wife of the author. About the author (based on several interviews with Tomoko, July 2004): William Victor Brandemuhl was born on 30 Nov. 1940 at Iron Mountain, Michigan. He grew up in Florence, Wisconsin, then attended the University of Wisconsin at Madison. He roomed for 3-4 years with various Japanese cancer researchers at the university. He also became close to Tomoko Arai (born 12 Dec. 1937 in Tokyo), a Japanese woman, who was doing graduate studies in social work there as a Rotary International Fellowship student. William initially intended to graduate in June 1962, but stayed an extra year in order to pursue independent studies in Japanese language and soybeans. He became interested in the soybean and its history in an anthropology class taught by Dr. R.J. Miller; William finished his excellent research paper on soybeans in Jan. 1963. He also took one year of Japanese language instruction (night classes). William graduated in Jan. 1963 with a BSc degree in economics.

William obtained a grant (no strings attached) from Honeycomb Products Co. of Mankato, Minnesota, to study soybean utilization in Japan. Only one American had studied this subject in Japan after World War II—Alan K. Smith of the USDA, who visited Japan and wrote short but detailed reports in 1948-49 and 1958. In Jan. 1963 Brandemuhl arrived in Japan and became research fellow at the Department of Agricultural Economics, Kyoto University, Kyoto, Japan. Between Feb. 1963 and May 1964 (15 months) he conducted field research on soybean utilization in Japan. In June 1963 (after William had been in Japan for 4 months), Tomoko completed her graduate studies, graduated from the University of Wisconsin, and (since her scholarship was finished), returned to Japan—to be with William and to help him with his research in Japanese, which he spoke only moderately well. She traveled with him throughout Japan and translated for him during the many interviews he conducted. At each destination, she spoke about America to the local Rotary club—which paid her transportation, room, and board. William's monthly check from Honeycomb paid for his room and board—but not for his travel and research, so he had to work part time doing English translation for a Japanese company. On trips, he took many photos using his expensive Nikon camera. Tomoko's family lived near Kobe, where she and William were married on 8 Aug. 1964—three months after he finished his field research. Several days after the marriage, they returned to the USA to visit his parents in Florence, Wisconsin, and enjoy a wedding party there.

William now knew he wanted to pursue a career in international business. He was soon offered a job at Crocker Citizen National Bank (International Division) in San Francisco, California. They drove to San Francisco and got an apartment at 1701 21st Avenue; he began work that fall,

and was soon learning the basics of international business. Every evening after work at the bank he returned home to work on transforming his field notes into a manuscript. As he wrote the rough draft, Tomoko (a skilled pianist but not a skilled typist) typed it on a manual typewriter. The next day he would correct any mistakes and she would retype each page into final form. In 1965 he had the best carbon copy bound and sent it to Honeymead; he kept the original. It was never published and he received no academic credit for it.

On 26 May 1966 their first son and only child, Konrad Victor Brandemuhl, was born in San Francisco. They bought a house in Pacifica. In 1967 he was offered a job with Caterpillar Tractor Co. (International Div.) in Peoria, Illinois. In 1968 he moved with his boss to work at Allis-Chalmers Manufacturing Co., West Allis, Wisconsin. In 1969 he was transferred to Tokyo, Japan, as Far East Representative of the company. In 1970 he was transferred to Singapore as Far East Manager of the company.

William and Tomoko later lived for about 10 years near Tokyo, Japan (mostly in Mitaka), and for a while in Singapore. Over the years he showed his typescript on "Soybean Utilization in Japan" to many people, but nobody was interested. In 1986 he started his own trading company, specializing in textiles, natural rubber, latex thread, and various machine mechanisms. Tragically, William died on 2 April 1998 in Bangkok, Thailand, of pneumonia, during a business trip. He loved the excitement of international business and interaction with people of different cultural backgrounds. Address: San Francisco, California.

1335. Brandemuhl, William. 1965. Soybean utilization in Japan: Figures (Document part). San Francisco, California. xxii + 478 p. Unpublished manuscript. 28 cm. [189 ref]

• **Summary:** 1. Black soybeans from Japan's Tanba region and American Harosoy soybeans. 2. Soybeans growing on a dike. 3. Soybean plants drying on rack. 4. Soybean plants drying just prior to harvesting. 5. Soybean plants drying just prior to harvesting. 6. Soybean harvester. 7. Depodding rack and pod filled stalk. 8. Depodding soybeans. 9. Entrance to the Red Chinese Trade Fair held in Tokyo, during April, 1964. 10. One of the agricultural exhibits at the Chinese Trade Fair (corn and soybeans). 11. Soybeans and soybean plants exhibited at the Chinese Trade Fair. 12. Soybeans and other bean products that Red China is capable of exporting (exhibition at the Red Chinese Trade Fair). 13. Soybeans on display at retail store. 14. Soybeans on display at retail store. 15. Barge unloading of soybeans at oil mill. 16. Barge unloading of soybeans at oil mill. 17. Soybean tank receiver at oil mill. 18. Multi-spout soybean feeder at barge side. 19. An oil gift assortment.

20. Selling oil at a small oil retail shop. 21. Dispensing oil. 22. Selection of oil at oil retail shop (notice birds in cage at right). 23. Vegetable oil displayed with petroleum products. 24. Vegetable oil displayed with petroleum

products. 25. Bottling facilities at oil wholesaler's. 26. Bottling facilities at oil wholesaler's. 27. Prepackaged oil products displayed at wholesaler's. 28. Seafood fried in soybean oil. 29. Selling soybean oil fried products. 30. Temperature controlled fryer. 31. At a chicken farm. 32. Handling 20 kilograms bags of chicken feed. 33. Soybean meal on top of other components of mixed feed prior to hand mixing. 34. Bag fastener for mixed feeds packed at wholesaler. 35. Fermenting agent for bakery (contains equal quantities of soybean flour, yeast, and water). 36. Silk worms eating mulberry leaves. 37. Silk worms eating soybean protein mixed with mulberry leaves. 38. Tofu. 39. Soybean grinder.

40. Soybean grinder. 41. Soybean grinder. 42. Open pit live steam cooker. 43. Open pit wood-stoked cooker. 44. Okara tank and press. 45. Outdated okara press. 46. Tonyu [soymilk] receiving tanks (precipitation tanks). 47. Removing water from precipitating curd. 48. Pressing tofu with stone weights. 49. Yakidofu. 50. Yakidofu being dipped into a shaping box. 51. Mechanical press for pressing yakidofu. 52. Cutting yakidofu. 53. Roasting yakidofu. 54. Kinugoshi tofu. 55. Aburaage. 56. Aburaage prior to being deep fried. 57. Frying sushiage, a product similar to aburaage. 58. Frying aburaage. 59. Hiroso: left front; atsuaage: right front; sushiage: left rear; aburaage: center rear.

60. Okara for use as cattle feed. 61. Okara for food use. 62. Overall view of production portion of tofu plant. 63. Tofu peddler. 64. Tofu on display. 65. Bagged tofu. 66. Miso-shiru soup. 67. Dengaku (yakidofu covered with miso and placed over low heat). 68. Aburaage formed as a bag with rice inside. 69. Yudofu, Japan's most famous but not often eaten tofu dish. 70. Yudofu. 71. Miso. 72. Fermentation starting material (rice inoculated with bacteria). 73. The first step in making home miso. 74. Mashing soybeans for home miso. 75. Rice koji being used for home produced miso. 76. Salt being added to soybean and koji for the making of home miso. 77. Mixing home miso components. 78. Mixing home miso components. 79. Freshly made home miso.

80. Home miso after one year natural fermentation. 81. Koji maker. 82. Koji filled boxes. 83. Autoclave for steaming soybeans. 84. Koji mixed with salt. 85. Wooden vat for miso fermentation. 86. Weights for pressing miso. 87. Removing miso from fermentation vat. 88. Mixing and grinding miso. 89. Degraining [grinding] miso. 90. Miso on display. 91. Miso packing and sealing instrument. 92. Packing miso in a plastic bag. 93. Beef and rice miso preserver. 94. Seafood and rice miso preserver. 95. Receiving soybean meal at shoyu factory. 96. Saline solution for shoyu production. 97. Fermenting moromi. 98. Equipment used for bubbling moromi. 99. Temperature control of moromi.

100. New moromi. 101. Moromi which has fermented nearly one year. 102. Hydraulic press for pressing moromi. 103. Running moromi into filter cloth. 104. Filter cloth containing moromi. 105. Raw shoyu storage tank. 106. Open press for previously pressed moromi. 107. Opening moromi filter cloth. 108. Removing shoyu kasu (shoyu presscake) from filter cloth. 109. Bagging shoyu kasu for sale as cattle food. 110. Quick method shoyu kasu. 111. Shoyu sterilization instrument. 113. Shoyu bottler. 114. Bottling shoyu by hand. 115. High speed labeling. 116. Hand labeling. 117. Preparing sauce for shipment. 118. Shoyu cold sauce. 119. Filling plastic bottles with shoyu for use in box lunches.

120. Broiled chicken coated with shoyu. 121. Fish marinated in shoyu. 122. Fish baked with shoyu. 123. Grilled eels basted with shoyu. 124. Daitokuji natto (look like raisins spread on a sheet of paper). 125. Cooker for steaming soybeans for natto. 126. Pressurized container for inoculating soybeans. 127. Inoculating soybeans for natto. 128. Traditional method of packing natto. 129. Traditional method of packing natto. 130. Incubation rack and traditional packages of natto. 131. Packaging inoculated soybeans prior to incubation. 132. Packaging inoculated soybeans prior to incubation. 133. Inoculated soybeans in recently introduced containers. 134. Natto incubation room. 135. Natto on display at egg shop. 136. Overall view of frozen tofu factory. 137. Precipitation containers for frozen tofu tonyu. 138. Smoothing frozen tofu curd. 139. Frozen tofu curd flowing into shaping box.

140. Shaping box for frozen tofu curd equipped with sheet metal guide. 141. Removing formed frozen tofu curd from sink. 142. Cutting formed curd into freezing size. 143. Sized curd in -20°C freezer. 144. Sized curd in -5°C degree freezer. 145. Defrosting frozen tofu. 146. Removing frozen tofu curd from centrifuge. 147. Inspecting frozen tofu curd for dryness. 148. Drying frozen tofu. 149. Grinding frozen tofu into marketable size. 150. Packing frozen tofu. 151. Frozen tofu on display. 152. Cooked frozen tofu displayed in food shop. 153. Cooked frozen tofu mixed with vegetables. 154. Packing kinako. 155. Kinako on display. 156. Covering pounded rice cake with kinako. 157. Yuba. 158. Yuba hanging on rack above tonyu tank. 159. Lifting yuba from tonyu tank.

160. Fresh yuba. 161. Rolling fresh yuba into marketable form. 162. Combining fresh yuba with vegetables. 163. Rolling dry yuba. 164. Yuba on display. 165. Shoyu vats at tsukudani factory. 166. Tsukudani cooker. 167. Cooling tsukudani. 168. Nimame being marketed. 169. Nimame with shoyu and shrimp. 170. Nimame with shrimp. 171. Selling nimame. 172. Nimame as served. 173. Hamanatto. 174. Sun drying Hamanatto. 175. Close-up of sun-dried Hamanatto. 176. Pressing Hamanatto. 177. Grading Hamanatto. 178. Hamanatto on display. 179. Edamame.

180. Sprouting soybeans. 181. Sprouting soybean covered with straw. 182. Close-up of sprouting soybeans. 183. Sprouting soybeans. 184. Wetting down sprouting soybeans. 185. Soybean sprouts. 186. Mapped sprouts [Note: "Mappe" is not a Japanese word; mappe beans are imported from Burma]. 187. Soybean roasting oven. 188. Roasting soybeans. 189. Soybeans and seaweed. 190. Black soybeans in pounded rice cake.

Map of Japan. Address: San Francisco, California.

1336. Brandemuhl, William. 1965. Soybean utilization in Japan: List of interviews (Document part). San Francisco, California. xxii + 478 p. Unpublished manuscript. 28 cm. [189 ref]

• **Summary:** Between Feb. 1963 and May 1964 the author interviewed people from the following organizations (listed alphabetically) related to soybean utilization in Japan. In many cases he interviewed the owner, president, or managing director.

1. Agricultural Experimental Farm, Kamigori, Hyogo-ken.
2. Akutagawa Candle Co., Kyoto.
3. Aoki Miso Co., Nagano-ken.
4. Aoki Umbrella Co., Kyoto.
5. Aoyama Candy Co., Kyoto.
6. Bunge Far East Agent, Osaka.
7. Choko Shoyu Miso Co., Nagasaki.
8. Continental Overseas Corp., Tokyo.
9. Daiichi Trade Co., Kobe.
10. Dainihon Ink and Chemical Co., Osaka.
11. Dainihon Pharmaceutical Co., Osaka.
12. Daiya Frozen Tofu Co., Suwako-gun, Nagano-ken.
13. Daizu Yuryo Wholesale and Broker, Kobe.
14. Franceya Chocolate Co., Kyoto.
15. Fuji Oil Co., Osaka.
16. Genroku Brewing Co., Kyoto.
17. Gion Mameheto Candy Co., Kyoto.
18. Hamamoto Tofu Co., Kyoto.
19. Hamano Tofu Co., Kyoto.
20. Hanamura Bread Co., Kobe.
21. Harada Miso Co., Kyoto.
22. Hasegawa Oil Co., Kyoto.
23. Hashizume Tsukudani Co., Kyoto.
24. Hirota Sauce Co., Kyoto.
25. Hohnen Oil Co., Osaka.
26. Honda Miso Co., Kyoto.
27. Ishino Miso Co., Kyoto.
28. Itoh Trade Co., Osaka.
29. Itoh Trade Co., Tokyo.
30. Iwai Trade Co., Osaka.
31. Kaihara Natto Co., Kyoto.
32. Kamejirushi Shinshu Miso Co., Nagano-ken.
33. Kanegabuchi Chemical Co., Takasago-shi, Hyogo-ken.
34. Kanemasu Grain Wholesaling Co., Osaka.
35. Kanematsu Trade Co., Osaka.
36. Kansai Paint Co., Osaka.
37. Kansai Shoji Wholesale Co., Kyoto.
38. Kanto Miso Co., Kyoto.
39. Kasakura Natto Co., Tokyo.
40. Kato Kinako Co., Tokyo.
41. Kido Tofu Co., Tokyo.
42. Kobata Farm, Kyoto.
43. Kobayashi, Michiharu, Kyoto University, Kyoto.
44. Koya-san Frozen Tofu Co., Ito-gun, Wakayam-ken.
45. Kurosawa Miso Co., Nagano-ken.
46. Kyoto Prefectural Agricultural Cooperative, Kyoto.
47. Louis Dreyfus and Co., Tokyo.
48. Mame Masa Candy Co., Kyoto.
49. Marubeni Iida Trade Co., Osaka.
50. Meiji Chocolate Co., Osaka.
51. Midori Natto Co., Tokyo.
52. Mitsui Trade Co., Osaka.
53. Mitsui Trade Co., Tokyo.
54. Moriguchi Natto Co., Kyoto.
55. Morita Frozen Tofu Co., Sasayama, Hyogo-ken.
- 56.

Moriwaki frozen Tofu Co., Taka-gun, Hyogo-ken. 57. Nagata, T., Dept. of Plant Breeding, Hyogo University of Agriculture, Sasayama, Hyogo-ken. 58. Nagoya Miso Co., Nagoya. 59. Nakai Wholesale Co., Osaka. 60. Nakamura Yuba Co., Kyoto. 61. Nakayama Farm, Kamigori-cho, Hyogo-ken. 62. Nakazawa Soap Co., Kyoto. 63. Namikawa Tofu Co., Kyoto. 64. Naruse Natto Bacteria Co., Tokyo. 65. National Agricultural Cooperative Assoc., Osaka. 66. Nihon Paint Co., Osaka. 67. Nikka Oil Co., Tokyo. 68. Nisshin Meal Co., Kobe. 69. Nisshin Oil Co., Yokohama. 70. Noda Shoyu Co., Takasago-shi, Hyogo-ken. 71. Nomura Meal Co., Kyoto. 72. Nomura Tsukudani Co, Kyoto. 73. Nunoura, Hiroshi, Kyoto Women's University, Kyoto. 74. Oguchi, K., Nagano-ken Shinshu Miso Assoc., Nagano-ken. 75. Ohashi, Taiji, Japan Soap Assoc., Tokyo. 76. Okazaki Natto, Tokyo. 77. O-mame Candy Co., Kyoto. 78. Osaka Grain Exchange, Osaka. 79. Osaka Prefectural Miso Assoc., Osaka. 80. Otsuya Agricultural Brokers, Kyoto. 81. Ryo Tofu Co., Kyoto. 82. Sawai Wholesale Co., Kyoto. 83. Senmaru Yuba, Kyoto. 84. Shimamoto Tofu Co., Kyoto. 85. Shinseimame Candy Co., Kyoto. 86. Sugimori, T., Marukin Shoyu Brewing Co., Kyoto. 87. Tada, H., Kyoto Prefectural College, Kyoto. 88. Taiyozakoku Wholesale Co., Kyoto. 89. Takeya Miso Co., Suwako-shi, Nagano-ken. 90. Tanaka Narazuke, Kyoto. 91. Tatsuna Higashimaru Shoyu Co., Tatsuno-shi, Hyogo-ken. 92. Tawa Chicken Farm, Kyoto. 93. Tofu Aburaage Assoc., Kyoto. 94. Toyo Menka Trade Co., Osaka. 95. Uchida Tsukemono, Kyoto. 96. Ueda Miso Assoc., Ueda-shi, Nagano-ken. 97. Uemura Suhama Candy Co., Kyoto. 98. Uno Tofu Co., Kyoto. 99. Yamajirushi Miso Co., Nagano-ken. 100. Yamamoto Farm, Taki-gun, Hyogo-ken. 101. Yamanaka Oil Wholesale Co., Kyoto. 102. Yamato Bean Sprout Co., Kyoto. 103. Yamaya Hamanatto Co., Shizuoka-ken. 104. Yazura Yahata, Kyoto Textile University, Kyoto. 105. Yoshihara Oil Co., Osaka. 106. Yoshimura, Hyogo University of Agriculture, Sasayama-shi, Hyogo-ken. 107. Yoshizabaru Retail Co., Kyoto. 108. Yubahan Co., Kyoto. 109. Yubakichi Co., Kyoto. Address: San Francisco, California.

1337. David-Perez, Enriqueta. comp. and ed. 1965. *Recipes of the Philippines*. Philippines: Published by the author. Printed by Capitol Publishing House, Inc. (Quezon City). 86 + [14] p. Illust. No index. 22 cm.

• **Summary:** This is an expanded edition of the author's 1953 book of the same title. Almost all the recipes in this book have Filipino names, with no English translation of those names. A surprisingly large number contain soyfoods (See Glossary at end). Misu is "a paste made of fermented rice and soy beans" [miso]. Tajure is "fermented soy beans, caked" (fermented tofu). Tausi is "fermented soy beans" [soy nuggets or fermented black soybeans with salt]. Tokua is "soy bean curd" (tofu). Toyo is Filipino-style soy sauce.

Soy-related recipes include: Chicken pastel (with toyo, p. 26). Arroz caldo with chicken (with 3 tbsp. patis or toyo, p. 45). Bañigus en tocho-2 (with 2 tbsp. each tajure and tausi, and 1 cake tokua, cut into pieces 3/4 inch long and 1/8 inch wide, p. 54). Bañigus in soy sauce (with 2 tbsp. soy sauce, p. 54). Bulanglang-1 (with 1 cup tokua, cubed and fried, p. 57). Burong isda (with 1 tbsp. angkak-fermented red rice, p. 59). Escabecheng apahap (with 4 pieces tokua, p. 71). Escabeche-Macao style (with 3 tbsp. toyo sauce, p. 71).

Kari-karing pata (with ground toasted peanuts or peanut butter, p. 79). Lumpia labong (with 5 bean cakes-tokua, p. 83). Lumpia sauce (with 1/2 cup toyo sauce, p. 84). Lumpia with peanuts (with 2 squares tokua-diced, 2 tbsp. toyo-soy sauce, and 1 cup ground peanuts, p. 85). Lumpia with ubod-2 (with 2 cakes tokua, and toyo to taste, p. 87). Misu-tomato sauce (with 2 tbsp. misu-soy bean paste, p. 92). Pancit "luglug" (with 1/2 cup soy bean cake-tokua-cut into small cubes, p. 97). Umba (with 2 tbsp. toyo and 1 heaping tbsp. tausi, p. 118). Pastillas de mani (with 1 can ground peanuts, p. 133).

On the page facing p. 186 is a full page ad for Suki Soy Sauce, made by the Philippine Shoyu Co., Liloan, Cebu, Philippines. It is "Pure and fully aged."

Seven unnumbered pages later is a full-page ad for "Ajino-Moto super seasoning... The purest vetsin ever."

A glossary at the end contains brief definitions of uncommon ingredients. Definitions of the soy-related ingredients above are taken from this glossary. Angkak is "red-colored grains of rice used as coloring for fermented fish."

Note: On the title page is printed "10th printing-1965" but no original publication date is given. Address: Philippines.

1338. Kawamura, Wataru; Matsumoto, E. 1965. *Misoshiru fudoki [Miso soups throughout the provinces]*. Tokyo: Zenkoku Miso Rengokai. 57 p. [Jap] Address: 2-4-7 Kugenuma, Tachibana, Fujisawa-shi, Kanagawa-ken 251, Japan.

1339. Koyanagi, Tatsuo; Oikawa, Keiko. 1965. *Daizu seihin oyobi shoku-en ga nezumi no hatsuiku oyobi kôjo-sen ni oyobosu eikyô [The effect of soybean products or sodium chloride in diets on the thyroid and growth of rats]*. *Eiyo to Shokuryo (J. of Japanese Society of Food and Nutrition)* 18(3):190-93. [17 ref. Jap; eng]

• **Summary:** Tests with rats showed that the feeding of heated soybeans, natto (fermented soybeans containing no sodium chloride), miso (fermented soybeans containing sodium chloride) or tofu (soybean curd) produced a high incidence of thyroid enlargement in the rats, but the enlargement was prevented by increasing the iodine content of the diets by a small amount.

The inclusion of sodium chloride in iodine-deficient diets at the 3% level caused a pronounced hypertrophy of the thyroid and weight loss in rats. In this case, the supplementation of iodine alone did not prevent the weight loss, but adding methionine plus iodine did.

Axelrod et al. have reported that thyroxine production in rats was increased with increasing sodium chloride intake. Thus, the effects of a large intake of sodium chloride resemble in some respects those of administration of thyroxine.

"It is well established that thyroxine increases the metabolic rate and oxygen consumption of animals and beyond small and very critical levels the thyroid hormone decreases growth and feed efficiency. Charkey found that all of these effects of thyroxine can be reversed by methionine. The present findings that methionine prevented the weight decrease of rats fed a diet of high sodium chloride content may be explained by the antithyrototoxic effect of methionine." Address: Tohoku Daigaku Nôgaku-bu, Eiyô Kagaku Kyôshitsu [Lab. of Nutrition, Faculty of Agriculture, Tohoku Univ., Sendai, Japan].

1340. Kurokawa, Kazuo. 1965. Daizu oyobi sono kakkô shokuhin no suiyosei chisso ni tsuite [Study of water soluble nitrogen of soybean and its products]. *Eiyô to Shokuryo (J. of Japanese Society of Food and Nutrition)* 17(5):333-36. (Chem. Abst. 64:11768. 1966). [5 ref. Jap; eng]

• **Summary:** The water soluble fraction of the nitrogen in soybean products varied depending on the way that each product was processed. In the case of miso, approximately 60% of the nitrogen was extractable, mostly as formol nitrogen. Address: Tokyo-toritsu Hakuô [Shiro Kamome] Kôtôgakkô.

1341. Li, Shih-chen. comp. 1965. Pen-ts'ao kang-mu [Collected essentials of herbs and trees. Illustrated compendium of pharmacopoeia with commentaries]. Hong Kong: Commercial Press. [Chi]*

• **Summary:** This 1965 edition of the classical work incorporates the following works on plants by earlier authors, now largely unrepresented, which were cited extensively by Schafer (1977) in his chapter: Chen, Ch'üan. *Yao hsing pên ts'ao*.

Ch'en, Ts-ang-ch'i. *Pên ts'ao shih i*.

Hsiao, Ping. *Ssu sheng pên ts'ao*.

Li, Hsün. *Hai yao pên ts'ao*.

Meng, Shen. *Shih liao pên ts'ao*.

Su, Kung. *T'ang pên ts'ao chu*.

Sun, Ssu-mo. *Ch'ien chin shih chih*.

1342. Ohsawa, George. 1965. Zen macrobiotics: The art of rejuvenation and longevity. The philosophy of Oriental medicine. Vol. I. Los Angeles, California: Ohsawa

Foundation, Inc. xiv + 128 p. Revised, edited and annotated by Lou Oles and Shayne Oles Suehle. No index. 17 cm. [20 ref]

Address: Los Angeles, California.

1343. Raper, Kenneth B.; Fennell, Dorothy I. 1965. The genus *Aspergillus*. Baltimore, Maryland: The Williams & Wilkins Co. 686 p. [400+* ref]

• **Summary:** The authors discuss the koji molds in Chapter 18 titled "Aspergillus flavus group." Contents: Outstanding characters. General considerations (incl. *A. oryzae*, *A. oryzae* var. *effusus*, *A. flavus*, *A. tamarii*, and *A. flavo-furcatis*). Occurrence and significance: Introduction, enzymes (amylolytic, proteolytic, lipolytic). "Members of this group are widely distributed in nature. They are regularly isolated from soils, particularly those from tropical and subtropical areas, from forage and decaying vegetation, from stored seeds and grains, and from various types of food products. They contribute to decomposition processes... Except for *A. Niger* and allied species, they have been used more widely in industry than any other group of molds, particularly for the production of enzymes.

"Members of the *Aspergillus flavus* group produce diastatic and proteolytic enzymes abundantly. In large measure the alcoholic and soy food industries of the Far East are based upon these molds and their enzymes. In the soy industries, closely related molds, or even the same strains, are used as a source of proteolytic enzymes. In 1894 Takamine secured a series of U.S. patents covering the production of diastatic enzymes and the making of alcoholic liquors. Subsequent to this, other investigators, mostly Japanese, published a number of papers in this field. Oshima, in 1922 and 1928, reported on the production of protease by members of the *A. flavus-oryzae* group. Today, considerable quantities of diastatic enzymes, proteolytic enzymes, and mixed diastatic and proteolytic preparations are being manufactured from these molds for use in the food, textile, and tanning industries." Address: Dep. of Bacteriology, Univ. of Wisconsin, Madison, Wisconsin.

1344. Sakurazawa, Nyoiti [Ohsawa, George]. 1965. You are all sanpaku. English version by William Dufty. Secaucus, New Jersey: University Books. 224 p. Index. 22 cm. First paperback edition published in 1980 by Citadel Press, Secaucus, NJ.

• **Summary:** Contents: Introduction. The divine ritual. A land of sanpaku. Faith and medicine. The cause. The cure. The daily check-up. Food and sex. Prayer and fasting. The sacred act. About salt. About sugar. About milk. About liquids. About chewing. About principal foods. Soulfood: Brown rice, rice cream, buckwheat, buckwheat cream, wheat, cous cous, chapati, millet, raw rice, bread, gomasio [gomashio] (sesame salt), umeboshi plums, miso and shoyu, tahini, miso cream, about tea, coarse green tea (bancha),

soya ban (coarse green bancha tea with soy sauce), mu tea, lotus tea, lotus tea, mint tea, thyme tea, Ohsawa coffee (Yannoh; made of rice, wheat, aduki beans, chick peas, chicory, and a little oil), Dandelio (dandelion coffee substitute), kokoh, kuzu, umeboshi juice, ume syo kuzu (umeboshi + shoyu + kuzu), aduki juice, radish drink (daikon #1 and #2), special rice cream, brown rice tea, wheat tea. The oneness of the universe [Ohsawa's profound and beautiful credo]. Tables: 1. Macrobiotic table of daily food in order of yin to yang. Note: The most yin foods are indicated by 3 downward-pointing triangles; the most yang foods by 3 upward-pointing triangles. Beans (except aduki) are quite yin, being symbolized by 2 downward-pointing triangles. Eggplant, tomato, and potato are the most yin vegetables. The most yang cereal is buckwheat, followed by rice. 2. Physical phenomena–Yin/yang table. Biographical note on Ohsawa (p. 213-18).

This was the first popular book in English to explain the principles of macrobiotics. "*Sanpaku* describes a condition in which they white of the eye can be seen between the pupil and the lower lid as the subject gazes directly forward. This, we quickly learn, connotes a grave state of physical and spiritual imbalance." It is the Oriental sign of impending disaster.

Soy-related recipes and information include: Soya bean plaster (p. 140). Tofu plaster (p. 141; tofu is called "white soya bean cheese"). Tekka [miso] for anemia and general weakness (p. 143). Miso and shoyu (p. 190). Miso cream (with tahini, p. 190-91). Soya ban: Coarse green bancha tea with soy sauce (p. 194). Ume syo kuzu (p. 199; a proven medicinal beverage [made from umeboshi, shoyu, and kuzu]).

About sugar (p. 165): "I am confident that Western medicine will one day admit what has been known in the Orient for years: sugar is without question the number one murderer in the history of humanity—much more lethal than opium or radioactive atomic fallout—especially for those people who eat rice as their principal food."

About milk (p. 169): "There is no reason for man to live on the milk of an animal—especially an animal inferior to him biologically and intellectually." People of the Orient avoid milk "because they respect the biological natural laws of the Order of the Universe... Once the young offspring of animals have their teeth and are weaned from nursing, they no longer drink milk... No animal ever does." "The quality and quantity of a mother's milk controls her child's destiny. In cases where the mother's milk is not available, babies can be fed with *Kokoh*—a macrobiotic cereal milk made with roasted rice, glutinous rice, oatmeal, soya beans and sesame seeds reduced to powered form" (see recipe p. 198).

Miscellanea: The Ohsawa Foundation at 317 Second Avenue in New York City, located on the first floor of an old tenement, had a 4-table restaurant in the front and a kitchen in the rear. There were several macrobiotic

restaurants in Paris, plus a tiny macrobiotic food store named Les Trois Epis and the Librarie Ohsawa, both on Rue Lamartine Guy Massat was editor of the French monthly journal *Yin/Yang*. The author: "I could not remember a single doctor, out of dozens who treated me, who had ever shown the slightest curiosity about what I ate and drank."

"The stark facts presented to the President of the U.S. by his Special Commission on the Nation's Health in December of 1964 are staggering: In 1963 heart-artery disease caused 55% of all U.S. deaths, and cancer 16%. Strokes 210,000; diseases of arteries outside the brain combined with diseases of the heart to kill 793,000. Cancer killed 285,000" (p. 66). Occidental medicine is symptomatic medicine; it does not seek to cure the basic causes. And it is microscopic/analytical. It seeks the truth in a maze of details; but the "truth is whole." The "ultimate cause of every illness is violation of the order of the universe through ignorance or through arrogance,..." (p. 80-81). "Disease is a divine warning, a message from nature seeking to guide us to the correct path" (p. 98). The essential factor in the proper nutrition of the human body is the proper proportion of Yin and Yang. The best proportion of Yin/Yang or Potassium/Sodium is 5 to 1. All those foods whose K/Na ratio is greater than 5 to 1 are Yin. The books ends with a "Biographical Note: Sakurazawa-Ohsawa" who is said to have "published some 300 works in Japanese and more than 20 books in Western languages, principally French." His wife, Lima, is a professor of traditional Japanese music. There is a selected bibliography of Ohsawa's books, especially those published in French. Address: New York.

1345. *SoyaScan Notes*. 1965. Chronology of The Infinity Company (Originally named Perseverance Foods). 16 Jan. 1992. Compiled by William Shurtleff of Soyfoods Center. • **Summary:** 1965?—This company was founded in New York City under the name Perseverance Foods by Howard Rower. 1964 or 1965—The company name was changed to The Infinity Co., but it was popularly known as Infinity Foods. In 196? it was incorporated as The Infinity Food Co. Inc.

After Herman Aihara and the Chico group left New York in 1961 and the Kushis left in 1963, something of a void was left—which Infinity filled. It was a macrobiotic and natural foods warehouse, importer, and wholesale distribution company that was a prime source of food for many of the early macrobiotic and natural foods groups and students, including the Kushi Study Houses in Boston, Massachusetts. Infinity imported foods (including Mugi Miso by 1965) from Tokyo CI (Centre Ignoramus), which "guaranteed" the foods' quasi-medicinal effects. The food was of top quality. The owners (including Howard Rower and Jason Hammond) were involved with the Church of Scientology.

1971–Greenberg’s Natural Foods in New York City and Mother Nature & Sons in New York City both advertise that they carry foods supplied by Infinity Food Co. which was located at 171 Duane Ave., New York City, New York 10013 [later 10005]. Phone: 212-925-2062. Infinity was located in the old produce district of New York, an area of town called Tribeca.

Bruce Macdonald (1992) remembers that for a while, in the late 1960s, Erewhon was Infinity’s largest customer, even though Infinity was always a relatively small company. As Howard Rower moved up in the Scientology hierarchy, he gradually lost interest in Infinity. Bruce thinks Infinity went out of business in about 1970 or 1971.

On the structure of the preservation of miso]. *Shokuryo Kenkyujo Kenkyu Hokoku (Report of the Food Research Institute)* No. 21. p. 55-59. Jan. [13 ref. Jap; eng]

• **Summary:** High-protein, low salt miso could be stored well for 10 days at or below 10°C. The miso acidified when stored for 4 days at over 20°C. The preservatives dehydroacetic acid and sorbic acid, which are allowed for use with miso, could protect swelling at the level of one part in 500 but not at 1 part in 1,000. Freeze drying was found to be better than vacuum drying for miso. Address: Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo, Japan.

1354. *SoyaScan Notes*. 1966. Chronology of Erewhon. Renamed Erewhon Trading Co. in 1967. 12 Dec. 1991. Compiled by William Shurtleff of Soyfoods Center.
• **Summary:** 1966 April 9–Erewhon opens as a small (10-by 20-foot) macrobiotic and natural foods retail store at 303-B Newbury Street (below street level) in Boston. Aveline and Michio Kushi are the founders, but Aveline is

the sole owner. Evan Root is the first retail store manager. The origin of the natural foods industry and movement in America can be traced to this date. Erewhon is the first store of its kind in America and it soon serves as a model for many other similar natural food stores across the nation. Erewhon sells several soyfoods, mainly miso and shoyu purchased from Howard Rower's Infinity Foods or Japan Foods Corp., both in New York.

1967 Aug.—Paul Hawken takes over the management of Erewhon (one small retail store) from Evan Root. He changes the name to Erewhon Trading Co. and starts to expand the business.

1968 May—Paul Hawken incorporates Erewhon Trading Company. Paul later states that he and Aveline Kushi each own 50% of the stock. However Aveline Kushi and her attorney, Morris Kirsner, agree that they offered him 50% of the Erewhon stock shortly before he left for Japan (in March 1969) but he did not accept it. To this day (Feb. 1999) Aveline has no idea why Paul did not accept such a generous offer.

1968 June—Hawken establishes his first supplier of organically grown grains, Ted Whitmer, a wheat farmer in Montana. By 1973 Erewhon had established and contracted with 57 farms in 35 states to provide the company directly with organically-grown foods.

1968 Aug.—Erewhon starts to import foods from Japan, initially from Muso Shokuhin, later by correspondence with Mr. Akiyoshi Kazama, who worked for an import/export company named Mitoku, which sold no food at the time. The initial orders contained red miso (made by Sendai Miso Shoyu Co.) and natural shoyu (made by Marushima).

1968 Nov.—On Thanksgiving day, Erewhon moves up and across the street to a much bigger and nicer location at 342 Newbury St. The company now has 6 employees: Paul Hawken, Roger Hillyard, Bruce Macdonald, Bill Tara, Jim Docker, and Jean Allison. One day later, Bill Tara leaves to start a macrobiotic East West Center in Chicago. Tofu, curded with calcium sulfate and made by a Chinese company in Boston, starts to be sold.

1969 March—Paul Hawken and Evan Root leave for Japan. Bruce Macdonald takes over as general manager of Erewhon. Paul stays in Japan for 9 months, arranging for individual packaging of products that were formerly imported in bulk, and finding new items for Erewhon to import. He visits suppliers, works with Mitoku and Muso, and studies Japanese language and culture.

1969 spring—Erewhon starts wholesaling foods, under the direction of Bruce Macdonald.

1969 Aug.—Aveline Kushi moves to Los Angeles where her youngest son, Hisao, undergoes traditional Japanese bone massage therapy. In Los Angeles, she establishes the first macrobiotic study house at 7511 Franklin Ave. Bill Tara arrives about a month later to set up a retail store,

Erewhon-Los Angeles, which opens on 8001 Beverly Blvd. in about September.

1969 Oct. (early)—Bruce Macdonald leaves for Los Angeles with his new bride to run the new Erewhon retail store there. Roger Hillyard takes over as general manager of Erewhon in Boston.

1969 Nov?—Erewhon opens its first warehouse in Boston, at 33 Farnsworth Street.

1970 Jan. 1—Erewhon's earliest existing catalogue seen (wholesale and retail) lists 7 pages of natural food products—most of them imported from Japan. By March 1970 Erewhon lists 96 products in its catalog.

1970 July—Erewhon's rapidly expanding distribution business moves into a large (20,000 square feet) fifth-floor leased brick warehouse at 33 Farnsworth St., on the docks in South Boston. *East West Journal* and Tao Books soon move to the same area.

1971 Jan.—*East West Journal* begins publication in Boston, Massachusetts.

1971—Erewhon Trading Company of Los Angeles has expanded and is now at 8001 and 8003 Beverly Blvd., Los Angeles, CA 90048.

1971 March—Roger Hillyard is replaced as general manager of Erewhon—Boston.

1971 May—Bruce Macdonald leaves Erewhon in a dispute over ownership of the company.

1972—John W. Deming Jr. plans to invest \$150,000 in Erewhon in exchange for stock, and Advest Co. plans to conduct Erewhon's first public stock offering—but neither happens after Michio Kushi nixes the plans.

1973 Aug.—Paul Hawken writes a critical history of Erewhon and its problems. Published in *East West Journal* it is titled "Erewhon: A Biography. The View Within." Shortly thereafter Paul Hawken resigns, saying that running Erewhon was a nightmare. Some say he sells his 25% ownership back to the company, which was subsequently managed by Bill Garrison, Tyler Smith, Jeff Flasher, and Tom Williams, in that sequence.

1974 July to 1977—Erewhon becomes the exclusive representative and agent for both the Muso and Mitoku companies in North America. The labels of all products imported from these companies must bear the Erewhon label.

Starting in late 1969 a number of macrobiotic and/or natural foods companies grew into distributors following the models established by and with help from Erewhon: Eden Organic Foods in Ann Arbor (started by Bill Bolduc on 4 Nov. 1969), Food for Life (started in 1970 by Bill Tara as a retail store on the 10th floor of a Chicago office building), Janus in Seattle, Washington (Jan. 1972, by George Gearhart and Blake Rankin, formerly of Spiral Foods), Essene in Philadelphia, Pennsylvania (by Feb. 1971), Laurelbrook in Maryland (Aug. 1971), Ceres in Colorado Springs (1973), and The Well in San Jose,

California (1973, by Roger Hillyard). These macrobiotic distributors had a strong influence on the numerous other non-macrobiotic natural food distributors, such as Lifestream (started in 1969 as a retail store), Westbrae in Berkeley, California (wholesale distribution: July 1970, by Bob Gerner; retail: Feb. 1971, Gerner). Shadowfax (New York, 1971), and Tree of Life in St. Augustine, Florida (retail: May 1971; wholesale distribution: Feb. 1972, by Irwin Carasso).

1975 Aug. 1—Erewhon sells all of its West Coast Division in California (Los Angeles and Culver City) to John Fountain and John Deming for cash and notes, realizing a net gain of \$86,872.

1978 (early)—Erewhon moves into a huge warehouse and office complex at 3 East St., Cambridge, Massachusetts 02141.

1979 April 27—The workers in Erewhon's production, trucking, shipping, and kitchen departments vote 42-19 to form a union affiliated with Local 925, the Service Employees International Union.

1979—John Deming steps in to liquidate all the assets of financially failing Erewhon—Los Angeles. Tom DeSilva, Tyler Smith, and Jeff Flasher buy the retail store at 8001 Beverly Blvd.

1981 Feb.—Erewhon currently lists 4,000 products in its catalog. It services 2,000 customers and provides jobs for 175 people in its warehouse and retail stores.

1981 Nov. 10—Erewhon files for bankruptcy protection under Chapter 11 of the Federal Bankruptcy Act because of debts totaling \$4.3 million. At his time, Aveline Kushi is the sole owner of Erewhon. Stow Mills picked up the lion's share of the Erewhon business, with Westbrae also getting a significant part of it.

1982 May—A \$1.3 million offer by Ronald Rossetti, president of Nature Food Centres, is accepted as the reorganization plan in the Erewhon, Inc. bankruptcy. Rossetti purchased Erewhon as an individual; it was never part of Nature Food Centres.

1986—Erewhon acquires U.S. Mills, which had been founded in 1908. In effect U.S. Mills and Erewhon were merged, and U.S. Mills was chosen as the corporate name, largely since it had been around longer.

1988 May—Chuck Verde (who was the president of Erewhon) and Cynthia Davis acquired the U.S. Mills / Erewhon business. They became the main joint shareholders. Address: 303-B Newbury St., Boston, Massachusetts.

1355. **Product Name:** Miso.

Manufacturer's Name: Japan Foods Corporation (Importer). Made in Japan.

Manufacturer's Address: New York.

Date of Introduction: 1966. April.

New Product—Documentation: Shurtleff & Aoyagi. 1983. *The Book of Miso*. 2nd ed. p. 236.

1356. **Product Name:** Miso.

Manufacturer's Name: Nishimoto Trading Co. (Importer). Made in Japan.

Manufacturer's Address: New York.

Date of Introduction: 1966. April.

New Product—Documentation: Shurtleff & Aoyagi. 1983. *The Book of Miso*. 2nd ed. p. 236.

1357. Hayashi, Shizuka. 1966. There's an increasing trend to soybean oil in Japan. *Soybean Digest*. May. p. 68-69.

• **Summary:** In 1965-66 some 1,852,000 tonnes of soybeans were used in Japan. Of this, 1,341,000 tons (74.5%) were crushed, 297,000 tons (16.0%) were made into tofu and frozen tofu, 150,000 tons (8.1%) were made into miso, 32,000 tons (1.7%) were made into natto, and 32,000 tons were made into soy sauce and other soy products.

Crushing the soybeans yielded 1,073,000 tons of soybean meal. Of this, 736,000 tons (68.6%) was used for animal feeds (largely as a component of mixed feeds), 174,000 tons (16.2%) to make shoyu, 65,000 tons to make tofu, 63,000 tons for other food uses, and 35,000 tons for other non-food uses. Thus, a little over 50% of all soybeans used in Japan in 1965 were used to make foods—not including soy oil.

Per capita consumption of edible oil in Japan has increased dramatically, from 7.52 grams per day in 1956 to 18.44 grams in 1965. During the same period, total soybean oil consumption has risen from 74,010 tonnes to 219,967 tonnes. In recent years a number of the large soybean crushing companies, such as Hohnen, Nikkoh, Nisshin, Showa, and Yoshiwara have expanded their extraction plants. "The various soybean food processors including soy sauce, miso, and tofu are consolidating into fewer large-scale plants with financial support from the government for improvement and better efficiency." Address: Japanese American Soybean Inst.

1358. Kilpatrick, James J. 1966. Right to be let alone is the most precious of all. *Los Angeles Times*. July 12. p. A5.

• **Summary:** Benevolent paternalism has become rampant in the USA; Big Brother is watching you—and is sure he knows what's best for you. "Nowhere is this arrogance of power less restrained, or more abused, than in the Food and Drug Administration" [FDA]. "For example, in New York City, on the complaint of the FDA, marshals recently swooped down upon the Ohsawa Foundation at 317 Second Ave., and there confiscated a large quantity of 'macrobiotic foods,' and a large quantity of books and pamphlets on Zen cookery."

The confiscated foods were not mislabeled, not contaminated in any way, and not adulterated. The Azuki

beans were pure and natural—as were the soy sauce, rice cakes, millet, and sesame oil.

It was the ideas behind the food that were bad. The Zen philosophy holds that a certain type of diet is good and that certain of these foods will cure certain diseases. “Such diets are dangerous,” says the FDA in a press release. Four persons are known to have died in New Jersey and one in California for following strictly these dietary precepts.

If a handful of Zen Buddhists think they will enter nirvana by eating soybean paste [miso], why should the FDA care? Is this a major threat to public health? Judge Brandeis once said that the most precious of all rights is the right to be left alone. Note: Supreme Court Justice Louis Brandeis said this in 1928, invoking a right to privacy.

1359. Ishii, Kenji; Kawamura, A.; Iwata, T. 1966. Hatcho miso no nigami ni kansuru kenkyû. III. Butanooru chûshutsu kubun no teimi [Studies on the bitter taste of Hatcho-miso. III. Taste of the butanol extract of Hatcho-miso]. *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 44(8):459-62. Aug. [3 ref. Jap; eng]

• **Summary:** “Hatcho-miso was extracted with ether and the residue was then extracted with butanol. The butanol extract had a bitter taste.” Address: Dep. of Agricultural Chemistry, College of Agriculture and Veterinary Medicine, Nihon University, Setagaya-ku, Tokyo, Japan.

1360. Swaminathan, M. 1966. The use of soyabean and its products in feeding infants and in the prevention of protein malnutrition in weaned infants and pre-school children in developing countries. *Indian J. of Nutrition and Dietetics* 3(4):138-50. Oct. [63 ref]

• **Summary:** Contents: Introduction. Chemical composition: Carbohydrates, fat, minerals, vitamins, proteins. Factors affecting the nutritive value of soya proteins: Trypsin and growth inhibitors, heat processing, other factors. Nutritive value of soya proteins (with or without methionine supplementation): Experiments with animals, experiments with human beings, supplementary value to other food proteins. Processed foods from soyabean for feeding infants and preschool children: Milk substitutes and infant foods, processed protein foods based on soya (soya flour, Multipurpose Food or MPF, soup powder). Foods based on soyabean and other oilseed meals: Precooked roller dried foods, extrusion-cooked full-fat soybean flour. Other soya products (soy protein isolate, tofu, natto, miso, tempeh, soy sauce). Conclusion. Address: Central Food Technological Research Inst. (CFTRI), Mysore, India.

1361. Hesseltine, C.W.; Shotwell, Odette L.; Ellis, J.J.; Stubblefield, R.D. 1966. Aflatoxin formation by *Aspergillus flavus*. *Bacteriological Reviews* 30(4):795-805. Dec. [39 ref]

• **Summary:** Introduction. Fungi producing aflatoxins and other toxins of *A. flavus*. Natural occurrence of aflatoxin. Factors affecting aflatoxin formation in nature. Production of aflatoxin in culture. Aflatoxin studies at the Northern Regional Research Laboratory.

The occurrence of mycotoxins has been known for several decades. In 1913 Alsberg and Black of the USDA studied the biochemistry of toxins of certain molds isolated from corn meal. *Penicillium puberulum* was found to produce penicillic acid which was toxic. Interest in aflatoxins arose after the death of a large number of young turkeys in Great Britain in 1960. At least 4 aflatoxins are known to exist, produced by certain strains of *Aspergillus flavus* Link, *A. parasiticus* Speare, and *Penicillium puberulum* Bainier.

“*Aspergillus oryzae* and its near relatives are widely used in the preparation of koji for such food fermentations as shoyu (soy sauce), miso, black beans [soy nuggets / fermented black soybeans], and sake” (p. 802). *A. oryzae* is a close relative of *A. flavus*; they are distinguished on the basis of minor morphological characteristics. Aflatoxin has been found on only two commercial commodities: Peanuts and cottonseed cake. Although *A. flavus* can be made to grow on soybeans, none of the strains produced much aflatoxin regardless of the conditions. Aflatoxins have not been found in commercial soyfoods produced by *Aspergillus oryzae*.

The authors obtained very low toxin production (0.03 micrograms/milliliter) on pearled soybeans (Hawkeye variety) using a strain of *Aspergillus flavus*. Address: NRRL, Peoria, Illinois.

Address: National Food Research Inst., Tokyo, Japan.

1368. Miller, Gloria Bley. 1966. *The thousand recipe Chinese cookbook*. New York, NY: Antheneum. First Grosset & Dunlap edition 1970. xiv + 926 p. Illust. magnificently by Earl Thollander. Index. 26 cm.

• **Summary:** This massive volume, by the blond-haired wife (a professional writer; photo shown on dust jacket) of a Greenwich Village sculptor, offers an in-depth introduction to Chinese cooking and ingredients, though it is unusually heavy on flesh foods and light on grain and vegetable dishes—as the following listing of recipes will show. In describing “The Chinese Diet” (p. 3-4) the author notes,

“Meat does not predominate, vegetables do:… There are no dairy products: Butter, cheese and milk are practically unknown to Chinese cooking. (Cattle, few and far between, were more profitably put to work as beasts of burden.) Yet, with nutritional ingenuity, the Chinese created their own ‘cow’ which produced its own ‘dairy’ products. They took the lowly soybean, whose protein closely resembles that of meat, and transformed it in innumerable ways. They softened and ground the soybean, then mixed it with water, converting it first to milk, then to curd, and finally to cheese. (They also put it to many other uses: made it into sauce and jam; served its sprouts as vegetables; fermented, dried and roasted it; used it salty as a condiment, sweet in pastries.)”

Page 75 notes: Soy sauce should be used discreetly in light soups. If possible, it should be light soy. The dark variety can destroy a soup’s lightness and clarity; its strong taste can overwhelm flavors.

Soy-related recipes include: Basic bean curd soup (p. 99-100). Basic cold bean curd (p. 114). Slivered bean curd and shrimp (p. 115). Stir-fried pork and bean curd (p. 133). Stir-fried pork with deep-fried bean curd. Stir-fried pork with pressed bean curd (p. 135). Stir-fried roast pork and bean curd I and II (p. 156-57). Basic steamed minced pork (with “fermented black beans,” p. 167-68). Steamed sliced pork with ham and bean curd (p. 170). Steamed sliced pork with white cheese [white fermented tofu] (p. 171). Basic braised pork with bean curd (p. 174-75). Braised pork with red bean cheese (p. 176). Braised pork and bean curd (p. 180). Braised five-flower pork and red bean cheese (p. 180-81). Red-simmered pork (with soy sauce, p. 186-88). Stir-fried spareribs with black bean sauce [made from “fermented black beans”] (p. 202-03. “Mince garlic and scallion stalk, then mash with soaked black beans. Combine with sherry, water and soy sauce”). Steamed spareribs with black bean sauce (p. 206. “Mince garlic and mash with soaked black beans; then combine with cornstarch, soy sauce and sugar. Pour mixture over ribs”). Braised spareribs with black bean sauce (p. 206. “Mince garlic and ginger root, then mash with soaked black beans”). Braised spareribs with red bean cheese (p. 206). Stir-fried beef and bean curd (p. 215). Red-simmered beef (with soy sauce, p. 245-46). Red-simmered (or cooked) duck (with soy sauce, p. 267-71). Stir-fried chicken with soy jam (p. 325-26). Stir-fried chicken and tomatoes with black beans [“fermented black beans”] (p. 327-28). Stir-fried deep-fried chicken with brown bean sauce (p. 329). Stir-fried deep-fried chicken with soybean paste (p. 330-31). Red-cooked or soy chicken (p. 366-69). Steamed fish topped with black bean sauce [“fermented black beans”] (p. 411-12). Braised soy fish (p. 429-32). Braised fish with deep-fried bean curd (p. 434). Braised fish steaks with bean curd (p. 435). Deep-fried bean curd stuffed with minced fish (p. 448). Braised dried oysters with bean curd sticks [yuba] (p. 483). Stir-fried shrimp with

bean curd I and II (p. 496). Stir-fried shrimp with deep-fried bean curd (p. 497). Stir-fried shrimp with black bean sauce ["fermented black beans"] I and II (p. 500). Poached shrimp with ham and bean curd (p. 527). Basic omelet with bean curd I and II (p. 551-52). Fried eggs with soy sauce (p. 569). Soy eggs (also called pot-stewed or red-stewed eggs). Soy duck eggs (p. 574). Basic stir-fried bean curd (p. 593). Basic deep-fried bean curd (p. 594). Deep-fried bean curd with dried shrimp sauce. Steamed stuffed bean curd (with pork, p. 595). Miscellaneous bean curd (p. 595-96). Stir-fried spinach and white cheese [fermented tofu] (p. 618-19). Stir-fried string beans and white cheese [fermented tofu] (p. 620-21). Soy jam noodles (p. 660). Noodles in brown bean sauce (and hoisin sauce, p. 661). Dips (incl. Dip for deep-fried bean curd; many use soy sauce or hoisin sauce, p. 709-14). Soy-vinegar dressing. Soy-sesame dressing (p. 715, with soy sauce and sesame oil). Soy-oil dressing (with soy sauce and peanut oil, p. 716). Marinades (many use soy sauce, hoisin sauce, brown bean sauce, or red bean cheese, p. 717-24). Sauces (many use soy sauce or yellow bean paste, incl. Sweet-and-pungent sauces, p. 725-39).

The chapter titled "Other Useful Information" tells more on bean curd

The extensive Glossary of Chinese Ingredients (p. 844-72) contains the following soy-related entries: Bean curd (bean cakes; note that recipes call for a certain number of "cakes" of tofu). Bean curd sauce (see cheese, Chinese white). Bean curd sticks (dried bean curd). Bean paste, yellow (yellow sauce). Bean sauce, brown (see brown bean sauce). Beans, black fermented beans (black bean sauce or salted black beans). Brown bean sauce. Cheese, Chinese red (red bean curd cheese, spiced red bean curd, or southern cheese). Cheese, Chinese white (bean curd sauce, white bean curd cheese, or white bean sauce). Five Spices (five-flavored powder or five-fragrance spice powder; star anise, anise pepper, fennel, cloves, cinnamon). Hoisin sauce (haisien sauce, Peking sauce, red seasoning sauce, red vegetable sauce, sweet vegetable paste, or sweet vegetable sauce; another variety is called Ten-Flavored Sauce). Pickles, Chinese (pickled vegetables; pickled in soy sauce). Red bean sauce. Soy jam (soybean paste). Soy sauce (light, black, or heavy varieties). Hoisin sauce (p. 855) is a "Thick, dark brownish-red sauce, made from soy beans, spices, garlic and chili. Sweet and spicy." Used in cooking and as a table condiment.

The chapters titled "Storing Information" and "Soaking Information" include such information on many of the foods listed in the glossary.

Photos show: A bottle of Chou Soy sauce made by Amoy Canning Co. (p. 112). A brick-shaped can of "Thick Soy" made by Tung Chun Canning Co. (p. 126). An earthenware jug of "Ho Sang Yick Soy Sauce" (p. 203). A Mason-type jar of fermented bean curd made by Tung Chun Soy (p. 596). A bottle of Koon Chu* soy [sauce] (p. 715).

Note 1. This is the earliest English-language document seen (April 2003) that uses the term "black bean sauce" to refer to a sauce made from "fermented black beans" [soy nuggets] approximately as follows: Soak fermented black beans. Mince garlic (and sometimes scallion stalk, ginger root, etc.) and mash with soaked black beans. Then combine with ingredients such as: (1) Sherry, water, and soy sauce. (2) Cornstarch, soy sauce, and sugar. Address: Greenwich Village, New York City.

1369. Milner, Max. 1966. General outlook for seed protein concentrates. *Advances in Chemistry Series No. 57*. p. 52-64. Chap. 5. World Protein Resources. [8 ref]

• **Summary:** "Seed proteins, particularly those of the cereals and legumes, are mainstays of human protein nutrition, providing several times more of this nutrient than animal proteins..."

"World Protein Resources: The cereals contribute in round numbers 75 million metric tons of protein, of which wheat provides 25 million, rice 12 million and corn 20 million tons. The legumes, consisting of various beans, peas and lentils, in aggregate, provide, surprisingly, only about 8 million tons. Additional but minor plant sources of protein are tubers, including potatoes, and nuts. The world animal protein supply, including principally meat, milk, eggs, and fish, has been estimated to be about 20 million metric tons. And finally, the potential contribution of the oilseeds, which include principally soybeans, cottonseed, and peanuts, can be considered to be about equal to that of all the animal protein now available, 20 million tons per annum."

A long section titled "Soybeans" (p. 57-59) discusses soybeans and soyfoods, including tofu, miso, natto, tempeh, soybean milk, full-fat soybean flour, soy protein concentrates and isolates, and spun soy protein products. Address: UNICEF, United Nations, New York, NY; Present address: Office of Technical Cooperation and Research, Agency for International Development, Washington, DC.

1370. Nagano Miso Kogyo Kyodo Kumiai Rengokai. 1966. *Shinshû Miso no rekishi* [History of Shinshu miso]. Nagano, Japan. 578 p. [Jap]*

1371. Nakamura, James I. 1966. Agricultural production and the economic development of Japan, 1873-1922. Princeton, New Jersey: Princeton University Press. xxiii + 257 p. Illust. Index. 24 cm. Series: Studies of the East Asian Institute, Columbia University. [149* ref]

• **Summary:** Japan's economic growth is usually described in superlatives and agriculture is widely viewed as playing an unusually important role in this growth. In reexamining government statistics about Japan's historical agricultural growth, the author finds that the median growth rate was not 2.4% as previously believed, but probably no more than 1.0%. This remarkable finding dispels much of the mystery

surrounding Japan's miraculous "take-off" in the Meiji period.

Japan was a net food exporter until about 1895. By 1920 Japan had become heavily dependent on food imports, including wheat, soy beans, sugar, and animal products (p. 126).

During the Meiji period and until relatively recently, most rural households in Japan were nearly self-sufficient, producing almost all of their own cloth, clothes, footwear, housing, many farm implements, and most processed foods and beverages including "soy sauce, bean paste sauce (*miso*), pickles, rice wine (*sake*), etc. (p. 127, 139-40).

Table 5 (p. 228-30) gives the yield of ten Japanese crops from 1879 to 1925. The yield of soy beans increased from 0.516 *koku/tan* [10.45 bushels/acre] in 1879 (1 *koku* = 4.96 bushels; 1 *tan* = 0.245 acres) to 0.778 *koku/tan* in 1900 to 0.915 *koku/tan* [18.52 bu/acre] in 1919.

Soybeans are also mentioned on pages 97, 231, and 233. Address: New York.

1372. Nelson, Andrew Nathaniel. 1966. The modern reader's Japanese-English character dictionary. Revised ed. Rutland, Vermont, and Tokyo, Japan: Charles E. Tuttle Co. 1109 p. Index. 24 cm. [15 ref. Jap; Eng]

• **Summary:** Radical 37 = dai or oh = big + 3 strokes = #1171 = *daizu* or *ômage* = soy bean (p. 290).

Radical 75 = tree; at left = ki hen. #2211 = eda of edamame. Radical 82 = Hair of animals, ke. Radical 85 = Water + 11 strokes = soymilk. Radical 151 = Bean + 7 strokes = mame (bean) or tou = tofu. Radical 164 = Liquid (Sake *sukuri*) + 11 strokes = shoyu no sho. Radical 201 = Yellow (variant is 11 strokes).

1373. Schenk, E.G.; Naundorf, G. 1966. Lexikon der tropischen, subtropischen und mediterranen Nahrungs- und Genussmittel [Dictionary of tropical, subtropical, and Mediterranean foods and food adjuncts (stimulants / enjoyables)]. Herford, Germany: Nicolaische Verlagsbuchhandlung Herford. xiv + 199 p. Index. 21 cm. Series: Manualia Nicolai 1. [200* ref. Ger]

• **Summary:** Pages 70-71 give a list of Japanese foods (after Mayerhofer and Pirquet 1926) in no apparent order, with the Japanese name followed by a translation of that name into German. Included in the long list are: Akamiso, miso, shiromiso, tofukasu [okara], daizu, fu [dried wheat gluten], kingyo-fu, kiri-fu, kiri-mochi [frozen and dried rice cake], ame [malt extract], mirin, aburage [tofu fried in vegetable oil], natto-Bohnenkäse, Tofu-Sojatoptfen, Tonyu-Sojamilch, azuki [small red beans], kwansen-fu, kinako-Sojabohnenmehl, geröstet, amasake-unvergorener Sake, umeboshi, koritofu [frozen and dried tofu], midzuame [soft ame = rice syrup], shoyu-Sojasauce, yuba-eine Bohnenspeise. Plus many types of sea vegetables.

On pages 140-42 the following terms are defined in German: Soja [soya], Sojabohne [soybeans], Sojabohnenkäse [soy cheese or tofu], Sojabohnenmehl [soybean meal], Sojabohnenöl [soybean oil], Sojakäse [fermented soy cheese], Sojamilch [soymilk], Soja-Nahrungsmittel [soyfoods]: Koji, Miso, Tofu, Nato [sic, natto], kondensierte Soja-Milch [condensed soymilk], Japanische Verarbeitungen [Japanese processed foods: Japanische Soja-Sauce Shoyu (Shoyu), Miso, Tofu], Soja-Nahrungsmittel, javanische [Javanese soyfoods: Tao-Hoe, Tempeh, Ketjap, Tao-Tjong [a term, and perhaps a product, between *doujiang* and *tao-tjo*, Indonesian-style miso], Sojatunken], Soja-Verarbeitungen: Sojamilch, Bohnenkäse, Teoufou (China), Tofu (Japan), Dan Phu (Vietnam), Natto (Japan), Tao-tehe (China).-Bohnenbri Miso (Japan), Tao-tjung (*doujiang*, China).-Sojasauce: Shogu [sic, Shoyu] (Japan), Tsiang-Yeou, Tao-yu (China), Ketjap (Java), Tuong

(Vietnam).—Gärmmittel: Kiut see (Japan). Then a table shows the nutritional composition of 8 of these foods.

Note 1. This book contains more than its fair share of errors and could be better organized.

Note 2. This is the earliest German-language document seen that uses *Sojabohnenkäese*, the German word meaning “soybean cheese,” to refer to tofu. Address: 1. Prof. Dr. med. habil., Dr. phil. nat, Laurensberg ueber Aachen, Germany.

1374. Sun, Ying-Hsing. 1966. *T'ien Kung K'ai Wu*: Chinese technology in the seventeenth century. Translated by E-tu Zen Sun and Shiou-Chuan Sun. University Park & London: Pennsylvania State University Press. xiv + 372 p. See p. 24, 29, 31, 215-16. Illust. 28 cm. [3 soy ref. Eng]

• **Summary:** The *T'ien Kung K'ai Wu*, by Sung Ying-Hsing (pinyin: *Tiangong Kaiwu*, by Song Yingxing) was published in 1637. The title can be rendered as “The Creations of Nature and Man.” This English-language translation of the 17th century work on Chinese technology contains 18 chapters, 151 superb illustrations, and extensive information on soybeans. The author concluded his preface in 1637 by warning “An ambitious scholar will undoubtedly toss this book onto his desk and give it no further thought; it is a work that is in no way concerned with the art of advancement in officialdom.”

In Chapter 1, “The growing of grains,” the section on “General terms” states (p. 3) that “the ‘five grains’ are sesamum, legumes, wheat, paniced millet, and glutinous millet. Rice is not included because the ancient sages who wrote on the subject were natives of northwestern China. Nowadays 70 per cent of the people’s staple food is rice, while wheat and various kinds of millet constitute 30 per cent. Sesamum and legumes are used exclusively as vegetables as [for making] oil, although tradition still classifies them among the grains.”

The section on “Hemp” (p. 24) notes that the seeds of hemp and sesame are only two kinds that can be used as grain or for oil. “Sesame is both delicious and nutritious; indeed it would be no exaggeration to say that it is the king of all grains.”

The section on “Legumes” (*shu*, p. 24, 29, 31) states that one of these legumes is the soy bean, of which there are two varieties [colors]: the black and the yellow. They should be planted not later than the time of the Ch’ing-ming festival [in early April of the solar calendar] or thereabouts. There are three types of yellow soy beans: “fifth-month yellow,” “sixth-month popper,” and “winter yellow.” “The yield of the first of these is small, while that of the last is always twice as much. The black variety is harvested invariably in the eighth month. North of the Huai River horses and mules that are used on long journeys must be fed this black soy bean before they can become strong and sturdy. The amount of the yield of the soy bean depends on the quality of the

soil, the frequency of cultivation, and the amount of rainfall. All bean jams (*shi*) [soy nuggets], sauces (*jiang*), and curds (*fu*) [tofu] are made from soy.

“South of the Yangtse [River] there is another species known as ‘long-legged yellow,’ which is planted in the sixth month after early rice has been cut, and is harvested in the ninth or tenth month. The method of planting this bean in Chi-an, Kiangsi [Ji’an, Jiangxi], is quite amazing: After the rice stalks are cut the stubble is not ploughed over, but in the open end of each stalk are placed three or four beans, which are pushed down with fingers. The beans are nourished by the dew gathered in the stalk stubs; later when the beans begin to grow the stubs will rot, providing further nourishment for the growth of the new crop. Should the weather be dry after the shoots appear, one pint of water [per plant?] is fed to the plants. In all, one watering and two cultivations are sufficient to bring forth a plentiful harvest. Birds must be kept away after the beans have been planted and before the young shoots appear, and man is the only effective guard against them.”

There are also “black-skin and brown-skin varieties of soybeans.” “In cultivating the fields of soybeans and green lentils [sic, mung beans], the land should be lightly ploughed, because the roots of the legumes are short and the shoots straight. If the furrows are deep the clods will pile up, preventing half the seeds from growing. Our ancient agriculturists did not know that deep ploughing was not suitable for legumes” (p. 29).

Other legumes include: (2) The green lentil (*liudou*) [sic, mung bean], “shaped small and round like a pearl.” (3) The pea (*wandou*, *Pisum sativum*). “It is round like the green lentil, but it has a black spot and is larger in size.” (4) The broad bean (*candou*, *Vicia faba*), “with its pod shaped like a silkworm and seeds larger than the soybean.”

(5) The small lentil (*xiaodou*) [sic, azuki bean]. “The red variety (*chixiaodou*) is effective when used medicinally, while the white variety (*baixiaodou*) (also known as the rice bean), is good as a vegetable. Planted at the time of the summer solstice, this variety is harvested in the ninth month, and is prevalent in the Huai and Yangtse river regions.”

(6) The black lentil (*liudou*), “which is now a common garden vegetable in north China. Its flour, made into thin sheets, serves the same purposes as that of the green lentil [sic, mung bean]. In Peking the street peddlers cry their ‘black lentil sheets’ all day long, indicating that the amount produced is considerable.

“A further kind is the white bean (*baibiandou*) [*Dolichos lablab*], which grows along trellises and is also known as the ‘eye-brow bean.’ In addition there are long string beans, tiger-spot beans, knife beans (large French beans [jack beans, *daodou*]), as well as the black-skin and brown-skin varieties of soybeans, and so forth, which are too numerous to describe. In all, they can serve as a

vegetable and take the place of grains in the feeding of mankind. How can students of Nature ignore them?"

In Chapter 4, titled "The preparation of grains," a section on "Preparing millet, sorghum, sesame, and beans" describes (p. 106) how to separate beans from their pods using a flail or a stone roller pulled by an ox. These two processes are shown in full-page illustrations (p. 83, 105).

In Chapter 12, "Vegetable fats and oils," the section on "Gradation of vegetable oils" begins (p. 215-16): "For eating, the oils of sesame seeds, turnip seeds, yellow soy beans, and cabbage (also called 'white cabbage' [i.e., celery cabbage]) seeds are the best. Next in quality come *Perilla ocymoides* ([the plant] resembles *Perilla nankinensis*; the seed is larger than that of sesame) and rape-seed oil (in the South it is called 'vegetable seed'); next, camellia or tea-seed oil;... the last in quality is hemp-seed oil..."

The yield of oil (in catties per *tan*) is given (p. 216) for many Chinese oilseeds. The two oilseeds with the lowest / worst yields of oil are: cotton seeds 7, and yellow soy beans 9. By contrast, sesame, castor, and camphor seeds yield 40 and rape seeds yield 30-40. In "Kiangsu [Jiangsu] the bean oil is used as food for humans, and the meal cakes are fed to pigs..." Note: 1 catty = 1 *jin* = 590 gm = 1.3 lb = 20.7 oz. 1 *tan* = ca. 180 liters. Thus, for soybeans, 9 catties = 5.31 kg of oil from ca. 180 liters of soybean seeds.

The next section in this chapter, titled "Methods and implements [for oil-extraction]" gives details of wedge presses and processes—but soybeans are not mentioned. Large illustrations show: Roasting and steaming oil seeds (p. 214). Press for making vegetable oils in China (p. 217). Pounding and grinding vegetable tallow tree seeds (p. 220).

Also discusses: Hemp seeds and oil (p. 24, 216). Sesame seeds and oil (p. 3-4, 24, 106, 215-16, 219). Address: China.

1375. Zen cookery: The philosophy of Oriental culture. Vol. I. Practical macrobiotics. 1966. Ignoramus Press, Ohsawa Foundation, Inc., 1434 N. Curson Ave., Los Angeles, California. 84 p. Index. 22cm.

• **Summary:** The revolutionary little reddish-orange or yellow book, with a black plastic comb binding, that introduced many to macrobiotic cooking. No author or editor is listed. The Ohsawa Foundation has branches in Los Angeles, New York, Wellesley, Paris, and Tokyo. Contents and format are identical to the 1964 edition edited by Teal Nichols, published by the Ohsawa Foundation of Chico—which see. Address: Los Angeles, California.

1376. Takeuchi, Tokuo; Yoshii, Hisao. 1967. Miso, shōyu no peptides ni kansuru kenkyū. V. Genryō C/N hi o i ni shita miso no peptides keitai (2) [Studies on the peptides in miso and soy sauce. V. Relation between the amino acid composition of miso peptides and C/N ratio of the raw

materials]. *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 45(1):34-39. Jan. [16 ref. Jap; eng] Address: Inst. of Food Technology, Aichi prefecture, Nagoya, Japan.

1377. Takeuchi, Tokuo; Yoshii, Hisao. 1967. Miso, shōyu no peptides ni kansuru kenkyū. IV. Genryō C/N hi o i ni shita miso no peptides keitai (1) [Studies on the peptides in miso and soy sauce. IV. Relation between the C/N ratio of the raw materials and the distributive patterns of peptides in miso]. *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 45(1):29-33. Jan. [16 ref. Jap; eng]

• **Summary:** "Soybean koji (low carbon/nitrogen ratio) contained more amino acids and peptides than any other koji of higher C/N ratio. This tendency seemed to have originated from the proteolytic character of soybean koji, because the neutral and alkali protease of *Asp. oryzae* (principal protease in soybean koji) would be more active in soybean protein than in acid protease.

"In the ripened miso the same distributive pattern of peptides was observed regardless of C/N ratio of raw materials. Therefore, the peptide patterns may be virtually similar for all types of miso." Address: Inst. of Food Technology, Aichi prefecture, Nagoya, Japan.

1378. Yokotsuka, Tamotsu; Sasaki, M.; Kikuchi, T.; Asao, Y.; Nobuhara, A. 1967. Kōji-kin no seisan-butsumi ni kansuru kenkyū. I. 1380. Hayashi, Shizuka. 1967. Serve Japanese soy noodles. *Soybean Digest*. March. p. 24.

• **Summary:** "A soybean exhibition was recently held for 3 consecutive days in Yokohama at the Takashimaya Department Store, one of the three largest department stores in Japan. The exhibit, devoted exclusively to soy foods, was under the sponsorship of the store, the prefectural government of Kanagawa, and various soybean groups.

“It was held to promote increased consumption of various soy products such as salad and cooking oils made from soybean oil, soy sauce, miso, frozen tofu, tofu products, and soy flour. Approximately 25 booths were used by manufacturers to display their products.”

The Japanese American Soybean Institute set up a snackbar named “Protein House” (Tanpaku-an) and served Japanese udon noodles made with a mixture of 15% soy flour and 85% wheat flour. The noodles were very popular and crowds swarmed the booth. “It was emphasized that the soy noodle has over three times the nutritional value of an ordinary noodle.” 7,000 people visited the 3-day exhibition and 381 entered the contents to name the noodle. The name selected by a committee was “Protein Noodle” (Tampaku-Udon). Address: Managing Director, Japanese American Soybean Inst.

• **Summary:** Contents: Traditional soy products in the Far East: Soysauce, soy milk, bean curd, tempeh, natto and miso, roasted soy flour, kochu chang [Korean soybean

miso], sprouted beans. Introduction [of soybeans] in other countries: Brazil, USSR, Africa, Latin America, Turkey. New types of products: Defatted soy flour, full-fat soy flour and beverages made from it developed by the Soybean Council of America. Justification: Cost of a pound of protein from different foods. Beef \$4.60. Pork \$4.30. Poultry \$1.50. Nonfat dry milk solids \$0.41. Dry beans \$0.35. Soybeans \$0.14. Attempted introductions: India. Factors involved in adoptability.

“Kochu chang is produced in every household in Korea from mashed boiled [soy] beans which are hung in bags for 2 to 3 months. The product is broken up, dried, and ground. It is then mixed with ground red pepper [plus salt and water] and kept for some time before use.”

This paper was presented by Leon Marie André.

Note 1. This is the earliest English-language document seen (Jan. 2007) that contains the term “roasted soy flour.” We read (p. 22): “This product is produced in small amounts and consumed with rice cake [mochi]. There is hardly any information on the nutritive value of the product.”

Note 2. This is the earliest English-language document seen (March 2009) that uses the word “kochu chang” (or “kochu-chang”) to refer to Korean-style red pepper and soybean paste (miso). Address: 1-2. Food and Agriculture Organization of the United Nations, Rome, Italy; 3. FAO Liaison Officer and adviser to UNICEF.

1385. Fischer, R.W. 1967. The use of soy in food products. *Soybean Digest*. May. p. 29, 31-32, 35-36, 38.

• **Summary:** An excellent overview, with considerable history. Contents: Introduction. Grisly hand of hunger. Soybean oil. Oriental soy foods. Soy flour and grits (with a good history of Berczeller, A.E. Staley, Shellabarger, Allied Mills, J.R. Short Milling Co. and Wytase). Isolates and concentrates. The war years (during and immediately after World War II, soy flour and grits come to be widely disliked). New products and know-how.

“Oriental soy foods:... In the Orient soybeans have, for centuries, played an important part in human diets as soy milk for infants, shoyu, or soy sauce as we call it, miso, tofu, tempeh, kinako, natto, yuba, etc.”

“Isolates and concentrates: In the mid-1930’s processes for further refining the protein factors of soy began to appear. The first 70% soy protein concentrate was turned out by Mead Johnson Co. using the Bonato process of sulfur dioxide and sulfurous acid extraction, but was discontinued for lack of adequate markets for the product. In 1936 the Glidden Co. began working on the production of an isolated protein [90-100% protein] from extracted soy flakes for industrial uses. Glidden, as a major manufacturer of resin, wanted the isolate as a stabilizer for the resin used in sizing paper to provide wet strength. By 1939 Glidden was producing an enzyme hydrolyzed isolated protein to be used with egg albumen for its whipping capacity in producing

food toppings... Over the years soy protein isolates have found their greatest application in the industrial field, particularly as paper coatings for high gloss products.”

A photo shows cans of Worthington Choplets, Soyameat (3 varieties), and Numete—all made from spun soy protein fibers. Address: Soypro International Inc.

1386. Hesseltine, Clifford W. 1967. Fermented products: Miso, sufu, and tempeh. *USDA Agricultural Research Service. ARS-71-35*. p. 170-80. May. Proceedings of International Conference on Soybean Protein Foods. Held 17-19 Oct. 1966 at Peoria, Illinois. [12 ref]

• **Summary:** Discusses: Miso. Sufu, or Chinese cheese [fermented tofu]. Tempeh. Absence of aflatoxin in fermented food products. Table 1 shows mold fermented food products tested for aflatoxin and found negative. These include shoyu, miso, Chinese black beans (Soy nuggets from Taiwan), Hamanatto, moromi, soy tempeh, wheat tempeh, rice tempeh, wheat-soybean tempeh.

Concerning sufu: “The pehtzes [molded tofu cubes] are next brined in various solutions depending on the flavor desired. A typical brine would consist of 12% NaCl and 10% ethanol (sometimes added as rice wine). In other instances, only a salt brine may be used. The molded cakes are allowed to age for about 2 months. The finished cheese along with the brine is bottled, sterilized, and marketed as sufu.”

Of all the various *Mucor* species tested for use in making, the *Actinomucor elegans* used commercially is the best proteinase and almost the best lipase producer. “This same fungus is used in China to produce a food made by fermentation of wheat gluten” Address: Northern Utilization R&D Div., ARS, USDA, Peoria, Illinois.

1387. Standal, Bluebell R. 1967. Amino acids in Oriental soybean foods: Determined by column chromatography. *J. of the American Dietetic Assoc.* 50(5):397-400. May. [18 ref]

• **Summary:** The author used column chromatography to determine the amino acid content of various Oriental soybean preparations. Methionine was the limiting amino acid in all foods. Table 1 shows the amino acid content of the following foods: Tofu, edamame (green soybeans), soybean sprouts, natto, miso, mungbean sprouts (*Phaseolus aureus* Roxb) and whole egg. Table 2 shows the amino acid ratio, essential amino acids index, protein score, and net protein utilization (NPU) for each food. Eggs had the highest NPU (90.9), followed by edamame (72.2), tofu (65.0), soybean sprouts (56.0), and natto (44.0). The first three foods are sources are good quality vegetable proteins. Address: Div. of Nutrition, Dep. of Home Economics, Univ. of Hawaii, Honolulu.

1388. Orr, Elizabeth; Adair, David. 1967. The production of protein foods and concentrates from oilseeds. *Tropical Products Institute Report No. G31*. 104 p. June. Also titled T.P.I. Report (London). [44 ref]

• **Summary:** Contents: Foreword. Acknowledgements. Introduction. 1. The use of oilseeds as a source of protein. 2. Oilseed resources. 3. The manufacture of protein flours by standard oil milling processes. 4. Some cost aspects of the manufacture of protein flour by standard oil milling processes. 5. Examples of the use of edible flours made by standard oil milling processes. 6. Full fat soya flours. 7. Oriental methods of processing soya. 8. Other processes for making protein products. 9. The distribution of protein products. 10. Current experience of making protein flours and foods from oilseeds. 11. The initiation of protein food programmes with particular reference to the role of the administrator. Appendices. 1. Protein nutrition. 2. Oilseed statistics. 3. Toxic hazards. 4. P.A.G. Guides [PAG]. 5. Aflatoxin. 6. Questionnaire. 7. Some examples of the cost of packaging oilseed-based protein foods. 8. Prices of edible oilseed products and protein flours and foods made from oilseeds. Bibliography. Chapters 6 and 7 are especially relevant to soyfoods.

“Full fat soya flour (FFSF) is manufactured in the USA by Archer Daniels Midland Co. and Central Soya, and in the UK by 3 firms: British Arkady Co. Ltd., Soya Foods Ltd., and British Soya Products Ltd. There are no official statistics for production in either country. A trade source of information has estimated UK usage of soya flour at 30,000 tons per annum, but this figure includes defatted soya flour made from meal imported from the USA. Full fat soya flours can be divided into 2 main categories: (a) flours used primarily for bleaching purposes in bread, and (b) general purpose flours. When the flour is to be used mainly for bleaching it is made from uncooked beans, since the natural enzymes in the bean must remain active until the bleaching process has been completed. It is estimated that about half the full fat soya flour made in the UK is used in bread manufacture.”

A table lists all known commercial full-fat soy flours, their composition and prices. Describes the Promo Process and Wenger Process for making FFSF, with cost data. Gives case histories for Pronutro in South Africa and Nutresco in [Southern] Rhodesia.

Chapter 7. Kinako. Fermentation products: Soya sauce (shoyu), miso, natto, tempeh. Developing the use of fermented products. Aqueous extracts: Soya milk and tofu, kori-tofu. Soya milk as a substitute for cow's milk. The package soy milk shop (including Tetra Pak and Prepac packaging; the Prepac system, developed by the S.E.A.B. Co., Villejuif, France, has a capacity of 1,500 packs/hour). Case histories for soya milk: Rural cooperatives in Taiwan, Saridele in Indonesia, and Vitasoy in Hong Kong. Soya milk made from soya flour: The 4 known manufacturers are

Promo Ltd. of the U.K. (“The product made by Promo is marketed under the brand name of ‘Velactin by the Wander company.’”), and Loma Linda Foods (Soyalac and Granogen), Mead Johnson (Sobee or Soybee), and Borden’s Soy Processing Co., all of the USA. Promo and Loma Linda use the traditional Oriental method rather than using soy flour.

Note: This is the earliest document seen (Sept. 2002) concerning Tetra Pak and soy. Address: TPI, 56/62 Gray’s Inn Road, London WC1.

1389. Tada, Masakazu. 1967. Some features of Japanese Buddhism. *British Vegetarian*. May/June. p. 225-28.

• **Summary:** For 1,850 years Japan kept no livestock farms as one sees in Europe. The main source of animal protein was only from fish and shellfish. But modern Japanese, especially those living in big cities, think animal protein is indispensable. One important feature of Japanese vegetarianism is the development and use of fermented foods, such as miso, shoyu, and natto. Address: Dr., 718 Daisen, P.O. Nirayama, Shizuoka, Japan.

1390. Weber, C.R. 1967. Three new and better large-seeded soybeans. *Iowa Farm Science* 21(12):3-5. June.

• **Summary:** Contents: Introduction. What they are. Why new varieties. The varieties. Adaptation and distribution. “Three new and improved large-seeded soybean varieties will be available to a few Iowa farmers in 1967. Developed by Iowa State University and the U.S. Department of Agriculture, the new varieties are: Disoy, Magna, and Prize.” “The large-seeded types are superior to field types for special food uses as a whole bean or for more or less direct processing methods in making miso (a fermented product) or tofu (soy curd). In addition they can be used green by home gardeners, canners and frozen food processors as well as for deep-fat frying or as dry beans in soups. Or, they may be baked as mature dry beans.”

“Large-seeded soybeans available to date, except for Kim and Kanrich, have had some limitations—poor seed yield and very poor shattering resistance (seed holding).” All the new varieties have yellow seeds and yellow hila.

Table 1 shows “Performance of new and old large-seeded and small seeded soybean varieties in Iowa, 1961 to 1966.” The varieties are: Chippewa, Disoy, Blackhawk, Magna, Hawkeye, Prize, Kanrich. For Disoy, Magna, and Prize: Yield (bu/acre): 35.6 / 37.4 / 36.5. Seed size (grams per 100): 26.6 / 26.3 / 26.3. Seed protein content: 41.6% / 38.9% / 39.2%. Seed oil content: 20.4% / 20.4% / 20.3%. Address: 1. Asst. Prof. of Agronomy; 2. Research Technician, Crops Research Div., USDA-ARS. Both: Iowa State Univ.

1391. Chico-San Inc. 1967. Chico-San Inc.—Unique foods: Retail price list. P.O. Box 1004, Chico, California. 2 p. July

15. 35 cm.

• **Summary:** This single-sheet catalog and price list, printed front and back with dark brown ink on pink paper, begins: “Dear retail customer: We encourage you to buy Chico-San products through your local health food store. When you buy directly from Chico-San you must add shipping costs to the cost of food.” Includes the following interesting items. Those followed by an asterisk (*) are marked “OEI” meaning “Our Exclusive Import.”

Specialties: Rice cakes, buckwheat cakes, millet cakes, wheat cakes, roasted rice, rice crackers*. Condiments: Tekka [miso], Tamari soy sauce*, soybean puree (miso)*, sesame salt, sesame spread, sesame butter, kuzu arrowroot*, salt plums, salt, sesame oil. Crude salt (1 lb to 10 lb). Cereals: Rice cream. Rice: Brown short grain (2 lb to 100 lb). Sesame seeds: White-brown. Black. Beverages: Ohsawa twig tea*, 16 herb tea*, Grain beverage—Koko, Grain beverage—Yano, Lotus root tea*, green tea. Noodles. Beans: Azuki red* (\$1.72/lb), Imported red, black beans [soy] (\$1.37/lb).

Note: This is the earliest English-language document seen (March 2009) that uses the term “Soybean Puree” to refer to miso. During the next decade, many macrobiotic publications referred to miso as a “Soybean puree.”

Sea vegetables: Shredded hijiki, kombu*, wakame—curly*, nori—thin sheet, kanten—sea veg gelatin. Dried foods: Lotus root, shrimp, dried fish, small fish—chirimen, tazukuri, shaved bonito [sic, bonito], dried radish [daikon], gourd strips [kampyo], mushrooms. Grain: Barley, buckwheat groats, corn meal, cracked wheat, millet, oat groats & oat meal, rolled oats, rye, wheat—hard red. Flour: One from each grain. Tooth powder jar. Cosmetics. Utensils.

Note 1. This is the earliest document seen (March 2006) that mentions Chico-San. It is also the earliest known Chico-San catalog and price list.

Note 2. This is the earliest document seen (Sept. 2002) concerning the use of miso in second generation products (tekka).

Note 3. This is the earliest English-language document seen (Dec. 2006) that uses the term “salt plums” to refer umeboshi salt plums. Address: P.O. Box 1004, Chico, California.

1392. **Product Name:** Tekka [miso].

Manufacturer’s Name: Chico-San Inc. (Importer). Made in Japan.

Manufacturer’s Address: P.O. Box 1004, Chico, CA 95926.

Date of Introduction: 1967. July.

Ingredients: Incl. miso.

How Stored: Shelf stable.

New Product—Documentation: Unique foods: Retail price list. 1967. July. Tekka [miso] is one of the condiments listed in this catalog. Spiral Foods Inc. 1971. Price list of

macrobiotic foods. Condiments: “Tekka (A traditional flavoring prepared from carrot, burdock, ginger, lotus root, Soybean Puree {Miso}, and sesame oil),...” Note: This is the earliest commercial product seen (Jan. 2009) in which miso is used as an ingredient.

1393. Hesseltine, C.W.; Wang, Hwa L. 1967. Traditional fermented foods. *Biotechnology and Bioengineering* 9(3):275-88. July. [8 ref]

• **Summary:** Contents: Summary. Introduction. Fish fermentations. Soybean and peanut fermentations: Koji, shoyu, miso, hamanatto, natto, ontjom, sufu, tempeh. Discussion: Advantages of preparing foods by fermentation. Address: NRRL, Peoria, Illinois.

1394. *Nutrition Reviews*. 1967. Soy fibers—A new approach to vegetable protein acceptability. 25(10):305-07. Oct. [6 ref]

• **Summary:** The subtitle summary states: “Fibers have been formed from soybean protein and incorporated into meat analogs. The process, its nutritional and economic aspects, and the mechanism of fiber formation are described.”

Traditional foods made from soybeans include tofu, natto, miso, and tempeh. U.S. food manufacturers have developed a new process for making “fibers from isolated soy protein, and for incorporating these fibers into meat-like analogs which may find consumer acceptance as a meat substitute in this country. These products should be cheaper than meat and can be made as or more nutritious than meat by addition of the missing vitamins and minerals.” The final products, meat analogs, typically contain (on a dry basis) 40% soy fiber, 10% protein binder (usually egg albumin), 0-50% fat and/or 0-50% flavors, colors, and supplemental nutrients.

1395. Dubawsky, Rebecca. 1967. Cooking with grains and vegetables plus: Booklet one—A beginning. Boston, Massachusetts: Order of the Universe Publications. 29 p. Illust. No index. 28 cm.

• **Summary:** This was the first macrobiotic cookbook written entirely by a Westerner. Rebecca, an older woman who never married and who later moved to Florida, collected these recipes from Aveline Kushi’s cooking classes in Boston. The dedication (p. 3) states: “The teaching of Aveline Kushi has made the information that follows possible.” The preface (p. 7), written by Michio Kushi on 20 Oct. 1967, begins: “Life is a dream. The purpose of our life is to realize our dream. Those who see a happy, peaceful dream shall become happy and peaceful...” The book has no copyright page, date or place of publication. It was printed by Jacques de Langre, 7557 Sunset Blvd., Hollywood, California 90046. Address given by Farmilant (1972) as Box 203, Prudential Center Station, Boston.

The section titled “Condiments” (p. 11-12) states: “Soya sauce—(Tamari- Japanese word for thick soya sauce)—always used in cooking—never at table, except with noodles, tempura, or soup. Miso—is a dark brown vegetable protein—much more digestible than animal protein.” Recipes are given for making Scallion miso, and Carrot top miso.

The section titled “Beans” (p. 17) mentions black beans: “Dried beans—*aduki, navy, pinto, kidney, black beans and chick peas*—double in bulk on cooking. 1 cup = 4 servings (side dish to main course)—wash 3 times and soak beans 1 to 3 hours before using.” It then warns: “Cook *black beans* by pot—they clog pressure cooker.” The section titled “Soups, Sauces, and Spreads” (p. 19) includes a recipe for “Vegetable, soya vegetable, and miso vegetable soup.” There are simple recipes for: Miso sauce (p. 22). Cooking black beans (p. 25). Vegetable soya soup (p. 27). Vegetable miso soup. Vegetable sauces (with soya or miso, p. 27).

Description of book: The covers are dark green, with the title printed in black ink and all lowercase letters. In the lower left corner of the cover is written: The Order of the Universe Publications, Box 203 Prudential Center Station, Boston, Massachusetts—02199. At the bottom of page 29 (the last numbered page): “Booklet II, *More About Grains and Vegetables*, will come out as soon as possible.” Near the bottom of the rear cover: “November 1967. Revised edition—July 1969. \$1.00.” Address: Boston, Massachusetts.

1396. Ebine, Hideo. 1967. Miso no seibun. I. Chisso kagô-butsu [The constituents of miso. I. Nitrogen compounds]. *Nippon Jozo Kyokai Zasshi (J. of the Society of Brewing, Japan)* 62(11):1210-14. Nov. [49 ref. Jap] Address: Norinsho Shokuryo Kenkyujo.

1397. Ilany-Feigenbaum, J.; Laxer, S. 1967. Color development in Israeli miso type products and its possible use for quality control. *Food Technology* 21(11):113-14. Nov. [13 ref]

• **Summary:** Miso darkens in color as the fermentation time increases. “When stimulated with koji and miso-extracted enzymes or with taka-diastrase, the time required to produce the dark brown color for the Israeli type miso products has been shortened from several months to a few weeks.” This browning reaction is viewed as the result of interaction between the products of the activity of the proteolytic enzymes and amylases of koji and if its extracted enzymes or taka-diastrase. It is suggested that the intensity of this color could be used in quality control of miso or miso type products. Address: Dep. of Biochemistry, Bar-Ilan Univ., Ramat-Gan, Israel.

1398. Ebine, Hideo. 1967. Miso seibun ichiran. II. Tô-ruì, yuki-san oyobi sono ta no seibun [A glance at miso’s constituents. II. Sugars, organic acids, and other

components]. *Nippon Jozo Kyokai Zasshi (J. of the Society of Brewing, Japan)* 62(12):1368-73. Dec. [57 ref. Jap]
Address: Norinsho Shokuryo Kenkyujo.

1399. Murakami, Hideya; Takase, S.; Ishii, T. 1967. Non-productivity of aflatoxin by Japanese industrial strains of *Aspergillus*. I. Production of fluorescent substances in agar slant and shaking cultures. *J. of General and Applied Microbiology (Tokyo)* 13(4):323-34. Dec. [14 ref. Eng]
• **Summary:** “Two hundred and fourteen strains of the *Aspergillus* were cultured both in agar slants and in a liquid medium by shaking, and the productivity of aflatoxins was studied, respectively, by observation of the fluorescence of the medium and by fluorometry and thin-layer chromatography, using the aflatoxin-producing strain ATCC 15517 as a control.” None of the resulting products were aflatoxins. “However, the fact does exist that certain strains belonging to the *Aspergillus flavus-oryzae* group or the *A. flavus* group produce aflatoxins...”

“Materials and methods—Microorganisms: We used 214 strains including 176 strains of the yellow-green-spored *Aspergillus* and 38 strains of the other *Aspergillus*. All of the formers were isolated or collected in our institute during 1904 to 1965, consisting of 100 strains for Sake brewing, 32 strains for Miso brewing and 44 strains for Shoyu brewing. Among the latter 38 strains, 16 strains were those used for manufacturing Shôchû (Japanese distilled liquor) and the remainings [sic, rest] were non-industrial strains received from the Institute of Applied Microbiology, University of Tokyo. Aflatoxin-producing ATCC 15517 was sent from the National Institute of Health, Tokyo, and used as a control.”
Address: Research Inst. of Brewing, Tokyo.

1400. Ebine, Hideo. 1967. Evaluation of dehulled soybean-grits from United States varieties for making miso. Tokyo: Central Miso Inst., Echizenbori 3-3, Chuo-ku. 168 p. Final technical report, USDA P.L. 480. Project UR-A11-(40)-2. Grant No. FG-Ja-101.
Address: Central Miso Inst., Echizenbori 3-3, Chuo-ku, Tokyo.

1401. **Product Name:** Village Soyburger (later renamed Village Soy Patties).

Manufacturer's Name: Village Manufacturing Co.

Manufacturer's Address: Berkeley, California.

Date of Introduction: 1967.

Ingredients: Whole soybeans, brown rice, carrots, oats, seasonings.

Wt/Vol., Packaging, Price: 3.25 oz patties, sold in packs of four.

How Stored: Frozen.

New Product—Documentation: Label and story in Living Lightly catalog, ca. 1982. “It all started in Berkeley, California, in 1967, when a student at the University of

California majoring in dietetics, mixed together the ingredients, constituting the first ‘Village soyburger.’ They were first sold at a sandwich stand just outside the campus.”

Letter from Somari Das of *Communities* magazine, Route 1, Box 191, Oroville, California 95965. 1975 or 1976. June 26. “Yes, we are *very* interested in learning to prepare tofu & miso on a community scale. We are a group of 12 adults and 3 children on 20 acres in Northern California. We have two cottage industries, one of them being a *soyburger* business, so we are pretty familiar by now with the marvelous soybean. We use miso and tamari to make our soyburgers and they are very tasty. At home, we eat a lot of tofu and miso soup, but we buy these products from local distributors rather than produce them ourselves. I am a student of Oriental medicine and feel like my education would be greatly enhanced by learning to prepare these traditional foods at home.—Om Tao, Somari Das.”

Talk with Mara Devine. 1988. April 7. The business was started by two women. A collective she belonged to bought the business from these two women in the early 1970s and did it until 1973, when they sold the business. It was made with cooked soybeans (not tofu) pressure cooked with miso. They would run them thru a Hobart grinder then mix in oats as a binder, carrots, maybe onions or garlic powder, then put it through a patty machine. The patties were then frozen. They were not fried; most people fried or baked them at home. The company also made a Frozen Rice-Patti. Their plant was in Oroville, across the street from the high school. The product is still being made, probably in Oroville. Mara now runs her own company named Soy Devine (which see).

• **Summary:** Ying-shih Yü (1977, p. 58) notes: “What makes the Ma-wang-tui discovery doubly interesting is the

amazing degree to which the food list from Tomb No. 1 agrees with the list given in the 'Nei tse ('Internal [Family] Regulations') chapter of *Li chi*. Virtually all the foodstuffs and prepared dishes listed above can be found in that chapter (*Li chi*, 8:19a-21b; Legge 1967, 1:493-63)."

1405. Manyôshû [The Manyoshu: A new and complete translation, by H.H. Honda]. 1967. Tokyo: Hokuseido Press. xii + 345 p. 31 cm. [Jap]*

• **Summary:** The translator, Heihachirô Honda, was born in 1893.

1406. Nakano, Masahiro. ed. 1967. Hakkô shokuhin [Fermented foods]. Tokyo: Korin Shoin. 244 p. See esp. p. 81-101. [Jap]

• **Summary:** Includes sections on soymilk yogurt (cultured with *Lactobacillus bulgaricus*) and *nyu fu* [fermented tofu].

Chapter 6, *Nyu fu* notes that this is an ancient food that came from China and Taiwan, but has never become a part of Japanese cuisine. In the United States (and English) it is known as "Soybean cheese" and "Vegetable cheese," while in China it is known as "Nyufu" as well as Chaw taufu, Sufu, Funyu, etc.

6.1.2—Places of production and varieties: Nyufu is made mainly in the middle to southern four coastal provinces of China. These include (pinyin / Wade-Giles): Jejiang / Chekiang (Jap: Sekkô), Jiangsu / Kiangsu (Jap: Kôso), Fujian / Fukien (Jap: Fukken), Guangdong / Kwangtung (Jap: Kanton). A lot of Nyufu is also made in Taiwan, which is located off the coast of Fujian province.

Since nyufu has been produced for a long time over a vast area, there are many varieties. A study conducted in the 1920s found the varieties shown in chart 6.1 in the Shanghai market (Shanghai is in Jiangsu province near the mouth of the Yangtze River).

(1) Pickled without mold on the tofu. (i) Jianning-dofu: Drain then dry the tofu, add salt, and pickle in jiang or the residue / dregs left after making soy sauce

(ii) Doufuru: Drain then dry the tofu. Sprinkle it with salt then pickle it in koji.

(2) Culture mold on small cubes of tofu until a fragrant white mycelium surrounds each cube, then pickle.

(iii) Jiangrufu: Pickle in jiang or the residue / dregs left after making soy sauce.

(iv) Honjiang rufu [red jiang fermented tofu]: Pickle in a mixture of red rice / angkak (a red koji made by growing *Monascus* mold on rice) and the residue / dregs left after making soy sauce.

(v) Zaorufu: Pickle in sake lees.

(vi) Hongrufu: Pickle in red sake lees.

(vii) Jiujia rufu: Pickle in white sake / daku-shu, like unrefined sake (*doburoku*).

(viii) Xiangrufu (fragrant rufu): Pickle in jiang with olive leaves, fragrant mushrooms, etc.

Dr. Masahiro Nakano was born in 1907. Address: National Food Research Inst., Tokyo.

1407. Riesman, David; Riesman, Evelyn Thompson. 1967. Conversations in Japan: Modernization, politics, and culture. New York, NY: Basic Books, Inc. xii + 371 p. See p. 58. Index. 25 cm.

• **Summary:** These are the authors' published diaries and tape recorded conversations with Japanese during a 2-month visit to Japan from Sept. 30 to Dec. 2, 1961. The visit was sponsored by the Japan Committee for Intellectual Exchange. The husband is a Harvard professor; his wife accompanied him. On 12 Oct. 1961 the authors visited Mr. Sekihara (an architect) and his wife at their home in Tokyo. "The whole effect of the room... was a blending of the cosmopolitan and the Japanese, like the meal, which began with cocktails and hors d'oeuvres, then went on to raw fish and delicacies such as fresh ginger root, soybean soup, meat and vegetables, rice and pickle, then on top of all this, apple pie and green tea. It was served buffet style." Note: "Soybean soup" probably refers to miso soup. The authors also enjoyed raw fish and seaweed (p. 319). Address: Brattleboro, Vermont; Cambridge, Massachusetts.

1408. *SoyaScan Notes*. 1967. Chronology of the work of Arran Stephens with natural foods, vegetarianism, and Lifestream Natural Foods Ltd. (Vancouver, then Richmond, BC, Canada). Part II (1967–1971). 24 Sept. 1992. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** Continued: 1967—Arran begins his first food business when he starts the Golden Lotus restaurant at 2936 West 4th Ave. (at Bayswater), Vancouver. Serving natural, vegetarian and macrobiotic foods, it is the city's first vegetarian restaurant. Before he left India, his Master had encouraged him to take up this "right livelihood" and promised to extend "all feasible help, both inside and outside." A place was found and the necessary money appeared as if by magic. Most of the workers were spiritual seekers. All lived upstairs, above the restaurant.

Arran was one of the cooks; he had learned how to cook brown rice, veggies, hijiki, wakame and miso soup while working as a waiter at the Paradox Restaurant in New York City in 1964; he learned the rest by trial and error, including the use of macrobiotic and vegetarian cookbooks such as *Vegetarian Cookery*, by Pietro Rotondi, and (later) *Ten Talents* by Frank and Rosalie Hurd.

"Amazingly, the rather monastic rules—including regular meditation and celibacy—were accepted and enthusiastically followed. In the communal setting, all worked without pay for the first 9 months. "Before the year was out, bills and loans were entirely repaid and all began receiving hourly wages, benefits, room and board. The numbers attending our weekly satsangs outgrew the upstairs, and the venue shifted downtown to the YMCA." One photo shows Arran

standing in front of the Golden Lotus restaurant in 1968 and another standing inside in 1969.

1968 Oct.—Arran and three others return to India to be with Master Kirpal Singh, having received his written permission. On the way they visit Ram Das (the former Richard Alpert) who was in retreat at his father's large New Hampshire estate. In India Arran lives close to Kirpal Singh. The Master will not initiate those who beg for food, only those who earn an honest living.

1969 March 4.—Arran, with the Master's blessing, marries an Indian woman, Rattan Mala Bagga, age 22, in a traditional Sikh marriage. She comes from a good family, has an M.A. degree, and is a lecturer at a girls' school in Moradabad. The Master, who changes her name to Ratana ("jewel") encourages family life and the tender bonds of matrimonial love and responsibility.

1969 April—Arran and sari-clad Ratana return to Vancouver, Canada, after nearly 6 months in India. He has changed from ascetic to householder. They settle into a little room above the restaurant, sharing a bathroom with 14 others and working, on average, 12-16 hours a day to get the restaurant firmly established. In May and December, Kirpal Singh writes with wise advice. As a result: "In three months we saved \$1,000 to make a down payment on a little two-bedroom house with a garden. Ratana was already pregnant with our first child, and we had had our fill of communal living."

"Considerable agitation began among the more left-leaning workers to turn the Golden Lotus into a commune. After a lot of soul-searching, we decided to make a clean break, and sold the restaurant to the group for a paltry \$3,000, wishing them all success." Soon after the Golden Lotus restaurant became defunct.

1970 Jan.—Arran opens a little store named Jyoti Importers and Natural Foods at West 4th Ave., near Yew Street on the same street as the Golden Lotus, but on top of the hill. He sells "Indian bedspreads, clothing, classical musical instruments, and healthy and organic foods. Food soon edged out the other wares. It became obvious that my destined vocation was connected to organic foods and wholistic living." After several years of growth, the business moves into a much larger building at 1813-1817 West 4th Ave., a corner location and opens as Lifestream Natural Foods on 1 Jan. 1971. Then Lifestream expanded to a second store on Broadway at Traflagar (See: *Shared Vision* 1990, p. 9).

1970 April 4—Arran and Ratana's first child is born at St. Paul's hospital in Vancouver by natural childbirth. Master telegraphed. "You may name the baby Shanti" (the ancient Sanskrit word for "peace"). Note: All the Stephens' children were born at this same hospital. Arran writes: "I was present at the miracle of each birth. On the birth of two of our children, Ratana was blessed with the vision of our Master, and she also experienced great light within."

1970 spring—On an impulse, Arran gives half of his business, Jyoti, to Peter Harwood, his friend and fellow disciple of Kirpal Singh; Peter becomes a working partner.

1970 June—Arran attends the founding meeting of Organic Merchants (OM), held outdoors on the side of Mt. Shasta. Lifestream becomes one of the founding members. OM was the first trade association for natural food retailers on the West Coast and the first organic trade association. Arran also remembers OM meetings at Blake Rankin's, at Lifestream, and at Pajaro Dunes.

1971 (1990 *Shared Vision* article says Lifestream opened 1970 Jan. 1). Jan. 1—Arran opens Lifestream Natural Foods in Vancouver, British Columbia, Canada, just north of the U.S. border, at 1813-1817 West 4th Ave. (at Burrard). It is Canada's first large natural foods retail store. His father suggests the name. "Free fresh carrot juice drew in crowds; an electric powered 20-inch stone-buhr mill, visible through a window from the street, ground tons of fresh whole-grain flour every day; alfalfa sprouts were grown in our nearby warehouse / factory; fresh nut butters were roasted and milled to order; natural candy bars and cookies were extruded and baked; egg-free cakes and muffins popped from the ovens; pies, crunchy granola, bulk foods, and wholesome artisanal breads were baked and sold by the hundreds. These were all firsts in Canada." The inspiration came from many sources, but was not macrobiotic. The Lifestream brand was represented by a woman gathering sheaves of wheat into a basket. "Teachers brought classes of school children on tours to see how wholesome foods were made. The store became so busy that it was often difficult to wade through the crowds of shoppers and hangers-on... Sales doubled every year for seven years, and the business quickly branched out into wholesale distribution."

1971 or 1972—A separate small vegetarian restaurant, named Mother Nature's Inn (MNI) was started as a *separate* business in the rear of the large retail store (on West 4th Ave.) by Victor Yankowich,... But after about a year MNI was purchased from Victor (for a pittance) for Ratana, who showed her business skills by running it very successfully and profitably. The company's best-known products are its line of Essene sprouted grain breads—moist, heavy, and delectable.

1972—Lifestream opens its own Bread of Life bakery (100% owned by Lifestream) in North Vancouver because of the area's scarcity of organic and natural baked items. The original Lifestream Essene Bread, developed by Arran at that bakery, was one of the Lifestream's first baked products. Essene Bread was always made with organic grain—from the Alvin Scheresky and David Orchard organic grain farms in Saskatchewan province.

A 1971 color photo shows Arran, smiling, holding a loaf of Essene Bread.

1971—At about this time Lifestream Natural Foods Ltd. moves to 724-26 W. 6th Ave., Vancouver 9, BC, Canada.

This was a combination headquarters, warehouse, manufacturing and packaging facility. It housed a flour mill, alfalfa sprout operations, nut butter operation, tamari nut roasting and packaging, plus packaging a wide range of organic grains, beans, nuts, seeds, flours, etc. When this facility opened, the only other Lifestream operation was the retail store.

1971—Since there was a scarcity of natural and organic foods, Lifestream began to do wholesale distribution. Frank Ford, founder of Arrowhead Mills in Texas, appointed Lifestream as distributor in Canada for the entire Arrowhead Mills' range of organic grains, beans, flakes, hot cereals, and flours. Hundreds of products were developed and marketed under the Lifestream brand: Breads, other baked goods, fruit & nut-based energy bars, juices, trail mixes, tamari roasted nuts and seeds, preserves, yogurt, granolas, mueslis, sprouts, soyfoods, expeller-pressed oils, and a wide range of imported Japanese macrobiotic products. During the 1970s Lifestream's profits came from a blend of manufacturing, wholesaling, and retailing—but not even the accounts knew what percentage of the total came from each of these activities. Continued. Address: 724-26 W. 6th Ave., Vancouver 9, BC, Canada.

1409. Susan's Balanced Foods: Yin–Yang. 1968. Retail price list: Terms and prices. Valley Center, California. 4 p. Jan. 1. 28 cm.

• **Summary:** This catalog is printed with black ink on orangish-yellow paper. The title on page 1 is printed in red. The contents look similar to those in the Chico-San catalog. Soy products include tamari, miso, soy-beans, soy-bean flour. They also sell: Azuki red beans, sea vegetables, rice crackers, herb teas, and many breads. Address: Remy Ranch, 29757 Anthony Road, Valley Center, California 29757. Phone: 745-6336.

1410. *Miso no Kagaku to Gijutsu (Miso Science and Technology)*. 1968—. Serial/periodical. Central Miso Research Inst., Shinkawa 1-26-19, Chuo-ku, Tokyo 104, Japan. Formerly Miso Gijutsu up to No. 166. This new name began in Jan. 1968. In 1983, issue No. 347 became Vol. 31, number 1. As of April 1989 the journal has never published English abstracts. [Jap]
Address: Tokyo, Japan.

1411. Takeyama, Shinji. 1968. Edo amamiso ni tsuite [On sweet red miso]. *Nippon Jozo Kyokai Zasshi (J. of the Society of Brewing, Japan)* 63(1):23-26. Jan. [11 ref. Jap]
Address: Abumata Miso K.K.

1412. *Time*. 1968. Pacific paradise. 91(5):60. Feb. 2.
• **Summary:** This article is about education in high schools. About California's far-out, freedom-loving Pacific High School, located about 10 miles south of Palo Alto in the

Pacific Coastal Range. Surrounded by mountains, in a 40-acre valley, "40 long-robed youths were introduced last week to the mysteries of Zen. Under the direction of a roshi (teacher [Zen master]), they spent long hours in meditation on black zazen cushions, chanted incantations through meals of miso soup,... and Tibetan barley bread, practiced Zen breathing exercises."

Note: This is the 2nd earliest known reference to "miso" in *Time* magazine.

1413. Ebine, Hideo; Yamamoto, Kôki. 1968. Dappi daizu ni yoru miso jôzô. II. Dappi daizu no miso genryô to shite no hyôka [Miso manufacturing from dehulled soybeans. II. Evaluation of dehulled soybeans for making miso]. *Shokuryo Kenkyujo Kenkyu Hokoku (Report of the Food Research Institute)* No. 23. p. 1-4. Feb. [11 ref. Jap; eng]
Address: Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo, Japan.

1414. Ebine, Hideo; Sakano, Keichi; Kizaki, Michiyo; Kimura, Haruo. 1968. Eiyô kyôka miso no kenkyû. VII. Mechionin oyobi yûdôtai no miso e no tenka [On the manufacture of enriched miso. VII. Addition of L and DL form methionine and methionine sulfoxide]. *Shokuryo Kenkyujo Kenkyu Hokoku (Report of the Food Research Institute)* No. 23. p. 9-13. Feb. [5 ref. Jap; eng]
• **Summary:** L-methionine, DL-methionine and methionine sulfoxide were added to two varieties of miso at the level of 0.2%. One was a light-yellow rice miso and the other a dark-colored rice miso. One group was pasteurized at 60°C; the other was not. Both were allowed to stand at 30°C for one month. There was no significant loss of methionine. In general, the non-pasteurized miso was organoleptically superior to the pasteurized miso. Address: Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo, Japan.

1415. Ebine, Hideo; Nakano, M.; Kuroha, I. 1968. Eiyô kyôka miso no kenkyû. VI. Mechionin no tenka jiki to seihin ni oyobosu eikyô [On the manufacture of enriched miso. VI. Effects of added methionine on the quality of miso]. *Shokuryo Kenkyujo Kenkyu Hokoku (Report of the Food Research Institute)* No. 23. p. 5-8. Feb. [10 ref. Jap; eng]
• **Summary:** The lysine content of rice or barley miso is comparatively high, whereas the content of sulfur-containing amino acids and tryptophan is low. DL-methionine was added to unripened miso at the level of 0.2–3% at the time the cooked soybeans were mixed with salted rice koji and ordinary salt. It was allowed to ferment at room temperature for a month and then at 30°C for 3 weeks. During the fermentation, much of the added methionine was lost, accompanied by an off-flavor, probably due to the activity of microorganisms in the miso. This drawback was improved by pasteurization of miso to which DL-

methionine had been added—after it had ripened adequately. Address: Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo, Japan.

1416. Sanae Restaurant. 1968. Introducing Sanae Restaurant, 272A Newbury Street, Boston (Leaflet). Boston, Massachusetts. 1 p. Single sided. 28 cm.

• **Summary:** “Dear Patrons and Friends: Sanae Restaurant has been designed as a unique, friendly eating place where everyone can enjoy genuine quality food in a family atmosphere. Since the present trend towards artificial, unnatural food is becoming more prevalent, we are trying to present real home cooking, combining food that is as natural as possible with the soundest old-fashioned methods of preparation. Our menu is centered around whole grains, with fresh vegetables, fish and seasonal fruits as side dishes.”

“We use real sea salt, soy bean paste (miso) and soy sauce (tamari) that has been processed and aged by natural methods, and home-made sesame salt (gomasio)... ‘Sanae’ means a young spring cereal plant which has a hope for a bright future at harvest time.

Hours: 3-10 Sunday-Thursdays, 3-11 Friday & Saturday. Closed Mondays.

A photo near the top shows (between two large hearts, left to right): Peggy Taylor, Evan Root, Connie Frank, and Martin Russell, each dressed in a white cook’s apron. Address: 272A Newbury St., Boston, Massachusetts. Phone: 247-8434.

1417. Yoshikawa, Seiji. 1968. [Food preference pattern and acceptance of miso soup]. *Shokuryo Sogo Kenkyujo Kenkyu Hokoku (Report of the National Food Research Institute)* No. 23. p. 204-210. March. [Jap; eng]

• **Summary:** Reprinted from *Miso Gijutsu (Miso Technology)*. No. 160. p. 4-9 (1967). Address: Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo, Japan.

1418. Saikowski, Charlotte. 1968. America’s foods expand Japan’s menu. *Christian Science Monitor*. April 19. p. 6.

• **Summary:** Orville Freeman, U.S. Secretary of Agriculture, wants to export more American products to Japan. In Tokyo, he and his wife attended the recent “American Festival of Fun, Food, and Fashion.” He noted that “The Japanese diet is still low in protein...” which means a great market for American brooder chicks.

“Such traditional Japanese foods as ‘miso’ (soybean paste), ‘shoyu’ (soy sauce) and ‘tofu’ (bean curd) are made for the most part from American-produced soybeans.” Address: Staff correspondent.

1419. Watanabe, Bunzo. 1968. The Japanese oilseed processing industry. *Soybean Digest*. May. p. 36, 38.

• **Summary:** Tables show: (1) Imports of soybeans to Japan during calendar year 1967 by country of origin: USA 81%, Red China 19%, Other countries 1%. Total imported: 2,169,000 metric tons (79,710,000 bushels). (2) Consumption of edible refined oils and fats in Japan (1963-1967). Per capita consumption rose from 13.58 lb in 1963 to 18.08 lb in 1967. (3) Total oils and fats production in Japan (1963-1967), imports and domestically grown, by oilseed type. Soybeans are by far the most important oilseed, followed by rapeseed. Rice bran is the main domestic source of oil. (4) Consumption of soybeans in Japan classified by utilization (1963-68, 1,000 metric tons). The following figures are for 1968 (1,000 metric tons): Crushed for oil 1,739. Foods: Tofu and aburage 294. Miso 170. Natto 50. Frozen tofu 40. Shoyu 15. Kinako 13. Other 70. The total used for food grew from 497 in 1963 to 652 in 1968.

Photos show: (1) American Soybean Association (ASA) executives seated around a table holding chopsticks at tempura luncheon with Mr. Watanabe, who is president of the Japanese Oilseed Processors Association, and other Japanese oilseed officials. From left, Shohei Takai, managing director Japan Oilseed Processors Association (JOPA); S. Yamada, manager oils and fats division, Ajinomoto Co., Inc; Scott Sawyers, ASA county director in Japan; Chet Randolph, ASA executive vice president; Mr. Bunzo Watanabe; and Hiroshi Higashimori, chief secretary JOPA. Tempura is a substantial outlet for soybean oil. (2) Portrait of Bunzo Watanabe. Address: Japanese Oilseed Processors Assoc., Japan.

1420. Chico-San Inc. 1968. Chico-San Inc.—Unique foods: Retail price list. P.O. Box 1004, Chico, California. 2 p. June 1. 35 cm.

• **Summary:** This single-sheet, dated catalog and price list, printed front and back with dark brown ink on pink paper is almost identical to the edition of 15 July 1967 in appearance, content, and pricing.

However two new condiments have been added: Dehydrated tamari, and Seitan.

Note: The entry for “Seitan” (actually misspelled as “Sietan,” but spelled correctly in the company’s next catalog) is different from all other entries in this catalog, since no weight, no price, and no explanation is given—as if Chico-San has ordered the product, but it has not yet arrived. Moreover, no “OEI” (“Our exclusive import”) appears after the word “Sietan.” Address: P.O. Box 1004, Chico, California.

1421. *Health Food Business Review*. 1968. Soy bean puree: Miso. Ancient Oriental health food. Boost your profits with macrobiotics! July. p. 44-45.

• **Summary:** Chico-San Soybean Puree can be used to make delicious miso soup for breakfast. “Miso, or Soybean Puree, in particular Chico-San Soybean Puree, is a naturally

fermented preparation of soybeans, barley, salt and water. It is devoid of chemicals, additives and processing that have made more modern foods such commercial triumphs. Using traditional methods employed centuries ago, Soybean Puree is fermented by the use of a delicately cultivated enzyme, *Aspergillus oryzae*, and aged for a period of at least eighteen months. During this time a very complex enzymatic action of molds, yeasts and bacteria are left to chemically interact.” The nutritional composition of “Barley miso” is given (based on S. Yamada, editor. 1957. *Manual of the Fermented Food Industries of Japan*. Tokyo, p. 44).

“Thy food shall be thy remedy”–Hippocrates.”

Note: This is the earliest article seen in a new wave of popular articles on miso.

1422. Product Name: Mugi Miso, or Hacho Miso.

Manufacturer’s Name: Erewhon Trading Co., Inc. (Importer). Imported from Muso Shokuhin in Japan.

Manufacturer’s Address: Newbury St., Boston, Massachusetts.

Date of Introduction: 1968. August.

Ingredients: Hacho miso: Soybeans, water, sea salt.

Wt/Vol., Packaging, Price: 16 oz.

How Stored: Refrigerated preferably.

New Product–Documentation: Erewhon Trading Company Inc. 1970. Jan. 1. Wholesale-retail catalogue. Soy bean products: The following types of miso were imported from Japan: Hacho miso (“Soybean puree made from soybeans, salt & water. No chemicals used in fermentation. Aged at least 18 months”; 1 lb, 2 lb, 44 lb keg). Mugi miso (“Soybean puree. A lighter miso made with barley”; 1 lb, 2 lb, 44 lb keg).

Advest Co. 1972. Nov. “Private placement \$500,400. Erewhon Inc.” On page 30 is a photocopy of the label for “hacho miso (soybean paste–soybeans only).” The text reads: “Hacho miso comes from one of the oldest manufacturers of miso in Japan. The company was originally established in 1362 and has been continuously processing miso since that time. In olden times boats would come up the Yahagi River near Nagoya bringing the raw materials for miso including the big stones which were placed on the kegs during aging. The water used in Hacho Miso is drawn from artesian wells located along the same river. The fermentation storerooms and the large cedar wood kegs used in producing Hacho Miso are over one hundred years old. The miso during its two year aging process is placed and situated so that it can freely interact with the four changes of season. Hacho Miso is easily digested and absorbed because the proteins are in a free state due to aging and fermentation. It can be used in the preparation of soups, sauces, and vegetable dishes, adding a rich and hearty flavour to them. New weight: 32 oz. (2 lb).
Ingredients: Well water, soybeans, and sea salt. Distributed by Erewhon Trading Company, Inc.”

Label. 1977, undated. 3.5 by 4.75 inches. Paper. Olive green, greenish brown on white. Vine illustration (hacho miso). “Erewhon Miso is produced by enzymatic fermentation and aging of soybeans a minimum of twenty-four months in wooden kegs. Its concentrated flavor makes it an ideal seasoning for enriching the taste of soups, sauces, vegetable dishes, noodles, casseroles, and fish. Erewhon Miso is completely free of chemical preservatives. Store in a cool place.” Note: In 1971 Erewhon was located at 342 Newbury Street, Boston. Phone: 262-3420.

Shurtleff & Aoyagi. 1983. *The Book of Miso*. 2nd ed. p. 236. In 1968 Erewhon started to import miso and shoyu from Japan. “A wholesale and distribution company was started that year and soon it was trucking a line of fine Japanese imported red, barley, and Hacho misos to a growing number of natural food stores.” By 1970 sesame miso and tekka [miso] were added to the Erewhon line. By 1976 brown rice (genmai) miso was added.

Ad (7.5 by 13 inches, full color) in *Natural Foods Merchandiser*. 1989. Feb. p. 25. “Erewhon... Macrobiotic foods you can recommend with confidence.” There are now 4 varieties of miso under the Erewhon brand: Hacho (note new correct spelling), genmai, kome, and mugi.

1423. Product Name: Moromi.

Manufacturer’s Name: Erewhon Trading Co., Inc. (Importer). Imported from Muso Shokuhin in Japan.

Manufacturer’s Address: Newbury St., Boston, Massachusetts.

Date of Introduction: 1968. August.

Wt/Vol., Packaging, Price: 7 oz.

How Stored: Refrigerated preferably.

New Product–Documentation: Erewhon Trading Company Inc. 1970. Jan. 1. Wholesale-retail catalogue. Products imported from Japan include: “Moromi–A thick sauce removed from the bottom of the soy sauce kegs after fermentation. Its uses are unlimited in soups & sauces”; 7 oz.

1424. Sawyers, Scott. 1968. *The soybean market in Japan, Taiwan, and Korea*. *Soybean Digest*. Sept. p. 68, 70-72.

• **Summary:** The American Soybean Assoc. office in Japan, known as the Japanese American Soybean Institute, has concentrated on mass media and consumer promotions to increase the utilization of soybean oil, meal, and traditional foods prepared from soybeans. In Japan, this means liquid cooking oil, tempura oil, salad oil, vegetable oil margarine, miso, tofu, and soy sauce. Also, the growing preference for more meat, milk, and eggs in the Japanese diet requires the use of more soybean meal to support an expanding livestock and poultry industry. Efforts were made to popularize two slogans: “Take Oil Once a Day for Foods Cooked with Vegetable oil.” And: “Take Oil for Health, Stamina, and Vitality.” The key focus is to encourage the Japanese to

consume more soy oil in their diet. A portrait photo shows Scott Sawyers. Address: Country Director, Japanese American Soybean Inst.-American Soybean Assoc., Tokyo.

1425. Hazelton, Nika. 1968. For pyromaniac and pasta-lover. *New York Times*. Dec. 1. p. BR28.

• **Summary:** Short reviews of cookbooks published this fall, including *Zen Macrobiotic Cookbook*, by Michel Abehsera (University Books, \$5.95). The book “pulls in Zen as window dressing for an undistinguished effort. Though much is made of Zen argot, the philosophy is never really explained, nor is it related properly to food.” The reviewer finds the book “very objectionable...”

Miso jukusei-chû no yûri amino-san no shôchô ni tsuite [Studies on the degradation of soybean protein during miso making. III. Changes in amino acid content]. *Nippon Shokuhin Kogyo Gakkaishi (J. of Food Science and Technology)* 15:418-21. [11 ref. Jap]

• **Summary:** “Changes in free amino acids during miso making were investigated. Total free amino acids showed a rapid increase in the first 10 days of fermentation and then a slow increase in the latter part. Except for glutamic acid, aspartic acid and proline, liberation of individual free amino acid indicated the same tendency. Free glutamic acid, aspartic acid and proline increased almost linearly with progress in fermentation up to 50 days. The rate of liberation was high for lysine, arginine, threonine, serine, proline and tyrosine, and low for valine, histidine, glycine and aspartic acid. Glutamic acid showed the lowest liberation among all other amino acids.” Address: Shinshu Miso Research Inst., Nagano.

1434. Abehsera, Michel. 1968. Zen macrobiotic cooking. New Hyde Park, New York: University Books/Avon. 224 p. Index. 18 cm. [15 ref]

• **Summary:** Abehsera’s first macrobiotic cookbook contains a strict approach to macrobiotics. Includes many short stories by and about George Ohsawa. Contains the following soy-related recipes: Miso spread (with sesame butter, p. 105). Miso onion spread (p. 106). Miso in green (with green pepper and scallion, p. 106-07). Miso soup (p. 117). Chinese soup (with miso, p. 120). La belle jardiniere (with miso, p. 123). Koi-koku (with carp, burdock, and miso, p. 125-26). French onion soup (with tamari, p. 132). Soup stock made with miso paste (p. 137). There are no tofu or seitan recipes in this book. It is not a vegetarian cookbook, since many recipes call for fish and seafood.

Note: This book was published in London in 1969 by Anchor Press, Ltd. (201 p.). Address: New York.

1435. Akizuki, Tatsuichiro (Akiduki). 1968. Miso. Translated by Herman Aihara. *Macrobiotic Monthly* 8(5):6-12. [1 ref]

• **Summary:** Discusses miso in the treatment of tuberculosis and atomic radiation exposure. On 9 Aug. 1945 the atomic bomb was dropped on Nagasaki. It killed many thousands of people. Dr. Akizuki was in charge of the St. Francis Hospital, located only 1 mile from the center of the blast in Nagasaki. The hospital was completely destroyed. He and his assistants helped many victims who suffered the effects of the bomb. He noticed that none of his co-workers suffered or died from radiation. He attributed this to the fact that they had developed a strong constitution by consuming miso soup and brown rice daily. He considers miso to be the highest form of medicine. It produces an alkaline condition in the body. Address: Chico, California.

1436. Diamant, E.J.; Laxer, S. 1968. Nutritional evaluation of miso. *Israel J. of Chemistry (Proceedings)* 6:147p. (i.e., page 147p. of the Proceedings). Proceedings of the 38th Meeting of the Israel Chemical Society... Held 8-10 Oct. at Beersheba, Israel. [1 ref]

• **Summary:** This miso is made using defatted soybean flakes instead of whole soybeans. Nutritional evaluation (PER) on weanling rats was difficult since this miso, a seasoning, had a high (8%) content of sodium chloride / table salt. The miso was found to contain no methionine and to lack adequate tryptophane, arginine and possibly histidine. Address: Dep. of Biochemistry, Bar-Ilan Univ., Israel.

1437. Hahn, Emily. 1968. *The cooking of China*. New York, NY: Time-Life Books. Series: Foods of the World. 206 p. Illust. (many color photos). Index. 28 cm.

• **Summary:** Another superb work in this superlative series from the editors of Time-Life Books. This book is about cooking in China, where the author lived (in Shanghai), before the 1949 Communist revolution.

Contents: Introduction: The cooking of the world's oldest civilization. 1. An ancient and honorable art. 2. "Chinese cooking" in your own kitchen. 3. Secrets of savor and spice. A reverence for good food. 5. Oriental staff of life. 6. Gentle teas and strong spirits. 7. Feasts for festivals. 8. A cuisine for all continents.

China, the world's oldest existing civilization, has the world's most ancient cuisine—as well as one that is both great and profound (p. 6). When the Red Guards of China's Cultural Revolution appeared in the 1960s, they "attacked every symbol of what they regarded as bourgeois culture. Among the targets in Peking were the city's fine restaurants." In the process they destroyed much of China's culinary heritage—but only inside of China (p. 7). An article by Peggy Durdin in the *New York Times* was titled "Mao's great crime against cuisine" (p. 184). Chinese food is, of course, about life, but it is also about health, and it can resonate on numerous symbolic levels (p. 7).

The southern provinces of China, Fukien, Kwantung, Yunnan, and Kwangsi, enjoy tropical temperatures year round and more than 80 inches of rain. Here rice is the main crop. Yet China is a mountainous country, with 60% of its land at elevation 6,500 feet or higher; only 11% of its land can be cultivated (compared with 80% in the USA) (p. 10). Fukien, a coastal province to the south, makes the best soy sauce in China, and steaming is called "red cooking" because of the color imparted by the soy sauce (p. 16, 42).

Vegetable oil is very important in China because the Chinese rarely use butter (p. 29). "For protein the Chinese depend heavily on the soybean, which has for this reason been called the cow of the East" [sic]. Soybean oil is used for cooking. Soybean milk is a good substitute for cow's milk. And "doctors, even Western doctors—prescribe it for babies who cannot get mothers milk and are allergic to cow's milk" [sic]. From soymilk one can make "bean curd, an exceptionally high-protein food known in China as 'the meat without bones.'" Bean curd is made by curdling soybean milk with gypsum, then pressing the curds into pieces about 3 inches square by ½ inch thick. "The thickened curd skin [sic, yuba] is a food by itself, with a more concentrated flavor. Fermented bean curd tastes much like cheese." Both soy and mung-bean sprouts are used in China, "In one form or another the soybean can be found in dishes eaten at every meal" (p. 29).

A two-page color photo spread and legend (p. 61-63) shows (numbered) basic Chinese ingredients, incl. "13. Fresh bean curd. 14. Dried bean-curd skin" [yuba]. Buddhist monks and nuns in China are strict vegetarians; special foods that simulate meat have been developed for them. These include vegetarian "duck made from crisp beancurd skin, colored and shaped to look like the bird's flesh" and "chicken roll in *hoisin* sauce, the 'chicken' made of soft soybean curd" (p. 64, 67, 70).

A full-page color photo and legend (p. 74-75) shows (numbered) Chinese sauces and condiments, incl. "1. *Hoisin* sauce. 3. Soy sauce. 8. Yellow-bean paste, or thick bean sauce. 11. Fermented black beans. 14. Red bean [azuki] paste." "Among the best known of Chinese seasonings is soy sauce, which was mentioned in several Confucian classics as early as the Fifth Century B.C." [sic]. Other condiments made from soybeans are bean paste (for preserving and flavoring meat) and *hoisin* sauce (widely served with Peking duck). "It is said that the best grades of soy sauce can take as much as six to seven years of aging to reach perfection, and that the making of superb soy sauce requires 'as much art in its preparation as good French wines'" (p. 74-75, 77).

The controversy over M.S.G. is discussed. "A really god Chinese chef considers it a questionable shortcut for giving taste to second-rate foodstuffs, but most Chinese cooks admit that its use in certain dishes is perfectly valid" (p. 77-78).

The emperor Chien Lung (1735-1796), 4th ruler in the Manchu [Qing] dynasty, wrote an *Ode to Tea* (p. 91). In China there is an intimate association between eating and health (p. 91).

Recipes: “Steamed bass with fermented black beans *Tou-shih cheng hsien yu* (with “2 teaspoons fermented black beans,” soy sauce, Chinese rice wine, and shredded fresh ginger root, p. 104).

Most festivals (each with a feast) in China are based on events of agricultural importance; the two most important are New Years and the Moon Festival (p. 155, 162, 164-65). A Peking duck is “brought to the exact degree of plumpness and tenderness through force-feeding,” then roasted slowly, suspended by hooks, in a mud-lined oven “until the thick, fat skin becomes golden in color. This crackled skin is the choice part of the dish.” The skin, a piece of the meat, a spring onion, and thick, sweet hoisin are served enfolded in a thin wheat-flour “pancake” (p. 158, 15).

The history of chop suey (unknown in China) and chow mein (had an honorable origin in China) are discussed (p. 178-79).

The first wave of Chinese to America came with the gold rush and transcontinental railway. Most were laborers from southern China. The first Chinatown in the USA was established in San Francisco (1850s), followed by New York City (Manhattan, 1870s). Most early American Chinese restaurants reflected their social status, serving inexpensive foods. In the early 20th century, as China’s Republican revolution was gaining momentum, a second wave arrived to study. These young people, also mostly from southern China, came from far more prosperous backgrounds than those in the 1st wave and they wanted better food. Restaurants were started or upgraded to suit their tastes. Thus, it “was the southern school of cookery that first spread over the world outside China” (p. 179).

China has three great regional cuisines: Cantonese (southern), northern, and Szechuan (p. 179). Six photos show “The Americanization of the fortune cookie: Assembly line at a factory in New York City’s Chinatown.” A two-page spread shows many of the “fortunes” found in fortune cookies (p. 195-97).

“A guide to ingredients in Chinese cooking” (p. 198-99) includes: Bean curd, fresh: Square. Bean-curd skin [yuba] (“Thin stiff sheets of dried bean curd. Sold by weight... {5 to 6 sheets weigh about 1 ounce}”). Bean sprouts (“Young sprouts of the mung bean”). Black beans, fermented (“Strongly flavored, preserved black soybeans.” Sold in cans or plastic bags). Brown bean sauce (“Thick sauce made from fermented yellow beans [huang dou = yellow soybeans], flour and salt. Sold in cans of 1 pound or more”). Hoisin sauce (“Sweet, brownish-red sauce made from soybeans, flour, sugar, water, spices, garlic and chili for use in cooking. Sold in 1-pound cans and up”). Oyster sauce (“Thick brown sauce with a rich flavor, made from oysters,

soy sauce and brine”). Red bean paste (“Thick, sweet paste made from red soybeans” [sic, azuki beans]). Salted eggs and thousand-year eggs. Sesame seeds and sesame seed oil. Soy sauce (“Pungent, salty, brown liquid made from fermented soybeans, wheat, yeast [sic, mold] and salt”). Vegetable steak (“A vegetarian food that looks like a small beefsteak but is made from wheat gluten. Sold in cans”). Address: Author, lives in England with her husband.

1438. Hawkes, Alex D. 1968. *A world of vegetable cookery: An encyclopedic treasury of recipes, botany and lore of the vegetable kingdom*. New York, NY: Simon and Schuster. See p. 213-14. Illust. by Bill Goldsmith. 28 cm.

• **Summary:** The section titled “Soybean” focuses on green vegetable soybeans, noting: “In the Orient and increasingly in such places as Hawaii and California in this country, green Soybeans are for sale as a fresh vegetable. The plants have pod-laden branches, each short, narrow, very hairy pod containing three or four edible seeds. The fresh Soybean pods are washed, then boiled in lightly salted water until they are soft. Drained, they are seasoned to taste with soy sauce and a bit of sugar, then served, the beans being shucked from the pods at table.”

There is a casserole recipe named “Miss Diddley’s Green Soybeans.” Also discusses briefly dried soybeans, roasted soybeans “ground into a meal and into flours of various degrees of coarseness [roasted soy flour] and “even used as a substitute for coffee, sprouted soybeans (a recipe is given for “Soybean Sprouts Cantonese”), soy oil, soy sauce, tofu, and miso. The author notes: “I often prepare my own version of *miso*, using dried navy or other white beans (see p. 44), instead of utilizing the commercial imported variety.”

“Tôfu is the curd of cooked, mashed white soybeans, which has been precipitated, then pressed into cakes. It is perishable, hence most conveniently bought in cans, water-packed. The rather soft but firm cakes—sometimes baked or even fried prior to canning, and respectively known as *yakidôfu* and *aburage*—have a bland flavor, vaguely reminiscent of a custard. It is just this suavity which makes *tôfu* so valuable, since it quickly absorbs the flavors around it in such things as soups, *sukiyaki*, and *mizutaki*, yet retains its exceptionally pleasant substance. *Tôfu* is to be found in many of our domestic markets, imported from Japan. With its high content of readily digestible protein, it should be better known by all Americans.”

1439. Ito, K. 1968. *Miso no chômi kinô ni tsuite*. II. [Tasting effect of “miso” as a seasoning. II.]. *Eiyo to Shokuryo (J. of Japanese Society of Food and Nutrition)* 21(1):1-3. [8 ref. Jap; eng]

• **Summary:** By cooking miso and mackerel together, C-20 and C-22 fatty acids with 5 or 6 double bonds (which are sources of fish odor), were decreased.

1440. Kikkoman Shoyu K.K. 1968. *Kikkōman Shōyu shi* [History of Kikkoman Shoyu]. Noda, Japan: Kikkoman Shoyu K.K. 804 p. Illust. No index. 26 cm. [113 ref. Jap; eng+]

• **Summary:** This is the third (and best) major history of Kikkoman, written largely by Mr. Morio Ichiyama. Contents: Preface. I. Overview–1. Fermented foods. 2. Japanese shoyu. II. Present status: 1. Overview of Noda (p. 15): Location, overview photo of city area. 2. Main building and facilities (p. 18): Main office, Tokyo branch, Osaka branch, plant No. 7, Kansai plant, inside the fermentation plant, bottling plant, sake making plant, food manufacturing plant, Goyo Gura traditional shoyu facility, Central Research Center. 3. The distribution and view of the buildings (p. 36): Distribution chart of the main buildings in the Noda area, view of the plant, water providing facility. 4. Products (p. 41): Shoyu, products made by food manufacturing department and sake brewing department. 5. Sales and marketing (p. 44): Domestic, overseas. 6. Welfare facilities (p. 48): Health center house, attached hospital, cultural gymnasium, dormitory and company housing quarters. 7. Connected enterprises (p. 50): *K.K. Senshūya (Chiaki)*, foundational juridicial person / (*kōfūkai*), foundational juridicial person / (*Noda Sangyo Kagaku Kenkyusho*), *Sōbu-Tsūun K.K.*, Kikkoman International, Inc., Tone Coca-Cola Bottling Co., Kikko Food Industry K.K., Seishin Seiyaku K.K. (pharmaceutical company), Mann's Wine K.K. 8. The staff members (p. 58).

III. History. 1. The history of shoyu (p. 61): History of shoyu, origin of character meaning shoyu, Daishokuzen and Shoin, Zashin of Shoin, the beginning of shoyu exports (p. 76), the first shoyu plant overseas, shoyu which was protected by the Lord of the Han (*Hanko*), references to Noda Shoyu in literature. 2. Trademarks (p. 86): The change of trademark, the origin of the Kikkoman trademark. 3. Management of the organization (p. 91): Changes in organization, changes in management, changes in bookkeeping. 4. Production (p. 118): History of the method, raw materials, processes, containers, sauce, new seasonings, various kinds of sake. 5. The plant (p. 231): Noda plant, Kansai (Osaka-Kyoto area) plant, sake making plant. 6. Research center (p. 265): History of the research center, achievements. 7. Businesses (p. 269): Sales, wholesale, business customs, export, transportation, prices, advertising, business offices, overseas activities. 8. Labor (p. 375): Changes in labor conditions, the labor union, labor relations board. 9. Welfare (p. 393): Health insurance union, medical facilities, dormitories for single workers and company housing quarters, day care center, travel club, fire department, committee for funerals, weddings, etc. (*Kyozaikai*), athletic association, cultural committee, Noda Shoyu co-op.

IV. Pre-history–Before the company's establishment. 1. Natural and environmental history of Noda (p. 415). 2. Development of the shoyu industry in Noda (p. 432). 3. Family tree (p. 440). 4. Brief description of the major contributions (p. 448, incl. Kotohira Shrine, Kameo Mogi's theory of business, founding of the Senshu-kai, the man who emphasized thrift and simplicity, the 1st president of the company, the 2nd president–Mogi-Honke, the 3rd president Chu-do Kikkoman Kuramoto).

V. Company history. 1. Developmental stage and established stage (p. 469): Outline, foundation of the company, beginning of the business, developments and labor problems, overproduction and the business world. 2. The new order and the controlled economy during World War II (p. 494): Outline, changes during the war, process under controlled economy during the war. 3. The U.S. occupation period (p. 519): Outline, development of democracy, danger of the business world, changes caused by international conditions. 4. Development period of new Japan (p. 547): Outline, quickening of economic growth, advancing technology, a step forward to modernization, diversification of the business.

Appendixes: 1. Company time table (20 p.). 2. Charts and graphs concerning the company's history (5 p.). 3. Food history and shoyu (193 p., including many old illustrations, photos, a 38-page chronology of Japanese food culture {p. 137-75}, and a bibliography {p. 191-93}). Closing remarks (2 p.). Contains many photos, illustrations, and copies of early documents.

Note: Ichiyama is not listed in this book as the author, even though he wrote it. On the copyright page the author is given as Kikkoman K.K. Continued. Address: Noda, Japan.

1441. Kikkoman Shoyu K.K. 1968. *Kikkōman Shōyu shi* [History of Kikkoman Shoyu (Continued–Document part II)]. Noda, Japan: Kikkoman Shoyu K.K. 804 p. Illust. [113 ref. Jap; eng+]

• **Summary:** The section on the beginning of shoyu exports (p. 76) states that the exporting of shoyu from Japan began when a group of merchants were allowed to do business after the closing of Japan during the Kan-ei era (1624-30) of the early Tokugawa period. In 1641 a group of Dutchmen moved to Nagasaki from Hirado. At that time, two merchants already in business were allowed to conduct trade: Their names were Koyanagi Heizaemon and Sameya Hisazaemon. They established a stock company with 16 shares. The shareholders were called *Dejima shoshiki urikomimi shōnin*. To the original two merchants, in 1653 four more were added and in 1666 ten more were added, making a total of 16. These were called the “Comprador Merchant Guild” (*Konpura Nakama*). They started exporting shoyu from Japan. According to documents in the Hague: 1668–It was exported to Coromandel on the southeast coast of India. 1670–To Ceylon. 1699–To Ceylon, Bengal, and

Nakabatanam. 1716–To Coromandel. 1717–To Suratt, in northwest India. Furthermore, the Dutch took shoyu to Europe. So we can see that in the late 1600s and early 1700s the people of Europe started to use shoyu.

The section on exports (p. 294-99) states that it is difficult to tell when shoyu from Noda was first exported from Japan. In 1879 a person named Domoto (?) got one Kikkoman brand and its logo (in the shape of a hexagon, but not the current Kikkoman logo) registered in California, and then he started to sell the product there. In about 1899 the Saheiji MOGI family's Kikkoman brand shoyu began to be exported to Hawaii via Okada-shoten, a company with offices at Koamicho 3-5 in Tokyo. In 1907 the Verleysen-Nyssens company in Brussels, Belgium, began to import shoyu in large kegs. They repackaged it in grey ceramic bottles of their own design, then published a pamphlet in French (see p. 295) describing the product (which they called "Soya") and showing a photo of two sizes of bottles. A 1.2 liter bottled retailed for 1.75 francs. Page 296 shows a gift coupon from the year 1922 from America. When a person buys a bottle of shoyu, he or she gets this \$0.50 coupon.

Excerpts from Appendix 3 (p. 152+): Chronology of food history. 1610–Tamari was made in Nagoya using only soybeans when the Nagoya Castle was built. 1615–Dried nori sheets invented in Edo. 1616–Shoyu started to be made in Choshi, Shimousa. 1661–Takanashi (1661) and Mogi (1662) families in Noda started to make shoyu and miso. 1666–Usukuchi shoyu started to be made in Tatsuno, Hanshu / Banshu by a certain man. And Bizen shoyu started to be made in Bizen. 1698–Shoyu wholesaler (*tonya*) first appeared in the literature in *Sonazaki Shinju*, by Chikamatsu Monzaemon. 1781–Kanro shoyu starts to be made. Mr. Takada offered shoyu to Yoshikawa-ko and received the admiration / appreciation of *kanro* ("sweet dew"). 1810–Choshi Shoyu received the *gozengoyô* Tanaka-gen han bakufu. 1829–The Takanashi house of Noda received the Bakufu's order for shoyu (*goryomaru*). Address: Noda, Japan.

1446. Spilsbury, Calvin C. 1969. Three stages in Far East soybean markets. *Foreign Agriculture*. April 14. p. 6-8.

• **Summary:** Today soybean markets in the Far East, the original home of the soybean, have emerged from time-honored Eastern patterns and have differentiated into what may be called three types—traditional, transitional, and industrial. In traditional markets soybeans continue to be sold and used chiefly for human protein foods, and volumes traded are comparatively small. Also, volumes processed by modern methods are small. Transitional markets are characterized by larger volume, the modern processing of considerable quantities of soybeans for oil for human consumption, and the developing use of soybean meal for human food products and for high-protein animal feeds for emerging livestock and poultry industries. In industrial markets very large quantities of soybeans are efficiently imported, marketed, and processed for oils and fats for human use and for meal for vigorous livestock industries; at the same time soybeans are still used in traditional foods and soybean meal is used to make a variety of new food products.

Korea is a traditional soybean market. Nearly all soybeans are processed into human protein foods such as synthetic milk, flour, paste for soup [miso], curd for consumption in more solid form, mash, sprouted beans, soy sauce, and even fermented "cheese". About 60 to 70% of the domestic crop of about 200,000 tonnes annually is sold in the country's food markets directly to private and

commercial consumers. Total imports in 1968 were 28,000 tonnes—all from the U.S.

Most processing of soybeans for human use is done in individual homes by housewives. For example, nearly every Korean family makes a product known as kochojang, or hot bean mash, which consists of powdered, fermented soybeans mixed with red pepper, salt, and water. Some foodmaking (soybean curd and soy sauce) is organized into cottage industry. Most of the soybeans imported from the U.S. are made into traditional soybean foods for rations for the Korean army by one large food factory. Crushing soybeans and other oilseeds for oil is done by about 100 small mills throughout the country. The estimated capacity of all the mills added together is about 200,000 tonnes per year of oilseeds of all types. The largest mills have capacities less than 25 tons per day.

In Taiwan, very little of the imported soybeans are used to make traditional Far East foods. The larger crushing and extraction facilities are clustered around large cities—Taipei, Taichung, Tainan, and Kaohsiung. Only the last is a port, and even there no mills are located on deep water. Imported soybeans are discharged by ships' equipment onto docks, where they are bagged and then stored. Bagged beans are sent by truck or rail to inland processing plants. Modern deep-water bulk discharge facilities are to be built at Kaohsiung along with storage for soybeans and grain.

Japan is the giant of Far Eastern markets for U.S. soybeans. One of the most important recent improvements in soybean logistics has been the development of modern deepwater grain and soybean terminals where soybeans can be rapidly discharged from ships' holds directly to storage, interim transportation, or crushing mills. The first fast-discharge elevator on deep water for soybeans or grain was built by an American-Japanese company. At present four terminals have been built in the Tokyo and Kobe areas, and two more are under construction. Unloading is accomplished by pneumatic suction tubes with capacities of 600 to 800 tons per hour (about 6,000 tonnes per 8-hour day). In Korea and Taiwan, facilities for the fast unloading of large tankers do not exist. Many large, new crushing mills have been built on harbor frontage rather than inland so that they can benefit from bulk transportation methods. The annual capacity of the 15 large, modern mills in Japan is estimated at 1.8 million tons of soybeans. The first mills in Japan were in the mountains because most oilseed crops were grown there. Address: Fats and Oils Div., Foreign Agricultural Service.

1447. Binding, George J. 1969. The soya bean—a vegetable full of body-building protein. *British Vegetarian*. March/April. p. 155-57.

• **Summary:** The “soya bean has the highest protein content of any vegetable. As such it is God's gift to man and is a must for vegetarians. In the Far East it is known as ‘the

meat of the soil.’” The author spent many years in East Asia, where he studied the foods of the region. Soya beans can be used to make a wide variety of foods; the author briefly describes the following: Bean shoots [soy sprouts], soya bean milk, bean curd or vegetable cheese [tofu], yuba, natto, miso, soy sauce, and boiled whole soybeans.

Since World War II, America has become the largest producer of soya beans. Before that war, England was one of the largest importers of soya beans in the world. “All vegetarians should make certain of a sufficient daily intake of protein. There's no more effective and satisfying way of doing so than eating soya beans.” Address: M.B.E.

1448. Ilany-Feigenbaum, J.; Diamant, E.J.; Laxer, S.; Pinsky, A. 1969. Japanese miso-type products prepared by using defatted soybean flakes and various carbohydrate-containing foods. *Food Technology* 23(4):156-58. April. [14 ref]

• **Summary:** Miso was prepared by 6-12 month's fermentation of steamed soybeans with *Aspergillus oryzae* grown on rice and salt. For miso-type products, defatted soyflakes were used and wheat/corn/bananas etc. replaced rice. Differences in fermentation time, flavor color content etc. are given. Address: Dep. of Biochemistry, Bar-Ilan Univ., Ramat-Gan, Israel.

1449. Stanton, W.R.; Wallbridge, A. 1969. Fermented food processes. *Process Biochemistry* 4(4):45-51. April. [34 ref]

• **Summary:** “Fermentation of starch tubers such as cassava with fungal organisms such as *Rhizopus* can result in a food product with significant increases in protein content.” The cassava dough is inoculated then extruded (like noodles) into fermentation trays.

Table 1 shows many different “vegetable cheeses and related fermented foods.” The first such food mentioned is minchin, made from wheat [gluten] in China. The microorganisms used are *Paecilomyces*, *Aspergillus*, *Cladosporium*, *Fusarium*, *Syncephalastrum*, *Penicillium*, and *Trichothecium* species. This is an anaerobic fermentation of wheat gluten for 2-3 weeks at room temperature during the winter, with 10% salt added. The product is cut into strips and used as a condiment. Eaten as a meat substitute, it is rich in protein, nutritious, and healthy.

Fermented soy products include sufu, tempeh, meitauza, Hamanatto, shoyu, miso, and natto. Address: 1. PhD, Head, Microbiology Section, Tropical Products Inst., London, England; 2. Parke Davis Co.

1450. Dosti, Rose. 1969. Happy holiday for Japanese. *Los Angeles Times*. May 8. p. H20.

• **Summary:** On April 29th, the Emperor of Japan celebrated his birthday, and wherever Japanese live there were banzai cheers. The hurrahs were especially loud in Los Angeles,

for more Japanese-Americans live here than in any other part of the United States.

A photo shows Japanese Consul General Kanji Takasugi, with his wife, Shinako. They hosted a party for 800 guests honoring the Emperor's birthday.

The meal is described and recipes are given for tempura and its dipping sauce (*tentsuyu*), based on soy sauce, mirin and grated daikon (white radish). "Plain rice is served with a thin soup called omiso [miso soup] to which soy bean cakes (tofu) and green onion pieces are added."

1451. *Time*. 1969. Cancer: A clue from under the eaves. 93:81. May 9.

• **Summary:** This article discusses the work of Dr. David Seel, who has studied 919 cases of stomach cancer at the Presbyterian Medical Center in Chonju, South Korea. He thinks the culprit "may be a mold used in the preparation of a favorite Oriental delicacy, soya paste."

He explained that each winter, almost every Korean household makes "loaves of soybean mash" [*meju*, soybean koji, used to make Korean soy sauce and soya paste] and stores them in a cool, dark place, often under the eaves, where they become moldy. By early spring, a mycelium of black or gray mold covers the loaves. The Koreans scrape off this mold, then immerse the loaves in brine for a month. Finally, they pour off the black liquid, which is soy sauce, and "make the debris left in the crock into a stiff soya paste," of which some Koreans consume as much as five ounces a day.

Dr. Seel believes the "soya-paste molds" might well be a cause of stomach cancer in South Korea. He suggests there may actually be two causes of the problem: "The most widely used mold is *Aspergillus flavus*, some growths of which secrete substances called aflatoxins. For some animals, these are among the most powerful cancer-causing agents known. Moreover, says Seel, the stomach lining seems especially liable to damage, including cancer. Among Koreans who had both low vitamin A readings and a high consumption of soya paste, stomach cancer was twice as common as among other groups." Aflatoxins have also been found in peanuts, which are consumed by Southern Negroes, among whom vitamin A deficiency is known to be prevalent. A photo shows a person "immersing soya loaf [*meju*] in brine."

Note 1. For another perspective, see the *SoyaScan Notes* interview on this subject with Dr. C.W. Hesseltine (Feb. 1981), an internationally recognized expert on aflatoxins.

Note 2. This is the earliest English-language document seen (March 2009) that uses the term "soya paste" to refer to miso, or to Korean-style miso.

1452. *Medical World News*. 1969. Is the staff of Asian life the stuff of cancer? 10(20):12. May 16.

• **Summary:** This article (under the heading "Late News of the Week") seems to be based, at least in part, on a report in *Time* magazine (9 May 1969, p. 66). *Aspergillus flavus* is "a fungus often found in soya paste or soya sauce. These foods are prepared by molding [i.e. from *meju*]. *Aspergillus flavus* produces toxic metabolites called aflatoxins, apparently the most potent carcinogenic substances ever discovered."

Research on stomach cancer patients in Korea seems to support the theory that low intakes of vitamin A or a vitamin A deficiency may open the way to stomach cancer if the diet is loaded with carcinogens. A Korean team led by American missionary doctors [incl. Dr. David J. Seel, associate director of the Presbyterian Medical Center in Chonju] examined the socioeconomic, clinical, and dietary histories of 70 stomach cancer patients and 70 controls, matched by age and sex. "A striking finding was that the average daily intake of vitamin A for the control group was around 3,331 International Units, but for the cancer patients, only 2,853. 'The typical Korean stomach cancer patient is apt to be a farmer with poor education, at the lowest income level,' reports Dr. Seel. For the poor Korean farmer, soya loaves [*meju*] are a staple. The loaves are prepared each winter from a bean mash and stored for molding in a cool, dark place, often under the eaves of the farmer's house.

"Should the American with exotic tastes limit his horizons to avoid carcinogenic intake? A physician attending the meeting assured MWN [*Medical World News*] that Occidentals who are Chinese and Japanese restaurant buffs have nothing to worry about, since they are probably fully protected by the quantities of vitamin A in Western diets."

1453. Spilsbury, Calvin C. 1969. The U.S. soybean market in the Republic of China (Taiwan). *USDA Foreign Agricultural Service*. FAS M-209. 20 p. Aug. Summarized in *Soybean Digest*, Nov. 1969, p. 52.

• **Summary:** Contents: Foreword, by Howard A. Akers. Introduction. The market. The oilseed crushing industry: Organization and mill location, number and type of mills, crushing capacity. Soybean oil and foods: Soybean meal demand for swine, soybean meal demand for poultry. Domestic oilseed supplies: Soybeans, peanuts, rapeseed, sesame, minor oilseeds. Marketing: Discharging and handling facilities, freight costs, government controls, purchasing, credit, quality problems, crushing margins wide. Appendix: Directory of major soybean and oilseed crushing mills, by region.

The Foreword notes: "This small island made near-phenomenal strides in both agriculture and industry in the late 1950s and early 1960s, and by the mid-1960s was recognized as a growing dollar market for U.S. soybeans and soybean products." In 1965 Taiwan moved from aid to trade status. In 1966 soybeans were removed from controls, and with the booming economy of 1967-68, imports of

soybean from the USA—all paid for in dollars,—leaped to record levels.

Today, Taiwan has one of the world's highest economic growth rates. Since the end of World War II, and especially since 1955, the Taiwan oilseed crushing industry has undergone a complete technological transformation. The country now boasts 36 solvent extraction plants, many of them with modern continuous systems.

In Taiwan today, per capita consumption of soybeans for food is estimated at around 5½ pounds/year, compared with about 4 pounds in 1958. Soybean oil is now Taiwan's major source of edible fats and oils; per capita consumption is about 6 pounds/year compared with 4 pounds/year for peanut oil. Total per capita vegetable oil consumption is about 12 pounds/year. Per capita consumption of animal fats is 6-8 pounds/year.

Domestic production of soybeans rose from 4,000 metric tons (tonnes) in 1935-39 to 72,997 tonnes in 1968. Historically, imports of soybeans and soybean products have been large. In 1938 over 45,000 tonnes of soybeans and about 164,000 tonnes of soybean cake were imported, mainly from Manchuria.

In 1950, Taiwan's vegetable oil crushing industry was first organized into a trade association by a group of 20 crushers using screw presses. By 1967 some 86 crushers were members; this included 35 solvent-extraction operators. Known today as the Taiwan Regional Association of Vegetable Oil Expelling and Refining Industries, the group is located at 82 Nan Yuan Street in Taipei. Today in Taiwan there are 99 oilseed crushing mills with a total crushing capacity of 1.3 million tonnes—up from only 400,000 tonnes in 1954-55.

As in many countries of East Asia, the Taiwanese consumer has a taste preference for crude peanut oil, sesame oil, and rapeseed oil, in that order. For this reason, soybean oil is often marketed as a blend with peanut or rapeseed oil.

The soybeans required for the manufacture of bean curd [tofu], soybean paste [jiang], [soy] sauce, milk, and other foods are largely produced domestically. In 1969 an estimated 40,000 tons of soybeans will be required for bean curd and 3,000 tons for soybean sauce. "In the rural areas of Taiwan, soybean milk cooperatives have been organized under government auspices. Members use their own soybeans and make their soybean milk at common soybean milk shops."

A map (p. 9) shows the island of Taiwan, each of its prefectures, and where each of four oilseeds (soybeans, peanuts, rapeseed, sesame) are produced. Tables show: (1) Production of four oilseeds in Taiwan from 1965-1968. Peanut production decreased from 88,000 to 74,000 tonnes. Soybean production increased from 66,000 to 73,000 tonnes but was still No. 2 after peanuts (p. 8). (2) Taiwanese soybean production, imports, and utilization from 1955 to 1968 (p. 11). Address: Fats and Oils Div.

1454. Takeuchi, Tokuo; Yoshida, M.; Yoshii, H. 1969. Miso, shōyu no peptides ni kansuru kenkyū. VII. 1455. *Macrobiotic (The) (Chico, California)*. 1969. Miso and cancer. 9(7):2-8. Sept/Oct. [3 ref]

• **Summary:** Herman Aihara summarizes and comments on two articles about miso and cancer in *Time* magazine (9 May 1969) and *Medical World News* (16 May 1969), then gives a synopsis of what miso is from two articles in *Health Food Business Review* (Sept. 1967 and July 1968). Following a translation of Dr. Akizuki's writings about his experiences with miso following the atomic blast at Nagasaki, Aihara shares his own thoughts about miso's health promoting properties, and about the causes of stomach cancer (sugar, overeating, fish and eggs, tropical fruits). He believes that smoking tobacco does not cause cancer. Address: Ohsawa Foundation, Chico, California.

1456. **Product Name:** Hacho Miso (Soy Paste), Mugi Miso (Barley Soy Paste).

Manufacturer's Name: Eden Organic Foods, Inc. (Marketer-Distributor). Purchased from Erewhon (Boston-Importer). Made in Japan.

Manufacturer's Address: 514 East William St., Ann Arbor, MI 48104.

Date of Introduction: 1969. November.

Wt/Vol., Packaging, Price: 1 lb. plastic bags.

How Stored: Shelf stable.

New Product-Documentation: Eden Foods Inc. 1971. July 26. Wholesale pricelist. "Hacho Miso (Soy Paste), Mugi Miso (Barley Soy Paste)." 1 lb containers.

Eden Foods, Inc. 1974. Feb. 1. Wholesale prices, FOB. "Mugi Miso, barley-soy paste (Erewhon)." This is the first time the word "Erewhon" appears after miso. It looks like Erewhon was requiring Eden to add it—which may have caused bad feelings.

Eden Foods Fall and Winter Catalog. 1977-1978. "Hacho Miso (Eden) soy paste. Mugi Miso (Eden) barley soy paste. Kome Miso (Eden) rice soy paste. Each is available only in 14 oz, 8.8 lb, 22 lb, and 44 lb sizes. Eden has found a way to go around Erewhon, probably by importing via Muso Shokuhin.

Eden Foods Catalog. 1978. Page 18. Eden Foods has now (happily) started to write the names of its misos in English rather than Japanese as follows: Eden Soybean Miso (Hacho), Eden Barley Miso (Mugi), Eden Rice Miso

(Kome), and Eden Brown Rice Miso (Kome). A photo shows Eden's miso line with labels in 1 lb plastic bags and plastic kegs.

Talk with Bill Bolduc, founder, original incorporator, and past president of Eden Foods. 1991. Dec. 8.

Eden Organic Foods first began selling soyfoods commercially in November 1969, starting with their first order from Erewhon in Boston. They would buy "tamari" (actually shoyu) and miso (Hacho = soybean, mugi = barley varieties) in bulk from Erewhon (which imported them from Japan). At their store, Linda Succop (Bill's wife's sister) would repackage the products, putting the shoyu into bottles and the miso into plastic bags. They were labeled using plain white self-adhesive gummed labels with a rubber stamp. One stamp contained the name and ingredients for each product, and another, that was stamped below it, gave the company name and address. They wrote in the weight or volume by hand near the bottom of the label.

1457. *SoyaScan Notes*. 1969. Chronology of Eden Organic Foods, Inc. Renamed Eden Foods, Inc. in April 1971. Part I. 1969 to 1972. 31 Jan. 1992. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** 1969 Nov. 4—Eden Organic Foods is named and incorporated as a non-profit corporation by Bill Bolduc. Other names on the articles of incorporation are Judith Bolduc, Ronald Teeguarden, Gloria Dunn, and Linda Succop. It is a natural foods co-op retail store at 514 East William St. in Ann Arbor, Michigan. Bill is president of the company and his wife, Judy, is part-time secretary. The date of incorporation, Nov. 4, was selected by an astrologer, Michael Erlewine, because it was astrologically propitious. Michael also designed the Eden logo of four sprouts in a circle. Also in Nov. 1969 Eden begins selling soyfoods, tamari and miso purchased from Erewhon.

Prior to this, starting in about the summer of 1969, Ronnie Teeguarden and Gloria Dunn had started a loosely-knit food buying co-op—which had no name, no assets, no formal structure, and no bank account. Original or very early members included Tim and Pattie Redmond, Mark and Nancy Retzloff, Linda Succop, Iona Teeguarden, and Bob Thorson. On about 3-5 different occasions they collectively ordered macrobiotic staples (including tamari and miso) from Erewhon in Boston, Massachusetts, using the Erewhon catalog. When the foods arrived, the members got together and divided them up at the Teeguarden-Leabu General Store, at 209 South State St. in Ann Arbor. This general store, located in the basement below Marshall's Bookstore, carried mostly antique clothing and records, and the art of local artists. By September 1969, Bill and Judy Bolduc joined the food co-op. They also joined the Zen Macrobiotic Supper Club; all of its members were also members of the food co-op.

In the fall of 1969 the Teeguarden-Leabu second-hand store looked like it was about to close, which would leave the food co-op without a home. The group (especially Ronnie Teeguarden) convinced Bill Bolduc to take charge of the food co-op and find it a permanent home, which he did—in an upstairs apartment at 514 East William St. Members of the informal food-buying co-op who worked at Eden Organic Foods included Bill Bolduc, Gloria Dunn, and Tim Redmond. An environmental group named the Environmental Defense Education Network (EDEN) also operated out of the Teeguarden-Leabu General Store; it was from this group that Eden got its name. That fall, after the Eden Organic Foods co-op was up and running, Tim Redmond went to Boston to work and study at Sanae, a macrobiotic restaurant on 272A Newbury St.

1970 summer—Bill Bolduc establishes Eden's first contact with an organic food grower (Bill Vreeland of Ypsilanti, Michigan, who grows organic wheat and soybeans). He soon makes Eden's first direct purchase of organically grown wheat, which the company mills and sells.

1970 July 6—Eden Organic Foods, Inc is reorganized upon a stock basis. Bill Bolduc (who resides at 6210 Bethel Church Rd., Saline, Michigan) owns all the shares (1,000). Other people listed on this document are Judith Bolduc, Ronald Teeguarden, and Gloria Dunn.

1970 Sept.—The fledgling company has an offer from Cynthia Shevel to move into a newly decorated mini-mall at 211 South State St. on the main street of campus. They need money to finance the move. Tim Redmond's father says he will help finance the expansion only if the business is reorganized as a for-profit corporation. So Eden is changed into a for-profit corporation, and Redmond invests the \$10,000 he borrowed from his father in Eden in exchange for 50% ownership. In Nov. 1970 Eden moves into the mini-mall (they register the new address on Nov. 17) and soon begins to mill flour and bake granola at the new store. Bolduc and Redmond are now equal partners

1971 April 8—Bolduc registers a change in the company name to Eden Foods, Inc. from Eden Organic Foods, Inc. After the store was up and running, Redmond returns to Boston and Sanae restaurant, where he completed his studies.

1971 Jan.—Michael Potter is hired by Bill Bolduc. Mike had initially had a good-paying job at an art gallery in Royal Oak, Michigan. Then he began working for, and eventually became a partner in Joyous Revival, a macrobiotic and natural foods retail store in Birmingham, Michigan. At that time he and his wife, Carol Roller Potter (Ron Roller's sister), moved from Royal Oak to Walnut Lake, Michigan—to be nearer to Joyous Revival. In the fall of 1970 Michael Potter, while still working at Joyous Revival and at Bill Bolduc's request, had done volunteer work to try to help a failing new Eden retail store in downtown Detroit on the

campus of Wayne State University. This store was owned jointly by Eden and two people named John and Darleen—two of the first people in the area interested in macrobiotics. By Jan. 1971 it had become evident that the store would not be able to survive financially, so Michael's first job after being hired was to make one last try to save it, then to help in shutting it down.

1971 May or June—Tim Redmond returns to Ann Arbor permanently, having finished his macrobiotic training in Boston. He planned to open a restaurant like Sanae in Ann Arbor but instead got increasingly involved with Eden Foods.

1971 June—Eden starts to wholesale natural foods out of the back of their retail store at 211 South State Street. They buy increasingly from original sources instead of other wholesalers. Buying clubs and co-ops come to the retail store to pick up their bulk foods.

1971 July—Eden's wholesale pricelist, dated July 26, shows that Eden is selling bulk (50 and 100 lb) soybeans, corn, soft wheat, and rye, which are being grown organically in Michigan (by Tom Vreeland). Eden stone-ground a portion of them into flour—on order. Eden is also selling numerous bulk and packaged grains, cereals, flours, and beans from Arrowhead Mills in Deaf Smith County, Texas; some are organically grown.

1971 early summer—Bill Bolduc asks Mike Potter to manage the Eden retail store at 211 South State St. Mike and his pregnant wife, Carol, move to Ann Arbor from Walnut Lake. By this time the company name was Eden Foods, Inc.

1971 Aug.—Eden Foods starts to distribute its wholesale bulk products, especially in the Detroit area. The company starts to bring in small trailer loads of staples from Arrowhead Mills in Texas. Bolduc and Redmond, realizing that Eden is the only natural foods store in the area, borrow some money and rent a 4,000 square foot Quonset hut warehouse on North Main Street north of Ann Arbor near the Huron River. They expand their wholesale and distribution operations.

1971 Oct.—Mike Potter is given 13.5% of the common stock of Eden Foods, Inc. largely to compensate him for his many hours of unpaid volunteer work. According to Michael Potter (Dec. 1986), at this point the common stock ownership of Eden Foods is: Between Bill and Judy Bolduc 43.5%, Tim Redmond 43.5%, and Michael Potter 13.5%. Potter later says (Feb. 1993) that Bill Bolduc and Tim Redmond now own the same number of shares, but Judy Bolduc owned a small number of shares so the Bolducs owned the largest block.

1972 fall—Ron Roller starts to work part time for Eden Foods. Continued. Address: 514 East William St. in Ann Arbor, Michigan. Phone: 313-769-8444.

1458. *SoyaScan Notes*. 1969. Chronology of Eden Foods, Inc. Part II. 1973 to Nov. 1981. 31 Jan. 1992. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** Continued: 1973 March—Eden moves into a larger warehouse at 310 West Ann Street in Ann Arbor, sharing it with Midwest Natural Foods, which initially was not a competitor. At about this time, Ron Roller starts working full-time for Eden. While at this warehouse, in late 1973 or early 1974, Eden receives its first shipments of imported Japanese natural foods from Mr. Kazama of Mitoku in Tokyo. Tim Redmond had ordered these foods from Mr. Kazama at a meeting of the Natural Foods Distributors Association in Florida. Initially Eden was forced to import Erewhon-branded products. Redmond recalls that at this time he was working at and managing the warehouse and Potter was working at and managing the retail store. Redmond was managing the corporation because he controlled it.

1973 summer.—The Eden retail store moves to a much larger location at 330 Maynard St. in Ann Arbor, on the University of Michigan campus. It now includes three operations under one roof in 6,000 square feet of leased space: A large natural foods retail store, a natural fast-food deli, and a natural foods bakery named Sun Bakery that had relocated itself from Kalamazoo, Michigan. This operation proved to be very profitable; it paid off all Eden's debts and paid for the new warehouse, offices, trucks, and equipment.

1973 July—Bill and Judy Bolduc leave Eden Foods, selling their stock to Mike Potter for \$2,500 cash. Tim Redmond becomes president. Redmond ends up owning 51% and Potter 49% of the shares in Eden Foods. Potter recalls that he bought the stock directly from the Bolducs, then gave a small amount to Redmond so that Redmond would have majority ownership. Redmond recalls that the Bolducs sold their stock back to the corporation, then Redmond sold enough shares to Potter so that he (Redmond) would keep control with 51% of the shares.

1973 late or 1974 early—Potter and Redmond become equal owners of Eden Foods after Potter loans the company \$44,000 (entrusted to him by his father), then converts the loan into an investment in the company in exchange for equal ownership.

1973 Sept.—Mike Potter becomes president of Eden Foods at the unanimous recommendation of an employee steering committee. At about this time Midwest Natural Foods starts to compete with Eden Foods, carrying many of the same products that Eden carries plus dairy products and frozen foods. Eden has never sold dairy products or frozen foods and, in the face of new competition from Midwest, Michael Potter reaffirms this position. This decision makes it impossible for Eden to become a full-line distributor like Midwest, and lays the groundwork for Eden's eventual decision in 1986 or 1987 to discontinue distribution to retail stores and focus on manufacturing of natural foods.

1974 spring—Eden moves from 310 West Ann St. into a larger warehouse at 4601 Platt Road. This move extricates Eden from what had become a “pathetic relationship” with Midwest Natural Foods. Redmond is sure that he and Potter became equal partners before this move.

1974 March 7-8—Michael Potter represents Eden at the meeting of Natural Foods Distributors at the Janus conference room in Seattle, Washington.

1974 Oct.—Potter makes the first of his eleven trips to the People’s Republic of China. On the way back he visits Yuko Okada at the Muso Company in Osaka, Japan. Potter decides to import exclusively from Muso.

1977 Aug.—Eden Foods opens Turtle Island restaurant at 315 South State St. in Ann Arbor.

1979 spring—Cliff Adler, a painter renovating apartments in Ann Arbor, is hired by Michael Potter to work for Eden in Chicago, Illinois, to try to expand their sales to natural food retail stores. During that summer Cliff lends Eden Foods \$100,000, for which he is paid bank interest rates. Tim Redmond, however, believes Cliff was hired as a salesman in 1976, and that on 15 March 1979 Cliff became a shareholder in Eden Foods, buying 10% of the stock.

1979 Nov. 26—The Eden warehouse at 4601 Platt Road is destroyed by a large fire. According to the *Ann Arbor News* (Nov. 27-29) total damages are estimated at \$650,000. Eden Foods, organized in 1970, employs some 100 persons in distribution and production, supplies about 500 natural food stores and restaurants, has annual sales of about \$5 million, and is said by its owners to be “the largest natural foods distributorship in the Midwest.” This fire burned many of Eden’s key records, including records that would have helped in determining dates and facts for this chronology. Eden has never kept a written chronology of key events in the company’s history.

1979 Dec.—Within 10 days after the fire, the board of directors (Potter, Adler, and Redmond) meets, authorizes a large number of additional shares of common stock, and decides to give away (free of charge) shares of Eden Foods’ common stock to six key employees/managers to try to motivate them to stay with the company and help try to rebuild it. They also decide to lay off 35 other people. Shortly thereafter Cliff Adler decides to convert his \$100,000 loan to stock (equity)

1980 Jan.—Tim Redmond decides to leave Eden Foods; he leaves in May, selling most of his stock (he kept 1,000 shares) in exchange for ownership of the Maynard Street Connection, Inc., which has a retail store and restaurant at 330 Maynard St., which are now separate companies.

1980 Feb.—Now Michael Potter and Cliff Adler each own 34% of Eden Foods shares, Frank Dietrich (of Natural Foods, Inc., Toledo, Ohio) owns 10% (which he bought for \$100,000), Ron Roller owns 5%, Michael Gordon 4%, Mark Cook 4%, Kathy Knor 3%, Bill Swaney 3%, and Bob Duha 3%. Michael Potter notes that four things saved Eden

Foods (which now had a negative net worth of more than \$800,000) after the fire: (1) Cliff Adler’s conversion of his \$100,000; (2) The incredible cooperation, generosity, and kindness that Eden received from its suppliers in the natural foods industry, and their trust that Eden would do its best to pay back their money at a time when interest rates were over 20%; (3) Frank Dietrich’s investment of \$100,000 in the company; and (4) The great effort made by natural foods retail stores and consumers to go out of their way help Eden survive by purchasing more Eden products. Note that it was not until Feb. 1982 that Eden ended up receiving from its insurer (Hartford Insurance Company) \$400,000 net, or \$0.50 for each dollar Eden felt it was owed.

1980 Nov.—Eden Foods headquarters moves into a 20,000 square foot building at 701 Tecumseh Road in the tiny town of Clinton (population 2,000) about 60 miles southwest of Detroit.

1981 Nov.—Erewhon Trading Co. files for Chapter 11 bankruptcy protection. Trying to keep up with the super-distributors in their region (especially Balanced Foods) Erewhon had moved into an 80,000 square foot warehouse and added too many items to their product line too fast—which destroyed the company. Stow Mills picked up the bulk of their business, with Westbrae scooping up most of the business for their Japanese imports. Eden had not yet recovered enough financially to take advantage of this opportunity. Continued.

1459. *SoyaScan Notes*. 1969. Chronology of Eden Foods, Inc. Part III. 1983 to present. 31 Jan. 1992. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** 1983 July—Eden Foods surprises the U.S. natural foods industry by introducing Edensoy, a long-life soymilk in plain, carob, or cranberry flavors, imported from Marusan-Ai Co. in Japan, and packaged in a stand-up foil retort pouch.

1984 Jan.—The Muso Company of Osaka, Japan, appoints Eden Foods its General Agent for North America.

1984 March 2—A series of calamities hit Eden Foods in quick succession. The FDA (U.S. Food and Drug Administration) informs Eden Foods, in a strongly worded letter, that it considers eleven claims in a promotional pamphlet for Edensoy to be erroneous. The FDA advised that the “Good for Babies” section of the pamphlet be deleted.

1985 June 14—The FDA informs Michael Potter that a six-month-old child in Canada had become seriously ill after being fed the company’s soymilk as an infant formula. The mother said her decision to forgo regular infant formula was inspired by Eden’s own literature—the promotional pamphlet cited above which said that Edensoy was “Good for Babies.” Eden took the position: “There’s a problem and were responsible for it.” To date some 18 million packs of Edensoy have been sold.

1985 June 23–Eden Foods voluntarily mails 10,686 requests for a recall of the pamphlet to its distributors and to individual retail stores.

1985 July–Eden Foods forms a joint venture partnership with four Japanese companies, and incorporates in the state of Michigan as American Soy Products, Inc.

1985–Eden opens a west coast sales office and warehouse in San Francisco, California.

1986 May–The Lima Company of Belgium appoints Eden Foods its General Agent for North America.

1986 Nov.–American Soy Products, Inc. launches a new generation of Edensoy soymilk products, in original, vanilla, and carob flavors. Made at a large, new factory in Saline, Michigan, they are packaged in Tetra Brik Aseptic cartons. This is the first aseptic soymilk plant in the USA.

1987 Jan. 1–Eden Foods stops distributing products directly to retail stores (which comprised only 10% of Eden's total sales), drops 150 products, and starts serving as a master distributor, selling only through other distributors. This decision had a very positive effect on Eden's growth; all the energy that was formerly required to attend to 10% of the business was now free to be focused on developing new products and the Eden brand.

1988 April 13–Cliff Adler and Michael Potter are in a serious car accident. Cliff is killed and Michael is seriously injured. Upon Cliff Adler's death, Michael immediately and automatically acquires Cliff's 34% share in the company—because Eden Foods Inc. and Michael and Cliff, jointly and severally, had a buy-sell contract that came into effect in the event that either Cliff or Michael should die. The value of Cliff's stock was \$500,000. Michael pays this amount from his personal funds for the stock. Potter now owns a large majority of Eden Foods' stock.

1988 May–While Eden Foods is still reeling from the effects of the car accident, the FDA files charges against Eden for publishing inaccurate information in a pamphlet which stated that Edensoy was “Good for Babies.” Eden's previous major effort to recall all of these pamphlets from retail stores apparently had little or not effect on the FDA charges.

1988–Eden Foods joins OCIA, the Organic Crop Improvement Association, for independent certification of organically-grown crops.

1989 Jan. 20–Nearly 6 years after Eden Foods published its ill-fated Edensoy pamphlet, the company is fined \$110,000 by a federal judge in Detroit, and its president, Michael Potter, is fined \$25,000 and sentenced to 30 days imprisonment. On Feb. 24 he begins to serve out his sentence in Bay City, Michigan.

1989 Oct. 12–Michael Potter is convicted of manslaughter and sentenced at the circuit court in Ann Arbor to 8-15 years in jail for his role in the April 1988 automobile accident that caused Cliff Adler's death. He begins to serve out his sentence in Oct. 1989 in Coldwater,

Michigan. Ron Roller takes over as president of Eden Foods—the top position.

1989–Eden and OCIA establish standards for food processing as well as growing crops.

1991 mid-June–Ron Roller, president of Eden Foods, is asked to resign from his position. He chooses to leave and go to American Soy products to work full time. There he becomes CEO.

1992–Eden Foods now has 180 distributors, virtually all of whom distribute Edensoy. Owners of stock in Eden Foods include Mike Potter (who owns more than 50% of the shares), Tim Redmond, Mark Cook, Bill Swaney, and at least one other person.

1992 Aug.–Michael Potter returns to work at Eden Foods. He was re-sentenced and his sentence is changed to 60 months probation. 1993 Dec. 31–Potter purchases Tim Redmond's remaining 1,000 shares of Eden Foods stock, which Tim has kept since 1980. \

Magou (now made in South Africa on a modern industrial scale from fermented corn and soybeans). Address: Northern Utilization Research and Development Div., USDA, Peoria, Illinois.

1463. Shurtleff, William. 1969. The Tassajara food trip. Tassajara, California: Published by the author. 63 p. Dec. 28 cm. [8 ref]

• **Summary:** Each of the 167 recipes is numbered, all show a strong natural foods influence, and many show a macrobiotic influence. Soy-related recipes include: 60.

Fresh daikon nitsuke with miso. 74. Squash in miso-tahini sauce. 76. Nori with tamari. 77. Basic soybean preparation. 78. Soybeans with hijiki. 79. Soybeans with hijiki and tahini (with miso). 80. Soybeans sauteed in miso. 81. Soybeans with lentils and buckwheat flour. 82. Soybeans with carrots and lentil sprouts. 83. Soybeans with dried daikon. 84. Soybean stew. 85. Broiled soyburgers. 86. Roasted soybeans. 87. Tofu sauteed. 96. Miso soup with tofu, carrots, burdock and mushrooms. 97. Miso soup with wakame. 98. Wakame soup with tofu. 99. Soy sauce & lemon soup. 101. Thick lentil soup with miso. 102. Thick lentil soup with miso & vegetables sauteed. 103. Lentil soup with miso and parsley garnish. 105. Aduki/azuki bean soup with miso. 107. Thick split pea soup with miso & vegetables. 110. Navy bean soup with miso. 115. Mushroom soup with dried tofu.

119. Misozuke pickles. 120. Kombu pickled in miso. 122. Bancha with tamari. 123. Kuzu cream with tamari. 125. Ume-syo-kuzu (with umeboshi, tamari and kuzu). 131. Basic soybean spread. 133. Lentil miso spread. 135. Garbanzo and miso spread. 138. Muso (miso-tahini) spread. 139. Peanut butter & tamari spread. 142. Peanut butter, miso, apples, carrot and parsley spread. 161. Sesame tofu (no soy). 163. Nut and seed loaf with miso.

San Francisco's largest natural foods store was New Age Natural Foods, 1326 Ninth Ave. run by Fred Rohé. Also recommended are The Food Mill, 3033 MacArthur, Oakland; and Chico-San, P.O. Box 1004, Chico, California. Selling Spiral Foods miso and tamari in bulk; The General Store, 5th and Junipero in Carmel.

Note 1. This is the earliest document seen (Dec. 2004) concerning the work of William Shurtleff with soyfoods. He wrote the book on a typewriter while practicing at Tassajara Zen Mountain Center, made about 30 photocopies, and sent them to friends as Christmas presents. He did not meet Akiko Aoyagi until 25 Dec. 1971 in Tokyo, Japan.

Note 2. This is the earliest document seen (Dec. 2004) in the SoyaScan database concerning or under the subject heading "Soyfoods Movement." Address: Zen Mountain Center, Carmel Valley, California.

1469. **Product Name:** Harmony Foods Miso, and Tamari.
Manufacturer's Name: Harmony Foods (Importer-Distributor). Made in Japan. Imported from Muso Shokuhin.

Manufacturer's Address: Ladbroke Rd., London, England.

Date of Introduction: 1969.

Wt/Vol., Packaging, Price: Imported nulk, in wooden kegs. Miso repacked in plastic bags. Tamari in glass bottles.

How Stored: Shelf stable.

New Product-Documentation: Interview with Bill Tara. 1991. Aug. 18. Among the early Japanese foods imported by Harmony Foods were bulk miso and "tamari" (actually shoyu), imported from Muso in wooden kegs. They repackaged the miso in plastic bags and the shoyu in glass bottles under the Harmony Foods label in London. This was the first Japanese miso and shoyu sold in England.

Listing in *The Vegetarian Health Food Handbook (UK)*. 1974. p. 173. "Tamari Soya Sauce, and Miso (Soya Bean Sauce) by Harmony Foods."

1470. *Cooking good food*. 1969. Order of the Universe Publications, Box 203, Prudential Center Station, Boston, MA 02199. 34 p. No index. 28 cm.

• **Summary:** A simple, concise source of the basic macrobiotic ideas adapted to the American way. Note 1. This booklet was written by Jim Ledbetter, a student of macrobiotic teacher Michio Kushi, although his name does not appear in it.

Contents: The traditional food of man. The way of eating. Salt and oil. Special foods. Useful kitchen items. Cooking brown rice. Cooking other grains. Cooking vegetables. Cooking sea vegetables. Cooking beans.

Cooking soups. Cooking with flours (Cooking noodles, cooking creams, baking bread, variations with flour). Cooking animal food. Preparing salads. Preparing condiments. Preparing drinks. Cooking desserts. Plasters. Traveling and eating out. The manner of eating. The seven levels of cooking.

In Chapter 4, titled “Special Foods” is a section on “Soybean foods” (p. 6), which states: “The soybean has been called the ‘Vegetable Cow’ of the Orient. It is full of good vegetable quality protein (43%). It was not traditionally eaten without special preparation, because it is fairly yin, except by monks who wished to limit their sexual desires. When cured with salt, however, it was used as a daily food. You will find these traditional preparations very helpful in your kitchen.

“Tamari is the ancient form of soysauce, fermented for at least eighteen months from soybeans, salt, wheat or barley, and water, without chemicals or preservatives. It has a very distinctive, delicious taste. It is used mainly in cooking vegetables when it is added after salting and just before the end of cooking time, and in broths. It is rarely used directly on grains, but is often found on the table to use with deep-fried foods. Some women mix tamari with an equal amount of water to make it less strong.

“Miso is a paste made from the same ingredients as tamari. There are two varieties; one (Hacho) is a little harder and darker in texture than the other. It has many uses, especially in soups, in which case it is added towards the end of cooking time so that the wonderful digestion-aiding bacteria it contains will not be destroyed. (All of these soybean condiments produce their best flavor when cooked slightly.) Miso soup has a deep, satisfying bouillon flavor, and is often taken every day as a delicious source of energy. It is helpful to thin miso in a little water before adding it to soups and sauces.

“Morromi [sic, moromi] is the pulp from which tamari has been made. It has a very special tangy flavor, and is used like miso.

“Seitan or ‘Protein X’ is made from the same ingredients as the above condiments. A slightly different process produces a strong jerky which, when boiled or sauteed, resembles beef in appearance and taste. It is very good in soups” (p. 6). Note 2. This is the earliest document seen (July 2005) that mentions “seitan.” It is also the earliest English-language document seen (July 2005) that contains the word “seitan.” By placing seitan in the category of “Soybean Foods,” the author is apparently emphasizing the importance of soy sauce as one of its two main ingredients. He seems to have tasted seitan, but it is not clear that he knows what its other main ingredients are (wheat gluten, ginger, sesame oil) or how it is prepared.

“Tofu is made from fresh soybeans. This curd or ‘cheese’ is a good quality, strong yin food which is very refreshing for occasional use in summer when it is cooked

with tamari. It is helpful to store tofu in water. The more yang pulp, which is usually thrown away, can sometimes be obtained from the Oriental stores which make tofu, and used to make delicious casseroles or well-sauteed vegetable dishes.”

The section on “Condiments” (p. 6-7) discusses Gomasio (Sesame salt), umeboshi (salted plums), and Tekka. The section on “Oriental vegetables” (p. 7) discusses lotus root, daikon, ginger root, Chinese cabbage, jinenjo (Japanese potato), and kuzu arrowroot.

In the chapter titled “Cooking Beans” the author considers “Aduki Beans” to be the “King of Beans.”

“Black Beans: The imported Japanese black beans are higher nutritional quality and superior taste. They are very sweet, delicious beans. They should be soaked and boiled, because their skin can become loose and clog a pressure cooker spout.”

“Miso Soup: This hearty bouillon is the staple everyday soup. Prepare vegetables and boil for at least one-half hour (if you want a really good soup); thin miso with a little of the stock in a bowl and add it to the soup towards the end. Do not boil the soup after adding miso or the beneficial digestion-aiding bacteria will be harmed. If it is simmered very slowly, it can be cooked from 5 minutes to one hour.

“Tamari Soup: Prepare as above using tamari instead of miso for flavoring. A simple tamari broth with onions or carrots and onions is often served over dishes such as noodles.”

In the chapter titled “Preparing Condiments” (p. 27) we read: “Vegetable Miso. Slice vegetables finely and saute. Add diluted miso and water and cook. Scallions, chives, carrot tops and many other vegetables are good prepared in this manner. ‘Tekka’ is made from lotus root, burdock root and carrots. ‘Sigure’ [Shigure] (‘November Rain’) is prepared with lotus roots, carrots, and onions. A little freshly grated ginger is often added towards the end of the cooking. A small amount of these condiments is usually sufficient.”

The chapter titled “Preparing drinks” (p. 28-29) discusses Mu tea, umeboshi tea, chicory, Yannoh [Ohsawa coffee], dandelion coffee, Bardan, Kokkoh, kuzu, ume-syo-kuzu, and daikon drink.

The chapter titled “Cooking Desserts” (p. 30) states: “Amasake (Homemade Rice Wine). For special occasions this drink is very smooth and sweet.”

Tofu is also mentioned in the chapter titled “Plasters” (p. 31). “Tofu Plaster. Squeeze tofu (soy bean curd, see *Special Foods*) and mix with 10% flour to make it more manageable. Apply this to any painful, feverish, or inflamed area. Alternating tofu plasters with ginger compresses often helps stubborn cases.”

Note 3 This is the earliest document seen (July 2000) that mentions “Hacho” miso (spelled that way).

Subsequently, many macrobiotic publications used this word and spelled it that way.

The chapter titled "Cooking sea vegetables" briefly defines kombu, wakame, hiziki (the incorrect idea concerning "black rice" comes from a casual remark by Evan Root), arame, dulse, and nori (laver).

Note 4 One original edition of this booklet, sent to Soyfoods Center by Tim Redmond (a founder of Eden Foods), has one dark blue stalk of wheat against a light blue background. In the lower right corner of the cover the following has been stamped with a blue ink stamp: "Eden Organic Food Store, 514 E. William, Ann Arbor, Mich. [Michigan] 48104." Address: [Massachusetts].

1471. Cowan, J.C. 1969. Soybeans. In: Encyclopedia of Chemical Technology. Vol. 18. 2nd ed. New York: John Wiley & Sons (Interscience Publishers). See p. 599-614. 27 cm. [44 ref]

• **Summary:** Contents: Introduction: Composition, standards and trading rules. Handling and storage. Processing: Preparation, screw-press and extruder-cooker operations, solvent extraction. Soybean products: Oil, meal and meal products, soy flour and related products, soy sauce and other food specialties (soybean milk, tofu, miso, natto, tempeh, sprouted soybeans, green vegetable soybeans). Production and export. Bibliography.

"An estimated 50 million lb of soy flour was marketed in 1967. About one-half of this went into pet foods and the rest into foods for humans." Address: USDA.

Address: Food Research Inst., Aichi prefecture, 2-1 Shinpukuji-cho, Nishi-ku, Nagoya-shi 451, Japan.

1474. Kwon, Shin Han. 1969. Soybeans and soybean products in Vietnam. Saigon: Republic of Vietnam, Ministry of Land Reform and Development of Agriculture and Fisheries, Agricultural Research Inst. 113 p. 28 cm. [60 ref. Eng]

• **Summary:** Contents: 1. Introduction: History of soybean, production and trade in the world and in Vietnam, utilization of soybean (uses, nutritive value of the soybean). 2. Botany of the soybean plant: Seed, stem and pubescence, leaves, flower parts, root and nodule bacteria, genetics. 3. Ecological requirement: Germination, temperature, rainfall, day length, soil. 4. Cultivation and storage: Planting (land preparation, depth of seeding, methods of seeding, rate of seeding, time of seeding, rotation, erosion), fertilizer (manure, nodule bacteria, nitrogen, phosphorus, calcium, potash, molybdenum, application), insects (maggot fly, soybean insects found in Vietnam, control), diseases (root disease, foliage disease, seed disease), weed control, harvesting and threshing (harvesting time, methods of harvesting, drying). 5. Variety improvement: Aims of improvement (high yielding variety, disease resistance, insect resistance, day length, varieties tolerant to unfavorable soil conditions, seed size, seed color, oil and protein content in seed, palatability), introduction method, pure line selection method, breeding method (making the cross, pedigree method, bulk method), regional trials, variety purification and multiplication (breeder's seed, foundation seed, stock seed, extension seed, maintenance). 6. Seed certification standard. 7. Bibliography.

The author thanks for their help: Dr. Thai-Cong-Tung, Director of the Agriculture Research Institute, and Mr. Nguyen-Huu-Quy, Manager of Eakmat Experiment Station.

In Vietnam, the soybean is still not a very familiar crop to the majority of farmers. Although the acreage has gradually increased since 1958, it has not yet reached 10,000 tons by 1967. According to the *Agric. Statistics Yearbook*, in 1966 in South Vietnam, total soybean acreage was 6,610 hectares and production was 7,585 metric tons, or 1.148 tonnes/ha. The main soybean producing provinces are all in the southern half of the country: Long-Khanh (40% of total South Vietnamese acreage), An-Giang (20.4%), Chau-Doc, Kien-Phong, and Binh-Dinh (5%). In 1963 some 1,440 tones of soybeans were imported and in 1966 some 100 tonnes were exported.

Table 4 shows an estimate of the costs and returns per hectare of growing soybeans at the Eakmat Agricultural Experiment Station in Ban-Me-Thuot in 1968. The net income or profit from one hectare was about VN\$26,000, which is larger than for any other field crops, including: cassava (VN\$22,766), mung beans (\$20,267), sweet

potatoes (\$19,269), upland rice (\$6,828), corn (\$6,569), and peanuts (VN\$5,100).

Uses: "In Vietnam, the soybean is not commonly used in daily food, but a number of foods such as soysauce, tuong [a soft kind of miso resembling Chinese chiang in consistency, and sold in crocks], bean curd, vermicelli, soymilk, soybean wine, chao [fermented tofu, sold in bottles], soybean oil, [soy] bean sprouts, and green pods [green vegetable soybeans] are available in the market and they are gradually becoming popular among Vietnamese.

The highest yielding soybean varieties in Vietnam are presently Palmetto and E-32. In trials, they yield about 1 tonne per hectare. Address: FAO Agricultural Officer. Phone: Saigon 91.746.

1475. Misumi, Kan. 1969. *Miso daigaku* [Miso university: The great teaching on miso]. Tokyo: Bungeisha. 230 p. Illust. 22 cm. Reprinted in 2001 by Gendai Shokan in Tokyo. [Jap]

• **Summary:** Contents: 1. The art and skill of making miso. 2. Thoughts about miso. 3. Barley miso. 4. Aged miso. 5. The limitless art of miso. 6. Wheat miso. 7. American miso. 8. Farmhouse miso. 9. Kumakusu miso. 10. Selective art. 11. Hangover treatment. 12. Kinzanji miso. The author's thoughts about miso. Additional discussion on pickles.

Kan Misumi, the author, lived 1903-1971. This book, which contains numerous excellent photos (many in color) and recipes, is a highly personal and literary approach to the subject of miso by a Kyushu-born novelist who, upon retirement, turned his spacious Tokyo home into a center for the study and preparation of miso and miso pickles. This volume and its companion, *Pickle University (Tsukemono Daigaku)* contain a wealth of information about the preparation of both these foods in the traditional, natural way.

Note: This is the earliest document seen (March 2009) that gives detailed, illustrated directions for making miso at home. Address: Dr. of Literature (Bungei Hakase), Tokyo.

1476. Misumi, Kan. 1969. *Tsukemono daigaku* [The great teaching on pickles]. Tokyo: Bungeisha. 266 p. Illust. No index. 22 cm. [Jap]

• **Summary:** This book contains many excellent photos and recipes. Contents: Pickles and health. Then 25 chapters on various types of pickles. Chapter 10 is umeboshi (salt plums). Chapter 15 is koji pickles. Chapter 16 is miso pickles and sand pickles (*sunazuke*). Address: Bungei hakase, Tokyo.

1477. Nishiyama, Buichi; Kumashiro, Yukio. trans. 1969. *Seimin yôjutsu*. 2nd ed. [Ch'i-min yao-shu (Qimin yaoshu)]. Tokyo: Asian Economic Press (Ajiya Keizai Press). [Jap]

• **Summary:** Translation into Japanese with explanatory notes and extensive general discussion.

1478. Ohsawa, Georges (Nyoiti Sakurazawa). 1969. *Le Zen macrobiotique; ou, l'art du rajeunissement et de la longévité* [Zen macrobiotics, or the art of rejuvenation and longevity]. Paris: Librairie Philosophique J. Vrin. 212 p. Index. 19 cm. Preface by Cauvet-Duhamel. [Fre]

• **Summary:** Contents: Preface, by Cauvet-Duhamel. Foreword, by G. Ohsawa. 1. Macrobiotics and the medicine of the Orient. My therapeutics. 3. The seven conditions of health and happiness. 4. With faith, nothing is impossible. 5. Yin and yang. 6. My macrobiotic cuisine and the ten ways of eating properly. 7 Principal foods (*Les aliments principaux*). 8. Secondary foods. 9. Special dishes. 10. Suggestions for some illnesses / maladies. 11. Healing regimens. 12. Food for infants. 13. Some ideas.

Appendixes: A cure in 10 hours. Pro-forma death certificate for the world empire of the American gold dynasty. My talks in the United States (starting in Nov. 1959, in New York, Los Angeles, and San Francisco). The despair of American doctors according to the *Times* of 7 March 1960 (listing of the number of people with 17 incurable diseases). How much does the death of a civilization cost? The real cause of sickness, unhappiness, and war. Professional education and religion. Medicine's last cry of despair. The medical revolution in the China of Mao Tse-tung. Medicine: God alone understands it. My prophecy.

The following foods are discussed: Rice, buckwheat, millet and other cereals (p. 67-77). Azuki beans (p. 98). Sesame tofu (p. 98). Sea vegetables (konbu, hijiki, p. 101-05). Miso and miso recipes (p. 105-08, incl. Tekka). Shoyu and shoyu recipes (p. 108-10). Ohsawa coffee (Yannoh, with azuki, p. 111-12). Syo-ban (Natural green tea with shoyu, p. 113-14). Kuzu (p. 114). Umeboshi juice (p. 116-17). Ume-syo-ban (umeboshi and tamari shoyu, p. 117). Ume syo-kuzu (with umeboshi, shoyu, and kuzu, p. 117). Miso fried in sesame oil (p. 118).

Note 2. The author, born in 1893, lists his name on the title page as "Georges Ohsawa (Nyoiti Sakurazawa)."

1479. Rudzinski, Russ. 1969. *Japanese country cookbook*. San Francisco, California: Nitty Gritty Productions. xvi + 198 p. Illust. by Mike Nelson. 14 x 22 cm.

• **Summary:** A surprisingly large number of the recipes in this cookbook contain soyfoods. Soy-related recipes include: Sukiyaki (with tofu and shoyu, p. 5-10). Teriyaki (normally done on a hibachi grill; *teri* = shiny or glazed and *yaki* = broiled, p. 16). Miso shiru (p. 20). Chicken teriyaki with sesame seeds (with shoyu, p. 24). Chicken liver teriyaki (with shoyu, p. 26). Shrimp teriyaki (with shoyu, p. 28). Spicy shrimp teriyaki (with shoyu, p. 28-29). Tofu dengaku (p. 29). Tofu yaki (fried) (with miso and shoyu, p.

29). Tofu soup (p. 48). Kaki no miso suimono (Oyster soup with soybean paste, p. 55). Vegetable and noodle miso soup (p. 56). Shrimp miso (p. 56). Takara yaki (omelette with tofu, p. 65). Tofu-egg cakes (p. 66). Tofu-egg omelette with white toasted sesame seeds (p. 66). Fried tofu with egg (p. 67). Cabbage with miso sauce (p. 85). Horenso (spinach) with miso (p. 89). Karai nasubi miso (Spicy eggplant with miso, p. 94). Goma nasubi miso (Eggplant with miso and sesame seed paste, p. 95). Tofu sauce (p. 102). Inari sushi (with aburage, p. 110-11). Miso dango (meatless rice-based patties / balls, p. 117). Soba (buckwheat noodles) with miso sauce (p. 122). Tofu to niku donburi (bowl with meat and tofu, p. 127). Sakana no nitsuke (fish cooked with miso, p. 135). Shiroy sakana no nitsuke (white fish with miso, p. 136). Tofu to ebi no kuzu-ni (tofu and prawns in kuzu sauce, p. 139). Simple kaki (oyster) miso (p. 140). Kaki nabe (pot of oysters with miso, p. 141). Kaki to tofu nabe (oyster pot with tofu and white miso, p. 141). Yaki hamaguri (broiled clams with white miso, p. 143). Kawari tofu nori zuke (prawn dumplings with tofu, p. 148). Tori dango miso (fried ground chicken with miso, p. 162). Tofu, pork and vegetables (p. 167). Mashed tofu and ground pork (p. 168). Buta nabe (pou-au-pork with tofu, p. 168). Pork mizutaki (with tofu, p. 169). Beef mizutaki (with tofu, p. 175-76). Shabu-shabu (with tofu, p. 181). Shoyu is used in many, if not most, of the recipes in this book.

At the back is a glossary, which includes definitions of aburage, miso, shoyu, and tofu. Address: California.

1480. Saito, Akio. 1969. [Chronology of soybeans in Japan, 1950 to 1969] (Document part). In: Akio Saito. 1985. Daizu Geppo (Soybean Monthly News). Feb. p. 15-16. [Jap]

• **Summary:** 1950–The production of soybeans increases greatly to 446,900 tonnes (2.1 times more than in recent years).

1950–In March, the food ration system organization is closed. In July the ration systems for miso and shoyu are removed.

1951 March–The restrictions for soybeans and rapeseed are removed. From this time on, the number of natto makers increases rapidly.

1952–Soybean production in Japan reaches 521,500 tonnes, the largest since World War II.

1953 Jan.–Restrictions are imposed on imports of foreign soybeans paid for in foreign currencies.

1955. Rice production in Japan this year is 12,390,000 tonnes (up 35.9% over last year). This is the first time it has topped 12,000,000 tonnes. Irrigated rice cultivation (*suiden*) is 20% more than last year. The days of rice shortages are over and the black-market price of rice falls. The per-capita direct consumption of soybeans for the year is 4.5 kg (This information comes from *Norin Suisan-sho, Shokuryo Jukyu-ho*).

1955 April–Soybeans from Brazil are graded using the AA system (*Yunyu jido shonin sei*).

1956–A new natto container is invented, made of shaved wood (*kyogi*) lined with a polyethylene sheet.

1956 June 13–New regulations for agricultural products and price stabilization. Domestic soybeans are added to them.

1956 Oct.–The tax on imported soybeans rises to 10% and the no-tax system for soybeans is removed.

1959–The first instant miso soup is introduced by Yamajirushi Miso in Nagano. It contains dried green onions, wakame, dried tofu [probably dried-frozen tofu], etc.

1959–At about this time research begins on meat analogs made from soy protein.

1960–Per capita consumption of shoyu drops to 13.7 kg. It has now fallen below 14 kg/person.

1960–Soybean imports rise to 1,128,000 topping the 1,000,000 level of the first time.

1961 July 1–The tax on imported soybeans is removed.

1962–A new natto container made of Styrofoam is invented (*PHP yoki, happo suchiroru*).

1963–In the USA General Mills starts to sell meat analogs made from soy protein.

1965–Per capita miso consumption drops to 7.8 kg, falling below 8 kg/person.

1965–Production of defatted soybean meal reaches 1,074,000 tonnes, passing the 1 million tonne mark for the first time. Production has risen 56% in during the past 5 years.

1966–At about this time meat analogs based on soy protein start to be sold commercially in Japan–to institutions.

1966–Soybean imports rise to 2,168,467 tonnes, passing the 2 million tonne mark for the first time.

1966–Production of soybeans in Japan drops below 200,000 tonnes for the first time. Japan now produces only 9% of the soybeans it consumes.

1966 May–Kikkoman starts selling low-salt shoyu.

1968–Meat analogs based on soy protein start to be sold to the general public in Japan.

1968 June–Research conducted by the *Mainichi Shinbun* shows that the size and price of tofu is now different in different areas. In Tokyo it sells for 25 yen per 300 gm or over. Cakes of tofu sold in downtown Tokyo (*shitamachi*) are smaller than those sold uptown (in the hilly sections) (*yamanote*). Some tofu shops that are not members of the tofu association sell it for 15 yen per 350 gm. In Nagoya it retails for 30 yen per 450 gm, and in Northern Kyushu 25 yen per 450 gm. Per capita consumption of tofu is 33 cakes (*cho*) a year.

1969–Per capita consumption of soy oil in Japan rises to 3.2 kg, passing the 3 kg mark for the first time. In 1969 it was 1.2 kg/person. Address: Norin Suisansho, Tokei Johobu, Norin Tokeika Kacho Hosa.

1481. Shinojima, Chu; Ashihara, Tamako. 1969. Practical shoyu cooking: Delicious dishes with Japanese soy sauce. Tokyo: Japan Publications Inc. 61 p. Illust. No index. 26 cm. [Eng]

• **Summary:** Contents: Introduction. Helpful hints on how to use this book. Egg dishes. Beef and veal dishes. Okinawan dishes. Chicken dishes. Japanese soy sauce–Shoyu. Pork dishes. Modern Japanese cooking. Canned foods and salads. Desserts. Tofu dishes and soups. Fish dishes.

Contains many full-page color photos. The word “shoyu” is used throughout the book, and all recipes call for the use of “shoyu.” The chapter titled “Japanese soy sauce–Shoyu” (p. 32-33) begins: “Shoyu is the single seasoning without which the art of Japanese cooking would be impossible. Its flavor and fragrance also blend beautifully with food of other countries, and shoyu is now in use throughout the world. Japan’s largest shoyu producer, the Kikkoman Shoyu Company, exports its product to 51 countries around the world.” It also notes that among the traditional influences on Japanese cooking, that “of Buddhism was especially strong in regard to developing a respect for the natural flavor of each food item. The best means of bringing out the flavor of each food was found to be through the use of shoyu.”

1482. Steinberg, Raphael. 1969. The cooking of Japan. New York, NY: Time-Life Books. 208 p. Illust. General index. Recipe index (English). Recipe index (Japanese). 28 cm.

• **Summary:** A superb, elegant book, that (with its spiral-bound companion volume of recipes) captures in both words and photos (by Eliot Elisfon) the true spirit of Japanese food and cookery. Contents: Introduction: Solving the mysteries of Japan’s marvelous cuisine, by Faubion Bowers. 1. The heritage of a remarkable past. 2. Foods to suit the seasons. 3. The logic of Japanese cookery. 4. The world’s greatest seafood. 5. Simple, satisfying foods of home. 6. A ceremony that sired a cuisine (*kaiseki* or tea ceremony cooking, with roots in 13th century Zen Buddhism). 7. Eating out as a way of life. 8. Magnificent meals in elegant settings.

Soy-related: The writer of the introduction snacked on odorous, fermented soy beans (*natto*) at night before retiring (p. 6). His son said to him recently, “Please, Dad. Not *tofu* again!” (p. 7). Importance of the soybean (p. 16-17; China has had a huge impact on Japanese culture. “Perhaps the most important food innovation contributed by China was the soybean, which in various disguises is still the foundation stone of Japanese cooking.”). Shoyu is the Japanese word for soy sauce (p. 26). Tofu (soybean curd), which is cooked with other foods throughout most of the year, becomes a dish in its own right during the summer, served on ice and flavored with soy sauce (as *hiyayakko*, p. 32). Photos of tofu, shoyu, green soybeans [*edamamé*] and

akadashi miso in prepared festival dishes (p. 34-35). *Matsutake* mushrooms with tofu or shoyu. “The most important lesson to be learned deals with the ubiquitous role of the soybean. Generally considered by Westerners to be the most humble of vegetables, the soybean is in fact the king of the Japanese kitchen. One might almost say that Japanese cuisine is built upon a tripod of soybean products: *miso*, a fermented soybean paste; *tofu*, a custardlike soybean cake; and soy sauce, used both to season foods as they are being cooked and to make dipping mixtures that enhance the flavors of the foods as they are being eaten.” Details about these three products and their uses is then given (p. 41-42). Teriyaki or “shining broil” (p. 43). Two-page color photo shows (p. 44-45): Azuki beans and *kuromame* (black soybeans), sesame seeds, sesame oil, *fu* (wheat gluten croutons), *aonoriko* (powdered green seaweed), Kikkoman shoyu, *aka miso*, *shiro miso*, *tofu*, nori and wakame. Ponzu, a dipping sauce which is half soy sauce and half lemon or lime juice (p. 46). Sukiyaki (p. 46). Tempura (p. 49). *Aemono* and *sunomono* with tofu, miso, or soy sauce (p. 48). Photo of a tofu-slicing knife with a serrated blade (p. 50). Recipes: Clear soup with tofu and shrimp (*Sumashi wan*, p. 55). Miso soup with red and white miso (p. 56-57, 59). Miso-flavored pork and vegetable stew (*Satsuma-jiru*, p. 61). Soy and sesame-seed dressing with string beans (*Goma joyu-ae*, p. 62; with “½ cup white sesame seeds, toasted and ground to a paste”). Tofu and sesame-seed dressing with vegetables (*Shira-ae*, p. 63; “Add the sesame seeds..., warm them until lightly toasted. Grind them to a paste in a *suribachi* (serrated mixing bowl) or, more easily, pulverize them at high speed in an electric blender with 1/8 teaspoon of soy sauce. Transfer the sesame-seed paste to a mixing bowl...” Two color photos show: (1) Toasted sesame seeds in a *suribachi* with a wooden pestle. (2) When ground, they “quickly release their oil and turn into a paste”). White miso dressing (*Neri shiro miso*, p. 67). Photo of *zensai*, incl. miso-marinated asparagus, and abalone cooked in soy sauce (p. 72). Sashimi dipped in soy sauce (p. 81-83, 90-91).

Undersea vegetables: nori, kombu, wakame, hijiki (p. 88-89). Recipes: Sushi (p. 95-101). Tempura (p. 103). Mirin and soy dipping sauce for tempura and noodles (*Soba tsuyu*, p. 104). Deep-fried tofu in soy-seasoned sauce (*Agedashi*, p. 105).

Tofu is the Japanese word for soybean curd (p. 108). Umeboshi (p. 109). Miso soup (p. 109-10). Natto and miso (p. 115). Tofu and shoyu in *yudofu* (p. 116). Sekihan and azuki (red beans, p. 120). *Mame* (“beans”) are served at traditional wedding feasts; the word also means good health. Mochi (p. 121). Recipes: Sekihan (p. 126). Fox noodles with deep-fried tofu (*Kitsune udon*, p. 127). Bubbling tofu (*Yudofu*, p. 132-33). *Sukiyaki* (p. 134). *Shabu shabu* (with tofu, p. 135).

Tofu and miso in *kaiseki* cuisine based on Zen Buddhism and the tea ceremony (p. 146-49). Teriyaki, mirin, ponzu, tofu (p. 152). Tofu and shoyu (p. 159). Sasanoyuki restaurant in Tokyo (uses tofu as a main ingredient in every dish, p. 160-61). Sukiyaki, with tofu and soy sauce (photo, p. 166-67). Broiled mackerel in miso marinade (*Miso zuke*, p. 169). Dengaku tofu (p. 172-73, with color photo). Beef teriyaki (with shoyu, p. 174-75). Yakitori (with teriyaki sauce, p. 174-75). Grilled chicken with sweet soy-seasoned glaze (*Tori teriyaki*, p. 176). Black soybeans and tofu (p. 188). At a geisha house, shoyu is called *murasaki* ("the purple").

A guide to Japanese ingredients (glossary): Incl. aji-nomoto, aonoriko, azuki, fu, goma, goma-abura, hichimi (shichimi) togarashi, kombu, konnyaku, mirin, miso, MSG, nori, shoyu, soba, tofu, umeboshi, wakame, wasabi.

Note: The spiral-bound recipe book accompanying this volume contains the recipes in the parent volume and no new information; the binding makes it easier to use in the kitchen. Address: USA.

1483. Ucko, P.J.; Dimbleby, G.W. eds. 1969. The domestication and exploitation of plants and animals: Proceedings of a meeting of the Research Seminar in Archaeology and Related Subjects held [18-19 May 1968] at the Institute of Archaeology, London University. Chicago, Illinois: Aldine Publishing Co.; London: Gerald Duckworth & Co. Ltd. xxvi + 581 p. Illust. General index. Index of sites and localities. Index of authors. 26 cm. [500+* ref]
 • **Summary:** One goal of this seminar is to gain an "insight into modern man's relationship to his habitat. In the last decade or two a change in methods of investigating these events has taken place, due to the mutual realization by archaeologists and natural scientists that each held part of the key and neither alone had the whole. Inevitably, perhaps, the floodgate which was opened has resulted in a new spate of knowledge..." "This meeting was called so that workers in the archaeological, anthropological, and biological fields could bridge the gap between their respective disciplines..." (p. ix).

"Mankind took an immensely long time to learn how to gain food by any other means than hunting, fishing and gathering. Our record of manufactured tools goes back over one million years but evidence of domesticated animals and plants only starts at a date somewhere near the end of the European Ice Age, i.e. after ca. 10,000 BC" (p. xvii).

While archaeology is presently best suited to study domestication, a movement is taking place in archaeological thought which recognizes the essential unity of the ecological approach; man is increasing being viewed as part of an ecosystem in which he has played a significant, if not dominant, role for some millennia. Increasingly man is seen as "another animal in the world of nature" (p. xxiii).

One cannot solve a problem unless one asks the right questions. And to ask the right questions one must look at the problem from a particular viewpoint. "That viewpoint, so far as the origin of domesticated plants is concerned, is, I am convinced, the ecological one... we must look at wild and cultivated plants associated with man as an ecological complex and view this in relation to the ecology of man himself." Scientists must search for exact "archaeobotanical data."

Vavilov considered the soyabean a primary crop (Hawkes, p. 25). In Indonesia, "fermented cakes of soya beans and groundnut [tempeh and onchom] provide about one-third of the total crude protein requirement of the population..." (Stanton, p. 464). In Japan, advanced fermentation processes are used to make miso and shoyu. Today these fermentations take place under highly controlled, industrial conditions in highly specialized environments (Stanton, p. 467).

This book shows clearly that many crops were domesticated before the soybean. In China, foxtail millet (*Setaria italica* var. *germanica*), broom corn millet (*Panicum miliaceum*), rice (*Oryzae sativa*), and wheats (*Triticum* spp.) have been identified in neolithic contexts (Watson, p. 398-99). In Tehuacan, Mexico, radiocarbon datings for common beans (*Phaseolus vulgaris*) have been reported from 5,300 B.P. [before the present] (Smartt, p. 452-53). Chili peppers (*Capsicum annuum*) share with *Phaseolus* beans and the Cucurbits (squashes) the distinction of being among the first plants cultivated in the New World (Americas). Chili peppers have been found in early sites in both Middle and South America. In Mexico, they have been dated back to about 7,000 BC. "This antedates the development of agriculture and implies that wild plants were being exploited." The first plants cultivated in Peru appear to be gourds and squashes, but by 2000 BC peppers were grown in the Ancon area on the central coast (Pickersgill, p. 443, 446-47). Address: 1. Dep. of Anthropology, University College, London; 2. Dep. of Human Environment, Inst. of Archaeology, London.

1484. Yamaguchi, Kozo. 1969. Jôzô kikai: Sake, miso, shôyu seizô no kindaika o hakaru [Brewing machines: Designing for the modernization of sake, miso, and shoyu production]. Tokyo: Chijin Shokan. 169 p. (Modern Engineering Library). [20+ ref. Jap]*

1485. Erewon Trading Co., Inc. 1970. Traditional foods: Importers, processors, distributors. Wholesale-retail catalogue. Boston, Massachusetts. 12 p. Jan. 1. 22 cm. [2 ref]

• **Summary:** On the cover is the silhouette of three heads of grain on the plant, by a Japanese crest. The company sells the following types of foods: 1. Grains: Brown rice (short grain Kokuho Rose grown by Koda Brothers), Sweet brown

rice (Koda Bros., more glutinous than brown rice). 2. Beans: Azuki beans (imported from Hokkaido), Black beans (“Kuromame, a black soy bean import”), Chickpeas (Garbanzo, imported from southern Europe). 3. Sea vegetables: Dulse (From Grand Manan Island, Canada), hiziki, kombu, nori (dried laver), wakame (the latter 4 imported from Japan).

4. Soy Bean Products: Soy sauce (“Aged naturally in wooden kegs at least 18 months”; 16 oz, 32 oz, 18 litre keg). Hacho miso (“Soybean puree made from soybeans, salt & water. No chemicals used in fermentation. Aged at least 18 months”; 1 lb, 2 lb, 44 lb keg). Mugi miso (“Soybean puree. A lighter miso made with barley”; 1 lb, 2 lb, 44 lb keg). Moromi (“A thick sauce removed from the bottom of the soy sauce kegs after fermentation. Its uses are unlimited in soups & sauces”; 7 oz.). Seitan (“Wheat and soy sauce cooked together for a long time. When used in soups or sauteed in vegetables it has a taste much like beef”; 3½ oz.). Note 1. This is the earliest document seen (July 2005) that mentions seitan and clearly understands what it is.

5. Condiments: *Furikake* (“A tangy sesame condiment made from Miso, sesame seeds, soy flour, nori and bonito [sic, bonito] flakes”; 3½ oz.), Daikon pickle, Sesame miso (“A hearty condiment for use on rice and other grains. Made from miso and unhulled sesame seeds”; 3½ oz). Tekka (“A strong dark condiment; famous for its medicinal qualities. Made from carrots, burdock, lotus, ginger, sesame oil, and miso”; 3½ oz), Sesame seeds, Sesame tahini.

6. Sea salt: Grey unrefined (from the Mediterranean Sea, unwashed and unground), White unrefined. 7. Oils: Corn germ oil (unrefined, pressed. No solvents, chemicals, or preservatives), Sesame oil. 8. Noodles: Ito soba, Kame soba, Udon. 9. Beverages: Kukicha, Kohren (Lotus root powder), Mu beverage (made from 16 different herbs), Yannoh (coffee-like drink made from grains and beans).

10. Miscellaneous: Dentie toothpowder (made from eggplant and salt), Kuzu arrowroot, Umeboshi & chiso [shiso, shisonoha, or beefsteak leaves], Umeboshi (“Salt plums aged in wooden kegs for at least 3 years”).

11. Cookbooks (written in America): *Cooking Good Food*, and *Cooking with Grains and Vegetables*.

The majority of the above products are imported, mostly from Japan.

The inside front cover states: “Due to the growth of our business and our belief that good quality food should be available at low cost, we have eliminated many items from our wholesale list. We have eliminated most grains because excellent quality grains are available from many sources at more reasonable prices than we are able to charge. Two excellent sources for grains are Arrowhead Mills, Box 866, Hereford, Texas, and Pioneer Specialty Foods, Box 427, Fargo, North Dakota. Also eliminated from our wholesale list is Chico-San products. For these please write directly to

Chico-San, 1262 Humboldt Ave., Chico, California, or contact any health food distributor.”

Note 2. The products in this catalog do not require refrigeration; they contain no refined sugar / white sugar, no meat, and no dairy products—just like the catalogs of almost all subsequent natural food distributors during the 1970s and 1980s.

Note 3. This is the earliest existing Erewhon catalog seen, and the earliest document seen (Sept. 2005) concerning Erewhon and soy.

Note 4. This is the earliest document seen (March 2006) that mentions Arrowhead Mills, of Hereford, Texas. Address: 342 Newbury Street, Boston, Massachusetts 02115. Phone: 617-262-3420.

1486. Hellendoorn, E.W. 1970. Onbewerkte en bewerkte peulvruchten in onze voeding [Unprocessed and processed legumes in our food]. *Voeding* 31(1):1-14. Jan. 15. [10 ref. Dut]

• **Summary:** The soybean (*de sojaboon*) and soyfoods (p. 6-7) include: Soybean meal (*sojameel*), soy oil (*de olie*), soy sprouts (*gekiemde sojaboonen*), tofu (*tahu*), soy sauce (*sojasaus*), miso, and tempeh. Address: Doctor, Centraal Instituut voor Voedingsonderzoek TNO, Zeist.

1487. Centre de Documentation Internationale des Industries Utilisatrices de Produits Agricoles (CDIUPA). 1970—. IALINE (Industries Agro-Alimentaires en Ligne) base de données [IALINE (Food and Agricultural Industries On-Line) database]. 1, avenue des Olympiades—91300 Massy, France. [271542 ref. Fre]

• **Summary:** This is the world’s best database for French-language publications related to food and nutrition. It first became available for use in Jan. 1970, and that is also the date of the earliest record in the database. It is produced by the Center for International Documentation on Industrial Utilization of Agricultural Products (CDIUPA), founded in 1965 by the French Ministry of Agriculture. CDIUPA is administered by APRIA (*Association pour la Promotion Industrie Agricole*), which is a member of the International Commission of Agricultural and Food Industries.

The current contents of the database is published in a monthly journal titled “Industries Agro-Alimentaires: Bibliographie Internationale,” which began under that title in Jan. 1983. It was preceded by *Bibliographie Internationale des Industries Agro-Alimentaires. Bulletin Bibliographique* (published from Jan. 1967 to Dec. 1982). In the monthly journal, the citations are grouped under 6 broad headings: 1. General (with 8 subcategories). 2. Agro-food industries (industries agroalimentaires; with 17 subcategories; Many documents on soyfoods are cited in subcategory N titled “*Protéines d’origine animale, végétale, microbiologique, algues et levures aliments*”). 3. Fermentation industries (with 6 subcategories). 4. Food

microbiology. 5. Food toxicology. 6. Utilization and adding value to agricultural and food-industry by-products. Biotechnology. The journal contains 3 indexes: Subject index. Index of sources (periodicals [with journal names written out in full], acts of congress, books, theses). Author index.

Information related to soyfoods is likely to be found under the following headings in the subject index: *Aspergillus oryzae*; Farine de soja (incl. soy flour, and roasted soy flour or kinako); Huile de soja (soy oil); Koji; Lait de soja (soymilk); Miso; Nato (incl. natto); Produit à base de soja (incl. dawa-dawa, kinema, soy cheese [western style], soy nuggets/Hamanatto, soynuts, soy ice cream, soy yogurt, thua-nao, yuba), Protéine de soja (soy protein products); Protéine de soja, Produit extrudé (extruded soy products); Protéines d'origine animale, végétale; Sauce de soja (soy sauce); Soja (incl. green vegetable soybeans); Soja, germe (soy sprouts); Sufu (fermented tofu); Tempeh; Tofu. Address: Massy, France. Phone: (1) 69.20.97.38.

1488. **Product Name:** Furikake, Sesame Miso, Tekka. **Manufacturer's Name:** Erehwon Trading Co., Inc. (Importer). Imported from Muso Shokuhin in Japan. **Manufacturer's Address:** 342 Newbury St., Boston, MA 02115.

Date of Introduction: 1970. January.

How Stored: Shelf stable.

New Product–Documentation: Erehwon Trading Company Inc. 1970. Jan. 1. Wholesale-retail catalogue. Products imported from Japan include the following “Condiments,” each made with miso: *Furikake* (“A tangy sesame condiment made from Miso, sesame seeds, soy flour, nori and bonita [sic, bonito] flakes”; 3½ oz.), Sesame miso (“A hearty condiment for use on rice and other grains. Made from miso and unhulled sesame seeds”; 3½ oz). Tekka (“A strong dark condiment; famous for its medicinal qualities. Made from carrots, burdock, lotus, ginger, sesame oil, and miso”; 3½ oz).

Label sent to Lorenz Schaller, perhaps by Chico-San. 1973. Sept. Tekka vegetable condiment. Product of Japan. Distributed by Erehwon Trading Co., Boston and Los Angeles. 3.5 oz. 3.75 by 2.5 inches. Paper. Light green, yellow, and black on white. “Tekka is an iron rich condiment prepared by cooking several root vegetables for one day in sesame oil and miso.” Tekka “has a nutty taste and pleasing flavor. It is delicious as a seasoning on brown rice and rice cream.” Ingredients: Carrots, burdock root, lotus root, miso, sesame oil, ginger.

1489. **Product Name:** Tamari (Soya Sauce), Miso (Soya Bean Paste), Daiya Tofu (Bean Curd).

Manufacturer's Name: Hunzana Foods Limited (Importer-Marketer). Made in Japan.

Manufacturer's Address: 34 Dryden Chambers, 119 Oxford St., London, W.1, England.

Date of Introduction: 1970. January.

New Product–Documentation: Ad (full-page) in *The British Vegetarian*. 1970. Jan/Feb. p. 9. Hunzana imports these health foods from Japan. ½ litre of “Tamari (Soya Sauce)” sells for 6 shillings 9 pence (6/9). 1 lb of “Miso (Soya Bean Paste)” sells for 5/6. 188 gm of “Daiya Tofu (Bean Curd)” sells for 6/6. Hunzana also imports other foods from India, North Ireland, Eire, Germany, and Greece.

1495. Erewhon Trading Co., Inc. 1970. Traditional foods: Importers, processors, distributors. Mail order catalogue. Boston, Massachusetts. 16 p. March 1. [2 ref]
• **Summary:** On the orange cover is the silhouette of three heads of grain on the plant, by a Japanese crest. The company sells the following types of foods: 1. Whole grains: Brown rice (short grain grown by Koda Brothers. "Not strictly organic, but the finest available in the U.S. today"), sweet brown rice (also grown by Koda Bros.), buckwheat groats (Kasha, from Pocono Mts. in Pennsylvania), wheat berries (organically grown in the Golden Valley of North Dakota), millet (organically grown), barley, yellow and white corn (organically grown in Deaf Smith County, Texas), oats, rye (organically grown in Deaf Smith County, Texas). Table of prices for different weights. 2. Fresh stone ground flours. 3. Cereals, made from whole grains and milled in a manner to allow quick cooking, incl. Kokoh (which can be used as a milk substitute or prepared as a cereal for children). 3. Noodles (udon, soba, and shonai fu-wheat gluten cakes). 4. Beans: Azuki beans ("The King of Beans... Organically grown on the island of Hokkaido, Japan), black beans (a sweet black soybean imported from Japan. Organically grown), chickpeas, soybeans ("Organically grown in Pennsylvania. A food high in protein, vitamins and minerals. Should be soaked many hours before cooking. Particularly good if cooked with Kombu"), pinto beans, whole green lentils, red split lentils. Table of prices for different weights.

5. Sea vegetables: Nori (dried laver), kombu, wakame, hiziki, agar-agar. 6. Dried fish and vegetables: Bonita [sic, Bonito] flakes, chirimen iriko, daikon pickle, gourd strips (dried), daikon (dried radish). 6. Order form. 7. Beverages: Kukicha, mu herbal beverage, yannah, lotus root powder, mugicha (barley tea), peppermint tea.

8. Soybean Products (imported from Japan): Soy sauce ("aged for at least 18 months"; 16 oz, 32 oz, ½ gallon, 1 gallon, 4.75 gallon keg). Mugi miso-Soybean puree ("Made by a special enzymatic process, this Miso is aged for 18

months. It is made from soybeans, barley, water and salt. It is ideal for making soups and sauces and blends well with tahini to make a spread for bread." 1 lb, 2 lb, 4 lb, 44 lb keg). Hacho miso-Soybean puree ("A darker, stronger miso than Mugi Miso..."). Moromi ("A thick sauce removed from the bottom of the Soy Sauce kegs after fermentation. Its uses are unlimited in soups & sauces"; 7 oz.). Seitan ("A concentrated protein source made from wheat and soy sauce. When used in soups or sauteed in vegetables, it has a taste much like beef"; 3½ oz.).

9. Condiments: *Furikake*, kuzu arrowroot, tekka, umeboshi, sesame butter, Erewhon sesame tahini, sesame salt, white sea salt, grey sea salt. 10. Oils: Refined corn oil, corn germ oil, sesame oil. 11. Sundries: Sesame seeds, sunflower seeds, pumpkin seeds, popcorn, raisons (Thompsons), dried apricots, wheat germ (raw), apple butter, whole dried chestnuts. 12. Toilet articles: Dentie (tooth powder made from eggplant and salt), Aditi sesame shampoo, Orgene [Orjene] herbal shampoo, Fu-nori (seaweed shampoo), sesame coconut soap, vege oat soap.

13. Kitchen and tableware: Cookbooks: *Zen Cookery*, *Cooking with Grains and Vegetables*, *Cooking Good Food*, *Zen Macrobiotic Cooking*. Tableware: Rice paddles (bamboo), soy sauce dispenser, oil skimmer, bamboo tea strainer, vegetable press, vegetable brush, bamboo chopsticks (Japanese), chopsticks (Chinese), MAC knife (vegetable), vegetable knife, fish knife, grater, suribachi (3 sizes), Corona hand grinding flour mill (\$10.95).

On the inside rear cover is a United Parcel Service rate chart. Address: 342 Newbury Street, Boston, Massachusetts 02115. Phone: 617-262-3420.

1496. Descamps, Hubert. 1970. Tamari et kokkoh: Source d'acides aminés [Tamari and kokkoh: Source of amino acids]. *Spirale (Brussels, Belgium)* No. 36. p. 13-16. May. [1 ref. Fre]

• **Summary:** Prof. Christophe of the laboratory of biochemistry and nutrition on the faculty of medicine of the U.L.B. has done an analysis of Kokkoh (grain coffee) and tamari. The composition of 8 amino acids is given for each product.

"Miso, another source of vegetable proteins, strongly resembles tamari, except that the dry extract is superior. Miso contains about 30-40% moisture. Thus it contains about 3 times the concentration of amino acids and other nutrients found in tamari. It is also clear that one cannot consume large quantities of miso. It is interesting to note that miso is very useful for making soups."

Note: This magazine began publication in 1964.

1497. Gray, William D. 1970. The use of fungi as food and in food processing. *CRC Critical Reviews in Food Technology* 1(2):225-329. May. (Chemical Rubber Co. Press, Cleveland, Ohio). [348* ref]

• **Summary:** The section titled “Oriental fungus-processed foods (p. 263)” discusses: Broad differences between fermentation processes in the Occident and Orient, miso, shoyu, Hamanatto, tempeh, ang-khak, ontjom, sufu, meitauza, ketjap, katsuobushi, and other fungus-fermented foods: Chee-fan (a type of sufu), fermented minchin (wheat gluten), fermented soybean prepared from black soybeans in China (soy nuggets), tao-cho, tao-si, and taotjo (the last 3 foods made from soybeans). Address: Dep. of Botany, Southern Illinois Univ., Carbondale, Illinois.

1498. Erehwon Trading Co., Inc. 1970. Traditional foods: Importers, processors, distributors. Wholesale catalogue addition. Boston, Massachusetts. 5 p. July 1.

• **Summary:** On the cover is the silhouette of three heads of grain on the plant, by a Japanese crest. “As of July 1st., we will be set-up in our new warehouse... All orders that are to be picked-up, will be from 33 Farnsworth Street, South Boston, Mass. The new phone number for wholesale information and offices is (617-542-1358). Please continue to direct all correspondence and payments to 342 Newbury Street, Boston, Massachusetts 02115.”

New products include: Soybeans in 100 lb (\$26.00), 50 lb, 25 lb, 10 lb, and 1 lb quantities. Kome Miso (Made with rice. It is younger and contains less salt than other Miso’s. Used more as a delicacy; 44 lb (\$24.50), 2 lb, 1 lb). Koji rice, imported from Japan, will be available soon. Address: 342 Newbury Street, Boston, Massachusetts 02115.

1499. **Product Name:** Kome Miso–Made with Rice.
Manufacturer’s Name: Erehwon Trading Co., Inc.
Manufacturer’s Address: 33 Farnsworth St., Boston, MA 02110. Phone: (617) 542-1358.
Date of Introduction: 1970. July.
Wt/Vol., Packaging, Price: 44 lb, 2 lb, or 1 lb.
New Product–Documentation: Erehwon Trading Company Inc. 1970. July. Wholesale-retail catalogue. “New imports from Japan... It is younger and contains less salt than other Miso’s. Used more as a delicacy. 44 lb for \$24.50, 2 lb for \$1.49, 1 lb for \$0.85.”

1500. *Los Angeles Times*. 1970. Mastering the menu: Learn how to order your Kaffee mit Schlagobers. Oct. 2. p. I2.

• **Summary:** For each of 15 countries where Americans travel, gives a list of words that are useful when ordering in a restaurant. Under Japan: “Kabayaki: Broiled eels. Miso: Bean paste [soy]. Natto: Steamed and fermented [soy] bean. Sashimi: Raw fish dish... Shoyu: Soy sauce. Soba: Buckwheat noodles. Sukiyaki: A quick-cooked meat stew [with tofu and shoyu]. Sushi: Flavored rice and raw fish [sic, many kinds without raw fish]. Tempura: Deep-fried shrimp, fish and vegetables. Tofu: Bean curd. Unagi: Eel.”

Note: This same article appeared under the title “Are menus a puzzle? Master a few of those foreign food

phrases” in the Oct. 6 issue (p. F16) of this newspaper.

1501. *Time*. 1970. The kosher of the counterculture. 96:59-60, 63. Nov. 16.

• **Summary:** “‘Tell me what you eat and I will tell you what you are,’ said Jean Anthelme Brillat-Savarin, the 18th century French gastronome. This aphorism is especially true today.” The youth of Woodstock Nation, with almost religious zeal, “are becoming vegetarians. They are also in the vanguard of the flourishing organic-food movement, insisting on produce grown without chemical fertilizers or pesticides.

“Diet is very central to the revolution,” says the leader of a north California commune. Why the new vegetarian trend? (1) It’s inexpensive; (2) The eco-activists are concerned about the amount of DDT and other chemicals in meat; (3) There is the vegetarian influence of East Asian religions such as Buddhism, Yoga, and Hinduism; (4) The Macrobiotic diet is vegetarian except that it allows fish and seafoods, but it discourages use of dairy products. There is a lengthy, critical discussion of macrobiotics, George Ohsawa (“who wrote dozens of abstruse books on ancient Oriental diet and medicine and was the principal proselytizer for macrobiotics in Europe and the U.S.”), and Beth Ann Simon (“Macrobiotics can be dangerous. The diet became notorious 5 years ago when a 24-year-old Greenwich Village housewife named Beth Ann Simon died after losing 50 lbs.” on Macrobiotic Regimen No. 7); (5) Diet and yoga have become a substitute for drugs for many people. They lead to a more real and spiritual consciousness. “The young are beginning to realize that drugs aren’t real. They thought it was a shortcut to the spiritual.”

“Anthropologist Claude Lévi-Strauss has shown that a society’s cuisine is a language into which it unconsciously translates its structure. Thus frozen foods, packaged foods, TV dinners, fast-food franchises, preservatives and additives all stem from a culture that made pragmatism, step saving and time saving virtues in themselves. Because there are different values and plenty of free time in the new culture, gardening (organically), grinding wheat, baking bread, preparing yogurt and making a quiet ceremony of cooking and eating are all parts of the scene... For the more earnest of the cultists, the kitchen has become a holy place, as it is to the Hindus and the Buddhists.”

The new diets are filtering to the suburbs via the teenagers. Rows of unfamiliar foods, such as brown rice, miso, aduki, and gomasio [sesame salt], are appearing in middle-class cupboards.

1502. *Soybean Digest*. 1970. A Southeast Asia soy food firm. [Yeo Hiap Seng Ltd.]. Nov. p. 3.

• **Summary:** “A company that started as a family business making soybean products is today one of the largest food and beverage concerns in Southeast Asia. Yeo Hiap Seng

Ltd. owns a number of manufacturing plants in Singapore and Malaysia and makes soybean products and also soft drinks and canned foods.

“Yeo Hiap Seng Ltd. started off using soybeans as a base for all its products. It made soy sauce, soybean paste, and other products that are basic necessities for Chinese food...”

“In 1950, Yeo Hiap Seng Ltd. decided to undertake the processing of soy milk on a commercial scale. The firm successfully launched the first soy milk in bottles in 1952. This is marketed as a food beverage known as ‘Beanvit’ and retailed at the same price as other soft drinks...”

In 1968 the company successfully introduced soymilk in a modern one-way container. “This form of packaging, which has been widely used for milk, is the tetrahedron-shape kraft paper lined with polyethylene-coated aluminum foil. The product is sterilized before filling.

“The soy milk is heated to 142°C and held for 4 seconds, cooled instantly to the original temperature, then poured into the containers. This method of packaging under sterile conditions will enable the product to be kept for about 8 months without refrigeration. The product is much better in both appearance and taste than with the normal sterilization at 115°C for 15 minutes. The container can be discarded after use.

“Yeo Hiap Seng Ltd. has recently introduced an improved soy milk, ‘Vitabean.’ Packed the same way, Vitabean is enriched with vitamins A, B1, B2, B6, C, D3 nicotinamide and pantothenic acid sufficient to provide half the normal daily vitamin requirements for adults. It has been found there are no great losses of heat-sensitive vitamins processed with this UHT [ultrahigh temperature] method.

“The company says it is looking forward to establishing Vitabean plants in other parts of the world.” A photo shows a machine packaging Beanvit and Vitabean, with a woman standing nearby.

1503. Crane, Paul S.; Rhee, S.U.; Seel, D.J. 1970. Experience with 1,079 cases of cancer of the stomach seen in Korea from 1962 to 1968. *American J. of Surgery* 120(6):747-51. Dec. [14 ref]

• **Summary:** This case-control study shows a very high incidence of stomach cancer when compared with other forms of cancer seen in a rural Korean mission hospital. Consumption of miso soup or miso (“soya paste” [doenjang]) was associated with increased risk of stomach cancer. “The fact that *Aspergillus flavus* is found in soya bean cakes raises the possibility that aflatoxins produced by this mold which grows on the soya cakes (from which soya bean paste is made) may be a possible etiologic factor in the high incidence of stomach cancer seen in 1,079 patients with stomach cancer in a 130 bed hospital in the seven year period from 1962 through 1968 in Southwest Korea.” Soya sauce intake was also studied. Address: 1. Nashville, Tennessee; 2-3. Chonju, Korea.

1511. Abehsera, Michel. 1970. *Cooking for life*. Swan House, P.O. Box 638, Binghamton, NY 13902. xiv + 364 p. First Avon Flare Books printing, March 1972. Index. 21cm.
 • **Summary:** Contains many imaginative and joyous macrobiotic recipes. The author uses the term “black beans” and from his definition on page 18 it seems that he is referring to black soybeans: “Black Beans, twin brothers of the red aduki in size, are sold in Chinese, Japanese and natural-food stores. They are the milk and honey of the bean family, and their flavor and texture impart a delightful sweetness and richness to any soup or vegetable dish.” No definition is given of soybeans. In the section titled “Condiments” (p. 20-21), the author defines soya sauce, miso, seitan, salted plums, tofu, kuzu, etc. “Tofu is another name for soya-bean curd. In Chinatown, you’ll see it in wooden barrels. It looks like Feta Greek Cheese and some people would swear it tastes like chicken. It is excellent served with sauteed vegetables, sauces, fried or cooked in Miso Soup.

“Seitan: Your guests will almost certainly mistake this for meat. Teeth find it pleasant to chew. A combination of wheat gluten, wheat soya beans [sic], water and salt, it comes in handy when mixed with vegetables, sauces and soups.” Note 1. No recipe for making or using seitan appears in this book.

Soy-related recipes include: *Cooking beans in a pressure-cooker* (p. 66; “Do not pressure cook black beans. Their skins may come off and clog the pressure cooker spout. It is quite dangerous!”). *Cooking beans in a pot* (incl. soya beans, p. 67). *Black-bean stew* (with miso, p. 70). *Soja jardiniere* (with whole soya beans and miso).

In the chapter titled “Soups,” the author tells the story of how the famous Japanese physician, Dr. Tatsuichiro Akizuki, used miso to strengthen his constitution and to survive the atomic bomb dropped on Nagasaki on 9 Aug. 1945. Under “Minerals” in that chapter he discusses other virtues possessed by miso, then gives a recipe for Miso soup (p. 86).

Radishes sauteed in miso (p. 114). *Sandwich au gratin* (with miso spread, p. 114). *Macrobiotic marbles* (with miso, p. 155). *Claudia’s pizza* (with miso, p. 158). *Salade au cresson* (with miso, p. 169). *Nato* [sic, Natto] (Japanese salad with natto, p. 171; Note 2. The author describes “Nato” as “sour soy-beans, bought in a Japanese store”). *Miso sauce* (p. 178). *Miso spread* (with tahini, p. 187). *Oat-miso spread* (p. 188). *Scallion spread* (with miso, p. 188). *Miso pâté* (p. 189). *Komoku* (with tofu, deep-fried and cut into strips, p. 212). *O’Sushi* (with tofu, p. 217). *Kasha à l’Orientale* (with tofu, p. 220). *Bi-Cuan* (Vietnamese recipe

with fried tofu, p. 226). *Kagetsu ice cream* (with fine soya powder [perhaps Jolly Joan from Ener-G foods in Seattle], p. 334; “Kagetsu is a beautiful restaurant in Seattle”). *Yellow pompidou* (with soya bean powder, p. 336).

“Ten years ago I was a sick man, struggling to stay alive and to finish a novel. I suspected I might fail in both matters and the doctors of Paris agreed. They abandoned me as a hopeless case. It was then that I discovered a way of life called Macrobiotics. After a year of eating grains and vegetables, my health restored, I ventured to New York to discover America and finish my novel.”

Note 3. *Webster’s Dictionary* (1985) defines feta, a word first used in English in 1940, as “a white semisoft Greek cheese made from sheep’s or goat’s milk and cured in brine.” Address: New York.

1512. Binding, George Joseph. 1970. *About soya beans: Wonder source of protein and energy*. London: Thorsons Publishers Ltd. 64 p. No index. 18 cm. About series, no. 35.
 • **Summary:** Contents: 1. Beans in general. 2. History of the soya bean. 3. Content of soya beans. 4. About lecithin—vital for retaining youth. 5. The soya bean in the Far East: La Choy Products, cooking in China, soya sauce, bean curd or tofu [sic, tofu], bean sprouts, soya bean milk, candied beans, Japan, natto, miso, Japanese soya sauce. 6. American influence on the soya bean. 7. Industrial uses in America. 8. The soya bean and world food shortage. 9. Soya bean recipes.

On page 10 we read: “For over 5,000 years this tiny seed has been the staple food of certain parts of the East, including North China, Japan, Korea, and some areas of India. The ancient Yogis, who were among the world’s first vegetarians, placed great faith in the soya bean as a supplement to their meatless diet.” Note: Soyfoods Center has been unable (Aug. 2004) to find any documentation for the statement that the ancient yogis consumed soya beans. The earliest date we have seen (Aug. 2004) for the soybean growing in India is 1798 (Roxburgh 1832). The earliest document we have seen concerning the soybean in India is by Beckmann (1798). The earliest document seen (Aug. 2004) for soy products in India (soy sauce) is by Locke (1679). Address: England.

1513. Bock, Felicia Gressitt. trans. 1970. *Engi-shiki: Procedures of the Engi era*. Books I-V. Tokyo: Sophia University. xi + 216 p. Index. 27 cm. [196* ref. Eng]
 • **Summary:** This is volume 1 of a two-volume series. The second volume (ix + 190 p.), published in 1972, contains Books V-IX. These “Procedures of the Engi era (A.D. 901-922) are a great body of regulations designed to supplement the administrative codes which were drawn up in the early eighth century. Because of their wide scope and the minute details included, they are an invaluable source of

information about Japan in the Nara and early Heian periods—eighth, ninth, and early tenth centuries.”

“At first glance the *Engi-shiki* appear to be huge aggregate lists, enumerations, specifications, registers, and statistics. Such they are, but in relation to the department of government under which they fall, they provide many essential regulations for carrying out day-to-day details of civil and religious administration” (Preface, p. v).

The contents of the five books translated here are as follows: Book one: Festivals of the four seasons (Part I). Festivals of the second month, festivals of the fourth month, festivals of the sixth month (repeated in the twelfth month). Book two: Festivals of the four seasons (Part II). Festivals of the ninth month, festivals of the eleventh month, festivals of the twelfth month. Book three: Extraordinary festivals. Book four: The Shrine of the Great Deity in Ise. Book five: Bureau of the Consecrated Imperial Princess. The back matter includes: A map (p. 186) showing the Provinces and Circuits at the time of the *Engi-shiki* (circuits—from east to west: Tokai-do, Tosan-do/Tozan-do, Hokuriku-do, Nankai-do, San’yo-do, San’in-do/Sanin-do, Saikai-do), a table of ancient Japanese measurements, eight appendixes, a bibliography, and a glossary and key.

In the many long list of ritual objects, two types of sea vegetables (wakame and arame) appear very frequently (see p. 61, footnote 161). Other common objects are hemp and bark cloth (primeval clothing materials), salt, sake, rice, abalone, sea-bream, bonito, and silk.

In Book Five, included in the list of “Monthly Requirements” (p. 163) are: 2 *kin* 13 *ryō* each of laver and codium, 11 *kin* 4 *ryō* each of wakame and gelidium,... 6 *shō* of fermented soybeans,... 2 *shō* of fermented bean paste, 1 to 5 *shō* of barley sugar, 3 to each of glutinous rice, soybeans, red beans [azuki], wheat, sorghum, sesame seeds...”

In Book Five, included in the list of things “Required for the Three Occasions in the First Month” after New Year (p. 163) are “1 *kin* each of laver [nori] and wakame, 3 *shō* of salt, 1 *shō* 5 *gō* each of pickles, bean paste [kuki, miso] and vinegar, 6 to of sake, 9 *shō* of glutinous rice, 3 *shō* each of soybeans, red beans [azuki], millet and sorghum, 6 *shō* each of wheat, sesame, and raw chestnuts...”

In Book Five, in the List of Pharmacopoeia required (p. 178+) is included “1 *gō* 1 *shaku* of fermented bean sauce (p. 179) [kuki, the ancestor of miso; see p. 194], and 6 *koku* each of soybeans and red beans [azuki], 1 *koku* of sesame seed... and 3 *koku* of sesame seed oil... and 1 to of dried sweet arrowroot [kudzu powder, see footnote 591] (p. 182).

1514. Kirkup, James. 1970. *Japan behind the fan*. London: J.M. Dent & Sons Ltd. xii + 228 p. See p. 104. Illust. Index. 23 cm.

• **Summary:** The author traveled to Japan in the late 1960s to study the language and culture. While staying with the

Sato family, he and Mrs. Sato are in the kitchen cooking. He describes the preparations including: “... a red lacquer bowl of rich *miso* soy (bean paste) soup.”

1515. Matsuura, Shinji. 1970. Aflatoxins and fermented foods in Japan. *JARQ (Japan Agricultural Research Quarterly)* 5(1):46-51. [6 ref. Eng]*

• **Summary:** No aflatoxins were detected in any samples of miso or shoyu examined. However, aflatoxin-like compounds were detected in about 30% of the koji molds examined, but these compounds differed from aflatoxins in their ultraviolet absorption spectra. Address: Chief, Lab. of Fermentation Technology, Fermentation Div., National Food Research Institute, Tokyo.

1516. *Shokuhin daijiten* [Great Japanese encyclopedia of foods]. 1970. Tokyo. [Jap]*

1517. Trager, James. 1970. *The enriched, fortified, concentrated, country-fresh, lip-smacking, finger-licking, international, unexpurgated foodbook*. New York, NY: Grossman Publishers. xv + 579 p. Illust. Index. 24 cm. [350+* ref]

• **Summary:** This hefty volume is packed with information about a multitude of interesting, little known, or bizarre subjects related to food. It is divided into 11 major chapters, each of which contains many mini-chapters, often with witty or enticing (but often un-descriptive) titles such as “mushrooms take savvy” or “Farmer Jefferson.” The extensive index is very useful, containing entries for such things as Accent/MSG (p. 445-48), prehistoric agriculture and food (p. 3-11), meat analogs and Bac*Os (p. 450-51, 457, 501), Archer Daniels Midland (p. 450), bean curd (p. 333, 362), Battle Creek Sanitarium (p. 460), Kellogg (p. 384, 460-61), miso soup (p. 362), soybeans (p. 21, 262, 382, 450-51, 518), soy protein (p. 450), vegetarianism and vegetarians (p. 3, 324, 343, 457-59).

In Chapter 10, titled “Nuts in the Fruitcake” (p. 455-86), the author takes the opportunity to make fun of anything he discusses related to health/natural foods or vegetarianism. To him, it all smacks of food faddism and extremists. There are sections about vegetarians past and present (“there are no convincing nutritional justifications for vegetarianism”), Sylvester Graham (“One of America’s first home-grown food faddists”), Horace Fletcher, Dr. William Howard Hay and acidosis, Gayelord Hauser (“Perhaps the most prominent diet and health mythologist in recent years”), organic foods baloney (“DDT has not yet been shown to have harmful effects for humans”), Carlton Fredericks and Adolphus Hohensee, Tiger’s Milk, aphrodisiac foods, and food and astrology. Address: New York.

1518. Wiener Bordow, Joan (Sita). 1970. *Victory through vegetables: With a section of recipes from the macrobiotic*

diet by Barbara Thralls. New York, NY, Chicago, Illinois, and San Francisco, California: Holt, Rinehart and Winston. ix + 163 p. 22 cm.

• **Summary:** A vegetarian cookbook. The author, whose name on the title page is given as Joan Wiener, was born in 1944. Soy-related recipes include: Soybean milk and soy chaff [Okara] (p. 15). Bean curd and instant bean curd (homemade, p. 15-16). Cream of rice and soybean soup (p. 31). Soy nut salad (with soy nuts, p. 42). Bean curd sukiyaki (p. 49). Far Eastern dumplings (filled with cooked and mashed soybeans, p. 54). Macao noodles and vegetables (with bean curd and soy sauce, p. 56). Whole wheat role filled with bean curd (p. 59). Soybean tomato mix in stuffed peppers (with soy chaff [okara], p. 71-72). Soybean nuts (fried in butter, with salt, p. 93). Tahini miso spread (p. 136).

1519. Carberry, James F. 1971. Our daily bread—Food faddism spurts as young, old people shift to organic diets: Concern on pesticides cited, but some see deception by quacks claiming cures. Yin and yang ice cream. *Wall Street Journal*. Jan. 21. p. 1, 12.

• **Summary:** Written from Hollywood, California, this article reports that “food faddism has been particularly prevalent lately.” Kahan & Lessin Co., one of the nation’s biggest distributors of organic foods, reports that its sales have doubled to \$12 million a year from \$6 million in 1968. New Age Foods of San Francisco [owned by Fred Rohé] recently opened a branch store in suburban Palo Alto, where it expects to gross \$1 million during its first year.

“Health and organic food advocates say the popularity of such items—as well as the more conventional products grown under ‘natural’ conditions—reflects the growing public concern over pesticide poisoning and the publicity over the dangers of food additives, preservatives, and substitutes like cyclamates.”

Richard Hansen is a sociologist at the University of California at Davis; he is researching the organic food movement.

“New insights into universe: Bruce MacDonald [sic Macdonald], president of Erewhon Trading Co., a Boston and Los Angeles concern that specializes in such exotic foods as hacho miso (a soybean paste), says that organic foods appeal to many dropouts from the drug culture. ‘It’s not just that the body’s malnourished from being on drugs a long time,’ he says. ‘It’s also that organic foods can give a person new insights into the order of the universe.’”

Warren Stagg, the bearded proprietor of H.E.L.P., a popular vegetarian restaurant, believes in the mystical, spiritual value of certain foods. A vegetarian diet can help elevate a person to a higher level of consciousness and bring him into harmony with the order of the universe, he says. Since 75% of H.E.L.P.’s clientele are nonvegetarians, the “restaurant offers some meat substitutes such as ‘beef

stroganoff made from vegetable protein, mushrooms, scallions, bell peppers and sour cream sauce, and a ‘vegeburger’ sandwich that’s also made from vegetable protein. Other dishes on its menu include braised tofu (soybean cake) with brown rice and a salad of cottage cheese, alfalfa sprouts, sunflower seeds, grated carrots, scallions, figs and apricots.”

A group of young people following a macrobiotic diet live in an old Victorian mansion above Hollywood’s Sunset Strip. They are students of the late Georges Ohsawa, a Japanese philosopher who taught about the delicate balance between yin and yang; they eat ascetic meals that include pressure-cooked brown rice and seaweed soup. There have recently been well-publicized cases of the deaths or severe illnesses of a few young people subsisting on only brown rice, the extreme form of the macrobiotic diet.

“Another famous food-faddist helped found a huge business in breakfast cereals. He was John Harvey Kellogg...” according to Ronald Deutsch, author of a history of food fads called “The Nuts Among the Berries.” Deutsch then tells his inaccurate version of how Mr. [sic, Dr.] Kellogg got into the cereal business.

“One man who spends a great deal of time pooh-pooing various nutritional eccentricities is Dr. Fred Stare, chairman of the department of nutrition at Harvard University’s School of Public Health.” Dr. Stare discusses his pet peeves.

Note: Bruce Macdonald recalls (April 1992): “In early 1971 *The Wall Street Journal* ran a front-page feature story on the emerging new natural foods industry. A person from Merrill-Lynch came in and said, ‘We could package this business and raise millions for you.’”

Advest Co. 1972. Dec. “A recent *Wall Street Journal* article named this industry as one of the ten highest growth industries for the 1970s.” Address: Staff Reporter.

1520. Ebine, Hideo; Miyairi, Masao. 1971. Eiyô kyôka miso no kenkyû. VIII. Tetsu no kyôka no kokoromi [Studies on enriched miso. VIII. Trial to enrich miso with iron]. *Shokuryo Kenkyujo Kenkyu Hokoku (Report of the Food Research Institute)* No. 26. p. 141-44. Feb. Reprinted from *Miso no Kagaku to Gijutsu*. No. 193. p. 28-30 (1970). [2 ref. Jap; eng]

• **Summary:** Commercial miso was found to contain 2.94 ± 0.36 mg per 100 gm at the 5% level of error. This value is very low compared with the 5.95 ± 1.15 mg per 100 gm obtained in 1955. When ferric citrate was used to enrich the iron content of miso, the addition of 1 mg of iron to 100 gm of miso gave satisfactory results, but 2.5 mg of iron gave an unfavorable effect on both the color and flavor. Address: Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo, Japan.

1521. Eden. 1971. Eden: Organic foods, natural foods (Ad). *East West Journal* 1(2):8.

• **Summary:** “Organic grains and vegetables. Miso and tamari. Oils, teas, and condiments. Nuts and seeds. Fresh and dried fruits. Book and utensils. Traveling accommodations on advance notice.” The Eden logo is 4 sprouts in a double circle.

Note: This is the earliest document seen (June 2001) that advertises or markets miso. Address: 211 South State St., Ann Arbor, Michigan; 347 Ludlow Ave., Cincinnati, Ohio. Phone: 313-769-8444.

1522. Essene. 1971. Essene (Ad). *East West Journal* 1(2):10. Feb.

• **Summary:** “Organic grains–vegetables–beans. Miso–tamari–sea vegetables. Flour stone ground on premises. Distributors of natural and traditional foods. Retail. Wholesale. Mail order. Mon. thru Sat. 9–6:30.”

Note: This is the earliest document seen (March 2006) concerning Essene, an early natural foods and macrobiotic company and distributor in Philadelphia. Address: 320 South St., Philadelphia, Pennsylvania. Phone: WA2-1146.

1523. Ito, Hiroshi; Ebine, Hideo. 1971. Miso no kôki seibun no kenkyû. II. Fukureta miso no kihatsusei seibun [Studies on the flavor components of miso. II. Volatile substances in swollen miso packages]. *Shokuryo Kenkyujo Kenkyu Hokoku (Report of the Food Research Institute)* No. 26. p. 123-27. Feb. Reprinted from *Miso no Kagaku to Gijutsu*. No. 191. p. 25-29 (1970). [5 ref. Jap; eng]

• **Summary:** “The composition of gases in a polyethylene bag in which miso swelled by the action of microorganisms during storage was examined by gas chromatography. Carbon dioxide was the major component and nitrogen and oxygen were also detected. Acetaldehyde, ethyl formate, ethyl acetate, ethanol, butyl acetate, amyl acetate, *iso*-amyl acetates, *iso*-amyl alcohol and ethyl lactate were detected. The amounts of ethanol and acetaldehyde increased remarkably when the swelling proceeded in the polyethylene bag.” Address: Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo, Japan.

1524. Ito, Hiroshi; Ebine, Hideo. 1971. Miso no kôki seibun no kenkyû. I. Heddo gasu ni yoru kenshitsu [Studies on the flavor components of miso. I. 1526. Marsh, Elisabeth. 1971. Macrobiotique pour les Américains [Macrobiotics for Americans]. *Spirale (Brussels, Belgium)* No. 46. p. 8-11. Feb. [Fre]

• **Summary:** Translated from the English by Josiane Bagno. Contains 8 lines about miso and 4 lines about tamari. *Spirale* is located at Avenue Voltaire 141, 1030 Brussels.

1527. Mother Nature & Sons Ltd. 1971. Natural foods. Organic and macrobiotic foods (Ad). *East West Journal* 1(2):10. Feb.

• **Summary:** “Full line of grains, vegetables, beans, sea vegetables, miso, tamari, umeboshi, fruits, nuts, teas, baked goods. From: Lima [Belgium], Chico San, Infinity, Spiral, Hain, Caldron, and Paradox. Located at: 351 Bleeker Street, New York City, NY 10014. Phone: 212-924-7572.

Note: *East West Journal* is edited by Ron Dobrin [a former New York journalist], published by Order of the Universe Publications, and distributed by Tao Books & Publications, Inc., 303b Newbury St., Boston, MA 02115. Address: 351 Bleeker Street, New York City, NY 10014. Phone: 212-924-7572.

1528. Erhard, Darla. 1971. Nutrition education for the “now” generation. *J. of Nutrition Education* 2(4):135-39. Spring. [41 ref]

• **Summary:** Describes the author’s efforts in Berkeley, California, to provide factual nutritional information to members of various San Francisco Bay Area counterculture groups, including Zen macrobiotics, the One World Family Commune, Krishna Consciousness devotees, and fruitarians.

“Food faddism—which used to be associated with older population groups—coupled with vegetarianism has now become the panacea for some members of the younger generation, often called ‘hippies.’

“The majority of my information on the Zen Macrobiotic diet was derived from classes that I attended taught by a former pupil of George Ohsawa, believed by some to be the originator of Zen Macrobiotics. From these groups, I learned that the widely publicized, all-cereal diet originating from the seven levels of eating (dietary eating pattern with initial allowance of certain percentages of all foods with seven progressions to the ultimate all-cereal diet) was the result of mistranslation and misuse of the Zen Macrobiotic principles by the American public.” The author then gives a fair and balanced description of a macrobiotic diet; miso, soy sauce and tofu are listed as part of a typical

daily macrobiotic menu. Address: 323 Monte Vista Ave., Oakland, California 94611.

1529. Kosuge, Takuo; Zenda, Hiroshi; Tsuji, Kunio; Yamamoto, Takeshi; Narita, Hiroko. 1971. Studies on flavor components of foodstuffs. I. Distribution of tetramethylpyrazine in fermented foodstuffs. *Agricultural and Biological Chemistry* 35(5):693-96. May. [17 ref]

• **Summary:** Tetramethylpyrazine (T.M.P.) was detected in many Japanese fermented foodstuffs, especially miso (29 mcg/kg), natto (22), and soy sauce (4). Moreover, the amount of T.M.P. in miso increased almost tenfold (from 29 to 265 mcg/kg) after storage for 1 year. This fact indicates that T.M.P. may play an important part in the flavor of these fermented foods. Roasted foods, such as coffee, cocoa, and peanuts, are a rich source of alkylpyrazines. Address: Shizuoka College of Pharmacy, Shizuoka, Japan.

1530. Kushi, Aveline. 1971. Recipes from *The Book of Miso*. *East West Journal* 1(7):7.

• **Summary:** Contains a drawing by Aveline Kushi of a family making miso, plus five soup recipes and two miso relish recipes from her forthcoming cookbook.

Note 1. This is the earliest document seen by either Michio or Aveline Kushi.

Note 2. This is the earliest article on soy seen (Aug. 2002) in the *East West Journal*. Address: EWJ, P.O. Box 203, Prudential Center Station, Boston, Massachusetts 02199. \$6.00 for 20 issues.

1531. Ohsawa, George. 1971. *Macrobiotics: An invitation to health and happiness*. Edited and appended by Herman Aihara. Oroville, California: George Ohsawa Macrobiotic Foundation. 95 p. Illust. 21 cm.

• **Summary:** Contents: Introduction. What is happiness? Judgment and health. Seven conditions of health. Foods for health and happiness. How to eat. Macrobiotic external treatment.

Appendixes (by Herman Aihara). A. History of macrobiotics. B. Warning of Diet No. 7. C. How to start macrobiotics. D. Macrobiotic cooking. E. Recipes (Cornellia Aihara). F. Does the macrobiotic diet supply enough protein. G. Vitamins. H. Conclusion: Eight macrobiotic principles, the Unifying Principle, the Order of the Universe.

Soy-related recipes include: Creamed onion-miso soup (p. 41). A table showing the amount of protein in various foods includes soybeans, soy sauce, natto, and miso.

Note: In his book *Learning from Salmon*, Herman Aihara says that this was his first book, published in June 1971. The copyright page says "Copyright 1971," but the National Union Catalog seems to indicate that it was not copyrighted until 1976. The 6th printing was 1984.

1532. Sokolov, Raymond A. 1971. Macrobiotic cooking—Learning the secrets of yin and yang. *New York Times*. July 8. p. 41.

• **Summary:** Cornelia Aihara, from San Francisco, California, is teaching a macrobiotic cooking class to 30 local enthusiasts in downtown Brooklyn. Each "paid \$6 to attend the class, a dinner, and a lecture" by Herman Aihara. In "the mystical world of macrobiotic diet the Aihara family are the equivalent of Pope, President, and Julia Child." Herman is the director of the George Ohsawa Macrobiotic Foundation. Ohsawa, now deceased, "brought the gospel of the grain-centered diet of Zen Buddhism to the United States and Europe.

Recipes are given for Brown rice, Wakame soup with miso, and Ohsawa coffee pudding.

1533. Eden Foods, Inc. 1971. Wholesale pricelist. 211 South State St., Ann Arbor, MI 48108. 2 p. July 26.

• **Summary:** This is the earliest existing Eden Foods catalog seen that is dated. The company was wholesaling the following products: Bulk grains (including some organically grown: Wheat (Deaf Smith), organic [from Texas]; Rye, soft wheat, and open-pollinated corn, organic from Michigan; Brown rice (natural, unsprayed), and sweet brown rice), bulk cereals or packaged cereals (incl. organic cracked wheat, corn flakes, wheat flakes, and rye flakes from Deaf Smith, Texas), bulk flour (all flour is stone ground on order in Ann Arbor, incl. organic soy flour), beans (incl. organic soybeans from Michigan [60 lb], and azuki beans [out of stock until fall]), noodles, oil and nut/seed butters (all unrefined and pressed, incl. soy oil in pint, quart, and 5-gallon sizes), dried fruit.

Soybean products: Tamari soy sauce (pints, quarts, and liters), Hacho Miso (Soy Paste; 1 lb), Mugi Miso (Barley Soy Paste). Note: The Eden logo with 4 sprouts in a circle is shown. Many of these soy products were obtained from Erewhon, and the grains from Arrowhead Mills. The format of the catalog, the product categories, and the product names and spellings are very similar to those used in the Erewhon catalog at this time. Address: Ann Arbor, Michigan. Phone: (313) 769-8444.

1534. Bell, Don. 1971. Ohsawa and the yin and yang of health. *Chicago Tribune*. Aug. 1. p. F23.

• **Summary:** The film "Joe" [1970] has a scene shot in an unusual restaurant in New York City's East Village. The dishes have unusual names like miso soup, hiziki [hijiki], and wakame salad. One man calls it "Jap food," but the waiter explains that it's "food in accordance with the order of the universe"—a definition of macrobiotics. We are what we eat. A respected scientist has stated that each year, 98% of the atoms in our bodies are replaced by new atoms that we take in from the food we eat, the water we drink, and the air we breathe.

Popular foods in the macrobiotic diet include seaweed, tahini (made from sesame seeds, a replacement for butter), Japanese azuki beans, and miso and tamari (protein-rich seasonings).

1535. Daniels, Mary. 1971. A loaf of whole-grain bread, a jug of bancha and thou: "Food for Life" is food that's "in accord with the Universe"—even on Halsted Street. *Chicago Tribune*. Aug. 1. p. F18-F25.

• **Summary:** "The mecca of macrobiotics in the United States today is Boston, and its Mohammed [Muhammad] is a Japanese professor of Oriental studies, Michio Kushi. Kushi is a disciple of Georges Ohsawa, who gave his first lectures in New York's Buddhist Temple in 1959." Ohsawa's followers went in two directions. In Oct. 1961, one group went to [Chico] California under the leadership of Herman Aihara. The other followed Kushi to Boston.

The first macrobiotic study house in the Boston area was established very informally about 7-8 years ago in the Kushi's home in Brookline. Soon thereafter his students founded Tao Books and Erewhon. By word of mouth and by his writings, Michio Kushi has attracted young people from all over the USA, many of them seeking something better than drugs. Soon the demands on his time were so great that Kushi had to give up his classes at Harvard to teach from his home and lecture twice a week on the true path to happiness.

Erewhon is now almost the size of a supermarket; it owns a large warehouse near the Boston docks. Eight large photos show foods sold at Erewhon retail stores. One caption mentions miso.

Part II of this article, titled "Macrobiotics: where it's at in Chicago," is about Tom Swan and his macrobiotic food store "Food for Life." This store, around which the local macrobiotic community revolves, was started in Feb. 1970 at 2356 Seminary by Ron Kotsch, a Harvard student who had worked at the Erewhon store in Boston.

On the shelves are cans and bottles of corn germ oil and sesame oil (both auger pressed, and both with a rich, natural flavor), sesame butter, a variety of seaweeds imported from Japan, buckwheat noodles, "a fermented soy paste rich in energy called miso (dancers down it before a performance), and a natural soy sauce called tamari that makes you realize how much the supermarket stuff cheats you in taste. All of these things are proudly labeled 'no preservatives.'"

Also mentions: John Palumbo, Bill Tara, Loren McCune, The Caldron, Dr. Walter Kempner, Burl Ives, brown rice from Chico San, organic foods, Gloria Swanson, and William Dufty. Includes five macrobiotic recipes: Brown rice with gomasio [gomashio]; leftovers fried and served with tamari (soy) sauce. Seaweed and carrots. Bancha tea. Tempura batter. Raisin muffins.

1536. *SoyaScan Notes*. 1971. Chronology of Laurelbrook in Maryland. 16 March 1992. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** 1971 Aug. 23—Laurelbrook Foods begins as a macrobiotic natural foods wholesale distributor in Forest Hill, Harford County, Maryland (about 25 miles northeast of Baltimore). The company started as a division of Cycle Parts & Accessories, Inc., a motorcycle parts company that Rod was planning to start in late 1970 shortly before the idea of starting a natural foods distribution company took form. Laurelbrook company never moved from its original location, but they kept a post office box (P.O. Box 47) in nearby Bel Air. Their original price list shows that they carried 11 products, mostly bulk organic grains and beans (including soybeans) purchased from Arrowhead Mills. Erewhon was their other major supplier from the outset. The company was founded by Rod and Margy Coates, the parents of five daughters (including Sally, Judy, Marion [Ronnie], and Dora Coates) and one son (Dan). Dora was Paul Hawken's first wife; they were married in June 1971. Judy was John Deming's first wife; they were married in Aug. 1972. Both Paul and John worked with Erewhon. Rod and Margy decided to call the company Laurelbrook since they lived on Laurelbrook Road in Fallston, Maryland. Rod and Margy first got interested in natural foods in 1967 when their next to oldest daughter, Judy, who had been studying macrobiotics with Michio and Aveline Kushi in Boston, Massachusetts, and had worked for Erewhon, offered to come home and cook for her parents for two weeks and let them try out the diet.

1971 Sept. 30—Laurelbrook is still considered by Rod Coates to be a division of his Cycle Parts & Accessories, Inc.

1973 Dec.—Laurelbrook opens a new, second warehouse in Raleigh, North Carolina (at 330 West Davie St.). Four people start and run the operation.

1974—Laurelbrook, which now employs 24 people, enlarges its warehouse.

1975—Feb.—Laurelbrook publishes a 6-page booklet showing that the company now distributes about 43 different food products—including soy flour, tamari, and miso.

1976 Nov.—One of Laurelbrook's employees is trying to start a labor union. Management vigorously opposes it. Laurelbrook now employs 32 people and has a fleet of 12 trucks that delivers to 350 stores. It is still a family operation, with Rod and Margy Coates, their 3 children, a son-in-law, a niece, and a nephew working at Laurelbrook.

1977—Laurelbrook outgrows its warehouse at 330 West Davie St. in Raleigh, North Carolina, so they move into a larger warehouse facility at 2319 Laurelbrook Street in Raleigh.

1977 Nov.—Laurelbrook has 44 employees. Sales last year were about \$3 million.

1978 June–Laurelbrook is now importing foods from Mitoku in Japan.

1979 May–Rod Coates hires Richard Curry as accountant and general manager.

1980 March 17–At a special meeting of the board of directors, Rod informs the board that he will be retiring in one week, on 23 March 1980, his 65th birthday. He recommends that he be replaced as president by Richard Curry and that his (Rod's) official position be chairman of the board.

1981 March–Things are not going well at Laurelbrook. Rod and Marge feel that Richard is not doing a good job in running the company. Employee morale is down. But Richard blames the problems on Rod, and wants Rod to be less actively involved with Laurelbrook on a daily basis.

1981 March–Dora Hawken is fired from her position in the Laurelbrook office.

1981 July 21–Rod, Margy, and Dan Coates, constituting all the board of directors of Laurelbrook, resign, effective immediately. They are upset with the way Richard Curry is running the company.

1981 Aug.–Richard Curry offers to buy out the Coates' interest in Laurelbrook foods. They accept the offer. Rod and Margy keep ownership of the property and Richard was to pay them rent for using it.

1981 Nov. 21–Over the next 30 days Richard Curry places five large orders with Hain Pure Foods in the amount of \$35,577.

1982 Feb. 15–Laurelbrook Foods files for Chapter 11 bankruptcy protection and does business under Chapter 11 for about 18 months. Richard Curry is president.

1982 Dec. 22–Rod Coates presents a list of items that he alleges Richard Curry sold illegally after the bankruptcy of Laurelbrook, and before the auction of the company's assets. Attached to this are letters between attorneys.

1983 Oct-Dec.–Rod and Margy Coates have to pay off the debt of \$35,577 to Hain—even though they no longer own the company. In Dec. 1983 the last of the equipment in the warehouse was auctioned off.

1990 March 4–Rod Coates dies of Alzheimer's disease. As of early 1992, Judy Coates lives in Ross, California, and Dora lives in Marin, California. Address: 505 Granary Rd., Forest Hill, Maryland 21050.

1537. Murakami, Hideya. 1971. Classification of the koji mold. *J. of General and Applied Microbiology (Tokyo)* 17(4):281-309. Aug. [40 ref. Eng]
Address: Research Inst. of Brewing, Tax Administration Agency of Finance Ministry, Takinogawa 2-6, Kita-ku, Tokyo 114, Japan.

1538. Lappé, Frances Moore. 1971. Diet for a small planet. New York, NY: Ballantine Books. xiv + 301 p. Illust. by

Kathleen Zimmerman & Ralph Iwamoto. Index. 18 cm. [90 ref]

• **Summary:** This one of the most important and influential books written about food, nutrition, and world hunger during the 1970s. Published on 1 Sept. 1971, it introduced the concepts of "protein complementarity" and "eating low on the food chain" to millions of Americans. By April 1973 the book had been reprinted 7 times. The book's roots lie in the University of California at Berkeley, where Ms. Lappé was enrolled in the School of Social Work in 1968. A committed community organizer of welfare recipients, she was frustrated in her inability to find an agenda that would truly end the people's suffering. So she began to study the political economy of food in the Natural Resources library. From this research came a 1-page handout, then a 5-page handout, then a 70-page booklet, and finally this landmark book.

Contents: Acknowledgments. Foreword. Part I: Earth's labor lost. Part II: Bringing protein theory down to earth. Part III: Eating from the earth: Protein theory applied. Part IV: Combining non-meat foods to increase protein values. Appendixes. Notes.

Key quotes: "This book is about PROTEIN—how we as a nation are caught in a pattern that squanders it... I propose that our meat-centered diet is at the very heart of our waste of the earth's productivity" (p. xi). "Fully *one-half* of the harvested agricultural land in the U.S. is planted with feed crops. We feed 78% of all our grain to animals. This is the largest percentage of any country in the world" (p. 5). We feed animals "89% of our corn crop, 98% of our grain sorghum crop, 87% of our oat crop, 64% of our barley crop, as well as 95% of our unexported soybean crop. To make beef or veal, "a cow must be fed 21 pounds of protein [from feed] in order to produce 1 pound of protein from human consumption."

This vegetarian book contains 125 pages of recipes and makes extensive use of soybeans and soyfoods—though mostly in the form of whole dry soybeans or grits (*) or soy flour (+), which are two of the least interesting ways of using soybeans. In the section titled "Getting the most protein for the least calories," subsection 5 on "Legumes" (p. 106) states: "Soybean curd (tofu) has the fewest calories for the amount of usable protein, largely because most of the fat is removed in its processing. Tofu is truly an excellent protein source. Lightly sautéed with a fresh vegetable accompaniment, one could easily eat 7 ounces of tofu and fulfill 25 to 30 percent of a day's need for protein—At the cost of only about 5 to 7 percent of a day's calorie allotment. I've included several tofu dishes among the recipes given later in this book."

Tofu is not mentioned in the index, but under "Soy Curd" we find one recipe titled "Leafy Chinese tofu (Soy curd)" (p. 144). It notes that soy + rice, and soy + sesame are complementary proteins.

The recipes are grouped by complementary combinations. Rice and soy (p. 140-45; combining in the proper proportions gives a 32% increase in usable protein): Crusty soybean casserole*. Stuffed cabbage leaves*. Curry rice*. Leafy Chinese tofu (soy curd). Sukiyaki (with tofu).

Rice and wheat and soy (p. 146-50; 24% increase in usable protein): Hearty vegetable soup (with miso and soy sauce)*. Sweet and pungent vegetable curry*. Mexican grains*. Rice-wheat “kasha”*.

Whole wheat and soy (p. 181-88; 32% increase): “Complementary” pizza+. Savory onion quiche+. Wheat-soy waffles+. Chameleon spice cake+. Wheat-soy pudding+.

Wheat, soy, and sesame (p. 189-94; 42% increase): Sesame crisp crackers+. Sesame dream bars+. Journey cakes+. Orange sesame muffins+. wheat-soy-sesame bread+.

Cornmeal and soy and milk (p. 202-08; 13% increase): My favorite cornbread+. Boston brown bread+. Pineapple-corn muffins+. Corn spice coffee cake+. Cornmeal-soy waffles+. Indian pudding*.

Soy, wheat, rice, and peanuts (p. 220-26; 15% increase): Curried soybeans and peanuts*. Nutty bean tacos*. Soybean croquettes*. Spanish soybeans over mixed grains*+. Deep dish vegetable pie*.

Soy and sesame seeds (or sunflower seeds) and peanuts (p. 227-32; 25% increase): Nutty noodle casserole*. Soy-sesame-peanut spread+ (with roasted soy flour). Peanut-sesame loaf supreme+. Soy-pea sesame snacks*. Bean burgers*.

This was one of the first popular books to show the connection between intensive livestock production and environmental degradation. Part I, titled “Earth’s Labor Lost,” shows how: (1) Animal wastes from huge feedlots cause water pollution (p. 15-16); (2) Growing crops for livestock feed and overgrazing leads to soil erosion, loss of topsoil, and soil depletion (p. 17-18); (3) The increased pressure on our land to grow livestock feeds has led to increased use of pesticides, which kill untargeted species and cause water pollution (p. 26-27). In short, a vegetarian diet “maximizes the earth’s potential to meet man’s nutritional needs and, at the same time, minimizes the disruption of the earth necessary to sustain him. It’s as simple as that” (p. 3).

Also gives a recipe for “Crunchy granola” (p. 251, based on rolled oats, coconut shreds, sesame seeds, and wheat germ).

Note 1. As of Sept. 1991, this book had sold about 4 million copies, and of that 3 million copies in English-language editions.

Note 2. This is the earliest document seen (May 2002) concerning the environmental impact of a vegetarian diet. Address: California.

1539. Spicer, A. 1971. Synthetic proteins for human and animal consumption. *Veterinary Record* 89(18):482-87. Oct. 30.

• **Summary:** Microbial protein can be textured into meat-like strands. “As regards the Eastern world, microfungi are extensively used in the processing of soya beans to make them suitable human food products. Miso and tempeh are but two examples. The average Indonesian eats 154 gm per day of tempeh, thus consuming several grams of *Rhizopus* in his daily diet.” Address: The Lord Rank Research Centre, High Wycombe, Bucks, England.

1540. B.W. [Becky Wood]. 1971. Making miso in America. *East West Journal* 1(14):6.

• **Summary:** Contains a description with photos of how miso is made at Norio and Fujimoto, but without the details necessary to actually make miso on a commercial scale.

Chico-San is developing a domestic miso which it hopes to offer commercially in the near future. Miso expert, Junsei Yamazaki, has tested and developed miso in Chico, California for the last seven years. Mr. Yamazaki has one batch which has been aging for a year. He hopes to market this batch in six months. Chico-San will expand its plant for large-scale production as the miso is perfected.

“We called Erewhon to ask if they had plans for the production of miso and Bill Tara reported that there is a big and rapidly growing market for miso. But, he said, ideally miso should be made in a given area for consumption in that area.” Erewhon will introduce to the domestic market a yeast grain called koji, essential to the production of miso.

There are currently two companies in the continental U.S. which produce miso on a commercial basis. One is located San Francisco and the other in Salt Lake City. Each produces rice miso made from white rice. The Norio Company has been located on the outskirts of San Francisco’s Japan-town, at 1532 Post Street, since the company started in 1919. The company is owned and solely operated by Mr. and Mrs. Minoru Arikawa and son.

Fujimoto and Company, which originated in Oakland, California, moved to 302 South Fourth West, Salt Lake City, Utah, in 1945. Mr. Sekino heads the three-man plant. He speaks little English. Address: EWJ, P.O. Box 203, Prudential Center Station, Boston, Massachusetts 02199. \$6.00 for 20 issues.

1541. Erewhon Trading Co., Inc. 1971. Natural and organic foods. Price list. Boston, Massachusetts. 4 p. Effective Thanksgiving day, Nov. 1971.

• **Summary:** This price list has no cover. Products include: Grains (incl. organically grown brown rice [short, medium, or long grain; Note: The short grain was probably grown by the Lundberg Brothers of Wehah Farms, Richvale, California], Ted Whitmer [in Bloomfield, Montana] organically grown wheat, hard red spring and hard amber

durum, and Deaf Smith [Hereford, Texas] organically grown wheat [hard red winter], rye, and corn). Cereals. Stoneground flours (incl. Soybean flour, full fat, organic Deaf Smith; Sweet brown rice flour). Beans (incl. azuki beans, black beans [Japanese, probably black soybeans], soybeans [organic]). Seeds. Tamari & miso: Tamari soy sauce (pints, quarts, half gallon, gallon, 4.7 gallon can, 4.7 gallon wooden keg). Hacho miso (soy paste, 1 lb or 44 lb keg). Mugi miso (barley-soy paste, 1 lb, 2 lb, 44 lb keg). Kome miso (rice-soy paste, 1 lb, 2 lb, 44 lb keg).

Sea vegetables: agar agar (kanten), dulse, hiziki, kombu, nori (dried laver), wakame, wakame root, wakame (thin sheet). Tea: Lotus root tea. Dandelio herbal coffee. Mu herbal beverage. Kukicha twig tea.

Pasta. Crackers (Chico-San Rice Cakes, organic-salted, unsalted, with buckwheat, or with millet). Snacks (incl. Corn munchies [organic corn chips with soy sauce], Chico-San "Yinnies" organic rice candy [made in Chico, California]). Hopi seeds: Sunflower seeds, pumpkin seeds, almonds, cashews, or soybeans, each dry roasted with tamari. Dried fruits. Virgin oils (incl. Soybean oil, pressed and unrefined in pints, quarts, half gallon, gallon, and 5-gallon can). Nut butters. Condiments (incl. sesame salt, and Tekka [vegetable condiment]). Unusual foods: Umeboshi (plums pickled in brine) and Kuzu arrowroot. For cleanliness [body care products]: Sesame lotion [organic and biodegradable], Sesame shampoo, Orjene shampoo, Peppermint Castile soap, Toothpowder, charred eggplant and sea salt [Dentie in bag or jar], Clearlake all purpose cleaner, biodegradable. For cooking (utensils, incl. 2 sizes of "soy dispenser," suribachi with pestle, Save A Tree canvas shopping bag). Flyers: The Organic Merchants NOT List. The Sugar Story. The Oil Story. The Macrobiotic Way.

On the last page is a note from Paul Hawken, with his signature, thanking customers for their orders. Address: 33 Farnsworth Street, Boston, Massachusetts 02210. Phone: (617) 542-1358.

1542. Teegarden, Iona. 1971. Freedom through cooking: The macrobiotic way. Order of the Universe Publications, P.O. Box 203, Prudential Center Station, Boston, MA 02199. 128 p. Illust. by Mary Purcell.

• **Summary:** Soy beans: These are the most yin of the commonly eaten beans, and it's suggested that they be used only occasionally... It's good to add a yang vegetable, sauteed, such as carrot or, better still, burdock or jinenjo. Soy beans are frequently utilized in the form of miso, which is delightful in soups (see p. 43). In this form we derive all the nutritional benefits of soy beans, and yet the preparation is yang and very energy-giving (p. 40).

Discusses miso soup and also contains a recipe for Miso-Tahini Spread (for sandwiches).

Ad in East West Journal. 1971, Vol. 1, No. 16. p. 8. It will be published on Nov. 15, 1971. Price: \$2.15. Written

through Iona Teegarden.

Miso "soup is excellent for people who are trying to regain mental and physical health. Miso (soybean puree aged a minimum of three years with salt) is an excellent source of high-quality protein; it also contains many minerals and is a great aid in digestion because of the enzymes it contains. In my own home, I usually serve it once a day, in the morning. It's a marvellous replacement for coffee, and gives greater and more lasting energy!"

1543. Clark, Marion; Sinick, Heidi. 1971. Try it! *Washington Post, Times Herald*. Dec. 12. p. 314.

• **Summary:** The section titled "Organic food feasts" states that "Mother Nature on the Run will cater organic food feasts for any occasion." This catering service was recently formed by six young health-food enthusiasts who love to cook and who believe that happy food makes happy people. At a recent church dinner, the group served a meal that included "brown rice with miso, tamari and natural peanut-butter sauce."

1544. Chico-San Inc. 1971. Portfolio. Chico, California. 6 sheets. Dec. 1971. 28 cm.

• **Summary:** Includes the following (all printed back-to-back with dark brown ink on golden yellow paper with a new complex spiral logo): (1) Form letter from J. Robert Kennedy to Lorenz A. Schaller, Pasadena, California. (2) "Rice cakes is our bag." Three varieties, made from brown rice, grown organically by Wehah Farms. (3) "How Chico-San guarantees Oriental-type, organically grown brown rice," article reprinted from *Health Food Business* magazine. (4-5) Chico food news 1, about Lima soysauce and sweet brown rice, with recipes. Ingredients include soybean flour and Yinnies Grain Syrup ("made from barley and brown rice is a new product from Chico-San"). (6-7) Chico food news 2, about rice chips, corn chips, Yinnies, mochi, with recipes. (8-9) Chico food news 3, about wild American ginseng and Chico-San rice vinegar. (10-11) Chico food news 6, about sea vegetables: Hijiki, nori, wakame, kombu, kanten. Address: 1262 Humboldt Ave., Chico, California 95926. Phone: (916) 343-6770.

1545. Chico-San Inc. 1971. Products: A catalog of macrobiotic foods. Chico, California. 8 p. Undated. 22 cm.

• **Summary:** The cover is with dark brown ink on golden yellow paper with a new complex circular spiral logo neat the top and three sheaves of grain across the bottom. The term OEI, applied to some products, means "Our Exclusive Import." Address: Chico, California. Phone: (916) 343-6770.

1546. Joyous Revival. 1971. Natural Foods (Ad). *East West Journal* 1(20):20.

• **Summary:** The company sells: Miso. Nuts. Seeds. Beans. Grains. Tamari. Fresh ground flours.

Note: Michael Potter, later head of Eden Foods, worked with this company in the early 1970s, until Dec. 1970. He was not a founder of the company, but he eventually rose to become a partner. Address: 1810 S. Woodward Ave., Birmingham, Michigan 48011. Phone: 313-644-9756.

1547. Spiral Foods Inc. 1971. Price list of macrobiotic foods. Chico, California. 2 p. Undated. 35 x 25 cm.

• **Summary:** This single-sheet catalog and price list, printed front and back with reddish-orange ink on green paper, contains 8 panels and is undated. Yet it was sent by Chico-San in a portfolio of sell sheets with a cover letter dated 8 Dec. 1971—from which we can estimate the date. It is also larger Spiral Foods catalogs issue after the disastrous 1972 fire that destroyed the company's plant. Under the name of each food is given a brief description. It includes the following foods:

Condiments: Tekka ("A traditional flavoring prepared from carrot, burdock, ginger, lotus root, Soybean Puree {Miso}, and sesame oil"), seitan ("A meat substitute made from vegetable protein of wheat gluten and tamari soy sauce"), salt plums, kuzu arrowroot, sesame salt, sesame butter, sesame oil (from organically grown seeds), Lima sesame oil (imported), crude sea salt ("Unrefined, unprocessed, trace sea minerals retained"), white unrefined sea salt, Mishio (Lima, with kombu), moromi ("Mash of soy sauce before pressing. A pungent flavor"), furikake ("A seasoning made from Miso, sesame seed, nori, bonita [sic, bonito] powder, whole brown rice and kombu" {kelp}), Goma Muso ("A seasoning prepared from traditional Miso and whole sesame seeds"), bainiku ekisu (concentrate of green [ume] plums), sesame seeds. Dried fish. Cosmetics. Beverages: Yano (grain beverage), Whole grain cereals. Whole grain noodles. Beans: Azuki red (Dainagon, or Korean), black [soy] beans. Sea vegetables. 100% whole grain brown rice. Sweet rice—mochi gome. Rice cakes. Lima soy sauce ("A traditional soy sauce of exceptional quality"), tamari ("The traditional soysauce, fermented naturally and aged 18 months. Prepared from soybean, wheat, salt and water"). Soybean puree (Miso) ("Made from the cultivation of a special enzyme and aged 18 months. The soybean puree is ideal mixed with sesame butter and used as a spread or can be added to soups and sauces"). Utensils.

Note: This is the earliest English-language document seen (Dec. 2006) that uses the Japanese-language term "bainiku ekisu" (literally "plum flesh extract") to refer to a commercial extract of ume plums. Address: 1017 Willow Street, Chico, California 95926.

• **Summary:** Contents: Introduction: Nine advantages of fermenting soybeans. Sufu. Hamanatto. Natto. Tempeh. Magou (from South Africa).

“In South Africa, an interesting fermented native food (*magou*) is now made on a modern industrial scale from fermented corn and soybeans. *Magou* is prepared by the fermentation of coarsely ground white corn meal (maize). Pure cultures of *Lactobacillus* used in this fermentation were isolated from native *magou*. The culture, which is not pure, is started in coarse whole wheat flour.” Then it is used to ferment corn meal for 22-24 hours. “The mash from the fermentation tanks is mixed with defatted soybean meal, sugar, whey, or buttermilk powder and yeast. The soybean meals used contain at least 52 per cent protein. After thorough mixing of all the ingredients, the mix is spray dried. Currently this product sells for about 10 cents a pound in 50 pound bags... *Magou* is used principally for feeding miners and other workers employed in heavy industry. It is well adapted to being taken into the mines and reconstituted at the point of consumption.” Address: NRRL, Peoria, Illinois.

1554. Hirayama, Takeshi. 1971. Epidemiology of stomach cancer. In: Tadashige Murakami, ed. 1971. *Early Gastric Cancer*. Baltimore, Maryland: University Park Press. Gann Monograph on Cancer Research No. 11. viii + 301 p. See p. 3-19. (Tokyo: Tokyo Univ. Press). [18 ref]

• **Summary:** This paper outlines the results of an epidemiological case-control study of stomach cancer in Japan. Table 1 (p. 10) shows “Factors associated with the standardized death rate for stomach cancer in 46 prefectures in Japan.” Many foods and nutritional elements are included. A negative association means: The more one consumes, the less one’s risk of dying from stomach cancer in Japan. The author reported a significant negative association for tofu (-5.28), vitamin A (- 4.12), and calcium (-6.54), and a very significant negative association for milk (-9.19). Thus these foods and nutrients appear to protect against stomach cancer. There was a significant positive association for fermented soybeans (+4.90; probably natto) and with a large amount of highly salted foods, including highly salted miso, but not including soy sauce or regular miso.

“The number of deaths from cancer of the stomach is still on the increase in Japan. Most of the increase, however, was found to be due to the increase in population itself. When the change in age structure was taken into account, the disease was noted to be on the downward trend since 1958. The death rate for age 45-49 in 1970 was 29% less for males and 14% less for females than in 1955.” The standardized death rate from stomach cancer for men in Japan (68.57) was the highest in the world, and over 7 times higher than for U.S. whites (9.42). By marital status, widowed men have the highest rate (376.3), followed by

separated men (273.6), then married men (116.4), with single men (75.1) having the lowest rate.

“In an international survey of 24 countries, the decline in the death rate for stomach cancer in recent years was found to be closely correlated to milk consumption.”

Address: Epidemiology Div., National Cancer Center Research Inst., Tsukiji 5-1-1, Chuo-ku, Tokyo, Japan 104.

1555. Korean Society of Food Science and Technology. 1971. *Comprehensive review of the literature on Korean foods (1917-1968)*. Seoul, South Korea: 71 p. * Address: Korea.

1556. Max, Peter; Proust, Ronwen Vathsala. 1971. *The Peter Max new age organic vegetarian cookbook*. New York, NY: Pyramid Communications. 128 p. Color illust. Index. 14 x 21 cm.

• **Summary:** Peter Max (the first author) was born in 1939. Soy-related recipes include: Miso soup (with aduki beans, p. 39). Soya poppy-seed rolls (with soya flour, p. 87). To sprout seeds, berries and beans (incl. soybeans).

1557. Ohsawa, Lima. 1971. *Makurobiotiku ryôri: Shokuyô katei ryôri 700 shu* [Macrobiotic cookery: Food-cure home cookery—700 recipes]. Tokyo: Nihon CI Kyokai. xix + 7 + 200 + 6 p. Illust. (many color plates). Index. 26 cm. [Jap]

• **Summary:** This macrobiotic classic contains many chapters and recipes related to soyfoods and other interesting Japanese foods: Azuki and bean cookery (p. 96-98). Tofu cookery (p. 99-104). Miso cookery (p. 104-08; tofu, miso, and shoyu recipes are also scattered throughout the book). The chapter titled “Other Vegetable Cookery” (p. 110-24) contains many recipes for *kôfû*, a term used to refer to fresh wheat gluten. There are recipes for Kofu cutlets and Kofu croquettes (#419, p. 112). Skewered kofu cutlets. Kofu fukume-ni. Kofu rolls (p. 113). Deep-fried kofu chunks (#423, p. 114; it states that kofu can be purchased at Chinese grocery stores). Interestingly, there is no mention of seitan. The same chapter contains 9 yuba recipes (p. 121-22). Recipes for sea vegetables are scattered throughout the book, especially in the chapter on wild vegetables (p. 135-37). Two recipes using amazake as a sweetener appear on p. 152, and homemade amazake beverage is found on p. 169

An extensively revised English-language translation of this book was published in 1974 under the title *The Art of Just Cooking* by Autumn Press. Address: Tokyo.

1558. Rose, Carrie; Peterson, Melinda. 1971. *The whole wheat heart of Yasha Aginsky: A vegetarian cookbook*. New York, NY: E.P. Dutton & Co., Inc. 128 p. Illust. Recipe index. 31 cm.

• **Summary:** Contains 3 soy-related recipes: (1) “Tofu.” A simple recipe for how to make tofu at home from full fat soy flour, using lemon juice as a curding agent. “Tofu,

better known as bean curd, is rich in protein and mainly used in soups, much as are chopped vegetables. Save the residue [okara] to use in breads, casseroles, loafs or soup.” (2) “Soy Nuts.” Soaked soybeans fried a few at a time in 1 inch of hot oil, then drained and salted. “One handful gives you an enormous amount of protein.” (3) “A Loving Soy Pat or Two.” Deep-fried patties containing whole and chopped soybeans, miso, vegetables, tahini, and whole wheat flour.

1559. Takashima, Shizuye 1971. *A child in prison camp* [1st ed]. Plattsburg, New York: Tundra Books. [74] p. Illust. so x 25 cm. *

• **Summary:** “The people in Japan, hearing how we have been treated by the Canadian Government, and that we are living in camps in the woods, send us barrels of soya sauce and miso paste.”

Note 1. This book is written for elementary and junior high school students. A Japanese-Canadian girl recalls her experiences of the three years (1942-1945) that she and her family spent in a Canadian internment (evacuation and relocation) camp during World War II. It was the New Denver Relocation Center in British Columbia.

1560. Tamura, Heiji; Hirano, Masaaki. 1971. *Shōyu no hon* [The book of shoyu]. Tokyo: Shibata Shoten. 286 + vi p. Illust. Index. 19 cm. [15 ref. Jap; eng+]

• **Summary:** Contents: Part I: Knowledge of shoyu. History of shoyu. How shoyu is made. Topography of shoyu: Shoyu in the provinces. Varieties of shoyu. Races of shoyu. How shoyu is used. Talk on various topics concerning shoyu. The science of shoyu. How to use shoyu and its near future. Part II: Shoyu cookery. Japanese cookery. Chinese cookery. Western cookery. One drop of shoyu can enliven. Part III: Shoyu and me. Short essays by famous Japanese about their fond, often childhood, memories of shoyu and its significance in their lives and in Japanese culture.

Mr. Tamura is a cooking teacher; he is said to have gotten most of his information other than recipes and reminiscences from another book, *History of Kikkoman Shoyu* (*Kikkoman Shoyu shi*, by Ichiyama 1968). Address: Tokyo, Japan.

1561. Tsuji, Kaichi. 1971. *Kaiseki: Zen tastes in Japanese cooking*. Tokyo and Palo Alto: Kodansha International Ltd. 207 p. With 96 color plates. Original woodcuts by Masakazu Kuwata. 29 cm.

• **Summary:** Contents: Foreword by Yasunari Kawabata (winner of the Nobel Prize for literature in 1968). Foreword: The tea ceremony and kaiseki by Sōshitsu Sen (head of the Urasenke School of Tea and the 15th generation descendent of Sen no Rikyu, founder of the school). Utensils and Kaiseki by Seizō Hayashiya (chief curator of the Ceramics Department at the Tokyo National

Museum). The twelve months of kaiseki. The kaiseki courses (defines and describes each course, such as Mukōzuke, Misoshiru [pages 168-71 give a fine description of miso and miso soup], Wanmori, Yakimono, Azukebachi, Hassun, etc.). Postscript. Notes on utensils. List of recipes. Glossary: Includes descriptions of miso, natto (incl. *Daitokuji-nattō*), shoyu, tofu, and yuba, plus azuki and Dainagon-azuki, many types of wheat gluten (fu), kuzu, mochi, sea vegetables (konbu, nori, wakame), fresh-water algae (Kamogawa-nori, Suizenji-nori (= Kotobuki-nori)), and umeboshi.

This is a magnificent, beautiful book, the finest work available on Japan’s highest form of haute cuisine, Tea Ceremony Cuisine, by a great Japanese Kaiseki chef. It was first published in Japanese by Tan-kōsha Inc. of Kyoto. Soyfoods are used throughout the book—especially miso, since one of the fixed courses in a kaiseki meal is miso soup (*misoshiru*). Many recipes use soy sauce, often the light colored type, usukuchi. Most recipes are shown in an accompanying full-color photo. The tea ceremony was developed at the court of the shogun in late Ashikaga times under such men as Soami, and his father and grandfather, Geiami (1431-1485) and Noami, who were painters, landscape gardeners, and poets in Kyoto. The greatest of the tea masters, under whom the tea ceremony (*chanoyu*) took final shape, was Sen no Rikyu (1521-1591). Zen preached the importance of the simple, uncluttered life. As a Zen priest and tea instructor, “Rikyu believed that amid the solitude of calm withdrawal from worldly cares sought by those who practice *chanoyu*, there should exist an element of creativity that leads to the serene enjoyment of beauty. The heart of this creativity, according to Rikyu’s Zen aesthetics, lies in the careful avoidance of the trite, the obvious, and the emphatic. Beauty has its most powerful effects when it arises from suggestion and restraint...

“Centuries ago, it was a rule that Zen priests ate only two regular meals a day—morning and noon. But since the priests engaged in rather strenuous work, by evening they were often hungry, and to assuage this hunger they would eat a light meal, which was called *yakuseki* (‘hot stones’). This term came from the practice of putting heated stones inside their clothing, by which the priests staved off hunger and cold during long sessions of meditation. When the tea masters developed the custom of serving a meal during the tea ceremony, they called it *kaiseki* (‘breast stones’). By evoking the image used in the Zen term, they seasoned their speciality with religious connotations.”

Soy-related recipes include: Miso soup (with aonorifu, azuki beans, and mustard, p. 29, plate 1, at Opening, the first of the 12 kaiseki months). Miso soup (with sesame custard, ginkgo nuts, and mustard), and Mukōzuke (with yuba and bonito flakes, p. 41, plate 9, at Evening). Miso soup (with wakanafu, kampyo, and mustard), and Azukebachi (hot dish, with sea cucumbers boiled in saké

and mirin, boiled yuba, citron peel garnish, p. 53, plate 17 & 22, at New Year's). Miso soup (with Sanshu miso, roasted momen bean curd [grilled tofu], and black [soy] beans), and Hassun (with natto wrapped in sea bream fillets, and miso-pickled chisha stems, p. 65-66, plate 25 & 31, at Spring). Miso soup (with icicle radish, temarifu, and mustard), and Azukebachi (hot dish, with octopus boiled in saké, and yuba, garnished with Japanese pepper, p. 77, plate 33 & 36, at Doll Festival). Miso soup (with yuba, warabi fern shoots, and mustard, p. 89, plate 41, at Flower Viewing). Miso soup (with walnut custard, trefoil, and mustard, p. 101, plate 49, at Brazier). Miso soup (with eggplants, bamboo shoots, and mustard) and Wanmori (abalone and bean curd custard, chisa leaves [a variety of lettuce], and grated ginger, p. 113, plate 57 & 59, at Off Season). Miso soup (with Sanshu miso, shiratamako, junsai) and Wanmori (with yuba and egg custard, asauri, and wasabi, p. 125, plate 65 & 68, at Morning). Miso soup (with Sendai and Sanshu-miso, koimo, and hojiso), and Yakimono (with deep-fried eggplant slices coated with white miso and broiled), and Hassun (broiled burdock wrapped in yuba, and deep-fried green peppers, p. 137-38, plate 73 & 76, at All Soul's Day). Miso soup (with namaifu, shirouri, and mustard), and Azukebachi (hot dish, with deep-fried dumplings of bean curd and hamo {sea/conger eel}, and broiled eggplants), and Hassun (with abalone cooked in saké and miso, soy beans in the pod [green vegetable soybeans] p. 149-50, plate 81, 85 & 86, at Moon Viewing). Miso soup (with koimo, zuiki, and sesame seeds), and Mukôzuke (with abalone, bean curd, and sesame seeds), and Wanmori (with boiled pine mushrooms and bean curd, nori, citron peel, p. 161, plate 89 & 92, at Closing).

Interesting Glossary entries: (1) *Daitokuji-nattô*, a "variety to which extra salt has been added, from the Daitokuji temple in Kyoto where it was first made as a preserve to be eaten in times of famine." (2) "*Fu* is the general name for a light cake made of wheat gluten. The two basic types of this cake are uncooked (*namaifu*) and baked (*yakifu*). The names that precede the suffix refer to what has been added to the gluten, the shape of the cake, or the area famous for a certain kind of cake. *Aonorifu* is baked and contains *Aonokiro*. *Chôjifu* is made long (=cho-) and cut to fit the bowl. *Daitokujifu* is fried cake that originated from the Daitokuji temple in Kyoto. *Temarifu* is a cake in the shape of a child's ball (=temari). *Wakanafu* contains several kinds of young greens (=wakana) that give it a fresh springlike color."

Note: This is the earliest English-language document seen (Oct. 2008) that uses the term *Daitokuji-nattô* (with a diacritical mark above the o -> ô) to refer to this Japanese type of "soy nuggets." Address: Kyoto, Japan.

1562. Watanabe, Tokujii; Ebine, Hideo; Ohta, Teruo. eds. 1971. *Daizu shokuhin* [Soyfoods]. Tokyo: Korin Shoin. 271

p. Illust. Index. 22 cm. [134 ref. Jap; eng+]

• **Summary:** This is the best book published to date on soyfoods in Japan. Contents: 1. Classifications and varieties of soybeans (p. 1). 2. Physical characteristics of soybeans (p. 5). 3. Chemical characteristics of soybeans (p. 9). 4. Standards and methods of examining soybeans (p. 47). 5. Special characteristics and problems of using soybeans for food (p. 53). 6. Current status of the soybean industry in Japan (p. 63). 7. Soymilk and various types of tofu: Aburage (deep-fried tofu pouches), ganmodoki (deep-fried tofu burgers), kôri-dofu (dried frozen tofu), soymilk, and yuba (p. 75). 8. Fermented soyfoods: Natto, shoyu, miso, fermented tofu (*rufu*) (p. 123). 9. Other soyfoods (incl. kinako, soy sprouts or moyashi, tempeh or tenpe, p. 203). 10. Quality and usage of defatted soybeans (*dasshi daizu*) (p. 219). 11. New food uses of soybeans and especially defatted soybeans (incl. 70% soy protein powder, soy protein curds, soy protein isolate, surimi gel, spun soy protein fibers) (p. 229). 12. Advice regarding supplying protein from organizations such as the United Nations and FAO (p. 257).

A 47-page translation of portions of this book (parts of Chapter 6 and all of Chapters 7) by Akiko Aoyagi and Chapters 8.1 and 8.2 by Alfred Birnbaum are available at Soyfoods Center.

Tokuji Watanabe was born in 1917. Hideo Ebine was born in 1921. Teruo Ota was born in 1926. Address: National Food Research Inst., Tokyo.

1563. Dimler, R.J. 1972. Oriental ceremonies at groundbreaking for a new rural industry. *Notes from the Director of the Northern Division* No. 1058. p. 2. Jan. 21.

• **Summary:** Describes the groundbreaking ceremonies on Jan. 19 for the new \$12 million Kikkoman shoyu plant at Walworth, Wisconsin. "Kikkoman sells 100 million gallons of shoyu annually, besides a line of dehydrated soups, miso,... The shoyu fermentation takes about 3 months and Kikkoman expects to start their first fermentations in October or November 1972 with the first sales in 1973. Initial production will amount to about 2,500,000 gallons annually which will use about 500,000 bushels total of wheat and soybeans per year. The plant brings to fruition the results from PL-480 research that NMN sponsored under the direction of Dr. C.W. Hesseltine (FL= Fermentation Lab), and that Kikkoman continued after the project itself terminated."

Dr. Hesseltine was among the honored guests. He found it cold standing in a corn field for almost 2 hours. Note: NMN probably stands for Northern Marketing and Nutrition Division—according to Dr. Walter Wolf, who worked there for many years. Address: Director [NRRL, Peoria, Illinois].

1564. Chico-San Inc. 1972. Chico-San Inc. products: A catalog of unique foods. P.O. Box 1004, Chico, CA 95926.

24 p. Revised Jan. 1972.

• **Summary:** The cover of this catalog is printed with dark brown ink on pea-green paper. A complex, circular orange-red spiral is above the title. Three sheafs of grain are across the bottom. Soyfoods imported from Japan include Lima Soy Sauce, Soybean Puree (Miso), and dehydrated miso. They also sell black [soy] beans.

Contents: Rice cakes is our bag. "How Chico-San guarantees Oriental-type, organically-grown brown rice." Wehah Farms is mentioned often in this article. Whole grains and flours. Cereals. Whole grain noodles. Beans. Specialties (incl. Yinnies / Ame). Seeds. Condiments. Sea vegetables. Dried foods. Beverages. Cosmetics. Dentifrice. Utensils. Recipes.

"Chico-San products have gained increasing acceptance throughout the country since their introduction in 1960." The booklet contains 11 pages of recipes (p. 13-23) including: Miso-sesame spread. Miso soup (p. 20). Address: P.O. Box 1004, Chico, California 95926.

1565. *SoyaScan Notes*. 1972. Chronology of Janus Natural Foods, macrobiotic and natural foods distributor in Seattle, Washington. And of Granum. 17 March. 1992. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** 1972 Jan.—Janus Foods Inc. is established at 712 Seventh Ave. South in Seattle, Washington, by George Gearhart and Blake Rankin, formerly of Spiral Foods. Some background: In 1969, while a student at UCLA, Rankin came in contact with Erewhon, Los Angeles. After graduation from UCLA he and several friends set up a small health food store in Victoria, BC, Canada. Then he spent 3 months in Boston, Massachusetts, living in a Kushi study house and working in an Erewhon warehouse. Back in Seattle, he worked at Spiral Foods, a wholesale operation that was an offshoot of Chico-San. Spiral Foods owned the O-Soba Noodle Nook in Seattle. Shortly after that he and George Gearhart, the proprietor, closed Spiral Foods and in Jan. 1972 opened Janus Foods as a macrobiotic and natural foods wholesale and distribution company. Tim Hartman was third of the original incorporators; all three men managed the company. It was successful. From opening day, Janus sold miso and shoyu, imported from Japan; they were among the company's best-selling products. Janus never owned a natural foods retail store or restaurant, and never sold foods retail from their warehouse.

1972 Sept.—Rankin leaves Seattle on a trip to Japan via Hawaii. He leaves Hawaii for Japan in March 1973. Erewhon had given Janus permission to buy natural foods (bearing the Erewhon label) directly from Japan, so in the spring of 1973 Rankin traveled and worked with Muso and Mitoku to set up the first shipments to Janus in Seattle. Janus probably never paid any royalties or fees directly to Erewhon. He leaves Japan in Sept. 1973. Then he goes to

Nepal and India on a spiritual search. In late 1973 he returns to Seattle and works for Janus.

1973—Two directories show that "Janus Foods Inc." is still located at 712 7th Ave. South, Seattle, Washington 98104. They now sell tamari and miso and distribute products from Erewhon, Spiral Foods, Deaf Smith, Pure & Simple, Chico-San, and Arrowhead Mills.

1974 March 8—Janus (Gearhart, Rankin, and Hartman) hosts the meeting of the Natural Food Distributors in Seattle; 16 people representing 12 companies attended.

1974 July 19. By this date, Janus Natural Foods, Inc. is located at 1523 Airport Way South, Seattle, WA 98134. Tim Hartman is still a manager of the company and Rankin is present. The company now sells barley koji. The company now has a lovely sprout-like logo (designed by Frederick Walsh) and a new brand called "Verity," whose labels were also designed by Walsh. Soy sauce and misos were sold under the Verity label for a while starting before Sept. 1976.

1975—The three managers decide to rotate the presidency of Janus annually. Rankin became president and Hartman left the company before his turn came around. During 1974 and 1975 Rankin and Gearhart were working on miso production.

1976 Sept.—Rankin leaves Janus and returns to Japan where he works for Mitoku and studies calligraphy. A few days after his arrival in Japan he meets his future wife, Yoko. They later had two children, but separated in 1988 and eventually were divorced.

1977—Janus leaves its large warehouse on Airport Way.

1979 Month? (before summer) Janus goes out of business, under the management of George Gearhart.

1981—Rankin returns to Seattle and in January or February starts Granum (pronounced GRAH-num, not GRAY-num) as a distributor and importer for Mitoku macrobiotic food products from Japan. The Granum logo is designed by Frederick Walsh. As of 1985 Granum has a small retail store and a 10,000 square foot warehouse, both at 2901 N.E. Blakeley St., Seattle, Washington 98105. Expected 1985 gross is more than \$500,000.

As of March 1992 Granum has more than doubled its business compared with 1985. Blake has remarried to Nancy and they have a 2-year-old son, Addison. George Gearhart now lives in the suburbs to the south of Seattle. He is a sales manager, but no longer works in the natural foods industry. Address: 712 7th Ave. South, Seattle, Washington 98104.

1566. Takeuchi, Tokuo; Hosokawa, N.; Yoshida, M. 1972. [Studies on the characteristics of proteolysate in soybean miso manufactured with enzyme preparation]. *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 50(1):21-29. Jan. [44 ref. Jap; eng]
Address: Food Research Inst., Aichi prefecture, Nishi-ku, Nagoya, Japan.

1567. *Food Engineering*. 1972. Japanese build sauce plant in U.S. 44(2):95. Feb.

• **Summary:** Subtitle: “Kikkoman Shoyu Co. will produce soy sauce in Wisconsin, using locally grown wheat and soy beans. Sauce will be made by applying modern technology to the traditional natural process.” An illustration shows an aerial view of the plant, which will be the largest Japanese plant to be built in the USA. The initial \$6 million plant will be built by Austin Co., Chicago, and be ready for operation in 1973. A description of the modern process for making “shoyu, a flavorful soy sauce,” is given. A portion of the soy sauce will be blended with other ingredients to make teriyaki sauce. A powdered miso (soy bean paste) soup is under development.

1568. Gorell, Wally. 1972. *Miso: What it is. How to make it* (Leaflet). Boston, Massachusetts. 4 panels. 22 cm. [1 ref]

• **Summary:** The author notes: “For the above text, I have drawn heavily on the writings of K. Shibasaki and C.W. Hesseltine which appeared in *Economic Botany* (1962) and *Mycologia* (1965).” Address: Boston, Massachusetts.

1569. Huang, Su-Huei. ed. 1972. *Chinese cuisine: Wei-Chuan cooking book*. Taipei, Taiwan: School of Home Economics, Wei-Chuan Foods Corp. 181 p. Illust. No index. 22 cm. [Eng]

• **Summary:** On each page is one recipe and a half-page color photo of the prepared dish. The title of the recipe is written in English in large bold letters and is also given in (to the right) in small Chinese characters, just above the number of servings. Most of the recipes call for ¼ to ½ teaspoon of MSG; many call for soy sauce.

On unnumbered pages at the front of the book are (1) A two-page color photo, on a light blue background, of 39 special ingredients, each numbered, with the numbers and names across the bottom of the pages. These include: “9. nori. 24. pickled plum (*umeboshi*). 25. bean curd noodle [pressed tofu noodles]. 30. bean curd wrapper (*pronounced ‘bai ye’*) [pressed tofu sheets]. 35. bean curd skin [yuba in large, semicircular thin sheets].

(2) Description of some other special ingredients: “Hot bean paste (*pronounced ‘la jiao jiang’*). This is made with red peppers [and soy beans] and has a very hot taste.” “Sweet bean paste (*‘t’ien mien jiang’*). This is made with steamed, fermented bread (black color).” Note 1. Why is this called “Sweet bean paste”? What kind of beans are used to make it?

“Soy bean paste (*‘do ban jiang’*). This is made with fermented soy beans (black color).” “Fermented black bean (*‘do shr’*). This is black [soy] beans which are steamed, then marinated in soy sauce or salt.” “Pickled bean curd (*‘do fu ru’* or *‘Chinese cheese’*). This is bean curd which is dried

and then pickled; there are many different kinds with different seasonings.”

(3) Helpful hints: “In all recipes you may substitute Worcestershire sauce for dark vinegar.”

In Chapter 3, “Pork and beef,” soy related recipes are: Shredded pork with sweet soy bean paste (with 1.3 tablespoons “sweet soy bean paste,” p. 39). Note 2. This is the earliest document seen (Feb. 2009) that contains the term “sweet soy bean paste.” See also p. 104 below.

Pork ribs with dried black fermented beans (p. 41). Pork in preserved bean sauce (p. 42).

In Chapter 4, “Sea Food,” is a recipe for Steamed carp with fermented black beans (p. 64).

In Chapter 5, titled “Bean curd and eggs” (p. 102-15) are recipes for: Stewed bean curd (with “1½ squares bean curd”), Assorted dish with hot sauce (with “½ tablespoon hot soy bean paste, 1½ tablespoons sweet soy bean paste,” p. 104), Bean curd stuffed with minced pork, Ma-Po’s fried bean curd with pork, Bean curd leaf rolls with minced pork (With “bean curd wrappers”), Beancurd noodles with celery salad (with “4 oz. {storebought} bean curd noodles”), Vegetarian chicken (with “16 bean curd sheets”).

Also: Green peppers stuffed with chopped meat (p. 122, with “1 tablespoon fermented black beans, crushed”). Bitter melon stuffed with fermented black beans (p. 126, with “2 oz. fermented black beans”). Eggplant with bean curd skin (p. 133, with “1 sheet beancurd skin” and “1 sheet nori” [sea vegetable]). Bean curd in earthen pot (p. 142, with “3 squares bean curd”). Address: 19 West Nanking Road, Taipei, Taiwan.

1570. Wang, Hwa L.; Ellis, J.J.; Hesseltine, C.W. 1972. Antibacterial activity produced by molds commonly used in Oriental food fermentations. *Mycologia* 64(1):218-21. Jan/Feb. [6 ref]

Address: NRRL, Peoria, Illinois.

1571. Aihara, Cornelia. ed. 1972. *The dō of cooking* (Ryurido). Vol. 1. Macroguide No. 13. San Francisco, California: George Ohsawa Macrobiotic Foundation. 109 p. Illust. No index. March. 25 cm.

• **Summary:** All recipes in this macrobiotic cookbook are numbered. Contains information on soy sauce and miso (p. 44-45). Soy-related recipes include: “Top of stove” casserole noodle soup (with “dry tofu” [dried-frozen tofu] and fried wheat gluten, p. 58). Fried whole wheat noodles (with seitan, p. 60). Homemade noodles with soup (and barley miso, p. 61). Onion miso (p. 62). Rolled cabbage with tofu (p. 63). Wheat gluten (p. 71, made from 10 cups whole wheat flour and 4 cups unbleached flour). Seitan (p. 72). Fresh wheat fu (2 versions). Serving recipes—boiled fu (p. 73). Fried fu—gluten cutlet. Shish kebab (with cooked fu, p. 73-74). Making tofu (at home using 3 cups soybeans, p. 75-76). Making nigari (p. 76). Quantity tofu preparation

(using 10 lb soybeans). Okara or unohana (sauteed with soybeans and vegetables, p. 76). Tofu with kuzu sauce (p. 78). Fried tofu. Shinano-age (Fried tofu with buckwheat, p. 79). Kaminari Tofu (Thunder Tofu, p. 79). Nori-maki (Tofu rolled in nori, p. 80). Age-tofu (stuffed tofu, variation, p. 80-81). Miso salad dressing (p. 90). Bean sprout miso salad (p. 91; it is not clear what kinds of beans the bean sprouts are made from—probably mung beans). Gamodoki ([Ganmodoki] mock goose; p. 99-100). French bread made with gluten water (p. 104). Amazake is not mentioned. Some recipes call for chicken or fish as ingredients.

Note 1. This is the earliest cookbook seen (July 2005) that gives a recipe for making seitan, as follows: “1 T. [tablespoon] dark sesame oil. 1 T. minced gingerroot. 1-2 cups soy sauce. 5 cups cold cooked gluten. Heat oil in a sauce pan, add minced ginger (use only fresh ginger) and saute. The amount of soy sauce used depends upon how long you intend to store the Seitan. Use a larger amount of soy sauce for longer storing and refrigerating. Add soy sauce, bring to a boil, and drop in pieces of gluten. Cook on low heat for three hours, stirring frequently. Remove cover and continue cooking until excess liquid is absorbed and evaporated. Seitan is ideal as a seasoning in noodles au gratin, stews, cooked with vegetables, etc. It will keep for long periods of time in the refrigerator.”

After Volume 2 of this series of four seasonal cookbooks was issued, Volume 1 was subtitled “Spring Cooking.” Address: San Francisco, California.

1572. Ebine, Hideo; Matsushita, Zenichi; Sasaki, Hirokuni. 1972. Beikoku-san daizu no miso genryô toshite no tekisei hyôka (hoi) Sôgô hyôka [Evaluation of U.S. soybeans as raw materials for making miso. (Supplement) Summary of evaluation tests]. *Shokuryo Kenkyujo Kenkyu Hokoku (Report of the Food Research Institute)* No. 27. p. 132-36. March. Reprinted from Miso no Kagaku to Gijutsu No. 210. p. 21-24 (1971). [5 ref. Jap; eng]

• **Summary:** A test of 101 U.S. soybean varieties showed that those most suitable for making miso are Kanrich, Mandarin, and Comet. U.S. soybeans generally have much higher oil content and lower carbohydrate content than Japanese soybeans. Discusses the key points in evaluating the suitability of a soybean variety for making miso. Address: Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo, Japan.

1573. Ebine, Hideo; Matsushita, Zenichi; Sasaki, Hirokuni. 1972. Beikoku-san daizu no miso genryô toshite no tekisei hyôka. III. Sentaku hinshu ni yoru chûkan kôgyô shiken [Evaluation of U.S. soybeans as raw materials for making miso. III. Miso manufacturing from screened soybean varieties in pilot plants]. *Shokuryo Kenkyujo Kenkyu Hokoku (Report of the Food Research Institute)* No. 27. p.

118-31. March. Reprinted from Miso no Kagaku to Gijutsu No. 206. p. 16-28 (1971). [2 ref. Jap; eng]

• **Summary:** As a result to pre-screening, the soybean varieties Comet, Harosoy, M-1 (Kanrich), and Tsurunotamago (abbreviated as Tsuru were used for making miso in pilot plants). “White miso. light-colored salty miso, and red salty miso were made from whole soybeans and from soybean grits. The ability of the whole soybeans to absorb water was M-1 > Comet > Tsuru > Harosoy for light colored salty red miso and for red salty miso, and M-1 > Comet > Harosoy > Tsuru for white miso.

As for soybean grits, although the amount of solid matter lost during soaking and cooking is larger than for whole soybeans, the color of the cooked grits is brighter, resulting in miso of a beautiful color made from them, and the protein of cooked soybean grits is more susceptible to enzyme hydrolysis resulting in higher evaluation of their miso in a sensory / organoleptic test. Address: Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo, Japan.

1574. Ebine, Hideo; Matsushita, Z.; Sasaki, H. 1972. Beikoku-san daizu no miso genryô toshite no tekisei hyôka. II. Miso manufacturing from soybean-grits]. *Shokuryo Kenkyujo Kenkyu Hokoku (Report of the Food Research Institute)* No. 27. p. 109-17. March. Reprinted from Miso no Kagaku to Gijutsu No. 203. p. 18-25 (1971). [7 ref. Jap; eng]

• **Summary:** Soybean grits were made from several dehulled U.S. soybean varieties (Dorman, Lee, Yelnanda, Harosoy, Hokkaido, and Clark) using two different dehulling machines. Large grits were preferred and the Weston Moisture Meter gave the best results. When using grits, 13% of the water soluble dry matter was lost in the water during soaking and steam cooking—twice as much as with whole soybeans. The main losses were from water-soluble sugars (6.1%) and protein (3.9%), both of which cause miso color formation.

When the grits were soaked in water before cooking, the color of the cooked grits and of the miso made from them was “bright and beautiful.” The loss of dry matter was the main problem. Address: Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo, Japan.

1576. Nakano, Masahiro. 1972. Miso—One of the Japanese traditional fermented foodstuffs. Paper presented at the Fourth International Fermentation Symposium. 4 p. Held 19-25 March 1972 at Kyoto, Japan.

• **Summary:** On the front page, the following organizations are listed in both English and Japanese: (1) Nagano Miso Industrial Co-operative Association, No. 1014, Minamiagata-machi, Nagano-shi, Japan. Phone: 0262 (28) 1221. (2) Japan Miso Industrial Co-operative Association, Shinkawa 1-26-19, Chuo-ku, Tokyo. Phone: 03-(551)-7161.

Contents: Traditional foodstuffs. Japanese fermented foods. Definitions of miso and koji. Miso: Its prototype was introduced to Japan about 1,200 years ago, development into miso, the varieties of miso. Koji, *Aspergillus oryzae*, and enzymes. Period of fermentation and salt-resistant lactic acid bacteria. Miso soup. Per capita consumption of miso throughout Japan is now about 27-30 gm/day. Flow diagram for commercial production of rice miso, with amounts of each ingredient given. Table showing nutritional composition of five basic types of miso.

Note: This is the earliest document seen (March 2009) that gives basic information about commercial miso production. Address: Meiji Univ., Japan.

1577. Tamura, Shinpachiro; Ishima, T.; Saito, S.; Miyauchi, T.; Tomita, F.; Yoshikawa, S. 1972. [Studies in the patterns of six tastes of twenty drinks in Japan]. *Shokuryo Kenkyujo Kenkyu Hokoku (Report of the Food Research Institute)* No. 27. p. 77-83. March. [3 ref. Jap; eng]

• **Summary:** “Taste patterns of 20 drinks in Japan were studied.” A total of 10 points were assigned to each of “six taste components, namely, sweet, salty, sour, bitter, tasty, and astringent.”

These drinks included miso soup and soy sauce soup (*sumashi-jiru*, a clear soup seasoned with soy sauce). A very interesting diagram showing these relationships appears on p. 80.

“The highest pattern similarity (0.996) was found between two kinds of green tea, namely ‘sen-cha’ and ‘ban-cha,’ and the lowest one was found between soysauce soup and coffee or Coca-Cola.” Address: Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo, Japan.

1578. Wiener, Joan. 1972. New food freaks. *Seventeen*. March. p. 134, 156, 158.

• **Summary:** This entire issue is about California. When the writer first came to California in 1967, it blew her mind. It was everything she had wanted back east but couldn’t get. Lots of sunshine, great vistas, abundant organic food, bags of brown rice, refrigerators packed with honey ice cream and goat’s milk yogurt, crates of California fruits and vegetables “untouched by man-made chemicals. It was food-freak heaven!... Since then the natural food scene has exploded. There are longhair-owned restaurants and stores

with names like “The Radiant Radish” (in Los Angeles), “Wholly Foods” (Berkeley), “The Good Earth” (Fairfax), and “Agape Natural Foods” (San Francisco). Hundreds of young people are going back to the land and to farming. Thousands more are buying organic foods at natural food stores. New Age Natural Foods is a huge, magnificent, almost unbelievable natural foods supermarket on California Street in Palo Alto—featuring pretty, healthy young salespeople, a huge produce section, a take-out deli (she watched as someone made meatless sesame burgers with chickpeas and miso), fresh pressed juices and information—such as free pamphlets on recycled paper with titles like “The Sugar Story,” “The Oil Story,” “The ‘Not’ List.” The manager, Randy Fishel, age 25, has been in business for 6 years. Randy says that when Fred Rohe opened New Age [in San Francisco] in 1969, the customers were mostly hip long-hairs. Today, 35% of the customers are the wives of doctors and lawyers. Also in 1969 Fred Rohe and Randy created Organic Merchants (OM), the only trade association for natural food stores; today there are 110 members—“mostly freaky little stores run by young people.” OM is very concerned with quality control.

Photos show: (1) Jim Baker and Robin Baker, owners of The Source restaurant, seated at a table under an awning. (2) Warren Stagg at his restaurant, H.E.L.P. Unlimited. (3) Customers weighing their purchases at New Age supermarket. Address: San Francisco.

1579. Farmilant, Eunice. 1972. Macrobiotic cooking. New York, NY: New American Library. 224 p. Foreword by Herman Aihara. May. Index. 18 cm. [31 ref]

• **Summary:** This pocketbook has a color (beige) photo on the cover of ears of wheat, one wooden spoon filled with soybeans and one filled with unpolished rice. It is “A basic introductory guide to cooking and eating the macrobiotic way.” The author’s interest in macrobiotics began in April 1968. Basic information on soyfoods (especially miso, tamari, and tofu) is given on pages 29, 33-38, 213-14. Soy-related recipes include: Wheat berries and black beans (i.e. black soybeans, p. 78). Sprouts (incl. soy sprouts, p. 82-83). Miso pickles (p. 124-25). Miso soup (p. 128-29). Cream of miso soup (p. 135). Black beans and wheat berries (p. 139).

There is an entire chapter on miso and tofu (p. 142-46) including: What makes miso so beneficial? Barley miso (nutritional analysis). Miso-vegetable stew. Miso-rice. Miso stew with vegetables. Miso-vegetable spoon bread. Homemade tofu (curded with fresh lemon juice).

Pizza—Macrobiotic style (with miso, p. 149). Chop suey (with tofu and miso, p. 151-52). Miso bechamel sauce (p. 159). Miso gravy. Simple tahini and tamari sauces (p. 160). Tempura dip (with tamari). Simple miso spreads (p. 161). Miso-vegetable spread. Miso-watercress spread.

There is a directory of macrobiotic stores and restaurants in the U.S. (p. 191-203, subdivided alphabetically by state,

and within each state alphabetically by city). The following states have the following number of stores and restaurants: Alaska 1, Arizona 4, Arkansas 1, California 32, Colorado 4, Connecticut 18, District of Columbia 3, Florida 14, Georgia 7, Hawaii 2, Illinois 7, Indiana 2, Iowa 5, Louisiana 4, Maine 14, Maryland 7, Massachusetts 51, Michigan 12, Minnesota 3, Mississippi 2, Missouri 3, Nevada 1, New Hampshire 20, New Jersey 9, New Mexico 3, New York 61, North Carolina 5, Ohio 14, Oklahoma 3, Oregon 2, Pennsylvania 8, Rhode Island 5, South Carolina 1, Texas 4, Utah 1, Vermont 26, Virginia 4, Washington 3, Wisconsin 2.

There is also a directory of stores, restaurants, and centers outside the U.S. (p. 204-07, subdivided by country). The following countries have the following number of stores, restaurants, or centers: Australia 1, Belgium 2, Brazil 2, Canada 15, Denmark 4, France 29, Germany 1, Holland (Netherlands) 2, India 1, Italy 1, Japan 3, Portugal 1, Puerto Rico 1, Spain 1, Sweden 1, Switzerland 2, United Kingdom: England 13, Scotland 1, Vietnam 2.

A list of wholesale distributors in the U.S. (p. 208-09) includes Shiloh Farms (Route 59, Sulfur Springs, Arkansas), Erewhon Trading Co. (8003 W. Beverly Blvd., Los Angeles, California 90048), Chico San Foods (1262 Humboldt Ave., Chico, California 95926), Erewhon Trading Co. (33 Farnsworth St., Boston, Massachusetts 02210), Deer Valley Farms (Guilford, New York 13780), Infinity Food Co. (171 Duane, New York, NY 10013), Mottel Foods (451 Washington, New York, NY 10013), Juniper Farms (Box 100, Sugar Loaf, NY 10981), Pioneer Specialty Foods (Fargo, North Dakota 58100), Merit Food Co. (Pill Hill Lane, Box 177, Bally, Pennsylvania 19503), Essene (58th & Grays Ave., Philadelphia, PA 19143).

protein-rich food based on Indian oil seed meals and pulses. II. *J. of Food Science and Technology (Mysore, India)* 9(2):57-62. June. [10 ref]
Address: Central Food Technological Research Inst. (CFTRI), Mysore, India.

1583. Webber, Ella V. 1972. Perry A. Webber: Pioneer missionary in true education to Japan. Chattanooga, Tennessee: Southern Missionary College. 87 p. *

• **Summary:** Perry A. Webber was born on 15 June 1890 in Northville, Michigan. His parents became Seventh-day Adventists (SDAs) during his early childhood. In 1904 the family moved to Berrien Springs, Michigan, and Perry was educated there. In 1911 Perry graduated with a BA from Emmanuel Missionary College [in Berrien Springs] and in 1912 he was married to Ella Mae Verney.

In 1913 he was appointed by the SDA General Conference Foreign Mission Board to go, with his wife, as missionaries to Japan. In Tokyo they studied Japanese language for 2 years, then began pioneering educational work in Japan until 1927. For 4 years (1915-19) they worked in Fukuoka (in northern Kyushu), then returned to Tokyo. A son, Alfred B. Webber, was born in Dec. 1919; he later became a medical doctor. In Tokyo they worked at a school in Ogikubo. By 1921 Perry was teaching about the virtues of brown rice. In 1923 Perry found 25 acres of land in Sodegaura; in September of that year the Great Tokyo Earthquake (*Kanto Daishinsai*) took place. Later in 1923 the family returned to California because of the wife's respiratory problems. Harry Webber was born in Glendale. After a year in Honolulu, Hawaii, in 1934, they returned to Japan in the summer of 1925 and moved the college into the country. In the spring of 1926 the students and teachers started to build their own self-supporting school, with Perry as principal. This school later grew into the Japan Missionary College (*Saniku Gakuin*). The Japanese name means "three-sided school" since equal emphasis was placed on mental, moral, and manual development.

During these years Perry grew very fond of Japanese food and especially of Inari-zushi (made of deep-fried tofu pouches filled with vinegared rice). On his way to language school, he used to stop in regularly at the Shinoda Sushi Shop in Kanda (in Awaji-cho by the 1970s) to enjoy their Inari-zushi. The shop once developed a special Webber Sushi, named after him, and they used his name in some of their promotional materials. He was also very fond of regular tofu and of miso soup.

In 1927 the Webbers returned to America to educate themselves in good health. At this time Adventists believed that the true remedies are "pure air, sunlight, abstemiousness, rest, exercise, proper diet, the use of water, and trust in Divine power (*Ministry of Healing*, p. 127). In the fall of 1928 Perry entered Michigan State University to study biological chemistry while his wife, Ella Mae, studied

nutrition; both were deeply interested in understanding the principles of good health. By May 1929 Perry was considered “one of our teachers” by Madison College in Madison, Tennessee.

During the early 1930s and the Great Depression, many students’ only hope of getting an education was to rely on their own efforts. Madison, which offered a work-study program, became a very attractive alternative school.

In Sept. 1930 the family moved to Madison while Perry finished his thesis. In June 1931 Perry was awarded his PhD degree in biological chemistry, with special interest in chemistry and soyfoods development. At Madison he became an instructor of chemistry with a strong interest in food chemistry. In the following years he became the main person at Madison responsible for the school’s growing involvement with soyfoods. In Nov. 1931 Perry wrote a long two-part article for *The Madison Survey* titled “Facts Concerning the Soybean.” During the early 1930s he put a great deal of creative energy into expanding Madison’s line of commercial soyfood products. Most of the products that were introduced between 1931 and 1934 were the result of his work. In August 1933 Perry Webber and Frances L. Dittes attended the annual convention of the American Soybean Association (ASA) in Baton Rouge, Louisiana. Webber presented a lecture with slides about the importance of soyfoods in Asia and their potential in America. He also prepared an exhibition of Madison soyfoods that was displayed at the convention. Webber was secretary-treasurer of the ASA for one year at this time. He visited Edsel A. Ruddiman at the Ford Motor Company and gave a talk to him and other leading research scientists about soyfoods. He was also a close friend of Dr. John Harvey Kellogg. He visited Kellogg, talked about soyfoods, and did some work developing a preservative for some of Kellogg’s crackers.

Perry Webber worked at Madison until Sept. 1935 when, after a big farewell party, he returned to Japan to serve as principal of the Japan Missionary College (Saniku Gakuin). There he taught a lot about nutrition and the value of a vegetarian diet. In about 1936 Webber visited Dr. Harry Miller in Shanghai, China, and helped him set up a sanitation and research lab for analyzing the Vetose soymilk products at his new plant.

From 1939 to 1943, during World War II, Webber was back in the USA, teaching at Madison as head of the chemistry department. He was also at Madison from 1946 to 1953 and from 1959 to 1962, each stay punctuated by work in Japan. While serving as an administrator at Madison Foods (1959-1963) he and Sam Yoshimura pulled the factory out of debt and put it several thousand dollars into the black in one year’s time.

During his trip to Japan that began in the spring of 1953, he taught one food plant how to make gluten, soymilk, and soy croquettes. Also in 1953 he started a self-supporting organization at Mt. Akagi, about 125 miles northwest of

Tokyo; there he worked for more than 7 years. In the winter of 1956 he suddenly became ill with pneumonia. He returned to America in the summer of 1958 and was found to have Parkinsonism; no medicine was prescribed until 1962. In 1966 Perry was an outpatient at the Madison Sanitarium/Hospital for a time, then he became an inpatient from Oct. 1967 to Jan. 1968. In Sept. 1968 he went to a convalescent home in Lodi, California. His son, Dr. Alfred B. Webber, was living and practicing medicine in Lodi. In 1969 he returned to the Wildwood Sanitarium, a self-supporting Seventh-day Adventist convalescent home and health care facility in Wildwood, Georgia (northern Georgia). He passed away there in January 1973 at age 82 of Parkinsonism.

1584. Conrat, Maisie. 1972. Soybean cookery. *Organic Gardening and Farming* 19(7):89-93. July.

• **Summary:** Discusses the benefits of soybeans and their products: whole soybeans, soy flour, tofu, miso, and soy sauce.

“If you go into a natural food store today, you will find soybeans available in many forms. In some stores you’ll find two or more varieties of whole beans as well as soy grits and soy meal, soy powder and soy flour. Most stores also carry roasted, salted soy nuts and a kind of soy cheese called tofu. They will have noodles, spaghetti, and macaroni made from soy; and they will also carry exotic soy products like miso. This may seem like a lot of things to get from one kind of bean, but in Japan, where soy is considered a protein staple, you will find more products yet...”

“Both tamari soy sauce and miso are made from fermented soy beans. (Regular commercial soy sauce has been adulterated with various chemicals to simulate fermentation.) Miso is a thick paste made from black [not true] soybeans and rice, and has the same flavor as tamari soy sauce. You can use miso as you would beef extract in making soups, stews and sauces.

“Tofu is a kind of soy cheese. It is widely used throughout China and Japan, where it is available in many forms. Tofu is made from clabbered soy milk, just as cottage cheese is made from clabbered cow’s milk. It is very mild and delicate, so you will probably want to serve it in a sauce or soup that has plenty of character.”

Contains recipes for: Apple soy crisp (with soy meal). Soy pancakes (with soya flour). Soy cheeseburgers (with soybeans). Soy balls (with soy powder).

1585. Ebine, Hideo; Matsushita, Z.; Sasaki, H.; Yanai, S.; Ariyoshi, M.; Machi, M. 1972. Beikoku-san daizu no miso genryô to shite no tekisei hyôka [Evaluation of U.S. soybeans as raw materials for making miso]. *Report of Central Miso Institute* No. 7. 66 p. July. Collection of 7 articles, in Japanese, with 4-page English-language summary. [28 ref. Jap; eng]

• **Summary:** Part I: Miso manufacturing test on a laboratory scale. (1) Employing 13 varieties of U.S. soybeans and 11 varieties of Japanese soybeans of 1961 crops, U.S. soybeans were generally higher in oil content and lower in carbohydrate content than Japanese soybeans. Among the tested U.S. varieties, Comet, Yelnanda and Harosoy were promising.

(2) In 1962, 27 samples of U.S. soybean crops and 5 samples of Japanese soybeans were employed. Not all the Japanese varieties tested were evaluated superior to the U.S. varieties, but the evaluation of consistency or texture was higher than that of U.S. varieties.

(3) Fourteen samples of U.S. soybeans from the 1963 crop and 26 samples from the 1964 crop were evaluated for their suitability in making miso. From the 1963 crop, Comet, J.E.W.-45, and Mandarin were considered the best. From the 1964 crop, Mandarin and Kanrich were considered best.

(4) Of the soybean samples of 1965 and 1964 crops, the results showed that Kanrich variety of 1964 was the best. "In comparison with U.S. soybeans, the characteristics of Japanese soybeans can be significantly recognized in the consistency of miso, namely in its fine and smooth texture."

Part II: Miso manufacturing from soybean-grits. Twice as much dry matter was lost during cooking as when whole soybeans were used. The main constituents of the loss were water-soluble sugar (6.1%) and protein (3.9%) which cause color formation of miso. When the soybean grits were soaked in water before cooking, the color of the cooked soybean grits as well as miso made from them were bright and beautiful. The flavor of fermented miso was also improved by this method of using soybean grits.

Part III: Miso manufactured from screened soybean varieties in pilot plants. The variety M-1 gave the best results for light colored salty miso, red salty miso, and white miso.

(Supplement) Evaluation tests were conducted on 101 U.S. and 24 Japanese soybean samples. In comparison with Japanese soybeans, the U.S. soybeans showed a higher level of oil content and a lower level of carbohydrate content. The varieties of U.S. soybeans suitable for making miso are Kanrich, Mandarin, and Comet. Soft and bright soybeans are generally suitable, since they show a high absorbing capacity of water. Soybeans rich in carbohydrate show generally high capacity of water absorption. Large size of soybeans are generally acceptable. Address: 1. Shokuryo Kenkyujo, Tokyo.

1586. Ebine, Hideo. 1972. Fermented soybean foods in Japan. *Tropical Agriculture Research Series* No. 6. p. 217-23. Sept. Symposium on Food Legumes.

• **Summary:** Production of fermented soybean foods in Japan in metric tons (tonnes) (1968): Miso: 553,000 tonnes; includes the use of 169,000 tonnes of whole soybeans,

6,600 tonnes of defatted soybeans, 84,400 tonnes of rice, 18,200 tonnes of barley, and 71,200 tonnes of salt. In addition, roughly 200,000 tonnes of miso are made at home in Japan.

Shoyu: 1,027,000 kiloliters; includes the use of 14,900 tonnes of whole soybeans and 147,320 tonnes of defatted soybeans, 126,600 tonnes of wheat, 7,700 tonnes of wheat bran, and 172,200 tonnes of salt.

Natto: 90,000 tonnes; includes the use of 47,000 tonnes of whole soybeans.

Note that miso uses more soybeans than shoyu. Annual per capita consumptions of these foods was: Miso 6.7 kg, shoyu 10.2 liters, and natto 760 gm. Address: Head, Fermentation Div., National Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo.

1587. Menezes, Tobias J.B. de. 1972. Alimentos e molhos obtidos por fermentacao da soja e de cereais [Foods and sauces obtained by fermentation of soybeans and cereal grains]. *Boletim do Instituto de Tecnologia de Alimentos (Campinas, Sao Paulo, Brazil)* No. 31. p. 49-63. Sept. [24 ref. Por]

• **Summary:** Contents: Introduction. Shoyu (*molho de soja*). Miso. Natto. Tempeh. Sufu. For each food, there is an introduction and a description of the process for making that food, sometimes with a flowchart.

Note: This is the earliest Portuguese-language document seen (April 2001) that mentions fermented tofu, which it calls "sufu." Address: Brazil.

1588. Saio, Kyoko; Watanabe, Tokuji. 1972. Advanced food technology of soybean and other legumes in Japan. *Tropical Agriculture Research Series* No. 6. p. 209-16. Sept. Symposium on Food Legumes.

• **Summary:** The following amounts of whole soybeans (in 1,000 metric tons) are used in Japan to make these products: Tofu and fried tofu 295, miso 169, natto 47, Kori-tofu (dried or frozen tofu) 34, shoyu 15, kinako 12, others 70. Total 642.

The following amounts of defatted soybeans (in 1,000 metric tons) are used in Japan to make these products: Shoyu 154, tofu and fried tofu 77, miso 8, others 45. Total 284. Grand total: 926. Address: 1. Senior Research Officer; 2. Director. Both: National Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo.

1589. Eden Foods. 1972. [Catalog and pricelist]. 211 South State St., Ann Arbor, MI 48108. 2 p. Oct. 5.

• **Summary:** This is the second earliest existing Eden Foods seen that is dated. Soy-related products include: Hopi Roasted Soybeans (1.3 oz snack). Soybeans (1 lb, 2 lb, and 50 lb bags). Soy flour (25 lb or 50 lb). Tamari soy sauce (pints, quarts, gallons).

Other interesting products include: Azuki beans (25 lb, 50 lb, and 100 lb bags). Sweet rice flour (25 lb). Celestial Seasonings herb teas (incl. The Red Zinger). Mu herbal tea #9, #16. Wild ginseng tea. Wild ginseng root. Wild goldenseal powder. Whole wheat noodles. Dr. Bronner's Castile Soap. Corona Hand Mill. Honey (blueberry blossom or raw clover; "This honey is strained only once and heated only to 115 degrees and not above in order to preserve the natural nutrients and enzymes in the honey").

Note: This is the earliest document seen (Jan. 2002) containing the term "Sweet rice" or "Sweet rice flour." The new term is used in place of the traditional term "glutinous rice" which is inaccurate since this type of rice contains no gluten. People with celiac disease, celiac sprue, or Duhring's disease must strictly avoid foods that contain gluten; they can eat "sweet rice." Address: Ann Arbor, Michigan.

1590. *East West Journal*. 1972. Chico-San burns. 2(14):5. Oct. 2-16.

• **Summary:** A fire at the Chico-San warehouse in Chico, California on September 14 results in the loss of 90% of the company's natural food inventory worth approximately \$350,000. Origin of the fire was uncertain, but it apparently happened when a vapor leak caused an explosion in one of the new rice cake machines. The macrobiotic food industry got its start in this country eight years ago with the production of Chico-San rice cakes.

Among the items destroyed was the first batch of traditionally-made American miso, which Chico-San had planned to market in the coming year. New office and warehouse facilities are in operation at 2244 West First Street in Chico. President of Chico-San, Robert Kennedy, hopes the rice cake machines and "yinnies" candy production can be re-assembled and working again within the month. Address: P.O. Box 203, Prudential Center Station, Boston, Massachusetts 02119.

1591. An, Jin-huai; Wang, Yugang. 1972. Mixian Da-huting Handai huaxiang shimu he bihua mu [The Han tomb No. 1 at Ma-wang-tui]. *Wen Wu (Cultural Relics, China)* No. 10. p. 49-62. [Chi]*

• **Summary:** The Han tomb No. 1 at Ma-wang-tui (pronounced "ma-wang-DUI") was discovered in 1972. Letter from Dr. H.T. Huang, expert on the history of Chinese food and agriculture. 1996. Sept. 29. This is the first official report on Han tomb No. 1. The article describes several of the murals, but not the one which has since been interpreted as a scene showing tofu being made; that mural was first described by Chen Wenhua in August 1990. Address: China.

1592. Kushi, Michio. 1972. Macrobiotic seminars of Michio Kushi. Boston, Massachusetts. 152 p. Illust. No index. 28

cm. Transcribed by Joan Mansolilli.

• **Summary:** This is a transcript of talk given by Michio Kushi, macrobiotic teacher, in the fall of 1972, from Oct. 10 to Dec. 20. The main subjects are: Theory and practice of natural agriculture. Principles of the ancient world calendar. Disease—Origin, causes, and cures.

Soyfoods are mentioned briefly as the cure for various ailments, including diabetes mellitus (p. 92, 94; miso, tamari), venereal disease (p. 104; tekka, strong miso), stomach cancer (p. 128-29; miso soup, fried tofu, tekka, miso pickles), toxication from cigarette smoking (p. 131; miso soup), appendicitis with high fever (p. 132-33; tofu plaster on head). Address: Boston, Massachusetts.

1593. Midwest Natural Foods Distributors, Inc. 1972. Catalog and price list 11/1/72. Offering the best in natural foods. Ann Arbor, Michigan. 58 p. Nov. 1. Index. Illust. 22 cm.

• **Summary:** This is a very early natural foods catalog, typewritten and mimeographed on pink paper; it contains a few logos of manufacturers but no ads. On the front cover is a stylized illustration of a rayed sun, with each ray represented as a fruit or vegetable. Contents: Hi! Who, where, phone, why. General information: Service, terms, freight, notes, contact (Henry Bednarz and Larry Kociela, p. 1-2). Special case lot discount—5%. Lines on which case lot discounts are not allowed (7). "Computerized billing by January 1, 1973 including Quantity, Unit, Description, Size, Sugg. [Suggested] Retail, Unit cost, extension, 10 day 2% discount, 10 day case lot discount" (p. 4).

The body of the catalog is an alphabetical listing of suppliers / manufacturers, with major brands or product categories a cross references (e.g. Bakon Yeast, see Sovex). Within each, products are listed alphabetically (shown below in parentheses). These include: Acme juicer Co. Appliances & utensils. Barth's Nutra Foods (Barth Soya Date Cereal). Books (Nutri-Books Corp., Denver, Colorado). Chico San (Rice Cakes, Lima Tamari Soy Sauce, Miso Soybean Puree, Sesame Salt, Sesame Butter, Salt Plums, Kuzu {wild arrowroot}, azuki beans, Mu Tea, kombu, soysauce tableserver—glass, chopsticks), Celestial Seasonings teas, Continental Culture Specialists (acidophilus culture, kefir grains, royal yogurt), Dr. Bronner & Assoc. (dulce sea lettuce, lecithin protein cereal, Do It Twice Soy Vege Base, pure peppermint oil soap), El Molino (7 Grain Cereal, soy beans—whole, soya flour, soya grits, soya meal, Graham flour), Fearn Soya Foods (Pancake S.F. [Soya Flour] Mix, liquid lecithin, High Protein (carob, chocolate, vanilla), soya protein 96%, Protein 600 Tablets (vanilla, chocolate), Muscle Protein, Soya Powder—Natural, Soya Powder—Low Fat, Soya Granules, cooking soybeans, Wheat Cereal Soya Mix, Corn Bread Soya Mix, Salted Plain SoyoSnax, Soybean—sprouting, lecithin granules, Soy O Snaks—Natural, barley—hulled organic, triticale flour—

organic), Flavor Tree (Pernola, Pernuts {unsalted, sea salted, mild garlic, onion, carousel [carousel] carob covered}), Gides, Inc. (Nu-Life {vitamins & minerals—has the most products of any supplier}; A Soyadophilus, vitamin E natural mixed tocopherols), Lassen Foods (granola), Malt-O-Meal (Soytown) (salted soy beans [roasted], unsalted, barbecue flavor, garlic, soy spread, soy honey bar, soy nut bar), Miracle Juicer Co., Modern Products (Gayelord Hauser), Norganic (vegetable oils, incl. peanut oil, soy oil, safflower oil, sesame oil, sunflower oil, Gold Soya Mayonnaise), Richter Bros. (Familia cereals {Swissy Cereal, Fritini Mix}, Morga vegetable bouillon, Pero coffee substitute, Herbmare seasoning salt), A. Sahadi Co. (sesame tahini), Sourdough Jack's Country Kitchen (sourdough starter), Sovex (granola, Bakon Yeast), Seelect Dietary Products: Herb teas (incl. Bladderwrack, dulce leaves, saw palmetto, Irish moss), St. Laurant Peanut Butter, Sunshine Valley, Viobin (lists 16 products, incl. wheat germ oil), Mineral Waters (incl. Apollinaris, Vichy, Perrier, Mountain Valley), Grist Mill (granola, Wunder Bars, Honey Graham Cracker, Super Protein Concentrate), Norwalk Juicer Co., Parkelp (Ocean Labs, Inc.; lists 4 kelp products), Nuvita Foods (Langes; Soya Carob Macaroni). Organic Sun Valley Dried Fruits (incl. Calimyrna figs, Monukka raisins, Black Mission figs, Zahadi dates). Honey Preserves—No sugar added. Index by products and suppliers.

Note 1. This is the earliest document seen (May 2006) concerning Midwest Natural Foods.

Note 2. This is the earliest English-language document seen (June 2006) that mentions the "Acme Juicer" or the "Acme Juicer Co." Address: 310 W. Ann St. (P.O. Box 100), Ann Arbor, Michigan 48107. Phone: 313-761-2997.

1594. Blinn, Johna. 1972. Celebrity cookbook: Keye Luke cooks variation on one theme. *Chicago Tribune*. Nov. 2. p. N_A8.

• **Summary:** Mr. Luke, a veteran actor with Zen Buddhist beliefs, is an amateur cook who has one or two Chinese dishes he likes to prepare—starting with flank steak: "I throw in a little ginger, garlic, assorted black bean paste, and soy sauce. I cook it over a hot fire in a wok."

His recipe for Asparagus and beef calls for "½ cake bean curd, diced. 2 to 3 tablespoons soy sauce."

1595. Advest Co. 1972. Private placement \$500,400. 1112 shares. Erewhon Inc. (Continued—Document part II). Hartford, Connecticut. 34 p. 28 cm.

• **Summary:** Continued from p. 12. Management of Erewhon: Paul Hawken—President & chairman. Born on 8 Feb. 1946 in San Mateo, California. Attended Berkeley High School in Berkeley, California. Graduated from Nevada Union High School 1963 [located between Nevada City and Grass Valley, California, is the Sierra Nevada foothills]. Worked one year as a carpenter. Traveled in

Europe 1964-65, studied at Alliance Française. Returned to the USA and enrolled at San Francisco State. School was closed by demonstrations, so he went into business for himself—Commercial photography, portraits, and advertising. Left business in 1966 to come to Boston to begin working at Erewhon in Aug. 1966. Married [to Dora Coates], one child.

Tomoko Kushi—Stockholder. Michio Kushi—Director East West Foundation. Morris Kirsner—Attorney at law.

John Deming, Jr.—Retail manager. Born 27 June 1947 in Tacoma, Washington. Graduated from Bolton High School at Alexandria, Louisiana, in 1965. Attended Tulane University (New Orleans) until 1967, majoring in English. Began his own business, opening a natural food store in Jackson, Mississippi. Sold the business in Aug. 1971 and went to work with Erewhon in Los Angeles. Married [to Judy Coates in Aug. 1972].

Gordon William Garrison, Jr.—Vice-president. Born 19 Dec. 1946 in New York, NY. Graduated Bennington High School 1964. Attended Norwich University [Northfield, Vermont] 1964-65. Attended University of Vermont 1965-69, and graduated in 1969 with a B.A. in philosophy and art. Job Experience: Camp counselor, construction worker, ski instructor and patrolman, carpenter, farmer, tree surgeon, and lecturer. In 1970 started with Erewhon. Single.

Paul West—General Manager. In Feb. 1971 began employment with Erewhon. Married with two children.

Christopher J. Connolly—Production manager. Began work at Erewhon in 1970 in Los Angeles. Transferred to Boston in Oct. 1971. Single.

"Employees and facilities: The company maintains a retail store with 2,100 square feet at 342 Newbury Street, Boston, and a second retail store with 2,500 square feet at 8001 Beverly Blvd., Los Angeles. Supporting this store and the Western regional wholesale market is a 14,000 square foot warehouse at 8454 Stellam Drive, Culver City, California.

"The company's headquarters and principal warehousing, packing, and processing facilities are located on 5 floors of two adjoining buildings at 33 Farnsworth Street, South Boston. This location comprises approximately 40,000 square feet. The company presently operates two packaging lines in Boston, 2 shifts daily, and one Packaging line in Los Angeles." The company employs approximately 40 people.

"The Market" Because it has grown with the organic movement and has followed rigorous standards of food purchase and preparation, the company enjoys an impeccable reputation for integrity in the rapidly growing organic foods market. The company believes it is presently the largest supplier of organic foods in the East.

"The market for natural, organic and health foods is a dynamic and rapidly growing one. A recent *Wall Street Journal* article named this industry as one of the ten highest

growth industries for the 1970s. The National Nutritional Foods Association [NNFA] estimates there are about 250 manufacturers and distributors in the industry whose total sales were estimated by Dr. Dennis Wood, of Arthur D. Little, to have grown from \$140 million in 1970 to \$200 million in 1971 and possibly \$400 million in 1972. These products are sold in over 3000 independent stores and by many food chains. Their level of importance is indicated by the recent printing of a separate Sears & Roebuck catalogue for health and organic foods.”

There is a diversity of motivations underlying consumer demand for organic foods. Three categories of demand appear to exist: Cultural, economic, and taste. Organic foods usually taste better than non-organic foods. “The growing public concern for ecology also lies behind the purchase of these foods. Presently many members of such organizations as the Audubon Society, Friends of the Earth, and the Sierra Club purchase organic foods to boycott the farmers and chemical industries whose use of pesticides and artificial fertilizers the groups consider harmful to the environment. The many life styles and philosophies that are loosely grouped as ‘counter culture’ also underlie the motivation to purchase organic foods. Youth predominates in this category, but some spokesmen are such notables as René Dubois and Buckminster Fuller. In its broadest terms, the ‘counter culture’ is a search for a better answer to man’s modern pattern of life. Man’s present life style has led to a dangerous disruption of his environment.”

“In fiscal year 1972 the company attempted a vigorous program of distributor sales aimed principally at broadening its market geographically and increasing sales. This program was successful in increasing sales, but its implementation required a rapid and inefficient expansion of the work force and substantial price discounts on distributor products. By consequence, the company’s overall gross margin contracted, while its operating expenses increased, resulting in a 10-month net loss of \$50,000 on sales of \$2.8 million.” Since that time distributor sales were effectively discontinued and substantial numbers of personnel were laid off. Gross margins have returned to their previous levels.

“Since its founding, the company has never employed a salesman full-time or run a continuous advertising campaign. Sales growth has been largely in response to externally developed demand and limited by capital.”

Photocopies show the following Erewhon-brand labels: Maple granola, Peanut butter, Apple juice, Olive oil, oil of sunflower, corn germ oil, oil of soybean, short grain brown rice (organically grown), whole wheat flour, hacho miso (soybean paste). Photos also show the front and interior of an Erewhon retail store. Address: 6 Central Row, Hartford, Connecticut 06103.

1596. Chico-San. 1972. Products (Document part). In: Midwest Natural Foods Distributors, Inc. 1972. Catalog and price list. Nov. 1. Ann Arbor, Michigan. 58 p. See p. 7-8.

• **Summary:** Rice cakes, Buckwheat cakes, or Millet cakes (salted or nonsalted, 3½ oz). Yinnies rice candy (3½ oz). Rice chips or Corn chips (5 oz). Lima Tamari soy sauce (8 oz, pint, or quart). Miso soybean puree (8 or 16 oz). Sesame salt (2, 4 or 8 oz). Sesame salt (4, 8, or 16 oz). Sea salt, white unrefined (1 lb). Salt plums (4 or 8 oz). Kuzu (wild arrowroot) (2 oz or 4 oz). Wholewheat spaghetti (OG [=organically grown], 8½ oz). Buckwheat spaghetti (8½ oz). Wholewheat macaroni (OG, 12 oz). Buckwheat macaroni (12 oz). Azuki beans (8 oz, 1 lb). Wild ginseng root (½ oz). Wild ginseng powder (25/6-pkts). Ohsawa twig tea (4 or 8 oz). Mu tea–Lima, more ginseng (24/2 or 24/8 pkts). Mu tea–Osaka (24/2 pkts). Green tea, natural leaf (6 oz). Lotus root tea (1 ¾ oz). Rice cream (OG, 1 or 2 lb). Kombu, kelp size (3½ oz). Tooth powder jar (½ jar).

Appliances: Food grater (with or without well). Vegetable knife–square end. Fish knife–pointed end. Mortar (suribachi, small or large). Pestle–wooden. Vegetable press. Oil skimmer for tempura. Vegetable scrub brush (small or large). Soysauce tableserver–glass. Rice paddle–bamboo. Chopsticks–lacquered. Chopsticks–long cooking.

At the bottom is the Chico-San spiral logo. Address: [Chico, California].

1597. Erewhon Inc. 1972. Distributor price list. Boston, Massachusetts. 4 p. Effective December 8, 1972.

• **Summary:** Includes: Three varieties of Wehah Farms organically grown rice in 50 lb bags (“Colusa” and Golden Rose” are both short grain; the third is sweet brown rice). Azuki beans (100 lb bags). Tamari & miso: Tamari soy sauce (8 oz, pints, quarts, half gallon, gallon, 4.7 gallon can). Hacho miso (30 x 1 lb or 44 lb keg). Mugi miso (24 x 1 lb or 44 lb keg). Kome miso (20 x 1 lb or 44 lb keg). Granola. Rice cream (toasted). Cereals: Infant cereal (Koko). Tsampa Tibetan barley cereal. Stone ground flours (incl. Soybean flour, full fat, organic; brown rice flour, organic). Grains & beans (incl. soybeans, organic’ Barley, pearled).

At the bottom of the last page: “Thank you very much for your order. We try to get our distributor orders out as quickly as possible, but you should allow seven to ten days to be on the safe side... When placing orders please call Bill Garrison or Paul Hawken and when checking on shipping dates and rates, please check with Doug Bray. Thank you.”

An illustration at the top left corner of the front page is clip-art of a man cutting barley. Address: 33 Farnsworth Street, Boston, Massachusetts 02210. Phone: (617) 542-1358.

1598. Leung, W-T.W.; Butrum, R.R.; Chang, F.H. 1972. Food composition table for use in East Asia. Atlanta,

Georgia: Center for Disease Control, U.S. Dept. of Health, Education, and Welfare. xiii + 334 p. Dec. No index. 30 cm.
 • **Summary:** Part I. Proximate composition, mineral and vitamin contents of East Asian foods, by Woot-Tsuen Wu Leung, Ph.D. (Nutrition Program, Center for Disease Control, Dep. of Health, Education and Welfare), and Ritva Rauanheimo Butrum, M.S., and Flora Huang Chang, B.S. (Federation of American Societies for Experimental Biology).

Part II. Amino acid, fatty acid, certain B-vitamin and trace mineral content of some Asian foods, by M. Narayana Rao, Ph.D., and W. Polacchi (Food Policy and Nutrition Division, Food and Agriculture Organization of the United Nations).

In Part I, Food Group 3 titled “Grain legumes and legume products” (p. 16-22) gives the composition of the following (100 grams edible portion and as purchased): Adzuki beans (*Phaseolus angularis*; incl. “Azuki-an,” and boiled sweetened). Asparagus bean: See Cowpea, yardlong. Asparagus pea: See Goabean. Bambara groundnut or jugo bean (*Voandzeia subterranea*). Bengal gram: See Chickpea. Blackeyed pea: See Cowpea, catjang. Blackgram: See Mung bean. Broad bean or horse bean (*Vicia faba*; incl. “Fuki-mame” and “Otafuku mame”). Burma bean: See Lima bean. Butter bean: See Lima bean. Catjang pea: See Pigeonpea. Chickpea or Bengal gram (*Cicer arietinum*). Cowpea, all varieties (*Vigna* species). Cowpea, yardlong: See Cowpea, all varieties. Dhal: See Lentil. Dolichos, Australia pea (*Dolichos lignosus*). French bean: See Kidney bean. Goabean [goa bean], asparagus pea, or winged bean (*Psophocarpus tetragonolobus*). Golden gram: See Mung bean. Green gram: See Mung bean. Haricot bean: See Kidney bean. Hindu cowpea: See Cowpeas, all varieties. Horse grain or horse gram or Madras gram (*Dolichos uniflorus*; *D. biflorus*). Horsebean: See Broadbean. Note 1. This is the earliest English-language document seen (Jan. 2005) that uses the word “horsebean” or the word “broadbean” to refer to *Vicia faba*.

Horsegram: See Horse grain. Hyacinth bean or Indian butterbean (*Lablab niger*; *Dolichos lablab*). Indian bean: See Mung bean. Indian butterbean: See Hyacinth bean. Jackbean, common (*Canavalia ensiformis*). Jugo bean: See Bambara groundnut. Kidney bean, French bean, navy bean, pinto bean, snap bean, or string bean (*Phaseolus vulgaris*; incl. “Usura-mame”). Lentil or dhal (*Lens culinaris*; *Lens esculenta*; *Ervum lens*). Lima bean, butter bean, or Burma bean (*Phaseolus lunatus*; *Phaseolus limensis*).

Note 2. This is the earliest English-language document seen (May 2003) that uses the scientific name *Lens culinaris* to refer to lentils.

Note 3. This is the earliest English-language document seen (Jan. 2009) that uses the name “Burma bean” to refer to the lima bean.

Madras gram: See Horse grain. Mung bean, Indian bean, red bean, green gram, golden gram, or blackgram / black gram (*Phaseolus aureus*; *Vigna radiata*; incl. vermicelli, dried starch, starch jelly, instant powdered green or red products with sugar and flour added). Mung bean, black gram or urd (*Phaseolus mungo*; *Vigna mungo*). Navy bean: See Kidney bean. Peanut or groundnut (*Arachis hypogaea*; incl. raw, roasted, with or without shell, salted, parched, seasoned, fried, peanut flour, peanut butter, peanut milk, peanut cake–defatted, peanut cake–defatted and fermented [onchom]). Peas, garden or field (*Pisum* species; incl. parched–salted, “Uguisu-mame”). Pigeonpea, or catjang pea (*Cajanus cajan*; *Cajanus indicus*). Pinto bean: See Kidney. Red bean: See Mung bean. Rice bean (*Phaseolus calcaratus*; *Vigna calcarata*). Soybean and soy products (*Glycine max*; *G. hispida*; *G. soja*; p. 19-21), incl. Whole mature seeds–dried (yellow, black), whole immature seeds dried, whole seeds–salted (black, green, green soaked, fried, fermented {natto}, pickled, roasted), flour of roasted soybeans, defatted soybeans–whole seeds. Soybean products: Curd–unpressed, curd–tofu–raw (plain, kinugoshi, fukuroiri), curd–tofu–fried (moist type, dried type–regular size, dried type–small size, canned, abura age), curd–roasted [grilled], curd–tofu–fermented (home–prepared, jarred), curd–tofu (dried–spongy square, preserved, dried–rope-like, commercial {fermented with chili pepper}–jarred), curd cheese, curd sheet (milk clot sheet {yuba}) (moist type, dried type, pickled in soysauce), curd–pressed–raw (plain, fermented, spiced, strips–semi-dry), miso (Japan) (plain, sweet {5.3% salt added}, salty–light {10.4% salt added}, salty–dark {11.7% salt added}, mame-miso {9.7% salt added}, powdered {18.5% salt added}), paste [jiang] (plain, fermented, red pepper added, sweet, malt), soybean milk (unenriched–unsweetened, “Kaset” {Thailand; canned–concentrated, fluid}, Saridele {a mixture of soybeans, sesame seeds or peanuts, with vitamins and calcium added–Indonesia}), soybean sauce (dark–thick, light–thin, unspecified), tempeh (fermented soybean product, Indonesia), “Budo-mame” (cooked–Japan), Soybean residue [okara] (liquid, powder). Urd: See Mungo bean. Velvetbean (*Mucuna utilis*; *Stizolobium utilis*; incl. dried or mold-treated {tempeh}). Winged bean: See Goabean, Indes.

Food Group 4 titled “Nuts and seeds (p. 23-29) includes: Almonds, hemp seeds–whole, perilla–common (*Perilla frutescens*), safflower seeds, sesame seeds, sunflower seeds (*Helianthus annuus*), watermelon seeds.

Food Group 5, titled “Vegetables and vegetable products” (p. 30-75) includes: Amaranth, mungbean sprouts, seaweeds (many types), soybeans–immature seeds [green vegetable soybeans], soybean sprouts (raw, cooked).

Note 4. This is the earliest English-language document seen (March 2004) that mentions silken tofu, which it calls

(in a table): “Curd, tofu, raw: ‘Kinugoshi,’ Japanese preparation.”

Note 5. This is the earliest English-language document seen (Dec. 2005) that contains the term “flour of roasted soybeans.”

Note 6. This is the earliest English-language document seen (Oct. 2006) that uses the term “Blackeyed pea” to refer to the cow pea. Address: Dep. Health Education and Welfare.

• **Summary:** Nitrosamines [pronounced nai-TRO-suh-meens] are reaction products from nitrite and amines. Some salt-pickled foods contain considerable amounts of nitrite. But very small amounts of nitrite were found in rice, wheat, and soybeans used as raw materials for making shoyu and miso.

Interest in the safety of nitrites started in about 1970. The following nitrite levels (parts per million) were found in other Japanese foods: Shiouri shiozuki (salt pickled cucumbers) 96, red hot dogs 64-79, niboshi (small dried sardines) 31, ham 29, fish sausage 24. Very low levels were found in fresh bread crumbs 16, and roasted soy flour 15.

Tests on aflatoxin contamination of miso and miso-koji in Japan]. *Nippon Shokuhin Kogyo Gakkaishi (J. of Food Science and Technology)* 19(2):76-80. (Chem. Abst. 81:167,973). [10 ref. Jap; eng]

• **Summary:** Studies were conducted to investigate whether or not miso and miso-koji in Japan contained aflatoxins. 108 samples of commercial miso, 33 of home-made miso, and 28 of miso-koji from almost all the prefectures of Japan were tested for their aflatoxin content. The results showed no aflatoxin on any of them. “But on the thin-layer chromatograms, 3 commercial misos, one home-made miso, and two miso-kojis showed aflatoxin-like fluorescent substances. The extracts of these aflatoxin-like substances were examined by the yolk sac test for their toxicity to the chicken embryo. The results however were all negative.” Address: National Food Research Inst., Ministry of Agriculture & Forestry, Koto-ku, Tokyo.

• **Summary:** All recipes are numbered and pages are unnumbered. Soy-related recipes include: 6. Brown rice in soy sauce. 16. Black [soy] beans and brown rice. 23. Inari-sushi (with agé). 24. Ohagi of 3 colors (with roasted soybean flour and miso). 32. Ojiya (with miso or soysauce). 37. Roasted rice (with black soybeans). 38. Musubi (with miso). 55. Kinako mochi. 76. Soy bean stock. 87. Oden (with agé and soy sauce). 90. Kenchin soup (with agé). 95. Cream of onion soup (with miso). 96. Hacho miso soup. 97. Mugi miso soup. 98. Kome miso. 99. Oil miso. 100. Sesame miso. 101. Walnut miso. 102. Miso salad dressing. 103. Shiguri [sic, shigure] miso (with scallops). 104. Tokiwa miso (with shiitake mushrooms, citron, and walnuts). 105. Oyster miso. 106. Tai miso. 108. Nuka miso zuke (vegetables pickled in rice bran and miso). 121. Miso pickles. 137. Daikon with agé. 138. Daikon with miso. 143. Turnip with sesame-miso. 159. Burdock-miso soup. 162. Burdock with miso. 180. Onion-miso sauce. 182. Scallion-miso. 191. Carrots with miso. 192. Carrots with soy sauce. 200. Dengaku (with miso). 220. Roasted soybeans. 221. Soybean soup. 222. Soybeans with vegetables. 223. Soybeans with miso. 224. Soybean tempura. 225. Mashed

soybeans with tarako (cod fish roe). 226. Soybean croquettes. 227. Soybean potage. 228. Soybean muffins. 229. Kidney beans with miso. 237. Shigiyaki (small eggplants with miso). 241. Eggplant miso pickle. 267. Rolled shiso leaves with miso. 291. Tofu kuzu sauce. 292. Tofu chili-nabe. 293. Tofu with vegetables. 294. Tofu salad. 295. Okara rice. 296. Torimotsu okara (with chicken giblets). 297. Okara soup. 298. Okara croquettes. 299. Egg tofu. 308. Koi-koku (carp soup with miso). 311. Loach soup (with miso). 312. River fish with miso sauce. 320. Mackerel with miso. 335. Coltsfoot with miso. 341. Dandelion miso-ai [miso-ae]. 345. Horsetail with miso-ai. 359. Watercress miso-ai. 361. Nobiru goma miso (with wild onions). 369. Shiromiso shiru [sweet white miso soup]. 371. Nimame (black soybeans). 400. Shoyu bancha (twig tea). 408. Black bean tea. 409. Amasake (homemade from koji rice and sweet brown rice). 456. Amasake manju. 461. Soba with miso-ame. 515. Tekka (with Hacho and/or mugi miso). 516. Seitan (homemade). 517. Soy sauce (homemade). 518. Miso (homemade). 519. Tofu (homemade using nigari). 520. Nigari (homemade). 521. Amasake (homemade from koji rice and sweet brown rice flour).

Cornellia Aihara was born with a heart valve defect. She was told by doctors that she could never bear children and would probably not live past her nineteenth year. She proved them wrong on both counts. In 1955 she came to America from Japan at the invitation of Herman Aihara, a man she knew only through correspondence, and they were married. Within several years their two children were born.

Cornellia has applied herself to the teaching of macrobiotic cooking, childcare, home remedies, and philosophy since 1960. Address: Chico, California.

1607. Aihara, Cornellia. 1972. *The dô of cooking (Ryorido)*. Vol. 2. Summer cooking. Macroguide No. 13. San Francisco, California: George Ohsawa Macrobiotic Foundation. 103 p. No index. 25 cm.

• **Summary:** All recipes in this macrobiotic cookbook are numbered. The section on “Tofu” contains recipes for: 35. Hiya yako [sic, yakko] (cold, uncooked tofu). 36. Kanten tofu (Tofu aspic). 37. Tofu kuzu aspic. 38. Harusame tofu kuzu sauce. 39. Unagi tofu [vegetarian].

The section on “Miso Soy Bean Paste” contains recipes for: 40. Soy bean miso [soybeans sauteed with miso]. 41. Vegetables with miso sauce. 42. Vegetable miso. 43. Green pepper with miso. 44. Deep fried miso balls.

Other soy recipes include: 60. Nori with soy sauce. 62. Kombu in soy sauce. 64. Hiziki tofu salad. 66. Fried koya tofu with carrot (with dried tofu). 71. Cold miso soup. 73. Split pea miso soup. 81. Tahini-tamari sauce. 89. Soy bean surprise [with miso-tahini sauce]. 92. Okara salad.

GOMF was founded in 1971. Address: 1471-10th Ave., San Francisco, California 94122.

1608. Aihara, Cornellia. 1972. *The dô of cooking (Ryorido)*. Spring. Oroville, California: George Ohsawa Macrobiotic Foundation. 125 p. Illust. by Carl Campbell. Index. 21 cm.

• **Summary:** This macrobiotic book is divided into two parts: Eleven chapters followed by 14 sections of recipes. In part one, miso is mentioned on pages 15, 35, and 51 (Condiments and spices). Recipe section IV, titled “Wheat gluten” (p. 79-82) contains recipes for: Wheat gluten. Seitan. Fresh wheat fu. Boiled fu. Fried fu—gluten cutlet. Shish kebab (using 3 strips of cooked fu). French bread (made with gluten water, p. 115).

Recipe section V, titled “Tofu” (p. 83-90) contains recipes for: Tofu making (using 3 cups green soybeans and nigari coagulant; with 11 excellent illustrations). Nigari (from gray sea salt). Quantity tofu preparation (using 10 lb soybeans). Okara or unohana (using “3 cups soybean puree leftover from tofu making”). Tofu with kuzu sauce. Fried tofu. Shinano-agé (Fried tofu with buckwheat). Kaminari tofu (Thunder tofu). Nori-maki (Tofu rolled in nori; with illustration). Age-tofu (Stuffed tofu; with illustration).

Soy-related recipes include: Onion miso (p. 70). Rolled cabbage with tofu (p. 71). Bean sprout miso salad (p. 100; miso is called “mixed soybean puree {half mugi and half kome}.” The sprouts are probably from mung beans). Ganmodoki (Mock goose; p. 109). Gyoza filled with seitan, dipped in a mixture of soy sauce and lemon juice (p. 111-12). Address: George Ohsawa Macrobiotic Foundation, Oroville, California.

1609. Aihara, Herman. 1972. *Miso & tamari. Macroguide (San Francisco: George Ohsawa Macrobiotic Foundation)*. No. 12. iii + 34 p. [3 ref]

• **Summary:** Contents: Preface. Part I: Miso. Introduction, the origin of miso, kinds of miso, ingredients, how to make miso [at home], value of miso, miso in the treatment of tuberculosis and atomic radiation exposure. Part II: Tamari or traditional soy sauce. Introduction, history, chemical change of tamari, how to make tamari soy sauce, how to use soy sauce. Part III: The other soybean foods. Tofu, natto. Part IV: Appendix. Contains recipes.

Note This is the earliest English-language document seen (March 2009) that describes how to make miso at home. Recipes for three types of miso are given: Barley miso, rice miso, and soybean miso. The method is translated from *Miso University*, by K. Misumi (in Japanese). Fortunately, the exact amount of each of 5 ingredients is given, and nine excellent illustrations show the main steps in the traditional process. Unfortunately, the instructions are somewhat vague. Address: San Francisco, California.

1610. Claiborne, Craig; Lee, Virginia. 1972. *The Chinese cookbook*. Philadelphia and New York, NY: J.B. Lippincott Co. xxi + 451 p. Color photos by Bill Adler. Drawings by Barbra and Roderick Wells. Illust. Index. 24 cm.

• **Summary:** Soy related recipes: Coriander and bean curd with sesame sauce (with dried brown bean curd [soy-sauce pressed tofu] and light soy sauce, p. 34). Cold chrysanthemum leaves with sesame oil (with dried brown bean curd and light soy sauce, p. 35). Chicken with black beans and shallots (with fermented, salted black beans, light soy sauce and dark soy sauce, p. 58-59). Note: This is the earliest English-language document seen (Oct. 2008) that uses the term “fermented, salted black beans” to refer to Chinese-style soy nuggets. The headnote to this recipe states: “Fermented, salted black beans have an almost winy flavor, and they give an intriguing flavor to almost any dish in which they are cooked.” Nowhere in this book do the authors state that these black beans are actually black soybeans.

Soy sauce chicken (with light soy sauce and dark soy sauce, p. 59-60). Spicy pork and bean curd (with “6 pads fresh white bean curd,” p. 136). Note: This is the earliest English-language document seen (Oct. 2008) that uses the term “fresh white bean curd” to refer to fresh tofu, or that uses the word “pads” to as the counter for pieces or cakes of tofu. The headnote states: “Bean curd has as many uses in China as cottage cheese does in the Western world. It is one of those neutral dishes [ingredients] like potatoes and snails which adapt well to assertive flavors.”

Ginger beef and bean curd with hot pepper (with “5 pads fresh white bean curd,” p. 188). Steamed fish with bean sauce (with “¼ cup bean sauce, p. 208). Stir-fry shrimps with bean curd (with “5 pads fresh white bean curd,” p. 231). Shrimps in black bean sauce with ginger and scallions (p. 234-35). Note: With “2 tablespoons fermented salted black beans and 2 tablespoons dry sherry or shao hsing wine.” “Combine the black beans with 1 tablespoon of the wine and crush lightly with a spoon.” Thus, “black bean sauce” can be easily and quickly made in the kitchen from fermented, salted black beans.

Clams in black bean and oyster sauce (with fermented salted black beans that are quickly made into black bean sauce as above, p. 243-44). Frogs legs with black beans (with fermented salted black beans, p. 257). Mock Peking duck (with “6 sheets dried bean curd,” p. 302-03. “Bean curd comes in large, semicircular thin sheets [yuba] as well as squares [probably yuba; see below]. Because the sheets are notably fragile, they are frequently broken.” The headnote states: “This dish uses dried bean curd to produce an eminently edible creation that tastes remarkably like roast duck”).

Bean curd and beef ball soup (with “1 pad fresh white bean curd,” p. 318). Whiting and bean curd soup (p. 327-28). Flowery bean curd soup (p. 328-29). Bean curd casserole soup (p. 330-31). Tsa chiang mien (Noodles with minced pork and bean sauce, incl. “½ cup bean sauce,” p. 365-66).

One color photo (facing p. 282) and a numbered key shows many ingredients used in Chinese cooking, incl.: 5. Dark soy sauce. 6. Light soy sauce (both in tall-neck bottles). 16. Fresh white bean curd. 28. Dried brown bean curd [soy sauce pressed tofu]. 31. Dried bean curd sheets [clearly yuba, since light yellowish brown, semi-transparent, subtly wrinkled surface, and very thin]. 32. Fermented salted black beans (small pile).

Chapter 11, titled “Chinese ingredients...” (p. 419-40) contains many interesting terms and definitions, with Chinese characters accompanying each. Soy related are: Dried bean curd sheets [yuba] (“These paper-thin, light brown half circles are very fragile and are often broken; they can be repaired by wetting and overlapping the broken edges. They are sold in packages of 10 and will keep for 3 to 4 months without refrigeration.” Eventually they will turn rancid, since they have a high oil content”). Dried brown bean curd (CC = doufugan; soy sauce pressed tofu). Dried red beans [azuki]. Fermented salted black beans (CC = douchi, dow see. “An ingredient of Cantonese cooking but virtually unknown elsewhere in China, these black [soy] beans, sometimes simply called ‘Salted Black Bean’ are sold in 1-pound cans or in 8- and 16-ounce plastic bags. They will keep for months if stored in the refrigerator in a covered jar”). Fresh white bean curd (CC = doufu). Ground bean sauce (Contains “the same ingredients as Bean Sauce, except the whole beans have been ground to a paste. It is sold in oblong 1-pound cans). Hoi Sin Sauce (“Made from pumpkin”). Red bean curd sauce (“A thick sauce made from soy beans, red rice, and salt water, this is available in 11-ounce oblong cans and also in 12-ounce round cans labeled ‘bean curd’”). Sesame oil. Sesame paste. Sesame seeds. Shao Hsing Wine (made from rice). Soy sauce (CC = jiangyou. Color ranges from light to very dark. The “difference lies more in the color than in the flavor.” Sold in tall-neck bottles ranging for 12-21 ounces. “The soy sauce generally sold in American supermarkets is light soy sauce—it is most suitable used as a dip or in some stir-fry dishes but in general is too light to lend an appetizing color to a dish. Dark soy sauce, usually found only in Chinese markets, is sometimes labeled ‘Black Soy.’ Soy sauce will keep for months and sometimes years without refrigeration”). There follows a nationwide directory of sources for Chinese ingredients.

Also mentions: Eight precious jewel pudding (with “1 cup dried red [azuki] beans, p. 406-07). Red sand rice roll (with 1½ cups dried red [azuki] beans, p. 408-09).

“Craig Claiborne was food editor of *The New York Times* from 1957 to 1971. During this period he was credited by the Chinese-American Restaurant Association of Greater New York with significantly raising the level of public interest in Chinese food, and thus the standard of Chinese restaurant fare.” A large, excellent color photo on the rear dust jacket shows Craig Claiborne and Virginia Lee

preparing a meal together in a kitchen. Address: East Hampton, Suffolk Co., New York (on the eastern tip of Long Island).

1611. Ebine, Hideo. 1972. Miso. In: Proceedings of the [Sixth] International Symposium on Conversion and Manufacture of Foodstuffs by Microorganisms. Tokyo: Saikon Publishing Co. viii + 297 p. See p. 127-32.

• **Summary:** Contents: General description. Characteristics of miso as a food. Advances in miso manufacturing: Application of starters, application of new type cookers and koji fermenters, production of miso with enzyme preparation, production of new type miso (low salt, dehydrated). Problem of mycotoxin.

In 1969 some 552,000 [metric] tons of miso were produced industrially in Japan, employing 180,000 tons of soybeans, 92,000 tons of rice, 19,000 tons of barley, and 75,000 tons of salt. In addition, the amount of home-made miso is roughly estimated at 150,000 to 200,000 tons.

Japanese soybeans are the best for making miso of good quality, followed by Chinese soybeans, then U.S. soybeans. The best U.S. variety is “Kanrich and its related varieties, Mandarin and Comet, which are comparable to the best Japanese varieties.”

Photos show: (1) Sterilization of miso using a long, horizontal machine. (3) Rotary drum fermenter for koji. Address: Fermentation Div., National Food Research Inst., Ministry of Agriculture and Forestry, Shiohama 1, Koto-ku, Tokyo, Japan.

1612. Food and Agriculture Organization of the United Nations (FAO). 1972. A selected bibliography of East-Asian foods and nutrition arranged according to subject matter and area. [Washington, DC]: Food and Agriculture Organization of the United Nations; U.S. Dept. of Health, Education, and Welfare. vii + 296 p. Dec. 27 cm. [1500* ref]

• **Summary:** This book has two title pages and can be cited in two ways. See Leung (1972). Address: Dep. of Health Education and Welfare.

1613. Hesseltine, C.W.; Wang, H.L. 1972. Fermented soybean food products. In: A.K. Smith and S.J. Circle, eds. 1972. Soybeans: Chemistry and Technology. Westport, CT: AVI Publishing Co. xiii + 470 p. See p. 389-419. Chap. 11. [54 ref]

• **Summary:** Contents: Introduction. Koji. Miso: Preparation of koji, treatment of soybeans (mixing, fermentation). Shoyu: Incl. chemical shoyu. Natto. Hamanatto. Tempeh. Sufu [fermented tofu]. New soybean products made by fermentation: Cheese-type products, fermented soybean milk, an ontjom-type product. 10. Future of fermented soybean foods.

Tables: (1) Demand for whole soybeans in Japan (1964-1967) to make miso, shoyu, and natto. In 1967, only 4.5%

of the soybeans used to make miso were used in the form of defatted soybeans, whereas the same year 91.1% of the soybeans used to make shoyu were defatted. The total demand in 1967 (in 1,000 metric tons) was miso 177, shoyu 169, and natto 47. (2) Chemical composition of soybean foods: Miso (salty light, salty light, soybean miso), natto, soybeans. (3) Annual production of miso (1956-1967). Production of 530,078 tons in 1956 decreased to a low of 453,956 tons in 1962, then rose to 520,510 tons in 1967. (4) Composition of miso in relation to time of fermentation and ratio of soybeans:rice:salt for three types of miso: White miso, light-yellow salty miso, and yellow-red salty miso. (5) Average composition of shoyu made from whole soybeans and defatted soybean meal.

Illustrations (flowsheets): (1) Process for making red miso. (2) Process for manufacture of shoyu. (3) Process for making hamanatto. (4) Tempeh fermentation on a laboratory scale. (5) Preparation of sufu. (6) Preparation of soybean cheese. Address: NRRL, Peoria, Illinois.

1614. Horton, Lucy. 1972. Country commune cooking. New York, NY: Coward, McCann & Geoghegan. 232 + [8] p. Illust. by Judith St. Soleil. Index. 24 cm.

• **Summary:** A nostalgic memoir (for those who came of age at this time) of the world of young Americans in communes in the early 1970s, with many fine illustrations (see p. 27). The author, raised in New York City and educated at Bryn Mawr (Pennsylvania, with a major in classical archaeology), earned her traveling money by working as a live-in maid and cook for a rich “Park Avenue Lady” before embarking on the project that became this book. She hitch hiked to San Francisco, arriving in June 1971, then spent most of the next year visiting 43 communes in 12 states and Canada, and collecting recipes from each. There she found “a New Age of Food Consciousness.” The main topic of conversation and common interest at these intentional communities was not God or sex, but food. This book, with her 150+ favorite recipes, features natural and organic foods (with lapses). Most of the recipes from California and the West Coast are vegetarian, but in New Mexico and eastward (especially New England) she was “surprised to find that vegetarianism was more the exception than the rule” (p. 81). Thus, Chapter 3 is titled “Meat (and one fish).” There are recipes for chicken, fish, deer, goat, beef, etc.

The Introduction notes (p. 15): “The *sine qua non* of commune cooking is tamari soy sauce, an unspeakably delicious fermented Japanese product available in natural foods stores which bears no resemblance to commercial soy sauce” * (Footnote: *”Kikkoman soy sauce, available in supermarkets, tastes like tamari but contains a preservative”).

“1. Soups: The commune soups I sampled were typically of mixed vegetables with a tomato or miso (p. 159) base” (p. 27).

Tamari chickbits (p. 94, with chicken). Note about soy grits (p. 114). Sprouts (p. 135-36, many kinds including alfalfa, mung beans, soybeans, from Terra Firma, Oregon). Miso Almond Sauce (p. 158-59). Tamari gravy (p. 159). Soy-related recipes include: From Chapter 2, "Vegetarian main dishes"—Donna's soyburgers (p. 60-61, with whole soybeans, from California). Soy cheeseburgers (p. 61-62, with whole soybeans, from Moon Garden, Oregon). Suzy's soybean casserole (p. 63-64, from Breadloaf, New Mexico). Baked soybeans (p. 64-65, from Woolman Hill School, Massachusetts). Larry's tofu (soy cheese) (p. 65-68, homemade tofu from whole soybeans, from Om Shanti, Mendocino County, California). Breakfast cereal with roasted, salted soybeans (p. 163). Soy spread (p. 227, with soy flour, from The Motherlode, Oregon). Soy nuts (p. 229-30, baked, soaked soybeans with oil and salt). A photo on the rear cover shows the author, age 27, with long blonde hair, granny glasses, and blue denim overalls. Says Raymond A. Sokolov: "Lucy Horton has done more than collect exotic recipes... she has assembled the crucial artifacts of a movement within The Movement."

Also discusses (see index): Adelle Davis, gluten (wheat), granola, ground nuts, macrobiotic diet, peanuts. Address: Derby, Vermont.

• **Summary:** Contents: Part I: Miso Culture. 1. Chinese jiang and Japanese miso. 2. Origin of miso in Japan. 3. Miso in Nara and Heian periods. 4. Miso in Kamakura period. 5. Miso in Muromachi-Momoyama periods. 6. Miso in Edo period. 7. Modern miso. 8. Value of miso. 9. Topography of miso. 10. About miso fermentation. 11. Miso slang and local words. 12. Haiku, senryu, kyoka and tanka of miso. 13. Classical miso cookery (contains many Japanese miso recipes). Appendix: Historical documents of miso.

Part II: Miso cooking. Preface. 1. Miso soup. 2. Aemono: Tossed with miso dressing. 3. Yakimono: Broiled food. 4. Nimono: Simmered with miso. 5. One pot cookery. 6. Nerimiso: Simmered with miso. 7. Agemono: Fried foods. 8. Miso pickles.

Wataru Kawamura was born in 1899. Hamako Tatsumi lived 1904-1977. Address: 1. 2-4-7 Kugenuma, Tachibana, Fujisawa-shi, Kanagawa-ken 251, Japan.

1618. Kikkoman Shoyu Co., Ltd. 1972. Guide to Kikkoman (Brochure). Noda City, Japan. 10 p. 15 x 10 cm booklet. [Eng]

• **Summary:** Contents: Introduction by Kenzaburo Mogi, president. Shoyu: Its past and present. History. Production method. People everywhere love Kikkoman (with a photo of 19 Kikkoman products). Kikkoman all over the world. Kikkoman in Japan. Note that the product is referred to throughout as "Kikkoman Shoyu" and not "Kikkoman Soy Sauce."

"History: In the 6th century Buddhism came to Japan from China, and with it came a strict ban on the eating of meat. Buddhism also brought a new vegetable-base sauce—a paste made by fermenting various grains—which replaced previous meat or fish-base seasonings. For a thousand years or so the Japanese used this paste as one of their major seasonings. It was not until the 17th century that this seasoning was developed into the shoyu that we know today.

Kikkoman worldwide: Kikkoman Foods Inc. (KFI) was established in 1972 to produce shoyu in America, our largest overseas market. Head office and plant: Walworth, Wisconsin 53184 USA.

Kikkoman International Inc. (KII) was established in 1957 to import and distribute our products in the USA. Head Office: 1581 Webster St., San Francisco, California 94115. Branches: Los Angeles, New York, Chicago.

Japan Food Corporation (JFC) is the largest importer and distributor of oriental foods in the United States. Head Office: 900 Marine St., San Francisco, CA 94124. Branches: Los Angeles, New York, Chicago, Sacramento, San Diego, Washington [DC].

Pacific Trading Co., Ltd. (PT) was established in 1928 in Tokyo to export oriental foods, mainly to the United States. Head Office: 767 Marunouchi Bldg., Chiyoda-ku, Tokyo.

Kikkoman Daitokai (Europe) GmbH is a restaurant chain, established in 1972 to serve mainly Japanese dishes. Head Office: 4 Dusseldorf, Kleverstrasse 46, West Germany.

Kikkoman in Japan. Kikkoman is the leading brand of shoyu in Japan. The second best-selling brand sells only 23% as much shoyu as Kikkoman and the third best-seller only 13% as much. Kikkoman's capital: \$18,500,000. Sales (1972): \$218,000,000. Total production of shoyu (1972):

100,000,000 gallons. Number of employees 4,400. The names of members of the Kikkoman board of directors are given. Kikkoman subsidiaries are Kikko Foods Corp., Mann's Wine Co. Ltd., Seishin Pharmaceutical Co. Ltd., Tone Coca Cola Bottling Co. Ltd.

1619. Kondo, Akitani. 1972. *Nihon no chōju mura, tanmei mura* [Japanese long-life and short-life villages]. Tokyo: Sanrodo. [Jap]*

1620. Kondo, M. 1972. *Chōju mura, Nippon kikō* [Longevity villages: A diary of travels through Japan in search of the secrets of diet and life patterns]. Tokyo: Women's Nutrition University, Publications Dept. [Jap]*

1621. Korean Institute of Science and Technology (KIST). 1972. [Foodstuffs and food additives for industry in Korea]. Seoul, Korea: Ministry of Science and Technology. [Kor]*
 • **Summary:** In 1971 production of fermented soybean foods in Korea (in 1,000 metric tons) was: Soybean sauce: industrial 107, home-made 116, total 223. Soybean paste: industrial 56, home-made 168, total 224. Red pepper soybean paste: industrial 23, home-made 89, total 112.

1622. Kwon, Tai-wan. comp. 1972. *Fermented foods in Korea: Annotated bibliography (1917-1971)*. Seoul, South Korea: Korea Institute of Science and Technology. 185 p. 28 cm. For *Fermented Soybean Products*, see p. 28-85. [248* ref. Eng]

• **Summary:** One of the best sources on soyfoods in Korea. A very well prepared bibliography. Of the 248 references, 83 are related to soy. Most of the documents cited were published in the 1950s and 1960s; only one (p. 28) was published before 1940.

Contents: 1. Fermented vegetable products (*kimchies* [*kimchi*]). 2. Fermented fishery products. 3. Fermented soybean products (soybean koji {meju, maiju, maeju}, soy sauce {kanjang, ganjang}, soy paste {doenjang, dainjang, dwen-jang}, hot soy paste {kochojang, kochuzang}, etc.). 4. Fermented cereal products (alcoholic beverages). 5. Miscellaneous. Appendix. Author index.

Note: Doenjang (Korean soybean paste) is first mentioned on pages 28, 64. Dainjang (Korean soybean paste) is mentioned on page 34. Dwen-Jang (Korean soybean paste) is mentioned on page 42.

Kochojang (Korean red pepper miso) is first mentioned on pages 28, 31, 46. Kochozang (Korean red pepper miso) is first mentioned on page 36. "Red pepper sauce" (Korean red pepper miso) is first mentioned on pages 38, 39. "Red pepper paste" (Korean red pepper miso) is first mentioned on pages 71.

Kanjang (Korean soy sauce) is first mentioned on page 34. Note: This is the earliest English-language document seen (Jan. 2009) that uses the term "kanjang" to refer to

Korean soy sauce. Ganjang (Korean soy sauce) is first mentioned on page 53.

Meju (Korean soybean koji) is first mentioned on pages 35, 41, 44, 60. Maiju (Korean soybean koji) is first mentioned on page 34. Maeju (Korean soybean koji) is first mentioned on pages 73, 83. Chung-Kook-Jang (Korean natto) is first mentioned on page 79. Address: PhD, Head, Food Resources Lab., Korea Inst. of Science and Technology, Seoul, South Korea.

1623. Liener, I.E. 1972. Nutritional value of food protein products. In: A.K. Smith and S.J. Circle, eds. 1972. *Soybeans: Chemistry and Technology*. Westport, CT: AVI Publishing Co. xiii + 470 p. See p. 203-77. Chap. 7. [417 ref]

• **Summary:** Contents: 1. Introduction. 2. Protein and amino acid requirements of man: Protein requirements, amino acid requirements. 3. Evaluation of protein quality: Amino acid composition, biological techniques involving animals, protein efficiency ratio (PER), N-balance studies, plasma amino acids, experiments with human subjects, amino acid availability, in vitro techniques (physical tests, available lysine, tests for biologically active components [urease, trypsin inhibitor], enzymatic and microbiological techniques). 4. Nutritional significance of other soybean constituents: Available energy, vitamins (fat-soluble vitamins, water-soluble vitamins), minerals (calcium, phosphorus, zinc, other minerals), unknown growth factor(s). 5. Factors affecting the nutritive properties of soybean protein: heat treatment, supplementation with amino acids, storage, germination, effect of antibiotics, dietary source of carbohydrate. 6. Soybean products used for human consumption: Soybeans as a vegetable, soybean flour, soybean milk, soybean curd, other fractions, protein concentrates, protein isolates (use in infant foods, use in textured foods), fermented products (tempeh, natto, miso). 7. Use of soybean products as protein supplement: As supplement to wheat protein (bread, other baked goods), as supplement to corn, as supplement to rice, use in vegetable protein mixtures, peanut and other oilseed proteins, blends containing corn, other cereals and legumes. Address: Univ. of Minnesota.

1624. Nakano, Sasuke. 1972. *Ryōri no kigen* [The origin of foods]. Tokyo: Nihon Hoso Shuppan Kyokai. 225 p. [Jap]

• **Summary:** The important chapter titled "The natto triangle and miso," by Sasuke Nakao (p. 118-27) discusses natto, its relatives and ancestors in East Asia, and the "natto triangle" theory (with a map). Nakao hypothesized that natto originated in the monsoon area of Southeast Asia, where there are East Asian evergreen forests. He considered Yunnan province in China to be the original center of natto. His theory is based on the observation that there are there are many varieties of non-salted fermented soyfoods and

soy condiments inside the “natto triangle.” Yunnan province in southwest China, Thailand, Myanmar (Burma), Bhutan, Nepal, Indonesia, and Japan all fall within this triangle.

Note: The term “natto triangle” can be misleading, especially for non-Japanese. Natto is the only non-salted fermented soyfood or soy condiment indigenous to Japan. Natto is made by fermenting whole, cooked soybeans with bacteria (*Bacillus natto*, or *Bacillus subtilis*) in a warm place (ideally 104°F or 40°C) for about 24 hours. According to various Japanese legends, natto originated almost 1,000 years ago in northeast Japan when cooked soybeans were placed in a rice-straw sack strapped over the back of a horse. The natto bacteria are found abundantly on rice straw, and the warmth of the horse’s body aided the fermentation. Under these conditions, the fermentation would take place naturally, without intentional inoculation. The “natto triangle” refers to the geographical area within a large triangle in East-, South-, and Southeast Asia—the only place in the world where non-salted fermented soyfoods and soy condiments are indigenous. A number of these—such as tempeh in Indonesia and unsalted soy nuggets in China—are fermented primarily with molds (e.g., *Rhizopus*, *Aspergillus*) rather than bacteria. The triangle has its three corners in northeastern Japan (on the northeast, for natto), northeastern India and Nepal (on the west, for kinema and thua-nao), and Java (Indonesia, on the south, for tempeh).

1625. National Food Research Institute. 1972. National Food Research Institute [Japan]. NFRI, Ministry of Agriculture and Forestry, Shiohama-cho 1-4-12, Koto-ku, Tokyo. 27 p. [144 ref. Eng]

• **Summary:** Contents: Brief history. Budget and personnel. Organization. General survey of the Institute. Major research area. Facilities and pilot plants. Reports and patents. Publications. Scholarship. Location.

In 1934, the Rice Utilization Research Laboratory was established by the national government. The first building of about 330 square meters was completed in 1935 at the present site. In 1944 the title of the Laboratory was changed to the Research Institute of the Bureau of Staple Food Administration, and investigations were directed toward the processing and utilization of unconventional food resources.

“Owing to the change in the food situation in Japan during World War II, the Institute carried out extensive research on the most efficient utilization of the nutrients in various foodstuffs, and on finding new food sources among various agricultural products, so as to meet the serious food shortage. This trend continued through the post-war period as the nation struggled with an even more acute food shortage problem. Fats and oils, fruits and vegetables, and fermented soybean products miso and soybean sauce were added as subjects of research.

“The Institute again changed its name to the Food Research Institute in 1947, and official analysis and

standardization of food commodities were included in its activities... The Institute came to belong to the Food Agency in 1949 and later, in 1961, as a result of the reform in agricultural research administration, it was brought under the administration of the Agriculture, Forestry, and Fisheries Research Council together with other agricultural research establishments.” The name was changed for a third time to the National Food Research Institute in 1970.

T. Watanabe is the Director of the organization. The fermentation research division is headed by H. Ebine, and consists of the following laboratories: Fermentation microbiology (M. Matsuno), fermentation chemistry (T. Ohta), industrial fermentation (H. Ito), mycotoxin (H. Ebine), resources utilization (N. Tsumura). The nutrition research division is headed by S. Kimura.

Note: This institute moved from Tokyo to Tsukuba in Feb. 1979. Address: Shokuhin Sogo Kenkyujo, Tokyo, Japan.

1626. Sakaguchi, Kinichiro. 1972. Development of industrial microbiology in Japan. In: Proceedings of the [Sixth] International Symposium on Conversion and Manufacture of Foodstuffs by Microorganisms. Tokyo: Saikon Publishing Co. viii + 297 p. See p. 7-10. Held 5-9 Dec. 1971 at Kyoto, Japan. [Eng]
Address: Prof. Emeritus, Univ. of Tokyo, Tokyo, Japan.

1627. Sams, Craig. 1972. About macrobiotics: The way of eating. Wellingborough, Northamptonshire, England: Thorsons Publishers Ltd. 61 p. No index. 18 cm. [7* ref]
• **Summary:** Chapter 5, titled “Other Important Foods,” introduces miso and tamari, and gives recipes for: Miso soup. Miso spread (with tahini). Miso gravy. Tamari broth. Tamari spread. Black soybeans are discussed on page 35, and a recipe for their use is given. The tenth printing appeared in 1985. A Spanish-language edition was published in 1983 in Madrid. Address: (London).

1628. Sankosha Kateibu. comp. 1972. Maruhi tôfu ryôri hyaku-sen [One hundred top secret tofu recipes]. Tokyo: K.K. Sankosha. 165 p. Illust. No index. 18 cm. [Jap]
• **Summary:** Contents: Part I: 100 selected tofu recipes. How to cook tofu. Tofu cooking techniques/hints. How to drain tofu. How to treat/handle tofu. Tofu boiled/simmered/cooked in sauces. Broiled tofu. Steamed tofu. Pickled, raw, boiled, tossed tofu. Sauteed tofu. Deep fried tofu. Part II: Information about tofu. History of tofu. Tofu was born in China. Origin of the name “okabe.” Other names for tofu. Various types of tofu. Names of tofu. Cruel tofu recipes. How to make tofu recipes tasty. Japanese cooking and the taste of tofu. The relationship between tofu and miso soup. How to make good tofu miso soup. How to cut tofu for miso soup. Good ingredients for tofu miso soup. Good ingredients for tofu soups. To what degree are you

interested in tofu? Tofu is the best healing food. Tofu is valued overseas. If you don't eat tofu, you lose! How to make tofu. Changes in the prices of tofu products. Did you know...? Address: Tokyo, Japan.

1629. Smith, A.K.; Circle, S.J. 1972. Historical background (on soybeans and soybean foods). In: A.K. Smith and S.J. Circle, eds. 1972. *Soybeans: Chemistry and Technology*. Westport, CT: AVI Publishing Co. xiii + 470 p. See p. 1-26. Chap. 1. [53 ref]

• **Summary:** Contents: 1. Introduction. 2. U.S. history: Introduction of soybeans, processing for oil, soybean oil. 3. Soybean meal and protein: Animal feed industry, poultry industry, industrial uses. 4. Soybean production. 5. Oriental history: Ancient history, Oriental fermented foods (shoyu, miso, tempeh, onjom, natto, hamanatto, tao tjo [Indonesian-style miso], kochu chang, ketjap), Oriental nonfermented foods (soybean milk, tofu), wedge press. 6. Soybeans and world food problems: Green Revolution, protein supplements (high protein food formulations, AID funded), amino acids, CSM, cottage industries.

Concerning industrial uses (p. 8-9): Soybeans rose in popularity as an agricultural crop in the USA at a time when other crops such as corn, wheat, cotton, and tobacco were being produced in surplus quantities. Soybeans took over much of the acreage vacated by these crops. "At that early period it was the hope of many leaders of agriculture, government, and industry that much of the oil and protein of the soybean could be diverted from the food and feed industries into industrial products such as paints, varnishes, soap stock, plastics, adhesives, plywood glue, paper coating and lamination, paper sizing, textile fibers, and other uses... In 1936 the US organized the Regional Soybean Industrial Products Laboratory for this purpose. These new industrial uses were expected to help relieve the problem of farm surpluses... In 1935 the Glidden Company built the first plant for the isolation of industrial grade soybean protein (transferred to Central Soya in 1958). The largest use of industrial grade protein is in the paper-making industry, for coating and sizing of paper board.

"After World War I, soybean meal, because of its low cost, replaced casein as an adhesive for Douglas fir plywood glue, where it still retains a substantial part of the market for the interior grade product."

"While soybean proteins have several important industrial applications, especially in the paper industry for coating and sizing paper, which are expected to continue for years to come, the original dream of an ever-expanding industrial market [for soy proteins] has faded. In the polymer market it appears that for most applications the proteins cannot be made competitive with the increasing number of low cost, high quality synthetic resins... It is generally recognized that the increasing demand for

proteins for feed and food will greatly surpass the anticipated industrial uses."

A graph (p. 1) shows: Soybean production in the United States for seed, 1940-1970. Address: 1. Oilseeds Protein Consultant, New Orleans, Louisiana; 2. Director, Protein Research, W.L. Clayton Research Center, Anderson Clayton Foods, Richardson, Texas.

1630. Smith, Allan K.; Circle, Sidney J. eds. 1972. *Soybeans: Chemistry and technology*. Vol. 1. Proteins. Westport, Connecticut: AVI Publishing Co. xi + 470 p. Illust. Index. 24 cm. [500+ ref]

• **Summary:** One of the best and most comprehensive reviews on the subject, with extensive information on modern soy protein products. Each of the 12 chapters is written by an expert on the subject. Volume 2 was never published. Address: 1. PhD, Oilseeds protein consultant, New Orleans, Louisiana; 2. PhD, Director, Protein Research, W.L. Clayton Research Center, Anderson Clayton Foods, Richardson, Texas.

1631. Smith, A.K.; Circle, S.J. 1972. Appendixes: Glossary of soybean terms: Terms used in conjunction with the processing of soybeans and the utilization of soy products. Official standards of The United States for soybeans. In: A.K. Smith and S.J. Circle, eds. 1972. *Soybeans: Chemistry and Technology*. Westport, CT: AVI Publishing Co. xiii + 470 p. See p. 438-56. Appendix. [4 ref]

• **Summary:** Glossary: Soybean(s), soybean processor, soybean processing (solvent extraction, mechanical processing, pre-press solvent processing), soybean oil, crude soybean oil, edible crude soybean oil, refined soybean oil, edible refined soybean oil, hydrogenated soybean oil, degummed soybean oil, winterized oil, technical grade refined soybean oil, soybean fatty acids, soybean soapstock, acidulated soybean soapstock, soybean lecithin, break material, sludge.

Soybean products: Ground soybeans, ground soybean hay, soybean hulls, solvent extracted soybean feed, soybean meal, dehulled solvent extracted soybean meal, soybean mill feed, soybean mill run, heat processed soybeans, nitrogen free extract (N.F.E.).

Standard specifications: Soybean chips, soybean cake, 41% protein soybean meal, soybean flakes, 44% protein soybean meal, dehulled soybean flakes, 50% protein solvent extracted soybean meal.

Soybean proteins: Soy flour, soy grits, soybean meal, defatted soy flour, low-fat soy flour, high-fat soy flour, full-fat soy flour, lecithinated soy flour, protein, isolated protein, toasting, textured protein products (TPP), meat analogs. Definitions: Soy grits and/or soy flour, isolated soy protein, soy protein concentrate.

Vegetable fats: Margarine, vegetable shortening.

Oriental foods: Soy sauce (shoyu), soy milk, miso, tofu, dried tofu, aburaage, kinako, namaage, ganmodoki, tempeh, natto, yuba, moyashi (soybean sprouts), vanaspati, ghee.

Official standards of the U.S. for soybeans. Soy flour standards. Analytical data range of commercial soy protein. Some U.S. companies marketing soy protein food ingredients. Nitrogen solubility index (NSI). Protein dispersibility index (PDI). Urease activity. Water absorption of soy flour. Address: 1. Oilseeds Protein Consultant, New Orleans, Louisiana; 2. Director, Protein Research, Anderson Clayton Foods, Richardson, Texas.

1636. Chico-San Inc. 1972? Chico-San history and outline for future development. Chico, California: Chico-San Inc. 5 p. Undated. Unpublished typescript.
 • **Summary:** A good early history of Chico-San, typewritten on the company's letterhead probably by Bob Kennedy. Atop the letterhead is printed: "Macrobiotic foods, rice cakes, cereals, sea vegetables." "By 1961 eleven macrobiotic families had packed their belongings, left their jobs behind in New York City, and headed for Chico, California, in the heart of the California rice growing

country. In a short time Chico-San, Inc. was formed by some of these people for the purpose of importing foods of superior quality which were not available domestically, and locally producing foods of the highest quality for distribution throughout the United States."

One of the company's first popular products was the "Rice Cake, a light cracker made from puffed up whole grain brown rice. The first "machine," imported from Japan in 1963, made one cake at a time and was a crude, hand-operated device. Soon, three more machines were tied to the original one, still hand operated. Bob Kennedy, Dick Smith, and a few others found it necessary to work twelve hour shifts, and for six and seven days at a time to meet the steadily increasing demand for the unique new cracker. In 1965 pulled shoulder muscles ceased to be a problem when the first semi-automatic Rice Cake machine was put into operation...

"Central to the guiding philosophy behind Chico-San was the search for an organically grown brown rice—the prince of grains. This search ended in 1969 when the first organically grown short grain brown rice was harvested just south of Chico, in Richvale, California. This product, grown under exclusive contract for Chico-San, further enhanced their growing reputation...

"Back in the late fifties and sixties people who were interested in food and health were called 'food faddists', or 'health food nuts.' The food products found in most health food stores at this time consisted of a vast array of vitamin and mineral supplements, super protein concentrates, natural cosmetics, and a scattering of whole grains, few of which were organically grown.

"But little by little products with the Chico-San label found their way onto store shelves. First the Rice Cakes, then natural soy sauce, Miso Soybean paste, Sesame Butter and Sesame Salt, and organically grown Brown Rice became popular...

"In the back room too is Junsei Yamazaki, who emigrated to Chico from Japan in 1963 for the purpose of producing natural soy sauce and miso for Chico-San. These two products make up the greater percentage of the imports from Japan, and are subject to high duties and shipping costs. For 17 years Junsei was a rice farmer in Japan after graduating from Tokyo University with a degree in agriculture.

"Combined with the income from Stage I, Chico-San will be ready to begin Stage III. This stage includes the construction of a plant for the production of, at first, miso, and then soy sauce." Address: Chico-San Inc., 1262 Humboldt Ave. Chico, California 95926.

1637. Eden Foods, Inc. 1973. Catalog. 211 South State St., Ann Arbor, Michigan. Undated. Probably published about Jan. 1973.

• **Summary:** Eden Foods is now carrying Organic Soybean Flakes from Arrowhead Mills (34% protein), and a line named “Hopi Seeds” which includes soybeans, sunflower seeds, pumpkin seeds, almonds, and cashews—each dry roasted with tamari, each in a consumer snack-sized pack weighing 1.3 to 1.5 oz. Note: This “Hopi Snacks” line was developed by Eden.

Other interesting products include “Michigan Grain” (soybeans, corn, rye, and wheat grown organically in Michigan, mostly by Tom Vreeland in Ypsilanti), umeboshi plums in salt brine, and kuzu arrowroot. Address: Ann Arbor, Michigan.

1638. Misko, Karin. 1973. *SeVa longevity cookery cookbook*. Columbus, Ohio: Soybean Press. viii + 113 p. Jan. Illust. by Judy Post. Edited by Debora Bittaker. Introduction by Catherine Bicknell. 22 cm. [45 ref]

• **Summary:** A vegetarian cookbook from the SeVa Restaurant, printed on 100% recycled paper. Soy-related recipes include: Soy milk (p. 18). Tahini milk. Nut milk (p. 18). Miso vegetable soup (p. 25). Variety muffins (with soy flour, p. 36). Salad for Virgo (with green soybeans and roasted soybeans, p. 45). Miso-tahini sauce (p. 51). Brown sauce (with Tamari soy sauce or miso, p. 51). Stuffed cabbage rolls (with green soybeans and brown rice, p. 65). Campfire dinner (with cooked or canned soybeans, p. 65). Soy bean loaf (p. 73). Roasted soybeans (dry roasted, p. 84). Granola (with Soya granules, p. 84).

The glossary (p. 98-100) includes listings for cold-pressed oils, fertilized eggs, ginseng, gluten [sic, gluten], miso, seaweed, tamari soy sauce, and tofu (“a bean curd made from soybeans which is used for flavoring soups and sauces.”)

Brand name products we use (p. 101; Note: Each contains soya). Smokene, Soyagen (spray-dried soymilk), and Vegeburger (Loma Linda Foods). Soya Granules (Fearn Soya Foods). Stripples (bacon alternative from Worthington Foods). Vege-Sal (Modern Products; flavored with soy bean extract). “Smokene: smoked seasoning spice made from toasted soy powder, dried yeast, soy sauce and condensed wood smoke. It is used for flavoring soups and sauces.” Address: Columbus, Ohio.

1639. Spiral Foods Inc. 1973. Mail order price list. Chico, California. 2 p. Jan. 35 cm.

• **Summary:** This single-sheet catalog and price list, photocopied front and back with black ink on tan paper, contains numerous background illustrations and the includes the following foods: Snacks: Rice cakes, corn chips, Yinnies—brown rice candy sugarless. Condiments: Lima tamari soy sauce—aged naturally over two years, Miso—soybean puree, entirely natural, rice malt vinegar, sesame butter, sesame oil—cold pressed, sesame salt, sea salt white unrefined, salt plums, kuzu—wild arrowroot starch.

Grains, flours, seeds and beans: Brown rice / sweet brown rice—short grain, organically grown. Black [soy] beans—Japan import. Azuki beans—Japan import, dainagon. Whole grain noodles. Sea vegetables. Beverages. Hygienic goods. Utensils.

Talk with Robert J. Kennedy, founder of Chico-San. 1991. Oct. 3. By about 1966-1967 rice cakes and rice chips (senbei) were beginning to cut a wedge into the mass market nationwide, so Chico-San created the Spiral Foods brand for these mainstream products, keeping the Chico-San brand for the health food market. Address: 1144 West 1st Street, Chico, California 95926.

1640. Winarno, F.G.; Fardiaz, Srikandi; Daulay, Djundjung. 1973. Indonesian fermented foods. Bogor: Agricultural University Bogor. 25 p. Originally presented as a lecture by Winarno to Regional Graduate Nutrition Course, SEAMEO, Jakarta, in Jan. 1973. [11 ref]

• **Summary:** Also titled “Indonesian Traditional Food Processing.” Address: Dep. of Agricultural Product Tech., Bogor Agricultural Univ.

1641. Hansen, Barbara. 1973. Yue Sang—Fishy salad in the raw. *Los Angeles Times*. Feb. 1. p. K11.

• **Summary:** Yue Sang is a Cantonese raw fish salad. At a meeting of the Los Angeles Chinese Women’s Club, Mrs. F. Chow Chan brought jai, a meatless dish, that ordinarily contains 18 ingredients including dried oysters, dried black and grass mushrooms, dried bean curd stick [dried yuba rolls], white lily petals, golden needles, cloud fungus and hair seaweed.”

“To symbolize gold, there were tangerines and jin duey, a deep-fried Chinese pastry stuffed with sweet black bean paste.” Recipes are given for Yue Sang, Lion’s head, and Rock salt chicken. A photo shows five Chinese women, each nicely dressed, gathered around a wok, from which they pick morsels with long chopsticks.

Note: This is the earliest English-language document seen (Sept. 2008) that contains the term “sweet black bean paste.” It can be made with either black soybeans or azuki beans.

1642. Manabe, Masaru; Ohnuma, Shizuko; Matsuura, Shinji. 1973. [Studies on the fluorescent compounds in fermented foods. II. Test on aflatoxin contamination of miso and miso-koji in Japan]. *Shokuhin Sogo Kenkyujo Kenkyu Hokoku (Report of the National Food Research Institute)* No. 28. p. 239-43. March. [10 ref. Jap; eng]

• **Summary:** Reprinted from *Nippon Shokuhinkogyo Gakkaishi (J. of Food Science and Technology)* 19(2):76-80 (1968). Address: National Food Research Inst., MAFF, Tokyo, Japan.

1643. Manabe, Masaru; Matsuura, Shinji. 1973. [Studies on the fluorescent compounds in fermented foods. III. Degradation of added aflatoxin during miso fermentation]. *Shokuhin Sogo Kenkyujo Kenkyu Hokoku (Report of the National Food Research Institute)* No. 28. p. 244-50. March. [14 ref. Jap; eng]

• **Summary:** “Although aflatoxin-like substances were detected in a few samples,” no actual aflatoxin was detected in any of the rice samples.

Reprinted from *Nippon Shokuhinkogyo Gakkaishi (J. of Food Science and Technology)* 19(6):268-74 (1972). Address: National Food Research Inst., MAFF, Tokyo, Japan.

1644. Manabe, Masaru; Matsuura, Shinji. 1973. [Studies on the fluorescent compounds in fermented foods. IV. Degradation of added aflatoxin during miso fermentation]. *Shokuhin Sogo Kenkyujo Kenkyu Hokoku (Report of the National Food Research Institute)* No. 28. p. 251-55. March. [9 ref. Jap; eng]

• **Summary:** “A certain amount of aflatoxin was added to green miso before fermentation in order to investigate the degradation of the toxin during miso fermentation.” There was some degradation of aflatoxin B1 and G1 in miso during the early stage of miso fermentation, but in the later stage the velocity was remarkably reduced. As a result, more than 50% of aflatoxin B1 and G1 remained in miso after 1 month fermentation. No degradation of aflatoxin B2 and G2 was detected during miso fermentation.

Reprinted from *Nippon Shokuhinkogyo Gakkaishi (J. of Food Science and Technology)* 19(6):275-79 (1972). Address: National Food Research Inst., MAFF, Tokyo, Japan.

1646. Erewhon. 1973. Supplying natural food stores, co-ops and communities (Catalog). Boston, Massachusetts. 10 p. Effective April 6, 1973.

• **Summary:** The number of products in Erewhon's catalog has increased dramatically during the past year. An illustration at the lower center of the cover is clip-art showing a man cutting barley. A message on the inside front

cover is signed “Thank you all, Paul Hawken.” Below his message is a smaller reproduction of the man cutting barley and below it: “Good morning.”

Contents: Grains: Incl. brown rice (short grain, “Colusa,” OG {organically grown}, California; medium grain, “Golden Rose,” OG {organically grown}, California; medium grain, OG, Louisiana; long grain, OG, Texas; glutenous [sic, glutinous] sweet, OG, California). Wheat (Deaf Smith, hard red winter, or hard amber durum, OG, Texas; Ted Whitmer, hard red spring, OG, Montana; soft white pastry, OG, Washington [state]). Barley, pearl. Buckwheat groats. Corn. Millet. Oats. Popcorn. Rye. Cereals: Incl. Rice cream. Soybean flakes (Deaf Smith, OG). Stoneground flours: Incl. soybean flour, full fat, OG, Texas. Sweet brown rice flour, OG. Beans: Incl. Azuki beans (100, 50, or 25 lb). Soybeans (OG, Texas, 60 lb). Seeds and nuts: Incl. Almonds. Peanuts (spanish, split). Sesame seeds. Tamari & miso: Tamari soy sauce (8 oz, pints, quarts, half gallon, gallon, 4.7 gallon can). Hacho miso soy paste (1 lb or 44 lb keg). Mugi miso barley-soy paste (1 lb or 44 lb keg). Kome miso rice-soy paste (1 lb or 44 lb keg). Sea vegetables: Agar-agar, dulce, hiziki, kombu, nori, wakame, wakame root. Tea: Incl. Mu herbal beverage No. 9 and No. 16. Kukicha twig tea. Celestial Seasonings herb teas (39 flavors). Pasta: Wholewheat spaghetti, elbows, flat macaroni, and shells. Granola: Five flavors. Snacks: Incl. Corn munchies (organic corn chips with soy sauce). Chico-San corn chips and rice chips. Soybean oil (5 gallon tin). Olive oil. Peanut oil (organic, pint, quart, or 5 gallon tin). Butters: Almond Butter (Golden Farms, OG). Peanut Butter (Erewhon, old fashioned). Sesame butter. Sesame tahini. Honey (Paradise Valley, unheated, unfiltered, clover or orange). Condiments: Sea salt. Sesame salt. Tekka (vegetable-miso condiment). Unusual foods: Ame (rice and barley malt–glucose syrup). McHenry's sorghum molasses. Kuzu arrowroot. Sauerkraut. Umeboshi (plums pickled in brine). For cleanliness: Dr Bronner peppermint castille soap. Infinity herbal products (shampoo and soap). Natural Living Company (sesame cream shampoo, sesame lotion). Orjene (herbal shampoo). Tom's coco-orange all-purpose soap. For cooking: Knives (vegetable, utility, paring), chopsticks, rice paddle, tea strainer, “soy [sauce] dispenser” (4½ inch), oil skimmer, vegetable brush, suribachi, Chinese wok, Quaker City hand grinding mill. Austria Email iron-enamel pressure cookers. Save-a-Tree canvas shopping bags, shoulder bags, and bike bags. Flyers: Organic Merchants N.O.T. list. The Sugar Story. The Oil Story. The Macrobiotic Way. Macro-Ecology. Packaged in cellophane bags with recipes (1 lb, 1½ lb, and 2 lb): Incl. brown rice, wheat kernels, pearl barley, alfalfa seeds (OG), sesame seeds, pumpkin seeds, sunflower seeds, mung beans (sprouting), soybeans (sprouting or cooking, OG), pinto beans, chickpeas, green lentils, green split peas, split red lentils, morning cereal (6-grain cereal blend), infant cereal

(koko), tsampa Tibetan barley cereal, rice cream, soybean flour (full fat, OG, 24 oz), soybeans (OG, 2 lb).

A long note at the top of this list states: "In our retail store we like to sell 'bulk' whenever possible. But we have found that to many new customers coming into our store everyday, pre-packaged foods such as we are presenting here offer a better introduction to the world of whole-grain cooker. Each package has an appealing 'kitchen-tested' recipe on the front so that new friends unfamiliar with these foods can give them a try. Furthermore, some people prefer to buy packaged foods because they feel for various reasons that food sold exposed is not as clean or pure. There is some truth to that, of course, depending on the store, but in any case we are happy to offer a complete line of Erewhon grains, cereals and flours in attractive, biodegradable cellophane packages. We will be expanding this line of cereals and grains and welcome your comments and suggestions. Please let us know how we can serve you better." Address: 33 Farnsworth Street, Boston, Massachusetts 02210. Phone: (617) 542-1358.

1647. Eden Foods, Inc. 1973. F.O.B. pricelist. 330 Maynard St., Ann Arbor, MI 48108. 3 p. Effective April 15.

• **Summary:** The subtitle reads: "Serving mid-America with natural foods." Eden Foods is now selling the following soy products: Soybean Flakes (25 lb bags, organically grown, from Deaf Smith, Texas [Arrowhead Mills]). Soy Flour (50 lb bags, organically grown, from Deaf Smith, Texas [Arrowhead Mills]). Soybeans (50 lb, organically grown, Michigan). Soy-Rice Shells (15 lb, organic, [probably from Erewhon]). Kome Miso (soy paste with rice, 1 lb and 44 lb). Tamari Soy Sauce. Mugi Miso. Soybean Oil (Erewhon, pints, quarts, and 5 gallons). Corn Munchies (organic corn chips with soy sauce, 4 oz.). Rice Munchies (organic rice chips with soy sauce, 4 oz.). Sunflower seeds roasted with tamari (50 lb).

Other interesting products include: Umeboshi (salt plums pickled in brine, 22 lb keg). Kukicha twig tea. Lotus root tea. Pure & Simple Apple Butter. Sea vegetables (Wakame, kombu, hiziki, nori [dried laver], dulse, agar-agar [kanten sea gelatin]).

Note: This is the earliest document seen (April 2006) that mentions Pure & Simple (as a brand). Address: Ann Arbor, Michigan. Phone: (313) 769-8444.

1648. **Product Name:** Kome Miso (Soy Paste with Rice).

Manufacturer's Name: Eden Foods, Inc. (Marketer-Distributor). Purchased from Erewhon (Boston-Importer). Made in Japan.

Manufacturer's Address: 330 Maynard St., Ann Arbor, MI 48108. Phone: (313) 769-8444.

Date of Introduction: 1973. April.

Wt/Vol., Packaging, Price: 1 lb. plastic bag, or 44 lb keg.

How Stored: Shelf stable.

New Product-Documentation: Eden Foods, Inc. 1973. April 15. F.O.B. Pricelist. "Kome Miso, soy paste with rice."

Eden Foods, Inc. 1974. Feb. 1. Wholesale prices, FOB. "Kome Miso, rice-soy paste (Erewhon)." This is the first time the word "Erewhon" appears after miso. It looks like Erewhon was requiring Eden to add it—which may have caused bad feelings.

1649. Rice, William. 1973. The fair-skinned soybean. *Washington Post*. May 10. p. E1, E16.

• **Summary:** The title of the continuation of the article on p. E16 is "The treasures beneath the surface of the fair skinned soybean." Mirror, mirror on the wall... The soybean is the fairest vegetable of all, for its dull yellow surface covers a treasure of protein and other nutrients. It is presented in many guises: "tofu (used in Oriental cooking as bean curd), green (fresh) soybeans (prepared as fresh limas, or eaten blanched or raw when very young), dried soybeans (eaten as peanuts or used as other dried beans in cooked dishes), soybean flour (can be mixed with other flours but lacks gluten and can therefore replace only 15 per cent or so of wheat flour in recipes), soy sauce (essential in Oriental cooking and mistakenly used in the manner of ketchup by many Americans 'eating Chinese'), tamari (pure soy-preferred by vegetarians), miso (fermented soybean paste), soybean milk (liquid or powdered), soybean grits and flakes, lecithin (supplement to control cholesterol build-up) and some others. Soybeans have long been available in health food stores."

Rising beef costs have led to the use of "textured vegetable protein" as an "extender" in ground beef products. Contains 4 recipes using whole dry soybeans or soy flour.

1650. Ewald, Ellen Buchman. 1973. Recipes for a small planet: The art and science of high protein vegetarian cookery. New York, NY: Ballantine Books. xi + 366 p. May. Foreword by Frances Moore Lappé (Hastings-on-Hudson, New York). Illust. by Diane Coleman. 18 cm.

• **Summary:** Lacto-ovo-vegetarian recipes based on *Diet for a Small Planet* by Frances Moore Lappe. The protein content is given for each recipe. Also contains information on complementary proteins. The author was born in 1946.

The chapter on protein complementarity discusses combinations of rice, wheat, peanuts or cornmeal with soy (in the form of whole beans, grits, flour, or tofu). A chart on protein / calorie comparisons gives the number of calories per gram of usable protein including the following: Defatted soybean flour 11, soybean sprouts 12, low fat soybean flour 12, tofu 15, full fat soybean flour 18, soybeans 20, gluten flour 23; Note that all these are relatively low in calories per gram of usable protein. By comparison: Hamburger 15, brown rice 69, cornmeal (whole, ground) 80.

Many recipes in this book contain small amounts of soy flour or grits, or soy sauce. Recipes containing significant amounts of soy include: All-protein crunchy granola (with soy grits, p. 48-49). New granola (with soy flour, p. 52-53). Orange pancakes with orange sauce (with soy flour, p. 58-59). Soy-sesame peanut spread (with roasted soy flour, p. 67). Peanut paté (with whole soybean and soy sauce, p. 70-71). Hot and sour soup (with tofu, p. 83-84). Soybean stew (p. 85). Peanut, tofu and sesame soup (p. 86-87). Exotic barley stew (with miso, p. 87-88). Cabbage soup for a meal (with soybeans, p. 91-92). Curried rice salad (with soybeans, p. 98-99). Gado gado (with tofu, p. 102-03). Soy-peanut marinade (p. 106). Dairy rich sauce (with tofu, p. 115). Chiles rellenos en casserole (with soybeans, p. 126-27). Herbed soybean bulgur casserole (p. 128-29). Garbanzo and cheese loaf (with miso, p. 133-34). Fesenjon-spiced ground beans (with soybeans, p. 135-36). Bean stroganov (p. 140-41). Crusted cauliflower (with soy flour, p. 143-44).

Breads and other baked goods (each with soy flour or grits, p. 195-274): Whole wheat soy bread. Wheat grits bread. Triple rich bread. Unusual pickle or olive juice bread. Cornmeal wheat bread. High rising bread. Spicy rye bread. Limpa bread. Oat rye soy bread. Caraway rye bread. Sourdough whole wheat bread. Egg and yogurt bread (SD = sourdough). Sun seedy oatmeal bread (SD). Four grain bread (SD). Nut and seed bread (SD). Mixed grain bread (SD). Crunchy nut muffins. Spiced pear muffins. Basic complementary muffins. Oatmeal muffins. Sour orange muffins. Pancake, waffle, or camping bread mix. Sourdough corn bread. Quick wheat soy bread. Quick molasses bread. Quick coconut bread. Cheese-filled coffee cakes. Walnut-and-raisin filled coffee cake. Orange coffee cake. Chocolate coconut cookies. Pumpkin cookies or bars. Fruit bar crunch. Honey almond bars. Banana spice bars. Gingerbread.

Cooking beans (p. 309-10, including soy and azuki/ aduki). Putting more protein in your family's diet (Appendix F, p. 326-31).

Glossary (p. 339-44) discusses miso, soy flour, soy grits, tofu ("Tofu is soybean cheese, also known as bean curd... Some supermarkets carry tofu, and you can also get it in health food stores and oriental groceries and restaurants..."). Address: Berkeley, California.

1651. Oberdorfer, Don. 1973. Now even soybean curd seems lost to Japanese. *Washington Post*. June 29. p. D11.

• **Summary:** Tokyo. Last night the USA announced an embargo on soybean exports—a big surprise and shock in Japan. Now even tofu, the ubiquitous and much-enjoyed soybean curd, will become more expensive. Soybeans are very important in Japan as a source of both food (beancurd, miso soup, soy sauce, etc.) and feed. 60% of the cooking oil in Japan is soybean oil. The USA supplies more than 90% of Japan's soybeans, and they are a major item of trade.

1652. Sickler, Roberta. 1973. *Ritual of the hearth: A cookbook of 20 menus and 117 unique vegetarian recipes in praise of life*. New York, NY: Macmillan Publishing Co. x + 195 p. Illust. by the author. 26 cm.

• **Summary:** The recipes are grouped by season. Soy-related recipes include: Snow pea soup (with 3 bean-curd cakes [tofu] (each about 3 inches square by 3/4 inch thick), soy sauce, and hoisin sauce, p. 4). Green broth (with bean cake [tofu], p. 84). Tofu (homemade from soy flour and lemon juice, p. 86-87; "Tofu is a rich, delicate curd from soybean. It is especially good for summer, served cold with raw vegetables, or in hot soups or sauces. Tofu is made fresh daily in many Oriental neighborhoods, and sold in the form of small squares. It can be made at home quite successfully."). Tofu and summer vegetables (with "1 3/4 cups tofu curds, or 3 tofu cakes, cubed," p. 87). Soy bechamel sauce (with soy flour and Tamari soy sauce, p. 130-31; "We use dark Tamari soy sauce because it is aged slowly in wood and has a light, deep flavor."). Soy burgers (with whole soy beans, soy oil, soy sauce, miso paste, and soy flour, p. 183-84).

1653. *New York Times*. 1973. Japanese upset by U.S. soybean curbs. July 7. p. 27, 32.

• **Summary:** Many Japanese are angry at President Nixon for his ban on exports of soybeans last week. Japan obtains 92% of her soybeans (nearly 3 millions tons a year) from the USA. These soybeans are needed, however, to meet shortage of cattle feed in the USA. Last Monday in Washington, DC, officials replaced the embargo on soybeans with a system of export licenses. Meanwhile, the price of soybeans has skyrocketed.

Japanese use soybeans in many foods, including "miso soup, a soybean broth." Tofu (soybean curd) and fish are the two most important sources of protein for Japanese, according to Kuniyoshi Takagi, managing director of the Federation of Tofu Makers' Associations. Makers of soy sauce say the USA has supplied all of the 240,000 tons of soybeans the industry consumes each year, according to Kaoru Ito, managing director of the Japan Soy Sauce Brewers Association. There was even concern at the restaurant Sasa-no-Yuki (snow on bamboo sprouts), which serves only tofu in 12 varied dishes; a full tofu dinner of 8 tofu dishes costs not more than \$3.00.

The Japanese government, deeply upset, placed soybeans at the top of a list of controlled commodities under a new regulation (that went into effect today) against hoarding and price manipulation. Japan's "stocks of soybeans stood at 400,000 tons at the end of May, and are expected to drop to 200,000 tons by Sept. 30, and be exhausted by Oct. 31 if there are no further imports," according to a spokesman for the Ministry of International Trade and Industry.

While the Ministry of Agriculture and Forestry urges the U.S. government to insure that Japan has a steady supply of soybeans, Japanese officials are also “looking for other sources and accelerating programs to increase local production.”

A bar graph shows: (1) U.S. soybean exports to the world: In 1971–420 million bushels worth \$1.3 billion. In 1972–441 million bushels worth \$1.5 billion. In 1973 (first 5 months)–248 million bushels worth \$1.3 billion. (2) U.S. soybean exports to Japan: In 1971–98 million bushels worth \$311.1 million. In 1972–109.4 million bushels worth \$375.4 million. In 1973 (first 5 months)–62.5 million bushels worth \$347.7 million.

1654. Product Name: Dehydrated Miso.

Manufacturer’s Name: Chico-San Inc. (Importer). Made in Japan.

Manufacturer’s Address: P.O. Box 1004, Chico, CA 95926.

Date of Introduction: 1973. July.

How Stored: Shelf stable.

New Product–Documentation: Chico-San Products. 1973. July. p. 13. “Dehydrated Miso.” This is imported barley miso “dehydrated by our own, low-temperature process that protects the enzymes which are abundantly present in this wonderful food. Use dehydrated miso as you would ‘moist’ miso, only less of it.”

1655. Chico-San Inc. 1973. Chico-San Inc. products: A catalog of unique foods. P.O. Box 1004, Chico, CA 95926. 26 p. Revised July 1973.

• **Summary:** Soyfoods imported from Japan include Lima Soy Sauce, Soybean Puree (Miso), and dehydrated miso. They also sell black [soy] beans.

Rice-based products include: Yinnies Grain Syrup (“a low cost natural sweetener made from whole grain barley and organically grown brown rice,” in a 12 oz. jar; a photo shows the jar and label); a 3-page description tells how the product is made and gives its composition (maltose is the key natural sugar); recipes are included. Yinnies (“A traditional Oriental grain candy. The ingredients are organically grown brown rice and barley. No sugar or artificial sweeteners are used.”). Rice chips with buckwheat. On the label of the Yinnies confection product the following statement appears: “The rice for the Yinnies is grown and harvested exclusively for and under the direct supervision of Chico-San by Wehah Farms of Richvale, California.” A similar statement appears on the Rice Chips label.

Corn Chips. Rice Cakes (3 types, each with brown rice and sesame seeds: Plain, with Millet, or with Buckwheat). San-Wich Rice Cakes–Unsalted (Ingredients: Brown rice [organic], sesame seeds, Chico-San yinnies syrup (brown rice and barley), various sea vegetables, and kuzu).

One section (p. 9-10) is titled “How Chico-San guarantees Oriental-type, organically-grown brown rice.” The words “Reprinted from *Health Foods Business* magazine” and “Wehah Farms” have been carefully deleted from the text of this article!

This is the revised edition of an earlier catalog. “Chico-San products have gained increasing acceptance throughout the country since their introduction in 1960.” The booklet contains 8 pages of recipes, including: Sesame-miso spread for bread or dips. Black soy beans (p. 21). Wakame miso soup. Note: This is the earliest macrobiotic recipe seen which uses the term “Black soy beans” instead of “Black beans” to refer to black soybeans. Address: P.O. Box 1004, Chico, California 95926.

1656. Harper, Anne. comp. 1973. Soybean processing and utilization: A partially annotated bibliography. Jakarta, Indonesia: Lembaga Ilmu Pengetahuan Indonesia (Indonesian Inst. of Sciences), Jl. Tjilik Ditiro 43, Jakarta. vi + 56 leaves. 30 cm. [440 ref. Eng]

• **Summary:** Contents: Preface (by Prof. Sarwono Prawirohardjo, Chairman, ASEAN Permanent Committee on Science and Technology). Introduction: The soybean (*Glycine max*), soybean meal and oil, food uses, industrial uses, scope of the bibliography (“excludes references to non-alimentary utilisation of soybeans” and to “references to alimentary utilisation where the harvested plant has not undergone processing by either fermentation or oil extraction”), terminology of soybean processing (soybean meal, soy flours and grits, solvent extraction, miscella, desolventizer-toaster, defatted soy flour, low-fat soy flour, high-fat soy flour, full-fat soy flour, lecithinated soy flour, soy protein concentrates, soy milk, Saridele, yuba, soybean curd [tofu], aburage, koritofu [kori-dofu, dried frozen tofu], soy protein isolate, protein fibre products {spun, spinnerettes}, extrusion-expansion products, fermentation products {ontjom, *Neurospora sitophila*, soysauce, shoyu, *Aspergillus oryzae*, koji, moromi, tamari, koikuchi, natto, miso, tempeh, *Rhizopus oligosporus*, soybean cheese, sufu, *Mucor sufu*}, *Zygosaccharomyces*).

General (p. 1). Fermentation products (p. 2-16). Soybean oil, meal, and protein (p. 17-42). Nutrition (p. 43-56). Note: 500 copies were printed. Address: Indonesia.

1657. Eden Foods, Inc. 1973. Wholesale prices. P.O. Box 100, Ann Arbor, MI 48107. 3 p. Catalog. Effective Aug. 1. • **Summary:** The products are very similar to those in the April 1973 catalog. Address: Ann Arbor, Michigan. Phone: (313) 769-8444.

1658. Erewhon. 1973. Supplying natural food stores, co-ops, schools and communities (Catalog). Boston, Massachusetts. 12 p. Effective Aug. 20, 1973.

• **Summary:** The structure and design of this catalog is quite similar to the previous one of April 6, however some new products and sizes have been added. The illustration and note from Paul Hawken are similar. OG = Organically grown. products: Cereals: Soybean flakes (Deaf Smith, OG, 25 lb). Stoneground flours: Soybean flour, full fat, OG, Texas, 50 lb. Beans: Azuki beans (100, 50, or 25 lb). Soybeans (OG, Texas, 50 lb). Tamari & miso: Tamari soy sauce (8 oz, pints, quarts, half gallon, gallon, 4.7 gallon can). Hacho miso soy paste (1 lb or 44 lb keg). Mugi miso barley-soy paste (1 lb or 44 lb keg). Kome miso rice-soy paste (1 lb or 44 lb keg). Pasta: Wholewheat shells (with rice and soy flour, 15 lb). Snacks: Corn munchies (organic corn chips with soy sauce). Hopi Seeds (all dry-roasted with tamari, 1.38 oz or 25 lb): Almonds, cashews, pumpkin seeds, soybeans, sunflower seeds. Vegetable oil, pressed and unrefined: Soybean oil (pint, quart, 5 gallon tin). Condiments: Tekka (vegetable-miso condiment, 3 oz). For cooking: Soy [sauce] dispenser (4½ inch). Packaged in cellophane bags with recipes (1 lb, 1½ lb, and 2 lb): Soybeans (sprouting or cooking, OG, 1 lb or 2 lb) stoneground soybean flour (full fat, OG, 24 oz), soybeans (OG, 2 lb). Address: 33 Farnsworth Street, Boston, Massachusetts 02210. Phone: (617) 542-1358.

1659. Hawken, Paul. 1973. Erewhon: A biography. The view within. *East West Journal* 3(8):11-16. Aug.

• **Summary:** An early, critical history of Erewhon, written without any capital letters [all lowercase], expressing the viewpoint of one of its early, important, and very innovative presidents. “Arrogant” is a term often used to describe the attitude of the people running the company. A store by the name of “Erewhon” opened in May 1966 on Newbury St. in Boston, first manned by Evan Root, then Paul Hawken. “On Thanksgiving day 1968 we opened a new store down the street [at 342 Newbury St.] which still exists today. At that time we were doing about \$250 a day and the rent on the new store, with utilities, totalled over \$1,000. It was a chance we took, a big chance, and seemed to set the pattern for many to come. The decision to place our economic life on the line was based on growth. By then Erewhon had grown to be six people, and all of us felt in our bones that we had a tiger by the tail. A sort of giddy optimism pervaded the new store, abetted by all of us working 12 to 20 hours a day—Bruce Macdonald, Jim Docker, Jean Allison, Bill Tara (later to leave for Chicago, Illinois), and Roger Hillyard. The intensity was so thick you could scoop it up and bag it. All of us felt like passengers on a very fast vehicle bound for unknown places. Business was increasing very rapidly and it seemed we could do no wrong. Time moved very quickly and I was soon to leave for Japan to establish a source of imported foods. My position as to coming back was ambivalent, so Roger Hillyard was appointed head in my absence. Bill Tara, who had set up

Food for Life in Chicago on the tenth floor of a downtown office building, left for Los Angeles with Aveline [Kushi] and set up another Erewhon due to Aveline’s prodding. It was later to prove to be our worst mistake and almost led us to bankruptcy.

“While I was away, roaming around Japan looking for pure foods and wise men, Roger [Hillyard] and others were busy establishing a wholesale business based primarily on the products that were being sent back from Japan. In retrospect, those times were chaotic, and I do not think the chaos let up until four years later, the spring of 1973. The chaos was (as I think back upon it) caused by thinly veiled ambition clothed in a stylishly cut suit of concern for our biosphere and guts. Perhaps this was a reflection of our urgent need to make up for years of bad living, bad ideas, and trash foods. In any case our actions were hasty, well-intentioned, very salty, and somewhat crude, but like a moldboard plow, we just kept coming.

“Chico-San saw us coming and promptly freaked out. They were very dismayed by their loss of New York business as our wholesale market developed. Chico-San had given us the impression in a number of personal conversations that they encouraged our self-reliance and particularly the importance of Japanese foods. Bob Kennedy, the head of Chico-San, candidly admitted that they lost money on imported items and they were able to stay in business only because they sold rice cakes. So it came as quite a surprise to us when they reversed their attitude. They began to express doubts about our motives and ability to procure good foods. Their attitude seemed to change into one where they were the ‘official’ food company, and that was that—appointed by the crown as it were. I can certainly see now how our brashness and youth did nothing to allay their doubts. In retrospect I have much sympathy, while realizing also that they did little to establish a real dialogue.

“Chico-San was formed by middle-aged people who split from New York City after Ohsawa walked into one of their meetings one night stoned on Scotch [whiskey] and announced the bomb was going to drop. This was during the Cuban [missile] crisis and there were many who shared that fear. They formed a well-organized caravan of families and trekked across the United States in a trip that got national coverage. Their purpose was to find the one place in America that was safest from radioactive fallout and also ideal for growing rice. Eureka! Chico, California. No one was more surprised than the local residents. The rift that opened between Erewhon and Chico-San has never closed.”

Hawken then describes the struggle to get organically grown brown rice from Wendell and Homer Lundberg of Richvale, California, starting in the fall of 1969. Bob Kennedy, who had worked for years trying to find a farmer in the area who would grow rice for Chico-San, signed an exclusive 5-year contract with the Lundbergs. “He had to

just about sign his life away... in order to guarantee that the farmer would not lose money in case of a severely short crop.” Chico-San would not sell the rice to Erewhon, so Hawken contracted with a farmer in Arkansas. “It was ironic because a year later the Lundbergs almost went out of business trying to get rid of all that organic rice that Chico-San had contracted for but could not buy.”

Hawken returned to Boston in Dec. 1969, then was fired by Aveline Kushi. He left and worked in San Francisco with Fred Rohe at New Age Natural Foods. Hawken returned to Erewhon in Boston in the summer of 1970.

In 1970 the “natural foods boom” started and swept Erewhon along with it. “If there is one person who is ‘most’ responsible for Erewhon being here today and not bankrupt, it is John Deming, who brought a sense of joy and happiness wherever he went in the company. He assumed the manager’s position at the retail store and made it the finest part of the company. His positive attitude was in contrast to the apprehension that all of us shared about the future. He gave Erewhon some money without which we would surely have failed. On his twenty-fifth birthday John came into a trust which sort of blew his mind. He had known nothing about it. He wanted to just give it to Erewhon, but it is on the books as a loan. It came just in time to pay back overdue creditors and panting bank officers.”

A table (p. 16) shows Erewhon, Inc’s. sales and sources of supply in 1966 and then in 1973. In 1966 Erewhon had about 200 retail customers. The company bought Koda rice from Sam Rabinowitz; imports from Chico-San, Infinity Co., Japan Foods Corp., and Wing-Wing; Lima (Belgium) products from Merit; grains and flours from Better Foods; and flour from Walnut Acres [founded by Paul Keene].

In 1973 in Boston the warehouse served about 200,000 customers (incl. 200 retail natural food stores, 43 Star Markets, 50 co-ops, 25 schools, 9 distributors, 10 restaurants, and 5 bakeries), and the store about 10,000 customers. In Los Angeles, the warehouse served about 75,000 customers (incl. 150 retail stores, 20 co-ops. 3 bakeries, and 10 distributors) and the store about 5,000 customers. A produce company in Los Angeles was supplied by about 40 organic farmers, and sold to 20 retail stores. Concerning soy products, Erewhon bought organically grown soybeans from Lone Pine in Arkansas [Carl Garrich of the Lone Pine Rice and Bean Farm], and soy oil from California. From Muso Syokuhin in Japan they imported tamari, and kome and hacho miso [plus azuki and black beans]. From Mitoku, Inc. they imported tamari and mugi miso.

Suppliers of organically grown grains included: Short, medium, and sweet rice (Wehah Farms, California). Medium rice (Willow Farms, Louisiana). Spring and durum wheat; flax (Ted Whitmer, Montana). Long rice (Jerry Ladds?, Texas). Winter wheat (Frank Ford, Arrowhead

Mills, Texas). White wheat (Lewis Cox & Bill Ingram, Washington state). Buckwheat (Penn Argyl, Pennsylvania). Corn (Bill Stockett, Texas). Millet (Chuck Moses, North Dakota). Oats (Fruen, Minnesota). Rye (Mike Skinner, Colorado). Peanuts (Chas. Warnken, Texas).

Note 1. This is the earliest document seen (March 2006) that mentions Mitoku, or Muso Shokuhin.

Note 2. This is the earliest document seen (March 2006) that mentions Food for Life (started by Bill Tara in Chicago). Address: [President, Erewhon].

1660. Ohsawa, George. 1973. Practical guide to Far-Eastern macrobiotic medicine. Herman Aihara, editor. The George Ohsawa Macrobiotic Foundation Inc., 1471–10th Ave., San Francisco, CA 94122. xi + 260 p. Aug. 21 cm.

• **Summary:** This book has a red, white, and black cover with a round yin-yang (*t'ai chi*) symbol on it. The first English translation from French of Ohsawa’s 1956 “Guide pratique de la médecine macrobiotique d’Extreme-Orient.” Contents: Forward [sic]. Preface. Introduction. Theory of macrobiotic medicine. Curing sickness. Cure the man. Letters from students of macrobiotic medicine. Appendix.

Information on soyfoods is found on the following pages: Tamari bancha (syoban, p. 85, 102). Miso (fermented soybean puree, p. 85). Tekka (miso, p. 87, 95). Tofu plaster (p. 88, 110-11, 125-30). Miso soup (p. 96). Koi-koku (Carp soup with miso, p. 99). Aburage (Age, p. 99). Deep-fried vegetable tofu (ganmo, p. 99). Vegetable with ganmo. Dried radish with age (p. 100). Yin/yang soboro (with miso, p. 101). Scallion miso. Onion miso. Shigure miso (p. 103). Pheasant nituke [nitsuke] (with miso, p. 104).

The forward [sic] by Herman Aihara, editor, notes: “This book, a compilation of several books and writings of George Ohsawa, attempts to give the whole scope of macrobiotic medicine to everyone. The main part is treatment for sickness. However, treatment without understanding of principles and a good attitude is dangerous, therefore, the theory of macrobiotic and other articles were added. The book, like its predecessor, *The Unique Principle*, is unique not because of its name and contents, but rather in how it was translated, edited and published.

“The first part is a translation taken from Japanese books such as, *A New Dietetic Cure, How to Cure Sickness and a Sick Man*, and *Vegetarianism*. The second part is a translation from the French edition of *Practical Guide to Far-Eastern Medicine* which was done by Ann Harris. Noboru Muramoto was consulted to suit remedies to present-day American needs.

“Cornellia Aihara translated *Cooking for the Sick* which was written by Lima Ohsawa. *Massage and Palm Therapy* are based on notes taken by Cynthia McCluskey at Mirimichi Summer Camp, 1972. Photos of Cornellia demonstrating external treatments were taken by Fred

Pulver. *The Manual of Macrobiotics* is a contribution of Nina Bond who took notes at George Ohsawa's lectures in New York at Summer Camp held about ten years ago.

"The third part is a translation from French and Japanese by Fred Pulver, Lou Oles and Herman Aihara.

"The last part is again taken from several articles appearing in past issues of *The Macrobiotic* magazine. The Appendix is taken from a translation of the French edition of Ohsawa's *Practical Guide to Far-Eastern Medicine*."

The preface, by George Ohsawa, states: "I am very happy to give you this short, simplified translation of my book, *Cure—Following the New Way of Eating*. It was originally written in Japanese, and is now in its 465th edition. I want to share with you the practical application of Macrobiotic healing that I have been teaching for almost 40 years—leaving aside the conceptual aspects covered in my other books and classes.

"Herein is the synthesis of my medical philosophy, which is nothing but the biological, physiological and dialectic interpretation of Far Eastern philosophy—the principles of the Order of the Universe and the Order of Man. For 30 years I have been writing on both the practical and theoretical sides of this question and have published more than 20 books and thousands of articles. But at this time I wish to limit myself to giving easily accessible information.

"My medical philosophy, the way of eating and the art of longevity and rejuvenation, is so simple and inexpensive that anyone can follow it any time, anywhere. If you decide to cure yourself before all else, you can forget about the bitter, painful and costly suffering that results from medical, physical, psychological and religious therapies.

"This system depends on you alone. No reliance on other people or on artificial means—everything depends on how you eat."

In the first chapter titled "How did I find macrobiotics? The principle of life," Ohsawa continues: "I was born at Sagano, Kyoto, Japan in 1893. My mother could not produce enough milk and I was a weak baby. I was told by mother that I almost died five times before I reached the first birthday. My family was poor. Father was a principal of an elementary school of a small village before I was born. Then my parents moved to Kyoto where he became a policeman. Mother worked at home to help finance—making strings for kimonos. Mother was an industrious woman. She studied Western science and culture through Yuzuru Nijima who was the founder of the Doshisha University. She died at the age of 30 from tuberculosis, leaving two sons. I was 10 and a younger brother was 6. Two sisters had died earlier due to the wrong diet which my mother introduced in our family through her study of Western science and culture.

"From that time we lived sad days as poor orphans. I was an apprentice in a Buddhist temple as a disciple. However, I soon started to vomit blood like my mother and

sisters did. At 18, I had to give up my school, medicine, eggs and meat because I was too poor to continue such expensive living. I lived in the lowest living condition. In other words, I lived with brown rice, radish pickle and salt plum even though I was told that my sickness—tuberculosis—required eggs and meats by the doctors and my mother who gave us milk, eggs and bread every morning (which was violating natural order). We were punished for this violation. Such a diet destroyed our family's health. I, however, resented that I could not afford to continue such a diet because I didn't know the fact that such a diet was the cause of mother's and sisters' death and my sickness. If I could have afforded to continue that diet, I would have died at that time. I am so grateful that I was poor...

"Curing all my diseases and re-establishing my health at the age of 20, I realized that food is the source of life. After realization of this important fact, I decided to devote my life to preaching this doctrine..."

"I traveled to France for the first time in 1914. Since then I have returned a dozen or more times."

1661. Haggerty, Donna. 1973. Re: Tekka [miso]. Letter to Lorenz Schaller, So. Pasadena, CA 91030, Sept. 28—in reply to inquiry. 1 p. Typed, with signature on form.

• **Summary:** "Tekka was discontinued because of lack of sufficient demand." Address: Spiral Foods Inc., 1144 West 1st Street, Chico, California 95926.

1662. Aonuma, Tatsuo; Yasuda, A.; Yuasa, T.; Arai, A.; Mogi, K.; Yokotsuka, T. Assignors to Kikkoman Shoyu Company, Ltd. (Noda-shi, Chiba-ken, Japan). 1973. Method of preparing soy and miso-paste. *U.S. Patent* 3,764,708. Oct. 9. 8 p. Application filed 11 Aug. 1971. [1 ref]

• **Summary:** "A method of preparing soy and miso-paste of superior flavor and taste and of high quality, which comprises treating the starting soy-beans and/or carbohydrates with a current of superheated steam at a gauge pressure of 4-8 kg/square cm and a temperature of 200°C to 280°C for a time not exceeding 15 seconds. The treated soybeans are quickly exhausted into the atmosphere at atmospheric pressure."

The examples use either defatted soybean flakes or granular soybeans. Both the present invention and the conventional method contain 17.55 gm of common salt per 100 ml of soy sauce. Products from the present invention and the conventional method contain (in gm/100 ml) respectively total nitrogen (1.808/1.680), amino nitrogen (0.890/0.828), glutamic acid (1.484/1.376), alcohol (2.08/2.01), and yield of nitrogen (89.42%/82.93%). Address: 1. Kashiwa; 2-5. Noda; 6. Nagareyama. All: Japan.

1663. Brown, Edward Espe. 1973. *Tassajara cooking*. Berkeley, California, and London: Shambhala. 256 p. 24 cm. Introduction by Zentatsu Richard Baker-Roshi. Series:

A Zen Center Book. Illust. by Norval Delwyn Carlson. A Zen Center Book. Index. Oct. 23 cm.

• **Summary:** This friendly, nicely illustrated natural foods vegetarian cookbook is also about the spirit of Zen Buddhist practice. The chapter on “Beans” (p. 121-26) begins with a sort of eulogy: “Beans. What suffering the word evokes. Beans. When you couldn’t afford meat. Oh beans! When you went camping. Beans! Beans are not meat, they’re beans: garbanzo, kidney... Soy—which rarely remains as a bean... Beans are the overlooked jewels of the vegetable world. They sell at dirt cheap prices and are one of the best protein buys around... Beans take some getting used to, some familiarity. It’s easy to say ‘beans don’t agree with me,’ without having given yourself a chance to agree with them.”

Soy-related recipes include: Oriental dressing (with soy sauce, p. 72). Cooking beans (p. 122-23; if presoaked, pressure cook soybeans for 20 minutes at 15 lb pressure. If not presoaked, for 25 minutes. For cooking without pressure, presoak, bring to a boil without salt, and simmer for 2 hours). Soy-sweetened beans (p. 124; “the Japanese version of an American standby”). Nut-battered beans. Chili beans (p. 125). Blanco beans. Soy beans with hijiki & carrots (p. 126). Five thing beans (p. 126). Easy Oriental dressing (with soy sauce, p. 172). Soy sauce mayonnaise (p. 173). Tahini salad dressing (with soy sauce, p. 174). Seasoning soups (with soy sauce or miso, p. 179). Miso stew (p. 206). Potato-bean bake (p. 211). Basic recipe for burgers (with cooked, ground soybeans, p. 234). Soyburgers (p. 235-36).

Tassajara Zen Mountain Center was founded in 1967. An illustration of the Center cooking in a large skillet graces the cover of this book, which by July 1978 was in its 9th printing. Address: Green Gulch Zen Farm, California.

1664. Ilany (Feigenbaum), J. 1973. Soybean food for today and tomorrow. *Gordian (Hamburg)* 73(10):390-91. Oct.; 73(11):428-30. Nov.; 73(12):464-65. Dec. [21 ref. Eng; ger]

• **Summary:** “This is a short review of what is chiefly known at present of this wonderful bean, which only a few years ago, constituted a strange and exotic food.” Contents: Introduction. Composition and nutritional value. Green soybeans. Sprouted soybeans. Soybean flours. Isolated proteins. Soy-food products of the Far East: Kinako, soymilk, yuba, “tofu or curd–soycheese,” aburage, natto, Hamanatto, tempeh, miso, shoyu or soy sauce. Soybean oil. Lecithin.

Concerning tofu: Tofu made in the regular way “is called ‘Fresh Tofu.’ It does not keep long, even under refrigeration, unless it is further processed. For this purpose it may be canned, frozen, fried, smoked, or fermented.”

Note: This is the earliest English-language document seen that uses the term “soycheese”; it refers to regular tofu.

1665. Taira, Harue. 1973. Heat destruction of amino acids in soybean products. *JARQ (Japan Agricultural Research Quarterly)* 7(4):267-73. Oct. [11 ref]

Address: Food Analysis and Nutrition Div., National Food Research Inst., Ministry of Agriculture & Forestry, Koto-ku, Tokyo.

1666. Eden Foods, Inc. 1973. Wholesale prices, F.O.B. P.O. Box 100, 310 W. Ann St., Ann Arbor, MI 48107. 2 p. Catalog. Effective Nov. 1.

• **Summary:** The products are very similar to those in the April 1973 catalog. But a new soy product is Wheat-Soy Grits (50 lb). Other products include “Umeboshi salt plums,” and Kelp powder (10 lb, bulk [from California]). Address: Ann Arbor, Michigan. Phone: (313) 769-8444.

1667. Chapin, Damaris. 1973. Home pickling. *East West Journal* 3(11):23. Nov.

• **Summary:** Describes how to pickle vegetables in a bed of miso and rice- or wheat bran (nuka), or in a bed of miso alone. Illustration shows a wooden crock labeled “Miso Soybean Paste.”

1668. *Macrobiotic (The) (Chico, California)*. 1973. Miso making with white rice koji. No. 92. p. 22.

• **Summary:** Koji is rice or wheat, barley, etc. which has been treated with a mold called *succaromises* [sic, *Saccharomyces* is a yeast genus]. Koji rice (only white rice unfortunately) is available in Japanese food stores. If you can’t find it, one can ask their local natural food store to order some from the manufacturer—Fujimoto & Co., 500 West Street, Salt Lake City, Utah 84101.

One recipe for quick (yin) miso calls for 18 pounds soybeans and 18 pounds koji, 5 gallons water and 9 pounds salt. This amount will go in a ten gallon stone crock. In Japan, one twenty gallon barrel of miso feeds five persons for one year.

1669. Saito, Y.; Ito, K.; Kawano, K.; Endo, H. 1973. Koso-zai riyô no miso jôzô ni tsuite [Miso manufacturing using enzymic preparations]. *Miso no Kagaku to Gijutsu (Miso Science and Technology)* No. 236. p. 20-30. (Chem. Abst. 82:169,030p). [12 ref. Jap]*

Address: 1,3,4. Fukushima-ken, Aizu Wakamatsu Kogyo Shikensho Shokuhin-bu; 2. Nishimata Miso Shoyu Jojo K.K.

1670. Aihara, Cornelia. 1973. The *dô* of cooking (Ryorido). Vol. 4. Winter cooking. Macroguide No. 16. San Francisco, California: George Ohsawa Macrobiotic Foundation. 120 p. Illust. by Carl Campbell. 21 cm.

• **Summary:** All recipes in this macrobiotic cookbook are numbered.

Soy-related recipes include: 29. Nikomi Oden (with stuffed agé). 32. Boiled tofu (yutofu). 35. Furofuki daikon [with orange miso]. 36. Miso soup. 40. Kenchin soup [with tofu]. 47 Miso zoni, and white miso zoni. 87. Soy bean nishime. 89 & 90. Koji pickles. The section titled “Amasake” (p. 97-104) describes how to make it using sweet [glutinous] brown rice, then how to use it as a sweetener in various recipes: Amasake manju (steam cake). Amasake roll. Amasake karinto. Amasake cookies. Amasake cake. Amasake donuts (unyeasted or yeasted). Amasake crescents. Amasake wedding cake with frosting.

Also contains detailed, illustrated instructions for making and cooking with mochi (p. 23-30). A number of recipes contain fish and there is a picture of a cooked fish on the cover. Address: 1471–10th Ave., San Francisco, California 94122.

1671. Aihara, Cornelia. 1973. *The dô of cooking* (Ryorido). Vol. 3. Autumn cooking. San Francisco, California: George Ohsawa Macrobiotic Foundation. 100 p. Illust. by Carl Campbell. 21 cm. Revised ed. 1977.

• **Summary:** Interesting recipes include: Buckwheat noodle gratin (with tofu, p. 29). Udon with adzuki (p. 32). Endive rolled with agé (deep fried tofu, p. 33). Fu vegetable cream cooked (with wheat gluten cakes, p. 34). Carrots and onions miso (p. 37). Vegetable miso (p. 38). Sliced kombu nitsuke (with koya [dried-frozen] tofu, p. 38-39). Vegetable stew–Chinese style (with agé and frozen tofu, p. 41). Adzuki bean soup (p. 46). Creamed miso soup (p. 46). Kenchin soup (with vegetables and tofu, p. 47). Stuffed agé with sauce (p. 49). Thick tamari soy sauce (p. 50). Tahini-tamari sauce (p. 50). Mock meat sauce (with miso, p. 51). Chrysanthemum leaves with tofu (p. 63). Unagi-modoki (mock eel, with tofu, p. 64). Chick pea vegetable nitsuke (with koya tofu, p. 71). Wheat gluten and seitan (p. 71-74, incl. homemade wheat gluten, fresh wheat fu, boiled fu, fried fu–gluten cutlet, shish kebab with fu). Autumn dish (with adzuki beans and tamari, p. 72). Address: 1471–10th Ave., San Francisco, California 94122.

1672. Andersen, Lynn. 1973. *Rainbow Farm cookbook*. New York, NY: Harper & Row. 222 p. Illust. Index. 24 cm. Preface by Allen Gordon.

• **Summary:** This vegetarian cookbook, which has a macrobiotic flavor, is from Rainbow Farm, located on over 300 acres of mountain land in Phoenicia, New York. Soy-related recipes include: Basic miso broth (p. 34). Miso vegetable soup #1. Miso soup #2 (p. 35). Soy butter dressing (made with 2 cups each oil and water, 3 tablespoons soy flour, and the juice of 2 lemons, p. 57). Miso vegetables (p. 67). Carrots and onions with tekka (miso, p. 67). Miso-onion spread (p. 76). Miso rice (p. 85). Tahini-miso spread (p. 108). Tahini-miso spread with vegetables (p. 108). Tahini-miso spread with seeds (p. 108).

Tahini-tamari spread (p. 108). Miso balls (p. 111). Soy butter (or whipped soy cream, p. 111). Soy milk (with a blender, from soy beans, p. 118). Soy milk (without a blender, from soy flour, p. 118). Soy burgers (from okara, p. 119). Soy loaf (with cooked soy beans, p. 120). Tofu “(Chinese Soy Bean Cakes)” (curded with Epsom salt, p. 120). Miso sauce #1 and #2 (p. 126). Hiziki and tofu ([hijiki], p. 132). Egg noodles (with wheat and soy flours, p. 144). Soy milk with whole beans (p. 205). Soy milk with soy flour (p. 205).

A glossary of “New or Unfamiliar Foods” (p. 212-14) includes good descriptions of tamari, miso soy bean paste, kuzu, and tekka. Address: Phoenicia, New York.

1673. Carroll, Anstice; Vona, Embree De Persiis. 1973. *The health food dictionary with recipes*. Englewood Cliffs, New Jersey: Prentice-Hall, Inc. Illust. by Vincenzo de Persiis Vona.

• **Summary:** The foods, listed alphabetically, include: Adzuki (p. 1-2). Beans, dried (incl. soy beans, p. 17). Gluten flour (p. 74-75, incl. Gluten soy bread). Miso and Miso butter (p. 101). Morromi (p. 102). Mu Tea (p. 102). Nori (p. 106). Oil, vegetable (p. 113-14, incl. lecithin, peanut oil, olive oil, always refrigerate vegetable oil after opening; “Vegetable oils can (and should) be substituted for hydrogenated fats such as margarine, shortening, and lard in many recipes”). Peanut (p. 119-21). Peanut butter (p. 121-22). Soy grits (p. 156). Soy milk powder. Soy oil. Soy sauce (p. 156-57). Soybean (p. 159, incl. Soybean salad). Soybean, roasted (p. 160, incl. recipe for making at home). Tofu (p. 174-75, incl. recipe for Tofu-vegetable soup). Umeboshi (p. 175).

1674. Cowan, J.C. 1973. *Processing and products [soybeans]*. In: B.E. Caldwell, ed. 1973. *Soybeans: Improvement, Production, and Uses*. Madison, Wisconsin: American Society of Agronomy. xviii + 681 p. See p. 619-64. Chap. 20. [52 ref]

• **Summary:** Contents. 1. Introduction. 2. Processing for oil and meal: Preparation of flakes, solvents, extraction, desolventizer-toaster, degumming. 3. Conversion to edible oil products: Refining, bleaching, deodorization, hydrogenation. 4. Edible fat products: Salad and cooking oils, status of flavor stability, shortenings and margarine oils, lecithin. 5. Essential fatty acids and atherosclerosis. 6. Industrial uses of oil. 7. Meal for livestock and poultry: Nutritional aspects, factors affecting use of meals. 8. Edible protein products: Soy flour, concentrates and isolates, textured protein products (textured soy flour or textured soy protein fibers made into “meat analogues” resembling chicken, bacon, etc.). 9. Fermented and specialty foods: Tofu, soybean milk (an intermediate step in the manufacture of tofu), miso, shoyu (tamari, light-colored shoyu), sufu, tempeh, hamanatto, and natto.

Soybeans flow through a crushing plant as follows: First, they are cracked to release or loosen the hull and to break the cotyledon into about 4 parts. Shakers and aspirators separate the hull from the cracked cotyledons and rollers flake them. "Purified petroleum hydrocarbons known as hexane extract the oil from the flakes and the solvent is recovered. Moistened flakes are heated to inactivate the antinutritional factors and are converted to feeds for livestock and poultry. A small proportion of the flakes goes to a wide variety of soybean protein products including flour, isolates, and concentrates."

Tables show: (1) Utilization of soybean in U.S. in million pounds, every 5 years from Oct. 1933 to 1970 (Kromer 1970). (2) Use of soybean meal in the USA for feeding livestock and poultry (million tons). In 1969, the estimated amounts used were as follows: Cattle 3.43. Hogs 1.69. Other livestock 1.73. Total livestock: 6.85. Broilers 3.07. Hens and pullets 1.28. Other poultry 1.10. Total poultry 5.45. Total livestock + poultry 12.30. Note that cattle are the single biggest users. (3) Bleaching soybean oil (process, % clay and type, change in Lovibond color rating). (4) Effect of bleaching, citric acid, and light exposure on soybean salad oil. (5) Specifications for soybean oil. (6) Effect of linolenate content on flavor of soybean oil at elevated temperatures. (7) Composition of certain edible oil products from soybean oil and related products (salad oil, hydrogenated-winterized soybean salad oil, hydrogenated soybean oil liquid shortening, plastic shortening types I and II). (8) Changes in iron and copper content of soybean oil in commercial refining. (9) Properties of all-purpose and high-stability shortenings from all-hydrogenated vegetable oils and blends of animal fat and/or vegetable oil (iodine value, melting point, % linoleic acid, solid fat index { % solid at temperatures indicated}). (10) Typical analyses for mellorine and cookie and confectioner's fat. (11) Analytical data for typical margarine oils low and high in polyunsaturates (iodine value, melting point, % linoleic acid, solid fat index { % solid at temperatures indicated}). (12) NSPA-tentative lecithin specifications (NSPA, 1969-1970). (13) Composition of soybean lecithins. (14). Approximate composition of soybeans and meal products (whole bean, cotyledon, hull, hypocotyl, meal {cake-extruded, flakes-solvent extracted, dehulled flakes-extracted, mill feed-separated hulls, mill run-separated hulls}). (15) Amino acid analysis of soybean meal (44% protein and 49% protein {dehulled}) and corn. (16) Amino acid analysis of blends of soy flour with cereals and milk (Inglett 1968; Corn soy milk {CSM}, Millet soy milk, Wheat soy milk, etc.). (17) Partial formulas for young swine and boiler rations in percent total rations. (18) Partial formulas for dairy feeds (14% protein). A supplement to forage or roughage. (19) Soybean grits and flour-screensize. (20) Composition of soy flour. (21) Composition of 4 types of soy protein concentrates. (22)

Uses for high-protein soy products (protein 70 [concentrates] and protein 90 [isolates]). Note: This is the earliest English-language document seen (Dec. 2004) that uses the term "protein 90" to refer to a soy protein isolate. (23) Amino acid analysis of fractions derived from dehulled extracted flakes (Rackis et. 1961, 1970). (24) Effect of cooking in salt solutions on texture of structured granules. (25) Composition and use (1,000 metric tons in 1964 and 1967) of soybeans for traditional foods in Japan (Use of whole soybeans in 1967 in 1,000 metric tons: Miso 169. Shoyu 15. Natto 47. Tofu 329. Total 642. Use of defatted flakes or grits in 1967 in 1,000 metric tons: Miso 8. Shoyu 154. Natto 0. Tofu 77. Total 284).

Figures show: (1) Flowchart: Processing of soybeans to oil and meal using hexane extraction. (2) Illustration: A modern soybean processing facility (aerial view, Central Soya, Inc.). (3) Schematic diagram / flowchart: Manufacture of edible soybean oil products (salad oil, salad and cooking oil, shortenings, margarines, liquid shortening). (4) Illustration: A continuous deodorizer for soybean oil. (5) Graph: Effect of prolonged storage at 100°F on flavor score of hydrogenated-winterized soybean oil or soybean salad oil (nitrogen packed, air packed). (6) Illustration: Continuous chilling and working equipment for margarine production (Votator Div., Chemetron Corp.). (7) Flow diagram; Conversion of emulsions of margarine oils and ripened milk to conventional stick, whipped stick, and tub margarines (Votator Div.) (8) Chemical structure of prostaglandin-E₂, a fatty acid with hormone activity. (9) Diagram: Vapor-desolventizer- deodorizer for soybean flakes (Blaw-Knox Co.). (10) Flowchart and diagram: Operations with extruder-cooker. (11) Flow diagram: Manufacture of protein 70 [soy protein concentrate]. (12) Schematic diagram: Manufacture of soy protein isolate (Protein 90). (13) Photo: Chicken-simulated soy protein "meat" in three forms (Swift Edible Oil Co.). (14) Photo: Protein tow containing 16,000 monofilaments spread apart to show its fibrous nature; other tows in background (General Mills, Inc.). Address: NRRL, Peoria, Illinois.

1675. Dubawsky, Rebecca. 1973. *Cooking with grains and vegetables*. Los Angeles, California, and Boston, Massachusetts: Order of the Universe Publications. Distributed by Tao Books. 29 p. Undated. Illust. No index. 28 cm.

• **Summary:** This 1973 edition differs from the original 1967 edition as follows: (1) On the cover, in the upper left corner, is an illustration of a man bent over working in a rice field. The title is written in the lower right corner rather than in the upper left. The subtitle "Booklet one-A beginning" and the name and address of the publisher (in the lower left corner) have been omitted. (2) On the inside front cover, near the bottom, is written: "Distributed by Tao Books, 8454 Steller Dr., Los Angeles, Ca. [California]"

90230. Tel.: (213) 837-2739 and 303B Newbury Street, Boston, Massachusetts 02115.” (3) On the next page are two illustrations apparently taken from early sources (clip art): A full head of wheat with a long awn extending upward from the husk enclosing each grain. Two pumpkins on the vine with leaves above them. Below that: Library of Congress No. 73-127918. (4) Next comes a second title page, with silhouettes of rice plants at the left. (5) Next is a page stating: “The teaching of Aveline Kushi has made the information that follows possible.” Below that: “Rebecca Dubawsky.” To the left is another silhouette of grasses. (6) Next is a full-page of clip art showing a German chalet in the background, with three farmers working in a field in front of it, and a cart pulled by two oxen in the foreground. (7) Table of contents (p. 5). (8) Two stalks of grain. (9) The preface (p. 7) by Michio Kushi, October 20, 1967. (10) Three full heads of different types of grain. (11) Meals (p. 9).

(12) The last numbered page is 29, which has illustrations of a rice plant standing in water and a head of rice. (13) After that is “The Order of the Universe Publications” which contains descriptions of one periodical (*The Order of the Universe*) and five books and booklets (*Cooking Good Food*; *Cooking with Grains and Vegetables*; *Food for Spiritual Development*, by Michio Kushi; *Spirals*; and *Book of Do-In Guide Pratique*, by Jacques de Langre). (14) At the bottom of the last page: “Printed in U.S.A. by Jacques de Langre, 7557 Sunset Blvd., Hollywood, Calif. 90046.” Address: Boston, Massachusetts.

1676. Ford, Marjorie Winn; Hillyard, Susan; Koock, Mary Faulk. 1973. *The Deaf Smith country cookbook: Natural foods for family kitchens*. New York, NY: Macmillan Publishing Co. (Collier Books). London: Collier Macmillan Publishers. xiv + 352 p. Preface by Frank Ford. Illust. Index. 24 cm. [7 ref]

• **Summary:** A pioneering natural foods cookbook, produced and copyrighted by Arrowhead Mills, Inc. of Hereford, Texas. Soy-related recipes include: Roasted soybeans (p. 42-43). Miso soup (with wakame, p. 53). Tamari bouillon (p. 57-58). *Todo en la caldera* (with soybeans and miso, p. 58). Miso sauce (p. 90-91). Thick tamari sauce (p. 91). Tofu (soybean cheese or bean curd, p. 98-99; an early recipe for homemade tofu made with vinegar or lemon juice as a coagulant. Lists 6 serving suggestions for tofu and 1 for the “soy mash” [okara]). Cooking flaked soybeans (p. 132-33). Soy sesame burgers (with 1/3 cup whole sesame seeds, p. 135-36). Rice pancake with tofu (p. 136). Soybean loaf (p. 138-39). Cooking with soybean flakes (p. 156). Blazing star timbales (with soybean flakes, p. 156-57). Tamale soy pie (with cooked soybeans or soybean flakes, p. 182-83). Soy milk (homemade, p. 292). In the last chapter titled “Natural Foods from Deaf Smith County,” the following soy-related foods are discussed:

Soybean flakes (p. 324, 327), black beans (a type of soybeans, p. 326), soybeans and foods made from them (p. 327). Soybean flour (p. 328). Tamari roasted nuts and soybeans (p. 331). Tamari soy sauce (p. 334). Miso soybean paste (p. 334). Wheat gluten is not mentioned in this book. Frank Ford’s preface shows him to be a devout Christian, organic farmer (in Deaf Smith County, Texas), and advocate of natural foods.

In about Sept. 1991 this early natural foods cookbook was reprinted with a new cover and subtitle (“Natural Foods for Natural Kitchens”). Over 300,000 copies are now in print. Address: 1. Arrowhead Mills, Hereford, Deaf Smith County, Texas; 2. Soquel, California; 3. Foods editor, *The Texas Star*.

1677. George Ohsawa Macrobiotic Foundation. 1973. *Useful names and addresses*. 1471–10th Ave., San Francisco, CA 94122. 55 p. 21 cm.

• **Summary:** This macrobiotic directory lists names and addresses of macrobiotic people, organizations, food stores and restaurants, and bookstores in the United States (each category broken down by state), Canada, and abroad. The leading states for individuals are California (7.3 pages), New York (1.5 p.), and Massachusetts (1 p.).

There are listings for the following foreign countries: Argentina, Australia, Austria, Belgium, Brazil, Costa Rica, Denmark, England, France, Germany, India, Ireland, Italy, Japan, Mexico, Netherlands, New Zealand, Norway, Portugal, Spain, Sweden, Switzerland, South Vietnam.

There are ads for the following companies: Sunflower, The Queensberry Bakery (112 Queensberry St., Boston 02215), East West Foundation Center, Sanae Inc. at 2 locations (Sanae Restaurant at 272A Newbury St., Boston, and The Seventh Inn at 288 Boylston St. in Boston), Prasad (1956 University Ave., Berkeley, California) (p. 0). Eden whole earth grocery and delicatessen, and Sun Bakery (330 Maynard St., Ann Arbor, Michigan) (p. 18). Janus Natural Foods (712 7th Ave. South, Seattle, Washington 98104. Phone: 206-MA4-1084) shows that they distribute (import) tamari and miso, as well as sea vegetables. They carry the following brands: Erewhon, Spiral Foods, Deaf Smith, Pure & Simple, Chico-San, Arrowhead Mills (p. 27). Cliffrose (129 Coffman, Longmont, Colorado). Ceres Harvest Natural Foods (3632 W. Colorado Ave., Colorado Springs, CO 80904; wholesale and retail) (p. 39). The Good Karma Cafe (501 Dolores St., San Francisco), and The Good Earth (123 Bolinas Rd., Fairfax, CA 94930) (p. 50). Greenberg’s Natural Foods, Inc. (125 1st Ave., New York, NY 10003).

The George Ohsawa Macrobiotic Foundation is a non-profit organization located at 1471–10th Ave., San Francisco, California 94122. It was founded in 1971. The aim of the Foundation is to spread the teaching of the unifying principle and its practical applications in daily life. Address: San Francisco, California.

1678. Hunan Sheng po-wu-kuan. 1973. Ch'ang-sha Ma-wang-tui i-hao Han-mu [The Han Tomb No. 1 at Ma-wang-tui]. Peking, China: Wen Wu Press. Vol. 1. See p. 35-36. [Chi]*

• **Summary:** The name of the tomb is pronounced “ma-wang-DUI.” Gives a list of the foods buried in this remarkable Han dynasty tomb in Changsha, Hunan province, China. They were buried in about 165 B.C. and unearthed in 1972. A complete listing in English is given by Ying-shih Yü (1977, p. 56). The seasonings included “soy sauce (*chiang*), *shih* (‘salted darkened beans’), and leaven (*ch’ü*) [*qu*].” Also includes azuki beans. Address: China.

1679. Hunter, Beatrice Trum. 1973. Fermented foods and beverages. New Canaan, Connecticut: Keats Publishing Co. 116 p. Index. 18 cm. [38 ref]

• **Summary:** In the chapter titled “Soybeans” (p. 31-49), the author discusses tofu (and how to make it at home with or without fermentation), meitauza (fermented okara), hakko tofu (a newly developed high protein food; fermented soybean curd), sufu (Vietnamese call it Chao), shoyu, miso, ketjap (thick Indonesian soy sauce), tempeh, Hamanatto, natto, Tao-cho from Malaysia, and Tao-si from the Philippines.

Note: The author has collected her information (both correct and incorrect) for a number of sources, which she does not cite directly, although she does have a bibliography.

1680. Ito, Kazuo. 1973. Issei: A history of Japanese immigrants in North America. Translated by Shinichiro Nakamura and Jean S. Gerard. Seattle, Washington: Executive Committee for Publication of Issei, c/o Japanese Community Service, 1414 S. Weller St., Seattle, WA 98144. xxviii + 1016 p. Illust. Index of personal names only. 24 cm. Translation of *Hyakunen Sakura*. [100* ref. Eng]

• **Summary:** This massive book is basically a history of first-generation Japanese immigrants to Pacific Northwest (especially Washington, Oregon, and British Columbia), focusing on the great struggles and hardships they met, written from the viewpoint of individual Japanese who tell their stories (often in the first person), and compiled by a Japanese journalist. The book was first published in Japanese. Access to the wealth of information it contains is crippled by the lack of a subject index. So if one were looking for information about tofu, miso, or soyfoods, one would have to read the entire book. The index of personal names is well done.

At the very front of this book are very interesting maps of the old Japanese districts of the following cities: Seattle, Tacoma, and Spokane, Washington; Portland, Oregon; Vancouver, British Columbia, Canada. Unfortunately, none of the maps are dated. The name and location of each

Japanese organization or business is shown clearly in English.

In Part 8, “Agriculture,” we read that Japanese immigrants to America sometimes enjoyed Japanese soyfoods. In about 1910, in Fife, a farming community near Seattle, in about 1910, Gunji Fujimoto “had miso soup and pickles for breakfast” (p. 440). In about 1916, in Hood River (northern Oregon), Henry Nakamura wrote that Japanese people could get foods from Japan, including “fried bean curd” (p. 499-500). There they also enjoyed miso soup for breakfast, cooked red beans [*azuki*?] spread on bread for lunch, and rice, pickles, and dried radish strips cooked with soy sauce for dinner (p. 503). In the early 1920s in Oregon, breakfast typically consisted of rice, miso soup, and pickled cucumbers (Shoemon Nakamura, p. 512).

Part 20, “On the Streets,” states that “The old Japanese towns in Seattle, Tacoma, Portland, and Vancouver (Canada) can hardly be traced today.” The author has tried to reconstruct maps of these towns “in roughly the period of the 1920s, but not in any specific year” (p. 779-80). In Nov. 1908 Masanao Hanihara, Secretary of the Japanese Embassy, issued a report on his investigations of living conditions of Japanese in the western USA (p. 791). He found the Japanese still lived “at the level of immigrant laborers;” the conditions in their communities were “extremely low and chaotic.” “The Japanese in these areas hardly mix with white residents, while sometimes they approach or mix with Chinese. There are many ill effects from clique-ishness.” “The majority of Japanese workers lack knowledge of English, so whenever they make contracts they sign papers blindly” (p. 795-96). Hanihara estimated the Japanese population of various states as follows: Washington 9,000 to 10,000, Oregon 3,500 to 4,500, Wyoming 1,000 to 1,500, Idaho 1,000 to 1,500, Montana 1,000, and Alaska 1,000. The largest Japanese community in the region was in Seattle (about 4,000 Japanese). “Shinzaburo Ban of Portland is almost the top among successful Japanese on the Pacific Coast.” His business, S. Ban Co., headquartered in Portland (where he arrived in 1891), acts mainly as a contract agency for Japanese laborers—a sort of employment agency, “and his store supplies sake, miso, soy sauce and other such Japanese foods and small items to the laborers” (p. 789-93; see portrait photo p. 792). A sidebar (p. 793, by Raisuke Tamura, Seattle) notes that “However long they lived in the United States, Japanese had to have Japanese food... Around 1906 I imported from Japan vegetables such as lotus root, Japanese radish [*daikon*], *gobo* (burdock), *zenmai* (fern), *abura-age* [deep-fried tofu pouches], *nigari* (bittern, a tofu coagulant), *tsukuneimo*, *yamaimo*, and so on, in hundred-pound baskets, and sold them to sawmills and railroad camps” (p. 793).

The 1 January 1916 edition the *Hokubei Nenkan* listed all businesses operating in various Japanese towns. These

included two “tofu-makers” in Seattle, Washington (p. 800), at least one tofu maker in Tacoma, Washington (p. 804. Tacoma had a Japanese population of 931 in 1915–721 males and 210 females). Spokane didn’t have a Japanese town as in Seattle and Tacoma, but in 1915 it did have a Japanese population of 536 (462 males and 74 females).

The map of old-town Portland, Oregon, probably from about 1935, shows 90 Japanese businesses located between 1st Ave. and 7th Ave. (running north-south) and between W. Burnside and N.W. Glisan (running east-west). Among these are two tofu manufacturing companies. “Ota Tofu Mfg.” is located on 5th Ave. between Everett and Flanders. [Note: The actual address was 86½ 5th N]. “Fukey Tofu Mfg.” is located is on N.W. Davis between 3rd Ave. and 4th Ave.

Contents: The book is divided into 21 parts, with each part containing several chapters (the number is shown in parentheses): 1. Sailing (6). 2. Secret passage and ship-jumping (5). 3. Japanese exclusion (15). 4. Japanese women (2). 5. Railroads (5). 6. Alaska (4). 7. Sawmills (2). 8. Agriculture (7). 9. Hotels (2). 10. Restaurants (2). 11. Mines (2). 12. Oysters (2). 13 Japanese language schools (2). 14. Studying English (3). 15. Pro-Japanese (8). 16. Furuya Company (4). 17. Lese majesty affairs (2). 18. Gambling (3). 19. Girls (2). 20. On the streets (9). 21. In Memorium [Memoriam—to the many who died]. (2). Appendixes: (1) Partial list of Japan-U.S. and Japan-Canada sister cities. (2) Japanese consulates. (3) Chronological table: Japan and America (side by side), 1868-Sept. 1972. Bibliography (p. 967-72, mostly Japanese-language books). Epilogues: To English and to Japanese editions. Index of personal names (p. 988-1016). Address: Tokyo and Seattle, Washington.

1681. Kawamura, Wataru. 1973. *Misoshiru fudoki* [Miso soups throughout the provinces]. Tokyo: Mainichi Shinbun. 213 p. Illust. No index. 20 cm. [Jap]

• **Summary:** A combination cookbook and discussion of miso in Japanese history and culture, in each of the provinces. Contents: Preface. Part I: The topography of miso soup. Story of the birth of a miso teacher. The homeland of miso. Jiang in the Chou Li (Shurei in Chinese; Rituals of the Chou Dynasty). The theory that Ganjin brought miso to Japan. About soybean miso. Sweet miso. Poems about miso soup. Genealogy of Satsuma-jiru soup. The original Miso Dengaku. Prayer to Bishamonten. Sendai miso. Shinshu miso. Kinzanji miso. Miso tenjin of Kumamoto. Miso dondo. The taste of michinoku. The arrival of sesame in Japan. The marriage of sesame and miso. Thoughts on salad with vinegar miso dressing. Pepper and wasabi. Bonito flakes. Mejika-bushi of Tosa. The virtues of sea vegetables. Suribachi grinding bowls, grinding pestle, and spatulas. Agar of Ashino and highland vegetables. Miso, konbu and wakame. Digging up mountain lilies and mountain yams. Miso soup shop. “Women and

Miso soup” TV drama dialogue. Making a fire bath. The origin of Go-jiru soup. Foods that appear at the first of the season. A good daughter-in-law. Part II: Miso soup and miso cooking (recipes). Postscript. Address: Miso teacher, 2-4-7 Kugenuma, Tachibana, Fujisawa-shi, Kanagawa-ken 251, Japan.

1682. Muramoto, Noboru; Abehsera, Michel. 1973. *Healing ourselves*. New York, NY: Avon/Swan House. 150 p. Illust. Index. 28 cm.

• **Summary:** The author’s first name is misspelled throughout: Noboru is correct; Naboro is wrong. The book is based on 4 weeks of lectures given by Muramoto. Abehsera compiled and supplemented these teachings.

Note: This is the earliest document seen (Sept. 2002) concerning Noboru Muramoto.

1683. Nakayama, Tokiko. 1973. *Chûgoku meisaiфу* [Chinese cuisine: Famous recipes]. Tokyo: Shibata Shoten. 4 Vols. [Jap]*

1684. David-Perez, Enriqueta. comp. and ed. 1973? *Recipes of the Philippines*. Philippines: Published by the author. Printed by Cacho Hermanos, Inc., Corner Pines, and Union Streets, Mandaluyong, Metro Manila, Philippines. 170 p. Undated. 22 cm.

• **Summary:** The title page of this book states that the 19th printing was 1973 (Copyright by the author), but no initial date of publication is given. The rear cover states: Reprinted and exclusively distributed by: National Bookstore Inc. Other editions include 1953 (at Library of Congress), 1954, 1960, 1965, and 1968. Contents: Acknowledgement. Introduction. Reminder, Fiesta fare. Everyday dishes. Sweets and desserts. Breakfast and merienda. Pickles and relishes. Refreshments. Glossary. Contains 19 black-and-white photos.

Soy-related recipes include: Baguio onion with tokua [firm tofu] (p. 28). Bañgus en tocho–1 (with tajure, p. 32). Bañgus en tocho–2 (with tajure, tausi, and tokua). Bañgus in soy sauce (p. 33). Bawang guisado (with tokua, cubed and fried, p. 33). Beef steak (with soy sauce, p. 34). Misu-tomato sauce (with miso, p. 74). Paksiw (Pork with soy sauce, p. 78). Paksiw na pata (with soy sauce, p. 78). Pancit “luglug” (with tokua, p. 80). Pork tapa (with toyo soy sauce, p. 88). Taguba (pork with soy sauce, p. 102).

The glossary defines the following soy-related terms: Misu–paste made of fermented rice and soy beans. Tajure–fermented soy beans, caked. Tausi–fermented soy beans. Tokua–soy bean curd. Toyo–soy sauce. Address: Philippines.

1685. Hartz (Jacob) Seed Company, Inc. 1973? *Hartz seed*. Stuttgart, Arkansas. 8 p. Undated. 28 cm.

• **Summary:** Contents: Introduction. Arkansas' Grand Prairie: a major seed producing area for soybeans, rice and oats. Facilities. Research. Real estate and farm management. Export.

Jacob Hartz Sr. (1888-1963), pioneer in the development of soybean production in the South, founded Jacob Hartz Seed Company in 1926 [sic, 1942] and later that year built the first small seed cleaner in the State.

"More farmland in Arkansas is planted in soybeans than any other crop... Jacob Hartz Seed Company contracts upwards of one and one-half million bushels of Arkansas Certified "Blue Tag" Soybeans each year. This seed is produced by 150 Certified Seed Growers. The company's export operations have been directed into many areas of the Pacific, especially for natto, tofu, and miso in Japan.

Photos show: A portrait of Jacob Hartz, Sr. (p. 1) An early binder, pulled by a tractor, cutting oats. Modern combines harvesting soybeans. An aerial view of the plants elevators and offices in Stuttgart. Company President Jake Hartz, Jr. with Dr. Curtis Williams in one of the company's three greenhouses. Address: P.O. Box 946, Stuttgart, Arkansas 72160. Phone: 501-673-8565.

1686. Oles, Shayne. 1973? The new Zen cookery: Practical macrobiotics. Woodland Hills, California: Shayfer Corporation. vi + 90 p. Undated. Index. 22 cm. Spiral bound.

• **Summary:** A revised edition of the first American macrobiotic cookbook, containing a wide variety of recipes from many sources. The cover is light orange. In the lower right corner is a sumi-e type brush sketch of some grasses and flowers. All recipes are numbered. The recipe numbers and page numbers are a little different from those in the 1966 edition published by Ignoramus Press in Los Angeles. Pages 59-62 (recipe nos. 210-21) are about Miso soybean paste. Pages 62-64 (recipe nos. 222-28) are about Tamari soy sauce.

Herman Aihara (Nov. 1990) has no idea why there are two versions of this book, both undated. Shayne Oles must have published one or both of these after Herman Aihara started the George Ohsawa Macrobiotic Foundation (any time after 1969). Only Shayne Oles would know. One clue is given in *Macrobiotics: Yesterday and Today* by Ron Kotzsch (1985, p. 170). "In 1966 Lou Oles, who with his wife Shane [sic, Shayne] had managed the revived Ohsawa Foundation, died, and Shane asked Herman [Aihara] to assist her. Herman began to travel to Los Angeles once a month to give lectures at the Foundation headquarters. He was also instrumental in the publishing of Ohsawa's books, which were selling well on the East Coast as well as the West. By 1969, however, dissention had developed over the role of Shane's new husband in the organization. Herman resigned. In 1970 the Ohsawa Foundation dissolved. Aihara, who had moved to San Francisco [from Carmichael, near

Sacramento], established the George Ohsawa Macrobiotic Foundation as a new educational and publishing organization." Address: President of Ohsawa Foundation, California.

1687. *Times (London)*. 1974. Saturday reviews: The Magical City, by Jonathan Raban. Jan. 26. p. 8.

• **Summary:** A long extract from the book *Soft City*, by Jonathan Raban (published this week by Hamish Hamilton). "The streets are crowded with evident isolates... macrobiotic devotees with transparent parchment faces,... everywhere one sees evidence of a growing devout irrationalism. Little bookshops sell the *I-Ching*, packs of tarot cards... and the macrobiotic foodshop on Portobello Road, Ceres, gravely turns the consumption of vegetables into a mystical religion." At Ceres, the author bought *Macrobiotics: An Invitation to Health and Happiness*, by George Ohsawa."

A new emphasis on "individuality leads us to the fact that we are living by ourselves and we are creating our life by ourselves.

"The girls who drift about the store [Ceres], filling wire baskets with soya beans, miso, and wakame seaweed" will later feed "their immaculate insides on harmoniously balanced amounts of yin and yang foods."

Among the few paperbacks in Annette's scented room are *Steppenwolf*, *The Macrobiotic Way*, and *The I Ching*.

1688. Kaibara, Ekiken. 1974. *Yōjōkun*: Japanese secret of good health. Translated by Masao Kunihiro. Tokyo: Tokuma Shoten Publishing Co. Ltd. vii + 133 p. Preface by Ayanori Onishi of the Japan Society of Medical History. No index. Jan. 21 cm. [Eng]

• **Summary:** Contents: Preface. 1. What is health preservation. 2. How to keep health. 3. Food and drink: What and how. 4. Repressing sexual desire. 5. The five sensory organs. 6. Easing nature and bathing. 7. Prudently guarding against illness. 8. Selection of a doctor: How to avoid a quack or charlatan.

"The original texts of this book are those of 'Yōjōkun,' published in Japanese by Chūōkōron-sha Inc., Tokyo, in 1969, and by Tokuma Shoten Publishing Co. Ltd. in 1968, and are adapted under the direction of Ayanori Onishi." The author lived 1630-1714, and this book was written in 1713. The Preface notes that the importance nurturing mental discipline lies at the very core of the author's art of staying healthy. Among his other works is *Yamato Honzo (Japan's Herbal)*, which is still valued today and well known even abroad. A Soviet scholar has even termed it "the first great work on natural history." The German physician and naturalist Philipp Franz von Siebold (1796-1866) called Kaibara "the Aristotle of Japan."

Kaibara, who has been called the "grandfather of macrobiotics," was an avid observer of the natural and human world. He traveled widely and wrote pioneering

works on botany, geography, herbal medicine, and on popular manners and morals. At the age of seventy he retired from active life, and, free to sift through a lifetime of experience and learning, wrote the *Yôjôkun*, which includes the old sage's views on health and longevity. He begins by asserting that physical well-being and long life are the natural conditions of mankind.

In Chapter One he writes: "The art of health preservation entails, first of all, keeping away from things harmful to one's body, i.e., the inner desires—the desire for food and drink, sexual indulgence, sleep, endless talk, and the seven emotions: joy, anger, worry, pensiveness, sadness, fear, and surprise—and the outer evils—the four atmospheric aspects: wind, cold, heat, and dampness... An important factor in suppression of the inner desires is temperance in eating and drinking... One should refrain from satisfying sexual desire and try to preserve one's energy. Sleep should be confined to standard hours. Oversleep is to be avoided... Of particular importance is to take a walk of a few hundred paces after meals... The art of health preservation begins with mental placidity. The way to achieve mental placidity is to keep one's mind calm and one's spirit unruffled... The human body is meant to last a hundred years... One should not rely on acupuncture, moxibustion, or medicine... A saint always expounds on the delights of living." And sickness, like health, is something which mankind creates. Quoting the *Tao Te Ching*, Kaibara observes "One's life is in one's own hands." Sickness comes only when one has willfully abused oneself. "Illness never comes without reason."

In Chapter 3, Kaibara discourses at length on the subject of food and drink. The author, a Japanese physician, recommends a balanced diet to protect against chronic diseases. Meat and sake should be consumed in moderation. "A person should prefer light, simple meals. One must not eat a lot of heavy, greasy, rich food. One should also avoid uncooked, chilled, or hard food (p. 54)... Of everything that one eats and drinks, the most important thing is rice, which must be eaten in ample amounts to ensure proper nutrition (p. 61)... Do not eat between meals or immediately before going to bed. After eating take a short walk to stimulate circulation. Massage the stomach and abdomen lightly to encourage digestion..."

The section titled "Bean paste" (p. 67) begins: "Bean paste [miso] has a soft quality and is good for the stomach and intestines. Soy sauce and the liquid that drips off bean paste [tamari] have a sharper quality than bean paste and are bad for people who suffer from diarrhea. Nor should vinegar be taken in too large amounts, for it is bad for the spleen and stomach... One must not eat too much of foods that are salty, vinegary [sour], or hot." One should also avoid tobacco.

In the chapter titled "Repressing Sexual Desire," Kaibara states that the great human frailties are gluttony and lust. He agrees with the Chinese sages that one should

practice sexual abstinence in youth to reserve one's vitality and vigor. He cites the *Chien Chin Fang* by Sun Szu-miao which talks about the frequencies of sexual intercourse: "At twenty years of age, people should have a discharge [of semen] no more than once in a period of four days, at thirty once in eight days, at forty once in sixteen days, and at fifty once in twenty days. At sixty a person should no longer discharge his energy sexually unless he is particularly vigorous physically, in which case he can do so once a month." Kaibara believes that it is very important to conserve sexual energy since it deeply affects the function of the kidneys, and the kidneys are the seat of vital energy for all the other organs. Address: Japan.

1689. Takeuchi, Tokuo; Yokoo, Yoshio. 1974. [Studies on peptides in miso and soy-sauce. XI. Effect of *koji* addition on the proteolytic patterns of soybean *miso* manufactured with an enzyme preparation]. *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 52(1):58-61. Jan. [2 ref. Jap; eng]

• **Summary:** Four types of soybean miso was made by several different combinations of the commercial enzyme Biosaime A, which was prepared by the water extraction of wheat bran *koji* made with *Aspergillus oryzae*. The enzyme was combined in different proportions with *koji* (0 to 100%), and the amount of free and bound amino acids in each miso was measured. Address: Food Research Inst., Aichi prefecture, Nishi-ku, Nagoya, Japan.

1690. Watanabe, Tokuji. 1974. Government role and participation in development and marketing of soy protein foods. *J. of the American Oil Chemists' Soc.* 51(1):111A-15A. Jan. Proceedings, World Soy Protein Conference, Munich, Germany, Nov. 11-14, 1973. [14 ref]

• **Summary:** Contents: Abstract. Introduction. Japan's soybean supply and demand. The present soybean protein food market in Japan. Administrative aspects with respect to soybean protein foods. Research and development projects concerning soybean protein foods and their achievements. References. Address: National Food Research Inst., Ministry of Agriculture & Forestry, Tokyo, Japan.

1691. Eden Foods, Inc. 1974. Wholesale prices, F.O.B. P.O. Box 100, 310 W. Ann St., Ann Arbor, MI 48107. 2 p. Catalog. Effective Feb. 1.

• **Summary:** The products are very similar to those in the Nov. 1973 catalog. The 3 types of miso (Mugi, Hacho, Kome) bear the Erewhon label. Address: Ann Arbor, Michigan. Phone: (313) 769-8444.

1692. Dresden, Donald. 1974. Japan Inn: A good show, visually and gastronomically. *Washington Post*. Feb. 17. p. PO34.

• **Summary:** Dining: The Japan Inn, now in its 3rd year of operation, located at 1715 Wisconsin Ave., NW (Georgetown), continues to rank as one of the finest Japanese restaurants in Washington, DC. To make the broth for Miso soup, begin with a Japanese seaweed called “sea tangle” [kombu], then remove it after it has imparted its flavor. Add dried bonito flakes to produce a delicate, fish-tasting broth. “Bean cake [tofu], mushrooms, and chopped green onions finish the dish.”

Shabu-shabu comes with two dipping sauces. One of these is made by mixing soy [sauce], vinegar, two kinds of sake, seaweed and dried bonito flakes. The other contains sesame seeds, oil, and paste. Shabu-shabu “also contains hot pepper, aged soy bean cake, soy sauce and two kinds of sake, one of them [mirin] sweet.”

Note: The meaning of “aged soy bean cake” is unclear. It could be fermented tofu, although that is rarely used as an ingredient in Japanese cookery.

1693. Kushi, Michio. 1974. Natural agriculture and food processing. *Michio Kushi Seminar Report (Brookline, Massachusetts)* No. 3. Feb. 26 and 27. p. 5-30. Edited by Ane & Mark Riegel.

• **Summary:** On Feb. 26 Mr. Kushi, a macrobiotic teacher, lectured on: Tekka. Miso and miso manufacturing, including how to make malt (rice koji). Soup stocks and miso soup.

On Feb. 27 he discussed: General outline for making shoyu—soy sauce, including discussions with Kikkoman on making natural shoyu starting with whole soybeans. Using bean and grain sprouts—moyashi (including soy sprouts). Other soybean products: Fried tofu (two methods for agé). Ganmodoki. Kori-tofu or koya-tofu (freeze-dried tofu). Soybean milk. Yuba. In the discussion, soymilk yogurt and “Chinese fermented tofu... fu nyu” (p. 28) were mentioned. The U.N. [United Nations] recommendations on food, using vegetable proteins.

Note: This is the earliest English-language document seen (Feb. 2004) that uses the term “freeze-dried tofu” to refer to dried-frozen tofu. Address: Brookline, Massachusetts.

1694. *Better Nutrition*. 1974. Food for thought. Feb. [1 ref]

• **Summary:** “The Overseas Development Council is calling for a Sino-American Soybean Research Institute for developing soybeans which will produce more beans per acre...”

“Unfortunately, our country uses most of its domestic supply of soybeans as food for poultry and cattle. In the Far East soybeans are used directly as food for people, which is, of course, much more sensible. Soybean protein is as nearly complete a protein as exists in vegetarian food. Combined with cereals or nuts at the same meal, soybean food offers complete protein very inexpensively at the rate of 11 grams for every serving of the cooked dried beans.

“Other soybean products available in our country are loaded with high quality protein: soy flour, with up to 47 per cent protein, soybean curd (a kind of cheese) with almost 8 per cent protein, *miso* and *natto* with 11 and 17 per cent protein respectively.

“Soybean milk products are equally nourishing where protein is concerned.”

1695. Erhard, Darla. 1974. The new vegetarians. II. The Zen macrobiotic movement and other cults based on vegetarianism. *Nutrition Today* 9(1):20-27. Jan/Feb.

• **Summary:** This article is mainly a very critical assessment of the macrobiotic diet and movement introduced as a cure by George Ohsawa. It also discusses Sufi groups, the new Vrindaban International Society for Krishna Consciousness (founded in 1966 by his Divine Grace A.C. Bhaktivedanta Swami Prabhupada), and various vegan groups.

A pie chart on page 21 shows the various major food movements in the U.S. counterculture “and how they all lead to unscientific vegetarian forms of food faddism.” Within the natural food movement are organic communes, Krishnas, vegans, Sufis, followers of the Ehret’s mucusless diet healing system, and practitioners of Yoga. Within the health food movement are four major teachers: Paul C. Bragg, Herbert Shelton, Carleton Fredericks, and Adelle Davis. Within the “Cosmic Nutrition Movement” are Zen macrobiotics (yin/yang polarity), and the Messiah’s Crusade (positive/negative polarity).

“Veganism is the philosophy and practice of compassionate living. Founded in England in 1944, the Vegan Society originally stressed the ethics of eating. The American Vegan Society, based in New Jersey, was founded in 1960 and is composed of individuals who are more health oriented. This Vegan philosophy was essentially based on Dr. Albert Schweitzer’s concept of reverence for life, and Mahatma Gandhi’s concept of Ahimsa, a Sanskrit term meaning non-killing and non-injury” [dynamic harmlessness] (p. 27). “Vegans who practice more restrictive diet interpretations may use Dr. Shelton’s Food Combining System.” Vegans and their children often use soya milk.

The reason is that the general natural foods movement is an example of unscientific food faddism is that the “Diet emphasizes natural and/or organic vegetables, fruits, legumes, grains, and usually dairy products, and restricts meat.”

A sidebar briefly defines “Vegetarian terms” including amasake, miso, mochi, nirvana, tamari, tofu, and umeboshi.

Note: This is the earliest document seen (May 2002) concerning Sufism (or Islam) and Vegetarianism. Address: RD, MPH, Research Nutritionist, Clinical Study Center, San Francisco General Hospital, California.

1696. Gerner, Bob. 1974. Log of trip to Japan to study traditional natural foods, 28 Feb.–2 March 1974. Part I (Log–unpublished). Westbrae Natural Foods Inc., Berkeley, CA 94710. 26 p. Unpublished log. Handwritten. 20 x 8 cm.

• **Summary:** 1974 Feb. 28. Meet Bill Shurtleff and Mr. Masa Miyashita of Kikkoman export dept. (good man, speaks fluent English) at the Imperial Hotel (*Teikoku Hoteru*, built in the 1920s by Frank Lloyd Wright) in Tokyo. Talk for 4 hours. Westbrae hires Shurtleff as an interpreter and guide.

March 1. Dinner at Sasa-no-Yuki, beautiful old restaurant that specializes in tofu cuisine.

March 4, Monday. Visit Kikkoman in Noda with Shurtleff and Miyashita. Tour Plant #7, then Plant #4 (the Goyo-Gura), which produces the emperor's shoyu in the traditional, natural way. "Saw 5 batches of moromi mash from 1 month old to 12 months old, and tasted each one. Delicious. Great color change between the 1 month and the 12 month moromi. We saw all the traditional tools. The moromi vats were made of cedar and last approximately 200 years." See a movie on how shoyu is made. Lunch at a sushi shop. Visit two miso retail shops with Shurtleff near his home. One had 42-45 types of miso (mostly rice miso, with 1 each Hatcho, barley, and cooked miso), the other 32-35 types. Tasted many and learned the differences. I buy Saikyo sweet white miso and Hatcho miso.

March 5, Tues. Attend a cooking class at Lima Ohsawa's house, then have dinner with Lima and the class members. Sick for the next 2 days.

March 9, Sat. Call then meet Mr. Kazama of Mitoku. He represents Erewhon. We may import through Kikkoman's Pacific Trading. Plan trip to Sendai Miso-Shoyu. Sendai is interested in using organic soybeans to make shoyu but would like a contract stating that all of it will be purchased when done. Dinner at the natural foods restaurant, Hakumon run by a Frenchman named Pierre.

March 11, Mon. Meet Shurtleff early at Tokyo station. Take bullet train (Shinkansen) to visit two Hatcho miso plants (Hayakawa Kyuemon Shoten, and Ota Shoten in Okazaki city, Aichi prefecture). Both plants claim to be over 600 years old. They use modern steamers and koji rooms. They pile 4-6 tons of rocks atop each large vat of miso, age it for 2 summers. It becomes very mellow when fully aged. They also use about half of their Hatcho miso to make Akadashi miso. It also contains caramel coloring, barley syrup, MSG, shoyu, a white miso, and preservatives. They sell a lot of Akadashi but only a little Hatcho miso. Lunch at an udon noodle shop that hand makes and cuts the noodles. Lots of slurping. Then visit a plant that makes real tamari and shoyu. All the tamari is mixed with junk. Train to Kyoto; stay at Friends World College. Note: This is the earliest English-language document seen (July 2006) that contains the term "real tamari."

March 12, Tues. Visit a tofu maker, a yuba maker (*Yuba Han*), then the company that makes Saikyo sweet white miso. The owner lies to us initially about his miso aging and caramel coloring (which tastes and looks like tar). Then he reverses himself without batting an eye. Lunch at a 300 year old Zen vegetarian restaurant (*Okutan* near *Nanzenji* temple); so beautiful that I start crying. Fantastic place. Light snow falling by the pond. Enjoy Simmering Tofu (*Yudofu*) in a broth. Then we go to a 400-year old tofu restaurant (*Nakamura-ro*) at a shrine (*Gion*) for dessert of *amazake* and *Dengaku* (skewered and braised with sweet miso). On to a second miso factory. It is a bore and the owner does not seem sincere but he has a great reputation among macrobiotics. He makes both natural and sweet white miso. Shurtleff visited him last year. For white miso the soybeans are boiled; for red miso they are steamed. Some white miso contains sodium thiosulphate bleach. Visit another yuba shop. They use granite grinding stones to make soymilk, cast iron pot to cook it in and copper skimming tables. A very beautiful place. Meet Ty Smith at a soba shop. He is a chain smoker, just quit working for Muso, and promoting a cooperative effort between Janus, Chico-San, Erewhon, and The Well to import foods from Japan. Evening at Jittoku coffee house, owned by an American, in a large old Japanese treasury (*kura*). Back to Tokyo by train. Talk until 1:00 A.M.

March 14, Thurs. Meet Kazama and Shurtleff, and take express train to Sendai Miso-Shoyu. We are treated royally by Mr. Muro. Long introduction and discussion. Visit their 2 plants, one modern, one traditional, natural. They make only rice miso. Their production of natural miso is more than all that imported to America by Erewhon and Janus. They age their natural shoyu 18-24 months at the request of Michio Kushi and Erewhon. They have 9 aging vats for the first year, then it is switched to other tanks. They invite us to have a shoyu taste test among 3 products: Kikkoman regular shoyu, Sendai regular, Sendai natural. Both Bill and I choose Kikkoman as best; good aroma, color, and taste. They congratulate us on our good taste. Sendai regular had very strong salty taste. We both liked the Sendai natural least; good color, no aroma, very mild taste. Sendai people say only one year is needed to ferment shoyu naturally. We might sell them organic soybeans (we had purchased 12 truckloads from a farmer) and get shoyu back in 1 year. We meet the president (Sasaki?), born 1928. Elegant geisha-hosted tempura and sushi dinner with president, 2 vice presidents, production manager, and a consulting professor (Shibasaka sensei). After dinner to a traditional bar for *doboroku* (thick, unrefined sake with a low alcohol content [or was it nigori-zake?]), then a sushi house. Shurtleff leaves for Tokyo on night train.

March 16, Sat. Visit Shurtleff and Aoyagi's home for lunch. We have dried-frozen tofu main dish, salad with creamy tofu dressing, strawberries with tofu whipped

cream. Delicious. Then we learn how to make tofu at home. Its easy. I'll make it at home in California, then at our Westbrae Natural Foods retail store on Gilman Street (Note: This led to a long series of tofu classes by Gerner, Liz Horowitz, and later Shurtleff & Aoyagi; The retail store changed its name in late 1976 to Gilman Street Gourmet).

Note: This is the earliest document seen (April 2006) concerning Westbrae Natural Foods. Continued. Address: President & Chairman of the Board, Westbrae Natural Foods Inc., 1224 10th St., Berkeley, California 94710.

1697. Gerner, Bob. 1974. Log of trip to Japan to study traditional natural foods, 28 Feb.–2 March 1974. Part II (Log–unpublished). Westbrae Natural Foods Inc., Berkeley, CA 94710. 26 p. Unpublished log. Handwritten. 20 x 8 cm.
 • **Summary:** Continued: March 19, Tues. Take bullet train to Kyoto to meet Steve Earle of Muso Shokuhin. We 3 go to Okayama to see Fuchu Miso, that makes mugi miso (the barley miso sold in our store) and sweet white miso. The president's wife is the epitome of Japanese woman. For lunch we have tofu burgers with Italian sauce and mushrooms in a bento made by Akiko. Delicious. Take a boat to Shodo-shima where Marushima Shoyu Co. is located. Island is also famous for toasted sesame oil. Arrive at a ryokan at 6:30 P.M. VIP treatment. Bath before dinner and served in private room by geisha. Too much fish! Note: This is the earliest English-language document seen (Jan. 2007) that contains the term "tofu burgers."

March 20, Wed. Miso soup for breakfast. Visit Marushima Shoyu where Muso gets its "natural" shoyu for export to America. They have the newest wheat roasters (they roast it with sand), biggest presses. We see cement aging tanks in a temperature-controlled room, then onto a large red building with 150 aging tanks. But we see no whole soybeans, only soybean meal (*dashi daizu*). "I feel the owner is a liar and this is a bogus operation. The scene gets heavy and ugly. Bill is great and presses on with questions." The owner claims that 40% of their shoyu is natural, aged for 3 years and made with whole soybeans; 60% made with soybean meal, temperature controlled for 7 months. Thus there should be about 120 vats of natural versus 60 regular. But where is the natural? Their faces turn red. We have caught them red handed. The owner take us to one musty, dirty old building with 25 vats, only 8 of which contain shoyu, some only half full. Lots of cockroaches. Looks like no one ever goes here. Still no sign of a single whole soybean. Uneasy departure. Steve Earle is embarrassed. We take a train to Tokyo. We present Earle/Muso with a list of inconsistencies and ask for a written reply.

March 21, Thurs. Visit Mr. Kazama's miso factory (*Ikeda Kojiro Miso Shoten* in Kawaguchi-shi near Tokyo), that makes barley miso, the only brown rice miso in Japan, and shoyu. Call Ty Smith of Muso. He says Muso was very

happy with our findings concerning the problems at Marushima, and that they have contacted a new source in Kyushu. Marushima said their president died a year or so ago and his son took over. They have lost the old feeling and tradition.

March 22, Fri. 6:00 A.M. Meet with Bill Shurtleff at his tofu master's tofu shop (*San-Gen-Ya*, run by Mr. Toshio Arai). We watch how he makes tofu. Beautiful place (12 feet square) attached to their home. Beautiful people; they don't speak English. Both make tofu starting early in the morning. He delivers in the afternoon and she sells out of the shop. He gave me hot rich soymilk (from *kinugoshi*) with wild mountain honey. Both incredible. So sweet and delicious. They also serve us freshly made agé, kinugoshi, and natto. Lunch at Shurtleff and Aoyagi's home: Noodles and tofu, Chinese fried tofu, tofu pudding, agé, kinugoshi, and mikan orange. We go over my notes from the miso factory. We copy all of his notes. Then I leave, very sad, but the friendship will remain. Akiko is a remarkable lady. Meet Mr. Kazama and go to Pacific Trading. Lousy meeting with Mr. Masaaki Miki (sales manager), and Masa Miyashita (export dept). Go to airport.

Results of the trip: (1) Westbrae started (about 9 months later) to import many varieties of miso, plus shoyu, and other products from Mr. Kazama in Japan. Bob Gerner was the founder, president, and chairman of the board of Westbrae; (2) Bob Gerner and Liz Horowitz taught "Tofu and Miso Cookery Classes" in Berkeley during 1976; (3) Westbrae published and distributed widely two brochures, *What is Miso?* (May 1976) and *What is Tofu?* (July 1976) written by Shurtleff and Aoyagi; (4) In 1976 Westbrae Natural Foods Inc. decided to sell its retail store at 1336 Gilman St. in order to focus on being a distributor and importer. The store had been losing money. Bob Gerner bought it in June 1976 for the low price offered by the highest bidder. He remodeled the store, renamed it Gilman Street Gourmet, and re-opened it in Sept. 1976. In the spring of 1977 Gerner added a deli to the store; there he made and sold Tofu Burgers, Tofu Treasure Balls, and Tofu Steaks Sauteed in Ginger Sauce. The same week that the deli opened, Gerner sold 3,000 to 4,000 of his new Tofu Burgers out of the Westbrae booth at the New Earth Exposition in San Francisco. Bob's nephew and sister (Margaret) made the tofu burgers. The burgers sold equally well at the same Expo in 1978 and 1979; (5) Shurtleff and Aoyagi wrote *The Book of Miso* and their New-age Foods Study Center moved toward becoming Soyfoods Center.

Note: In late November 1974 Mr. Kazama came to a meeting at Pajaro Dunes by Santa Cruz, sponsored by The Well. The idea was to set up a natural foods trade association. Erewhon wanted to control all imports of Japanese natural foods from Japan. Janus and The Well both had to import through Erewhon. They said Westbrae must buy through them via The Well (Roger Hillyard/Pure &

Simple), and pay a 5% commission. Kazama had to defer to them. Gerner refused and they backed off. Ty Smith, now head of Erewhon, was upset that Westbrae was not paying a commission. Gerner told him "Tough." So Westbrae ended up importing from Kazama. Address: President & Chairman of the Board, Westbrae Natural Foods Inc., 1224 10th St., Berkeley, California 94710.

1698. Huang, Su-Huei. ed. 1974. Chinese snacks: Wei-Chuan cooking book. Taipei, Taiwan: Dept. of Home Economics, Wei-Chuan Foods Corp. 184 p. Illust. No index. 25 cm. [Eng]

• **Summary:** Almost every page contains a large color photo of a finished dish. Recipes include: Seaweed-bean curd broth (p. 7). Bean curd-rice noodle soup (p. 8-9). Egg flower soup with tofu (p. 10). Steamed spareribs with black beans over rice (with "fermented black beans," p. 14). Bean curd and vegetable soup (p. 14). Bean curd and oyster broth (p. 24). Chicken in black bean sauce over rice (p. 25). Red-cooked beef noodles (with black bean paste {pronounced "he do ban jiang"}) and hot bean paste {"la do ban jiang"}, p. 47). Saucy noodles—"Ja jiang mien" (with pressed bean curd and sweet bean paste {"tien mien jiang"}, p. 59). Sweet almond-beancurd soup (p. 143). Sweet soybean milk ("Do jiang," p. 156). Salty [soy] bean milk (p. 156). Crispy Chinese crullers ("You tiau," p. 157; serve with sweet or salty soybean milk).

Also: Cantonese moon cakes (with red bean paste [azuki] filling, p. 133, with color photo). Crunchy sesame cakes (with red bean paste filling, p. 135). Tasty fried bean cakes (with red bean paste filling, p. 137). Sesame-bean paste puffs (with red bean paste filling, p. 141). Sweet almond-beancurd soup ("beancurd" made with agar and evaporated milk—no soy, p. 143). Address: 19 West Nanking Road, Taipei, Taiwan. Phone: 551-13564.

1699. Nihon Jozo Kogyo K.K. 1974. Marufuku tane-koji (miso-yô) [Marufuku koji starter for miso]. Koishigawa 3-26-3, Bunkyo-ku, Tokyo, Japan. 1 p. Feb. Manufacturer's catalog. [Jap]

• **Summary:** Describes 9 types and 17 varieties of koji starter for miso, with prices and amounts of koji each will make. Address: Tokyo, Japan. Phone: 03-814-2738 or 9.

1700. Spiral Foods Inc. 1974. Wholesale price list. Chico, California. 4 p. March 15. 28 cm.

• **Summary:** This two-sheet catalog and price list, consisting of two pages stapled in the upper left corner, is printed front and back with reddish-orange ink on tan paper. The first item is five cookbooks. Soy-related products: Condiments: Lima tamari soy sauce (aged naturally over 2 yrs.). Miso—soybean puree (entirely natural—Mugi Miso, or Kome Miso). Lima kome miso. Nigari (natural coagulant to make tofu). Barley koji. Tekka. Sesame salt (toasted whole brown

sesame seeds and sea salt). Salt plums (pickled in sea salt). Kuzu (wild arrowroot starch). Utensils: Soy pitcher [dispenser]. Address: 1144 West 1st Street, Chico, California 95926. Phone: 343-2111.

1701. Takeuchi, Tokuo. 1974. Studies on peptides in miso and soy-sauce. XII. Low molecular weight peptide in soybean miso. *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 52(4):256-67. April. [12 ref. Eng] Address: Food Research Inst., Aichi prefecture, Nishi-ku, Nagoya, Japan.

1702. **Product Name:** Yin Yang Soyang [Savoury Vegetable, Savoury Onion, Curry], and Fermented Soya. **Manufacturer's Name:** Yin Yang Natural Products Ltd. **Manufacturer's Address:** 45 Chalton St., London NW1 1HY, England. Phone: 01-387-0456.

Date of Introduction: 1974. April.

New Product—Documentation: Ad in *The Vegetarian Health Food Handbook (UK)*. 1974. p. 4. "Yin Yang-Soyang: A new wholesome high protein vegetarian food." Photos show the lid of a product named Soyang, and the side of a product named Yin Yang Fermented Soya. These two fermented products are rich in protein. "Organically grown sesame seeds perfectly combined with the soya give a very well balanced amino acid pattern, as well as a good source of calcium. Wheat germ provides an extra source of protein and creates youthful energy. To this basic product Yin Yang add Onion, Mixed Vegetables and Curry to make three very different, interesting and exciting meals. There are NO animal fats, no preservatives, and no artificial colourants or flavours."

The company also sells Yin Yang skin conditioner, precious earth face pack, and skin cleanser.

Listing in *The Vegetarian Health Food Handbook (UK)*. 1974. p. 176. "Soyang (Savoury Vegetable, Savoury Onion, Curry), and Sesame Sowen by Yin Yang Natural Products Ltd."

1703. Loring, Kay. 1974. Restaurants: Elegance prevails at new Dragon Inn North. *Chicago Tribune*. May 16. p. N1.

• **Summary:** This is a restaurant review. The Dragon Inn serves a hot and sour soup "filled with soybean curds and lean shredded pork."

The dessert (which must be ordered in advance) "was a 'jewel' rice pudding... It's beautiful to see, a molded sticky rice mound with black bean paste and fruits..."

1704. Kay, Theodore. 1974. Soybeans in the Nigerian diet. *Samaru Agricultural Newsletter* 16(1):18-22. May. [Eng]

• **Summary:** Contents: Introduction. Nutritional value of the soya bean. Daily amino acid requirements for men, women, and children. Suggested methods of incorporating soya bean into the Nigerian diet: Soya bean paste (soaked, uncooked

soya beans, with the hulls on, ground to a white paste) and whole beans (not dehulled). Utilization of the paste: Directly for kosei (akara ball) and panke (puff-puff), for preparation of soya bean milk, which can be used to make protein-enriched pap, fu-fu, bean curd (to-fu), awara or wara. Use of the residue from preparation of soy bean milk [okara]: In Alele (moin-moin), or biscuits. Utilization of whole soya beans: baked, sweet baked powder, stew. Discussion: Why do we need soya bean in Nigeria? Five reasons are given. Acknowledgments to many co-workers.

The soya bean has been cultivated in the Far East since about 2800 B.C. It has [been] the main source of protein for all of East Asia, particularly for the vegetarian Buddhist. It has been used as bean curd (To-fu) and soya sauce in most parts of the Far East from Indonesia up to the Northern end of Japan, as soya bean milk in China, as soya paste (mi-so) in Japan, and as a fermented product (Tempe) in Indonesia.

The crop is well established in Benue Plateau State south of Makurdi, in the North-Western State around Abuja and in the southern part of North-Central State. However, it has been very difficult to cook the beans in a traditional West African way so it has never become popular in this country. Most of the soya bean produced in Nigeria has been exported as a cash crop, except a little for animal consumption. Address: Inst. for Agricultural Research, Samaru, Ahmadu Bello Univ., PMB 1044, Zaria, Nigeria.

1705. Eden Foods. 1974. Spring pricelist. P.O. Box 100, Ann Arbor, MI 48107. 4 p. Effective June 1.

• **Summary:** There are many more total products than in the Nov. 1973 catalog. The 8 oz tamari soy sauce and the 3 types of miso (Mugi, Hacho, Kome) in 1-lb packages bear the Erewhon brand after the product name in the catalog, but the pints and gallons of tamari soy sauce and the same 3 types of miso sold in bulk (44 lb tubs) do not bear the Erewhon brand, perhaps indicating the Eden has found a way to go around Erewhon in importing bulk miso. New products include: Kuzu arrowroot. Grade C Korean nori (Roland). Canadian leaf dulse (Atlantic Mariculture). Sicilian olives (Pure & Simple). Barley malt powder. Barley malt syrup. Maple syrup. Bee pollen. Shiu-chu finest preserved Ginseng roots (China). Kirin extra large ginseng roots, red. pres. (China). Ginseng balls (*fo-ti-tieng*, *dong kwai* [angelica root]). Mao herb (Chinese ephedra). Lemongrass. And many other herbs. Address: Ann Arbor, Michigan. Phone: (313) 769-8444.

1706. Erewhon. 1974. Natural and organic foods: Supplying natural food stores, co-ops, schools and communities (Catalog). Boston, Massachusetts. 16 p. Effective June 1974.

• **Summary:** The structure and design of this catalog is quite similar to the previous one of April 6, however four pages of new products and sizes have been added. The

background of illustration has been changed but the foreground is the same; it is now copyrighted by Erewhon. The note from Paul Hawken has been replaced by a similar one signed "the erewhonians." OG = Organically grown.

New additions to the catalog: Flyers: (1) Organic Merchants: The flour story. The salt story. (2) Issues of *East West Journal*. From Vol. IV, No. 6, July 1974, "Energy" to Vol. IV, No. 9, Oct. 1974, "Healing." (3) Natural Recipes: Three by five inch tear-off pads, each pad containing 100 of the same natural-food recipe. Four assortments (A-D), eight different pads in each assortment. There is one soy-related recipe pad in each assortment: (A) Soybeans au gratin. (B) Miso soup. (C) Soybean casserole. (D) Soyburgers. Address: 33 Farnsworth Street, Boston, Massachusetts 02210. Phone: (617) 542-1358.

1707. *Foreign Agriculture*. 1974. Koreans expand soybean output by planting rice paddy dikes. July 8. p. 8-9.

• **Summary:** Korea, which doubled its imports of U.S. soybeans last year, is again promoting a program to boost domestic oilseed production by planting soybeans on rice paddy dikes. This practice, which was mandatory under the Japanese occupation, had been abandoned until revived last year. In 1973, "dike-bean" acreage was estimated at 86,485 acres. The Ministry of Agriculture and Forestry (MAF) estimates that the maximum area for dike-beans now ranges from 93,900 to 135,900 acres. A significant portion of the crop harvested daily in the summer to be consumed as a cooked, green vegetable, much as Americans eat lima beans. Nearly all of Korea's soybean production is consumed as food. Industry sources estimate that 70% is used in homes for making soy sauce and paste, 20% for bean curd, and 10% for bean sprouts. Address: Office of U.S. Agricultural Attaché, Seoul.

1708. Gandjar, Indrawati; Steinkraus, K.H. 1974. Biochemical, nutritional, and organoleptic changes occurring during production of indigenous fermented foods. In: UNESCO/ICRN/ITB Training Course on Indigenous Fermented Foods. 25 p. Held 12-31 Aug. 1974 at Bandung, Indonesia. *

• **Summary:** Discusses kecap ([kechap], soy sauce), tauco ([taucho] Indonesian-style miso), tempeh, idli, tapeh ketan, and terasi.

Note: This is the earliest English-language document seen (March. 2009) uses the word "tauco" (spelled in that way) to refer to Indonesian-style miso.

1709. Robinson, Robert J.; Kao, Chuan. 1974. Fermented foods from chickpea, horse bean, and soybean (Abstract). *Cereal Science Today* 19(9):397. Abst. #94. Sept.

• **Summary:** The authors made soybean tempeh, chickpea tempeh, and horse bean tempeh from dehulled 0.2 to 0.4 cm

diameter grits. The soybean tempeh had the best flavor, texture, and color.

They also made soybean miso, chickpea miso, and horse bean miso from the grits. Compared with soybean miso, chickpea miso's color was darker, while horse bean miso's is lighter.

Note: This is the earliest document seen (Sept. 2002) concerning miso made without soybeans; chickpeas and horse beans were used instead. Address: Kansas State Univ., Manhattan, Kansas.

1710. Spira, Ruth Rodale. 1974. *Naturally Chinese*. Emmaus, Pennsylvania: Rodale Press, Inc. iii + 346 p. Illust. Index. 25 cm. [8 ref]

• **Summary:** Contains recipes that call for and an excellent glossary that describes: Bean curd (dow foo—tofu), deep-fried bean curd (tofu), bean curd–dried (foo jook = yuba), bean curd cheese (fooh yu [fermented tofu], p. 297), bean curd stick (yuba), bean paste–yellow (wong dow sa), bean sauce–brown (min see jeung), beans–black fermented (dow see), soy milk, soybean sprouts, soybeans–black (kei tou).

1711. Eden Foods. 1974. Fall & winter pricelist. 4601 Platt Rd., Ann Arbor, MI 48104. 2 p. Effective Nov. 1.

• **Summary:** Note that the company has moved to a new and much larger warehouse. Soybean Flakes are still organically grown in Deaf Smith, Texas. Tamari Soy Sauce, and 3 misos still bear the Erewhon brand. Eden is selling Honey Vinegar, Apricot Butter, and Apple Sauce under the Pure & Simple brand. Address: Ann Arbor, Michigan. Phone: (313) 973-9400.

1712. Aihara, Herman. 1974. *Soybean diet: Diet for the better protein*. Oroville, California: George Ohsawa Macrobiotic Foundation. xi + 164 p. Nov. Illust. Index. 21 cm.

• **Summary:** This book is an expanded version of "Miso and Tamari" (1972). Contents: Preface. Introduction. 1. Theory: Steak vs. gasoline, is animal protein indispensable, protein requirements, essential amino acids—law of all or nothing, minimum daily requirement of essential amino acids. 2. Miso: Introduction, the origin of miso, kinds of miso, ingredients, how to make miso, value of miso, miso in the treatment of tuberculosis, how to make miso using mugi koji, recipes using miso for warmer seasons, recipes using miso for colder times. 3. Tamari or traditional soy sauce: History, chemical change of tamari, how to make tamari soy sauce, how to use soy sauce, soy sauce cooking for warmer times, soy sauce cooking for colder times. 4. The other soybean and high protein foods: How to make tofu at home, how to make tofu plaster, how to make agé—deep fried tofu at home, how to make seitan at home. 4A. Tofu, seitan, and gluten cooking for warmer times: How to make tofu, nigari, and bulk tofu at home, how to make wheat gluten, seitan

and fresh wheat *fu* at home. 4B. Tofu, seitan and gluten cooking for colder times. Appendix: Cutting styles, useful information. Bibliography.

Large photos near front of book show Herman Aihara and (happy) Cornelia Aihara at her stove. Address: Oroville, California.

1713. *Soybean Digest*. 1974. East meets West in soybecue sauce. Nov. p. 38.

• **Summary:** "A Japanese scientist has added soybean miso to American barbecue sauce in a new East-meets-West food, 'soybecue' sauce. Ichiro Ouchi, studying at the USDA research laboratory in Peoria, Illinois, replaced part of the catsup in conventional barbecue sauce with red miso, a fermented soy food, to formulate the new sauce..."

"Mr. Ouchi is studying the use of miso made from U.S. soybeans in American foods like meat sauces, salad dressings and snack dips and spreads. His research with Hwa Lih Wang, biochemist, and Dr. C.W. Hesseltine is sponsored by the Shinshu Miso Association, an organization of Japanese companies."

1714. **Product Name:** Sunwheel Organic Hatcho Miso, Mugi Miso, Tamari, and Shoyu.

Manufacturer's Name: Sunwheel Foods (Importer-Distributor). Made in Japan. Imported from Muso Shokuhin.

Manufacturer's Address: London, England.

Date of Introduction: 1974. November.

How Stored: Shelf stable.

New Product–Documentation: CSP form filled out by Simon Bailey. 1988. Sept. 28. Gives date of introduction as 1974. In 1984 Sunwheel divided and sold its Sunwheel brand to Northumbrian Fine Foods. Its high quality Japanese products are now imported by Clearspring Natural Grocer. Peter Bradford is the contact person. Japanese agent is Mitoku. Various Japanese manufacturers.

Interview with Bill Tara, founder of Sunwheel. 1991. Aug. 18. By late 1974 Sunwheel Hatcho Miso, Mugi Miso, and Tamari were on the market, imported from Muso (Yuko Okada) in Japan. By 1979 Sunwheel was sold to a larger health food company.

• **Summary:** Volume 1 published April 1976, copyright 1969; vol. 2 published July 1974, copyright 1974. Chinese title also written *P'ei-mei shih p'u*. Address: Cooking teacher, Taipei, Taiwan.

1729. Central Bureau of Statistics (CBS), Indonesia. 1974. [Industrial census]. Indonesia. [Ind]*

• **Summary:** Contains the first statistics seen on commercial production of tempeh, tofu, Indonesian soy sauce (*kecap*), and Indonesian miso (*tauco*) in Indonesia. Producers are divided into 2 groups by size: Home industry (1-4 workers) and small scale industry (5 or more workers). The amount of soybeans processed in tonnes/year is as follows for home industry/small-scale industry: tempeh (1.8/12.3), tofu (3.8/15.2), soy sauce (0.8/3.7), and miso (4.7/6.3).

1730. **Product Name:** Eden Miso [Mugi (Barley), Hacho (Soybean), or Kome (Rice)].

Manufacturer's Name: Eden Foods, Inc. (Importer). Made in Japan.

Manufacturer's Address: 4601 Platt Rd., Ann Arbor, MI 48104. Phone: (313) 973-9400.

Date of Introduction: 1974.

New Product-Documentation: Ad in Soykraft. 1979. Summer. p. 38. "Traditional Soy Products from Eden Foods." "Eden miso is made from whole soybeans, grains, and sea salt, fermented at natural temperatures in cedar kegs. Barley miso (mugi), Soybean miso (hacho), Rice miso (kome), and Brown rice miso (genmai) are all available in 14 oz, 8.8 lb, 22 lb, and 44 lb sizes."

Eden Foods, Inc. 1991. Feb. "Eden Foods Product Overview." "1972-Trade relationship began with Muso Company, Ltd. of Osaka, Japan."

Talk with Ron Roller of American Soy Products (formerly of Eden Foods) in Saline, Michigan. 1991. Nov. 27. Originally Eden bought tamari and miso from Erewhon. Then Eden started importing them from Mitoku; they were importing from both Mitoku and Muso in the very beginning.

Letter from Bill Bolduc, a founder of Eden Foods. 1991. Dec. 4. Eden started to import a line of foods from Japan in about 1974 or 1975. Imports had definitely not yet started by the fall of 1973. Talk with Michael Potter, Chairman of Eden Foods. 1993. Oct. 31. These 3 varieties of miso

arrived with the first shipment imported from Mitoku in Japan.

1731. **Product Name:** 'Lima' Tamari (Soya Bean Sauce), and Miso (Soya Bean Paste).

Manufacturer's Name: Hofels Pure Foods Ltd.

Manufacturer's Address: England.

Date of Introduction: 1974.

New Product–Documentation: Listing in The Vegetarian Health Food Handbook (UK). 1974. p. 174.

1732. **Product Name:** Westbrae Natural Miso [2 Year Barley Miso, 2 Year Red Miso, Hatcho Miso (Aged 2 Years), or Soybean Miso (1-Year Waka Hatcho)].

Manufacturer's Name: Westbrae Natural Foods (Importer). Made in Japan.

Manufacturer's Address: 1224 10th St., Berkeley, CA 94710.

Date of Introduction: 1974.

Ingredients: Barley Miso: Whole soybeans, barley, water, salt.

Wt/Vol., Packaging, Price: 1 lb poly bag.

How Stored: Shelf stable.

New Product–Documentation: Labels. 1974, undated. 3.5 by 5 inches. Black plus 1 color on tan. "Naturally fermented and aged in large wooden kegs. Packed on order and shipped without preservatives or additives of any kind." Labels. 1977. 4.5 by 3.5 inches. Paper. New design, with glossy gold, green, or red background. Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center. These were Westbrae's first soyfoods imported from Japan, from Mr. Kazama and Mitoku.

Westbrae Natural Wholesale Food Catalog. 1980. Spring. Red miso (*kome miso*) aged 2 years, brown rice miso (*genmai miso*) aged 1 year, barley miso (*mugi miso*) aged 2 years, Hatcho miso aged 2 years, soybean miso aged 1 year, natto miso. Each type comes in 1, 5, or 22 lb sizes. Red miso recommended retail price is \$1.36 per 1 lb bag. Westbrae now also sells Cold Mountain Miso (Red, Light Yellow, and Mellow White varieties).

Letter from Gordon Bennett. 1987. Oct. Gives year of introduction as 1974. Currently 8 varieties.

1733. Aihara, Cornelia. 1974. How to make miso using mugi koji (fermented barley). *Macrobiotic (The) (Chico, California)* No. 98. p. 53-55.

• **Summary:** Gives a large-scale recipe using 30 lb soybeans, 20 lb barley, 15 lb salt, and 7 cups barley koji. The mugi koji can be ordered from Janus Natural Foods, 1523 Airport Way, Seattle, Washington 98134. Or from Chico-San Inc., 1144 West First St., Chico, California 95926. Address: Chico, California.

• **Summary:** Soy-related recipes include: Miso soup (p. 19). Soy bean cake (made with whole soy beans, p. 45). Miso wakame soup (p. 90).

Page 137 lists "Meat Substitutes" including "Protoveg: Texturised vegetable protein made to look and taste like meat in several flavours." "Soyapro: A tinned [canned] texturised vegetable protein. Many other brands of TVP will appear on the market in the years to come."

1736. Corlett, Jim. 1974. Super natural cookery: Recipes for vegetarian gourmets. Newton Abbot, Devon, England, London, and Vancouver: David & Charles. 96 p. Illust. by Dave Colin. Index. 21 cm. [10+ ref]

• **Summary:** Among the "New Words" (p. 8) are miso and tekha [sic, tekka] powder (made from miso). Soy-related recipes include: Lentil, carrot and soy soup (p. 17). Soybean sprouts (p. 38). Gluten (Seitan, p. 56). Soy bean flours (p. 56). Soy sweet (dessert with soy flour. p. 56). Gluten cutlets (. 64). Soy bean cheese (to fu, p. 67). Soy sprouts (p. 67). Sakura's vegetable sukiyaki (with tofu, p. 69).

An identical 1975 edition was published in Washington, DC, by Acropolis Books. Address: England.

1737. Hannaford, Kathryn. 1974. Cosmic cookery. Berkeley, California: Starmast Publications. xixd + 264 p. Illust. by Lorena Laforest. 21 cm.

• **Summary:** This vegetarian cookbook contains 190 recipes created and tested at the communal One World Family Natural Foods Restaurant. Page 35 lists uses and seasonings of beans, including aduki beans and soy beans. Favorite seasonings for the latter are thyme, oregano, basil, green pepper, tomato, cheese, soy sauce, onion, or garlic. Soy-related recipes include: Soy grits (p. 75). Macroburger mix (with cooked soybeans, p. 83). Soy mayonnaise (with soy milk powder, p. 111). Chunky soy spread (p. 130). Miso tahini spread. Creamy soy spread (p. 131). Miso soup (p. 144). Miso-scallion broth (p. 145). Macro-sausage (with Soy Spread, p. 163). Spaghetti with miso sauce (p. 176). Super soybean casserole (p. 182). Miso sauce (p. 200). Soya carob nut brownies (with soy milk powder, p. 227). Address: Berkeley, California.

1738. Himalayan International Institute. 1974. *The Yoga way cookbook*. 1st ed. Honesdale, Pennsylvania: Himalayan International Institute. 203 p. *

• **Summary:** This is a natural foods, vegetarian cookbook. Page 7 contains basic information about various soyfoods. Soy-related recipes include: Soybean rice (p. 37). Soy burgers (p. 38). Soy tacos (p. 39). Miso soup (p. 99). Tofu-avocado sandwich (p. 193). Tofu salad dressing (p. 194).

1739. Hunter, Beatrice Trum. 1974. *Favorite natural foods: Adapted from a series of programs on WGBH, Boston*. New York, NY: Simon and Schuster. 219 p. Index. 21 cm. [154 ref]

• **Summary:** Contents: Foreword. 1. Vegetables, vegetables. 2. Perking up the salad bowl. 3. Sprouts (incl. legume seeds {alfalfa, chick pea, lentil, mung bean, peanut, pinto bean, soybean}, grain seeds, vegetable seeds, herb seeds, weed seeds, oil seeds {flax, safflower, sesame, sunflower}). 4. Whole grains. 5. The Cornell mix [for bread; Dr. Clive McCay]. 6. Sourdough. 7. Sauerkraut. 8. Yogurt. 9. Soybeans. 10. Satisfying that sweet tooth: Dried fruit desserts, confections, snacks. 11. Of special concern: Baby foods, brown-bagging, party fare, making good foods even better. Appendix.

Contents of chapter 9, Soybeans: Introduction. Soybean sprouts. Fresh green soybeans as a vegetable: Freezing, canning, drying. Recipes for whole dry soybeans (2). Making soybean pulp (put cooked, drained soybeans through a meat grinder; recipe for green peppers stuffed with soybean pulp). Roasting dry soybeans (soak, drain, and dry roast). Making soybean milk (recipes for spiced soybean milk, brown rice pudding with soybean milk). Making soybean curd (also called “soybean cheese” or “tofu.” From soybean milk, from fermented soybean milk, from soybean flour, from soybeans). Using soybean flours (three types: high-fat or full-fat, low-fat or medium-fat, minimum-fat or fat-free). 100% soybean flour cookies (grain-free). Other soybean products you can buy: Soybean grits and soybean flakes (with 1 recipe). Soybean lecithin (with 2 recipes). Tamari, miso. The soybean and you: Meat alternatives, tempeh, textured vegetable protein products (inferior), fabricated soy foods in school lunch programs (“a nutritional crime”). Avoid mock foods.

About the author: She is the author of numerous books and winner of the French Company’s Tastemakers Award. She and her husband, John, live in New Hampshire. Nationally known for her lectures and demonstrations on natural foods, she is a member of the Price-Pottenger Nutrition Foundation and twice a speaker for the Martha Jones Lectures in Nutrition at the Ashbury Theological Seminary in Kentucky. She holds a B.A. from Brooklyn College and a Master’s degree from Columbia University. She has done graduate work at State Teachers College in Buffalo, New York, and at Harvard University. A small

photo of Beatrice Trum Hunter appears on the front dust jacket of the hardcover edition. Address: New Hampshire.

1742. Kawamura, Wataru; Tada, Kazue. 1974. *Misoshiru hyakka* [Encyclopedia of miso soups]. Tokyo: Kosei Shuppansha. 230 p. Illust. No index. 19 cm. [Jap]

• **Summary:** Contents: Part I: Lecture of the miso scholar (sensei) (by Wataru Kawamura): 1. How to make delicious miso soups (recipes). 2. A talk about miso. 3. A talk about dashi soup stocks. 4. True stories. 5. About garnishes for soups. 6. Miso soups and health. 7. Topography/geography of miso. Part II: 100 selected miso soups in spring, summer, fall and winter (by Kazue Tada). In the beginning: Spring. Summer. Fall. Winter. Miso soups of homeland country villages (recipes). Miso teacher’s quick memos (hints).
Address: Miso teacher, 2-4-7 Kugenuma, Tachibana, Fujisawa-shi, Kanagawa-ken 251, Japan.

1743. Kikuchi, Grace. 1974. *Tofu recipes*. Ann Arbor, Michigan: Published by the author. 47 p. Illust. by Lou Bohr. No index. 22 cm. Spiral bound.

• **Summary:** This is the first book on tofu ever published in the Western world or in a European language. The author’s formal married name is Mrs. Chihiro Kikuchi. Contents: 1. To begin with: Homemade tofu, okara. 2. Soups and sauces: Clear and miso soups, mushroom tofu soup, tofu sauce for vegetables. 3. Poached, steamed, fried: Hiyadofu—chilled, yudofu—hot, stewed tofu, fried tofu, steamed tofu, ganmodoki. 4. Pots—one dish meals: Hamanabe, fresh pork and vegetables, chicken mizutaki, sukiyaki, shabu shabu, sin sul lo. 5. With fish: Seafood mizutaki, tofu steamed with fish, tofu with flounder, sakamushi, tofu and tuna fish. 6. With this and that: Stir-fried tofu, soboro domburi, mandoo, meatballs made with tofu, tofu with scrambled eggs, tofu with pork and miso, beef with tofu and chili peppers. Glossary. Address: 260 Sumac Lane, Ann Arbor, Michigan 48105.

1744. Kobayashi, Keizō. 1974. *Shōjin ryōri nyūmon* [Entry gate to Zen vegetarian cookery]. Tokyo: Shibata Shoten. 230 p. Illust. 22 cm. [Jap]

• **Summary:** The author was born in 1930. Address: Formerly asst. head cook at Eiheiji Zen Monastery. Now

head priest, Rinsho-ji, Tateoka, Murayama-shi, Yamagata prefecture.

1745. Kozel, Carlos. 1974. *Guía de medicina natural. I. Salud y curación* [Guide to natural medicine. I. Health and healing]. Viladrau (Gerona prov.), Spain: Ediciones Cedel. xii + 467 p. Illust. 23 cm. Vol. 1 of his *Guía de Medicina Natural* [Guide to Natural Medicine]. [Spa]

• **Summary:** About natural food and vegetarianism. Pages 185-91 discuss soya, which is called “vegetable meat” and from which one can obtain lecithin, soymilk, whole soy flour, miso, tofu, shoyu, etc. The nutritional composition of soybeans is given.

1746. Lo, Kenneth H.C. 1974. *Chinese vegetable and vegetarian cooking*. London: Faber & Faber, Ltd. 172 p. Index. 21 cm.

• **Summary:** This original edition, published in London, is smaller in height, has no illustrations, and 13 fewer pages than the American edition published the same year. The recipes are the same, but on slightly different pages; For details, see the American edition (1974).

1747. Lo, Kenneth H.C. 1974. *Chinese vegetarian cooking*. New York, NY: Pantheon Books (Div. of Random House). 185 p. Illust. by Tom Funk. Index. 22 cm.

• **Summary:** Originally published in 1974 in London, England, as “Chinese Vegetable and Vegetarian Cooking” by Faber & Faber, Ltd. However that book is smaller in height, has no illustrations, and 13 fewer pages than this American edition. The entire text has been lightly edited and re-set for American cooks and readers. The recipes are basically the same, but on slightly different pages, and with some titles slightly changed (e.g., from “sesame jam” to “sesame paste,” p. 133).

In the Introduction, under “Flavoring,” the following soybean products are listed: Soy sauce, black beans (salted), soybean paste (yellow and black), bean-curd cheese (red and yellow). Soy-related recipes include: Steamed bean curd with peanut butter sauce (p. 50). Hot-marinated bean-curd sticks [dried twisted yuba] with quick-fried [mung] bean sprouts (with “yellow bean-curd cheese” [fermented tofu], p. 60-61). The Lo Han dish of the monks’ mixed vegetables (with tofu, and “red bean-curd cheese” [fermented tofu], p. 72-73). Hot assembly of shredded bamboo shoots and bean curd... (with tofu and “bean-curd cheese” [fermented tofu], p. 74). Hot assembly of chestnuts, sliced lotus root, ginkgo nuts, peanuts, Chinese mushrooms, and bean curd (with tofu and “white bean-curd cheese” [fermented tofu], p. 75). Hot black bean and tomato sauce (Ratatouille Chinoise; with salted black beans and soybean paste, p. 82-83). Basic bean-curd soup (p. 105). Enriched bean-curd soup (p. 105). Soy eggs (with soy sauce, p. 125).

Note 1. This is the earliest English-language document seen (Feb. 2007) that uses the terms “yellow bean-curd cheese” or “red bean-curd cheese” or “white bean-curd cheese” to refer to fermented tofu.

There is an entire chapter titled “Bean Curd” (p. 135-48), with an introduction and the following recipes: Cold bean curd (with soy sauce and peanut oil). Cold bean curd with sesame paste or peanut butter (“Use 1½ tablespoons sesame paste,” p. 136). Hot-and-savory bean-curd pudding (with salted black beans). Hot-and-pungent bean-curd pudding. Red-cooked bean curd with bean-curd sticks [yuba] (with soybean paste and soy sauce; the sticks are about 20 inches long). Stir-fried bean curds. Bean curd stir fried with [mung] bean sprouts or spinach. Bean curd stir fried with green beans. Deep-fried bean curd stir fried with duck eggs and cucumber skins. Deep-fried bean curd stir fried with eggs, mushrooms, and wood ears. Stir-fried shredded bean curd with dried bamboo shoots, dried mushrooms, lily-bud stems, and seaweed. Clear-simmered bean curds. Clear-simmered bean curd with lettuce and cellophane noodles. Clear-simmered bean curd with [mung] bean sprouts, water chestnuts, and sliced cucumbers.

Note 2. This is the earliest English-language document seen (June 2003) that uses the term “sesame paste.”

1748. Newman, Marcea. 1974. *The sweet life: Marcea Newman’s natural-food dessert book*. Boston, Massachusetts: Houghton Mifflin Co. 161 p. Illust. by Linda Stine. Index. 29 cm. A 1981 revised edition contained 176 p. [63* ref]

• **Summary:** This early and beautifully presented natural foods cookbook contains very innovative and tasty tofu dessert recipes made with limited natural sweeteners and no dairy products. It discusses the harmful effects of refined and denatured foods, with details on white flour, sugar, oil, salt, eggs, milk, and baking powder [which contains alum, a product of aluminum; “it may even be harmful”].

Chapter 1, titled “Natural necessities: Equipment, techniques, and ingredients,” gives good definitions of and introductions to amasake (p. 6), miso (p. 10), tamari (p. 12), and tofu (soybean cheese, p. 13). Soy-related recipes include: Basic cake II with tofu sour creame (p. 25). Cheesecake tofu pie (p. 37). Cantaloupe cheesecake (p. 37, with tofu). Upside-down tofu cake (p. 38). Mincemeat filling with miso (p. 50-51). Tofu poppy seed filling (for pastries or phylo, p. 53). Instant tofu creame (p. 59). Tofu creame (p. 59). Tofu creame whip (p. 60). Tofu sour creame I and II (p. 60). Tofu custard (p. 62). Apple tofu delight (p. 82). Creame puffs with amasake filling (p. 82). Cherry tofu strudel (p. 88). Tofu sour creame cherry tart (p. 92). Thanksgiving squash-mincemeat pie (with miso in the filling, p. 98-99).

The inside dust jacket gives a brief biography of the author, who was born and raised in New York. In Berkeley,

California, she studied Japanese and natural-food cooking, and helped to start a “noodle bar” where she baked her first dessert. Now she lives in Boston and caters weddings, parties and school fairs with natural and organic foods and desserts.

An Appendix (p. 151-52) lists the name and address of 39 suppliers of natural foods in the USA (divided by region), and 2 in Canada. This list includes the following companies: Erewhon Trading Co. (33 Farnsworth St., Boston, Massachusetts 02210), Good Nature Distributing Co. (Box 447, Export, Pennsylvania 15632), Infinity Co. (173 Duane Ave., New York, NY 10005), Shadowfax (25 N. Depot St., Binghamton, NY 13901), Sundance Organic Food (R.D. #1, Box 146A, Coventry, Connecticut 06238), Walnut Acres (Penns Creek, Pennsylvania 17862; founded by Paul Keene), Collegedale Distributors (Box 492, Collegedale, Tennessee 37315), Laurelbrook Foods (Box 47, Bel Air, Maryland 21014), Tree of Life (Box 1391, St. Augustine, Florida 32084), Ceres, Inc. (2582 Durango Dr., Colorado Springs, Colorado 80910), Cliffrose (129 Coffman St., Longmont, Colorado 80501), Eden Foods (Box 100, Ann Arbor, Michigan 48107), Food for Life (420 Wrightwood St., Elmhurst, Illinois 60126), Akin Distributors (Box 2747, Tulsa, Oklahoma 74101), Arrowhead Mills (Box 866, Hereford, Texas 79045), Shiloh Farms (Box 97, Sulphur Springs, Arizona 72768), Sunrise Distributors (Box 5216, Phoenix, Arizona 83010), Erewhon Trading Co. (8454 Steller Dr., Culver City, California 90230), Janus Natural Foods (1523 Airport Way, South, Seattle, Washington 98134), New Day Distributors (1242 S. Berendo St., Los Angeles, CA 90006), The Well/Pure & Simple (795 West Hedding St., San Jose, CA 95126), Lifestream Natural Foods, Ltd. (724-26 W. 6th Ave., Vancouver 9, BC, Canada), and Natural Foodstuffs (1 Main St., Box 27, Sutton, Quebec, Canada).

Note: This book contains the earliest recipe seen (Dec. 2005) for a tofu cheesecake. It is also the earliest English-language document seen (Dec. 2005) that uses the term “cheesecake tofu pie” to refer to a tofu cheesecake. For the story of how Marcea got interested in tofu and wrote this book see: Marcea Newman. 1994. Oct. Re: Early work with tofu and tofu cheesecakes in America. Address: Boston, Massachusetts.

1749. Ohsawa, Lima. 1974. *The art of just cooking*. With Nahum Stiskin. Hayama, Japan and Brookline, Massachusetts: Autumn Press. 216 p. Illust. by Maurice Owen. Index. 19 x 23 cm. Reissued in 1984 as *Macrobiotic Cuisine* by Japan Publications, NY. 175 p. [26 ref]

• **Summary:** This work is based on Lima’s Japanese-language book titled *Macrobiotic Cookery* (1971). In 1953, at age 54, Lima Ohsawa first ventured beyond the shores of her native Japan. She and her husband, Georges Ohsawa, left on their first world tour. In 1955-56 they spent time with

Dr. Albert Schweitzer in Lambarene, Gabon. “Being vegetarian Dr. Schweitzer was always very interested in the nutritional assets of the soybean and asked me to show him different ways to prepare it” (p. 10). During this and many subsequent travels, Lima learned many traditional, natural recipes from around the world.

Contains numerous Japanese macrobiotic style recipes. Page 32 gives good definitions of miso and shoyu. Soy-related recipes include: Brown rice with soybeans (p. 53). Inarizushi (p. 55). Brown rice porridge with vegetables and miso (p. 58). Soya omochi (mochi with soya flour). Burdock with miso and lemon peel (p. 90). Broccoli and radish with miso dip (p. 92). Carrot with green beans and tofu (p. 95). Ninjin shiro-ae (with tofu, p. 93). Cucumber with wakame and walnut miso (p. 96). Cucumbers with miso and sesame (p. 97). Onion nitsuke with miso (p. 100). Onion goma-miso-ae (onion with sesame miso, p. 100). Eggplant nabeshigi-yaki (with miso, p. 101). Scallion and aburage nitsuke (p. 101). Scallion dengaku (with miso, p. 102). Renkon ikada age with kuzu-lemon sauce (p. 103). Kabocha miso ni (p. 106). Kabu miso-ae (turnips with sesame miso, p. 109). Daikon age rolls (with aburage, p. 114). Vegetable skewers with koya-dofu (dried-frozen tofu, p. 114). Kombu with shoyu (p. 117). Renkon miso inro (lotus root tempura with miso, p. 123). Coltsfoot buds with miso (p. 126). Wakame miso soup (p. 137). Mugi-miso soup (p. 137). Sake-no-kasu jiru (miso soup with sake lees, p. 137). Go jiru (soybean potage with aburage, p. 141). Oden with ninjin and gobo kombu maki (with aburage, p. 146).

Condiments and pickles (p. 154-57): Gomashio (sesame-salt). Tekka miso (sauteed vegetables with miso). Shigure miso (moist tekka). Miso sauté. Soybeans with miso and burdock. Soybeans with miso. Miso pickles (fall and winter). Sauces, spreads and salad dressings (p. 161-63): Lemon shoyu. Ginger shoyu. Orange shoyu. Tsuje-jiru dipping sauce (with shoyu). Goma joyu sauce (with shoyu). Scallion miso. Walnut miso. Citron miso. Goma miso (sesame).

Beans (p. 165-78). Black bean ni (the black beans are actually black soybeans. “In Japan this exquisitely sweet dish is a must on New Year’s Day. It gets even sweeter after standing for a day or two”). Gomoku-mame (soybean nitsuke).

Tofu ryori (p. 173-78; “Tofu or bean curd is rich in vegetable protein. Although it is rather *yin* in our classification of foods, the recipes I have included here balance its *yin* characteristics with *yang* so don’t hesitate to use it occasionally. It’s delicious in miso soup, stews and *nabe*, and as a dish by itself. It is available at Oriental food shops and can also be made at home.”): Homemade tofu. Unohana pouches (with okara and aburage). Gammodoki. Tofu with kuzu sauce. Tofu roll. Koya-dofu sandwich. Tofu nitsuke. Chinese dow-foo oroshi-ae. Tofu mold (with kuzu). Tofu tempura. Goma dofu (sesame tofu).

Squid and scallion miso-ae (p. 183). Salmon head soup (with soybeans, p. 183). Surimi shinoda (with aburage, p. 184). Red snapper in miso. Koi koku (with miso, p. 184). Egg tofu (p. 185). Amazake manju (sweet sake dumplings, p. 198). Amazake (homemade, using glutinous “sweet” brown rice, p. 207).

The section titled “*Kofu*: Wheat Gluten” (p. 85-86) includes recipes for Homemade kofu (wheat gluten, including Kofu loaf and Seitan), and Kofu cutlet. “First introduced to Japan from China by Buddhist monks, *kofu* became a very popular food in Zen temples. It is delicious in soups and stews and mixed with sautéed vegetables. *Kofu* cutlet looks, feels, and tastes like meat.” Seitan is made by simmering 5 cups cold wheat gluten, separated into small pieces, for 3 hours in shoyu, sesame oil, and minced gingerroot.

Dandelion coffee (made from roasted, ground dandelion root) and Yannoh (prepackaged grain coffee, made from 5 different grains) are described on p. 206-07.

The book, which contains many fish recipes, begins with a nice photo of Lima at age 75—she looks 20 years younger—and ends with a good glossary. Lovely illustrations, a wealth of original information on Japanese foods.

Note 1. This is the earliest document seen (July 2000) that mentions “Tekka miso” (spelled that way).

Note 2. This is the earliest English-language document seen (Feb. 2005) that used the word “kofu” to refer to wheat gluten. Address: Tokyo, Japan.

1750. Sandler, Sandra Takako. 1974. *The American book of Japanese cooking*. Harrisburg, Pennsylvania: Stackpole Books. 192 p. Illust. Index. 24 cm.

• **Summary:** The author, a third generation Japanese-American, reveals the secrets of successful Japanese-style cooking—specifically for the American cook. The three introductory chapters discuss tofu (p. 16, 23, 29, 36), shoyu (p. 20), and miso (p. 27, 35). Soy-related recipes include: Seafood in miso sauce (p. 54). Shellfish in soy-mirin sauce (p. 55). Miso soups (p. 57-59). Tofu & scallions soup (p. 60-61). Instructions for sprouting beans (incl. mung- and soybeans, p. 72-74). Vegetables with tofu & sesame dressing (with white miso, and “white sesame seeds, toasted and ground,” p. 77-78). Eggplant and green peppers with miso dressing (p. 78-79). Fried okara (p. 79-80). Sweet cooked soybeans (p. 82). Inari-zushi (p. 89-90). Fish misoyaki (p. 111). Miso abalone (p. 112-13). Beef misoyaki (119-20). Sukiyaki (with tofu and soy sauce, p. 121-22). Pork and tofu (p. 135-36). Stuffed tofu (p. 138-39). Chicken teriyaki (with soy sauce, p. 145). Fresh tofu (p. 154-55). Homemade tofu (p. 155-57). Deep-fried tofu (p. 157). Batter-fried tofu (p. 158). Yakidofu (p. 158-59). Aburage (p. 23, 159). Fox noodles (p. 167-68). Udon in miso shiru (p. 168). Tempura and udon (p. 168-69). San bai zuke (p. 175).

Also discusses azuki beans (p. 23, 178), sweet azuki bean paste (*koshi-an*), sesame seeds, sesame oil (p. 28), sea vegetables, and mochi.

1751. Shinoda, Osamu. 1974. *Chûgoku shokumotsu-shi* [History of foods and diet in China]. Tokyo: Shibata Shoten. 389 p. Illust. Index. 21 cm. [Jap]

1752. Watanabe, Tokujii; Ebine, H.; Okada, M. 1974. *New protein food technologies in Japan*. In: A.M. Altschul, ed. 1974. *New Protein Foods*. Vol. 1A. Technology. New York: Academic Press. 511 p. See p. 414-53. Chap. 9. [80 ref]

• **Summary:** Contents: Introduction: Soy products, fish products, enzyme applications. Tofu: General description, new materials, new type products, large-scale production, trends in cost, kori-tofu and aburaage. Miso: General description, new technologies, new type products, problems of mycotoxin, packaging and preservation, trends in cost and consumption. Kamaboko and fish sausage—fish jelly: General description, new technologies, new materials—frozen surimi, packaging and preservation, trends in consumption. Textured vegetable protein: Soybean protein curd, wheat gluten, soybean protein sponge. Hydrolyzed vegetable protein (HVP). New enzyme applications: Liquefied fish protein concentrate (LFP), collagenase for poultry processing, removal of beany flavor from soybean by enzyme treatment, microbial rennet. The protein food structure of Japan.

Fig. 13 (p. 47) shows 3 pie charts, each giving the percentage of protein intake per capita from various sources at three different time periods. In 1921-25 only 9% of the total protein came from animal sources (6% from fish and 3% from other animal sources); 42% came from rice, 21% from soybeans, and 14% from cereal grains other than rice. In 1951-55, shortly after World War II, some 23% of the total protein came from animal sources (17% from fish and 6% from other animal sources—such as milk, eggs, chicken, pork, and beef); 32% came from rice, 15% from soybeans, and 20% from cereal grains other than rice. In 1969, some 30% of Japan’s total protein intake came from animal sources (21% from fish and 19% from other animal sources); 22% came from rice, 12% from soybeans, and 13% from cereal grains other than rice. Thus the main trend seen during this period is the steady increase in the percentage of protein from animal sources and the corresponding decrease from plant sources. Source: Food Balance Sheet. 1970. Ministry of Agriculture and Forestry. Fig. 14 shows that these trends are apparently related to increasing per capita income and GNP. Address: 1-2. National Food Research Inst., Ministry of Agriculture and Forestry, Tokyo, Japan; 3. Tokai Regional Fisheries Research Lab., Fishery Agency, Ministry of Agriculture and Forestry, Tokyo, Japan.

1753. Chuo Miso Kenkyujo. 1974? Miso no hanashi [About miso]. Tokyo: Zenkoku Miso Kogyo Kyodo Kumiai Rengokai. 10 p. Undated. [Jap]

• **Summary:** An excellent source of statistics on types of Japanese miso and composition by type. Contains many color tables. Address: Tokyo, Japan.

1754. Janus Natural Foods. 1974? Home made mugi miso (Leaflet). Seattle, Washington. 2 p. Undated. 28 cm.

• **Summary:** Describes in detail how to make miso at home using 20 lb soybeans, 20 lb barley koji (dried), and 8 lb salt. Janus sells barley koji.

Note: This is an excellent, accurate recipe, with exact ingredients, a 12-step process, and many notes. Address: 1523 Airport Way South, Seattle, Washington 98134. Phone: (206) 624-1084.

1755. Canupp-Penrod, R. Lewis. 1975. Soy you want soy sauce [Make yer own]. *Mother Earth News* No. 31. Jan. p. 36-37. [2 ref]

• **Summary:** The author is writing a book on soybean products. "Perhaps the best description of the basic chemical process involved [in making soy sauce] was given by a traveler named Bishop, who visited Korea between 1894 and 1897. He wrote, 'Oil of sesamum is largely used in cooking, as well as vinegar, soy and other sauces of pungent and objectionable odors, the basis of most of them being capsicums and fermented rotten beans.' In Bishop's time, Koreans made soy sauce in the fall, after the harvesting of the dried soybeans." He proceeds to describe the ancient Korean process for making mei-ju [meju, soybean koji] and from it soy sauce.

Then he describes briefly how to make Korean miso (*toin-chang {doen-jang}*), tofu (*yu-bu*), soybeans boiled in soy sauce (*kong-cha-ban*), dry roasted soynuts, soy sprouts, and pickled soy sprouts.

Illustrations show: (1) A truncated cone of pounded soybeans, 8-10 inches high by 12 inches in diameter, as it begins its period of fermentation on a homemade mat of cattail leaves. (2) The cone is later enclosed in tapered strips of unbleached muslin and hung from a hook—as under the eaves or a rafter.

1756. Kushi, Michio. 1975. The unifying principle in the world of biology; Natural agriculture and home food processing. *Michio Kushi Seminar Report (Brookline, Massachusetts)*. Winter. No. 5. Feb. 11. p. 13.

• **Summary:** A student asks "Should miso be boiled or not?" Kushi answers: "It doesn't matter. Again, it depends upon what you want. If you want to have yin type of miso with plenty of enzymes present in the soup to aid in good digestion, then you should not boil the soup after adding the miso. But, if you would like to have a strong miso soup which will make you yang, then you can boil it. This is a

very controversial argument among macrobiotic people: should miso be boiled or not. It is a controversy not only in America but all over the world." Address: Brookline, Massachusetts.

1757. Laurelbrook Foods. 1975. A little bit about our food. Bel Air, Maryland. 6 p. Feb. 28 cm.

• **Summary:** Laurelbrook now distributes about 43 different food products, plus 7 non-food products. Each of these is described, including wheat, brown rice, soy flour (ground from lightly toasted beans by arrowhead mills), granola, tamari ("High quality soy sauce from Japan, made from whole soybeans, wheat and sea salt..."), miso ("A thick soybean paste from Japan." Hacho miso, Mugi miso, and Kome miso are available), Deaf Smith peanut butter, vegetable oils (expeller pressed and unrefined), sea vegetables, kuzu, umeboshi (salt pickled plum with chiso [shiso, aojiso] leaf). Address: P.O. Box 47, Bel Air, Maryland 21014; Raleigh Branch: 330 W. Davie St., Raleigh, North Carolina 27601.

1758. McCormick, Sally. 1975. Azuma Sukiyaki House: Authentic Japanese cuisine and atmosphere!—5120 N. Broadway, Chicago (Ad). *Chicago Tribune*. March 15. p. G10.

• **Summary:** Azuma is Chicago's oldest and finest Japanese restaurant. "The Azuma dinner includes Sukiyaki, a generous portion of prime rib slices with fresh mushrooms, bamboo shoots, Tofu (soy bean cakes), Shiratake [Shirataki] (yam noodles) [thin konnyaku noodles] and assorted fresh vegetables." Azuma also serves Cold tofu [Hiya-yakko], Miso shiru [Miso soup], Beef Teriyaki, Chicken Teriyaki and Salmon Teriyaki. Four photos show Azuma Sukiyaki House.

Note: A similar ad appeared in the 9 Oct. 1975 (p. N17) issue of this newspaper.

June. [12 ref. Jap]

Address: Niigata-ken Shokuhin Kenkyusho, Niigata, Japan.

1767. Erewhon Trading Co. [Los Angeles, California].

1975. Wholesale price list. July 1975. Culver City, California. 10 p. Catalog and price list.

• **Summary:** On the front cover is a copy of an analysis of carrots performed by Agri-Science Laboratories Inc. of Los Angeles. They contain no Organo-phosphates—None detected as Parathion < 0.010 ppm.

Products include: Whole grains. Cereals. Flours—Freshly milled whole grains (incl. Raw soy flour, organic). Beans (incl. Soybeans, organic, Texas {10 or 16 lb}, Soybean flakes, organic, Texas). Butters (incl. Peanut butter, Sesame butter). Applesauce. Carbonated drinks. Juice. Chips. Goodies. Nik's Snaks. Granola. Soybean products: Tamari soy sauce (4 sizes, 8 oz to 4.7 gal). Hacho miso, soybean paste (1 lb or 44 lb). Mugi miso, Barley-soybean paste (1 lb or 44 lb). Kome miso, Rice-soybean paste (1 lb or 44 lb). Sea vegetables. Specialties (incl. Kuzu arrowroot, umeboshi {Plums pickled in brine}, Sesame salt). Seeds. Nuts. Fresh produce—Organic. Dried fruit—Bulk. Dried fruit—Packaged. Books and flyers (Deaf Smith County Cookbook, Oil Story, Pasta Cooklet). Redwood rennetless natural cheeses (Raw or pasteurized). Pasta (Bulk or packaged, incl. Soya-rice shells). Salt. Oils (incl. Soy oil). Erewhon packaged goods: Grains, cereals, flowers, seeds, beans. Teas. Celestial Seasonings bulk herb teas or tea bags. Cosmetics. Cooking utensils.

Inserted is a letter on Erewhon letterhead from Loren M. Spector, general manager, dated 1 July 1975. It begins: "Dear customers: Please find enclosed our summer price list." On the back are "July specials." Address: 8454 Steller Dr., Culver City, California 90230. Phone: (213) 836-7569.

1768. Honorof, Ida. 1975. "Miso"—the miracle soybean food: Man does not live by amino acids alone. *Report to the Consumer* 5(106):104. July. [4 ref]

• **Summary:** Contains a long translation by Herman Aihara of Dr. Akizuki's account of miso soup curing victims of the Nagasaki atomic bomb. Address: P.O. Box 5449, Sherman Oaks, California 91493.

1769. Tara, René. 1975. Re: Interest in making miso.

Writing European macrobiotic cookbook. Letter to William Shurtleff at New-Age Foods Study Center, Aug. 17. 2 p. Handwritten, with signature. [1 ref]

• **Summary:** "I was so happy to see your note in the East-West Journal as I have for a long time wanted to learn more about miso making and different uses of the soybean. Do you have completed books that I might buy from you and if so how much?"

"I am in the process of writing a European Macrobiotic Cook Book and would like to discover how to do it in this country... We live in a small town more or less in the country. I am sorry I missed your article on miso & tofu but

it is not always so easy to get E.W.J. here. Please let me know about the books. Do you know Bev & Nahum Stiskin? Thank you." Address: 30 B Market St., Bradford-on-Avon, Wilts. [Wiltshire], England.

1770. Eden Foods. 1975. Wholesale pricelist. 4601 Platt Rd., Ann Arbor, MI 48104. 19 p. Aug. Catalog.

• **Summary:** This catalog is large enough to have a table of contents on page 1, along with an illustration (line drawing) of large windmills. Page 7 lists "Tamari, Miso & Condiments." Tamari Soy Sauce is now sold under 3 labels (Erewhon, Japan, and Lima-Chico San). Miso (Mugi, Hacho, and Kome) is also still sold under the Erewhon label. Mugi miso is described as "barley-soy paste" and Kome miso as "rice-soy paste." Also includes "Kuzu Arrowroot, Umeboshi Salt Plums (Erewhon), and Sea Salt-white French." Address: Ann Arbor, Michigan. Phone: (313) 973-9400.

1771. Erewhon Trading Co. 1975. Erewhon talking food. Miso and tamari (Ad). *East West Journal* 5(10):43. Oct. 15.

• **Summary:** A lengthy description of how traditional miso and tamari (shoyu) are made in Japan and some philosophical reflections on the processes and ancient wisdom that created them. Address: Boston, Massachusetts.

1772. Erewhon Trading Co., Inc. 1975. Erewhon harvest '75. Boston, Massachusetts. 48 p. Oct. Catalog and price list.

• **Summary:** On the front cover, a brown and white photo shows a rustic farmer, holding a pitchfork, standing by his horse and hay wagon with wife and child. On the rear cover, Erewhon's president, Tyler Smith, writes a poetic passage about the beauty of wheat. Products include: Grains: Lone Pine in Arkansas grows organic short grain and long grain brown rice. Wehah Farms in California grows organic short grain brown rice and non-organic sweet brown rice [glutinous rice]. Baker in Louisiana grows organic medium grain brown rice. Organic hard red winter wheat is grown in Nebraska and in Deaf Smith, Texas. Organic hard red spring wheat is grown by Ted Whitmer in Montana and Ricke in Minnesota. Organic hard amber durum wheat is grown by Whitmer in Montana. Organic soft white pastry wheat is grown by Wild Winds in New York. Other organically grown grains are pearled barley (Idaho), whole unhulled buckwheat for sprouting, hybrid yellow or white corn (Deaf Smith), open-pollinated yellow corn (Minnesota), blue corn, whole oats, and rye. Cereals include organic soy flakes from Deaf Smith (25 lb). Flours include organic soybean flour (25 lb, steelground, full-fat). Pasta (packaged or bulk) includes Japanese soba, Soy Rice Shells.

Snacks from "Erewhon L.A." include Chico-San Yinnies, and Date-Nut Delight. Nik's Snaks (p. 8): This full page lists about 30 products. Of these, eleven are "tamari-

roasted" whole-food snacks. The 30 products are sold in 5 sizes: 2.5 oz, 3.5 oz, or 6 oz. pick-up packages, or 25 lb bulk. The soybeans (dry roasted with tamari, no salt) are sold only in 25 lb packs. Other tamari-roasted seeds include: Spanish peanuts, sunflower seeds, roasted almonds (all 2.5 oz or 25 lb), cashews or pumpkin seeds (25 lb). Non tamari-roasted products include: Raisin walnut mix. Roasted mixed nuts. Raw mixed nuts. Raisin nut mix. Peanut raisin mix. Trail mix (Honey almond granola, roasted peanuts, raw sunflower seeds, date pieces, raisins, and sea salt). Honey almond granola. Chia seeds. Bee pollen. Alfalfa seeds. Date sugar. etc. Erewhon Aztec organic corn chips. Baked goods from Cable Springs Bakery in Cambridge, Massachusetts. Fruit juices from Erewhon, Heinke's, Knudsen, Lehr's (natural grape juice from Germany), and Biotta (Swiss Vegetable juices).

Dairy Products: Cheeses from Alta Dena (also kefir and yogurt) in California, Superior Cheese Co. in Massachusetts, Redwood Natural Cheese Co. in California. Also Favorite Foods yogurt.

Dried fruit, including organically grown Monukka and Thompson raisins, prunes, dates, apricots, apples, Bing cherries, black mission figs, and Calimyrna figs. Peanut-, apple-, sunflower-, and sesame butters. Sesame tahini. Pure & Simple "fruit butters sweetened with honey only; terrific old-fashioned jams (apple, apricot, peach, plum, raspberry, strawberry, grape, cherry). Erewhon apple sauce. "Pumpkin Sour" apple sauce and apple butter made in Plainfield, Vermont. Tree of Life fresh fruit preserves from Florida (8 varieties).

Seeds & nuts, incl. Erewhon organic soybeans in 1-lb packs, and Erewhon organic stoneground soybean flour in 24-oz packs. Arrowhead Mills packaged products, incl. Bulghur-soy grits (24 oz), Soy flakes (16 oz, organic), Roasted soy flour (24 oz, organic). Beans, incl. Aduki (25 lb, from Japan or Mainland China), yellow soybeans (50 lb, organic, New York), black soybeans (25 lb, non-organic from Japan, or organic from New York), green soybeans [dry] (25 lb, organic). Erewhon granola (17 products, including various sizes), Arrowhead Mills granola, Back to Nature granola (unsalted).

Oils, incl. Arrowhead Mills soybean oil (pints, quarts, or 5-gallon jug). Honey. Baking, incl. Premose barley malt, and Yinnies grain syrup from Chico-San. Tea, incl. 2 pages from Celestial Seasonings, and Erewhon Mu tea (9 or 16 herbs), Lotus root tea, Kukicha-branch twig tea. Springwater.

Tamari & Miso: 4 pages of descriptions and prices for Hacho miso (all misos are sold in 1 lb or 44 lb keg), Mugi miso, Kome miso, Tamari soy sauce [actually shoyu] (8 oz, pints, quarts, ½ gallons, gallons, or 4.7 gallon tin), Barley koji (1 lb). Specialties, incl. Unrefined sun-dried sea salt with natural trace minerals from the north coast of Brittany in France, Tekka, kuzu, umeboshi, sesame salt, Herbamare

salt, nigari, brown rice vinegar, non-alcoholic beer (Birell, Kingsbury), Bambu instant coffee substitute.

Fearn Soya Foods: Soya granules, Soy-O wheat cereal, Soy-O corn bread & muffin mix, Soy-O bran muffin mix, Soy-O pancake mix–buckwheat, Soy-O pancake mix–wholewheat, Sesame burger mix, Natural soya powder.

Sea vegies: Agar-agar, dulse, hiziki, kombu, wakame, nori seaweeds (a description of each is given).

Erewhon certified organic produce, incl. Daikon grown in California. Soaps, incl. Cattier clay products and Dr. Bronner's Peppermint castile soap, Orjene, Nature's Gate, Tom's Natural Soap.

Cookware, mostly imported from Japan, incl. Soy [sauce] dispenser, 4½ inch. Growing [sprouts and sprouters]. Cast iron. Flyers, incl. Talking Food series, Natural recipes (3 by 5 inch tear-off pads. Soy-related recipes include: Soy au gratin, Soy casserole, Miso soup, Soyburgers, and Soy loaf).

A map shows Erewhon's delivery region (Maine, New Hampshire, Massachusetts, Rhode Island, Connecticut, New York, New Jersey) and schedule. The company also has an office near New York City at 303 Howe Ave., Passaic, New Jersey 07055. Phone 212-594-6455.

Note 1. This is the earliest document seen that uses the word "vegies" (spelled as such, one of two documents) to refer to vegetables, or "Sea vegies" to refer to sea vegetables (edible seaweeds).

Note 2. This is the earliest document seen (May 2006) that uses the term "trail mix" to refer to a non-perishable mixture of dried fruits, seeds, nuts, roasted soybeans, granola, etc. to be eaten as a snack, as when hiking or walking. Nik Amartseff coined the term "trail mix" and launched the first commercial trail mix product through Erewhon Trading Co. in 1974. At the time, Nik was studying and practicing macrobiotics in Boston, Massachusetts. By the late 1970s several brands of trail mix were on the market in both natural food stores and supermarkets; by the 1980s there were many, as it became a mainstream American snack. Address: 33 Farnsworth Street, Boston, Massachusetts 02210. Phone: 617-542-1358.

1773. Erewhon [Los Angeles, California]. 1975. Erewhon. November/December 1975. Culver City, California. 22 p. Catalog and price list.

• **Summary:** On the front cover is an illustration (line drawing) of Benjamin Franklin, wearing a fur hat and glasses. Below is a quote from his *Poor Richard's Almanac* (1739): "Keep thy shop and thy shop will keep thee." Other quotes are scattered throughout the catalog.

Products include: Pasta (packaged and bulk). incl. Soya-Rice Shells (organic) "Eat to live, Live not to eat." Bulk staples–Grains (including Sweet Rice from California), flours (freshly milled whole grain), cereals, beans (incl. organic soybeans and soybean flakes from Texas), seeds.

"Knowledge like a rich Soil, feeds if not a world of Corn, a world of weeds." Erewhon packaged staples–Grains, flours, cereals, beans (incl. organic soybeans), seeds. "A long life may not be good Enough, but a good Life is long Enough."

Granola. More packages–Arrowhead grains, cereals, and beans, Fearn Soya Foods (from Fearn Soya Products, incl. Soy-O-Pancake Mix {Wholewheat or Buckwheat}, Soya Powder {Natural or Low Fat}), Earthwonder meals-in-a-bag. Arrowhead Mills The Simpler Life food storage program (nitrogen packed in #10 metal cans; incl. soybeans and soy flakes). Juice. "They that cannot Obey, cannot Command." Spreads (nut butters {peanut butter, sunflower butter, sesame butter, sesame tahini} and fruit butters {Pure and Simple, sweetened only with honey}). Rocky Hollow Herb Farm's line of organic and natural herbs, spices, and essential oils. "Time is an Herb that cures all Diseases." Goodies: Nik's Snaks, chewies (incl. pemmican), chips (incl. Mother Earth Tamari Chips, Corn Munchies–Pure & Simple). "To lengthen thy Life, lessen thy Meals." Rennetless cheese from Redwood Natural Foods. Dried fruit (bulk or packaged, incl. calymyrna figs, medjool dates, monukka raisins). Tamari & miso (Tamari soy sauce–4 sizes aged 2 years, Hacho miso–3 sizes aged 2 years, Mugi miso–3 sizes aged 18 months, Kome miso–3 sizes age not given). Vegetable oils (incl. Arrowhead Soy Oil in 3 sizes). Garden fresh produce. Sea vegetables. Herb teas (incl. Celestial Seasonings). "Make Haste slowly." Body care (incl. Tom's soap and shampoos, Dr. Bronner's soaps, Cattier products), "When the well's dry, We know the worth of Water." Potpourri: Condiments (incl. "kuzu arrowroot, umeboshi (plums pickled in brine)," cookware (Quaker City grain mill, Corona stone mill, Mac steel utility knife, Soy sauce dispenser), publications). "Hunger is the best Pickle." Important stuff (Ordering information). "Drive thy Business, let it not Drive Thee."

On the last page, John Fountain extends "grateful appreciation to all those whose positive accomplishments have created Erewhon: Lima and George Ohsawa, Aveline and Michio Kushi, Cornelia and Herman Aihara, Michel Abehsera, Yvette & Jacques DeLangre, William Dufty, Frank Ford, Paul Hawken, Carolyn Heidenry, Roger Hillyard, Bob Kennedy, Bruce McDonald, Tommy Nakayama, Shane and Lou Olds [sic, Shayne Oles], Fred Rohe, Dr. Pietro Rotundi, Evan Root, Tyler Smith, Bill Tara, our customers, staff, suppliers, and growers, Susan and Lou Remy and all." Address: 8454 Steller Dr., Culver City, California 90230. Phone: (213) 836-7569.

1774. Shurtleff, William. 1975. Chronology of early tofu and miso classes in California and Hawaii: 25 Oct. 1975 to 14 Feb. 1976. Lafayette, California. 1 p. Unpublished manuscript.

• **Summary:** Each class started with a talk about soybeans, soyfoods protein, world hunger, and meatless/vegetarian

diets. Then a series of about 25 color slides demonstrated how to make tofu at home. Other slides showed favorite tofu recipes and how tofu was made in a traditional Japanese shop.

1975 Oct. 25–We do our first real “Tofu Class” at Westbrae Natural Foods in Berkeley, California, arranged by Bob Gerner and Liz Horowitz. Thrilling to have an audience of about 14 interested people. On Oct. 30 at Westbrae 16 people attend, and on Nov. 8, 18 people.

November tofu classes: Nov. 14th–Rainbow Grocery (arranged by Bill Crollius), 23rd–Esalen Institute in Big Sur (John Russel).

December tofu classes. 2nd–We do a big tofu class in living room of 790 Los Palos Dr. with lots of publicity from a big newspaper article on our work; 47 attend. 4th–Acalanes (Sandy Hills, 89 attend), 6th Westbrae (Bob Gerner), 7th–San Francisco Vegetarian Society (Dixie Mahy, 67 attend), 8th–Seventh-day Adventist Pacific Union College (Mary Eighme, 48 attend), 11th–Dawn Horse Bookstore in S.F. (Moe).

1975 Dec. 12–*Book of Tofu* in hand. Since we started it on 22 Oct. 1972, it had taken just about three years to write.

Dec. 13–Sept. 1976–I hand deliver *The Book of Tofu* to many bookstores and food shops that wish to sell it, typically selling 4–50 per stop at 40% discount: Communion Vegetarian Restaurant #2, Nutrition in a Nutshell, Open Sesame, Lafayette Natural Foods, San Francisco Vegetarian Society, Kinokuniya Bookstore, Rising Sun (440 Judah St. in San Francisco), Diablo Oriental Foods, San Jose Tofu Co., Soko Hardware, Effie Chow & East West Academy, Ted Nordquist (1536 Versailles Ave., Alameda, CA 94501), The Wok Shop (804 Grant Ave., SF), Westbrae Natural Foods, etc. By 24 July 1976, I had distributed 266 copies.

December tofu classes after we have our book: 13th & 14th–Jacques Delangre (Paradise, CA), 16th–East West Academy (Effie Chow), 17th–Westbrae, 18th–San Francisco Zen Center (Ed Brown), 19th–Fairfax (M. Squire).

Tofu classes/lectures in January 1976 in Northern California: 5th–Westbrae, 7th–St. Andrew’s Church in Walnut Creek (Dorothy Headley), 8th–Kepler’s Bookstore (Jeffrey Shurtleff & Hank Maiden) 12th–Odiyan, where I see David Mastrandrea after many years, 14th–Berkeley Co-op Natural Food Center at 1414 University Ave. (Susan Kishi, with Ted Nordquist and Janet Fehring [Ahava] helping to make tofu dip; 105 attended), 15th–San Francisco Medical School and East West Academy of Healing Arts (Effie Chow), 17th–Persimmon (Peter Godfrey), 20th–United Energy Co-op (Sri Ramon).

Jan. 16–18–Visit Bubba Free John at his community. Do and film a program on tofu.

Jan. 20–30?–Tofu trip to Los Angeles with mom and Akiko. Many tofu and miso classes. 22nd–East West

Academy of Healing Arts (Effie Chow in a church), 24th–weird Los Angeles Vegetarian Society (Blanche Leonard, 150 people attend), 25th–East West Center (P. Retzsky), 27th–Dr. Harry Miller and Loma Linda Foods (70 attend), 29th–Ojai (Luke Gatto). We visit Frazier Farms, a huge natural foods supermarket in Escondido, then go to San Diego for an interview with *Well Being* magazine (David & Barbara Salat).

Feb. Tofu classes: 4th–Walnut Creek Co-op, 6th–Albany church (Nancy Dohur).

Feb. 10 to Oahu, Hawaii. Feb. 12th–tofu class for Seventh-day Adventist group (Naomi Yamashiro, 80 attend), 13th–Honolulu, Hawaii, Kyukendall Hall at at Univ. of Hawaii at Manoa (David Lee “Kalm” Sukowske, 140 attend). Then Feb. 14 arrive in Japan. 30-minute KQED TV special on tofu we made shown in California after we left. Expected viewership is estimated at 45,000.

In summary, from October 1975 until February 1976 we did 35 tofu and miso programs in California and Hawaii plus numerous media appearances and interviews. 1,300 people attended these classes. We requested that an admission of no more than \$1 per person be charged. Our honoraria, shared with the sponsors, totalled \$600. We also sold 366 copies of our books.

Note 1. This is the earliest document seen (Dec. 2001) concerning a natural foods retail chain–Frazier Farms natural foods supermarket.

Note 2. This is the earliest document seen (June 2002) concerning the work of Ted Nordquist with soyfoods. Address: 790 Los Palos Dr., Lafayette, CA 94549.

1775. Singer, Peter. 1975. *Animal liberation: A new ethics for our treatment of animals*. New York, NY: New York Review. Distributed by Random House. xix + 301 p. Oct. Illust. Index. 18 cm. Paperback edition published Sept. 1977 by Avon Discus. [200* ref]

• **Summary:** This book, a milestone in and “bible” of the animal rights movement worldwide, first popularized the concepts of animal rights and speciesism (pronounced SPEE-shees-iz-um, a term first used in 1973) as logical extensions of human rights and racism. It helped to make 1975 a year that saw explosive growth in the animal rights and vegetarian movements.

The author, an Australian philosopher, argues for an end to oppression and exploitation of non-human animals, discusses animal experimentation and factory farming, and presents vegetarianism as an opportunity to take a political, economic, and moral stance in our daily lives.

Contents: Preface (It begins: “This book is about the tyranny of human over nonhuman animals. This tyranny has caused and today is still causing an amount of pain and suffering that can only be compared with that which resulted from the centuries of tyranny by white humans over black humans. The struggle against this tyranny is a struggle

as important as any of the moral and social issues that have been fought over in recent years”). Acknowledgments. 1. All animals are equal... or why supporters of liberation for blacks and women should support animal liberation too. 2. Tools for research... or what the public doesn't know it is paying for. 3. Down on the factory farm... or what happened to your dinner when it was still an animal. 4. Becoming a vegetarian... or how to reduce animal suffering and human starvation at the same time. 5. Man's dominion... a short history of speciesism. 6. Speciesism today... defenses, rationalizations, and objections to animal liberation. Appendices: Cooking for liberated people (incl. Seventh-day Adventists, bread, peanut butter, tahini, miso, hummus, and Tartex, Chinese recipes, mung bean sprouts and tofu, Indian recipes, Middle Eastern recipes, flat Arabian bread, chickpeas and felafel, Italian recipes, macrobiotic recipes {incl. soy sauce, soybeans}, meat substitutes {incl. TVP, Granburger, Protoveg, Itona, Vitpro, Loma Linda meatless frankfurters, imitation bacon bits}, and milk substitutes—often made from soybeans), further reading, organizations.

Singer's book was not just a philosophical treatise. It was a call to action. Invoking the concept of speciesism, Singer deplored the historic attitude of humans toward non-humans as a “form of prejudice no less objectionable than racism or sexism,” and urged that the liberation of animals become the next great cause after civil rights and the women's movement. Singer's popular book produced two important effects. First, it reintroduced to the anti-vivisectionist cause an intellectual basis, a philosophical orientation, and a moral focus. Second, it attracted to the animal rights cause a host of new activists who started many new organizations. The most active and visible of these has been PETA (People for the Ethical Treatment of Animals, in Washington, DC), which by 1988 was thought to have 200,000 dues paying members in the USA.

Note: This is the earliest document seen (May 2008) that mentions Itona, a British brand milk- and meat alternatives. Address: Australia.

1776. Erewhon Trading Co. 1975. News from nowhere (Japanese fermented foods—Miso, tamari, and koji). *East West Journal*. Nov. 15. p. 29.

• **Summary:** The subtitle states: “Erewhon news from Nowhere is a regular *East West Journal* column providing information about food. We hope that this will be a valuable educational service, enabling readers to select what they eat knowledgeably. If you require more information about food, we invite you to visit us at our retail stores.” Note that though the column is written in the first person, no author is given.

“In my opinion the most fundamental change in the creation of traditional fermented foods occurred with the shift of the Japanese rural-based economy after World War II. The movement of the population to the cities and the

emphasis on production and manufacturing by large numbers of city dwellers who consumed increasingly larger amounts of food created a demand for soybeans beyond the capacity of the rural of the rural population's productivity. The Japanese turned to America for their soybeans and began to use varieties that did not lead to the fine product to which the native beans had formerly contributed. The result was an economic necessity for research, carried out by American and Japanese technicians, and the results created several basic changes in the manufacturing process.

“First, the koji mold was investigated, and out of the hundreds of strains of mold bacteria [sic] present in the traditional mold culture, certain strains were isolated and propagated for their effectiveness to create the fermentation under laboratory conditions. Thus, new strains of ‘hybrid’ cultures were developed that would break down the American beans of inconsistent quality. The technicians failed to see the process as a whole, not realizing that the long-term fermentation and great attention in handling the raw materials at different stages was an art that depended on a great variety of naturally occurring bacteria to produce an environment where natural competition worked to strengthen the culture.”

“Except for the small number of true traditional makers in Japan, I would say that Americans in their own backyards will, within the next ten years, be producing finer miso and tamari than the majority of producers currently working in Japan.” Address: Massachusetts.

1777. Lambert, Pat. 1975. Classes to demonstrate cooking with tofu. *Contra Costa Times (Walnut Creek, California)*. Nov. 28. p. 13.

• **Summary:** “William Shurtleff and Akiko Aoyagi, co-authors of ‘The Book of Tofu,’ will present two demonstrations next week on creative ways to serve tofu (soybean curd) and miso (fermented soybean paste).

“The first will be Dec. 2 from 7:30 to 9:30 p.m. at 790 Los Palos Manor, Lafayette [the Shurtleff's home], and the second, held under the auspices of the American Nutrition Society is dated for Dec. 4. Registration for the Dec. 2 presentation is \$1. For reservations cal 283-2991.

“The Dec. 4. presentation will be at 8 p.m. in the multi-purpose room of Acalanes High School, Lafayette. There is a \$1.50 fee for adults and 50 cents for students...

“‘Tofu contains no cholesterol and little saturated fats,’ says Sandy Hills, president of the society's Northern California chapter... Tofu can be purchased at most health food stores for approximately 39 cents per pound but, according to Shurtleff, tofu has a more delightful flavor when prepared at home.” Three black-and-white photos (by Eric Rahkonen of the Times) show Shurtleff and Aoyagi making tofu in the Shurtleff family kitchen at 790 Los Palos Dr., Lafayette, California: (1) Pressing the curds in a cloth-

lined forming box. (2) Pureeing soaked soybeans with water in a blender. (3) Holding a large cake of tofu on a plate.

1778. Shurtleff, William; Aoyagi, Akiko. 1975. Tofu as a food. *Macrobiotic (The) (Chico, California)* No. 110. p. 14-24. Nov. [2 ref]

• **Summary:** Excerpted from the forthcoming Book of Tofu.

The magazine's editor notes: Tofu is also good for external plasters, especially on a head injury or concussion, etc. However it is not advisable to use it on heart area injuries, as tofu is very yin, and could weaken the heart.

Tofu as food should be balanced with Tamari or Miso, or eaten with fish, burdock or any other yang food. This will balance its yin quality. Address: Lafayette, California.

1779. Tovar Galvez, Luis Raul. 1975. Productos derivados del frijol soya tecnologías tradicionales en el Lejano Oriente [Traditional technology soy products in the Far East]. In: American Soybean Assoc., ed. 1975. *Memorias: Primera Conferencia Latinoamericana Sobre la Proteína de Soya*. Mexico City. 232 p. See p. 185-93. [14 ref. Spa]

• **Summary:** Descriptions of and flow sheets for the production of the following basic soyfoods are given: Miso, shoyu (*salsa de soya*), natto, tempeh, sufu (fermented tofu), and soy yogurt. A table shows the nutritional composition of each of these foods as well as yuba and kori-tôfu (dried-frozen tofu).

Note 1. This is the earliest Spanish-language document seen that mentions tempeh, which it calls "tempeh."

Note 2. This is the earliest Spanish-language document seen (Feb. 2004) that uses the term "kori-tôfu" to refer to dried-frozen tofu. Address: Facultad de Química, UNAM, Mexico.

1780. Eden Foods. 1975. Wholesale pricelist. Winter 75-76. 4601 Platt Rd., Ann Arbor, MI 48104. 26 p. Dec. 15.

• **Summary:** On the cover is a man entering the gate of his snow-covered cabin in the moonlight. Tamari Soy Sauce is now sold under 2 labels (Erewhon, and Japan-Marushima). The three types of miso (all under the Erewhon brand) are still spelled Mugi, Hacho, and Kome. Address: Ann Arbor, Michigan. Phone: (313) 973-9400.

1781. Kiuchi, Kan; Ohta, Teruo; Ebine, Hideo. 1975. Changes in lipid components of miso-dama koji. *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 53(12):869-74. Dec. [6 ref. Eng]

• **Summary:** "A large amount of lipids [such as oil and lecithin] is contained in miso, especially soybean miso, since soybean is the raw material of miso." However the free fatty acid content of miso dama was higher than that of soybeans. Address: National Food Research Inst., Ministry of Agriculture and Forestry, Shiohama, Koto-ku, Tokyo, Japan.

1782. *Macrobiotic (The) (Chico, California)*. 1975. Miso as a replacement for meat. No. 111. p. 39. Dec.

• **Summary:** "Miso is Yang. It replaces meat, being as Yang as meat. One who eats miso every day will soon have no desire to eat meat. The Yang mineral salts he craves are amply supplied by miso. Without miso, it is difficult to remain healthy and free of disease. With miso, for the intestines, the root of all disease, are maintained in a healthy condition. Animal foods which are not digested completely easily breed bacteria which are toxic... Carnivorism is a short term adventure, always reckless and dangerous, that ends in tragedy and disease..."

1783. Shurtleff, William; Aoyagi, Akiko. 1975. The book of tofu: Food for mankind. Hayama-shi, Kanagawa-ken, Japan: Autumn Press. 336 p. Illust. by Akiko Aoyagi. Index. Dec. 28 cm. Rev. ed. 1977 Autumn Press, Brookline, MA. [53 ref]

• **Summary:** This pioneering work started the "tofu revolution" in America. Contents: Preface. Acknowledgements. Part I. Tofu: Food for mankind. 1. Protein East and West. 2. Tofu as a food: Introduction, rich in high quality protein (NPU, biological value, protein score, amino acid content), high protein complementarity (tofu contains an abundance of lysine, an essential amino acid that is deficient in many cereal grains; increase usable protein by combining tofu with wheat, rice, corn, etc.), easy to digest, an ideal diet food, low in saturated fats and free of cholesterol, rich in vitamins and minerals, a health-giving natural food, backbone of the meatless / vegetarian diet, free of chemical toxins, low in cost, easily made at home, quick & easy to use, versatile.

3. Getting started: Introduction, buying and storing tofu, basic ingredients (whole-wheat flour, miso {rice-, barley, and soybean miso, special Japanese miso, Chinese chiang}, oil, brown rice, salt, shoyu {natural shoyu, shoyu, Chinese soy sauce, synthetic or chemical soy sauce}, sugar, vinegar, monosodium glutamate {MSG}), Japanese kitchen tools (each illustrated), preparatory techniques (salt rubbing, rinsing and pressing leeks and onions, soaking burdock root, reconstituting dried sea vegetables {dried hijiki, wakame, agar}, wheat gluten and kampo, parboiling, cutting tofu and vegetables, using sesame seeds, toasting nori, preparing a steamer), basic recipes (soup stocks and broths {dashi}, basic shoyu dipping sauces {*tsuke-jiru*}, miso toppings {sweet simmered miso / *nerimiso*, miso sauté / *abura miso*, special miso toppings and dipping sauces, finger lickin' miso, and regular miso}, miso salad dressings, nut and seed butter toppings, spreads and dressings, basic sauces, rice, noodles and other basic preparations).

Our favorite tofu recipes (lists about 80 recipe names for each of the different types of tofu, plus soymilk, yuba, whole soybeans, gô, okara, and curds; very favorites that

are also quick and easy to prepare are preceded by an asterisk).

Part II. Cooking with tofu: Recipes from East and West (500 recipes). 4. Soybeans: History of soybeans and “soybean foods,” cooking with whole dry soybeans, roasted soybeans (*iri-mame*), fresh green soybeans (*edamame*, incl. a recipe for “Sweet emerald bean paste {*Jinda*}),” kinako (roasted full-fat soy flour, incl. Japanese health food treats such as *kinako amé*, *gokabo*, *kokusen*, *kankanbo*, and *abekawa mochi*), soybean sprouts (*daizu no moyashi*), natto (sticky fermented whole soybeans, with “gossamer threads”), tempeh (fermented soybean cakes), Hamanatto and Daitokuji natto (raisin-like natto), modern western soybean foods (natural soy flour [full-fat], soy granules, defatted soy flour and grits, soy protein concentrates, soy protein isolates, spun protein fibers, textured vegetable protein {TVP}, soy oil products). 5. Gô (a thick white puree of well-soaked uncooked soybeans). 6. Okara or Unohana. 7. Curds and whey. 8. Tofu (includes history, and preparatory techniques: Parboiling, draining, pressing {towel and fridge method, slanting press method, sliced tofu method}, squeezing, scrambling, reshaping, crumbling, grinding).

9. Deep-fried tofu: Thick agé or nama agé, ganmo or ganmodoki (incl. *hiryozu / hirosu*), agé or aburagé (incl. “Smoked tofu,” p. 197). 10. Soymilk. 11. Kinugoshi (“*Kinu* means ‘silk’; *kosu* means ‘to strain’; well named, kinugoshi tofu has a texture so smooth that it seems to have been strained through silk”). 12. Grilled tofu. 13. Frozen and dried-frozen tofu. 14. Yuba (incl. many meat alternatives such as Yuba mock broiled eels, Buddha’s chicken, Buddha’s ham, sausage). 15. Tofu and yuba in China, Taiwan, and Korea (incl. Savory tofu {*wu-hsiang kan*}; see p. 258 for illustrations of many meat alternatives, incl. Buddha’s fish, chicken, drumsticks, and duck, plus vegetarian liver and tripe, molded pig’s head, and molded ham). One type of Korean soybean miso is called *kotsu jang* [sic, *kochu jang*]. When tofu is served with miso [Korean-style, *Tenjang*] as the dominant seasoning, and with rice, “it becomes the popular *Tenjang Chige Pekpem*” (p. 262). 16. Special tofu.

Note: This is the earliest (and only) English-language document seen (March 2009) that uses the word “*Tenjang*” to refer to Korean-style soybean jang (miso).

Part III—Japanese farmhouse tofu: Making tofu for more and more people. 17. The quest. 18. Making community tofu. 19. The traditional craftsman. 20. Making tofu in the traditional way.

Appendices: A. Tofu restaurants in Japan; many are vegetarian: In Tokyo: Sasa-no-yuki / Sasanoyuki, Goemon, Hisago, Sanko-in, Shinoda-zushi, Dengaku (south of Tokyo in Kamakura). In Kyoto: Nakamura-ro, Okutan, Takocho, Izusen, Junsei, Nishiki, Hakuun-an, Rengetsu, Sagano, Sorin-an. Tea ceremony cuisine (*Kaiseki ryori*), Zen temple

cooking or Buddhist vegetarian cooking (*Shojin ryori*), Tea ceremony cooking from China (*Fucha ryori*), Wild gathered cooking (*Sansai ryori*). A directory of these and others, with addresses and phone numbers, is given (p. 312).

B. Tofu shops in the West (Directory of 43 shops in the USA, 3 in Europe, and 3 in Latin America). C. People and institutions connected with tofu. D. Table of equivalents. Bibliography. Glossary. Index. About the authors (autobiographical sketches; a photo shows Shurtleff and Aoyagi, and gives their address as New-Age Foods Study Center, 278-28 Higashi Oizumi, Nerima-ku, Tokyo, Japan 177). Sending tofu in the four directions.

pudding recipes include: Rice pudding with gô and apple (p. 76, incl. 2 cups soymilk). Tofu chawan-mushi (p. 147; Steamed egg-vegetable custard with tofu). Tofu fruit whips (p. 148). Tofu rice pudding (p. 150, incl. 1 cup soymilk). Tofu custard pudding (p. 152). Soymilk custard pudding (p. 208). Brown rice pudding (p. 208, with 2 cups soymilk). Soymilk chawan-mushi (p. 209). Chawan-mushi with yuba (p. 249).

Dessert recipes include: Tofu whipped cream or yogurt (p. 148; resembles a pudding or parfait). Tofu ice cream (p. 149, with chilled tofu, honey, vanilla extract and salt). Banana-tofu milkshake (p. 149). Tofu cream cheese dessert balls (p. 149). Tofu icing (for cake, p. 149). Tofu cheesecake (p. 150). Tofu-pineapple sherbet (p. 151). Also: Soymilk yogurt (cultured, p. 205). Healthy banana milkshake (p. 206). On p. 160 is a recipe for “Mock tuna salad with deep fried tofu.”

Note 1. This is the earliest English-language document seen (March 2007) that uses the term “Tofu ice cream” to refer to soy ice cream or that contains a recipe for “Tofu ice cream.”

Note 2. This is the earliest English-language document seen (March 2000) that uses the term “Tofu Cheesecake” and the first to give a recipe for a tofu cheesecake.

Note 3. This is the earliest English-language document seen (May 2000) that uses the term “Tofu Sour Cream” (p. 109) or that contains a recipe for “Tofu Sour Cream.”

Note 4. This is the earliest English-language document seen (Dec. 2003) that uses the term “tofu milkshake” or that gives a recipe for a shake made with tofu.

Note 5. This is the earliest English-language document seen (Feb. 2004) that uses the word “stringy” to refer to natto.

Note 6. This is the earliest English-language document seen (Feb. 2004) that uses the term “dried-frozen tofu.”

Note 7. This is the earliest English-language document seen (March 2004) that describes preparatory techniques for tofu (p. 96-98).

Note 8. This is also the earliest English-language document seen (March 2004) that contains the term “smoked tofu.”

Note 9. This is also the earliest English-language document seen (March 2004) that uses the term “kinugoshi tofu” to refer to silken tofu.

Note 10. As of March 2007, the various English-language editions of this book have sold more than 616,000 copies. Address: c/o Aoyagi, 278-28 Higashi Oizumi, Nerima-ku, Tokyo 177, Japan. Phone: (03) 925-4974.

1784. Shurtleff, William; Aoyagi, Akiko. 1975. What is miso? *Macrobiotic (The) (Chico, California)* No. 111. p. 27-38. Dec.

Address: Lafayette, California.

1785. Shurtleff, William; Aoyagi, Akiko. 1975. Tofu and yuba in China, Taiwan, and Korea (Document part). In: W. Shurtleff and A. Aoyagi. 1975. *The Book of Tofu*. Hayama-shi, Kanagawa-ken, Japan: Autumn Press. 336 p. See p. 250-64.

• **Summary:** Contents: Introduction. Three varieties of tofu. Doufu: Known as *tojo* or *tokua* in the Philippines, or as *tahu* in Indonesia. Pressed tofu (*doufu-kan*): Savory tofu (*wu-hsiang kan*), soy-sauce pressed tofu (*chiang-yu doufu-kan*), pressed tofu sheets (*pai-yeh*, incl. pressed tofu noodles or “beancurd shreds” {*doufu-ssu, kan-ssu*}, pressed tofu loops {*pai-yeh chieh*}, Buddha’s Chicken {*su-chi*} or Buddha’s Ham {*suhuo-t’ui*}, salted dry tofu {*doufu-kan*}). Chinese soft kinugoshi (*shui-doufu, sui-doufu, nen-doufu, nan-doufu, shin-kaou doufu*). Warm soymilk curds: Chinese smooth curds (*doufu-nao, dou-nao*; often served for breakfast by street vendors), curds-in-whey (*doufu-hua*). Deep-fried tofu (*yu-doufu, cha-doufu, doufu-kuo, kuo-lao doufu*). Frozen tofu (*tung-doufu, ping-doufu*).

Fermented tofu: *Doufu-ru*, white fermented tofu (*pai doufuru*, incl. 5 different types such as red pepper, sesame oil and red pepper, five-spice, etc.), red fermented tofu (*hung doufuru, nanru, nanyu*, made by adding Chinese red fermented rice {*ang-tsao*} to the brining liquor to give it a deep red color, thick consistency, and distinctive flavor and aroma; soy sauce is generally used in place of rice wine; another variety is rose essence fermented tofu), stinky fermented tofu (*tsao-doufu, ch’ou doufu*, incl. green stinky fermented tofu), *chiang-doufu* (prepared by pickling firm cubes of tofu for several days in either Chinese-style miso {*chiang*} or soy sauce).

Soymilk (*doufu chiang, dou-chiang, dou-nai, dou-ru*): Widely enjoyed as a spicy hot breakfast soup (p. 204) or a warm, sweetened beverage (p. 207). Sometimes sold bottled by street vendors.

Yuba: Much more popular and much less expensive in China and Taiwan than it is in Japan. Called bean curd “skin” or “sheets” in most Chinese cookbooks, yuba is known in Mandarin as *doufu-p’i* (“tofu skin”) or *doufu-i* (“tofu robes”). Remarkable Chinese ingenuity and creativity in giving the semblance of meat. In the display case of

attractive restaurants or marketplace yuba shops are perfect replicas of plucked hens, roosters, and ducks, light-brown fish (complete with fins, gills, eyes, and mouth), juicy hams, tripe, liver, rolled meats, red sausage links, deep-fried drumsticks, and a life-sized pig’s head—all made from yuba. Most of these imitation meat dishes are prepared by pressing fresh yuba into a hinged (wooden or aluminum) mold, clamping the mold closed, then steaming it until the yuba’s shape is fixed. *Su-tsai* restaurants specialize in Buddhist vegetarian cookery. Names of prepared dishes: Buddha’s Chicken (*suchi*), Buddha’s Fish (*suyu, sushi*), Buddha’s Duck (*suya*), Vegetarian Tripe (*taoto*) or Liver (*sukan*); Molded Pig’s Head (*tutao*), Molded Ham (*suhuo*), Sausage Links (*enchan*), Buddha’s Drumsticks (*sutsai tsui*), Deep-fried Duck (*suya*). A full-page illustration (p. 258) shows these products. Fresh yuba. Dried yuba (*kan doufu-p’i*, incl. sweet yuba and Bamboo yuba {*fuchu*}). Tofu and yuba in Chinese cookery: Mandarin cookery, congee (rice porridge), “red broiled” sauces (*hong-sao*), meatless days, vegetarian restaurants.

The Chinese tofu shop: Description of the process for making tofu. Tofu in Korea. Recipes: Fermented tofu dressings, spreads, dips, and hors d’oeuvre. Fermented tofu in sauces, egg dishes, and with grains.

Illustrations show: (102) A woman cutting doufu at the marketplace. (103) Making pressed tofu using a hand-turned screw press. (104) Pressed tofu noodles. Buddha’s chicken. (105) Street vendor selling soymilk curds. (106) Pressing tofu in forming boxes using stone weights. (107) Deep-frying agé triangles in a wok. (108) Threaded thick-agé cubes. (109) Net-like thick agé. (110) A soymilk vendor carrying bottled soymilk using a shoulder pole. (111) Yuba mock meats. (112) Yuba steaming pots. (113) Steam-heated drum can cooker in Chinese tofu shop. *Doufu-ru* [fermented tofu] cubes on plate, in bottle, in can. Woman selling tofu, seated by the street side.

Note 1. This is the earliest English-language document seen (Feb. 2004) that uses the word “doufu” to refer to Chinese-style tofu. Note 2. This is the earliest English-language document seen (Oct. 2008) that uses the word “tofu skin” to refer to yuba. Address: Lafayette, California.

1786. Shurtleff, William; Aoyagi, Akiko. 1975. Natto (sticky fermented whole soybeans) (Document part). In: W. Shurtleff and A. Aoyagi. 1975. *The Book of Tofu*. Hayama-shi, Kanagawa-ken, Japan: Autumn Press. 336 p. See p. 67.

• **Summary:** “Natto are prepared (commercially or at home) by steaming soaked soybeans until they are soft, inoculating the warm (104°) beans with the bacteria *Bacillus natto*, and then allowing them to ferment for 15 to 24 hours in a humid environment at about 104°. The dark-brown beans have a fairly strong and unusual aroma and flavor, and a sticky, slightly slippery surface texture. When lifted from the bowl with chopsticks (fig. 13), like some varieties of melted

cheese, they form gossamer-like threads. Although most whole soybeans are somewhat difficult to digest, natto are highly digestible because the beans' complex protein molecules have been broken down by the bacteria during fermentation. A whole, natural food, natto contains 16.5 percent protein and are rich in vitamins B-2, B-12, and iron. In Japan and in Japanese grocery stores in the West, natto are sold small (3 to 4 ounce) packages wrapped in straw, from which they traditionally received bacteria for fermentation. Generally served as a topping for rice, natto are also used in miso soups and *Aemomo*-dressings, or sautéed with vegetables. In the provinces, they are mixed with a little sugar and served as an hors d'oeuvre. About 50,000 tons of soybeans are made into natto each year in Japan, about one-fourth the amount used to make either miso or shoyu." Address: Lafayette, California.

1787. Shurtleff, William; Aoyagi, Akiko. 1975. The book of tofu: Food for mankind (Illustrations—line drawings). Hayama-shi, Kanagawa-ken, Japan: Autumn Press. 336 p. Illust. by Akiko Aoyagi. Index. Dec. 28 cm. Rev. ed. 1977 Autumn Press, Brookline, MA. [53 ref]

• **Summary:** Continued: Illustrations (line drawings, both numbered and unnumbered) show: A hearth in a traditional Japanese farmhouse with tofu dengaku roasting around a bed of coals in a sunken open-hearth fireplace. An old Japanese plum tree blossoming in winter. Three pieces of skewered tofu dengaku with a sansho leaf atop each in a special serving box. A sprig of sansho with berries. Stylized top of a soybean plant in a circle. Fig. (4) Tofu products available in the West (tofu, dofu, kinugoshi, thick agé triangles, cubes, and cake, agé and age puffs, hollow agé cubes, soymilk, tofu pudding, doufu-ru {white and red}, ganmo {patties, small balls, and treasure balls}, grilled tofu, dried-frozen tofu, instant powdered tofu, okara, dried yuba, soymilk curds, pressed tofu, savory tofu). A wooden cutting board and Japanese broad-bladed vegetable knife (nagiri-bôcho) with vegetables and tofu on a woven bamboo tray. (8) A wooden keg of red miso and a plastic bag of barley miso. (9) Shoyu in a metal can, wooden keg, glass bottle, and table-top dispenser. Traditional Japanese kitchen tools: *Miso-koshi* (woven bamboo strainer used in making miso soup). cutting board, Japanese vegetable knife, wooden spatula, bamboo rice paddle (*shamoji*) and spoon, woven bamboo colander or tray (*zaru*), suribachi, Japanese grater (*oroshi-gané*), sudaré (bamboo mat), pressing sack for tofu or soymilk, serrated tofu-slicing knife, tawashi scrub-brush (made of natural palm fiber), wok with draining rack and wooden lid, stir-frying ladle and spatula, long cooking-chopsticks, mesh skimmer, deep-frying thermometer, Chinese bamboo steamer (*seiro*), charcoal brazier (*konro*, *shichirin*), broiling screen. Covered pot steamer. Small lidded pottery pot. More kitchen tools (p. 50-51). (10) A soybean measuring box (*isshô-bako*). (11) The soybean

plant. Two views of a soybean seed with seed coat, hilum, and hypocotyl labeled. A bag full of soybean. Roasted soybeans in a woven bamboo tray (*zaru*). Edamamé in the pods. Three shapes of kinako treats. Soybean sprouts. Natto on a bamboo mat (*sudare*). Natto wrapped in rice straw as it ferments. A hand holding chopsticks that lift natto up from a bowl of natto—connected by gossamer threads. Tempeh (round and square pieces). Wrapping a small packet of inoculated soybeans to make tempeh. (15) Two Japanese women in traditional clothing using hand-turned grinding stones (quern) to grind soaked soybeans when making tofu. (16) Push-pull grinding stones. (17) Motor-driven grinding stones. (18) Water-powered millstones. (19) Wind-powered millstones. (20) Unohana. (21) A tofu maker sitting on a traditional lever press that presses soymilk from the okara in a pressing sack on a rack. A heavy iron skillet. (22) Folding okara omelet pouches. Okara doughnuts. (23) A bamboo colander. (24) A tofu maker weighting a colander with a brick so that whey will collect in it. (25) Ladling whey from curds; it foams! (27) A horse drinking whey from a wooden vat. Soymilk curds in a bamboo mat. (28) Ladling curds for Awayuki. (29) Fresh tofu in a plastic tub. (30) A tofu maker placing a weight on pressing lids as tofu is pressed in settling boxes (forming boxes). Transferring tofu-filled settling box to sing. Cutting a block of tofu into cakes under water. Eggplant halves in a yin-yang dance. Preparatory techniques used with tofu (slanting press, sliced tofu, squeezing, scrambling, reshaping, crumbling). (32) Utensils for making tofu at home. (33) Three designs for a homemade settling container. (34) Preparing homemade tofu (a-1). (35) Removing tofu from a farmhouse-style settling container (forming box). (36) Chilled tofu. Iceberg chilled tofu. A hot, moist, white towelette (*o-shibori*) is used to wipe the face and hands before a meal Tofu salads in three Japanese pottery dishes. Japanese soups in three types of containers. (37) Chrysanthemum tofu. (38) Tofu poached egg. Tofu-stuffed green peppers. A wok. (39) Filling a wok with oil. (40) testing oil temperature in a wok. (41) Deep-frying tofu tempura—and (42) Serving it in a shallow bamboo basket. (43) Making *Kaki-agé*. (44) Dengaku Hoshi (from *Tofu Hyaku Chin*). (45) Skewered Tofu dengaku. Preparing Tofu dengaku in old Japan (from Hokusai's sketchbooks). (46) A variety of skewers. (47) Chinese firepots. (48) A Simmering Tofu wooden serving container heated by coals from within. (49) Miso oden. (50) Tofu wrapped in rice straw. (51) Nanzenji wrapped tofu. (52) Gisei-dofu. (53) Serving freshly deep-fried agé. (54) The deep-frying area of a traditional tofu shop. (55) Deep-frying tools. (56) Wooden bamboo tray with raised sides. Chinese cleaver. (57) Nori-wrapped sushi with agé (making and serving; six drawings). Eating noodles from old Japan (from Hokusai's sketchbook). (58) Preparing homemade noodles. (59) The Oden man on a winter's eve. A potter bowl of Oden. Kombu rolls. (60) Making konnyaku twists. (61)

Nishime in a multi-layered lacquerware box. (61) Pressing tofu for thick agé in a tofu shop. (62) Deep-frying tofu for thick agé. (63) A tofu maker with deep-fried thick agé triangles on screen trays. (64) Stuffing thick agé. (65) Thick agé stuffed with onions. (66) Pressing tofu for ganmo. (67) Adding seeds and vegetables. (68) Deep-frying ganmo. (69) A farmhouse open-hearth fireplace with nabe kettle. (70) Preparing homemade ganmo. Ganmo balls in a draining tray. Ganmo cheeseburger. (71) Cutting tofu to make agé slices (*kiji*). (72) Deep frying agé. (73) Opening agé into pouches. Agé treasure pouches. (74) Agé pouches sealed with foodpicks. Inari shrine with Shinto torii. (75) Kampyo-tied pouches. (76) Making rolled agé hors d'oeuvre. (77) Tofu maker ladling gô (fresh soy puree) into a cauldron. (78) Stirring down the gô. Pressing soymilk from okara with a hand-turned screw press. (79) Serving fresh soymilk in a tofu shop. Six Japanese commercial soymilk products. Little girl at The Farm (Summertown, Tennessee) seated on a small chair drinking a cup of soymilk. Chinese breakfast soymilk soup with deep-fried crullers (*Siento-chiang with yu-chiao tsao pi*). (80) Takigawa-dofu. (81) Tofu maker pouring the soymilk for kinugoshi tofu. (82) Adding solidifier. (83) Trimming kinugoshi from sides of box. (84) Modern lactone kinugoshi (with GDL). (85) Modern kinugoshi factory. (86) Sasa-no-Yuki's Gisei-dofu container. (87) Kinugoshi with ankake sauce. The entrance way to a traditional Japanese restaurant featuring tofu. Traditional metal skewer for making grilled tofu. (88) Traditional tofu maker grilling tofu over a charcoal brazier (*hibachi*). Grilling tofu in a traditional open hearth. (89) An early method of elaborate grilling. Pieces of tofu on different types of skewers. Farmhouse sukiyaki with grilled tofu. (90) Tying frozen tofu with rice straw. (91) Drying farmhouse frozen tofu. (92) Pressing frozen tofu at home. (93) Deep-fried frozen tofu with cheese. (94) Making deep-fried frozen tofu sandwiches (*Hakata-agé*). (95) Frozen tofu wrapped in kombu. (96) Steaming table in a yuba shop. Ten different types / shapes of yuba. (97) Lifting yuba away from soymilk. (98) Yuba sashimi. (99) Yuba envelopes. (100) Deep-fried yuba dengaku. (101) Folding yuba into bundles. Trimming half-dried yuba from a skewer. (102-113) Tofu and yuba in Taiwan, China, and Korea (see separate record). Sesame tofu in pottery bowl. (114) Traditional farmhouse tofu, tied into a package with rice straw rope. (115) Shirakawa-go farmhouses with water-powered rise-husker in foreground. (116) Making seawater tofu at Suwanose. Mortar and pestle for pounding mochi. Making community tofu: Western metal hand mill, hand-turned stone mill apparatus, faces of upper and lower stones, colander and cloth, two shapes of cooking pots, Japanese farmhouse earthen cooking stove, cooking pot set on cut-off oil drum, ladle, two wooden paddles, pressing rack, pressing okara, lever press, pressing sack, wooden settling [forming] container with cloths. (117) Making nigari with salt in

bamboo colander, a traditional "salt boat" for refining salt of nigari. (119) Country farmhouse tofu (5 illust.). (121) Morning shopping at a tofu shop. (122) Diagram of a tofu-shop floor plan. (123) Modern pressure with hydraulic press. (124) Modern centrifuge with 3 soymilk barrels. Thirty-one unnumbered illustrations showing every step in making and selling tofu in a traditional Japanese shop (p. 299-306). (125) Cutting tofu for Dengaku (from *Tofu Hyaku Chin*). (126) Ladies busy making dengaku (from *Tofu Hyaku Chin*). (127) Hearth at Nakamura-ro. (128) The garden at Okutan. Six types of Japanese sea vegetables: Hijiki, aonori, wakame, agar, nori, kombu. (129) Japanese vegetables (27 illustrations). Address: c/o Aoyagi, 278-28 Higashi Oizumi, Nerima-ku, Tokyo 177, Japan. Phone: (03) 925-4974.

• **Summary:** Discusses some important East Asian fermented foods, including miso, shoyu, and tempeh. Note: This is the earliest record on soyfoods in the IALINE database from CDIUPA. Address: INRA, Stat. Antibiotiques Bioconversions, Chartres, France.

1790. **Product Name:** [Manna Miso: Soybean Paste (Barley Miso, Rice Miso, Hacho Miso)].

Foreign Name: Manna Miso: Sojapasta (Gerste Miso, Rijste Miso, Hacho Miso).

Manufacturer's Name: Stichting Natuurvoeding Amsterdam. Renamed Manna Natuurvoeding B.V. in 1982 (Repacker, Marketer, Distributor). Imported from Muso in Japan.

Manufacturer's Address: Rozenstraat, Amsterdam, Netherlands.

Date of Introduction: 1975.

How Stored: Shelf stable.

New Product-Documentation: Talk with Sjon Welters. 1989. Aug. 15. When he started to work for Manna in Sept. 1975 they were importing 3 varieties of miso from Japan via Muso. He does not know which company in Japan made this miso.

Label sent by Sjon Welters from the Netherlands. 2007. June. Manna Unpasteurized Organic Barley Miso.

1791. **Product Name:** Westbrae Natural Natto Miso.

Manufacturer's Name: Westbrae Natural Foods (Importer from Mitoku). Made in Japan.

Manufacturer's Address: 1224 10th St., Berkeley, CA 94710.

Date of Introduction: 1975.

Ingredients: Soybeans, barley malt, kombu seaweed, ginger, water, sea salt.

Wt/Vol., Packaging, Price: 22 lb retails for \$1.77 lb. Also in 30 lb.

How Stored: Shelf stable.

New Product–Documentation: Westbrae Natural Wholesale Food Catalog. 1980. Spring. Includes natto miso, which comes in 1, 5, or 22 lb sizes. Also label of product. 6 by 7 cm. Red and blue on gold. Note: This is the earliest document seen (Dec. 2008) with the term “natto miso” as a product name or in the title of a publication.

Interview with Bob Gerner. 1987. Aug. 20. Westbrae was the first company in America to introduce this Finger Lickin' Miso.

1792. Circle, S.J.; Smith, A.K. 1975. Soybeans: processing and products. In: N.W. Pirie, ed. 1975. *Food Protein Sources*. Cambridge, London, New York, Melbourne: Cambridge University Press. xx + 260 p. See p. 47-64. [88 ref]

• **Summary:** Contents: Introduction. Agronomy: Varieties, cultivation, yields. Soybean composition. Protein nutritional value. Traditional processing into nonfermented foods: Soybeans as a table vegetable (green soybeans), soy milk, tofu (soybean curd), yuba, kinako, salted soybeans, soybeans sprouts. Traditional processing into fermented foods: Miso and shoyu, tempeh. Others include: natto, hamanatto, sufu (soy cheese), tao-tjo, kochu chang, ketjap, ontjom, and yogurt-like products.

Contemporary processing without defatting: 'Debittering' by aqueous treatment, whole bean processing, full-fat flour, soy milk and curd. Contemporary defatting processes: Defatting by aqueous processing, defatting with organic solvents, composite flour, soy flours, protein concentrates, protein isolates and textured soy products (recipes for using soy protein products in foods are available from several publications). Address: Anderson Clayton Foods, W.L. Clayton Research Center, 3333 Central Expressway, Richardson, Texas 75080.

• **Summary:** This book is filled with lovely woodcuts from the Horace Carpentier Collection, East Asiatic Library, University of California, Berkeley. Only 11% of China's land area is arable compared to 80% in the USA, yet today its population, mostly squeezed into the eastern third of the country, is four times that of the United States. The best soy sauce in China comes from Fukien [Fujian] and Amoy. The Classic of Mandarin cuisine reached its zenith around 1800, when Yuan Mei wrote volumes about food; these are still considered to be definitive studies of Chinese gourmet cooking in the Mandarin style. There is one entire chapter titled “Bean curd” (p. 57-63).

The book also contains recipes for: Fuzzy melon soup with bean curd (p. 37). Seaweed soup with bean curd (p. 41). Bean curd soup (p. 42). Ma Po bean curd (Szechwan, p. 59). Stir-fried vegetables with black bean sauce (with “2 tablespoons fermented black beans, rinsed and mashed, 1 slice ginger root, minced, 1 garlic clove, minced,...” p. 90). Stir-fried vegetables with fermented bean cake (fermented tofu, p. 91). Braised soybean sprouts (Shanghai, p. 96). Clams with black bean sauce (with fermented black beans, rinsed and mashed, and slices of ginger root, minced, p. 109). Braised fish with fried bean curd (p. 115).

The glossary (p. 178-84) defines: Bean cake, fermented, and fresh (2-inch squares, 1 inch thick). Bean curd cheese, red (nam goeey). Bean-curd cake, deep fried. Bean-curd sheets or sticks, dried [yuba] (“Creamy beige-colored thin sheets. Used for vegetarian (Buddhist) dishes congee or as substitute for egg roll skins. Stick form is used mainly for soup... Always soak in warm water to make pliable before proceeding with recipe”). Bean curd, sweet (“Comes in dried, flat sheets, about 6 inches by 1½ inches. Mocha in color; no sweet taste”). Bean paste, hot. Black beans, fermented (= Fermented black beans. “Small black beans preserved in salt. Very pungent and moist. Almost always used with garlic and ginger in sauces. Rinse with warm water and mash before using. Purchased in plastic bags by weight in Oriental markets”). Brown bean sauce (“Also

known as yellow bean sauce and ground bean sauce”). Fish soy. Hoisin sauce (“Thick, smooth, dark reddish brown sauce made from soybeans, spices, sugar, chili and garlic. Mildly sweet in flavor”). Soy sauce (light vs. dark with caramel added). Address: San Francisco, California.

1796. Goulart, Frances Sheridan. 1975. *Bum steers: How and why to make your own delicious high protein mock meats, fake fish & dairyless desserts, and avoid useless calories, cholesterol, sodium nitrate, salmonella, trichinosis & high prices.* Old Greenwich, Connecticut: Chatham Press. 205 p. Illust. Recipe index. 21 x 19 cm.

• **Summary:** This vegetarian cookbook, interspersed with many well-selected anti-meat quotations, describes how to make meatless meats and milk-free dairylike products at home. Contents: Introduction. On the block: Major mock-meat-making supplies. *Vegebutchering*: Master mock-meat recipe file. Bogus beef. Pseudo pork. Unreal veal. Sham lamb. Con game. Phony poultry. Fake fish. Un-innards. The vege-deli. Mocking up: General dishes. The mock crock. On the side. Dairyless desserts. Steerage (sources of unfamiliar ingredients).

Chapter 1 begins with an introduction to and nutritional composition of tofu, followed by the soybeans, gluten flour, other legumes, etc. Under “Flavors enhancers” are listed soy lecithin granules or flakes, miso, yeast extract (marmite), soy sauce and tamari, and Worcestershire sauce. Chapter 2 contains recipes for making gluten, tofu, grainola (with soy grits), a stock with miso for non-meat dishes (p. 32), mock milk I (made with soy flour), mock milk II (made with raw cashews or almonds), mock (soy) butter, and mock cream (with soy flour), and mock yogurt (with cashew nuts and soy yogurt culture). A sampling of the many other soy-related recipes include: Moo-less ragout (with tofu, soy sauce, and soy butter, p. 43). Vegetarian rolladen (with cooked ground soybeans, p. 52). Good red meat (with gluten or tofu, p. 53). Greenbutcher’s meatballs (with tofu, p. 57). Mock Mac I (burger with soybeans, p. 64-65). Pineapple pig (with tofu, p. 72). Half-calf (with tofu, p. 79). Surrogate salami (with “bean pulp (residue from making Tofu)” [okara], p. 125). Bumsteads: Two burgers for meat-totalers (with tofu, p. 131). Meatless mincemeat (p. 142). Soybean mustard (with soy sprouts, p. 165). Cow tow: Cowless milk candy (with soy milk powder). Jersey bounce: A moo-juice-less junket (with soy milk, p. 184). Bum bombe: Egg-less, cream free (with soy cream, p. 184). Two 100% vegetarian ice creams: Eggless, milkless (with soy powder, p. 186).

Many recipes also contain wheat gluten: Charisma: Char-broiled bum steers (p. 48). Pig-less pork sausage (p. 70-71). Roast loin of veal (p. 80). Fake steaks: Two sham schnitzels (p. 80-81). Vegetarian cutlets (p. 82). Mocking birds I (p. 83). Fruit stew (p. 86). Sham lamb (p. 89). Sham

lamb curry (p. 91). Bum bunny (p. 97). Sweet breads (p. 121).

Aduki beans are used in Moo-less rice pudding (p. 183). Sources of ingredients include: Walnut Acres, Penns Creek, Pennsylvania 17862 (herbs, spices, oils, whole grains, flours, seaweeds, etc.). Erewhon Trading Co., 342 Newbury St., Boston, Massachusetts 02115 (seaweeds and general goods, grains, beans, vegetables, seeds, etc.). Shiloh Farms, Route 59, Box 97, Sulphur Springs, Arkansas 72768. Arrowhead Mills, Box 866, Hereford, Texas 79045. Dynamic Nutritional Products, P.O. Box 528, North Hollywood, California 91603 (Milk-free yogurt culture. Trade names: Soyadophilus and Theradophilus). Address: Wilton, Connecticut.

1797. Hillyard, Roger. 1975. Biographical sketch. Hereford, Texas. 1 p. Undated. Unpublished manuscript. Followed by an interview on 17 April 2006.

• **Summary:** Born on 28 Aug. 1942 in Seattle, Washington, Roger was raised in the San Francisco area. In early 1965 he met Susan, his wife to be, through mutual friends in the Haight-Ashbury district of SF—where he was living. She was a photographer, working as a sort of apprentice with Ruth Bernard, a professional photographer. In June 1965 he graduated from San Francisco State College with a degree in language arts. He then became technical director for the San Francisco Mime Troupe, produced an experimental film series, and developed one of the first “light shows” in San Francisco.

In Jan. 1966 he started macrobiotics, then in July 1967 he and Susan left San Francisco and moved to New Mexico, where they lived on a 100-acre farm. They were married on Thanksgiving, 23 Nov. 1967 in Placitas, New Mexico. Their first child, Cyrena, a daughter, was born on 13 July 1968 in Santa Fe, New Mexico. In Oct. 1968 they moved to Boston, Massachusetts, where Roger pursue his interest in macrobiotics. He worked at the Erewhon retail store at 303B Newbury St. for 2 weeks, but wasn’t “together” enough, so he worked in a hospital as an operating room orderly for 3 months. In Feb. 1969 he began work at the Erewhon retail store at 342 Newbury St. In Aug. 1969 [actually probably early Oct. 1969] he took over as general manager of Erewhon’s over-all operations. He managed Erewhon-Boston and oversaw the financial aspects of Erewhon Boston and Los Angeles until March 1971. During this period the company grew substantially, wholesale activities were expanded, a warehouse at 33 Farnsworth St. was opened and developed, the staff grew from 6 to 45 members, the retail store’s daily sales grew from \$700/day to \$2,000/day, and imports from Japan expanded (including the largest American stock of hacho [Hatcho] miso).

Roger and Susan’s 2nd child, Christopher, was born on 24 Dec. 1970 in Somerville, a suburb of Boston, at a Seventh-day Adventist hospital that offered natural

childbirth. They were living in Newton at the time. Roger and his family left Boston in mid-1971 and drove to Los Angeles, where he spent 4 months managing Erewhon–Los Angeles. He is currently the manager of Deaf Smith Organic Farms, a joint venture of Erewhon and Arrowhead Mills. He is married, with 2 children. Note: That joint venture, created by Paul Hawken and Frank Ford, never developed. Address: Hereford, Texas.

• **Summary:** Soy-related recipes include: Tamari dressing (p. 119). Soybean barley soup (p. 221). Savory tofu casserole (p. 223). Miso broth (p. 286). Address: Santa Cruz, California.

1803. Shimizu, Keiichi. 1975. Miso to umeboshi: Nihonjin no chie. San-zen nen mae ni hakken sareta kenkô shoku [Miso and umeboshi salt plums: The wisdom of the Japanese. Health foods discovered 3,000 years ago]. Tokyo:

Tokyo Sports Shinbunsha. 252 p. Illust. 18 cm. Series: Tosupo Bukkutsu. [Jap]*

• **Summary:** Keiichi Shimizu was born in 1907.

1804. Shokuryo-cho. 1975. Miso no seizô oyobi ryûtsû kijun [Regulations governing the manufacture and distribution of miso]. Tokyo. 274 p. Illust. 21 cm. [10+ ref. Jap]*

1805. Silverstein, Alvin; Silverstein, Virginia B. 1975. Beans: All about them. Englewood Cliffs, New Jersey: Prentice-Hall, Inc.. 86 p. Illust. by Shirley Chan. Index. 22 cm. Summarized in Soybean Digest, Sept. 1975, p. 43. [7 ref]

• **Summary:** This book for children discusses beans in legend and history, how to grow them, and their future as a low-cost protein supplement. Includes experiments, bean recipes, and games.

Contents: Beans. The story of beans. The history of beans. Beans in legend and lore. The life story of the bean. Kinds of beans. Beans in the garden and the marketplace. Beans for the future. Fun with beans. Beans for good eating.

Page 2: “Kuan Yu, a great war god in Chinese folktales, was a bean curd [tofu] seller in his youth.”

Pages 12-13, a brief (and partially accurate) history of the soybean, begin: “Soybeans are native to eastern Asia. The oldest written records of them date back to 2838 B.C. [sic], when Emperor Shen Nung of China wrote a description of the plant.” Also mentions: The five sacred grains, soybean “milk,” tofu, yuba, [soy] sauces, soybean paste, soybean sprouts, soybean oil, Engelbert Kaempfer, first introduced “to the United States around 1800 when a ship brought some to Philadelphia, Commodore Perry (1854), USDA tested about 10,000 different kinds. Now soybeans are the number one U.S. cash crop, accounting for more then 75% of the world’s soybean supply. Soybeans are used as foods for humans (in the form of oil, flour, soy sauce, “milk substitutes, and meat substitutes and ‘extenders’”) and feeds for animals. They are also used in the manufacture of more than 250 industrial products, including paints, soaps, lubricants, adhesives, and fertilizer.

Page 16: “In China, beans were a good luck symbol. A person who wore a string of soybeans hidden around his neck was believed to possess magic powers to do amazing feats. Three dark soybeans soaked in sesame oil for three days were used to foretell the future.”

The chapter “The life story of the bean” (p. 18-29) gives (with illustrations) a simple and accurate description of the bean seed and how it grows, discussing the hilum or seed scar, the micropyle or tiny hole at one end of the hilum, the seed coat, the two cotyledons in which food for the young growing plant are stored, the embryo nestled (a plant in miniature) between the cotyledons, with its two tiny leaves (the plumule), a little root (the radicle), and a stemlike part

connecting them (the hypocotyl). When the seed is planted, and it germinates or sprouts, the “embryo root pokes its tip out through the micropyle and grows out into the soil. Tiny root hairs form along the growing root. They take in moisture and dissolved minerals from the soil.” The hypocotyl grows until it “suddenly pushes up out of the soil—the first part of the seedling to emerge. It is bent over, for the cotyledons are still buried in the soil.” The hypocotyl continues to grow. In a day or so the seed coat splits, then the top of the plant pops up out of the soil. “The empty seed coat is left behind, buried beneath the surface.” Now the young bean seedling is growing straight up. The two seed leaves at the top unfold and grow quickly. Below them on the stem are the two cotyledons. As sun shines on the growing plant, its leaves, cotyledons, and stem begin to turn green—a turning point in the life of the plant.

For a while, the growing plant takes the food it needs from the reserves stored in the two cotyledons. But as these reserves are used up, they shrivel and finally fall off. Now the young plant must create its own food using chlorophyll and photosynthesis.

Chlorophyll traps energy from the sun. When examined under a magnifying glass, one can see that the surface of a plant leaf contains many tiny openings called stomates, which are usually open during the day and closed at night. “When the stomates are open, gases from the air pass freely in and out.” Air is about 80% nitrogen, 20% oxygen, plus smaller amounts of carbon dioxide, water vapors, and others gases. In the leaves, “carbon dioxide and water are combined, using the sunlight energy trapped by chlorophyll, into sugar, starches, and other complicated chemicals. Scientists call this process photosynthesis (photo means light, and synthesis means a putting together).” The by-product, oxygen, passes out into the air through the stomates; it is the gas that humans and other mammals need to breathe.

Describes the underground activities related to plant growth, nodules, bacteria that live symbiotically in the roots and fix ammonia and nitrogen. Also describes the bean flower, its parts, self-pollination, and they key role of bees. And how the seeds are formed from the flower.

The chapter “The soybean—Number one” (p. 36-39) describes the current status of the soybean in the USA. The chapter “Beans for the future” discusses modern developments such as CSM, soyfoods such as sufu, tempeh, miso, spun soy protein fibers, soybean meat analogs, textured vegetable protein (TVP).

When a bean seed sprouts, how does it know which way is “up”? “Could you ever get a seedling with its roots pointing up in the air and its shoot poking down into the soil?” Supposing you cut off all sunlight? No, plants have a built-in gravity sense which scientists call “geotropism.” A plant hormone called an auxin causes the plant to bend upward—and toward the light (heliotropism). In 1888, the

symbiotic partnership between legumes and nitrogen fixing bacteria was first discovered by Hellriegel and Wilfarth. There are short-day plants, long-day plants, and day-neutral plants; flowering will not begin until the length of days and nights is just right (p. 54-59). Bean recipes (p. 70-75). Address: 1. Prof. of Biology, Staten Island Community College, New York City; 2. Translator of Russian scientific materials.

1810. *Hokubei Mainichi*. 1976. Tofu demonstration in Berkeley today. Jan. 14.
• **Summary:** “As a community service, the Co-op Natural Foods Center council is inviting the public to meet Bill Shurtleff and Akiko Aoyagi, co-authors of ‘The Book of Tofu,’ during a lecture-demonstration on Wednesday, Jan. 14, 7:30 p.m., in the University Avenue Co-op meeting room, at 1414 University Ave., Berkeley. The speakers will prepare and serve a number of their favorite Tofu and Miso

recipes, teach how to make Tofu at home (for less than \$0.13 a lb), discuss Tofu and Miso as excellent sources of high-quality, low-cost protein, and explain why these traditional soybean foods offer a realistic hope for solving the world food crises... A \$1 contribution is requested to help defray the cost of supplies and samples.” Address: San Francisco, California.

1811. Hesseltine, C.W. 1976. Miso no shinki yôto [New uses for miso]. *Miso no Kagaku to Gijutsu (Miso Science and Technology)* No. 263. p. 5-7. [Jap]

• **Summary:** Translated by Dr. Hideo Ebine. Address: NRRL, Peoria, Illinois.

1812. Koyama, M. Assignor to Shinshu Miso Company. 1976. Process for producing processed low salt soybean paste. *U.S. Patent* 3,937,844. Feb. 10. 3 p. Application filed 20 Dec. 1974. [3 ref]

• **Summary:** “An improved process for producing soy bean paste miso by adding lactic acid at the early stage of fermentation to effect lowering of the pH, thereby resulting in a salt content of less than 10%...

“The improved process according to this invention comprises the steps of adding 0.05–0.5% (75% density) lactic acid or organic acid into the conventional components of bean paste at its early stage, lowering the PH of said paste at said early stage, brewing and ripening said paste with salt less than 10%.” Address: Tokyo, Japan.

1813. Ho, Coy Choke; Koh, Chong Lek. 1976. Microbiology of soybean-based fermented food in South-East Asia. Paper presented at the Third INTSOY Regional Soybean Conference. 7 p. Held 23-27 Feb. 1976 at Chiang Mai, Thailand. Unpublished manuscript. [17 ref]

• **Summary:** The relatively well-studied soy-based fermented foods in South-east Asia are tempe, sufu (soy cheese), ontjom tahu [okara tempeh], tau chiow ([tauco, tauch], soybean paste), soy sauce, and thua-nao (natto). These are shown in Table 1, with the microorganisms responsible for fermentation, substrates, uses, and principal references given for each. “It can be noted that only a very limited range of genera of fungi are involved in these fermentations, namely *Rhizopus*, *Aspergillus*, *Neurospora*, *Actinomucor* and *Saccharomyces*. Furthermore, within a genus only a very limited number of species are actually utilized, for example *Aspergillus sojae* in soy sauce fermentation, and *Neurospora intermedia* in ontjom tahu fermentation.

“Regarding ontjom tahu fermentation, the fungus used was formerly erroneously listed as *Neurospora sitophila* (Dwidjoseputro, 1961).”

The authors then use analyses of conidia color and crossing experiments based on meiotic sterility to show that

the cultures on okara tempeh (ontjom tahu) belong to a single species, *Neurospora intermedia*.

Note: This is the earliest English-language document seen (March 2009) that uses the word “tau chiow” to refer to Indonesian-style miso. Address: Dep. of Genetics and Cellular Biology, Univ. of Malaya, Kuala Lumpur, Malaysia.

1814. *Open Education Exchange (Berkeley, California)*. 1976. Tofu & Miso Cookery [Class by Liz Horowitz and Bob Gerner]. Feb. p. 2.

• **Summary:** Liz has 2 years experience cooking at Tassajara and Westbrae Natural Foods. Bob is a founder of Westbrae and an expert on tofu and miso. Four meetings, Mondays 6-8 p.m. Class size: 5-15. Preprinted recipes. A \$6-\$10 food fee is payable to instructors. Classes held in north Berkeley.

1815. Shurtleff, William; Aoyagi, Akiko. 1976. Soybean foods from Japan (Letter to the editor). *Organic Gardening and Farming*. Feb. p. 15-16.

• **Summary:** “For the past 4½ years, I have been living in Japan doing research and writing a book about two of East Asia’s most important soybean foods: tofu and miso, both of which seem to hold real promise of becoming basic sources of high-quality, low-cost protein throughout the world.

“This spring, Ms. Akiko Aoyagi, the Japanese cook and artist with whom I have been working, and I plan to travel throughout the United States visiting natural food centers, communities, and other interested groups. We will be conducting cooking classes, giving talks, and showing slides about these remarkable foods. We will also give demonstrations on the preparation of tofu and miso on a family, community or commercial scale. If anyone is interested in having us visit your area, please contact us at 790 Los Palos Drive, Lafayette, Cal. 94549.” Note: At this time Shurtleff & Aoyagi were still living in Tokyo. They returned to Lafayette, California on 23 July 1976, and left from there on their Tofu & Miso America Tour on 29 Sept. 1976. Address: Lafayette, California.

1816. Jerram, Elsie. 1976. Tofu adapts to American menus: Authors introduce an ancient food. *Monterey Peninsula Herald (California)*. March 17. p. 30. [1 ref]

• **Summary:** Based on a lecture by Shurtleff and Aoyagi, who “visited the Peninsula recently” (probably shortly before Feb. 10). Contains 5 black-and-white photos by Bob Fish. One shows Brian George of Pacific Grove making tofu in his apartment kitchen. Another shows Shurtleff and Aoyagi serving miso-topped apple slices and creamy tofu dip during a lecture.

1817. *Foreign Agriculture*. 1976. Outlook better for soybeans in three Far East markets. March 22. p. 2-4.

• **Summary:** The improved forecast is for Japan, Taiwan, and South Korea. Once virtually free of competition for the important Japanese soybean market, the U.S. must now reckon with Brazil as a competitor, while facing Malaysian palm oil in the vegetable oil market. Brazil's soybean exports to Japan last year, for instance, probably totaled only about 60,000 tons, compared with the 2.8 million tons of U.S. beans. The cost of shipping Brazilian beans to Japan in 1975 averaged \$5-\$10 per ton more than from the U.S. This difference reflected the longer distances from Brazilian ports, plus Brazil's use of smaller ships. The 10-day-longer shipping time from Brazil is especially important in Japan, where timeliness of cargo is a key market factor.

There is only one major oilseed crusher and meal supplier in Korea. The Government production plan calls for self-sufficiency in soybeans and the country has launched a strong drive in this direction. Current Korean production of soybeans totals about 311,000 tons. The low-oil variety of bean produced in Korea is best suited for food use (e.g. miso).

Taiwan is the largest per capita consumer of soybeans in the Far East, with a per capita soybean oil consumption of about 11 pounds in 1975 (out of 13 pounds for all vegetable oils).

1818. Bortz, Brenda. 1976. The joys of soy. II. Tofu and tempeh. *Organic Gardening and Farming* 23(3):128-31. March. See also Part I: 23:28-30, 32, 34, 36, 38. Feb.

• **Summary:** "Two Far Eastern soybean favorites—tofu and tempeh—turn up exciting new menu and nutrition ideas in the OGF Research and Development Group's latest tests..."

"At this time, Dr. Schwartz is inviting a limited number of adventurous OGF readers to help him evaluate the ease and dependability of his method and tempeh's potential as a new food for Americans. Readers who would like to join R & D's modest 'Soybean Task Force' should write to Nancy Bailey, R & D Readers' Service, Rodale Press Inc., Emmaus, Pennsylvania, 18049. Those selected will receive soybeans, culture, and complete instructions for making the simple incubator and tempeh itself."

Contains a recipe for Tofu Loaf with Onion and Cheese from *The Book of Tofu* by Shurtleff and Aoyagi.

Note: This is the earliest document seen (March 2003) that mentions tempeh, published by or in connection with Rodale Press.

1819. **Product Name:** Tekka (Miso Condiment).

Manufacturer's Name: Eden Foods, Inc. (Marketer-Distributor).

Manufacturer's Address: 4601 Platt Rd., Ann Arbor, MI 48104. Phone: (313) 973-9400.

Date of Introduction: 1976. March.

Ingredients: Incl. carrot, burdock, ginger, lotus root, miso.

Wt/Vol., Packaging, Price: 2.8 oz jar.

How Stored: Shelf stable.

New Product—Documentation: Eden Foods. 1976. March. Spring Catalog. Page 15. "Tekka. A salty condiment very rich in iron and minerals. Made from carrot, burdock, ginger, lotus root, and miso."

1820. Eden Foods. 1976. Spring catalog. 4601 Platt Rd., Ann Arbor, MI 48104. 30 p.

• **Summary:** On the cover is a woman carrying a sheaf of grain and a sickle on her head, with a child following after her. This is the first catalog with explanations of the product categories and individual products. Tamari Soy Sauce is now sold under 2 labels (Erewhon, and Marushima). "All of this soy sauce, bulk and bottled, is naturally and slowly aged for 2 years in wooden kegs. Made from soybeans, wheat, water, and salt." Hacho miso and kome (rice) miso, both still sold under the Erewhon brand, are fermented for 2 years, barley miso for 18 months. A new condiment is Tekka, sold in a 2.8 oz jar. "A salty condiment very rich in iron and minerals. Made from carrot, burdock, ginger, lotus root and miso."

Under packaged meals is Fritini (regular, with herbs, with curry, or with paprika; 8 oz.). Also new is Plum Extract (Bainiku Ikisu [sic, Ekisu]). Address: Ann Arbor, Michigan. Phone: (313) 973-9400.

• **Summary:** Reprinted from *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 53(6):386-92 (1975)—as "Studies on the utilization of soybean cooking drain exhausted in miso fermentation (II)." Address: 1&3. Div. of Applied Microbiology, National Food Research Inst., MAFF, Koto-ku, Tokyo, Japan; 2. Suzusei Shokuhin Co., Ltd., Yamanecho, Ichinoseki, Iwate.

1823. Norinsho. 1976. *Nihon shokuhin hyôjun seibunhyô* [Food composition tables for Japan. 2nd ed]. Tokyo: Ishiyaku Shuppan K.K. 180 p. March 25. Index. 15 x 21 cm. [Jap]

• **Summary:** The first edition of this book was published on 15 Jan. 1964. The first revised edition (130th printing) was published on 25 Jan. 1969. This is the second revised edition (265th printing), published on 25 March 1976. Also published by Joshi Eiyo Daigaku Shuppan-bu.

For soybeans and soyfoods, see pages 33-35, 69, and 74 (basic nutritional composition), and 111-12 (amino acid composition).

Page 88, No. 812: Amazake. Per 100 gm. Calories 101, moisture 74.0 gm, protein 2.4 gm, fat 0.1 gm, carbohydrates (sugars 22.7 gm, fiber 0.6 gm), ash 0.2 gm, calcium 74 mg, phosphorus 25 mg, iron 0.4 mg, vitamin A 0 mg, vitamin B-1 0.08 mg, vitamin B-2 0.06 mg, nicotinic acid 0.06 mg, vitamin C 0 mg.

A later edition (after 1976), containing at least 298 pages, gives details on the following soy-related foods (p. 76-80): Japanese-grown whole soybeans (dry, or boiled). Whole dry USA-grown soybeans. Whole dry Chinese-grown soybeans. Green immature soybeans (edamame; raw, or boiled). Soybean sprouts (raw, or boiled). Defatted soybeans (whole, or dehulled). Kinako (soybeans roasted and ground). Budô-mame (soybeans boiled with shoyu). Momen tofu (regular). Kinugoshi tofu (silken). Soft tofu. Packed tofu. Okinawa tofu. Yaki-tofu (grilled). Nama-age. Abura-age. Ganmodoki. Kôri-dofu. Tofu-chikuwa (steamed type, or roasted type). Natto (fermented soybeans): Itohiki-natto, Goto natto, or tera-natto.

Miso: Rice-koji miso (sweet type, light yellow type, dark yellow type). Barley-koji miso. Soybean-koji miso. Dried miso. Kinzanji miso. Hishio-miso.

Other: Okara. Soymilk (regular, reconstituted, or soft drinks). Yuba (wet, or dried).

Page 254 gives the amino acid composition of soybeans and various soyfoods. Page 298 gives the protein scores, amino acid values, and chemical scores of selected foods. Page 8 gives the energy conversion factor for tofu, age, and yuba.

1824. Colchie, Elizabeth. 1976. The sensual soybean: Eating well at bargain-basement prices. *House and Garden* 148:133, 144, 146. April. [1 ref]

• **Summary:** A brief introduction to soy flour, sprouts, whole dry soybeans, roasted soybeans, bean curd cakes [tofu], fermented curd, bean curd skin [yuba], dried bean curd sticks, bean paste, miso, black beans [soy nuggets]. With illustrations from *The Book of Tofu* by Shurtleff & Aoyagi.

1825. Dart, Susan. 1976. Mother finds way to beat food additives: Natural foods. *Chicago Tribune*. May 13. p. E30.

• **Summary:** Clara Lo was born in Hong Kong, but educated in the USA. She marinates her ground pork with “Chinese bean paste [jiang], which she buys in Chinatown.” She points out that “a marinade of soy sauce would have the same effect, but the soy sauce must not contain sodium benzoate or other preservatives and be free of any coloring whatsoever...”

Note: This is the earliest English-language document seen (March 2009) that uses the term “Chinese bean paste” to refer to Chinese-style miso.

She notes that the Chinese have traditionally eaten a balanced diet. Based on rice, or wheat, it always includes “green vegetables, fish, meat or soy bean cake [tofu]...”

1826. Crum, Maggie. 1976. Tofu—will it be the staff of life. *Contra Costa Times*. May 19. p. 13. [1 ref]

• **Summary:** About the work of William Shurtleff and Akiko Aoyagi. A photo shows the two co-authors holding up their *Book of Tofu*. “The popular tofu enthusiasts are currently back in Japan, where they are working on their second book, whose subject is miso... Come summer, Bill and Akiko will return to the United States to begin a lecture/demonstration tour in over 100 towns and cities.” Contains 4 tofu recipes. Address: California.

1827. Huang, Su-hei (Miss). ed. 1976. Chinese cuisine: Wei-Chuan cooking book. Taipei, Taiwan: Wei-Chuan Publishing Co. 221 p. May. Illust. Index (at front). 27 cm. [Chi; Eng]

• **Summary:** This attractive book of Chinese cooking from the Wei-Chuan Cooking School is a bilingual Chinese / English edition. On each page is one recipe and a 1/3-page color photo of the prepared dish. The title of the recipe is written in Chinese in large bold characters and is also given (to the right) in smaller bold letters in English. Above the number of servings is the province or region of China from which the recipe comes (e.g., Szechuan, Cantonese, Peking, Hunan, etc.) Most of the recipes call for ¼ to ½ teaspoon of MSG; many call for soy sauce.

The introduction (p. 2-17) contains: (1) Seasonings for Chinese cooking, incl. soy sauce. (2) Instruments [utensils] for Chinese cooking. (3) Culinary idioms (basic techniques, such as cleaning, cutting, heating the pan, stir frying, etc.). (4) Arrangement of seating order at feast. (5) Arrangement of the dinner sets at a feast. (6) Arrangement of food and menu. (7) Basic principles of arranging the menu. (8) Sample menus for banquets or ordinary meals. (9) Commonly used vegetables (2-page color photo, incl. “9. yellow soybean sprouts”).

(10) Commonly used dry materials and canned foods (2-page color photo, incl. “6. fried gluten balls {‘mien jin pau’}.” 13. pickled plums (‘umeboshi’). 18. agar-agar. 33. nori (purple laver sheet). 35. bean curd skin [yuba, doufu p’i]. 36. bean curd roll. 37. Pressed bean curd cake

[*doufugan*]. 39. kau fu. 40. bean curd wrapper (bai yeh; pressed tofu sheets). 41. vegetarian gluten roll (*mien jin*). 42. dried bean curd noodles [*kan-ssu*]. 43. Fermented black beans [soy nuggets]. 44. bean curd stick (*'fu dzu'*). 47. Soy sauce. These two pages also show Wei-Chuan Foods Corp. is a manufacturer of many Chinese-style foods.

(11) Description of some other special ingredients. "1. Hot bean paste (pronounced *'la jiao jiang'*). A thick spicy paste made from ground hot red peppers and soy beans." "2. Sweet bean paste (*'t'ien mien jiang'*). Made 'from ground, fermented steamed bread and spices'" [soy is not mentioned]. "3. Soy bean paste (*'do ban jiang'*). A thick black paste similar in taste to sweet bean paste, but made from fermented soybeans." "8. Fermented black beans: Small black [soy] beans which have been marinated in soy sauce and salt and are used to flavor steamed fish and meat or in stir-fried dishes." "10. Pickled bean curd or Chinese cheese (*'do fu ru'*). Bean curd cubes which are first dried and then mixed with wine, spices and salt and allowed to ferment. It is used to season braised pork and duckling." "21. You tiau. A deep-fried crispy Chinese cruller..." * "Kau fu: A spongy type of vegetarian ingredient made from wheat gluten" (see p. 151). "Fried gluten ball (*'mien jin pau'*): A type of light, round, deep-fried ball made from wheat gluten and water." "Su tsang: A type of long thin roll made of wheat gluten and water."

Interesting soy related recipes: Bean curd noodle and celery salad (with "4 oz. bean curd noodles," Szechuan, p. 23). Steamed spareribs with fermented black beans (with "3 T. [tablespoons] fermented black beans," garlic, ginger root, rice wine, and soy sauce, Cantonese, p. 60). Steamed pork in preserved bean sauce (with "2 squares fermented bean curd" (*'do fu ru'*), Cantonese, p. 74). Steamed carp with fermented black beans, Hunan, p. 88. Braised carp with hot bean paste (with "1½ T. [tablespoons] hot bean paste" (*'la do ban jiang'*), Szechuan, p. 100). Stir-fried oysters with fermented black beans (Taiwanese, p. 132).

One section of the book titled "Bean curd & eggs" (p. 140-49) contains various tofu and yuba recipes, including: Ma-Po's bean curd (Szechuan, p. 140). Vegetarian chicken loaves (with "16 sheets bean curd skin" [yuba], Shanghai, p. 147). Eggplant rolls with chopped pork (with "1 sheet bean curd skin, Taiwanese, p. 148). Stuffed bean curd rolls (with "8 bean curd sheets (*bai ye*), Shanghai, p. 149). Bean curd is counted in squares. Address: Taiwan.

1828. Saono, S.; Brotonegoro, S.; Abdulkadir, S.; Basuki, T.; Jutono, -; Badjra, I.G.P. 1976. Microbiological studies of tempe, kecap, and taoco. I. Quantitative estimation and isolation of microorganisms from some products from West Java. In: ASEAN Project on Soybean and Protein Rich Foods, Progress Report on Research Activities, Jan-May, 1976. Appendix 7. *

• **Summary:** Note: This is the earliest English-language document seen (March 2009) that uses the word "taoco" to refer to Indonesian-style miso.

1829. Shurtleff, William; Aoyagi, Akiko. 1976. What is miso? (Brochure). Berkeley, California: Westbrae Natural Foods Inc. 10 panels. Illust. by Akiko Aoyagi. May. 24 x 13 cm.

• **Summary:** Contents: Introduction. Delightfully varied; highly versatile. A nutritional treasure trove. The varieties of miso (including a table). The preparation of miso. Traditional natural miso and quick modern miso. A brief history of miso. Buying, storing, and using miso. Miso in Japan. Traditional Japanese miso shops and modern factories. Making miso at home. Favorite miso recipes (contains 16 recipes). About the Soyfoods Center.

Note: This brochure was sponsored, published, and widely distributed by Westbrae Natural Foods Inc., 1124 10th St., Berkeley, California 94710. From May 1976 to Dec. 1979 approximately 105,000 copies were printed. Address: c/o Aoyagi, 278-28 Higashi Oizumi, Nerima-ku, Tokyo 177, Japan. Phone: (03) 925-4974.

1830. Burros, Marian. 1976. The no-sweat barbecue. *Washington Post*. June 24. p. E23.

• **Summary:** The recipe for Chinese barbecued ribs calls for "¾ cup hoisin sauce. 3 tablespoons yellow bean paste. 1½ tablespoons dark soy sauce."

1831. Miyako Oriental Foods, Inc. 1976. Cold Mountain Firm Granular Rice Koji recipes (Leaflet). Los Angeles, California. 2 p. Front and back. 28 cm.

• **Summary:** Printed with brown ink on both sides of a yellow sheet of paper, this leaflet contains recipes for homemade red miso, sweet white miso, and amazake, all excerpted with permission from *The Book of Miso* by Shurtleff and Aoyagi. One copy of the leaflet was packed with each tub of firm koji sold by Miyako. A copy was also printed in *Soycraft* newsletter (No. 3, June 1976, p. 6). A number of America's early manufacturers of commercial amazake learned how to make it from this leaflet.

Note: This is the earliest document seen (April 2009) concerning Miyako Oriental Foods. Address: 404 Towne Ave., Los Angeles, California 90013. Phone: (213) 488-1678 Factory.

1832. Shurtleff, William. 1976. Koji starter for miso and shoyu. Nerima-ku, Tokyo, Japan. 2 p. Undated (June?). Catalog.

• **Summary:** This typewritten, photocopied, 2-page leaflet describes 9 different types of koji starter for: Red miso, barley miso, soybean miso, mellow barley miso, sweet white miso, light-colored miso, fast white miso, amazake or pickling, or shoyu. All 9 types are available from: Mitoku

Trading Co., Attn: Mr. Akiyoshi Kazama, C.P.O. Box 780, Tokyo 100-91, Japan. Phone: 03-201-6706. Address: c/o Aoyagi, 278-28 Higashi Oizumi, Nerima-ku, Tokyo 177, Japan. Phone: (03) 925-4974.

1833. *Asahi Shinbun (Asahi Daily News, Tokyo)*. 1976. Nihon to watakushi. Kondo wa Miso no Hon o [Japan and I. This time its a book on miso. Bill Shurtleff, the American food researcher who wrote *The Book of Tofu*]. Aug. 16. p. 4. [2 ref. Jap]

• **Summary:** Two photos show Shurtleff talking and one shows the cover of *The Book of Tofu*. Address: Japan.

1834. Tonomura, Tamihiko. 1976. Researcher on tofu, miso: Bill Shurtleff. *Asahi Evening News*. Aug. 23. Monday. [Eng]

• **Summary:** Contains a biography of Shurtleff and a history of how and why Shurtleff wrote *The Book of Tofu*, which is now in its third printing and has sold 30,000 copies. Photos show: (1) Shurtleff talking. (2) The cover of *The Book of Tofu*. Note: Akiko Aoyagi, co-author, artist, and cook. is not mentioned. Address: Asahi Shimbun writer, Japan.

1835. Bennett, Gordon. 1976. Re: What is Miso? pamphlets from Westbrae Natural Foods. Letter to William Shurtleff at New-Age Foods Study Center, Aug. 25. 2 p. Handwritten, with signature. [1 ref]

• **Summary:** “(1) Greetings! This letter is a collection of several days of considerations: (2) Is it possible to omit your side of how miso is packaged in America—our miso bag looks terrible next to others, and its a label we no longer use; a new slide?

“(3) Is it possible to get some pictures made of the miso slides—we’d like to put some of the more striking one into our pricelist & perhaps use as displays in our stores. I will arrange and pay for this.

“(4) Re giving away pamphlets across the country; we feel this is basically a good idea. However (1) we would like you to give away the WB [Westbrae] logo pamphlets...

“(5) Sea vegetables—we are writing to Japan to determine what their labeling capabilities are—this will actually decide whether we can use your copy as is, or whether we need to edit it down...

“(6) Due to the surprisingly small turnout at the lecture, our expenses were much greater than the number of people present @ \$1.00 per person. Next time we will use posters!” Note: Bill Shurtleff gave a outdoor lecture and slide show for Westbrae on Tuesday, Aug. 24, at John Hinkel Park in Berkeley, from 5-8 p.m.

“(7) A number of requests are coming for single pamphlets. We would like to forward there to you for your follow-up and interest. (8) The overseas mailing are more complex than we had thought. (9) Only 1 reply on the pamphlets so far—Manna in Toronto [Ontario, Canada]—their logo—small number [5,000]. (10) It is much more

convenient for me to arrange to get your pamphlets, agar, or whatever you’d like in advance... (11) We all thoroughly enjoyed Tues eve.—thank you & thank you Akiko—Gordon.” Address: 1224 10th St., Berkeley, California 94710. Phone: 415-524-0506.

1836. Doorn, Wil van. 1976. Lima, the European Erewhon. *East West Journal*. Aug. p. 21-22, 24-25. [Eng]

• **Summary:** This is an interview with Pierre Gevaert, co-owner and manager of Lima natural food factories in St. Martens, Latem, Belgium. Gevaert was working for world peace before George Ohsawa visited in May 1957. In early 1959 Gevaert started to produce large quantities of miso and tamari soy sauce at St. Martens Latem, Belgium, with the help of two Japanese specialists that Ohsawa had sent. The company, named Lima, was officially started in March 1960, though they had been producing food for almost 3 years under the name “Sesame.”

In 1962 Lima started to contract with farmers to grow grains organically; they were the first company in Europe to do this, in part because they were so familiar with organic agriculture themselves. “Using the knowledge gained from our own experience, we taught many farmers to grow their produce organically again in the traditional manner.” Brown rice was grown in the south of France. In 1967, after operating at a loss for many years, a businessman-consultant named Edouard van der Seelen advised them to halt production of miso and tamari. Sales were good but the products took 3 years to mature.

Pierre is a Catholic who has practiced macrobiotics for 19 years.

Note: This is the earliest document seen (Jan. 2003) concerning the soyfoods movement in Europe.

1837. Ohlund, Tim. 1976. Re: Work with miso and koji in Sweden. Letter to William Shurtleff at New-Age Foods Study Center, Aug. 2 p. Handwritten.

• **Summary:** “Dear friend. I have been very impressed with your articles on tofu and tempeh in such magazines as *East West Journal* and *Mother Earth News*. I have been working in this area on a very small scale since about 5 years ago, when I got into macrobiotics in Japan under Nahum Stiskin. Since then I have been living in Sweden studying Japanese and Chinese at Uppsala University as well as managing a truck garden (biodynamic) during the summers.”

He has been growing Japanese vegetables in Sweden—with good results. “I’ve also been working with a new variety of soybean suited for this northern climate. This year I have a very good crop of them. The last two winters I’ve been making up batches of miso just to see how it would go and gain some experience at it. It is not yet as I would like it, but that will take some time. What I really need at this time is some good literature on the subject. My friend and I have combed the library at the university here and found

much important information on tofu, tempeh, and lactic acid fermentation in *Applied Microbiology* and *Journal of Food Science*, etc.” He requests more information and contact people. He may make another trip to Japan in the next year or shortly thereafter to do research. Address: Box 559A, 19063 Örsundsbro, Sweden.

1838. Ohsawa-Japan. 1976. List of macrobiotic food products & related items. Tokyo, Japan. 2 p. Single sided.
 • **Summary:** Printed with black ink on white paper. Soy related products: Soya bean sauce (shoyu). Soya bean paste (miso). Mugi miso. Kome (koji) miso. mame miso. Tekka. Black [soy] beans (Kuromame). No prices are given. Address: 11-5 Ohyamacho, Shibuyaku, Tokto, Japan. Phone: (03) 465-5021.

1839. Order forms containing names and addresses of people who purchased publications or materials from New-age Foods Study Center in Aug. 1976 (Archival collection). 1976. Lafayette, California. Order forms filled out by the person who placed the order.

• **Summary:** BOT2 = The Book of Tofu, Vol. 2—later titled Tofu & Soymilk Production. BOM = The Book of Miso. BOM2 = The Book of Miso, Vol. 2—later titled Miso Production. TB = Tofu box. TK = Tofu Kit. NN = Natural nigari. CTE = Catalog of commercial tofu-making equipment. CKS = Catalog of koji starter for miso or shoyu.

August: Quong Hop’s Co., 161 Beacon St., South San Francisco, California 94080 (BOT2, CTE). Steven Zeev Berg, c/o Caldron Restaurant, 306 E. 6th Street, New York, NY 10003 (BOT2—The book did not arrive until Nov. 1976). Peter G. Beane, Star Route, North Anson, Maine 14958 (BOT2). Doug Wasyliw, 842 E. 10th Ave., Vancouver, BC V5T 2B1, Canada (BOM2, 10 WIT, 10 WIM, 2CTE, 2CKS). Bob & Toni Heartsong, 6051 S.W. 46 Ter. [Terrace], Miami, Florida 33155 (BOM, BOT2, BOM2). Lorenz A. Schaller, South Pasadena, California 91030 (BOM2). James Hemminger, 216 E. Ella, Fayetteville, Arkansas 72701 (BOM, BOM2). Address: New-Age Foods Study Center, 790 Los Palos Dr., Lafayette, California 94549. Phone: (415) 283-3161.

1840. Shurtleff, William; Aoyagi, Akiko. 1976. Miso to wa? [What is miso? Translated into Japanese by Tsutomu Mochizuki]. Shinshu Miso Research Inst., Nagano-shi, Japan. 15 p. [1 ref. Jap]

• **Summary:** A Japanese-language translation of the English-language pamphlet “What is Miso?” originally published by Westbrae Natural Foods in on 1 May 1976. Dr. Mochizuki was interested in this western viewpoint on miso. Address: Authors: 790 Los Palos Dr., Lafayette, California 94549; Translator: Director, Shinshu-Miso Research Inst., Nagano-shi, Japan.

1841. *Chicago Tribune*. 1976. Stocking your Mandarin pantry: A grocery list for Mandarin cooks. Sept. 16. p. D1.

• **Summary:** There are four basic categories of supplies: Dried, canned, condiments, and produce. Under “Dried” we find: “Fermented black beans—Also called salted black beans. Sold in plastic bags, slightly moist; store in covered container in refrigerator.”

Under “Canned” are Hoisin sauce, and Hot bean paste. The latter is “Essential to Szechwan dishes... (Don’t buy sweet bean paste, yellow bean paste, or soy bean paste by mistake).

Under “Condiments”—“Light soy sauce—The kind you are used to. Buy the ubiquitous brand all Chinese stores and restaurants use, Kikkoman; buy at least a pint.” “Dark or black soy sauce—Used as flavoring. Thicker than regular soy, it has a molasses-like quality and is a necessity in many dishes. Measure carefully, though, because it can be overpowering.” Also rice vinegar, and sesame oil made in Taiwan or Hong Kong, rather than Japan.

Produce: “Fresh bean curd [tofu]—Sold as produce in plastic containers in a chunk covered with water. Keeps a week in the refrigerator with two or three water changes. (Don’t buy dried bean curd, unless your recipe specifies it).”

A photo shows a man walking down South Wentworth Avenue with many Chinese signs and shops in the background.

1842. Knoblauch, Mary. 1976. Shopper in a strange land. *Chicago Tribune*. Sept. 16. p. D1.

• **Summary:** The biggest culinary rage in Chicago, next to eating Mandarin food out, is cooking it in. To start, you need a good cookbook, such as *The Chinese Cookbook*, by Craig Claiborne and Virginia Lee (1975, Lippincott). “You choose a recipe (or several) and make a shopping list—fresh ginger root, hot bean paste,... Szechwan pepper, fresh bean curd [tofu], fermented black beans, scallions...”

A large photo shows the inside of a Chinese grocery store and its grocer, Man Sun Wing Co., 2229 S. Wentworth Ave., Chicago

1843. Erewhon, Inc. 1976. Erewhon. Autumn 1976. Boston, Massachusetts. 17 p. Catalog and price list.

• **Summary:** On the front cover is a photo of six adults and three children standing atop the Erewhon warehouse building at 33 Farnsworth Street in Boston. In the background are skyscrapers and the Boston skyline. The people are: Front row (left to right): Maureen Young, Richard Young, Holly Young (youngest child), Tansy Young, Lori Young. Back row (left to right): David Simon, Jeanne Bleiweiss, Tom Herzig.

On the first page, Tyler Smith, writes about this catalog and upcoming events. “To help stimulate our customers, in the late Fall, Erewhon will present a lecture and

demonstration day in both the New York and Boston areas which will feature as the main teacher, Mr. Bill Shurtleff, author of *The Book of Tofu* and *The Book of Miso*. He will be coming to this area on a lecture tour from Japan.”

Contents: Grains. Cereals. Flour. Pasta. Juices. Beverages. Spring water. Natural sodas. Nik’s snaks. Barbara’s bakery. Bliss pastries (whole-grain, sweetened with unfiltered honey, made at Cable Springs Bakery). Donna’s butter cookies, Butterchews, Lind’s candy bars. Chico-San candies (Yinnies, Yinnies San-Wich). Crackers & Chips (incl. tamari corn chips or corn tortilla chips). Rice cakes & bread. Cheese. Butter. Yogurt. Kefir. Produce. Dried fruit. Seeds & nuts (incl. alfalfa seeds unsprayed, almonds, Brazils, cashews, peanuts, pecan halves, pistachios, pumpkin seeds, sesame–brown, sunflower seeds, walnuts). Granola. Beans (incl. aduki [azuki], organic black soybeans or yellow soybeans from New York, and black soybeans from Japan). Seed & nut butter (almond butter, cashew butter, peanut butter {Erewhon or Deaf Smith–crunchy, or unsalted}, sesame butter, sesame-peanut butter, sesame tahini, sunflower butter). Fruit butters. Oils: Erewhon oils, Arrowhead oils (incl. Soy oil). Condiments–sauces: Erewhon sauces (incl. 4 sizes of tamari soy sauce), Erewhon miso (kome {rice & soy}, Hacho {soy only}, or mugi {barley & soy}–each in 3 sizes), Erewhon Japanese imports (incl. shiitake mushrooms, barley kogi [sic, koji] to make mugi [miso], kuzu arrowroot powder, tekka seasoning, nigari (to make tofu), umeboshi), salt (incl. Herbamare salt, unrefined sea salt from France), olives, pickles, sauerkraut, brown rice vinegar (from Japan), Pure and Simple vinegar (Honey, red wine, apple cider natural), mulled cider spices. Baking (incl. barley malt syrup). Niblack’s. Fearn’s [sic, Fearn’s] (incl. Rich Earth wholewheat & soy pancake mix, Soya powder natural). Honey-syrup. Erewhon packages: Beans, grains & seeds (incl. soybeans yellow organic), hot cereals, flours (incl. soybean full-fat organic), baking. Arrowhead packages. Sea vegetables (agar-agar, hiziki [hijiki], kombu, nori, flavored nori with tamari, wakame, dulce). Fmali ginseng. Teas: Erewhon, Celestial Seasonings. Body care: Cattier clay, Dr. Bronner’s, Natural Living, Nature’s Gate, Orjene, Tom’s, luffas. Cookware (incl. soy dispenser glass). Readables: Magazines, books, posters, flyers-recipes. Apparel. Discontinued–sale. New products (Bob Swanson was the former owner and creator of Llama, Toucan and Crow, a New England distributor; Chico-San’s organic rice cakes).

Erewhon’s New York / New Jersey office is located at 303 Howe Ave., Passaic, NJ 07055. Address: 33 Farnsworth Street, Boston, Massachusetts 02210. Phone: 617-542-1358.

1844. Kozaki, Michio. 1976. Tōnan Ajia no miso to shōyu [Southeast Asia’s miso and shoyu]. *Miso no Kagaku to Gijutsu (Miso Science and Technology)* No. 271. p. 1-7. Sept. [Jap]

1845. Miyako Oriental Foods, Inc. 1976. Price list, Sept. 1, 1976: Miso. 404 Towne Ave., Los Angeles, CA 90013. 1 p. • **Summary:** Gives package size, wholesale and suggested retail prices for Yamaizumi Miso and Yamajirushi (Shinshu Type) Miso. The latter is divided into shiro miso, aka miso, and koji miso. For example, the suggested retail price of a 2-pound bag of aka miso is \$2.19. In the upper left corner is *Yama-chan*, the company logo, showing a cute child eating miso soup with chopsticks. Address: Los Angeles, California. Phone: (213) 488-1678 Factory.

1846. Order forms containing names and addresses of people who purchased publications or materials from New-Age Foods Study Center in Sept. 1976 (Archival collection). 1976. Lafayette, California. Order forms filled out by the person who placed the order.

• **Summary:** BOT2 = The Book of Tofu, Vol. 2–later titled Tofu & Soymilk Production. BOM = The Book of Miso. BOM2 = The Book of Miso, Vol. 2–later titled Miso Production. TB = Tofu box. TK = Tofu Kit. NN = Natural nigari. CTE = Catalog of commercial tofu-making equipment. CKS = Catalog of koji starter for miso or shoyu.

September: The Nova Scotia Farm, RR#2, Hampton, NS B0S 1L0 Canada (BOM). Colorado Farm, Rt. 2, Box 188, Hotchkiss, Colorado 81419 (BOM). Ira Leviton, Corncreek whole grain bakery, 60 Elm St., S. 1847. Revelle, Roger. 1976. The resources available for agriculture: The physical resources of earth, air, fire (energy) and water are large but essentially fixed. The biological and social resources, however, are far from being pressed to the limit. *Scientific American* 235(3):164-68, 170, 172-74, 177-78. Sept.

• **Summary:** Pages 170 and 172 discuss the importance of microorganisms and fermentation. “The fermentation process not only adds distinctive flavors, which are prized in their own right, but also often augments the content of riboflavin and other vitamins. Sauerkraut and yogurt are familiar fermentation products in American diets; tempeh, ragi, sufu, shoyu, ang-kak, tea fungus and mizo [sic, miso] are among those eaten in Asian countries.” Address: Director, Center for Population Studies, Harvard Univ., Massachusetts.

1848. Shurtleff, William; Aoyagi, Akiko. 1976. Getting the most from soybeans: Excerpt from *The Book of Miso*. *East West Journal*. Sept. p. 18-23.

• **Summary:** Excerpts mostly from the Preface and chapter 2, “Miso as a Food.” Includes recipes. Address: 790 Los Palos Dr., Lafayette, California 94549.

1849. Shurtleff, William; Aoyagi, Akiko. 1976. *The book of miso*. Hayama-shi, Kanagawa-ken, Japan, Soquel, California, and Brookline, Massachusetts: Autumn Press. 256 p. Sept. Illust. by Akiko Aoyagi. Index. 28 cm. Revised ed. 1981. New York, NY: Ballantine Books, 620 p. [60 ref]

• **Summary:** Contents: What is miso? Preface. Acknowledgments. Part I. Miso: Savory, High Protein Seasoning. 1. Soybeans, protein and the world food crisis. 2. Miso as a food. 3. The miracle of fermentation. 4. The varieties of miso: Regular Miso: Rice miso (red / aka, light-yellow / shinshu, mellow red / amakuchi akamiso, mellow beige / amakuchi tanshoku, mellow white / shiro koji, sweet red / edo or edo ama-miso, sweet white / Kyoto shiro miso), barley miso (karakuchi mugi, mellow barley / amakuchi mugi), soybean miso / mamé miso (miso-dama, Hatcho miso, soybean miso / mame miso, tamari miso). Special Miso: Finger lickin’ miso / Namemiso (Kinzanji miso, moromi miso, hishio, namémiso, natto miso, goto miso), sweet simmered miso / nerimiso. Modern Miso: Akadashi miso, dehydrated or freeze-dried miso, low-salt / high-protein miso.

Part II. Cooking with Miso (400 recipes). 5. Getting started. 6. Recipes from East and West: Miso toppings, miso in dips & hors d’oeuvres, miso in spreads & sandwiches, miso dressings with salads, miso in soups & stews, miso in sauces, miso with grains, beans & tofu, miso in baked dishes, miso sautéed & simmered with vegetables, miso in grilled dishes, miso in deep-fried dishes, miso & eggs, miso in desserts, miso pickles, koji cookery.

Part III. The Preparation of Miso. 7. Making miso at home and in communities. 8. Japanese farmhouse miso (incl. miso-dama). 9. The traditional miso shop. 10. The modern miso factory. Appendixes: A. A brief history of chiang, miso, and shoyu: Introduction, Chinese chiang, early Japan, the Nara Period (710 A.D. to 784 A.D.), the Heian Period (794 A.D. to 1160 A.D.), the Kamakura Period

(1185 A.D. to 1333 A.D.), the Muromachi Period (1336 A.D. to 1568 A.D.), tamari—the forerunner of shoyu (Priest Kakushin returns to Japan from China, where he learned how to make Kinzanji miso, settles at Kokoku-ji temple near town of Yuasa, discovers tamari), miso during the Edo Period (1603 A.D. to 1867 A.D.), the development of shoyu the Meiji and Pre-war Periods (1867 A.D. to 1941 A.D.), modern times, transmission to the West.

B. The varieties of Chinese chiang, Korean jang and Indonesian Tao-tjo. C. The chemistry and microbiology of miso fermentation: Introduction, koji starter molds, making koji starter, making koji—the first fermentation, cooking the soybeans, preparing the miso—the second fermentation, the finished miso. D. People and institutions connected with miso: In Japan—Miso research scholars and institutes, exporters of natural miso and koji to the West, traditional or semi-traditional shops making natural miso, Japan’s ten largest miso factories (gives the production in tons/year for several companies), other well-known miso makers. Makers of koji starter and koji, Japanese restaurants specializing in miso cuisine. North America—Miso research scholars and institutes, commercial miso makers, companies importing Japanese miso, koji, or koji starter, individuals interested in miso. Europe—Latin America. E. Miso additives. F. Miso with seafoods, chicken, and meat. G. Table of equivalents. H. So you want to study miso in Japan? Bibliography. Glossary. About the authors (autobiographical).

Note 1. This is the earliest English-language book seen (July 2000) that has the word “miso” in the title. It is also the first book in the Western world written entirely on the subject of miso.

Note 2. This is the earliest document seen (July 2000) that mentions “Hatcho miso” (spelled that way—which is now the correct romanization). Hatcho is a Japanese place name meaning (approximately) “Eighth Street.”

Note 3. This is the earliest document seen (Sept. 2002) that contains industry and market statistics on individual miso companies.

Note 4. This is the earliest document seen (March 2009) that gives illustrated details about commercial miso production.

Note 5. An advertisement on the inside rear cover of the paperback edition of this book announced that the authors were preparing *The Book of Sea Vegetables*. That book was half researched and written but never published because of concern with pollutants in sea vegetables, and increased interest in soyfoods. Address: 790 Los Palos Dr., Lafayette, California 94549.

1850. Shurtleff, William; Aoyagi, Akiko. 1976. *Tofu & Miso America Tour: 29 Sept. 1976 to 3 Feb. 1977* [Itinerary with two maps]. Lafayette, California: New-Age Foods Study Center. Unpublished manuscript.

• **Summary:** On 13 Sept. 1976 the authors bought a large, white 1975 Dodge Tradesman 300 van (used, with 40,000 miles on it). On one side Akiko painted in large, bold letters “Tofu and Miso America Tour 1976-77.” Their *Book of Tofu* had been published in December 1975 and *Book of Miso* on 23 Sept. 1976. On Sept. 29 they packed the van full to the ceiling with their books on tofu and miso, plus Larry Needleman’s tofu kits—and departed.

This trip had four main purposes: (1) To introduce tofu and miso to America; (2) To introduce people to the many benefits of a meatless/vegetarian diet; (3) To encourage people to start soyfoods companies, especially tofu shops; and (4) To promote the authors’ newly-published *Book of Tofu* and *Book of Miso*.

This itinerary includes the name and address of 64 people and organizations visited. Many of these were pioneers in the soyfoods and natural foods movements: Sept. 29—David and Kathleen Sandler, Robert Dolgin, Don Wilson, Farm Food Co. (San Rafael, California). Oct. 1—Petaluma, California. Oct. 2—Josephine County Food Center, Grants Pass, Oregon. Oct. 3. Heliotrope Natural Foods (Salem, OR). Oct. 4—West Bank Cafe (Corvallis, OR). Oct. 5. Visit Linda Shurtleff (McMinville, OR). Visit *Rain Magazine* (Portland, Oregon). They do an interview which is published in their Nov. 1976 issue. Oct. 6. Blake Rankin and Janus Natural Foods (Seattle, Washington). Oct. 7. Janus. Oct. 8—Luke Lukoskie and Sylvia Nogaki of Island Spring (Vashon, Washington). Oct. 10—Jack Grady, a macrobiotic (Spokane, WA). Oct. 13—Univ. of Minnesota. Oct. 14—Georgie Yiannias of Wedge Food Co-op and Ananda Marga (Minneapolis, Minnesota). Our largest class with 300 people. Oct. 15—Barbara (“Bobbie”) Reinhardt Shurtleff dies of colon cancer at Alta Bates Hospital, Berkeley, CA. Oct. 15. Famine Food Co-op (Winona, Minnesota). Oct. 16—Bonnie Maroney of The Wisconsin Farm (Ettrick, WI). Oct. 19—Visit George Strayer and Larry Kruger of the American Soybean Assoc. (Hudson, Iowa). Visit David and Ann Tucker (Iowa City, Iowa). Oct. 20. Outpost Natural Foods (Milwaukee, WI). Visit Bountiful Bean Co-op. Oct. 21. Visit Dr. Danji Fukushima and Kikkoman Foods (Walworth, Wisconsin). Oct. 22—Visit Drs. Hesseltine, Wang, Wolf, Mustakas, Cowan at Northern Regional Research Center (Peoria, Illinois). Oct. 23—Morning class on commercial production for Les Karplus and 5 people at Vegetarian Incorporated (Urbana, Illinois). Oct. 23-24. Side trip to visit ADM and Staley (Decatur, IL). Oct. 24—Les and Debbie Karplus of Vegetarian Inc. (Urbana, IL). Oct. 25—Visit Dr. L.S. Wei of the Univ. of Illinois Dept. of Food Science (Urbana, Illinois). Evening program for Karplus in Urbana. Oct. 26. Purdue University (Indiana). Oct. 27—Chris Steele (Lansing, Michigan). Oct. 28—Mike Potter and Louis Howie of Eden Foods (4601 Platt Rd., Ann Arbor, Michigan). Oct. 29—Calico Market (Erie, Pennsylvania). Oct. 30—Visit Greg Weaver and Jay

Thompson of Rochester Zen Center (Rochester, New York; Later Northern Soy). Visit Genesee Co-op. Oct. 31—Alternative Health Education Center (Rochester).

Nov. 1—Visit Arnold Karmody at Empty Cloud (Canandaigua, New York). Meet Dr. Keith Steinkraus (Geneva, New York). Nov. 2—Visit with Dr. Steinkraus at New York Agric. Exp. Station (Geneva, NY). Lunch together with his wife, Maxine. Nov. 3—Tom MacDonald at Hannibal, New York. Nov. 4—Ira and Kathy Leviton of Corncreek Bakery (South Deerfield, Massachusetts). Visit Laughing Grasshopper tofu shop just before it begins operation. Nov. 5—Fritz Hewitt of Common Ground Restaurant (Brattleboro, Vermont). Visit Tom Timmins of Llama, Toucan & Crow (Brattleboro). Nov. 6. Shep Erhard (Franklin, Maine). Nov. 7—Ann S. Johnson at Univ. of Maine (Orono, ME). Nov. 8—Visit Marine Colloids (Rockland, Maine). Nov. 10—Drive to Boston, stay with Nahum & Beverly Stiskin (Brookline). Nov. 13—Tofu & Miso program in Boston. Visit Erewhon Natural Foods (33 Farnsworth St., Boston, Massachusetts), Martha Trundy, Jeffrey & Gretchen Broadbent. Nov. 14—Visit to shops in Boston’s Chinatown. Michio and Aveline Kushi give a big party in our honor at their home at 62 Buckminster Rd., Brookline, then take us out to dinner at the Seventh Inn. Nov. 15—Tofu-making class at a home in Boston. Nov. 17—Visit offices of *East West Journal*. Sherman Goldman conducts long interview, later published in Jan. 1977 issue. Misomaking class at home of Ken Burns. Nov. 18—Visit Joel Wollner in Cape Cod. Nov. 19—Radio show then program for Joel. Nov. 20—Peter Smith at Quaker group in Pennsylvania. Nov. 22—Visit Woods Hole, Massachusetts to study sea vegetables. Evening program at New Bedford, MA. Nov. 23—Stay with Seung Sahn, Sa Nim at Providence, Rhode Island Zen Center. Meditate and show students how to make tofu. Evening at Insight Meditation Center, Barre, MA, a Vipassana center in a former Catholic seminary, co-founded in 1976 by Jack Kornfield, Joseph Goldstein and 3 others. We have dinner, meditate with the sangha, and hear Jack talk about Vipassana. Nov. 24 Sit morning zazen with master and students at Providence zendo. Nov. 25—Thanksgiving. Akiko and I stay alone in a house near Hartford, Connecticut and taste a good tofu pumpkin pie. I read about seaweeds. We take a long walk in the countryside. Nov. 26—Program for Erewhon Natural Foods in Hartford (stay with Maria Orefice, owner of Garden of Eating restaurant in Hartford). Article in *The Hartford Courant* (Dec. 1). Nov. 27—Long River Food Coop in Connecticut. Nov. 28—Stay with Susan and Kirk Gershuny of Snowflower (Tivoli, New York). They plan to make soy ice cream soon. Nov. 29—Drive in Deep snow to the New York Farm in Franklin, New York. Stay in a big house they built. Nov. 30—Carl Bethage of the East West Center in Gardiner, New York. Also did a radio program.

1976 Dec. 1—Visit Frances Moore Lappé at her upstairs office in Hudson-on-Hastings, New York. Then visit her large home on the hillside. Dec. 1-5—We missed a program for Annemarie Colbin in New York City (partly because we feared our van would be burglarized on the street) so we stayed Dec. 1-5 at the luxurious home of Leo S. Nikora (Niki; Bobbie's friend). I work on writing *The Book of Kudzu*. Dec. 6-7. Program for 40 people (Hosts: Nancy N. Bailey and Robert Rodale) at Rodale Press (Emmaus, Pennsylvania); I am surprised they serve white sugar on their dining tables. Dec. 8—Tim Snyder of Ecology Co-op in Philadelphia. Dec. 9—Stay at home of Sylvia Anderson in Pleasantville, New Jersey and do a program upstairs in a modern university. Study magnificent photos of Edward S. Curtis. Dec. 10—Visit Jay and Freya Dinshah of the North American Vegetarian Society (Malaga, New Jersey); their poor vegan child has bowed legs. Dec. 12—Cindy Blouse in Dallastown, Pennsylvania. Dec. 13—Visit Laurelbrook Foods, a natural foods distributor in Forest Hill, Maryland. We meet Rod and Margie Coates. Dec. 14—Big program hosted by Ella May Stoneburner and Seventh-day Adventists near Washington, DC. Dec. 15—Michael Rosoff (who ran the East West Center in Washington, DC) planned to host a class in a DC church. After we witness a robbery, we are afraid to leave our van on the street. So we do a scaled-down program in the home of Murray and Pam Snyder, which was the East West Center in Baltimore, Maryland. Visit Laurelbrook Foods Warehouse #2 in Durham / Chapel Hill. Dec. 16—Roanoke Food Co-op in Copper Hill, Virginia. Dec. 17-18—John Shuttleworth and Jim Morgans of *Mother Earth News* (Hendersonville, North Carolina). They do a long interview and take photos. Program at night. Note: An audio tape of Bill's talk at this program is filed with Soyfoods Center documents for 1976. Dec. 19—Chandler Barrett in Atlanta, Georgia.

Note 1. This is the earliest document seen (April 2001) concerning the work of Ira Leviton or Tom Timmins with soy. One evening, before Shuttleworth was scheduled to speak at Leviton's Corncreek Bakery, Leviton drove Shuttleworth to see the Laughing Grasshopper Tofu Shop which was under construction on the second story of an old wooden building in the nearby town of Millers Falls, Massachusetts. Much of the equipment was made out of wood—including wooden curdling vats and a wooden cider press. The company opened in Jan. 1977.

Note 2. This is the earliest document seen (April 2006) concerning Llama, Toucan & Crow in Brattleboro, Vermont.

Note 3. This is the earliest document seen (May 2006) concerning the forerunners of United Natural Foods, Inc. (INFI)—in the form of Llama, Toucan & Crow. Address: 790 Los Palos Manor, Lafayette, California 94549. Phone: 283-3161.

1851. Shuttleworth, William. 1976. New-Age Foods Study Center: Basic purposes and activities (Leaflet). Lafayette, California. 1 p. Single sided. Sept. 28 cm.

• **Summary:** "1. To work toward creative, low-cost solutions to the present world food/protein crisis by doing basic research and writing books... Our special interests include soybean products (tofu, miso, tempeh, shoyu, etc.), sea vegetables, whole-grain bread, and kuzu.

"2. To aid in the spread of the ideas found in our writings by regularly responding to invitations from any part of the world to do lecture/demonstrations and cooking classes."

3. To encourage the adoption of meatless and vegetarian diets which help make the best use of the planet's precious food resources, are low in cost, conducive to the development of a healthy body and clear mind, kind to animals, and ecologically sound.

"4. To encourage people in the West to begin commercial or community production of tofu, miso, and tempeh..."

"5. To provide centers where people can come to learn more about our work and to begin their own study of basic important foods. In Japan, we assist people in studying with tofu- and miso masters..."

"6. To work actively to promote the key concept of food self-sufficiency and simpler, low-cost lifestyles that are harmonious with the needs of the planetary ecosystem. Likewise to encourage deeper understanding of selfless service, and of daily life and work as a spiritual practice.

"7. To provide a catalog of publications and materials related to our work. We invite you to contact us and we hope we may be of service to you." Address: New-Age Foods Study Center, 790 Los Palos Dr., Lafayette, California 94549. Phone: (415) 283-3161.

1852. Shuttleworth, William; Aoyagi, Akiko. 1976. Tofu & Miso America Tour: 29 Sept. 1976 to 3 Feb. 1977. Continued from Jan. 1977. [Itinerary with two maps]. Lafayette, California: New-Age Foods Study Center. Unpublished manuscript.

• **Summary:** Continued: 1976 Dec. 21. Arrive at The Farm in Summertown, Tennessee. Meet Margaret Nofziger and Stephen Gaskin. Stay until 2 Jan. 1977. We stayed most of the time at "Hoot Owl Hollow," a large community owner-built home with many families; our host was Edward Sierra. During the next few weeks we stayed in a parked mobile home (owned by the Sandlers) in a lovely valley about 1 hour drive away. I worked on *The Book of Kudzu* final draft. Heavy confrontation with Farm folks—as I am about to start a program—about how they didn't like my way. Write a 4-page pamphlet titled "What is Tempeh?" jointly with Cynthia Bates. 1976 Dec. 31—This is our first year with significant income (\$27,390, mostly from Autumn Press royalties) but no profit. During 1976 thirty articles and book

reviews about our work with tofu and miso were published in magazines and newspapers in the USA and Japan.

1977 Jan. 2—Our Tofu & Miso America Tour continues. Jan. 3—Stay in a suburban home with Lynn Delacruz in Meridan, Mississippi. Jan. 4—Program for Atlantis Distributors in New Orleans. That night we stay in a trailer home with John Gabriel and his wife in Houma, Louisiana. They are from The Farm and make commercial tempeh in their trailer. Jan. 6—Jim Baker (Dallas, Texas). After the program I meet Dr. Ralph Sand who is studying tofu and soy cheeses at Anderson Clayton. We also visit with my cousin, Bob Shurtleff, near Dallas. Jan. 7—Jane Binante in Denton, Texas. Jan. 9—Jim Hemminger of Gregg St. Tofu Co. (started by Thom Leonard) in Fayetteville, Arkansas. His partner is Mary Weingartner. We sleep on the floor of a small house in Fayetteville and the next morning see Jim make tofu in a bathtub. Jan. 10—East Wind in Tecumseh, Missouri. Jan. 12—Stay with Robert Nissenbaum (a fine, humble fellow) in St. Louis, Missouri. I finish typewritten manuscript of “What is Tempeh?” Jan. 13—Program at a restaurant, The Sunshine Inn (St. Louis). Sponsored by The Ethical Society. Stephen Uprichard, Dale Deraps, and Robert Nissenbaum are there.

Jan. 15—Meet David and Danette Briscoe (Kansas City, Missouri; they soon start publishing *Soycraft*, a small periodical on soyfoods), dinner with Thom Leonard at his home in Lawrence, Kansas (we have miso soup with miso that Thom made, then do a big program sponsored by the Mercantile Community Co-op in downtown Lawrence at either the Lawrence Library or Community Center—in a big downstairs room. I tape the lecture. Unbeknownst to me, Ken Bader, CEO-to-be of the American Soybean Assoc., is in attendance). Jan. 16—Visit Bob Amelay of the Omaha Food Co-ops in Omaha, Nebraska. Jan. 17—Drive across Nebraska to Denver. Jan. 18-19—Dave Bolduc and Christie Shurtleff in Boulder, Colorado. The first night we do a big tofu program in the historic Boulder Theater. That afternoon we have an audience with the Karmapa—a high Tibetan spiritual leader, who has diabetes; we give him an inscribed hardcover copy of *The Book of Tofu*. Akiko recalls cooking tofu burgers for him. That evening in a large, packed hall, we witness his Holiness conduct the Black Crown Ceremony. Jan. 20. Jimmy Carter is inaugurated as president. Jan. 24—Program for The Colorado Farm in Hotchkiss, Colorado—way out in the boondocks. Jan. 25—Stay with Andrea Chin in Taos, New Mexico. Visit Lama Foundation high above Taos in the snow (Steve Durkee, teacher). They have many small meditation cubicles around the hillside and have just finished a nice adobe meditation hall. Near Durango, Colorado, we visit Ed Tripp, who looks lonely, sad and desolate, farming a little patch of organically grown wheat and living alone in a bare shack on coffee and cigarettes. Jan. 26. We stay somewhere in New Mexico. Jan. 27—Program at the First Unitarian Church in Albuquerque

(79 p.m.) hosted by Michele E. Martin of Jemez Bodhi Mandala Zen Center, Jemez Springs, New Mexico. Sit meditation in their cold Rinzai zendo then soak in the hot springs outside in the snow. Their teacher, Sasaki roshi, is not there. Jan. 28—Susan Berry in Silver City is supposed to host a program. We cannot find her house. At one point along in here we do a program in or near Utah in a remote church up on a little bluff. Dinner before at Frosty Hot Dog place. Jan. 29—Long drive across Arizona to San Diego. Jan. 30—Big program in San Diego for 350 people at the Ocean Beach Community School hosted by David and Barbara Salat, publishers of *Well Being* magazine. Afterwards we stayed overnight on their houseboat in San Diego Bay. Magical. Akiko had a bad cough and was very tired.

In Los Angeles we spend a day (in late January or early February 1977) with Lewis Headrick and Jimmy Silver visiting three small tempeh shops: Bali Foods (in Baldwin Park, run by Mr. Henoeh Khoe), Country Store Health Foods (in Sun Valley; Joan Harriman), and Toko Baru (in West Covina; Randy Kohler). One evening we had dinner with Mr. Yamauchi and perhaps Al Jacobson. I gave a presentation on tofu. Afterwards, in the parking lot, Mr. Yamauchi gave me an envelope containing several hundred dollars in bills—his way of saying thank you for the work we were doing on behalf of tofu. Feb. 1. Drive to northern California, then have dinner at the home of Herman and Cornelia Aihara (Oroville, CA). Feb. 2. Last program of the tour for Harold Lockhard of the Sacramento Natural Foods Co-op (Sacramento, California; Program is in a modern college building).

On 3 Feb. 1977 arrive home in Lafayette, California.

On this 4-month tour the Shurtleffs, trying to do for soyfoods what Johnny Appleseed did for apples, presented 70 public programs attended by about 3,646 people, did many media interviews and appearances, and travelled 15,000 miles. They had a gross income of \$18,020 from honoraria and sales of their books (*Book of Tofu*, *Book of Miso*), tofu kits, pamphlets, and nigari. Total trip expenses were about \$5,361 plus about \$7,200 for books from the publisher, leaving a net income of about \$5,459. It was a huge, challenging, and exhausting Odyssey that bore abundant fruit in the founding of a new tofu shop almost everywhere they spoke.

1977 Feb. 9—Meeting in Lafayette (790 Los Palos Dr.) with Robert Dolgin and David Sandler (from the Farm and Farm Foods in San Rafael) and Larry Needleman leads to the establishment of Bean Machines, Inc. (BMI). The Farm places a firm order for a Japan tofu system.

1977 Feb. 12—Bill and Akiko leave America and fly to Japan. Air fare paid by Hydrometals. Address: 790 Los Palos Manor, Lafayette, California 94549. Phone: 283-3161.

1853. Shurtleff, William; Aoyagi, Akiko. 1976. Tamari (Document part). In: William Shurtleff and Akiko Aoyagi. 1976. *The Book of Miso*. Hayama-shi, Kanagawa-ken, Japan, Soquel, California, and Brookline, Massachusetts: Autumn Press. 256 p. See p. 50, 219-21. Sept. Illust. by Akiko Aoyagi. Revised ed. 1981. New York, NY: Ballantine Books, 620 p. [60 ref]

• **Summary:** In Chapter 5, “Getting started,” in the section on “Basic ingredients,” is a subsection titled “Tamari” which states (p. 50): “A close relative of shoyu, tamari is prepared from a koji which contains only soybeans and no wheat; it has a distinctive, slightly strong flavor and aroma, a dark brown color, and a fairly thick consistency. Produced either as a byproduct of tamari miso (p. 44) or as a food in its own right, it is now rarely used in its natural form, being generally made into *sashimi-damari* by mixing it with miso-damari (see below), *mizuumé*, cane sugar, caramel, and often preservatives. Although not widely used in Japan, it remains fairly popular in Kyoto and central Japan, where it is used as a seasoning for *sashimi* (raw fish). In ancient times tamari was widely used in its natural form and highly prized as a fine seasoning, having much the same flavor as a best-grade Chinese soy sauce. Today, an increasing amount is made synthetically.

“*Miso-damari*—also called *uwahiki*—is the tamari-like liquid that accumulates in *any* variety of miso during fermentation. Thicker and richer than tamari, it is gathered only in very small quantities and is not sold commercially. A delicious by-product of most homemade miso (it rises to the surface in summer and settles in winter), it may be used like shoyu and is especially delicious with hors d’oeuvres.

In “Appendix A: A brief history of chiang, miso and shoyu,” is a section (p. 219-21) titled “Tamari: The forerunner of shoyu.” Address: 790 Los Palos Dr., Lafayette, California 94549.

1854. Shurtleff, William; Aoyagi, Akiko. 1976. Appendix B: Varieties of Chinese chiang, Korean Jang, and Indonesian Tao-tjo [Tauco] (Document part). In: William Shurtleff and Akiko Aoyagi. 1976. *The Book of Miso*. Hayama-shi, Kanagawa-ken, Japan, Soquel, California, and Brookline, Massachusetts: Autumn Press. 256 p. See p. 277-331. Sept. Illust. by Akiko Aoyagi. Revised ed. 1981. New York, NY: Ballantine Books, 620 p.

• **Summary:** Contents: Introduction. Note: Of the romanized Chinese names given in curly brackets below, the first is in the Wade-Giles transliteration; the second is in the more modern pinyin transliteration.

Chinese chiang: Introduction, Red or regular chiang (chunky chiang, hot chunky chiang, Szechwan red-pepper chiang, Hamanatto chiang, Cantonese red chiang, great chiang, yellow-red chiang), black chiang (sweet wheat-flour chiang, black chiang), assorted chiangs (introduction, red-pepper chiang, Canton sweet simmered chiang, dried

chiang, other varieties (none of which contain soybeans or grain koji; sesame chiang, peanut chiang, umeboshi chiang, shrimp chiang, corbicula chiang, tangy chiang, semi-fermented chiang)), chiang sauces (bean sauce, hoisin sauce [*hai-hsien chiang*, *haixiang jiang*], oyster sauce, barbecue sauce, other chiang sauces, none of which contain soybeans or grain koji; shrimp sauce, Chinese Worcestershire sauce, Chinese ketchup). Note 1. The Chinese (Wade-Giles) names and characters for each of these sauces are given on page 230.

Korean jang: Introduction, Korean soybean jang (*doen jang*), Korean red-pepper jang (*kochu jang*), Mild red-pepper jang (*mat jang*), Chinese sweet black jang (*cha jang* or *chungkuk jang*), Japanese red jang (*wei jang* or *ilbon jang*).

Note 2. This is the earliest English-language document seen (March 2009) that uses the word “kochu jang” (or “kochu-jang”) to refer to Korean-style red pepper and soybean paste (miso).

Indonesian tao-tjo: Summary.

Note 3. This is the earliest English-language document seen (March 2009) that uses the term “chungkuk jang” to refer to a fermented Korean soyfood or seasoning. Actually, the term refers to a type of Korean natto, and therefore does not belong in a book about miso. Address: 790 Los Palos Dr., Lafayette, California 94549.

1855. Shurtleff, William; Aoyagi, Akiko. 1976. The book of miso (Illustrations—line drawings). Hayama-shi, Kanagawa-ken, Japan, Soquel, California, and Brookline, Massachusetts: Autumn Press. 256 p. Sept. Illust. by Akiko Aoyagi. Index. 28 cm. Revised ed. 1981. New York, NY: Ballantine Books, 620 p. [60 ref]

• **Summary:** Continued: Illustrations (line drawings, both numbered and unnumbered) show: The two Japanese characters for miso. Three men “Putting Hatcho miso to bed” by piling nearly round river stones on top of a huge vat; the pyramid shape makes the pile earthquake proof. A child holding a sheaf of grain. A round *zaru* (woven split bamboo tray) with a circle of salt in the middle. A square wooden measure (*isshô-baku*) filled with soybeans. The top of rice and barley plants showing grains and leaves. A wooden vat or red miso tied with rice-straw ropes. A miso makers standing large wooden vats of two different sizes, with braided bamboo hoops. A well stocked miso shop in Japan (at Kichijoji train station, Tokyo). A woman standing behind two deep earthenware crocks filled with miso; ball so miso are in a basket. A sunken traditional Japanese farmhouse fireplace (*irori*) with a pot hanging over the coals on a hook (*jizai kagi*) and tofu dengaku being grilled around the coals, their skewers stuck into the ash. Nine wooden kegs of different kinds of miso piled up on 3 levels. A field of soybeans planted in rows. A hand holding soybeans pods still attached to the stem. A soybean pod split open to show

the beans. (1) Bar graph of protein from different sources vs. protein returned. (2) Diagram of energy flow through two different food chains, one with a steer in the middle, the other with direct consumption of soy and grains. (3) Development aid from affluent nations as a percentage of GNP (1960-1971). Stylized soybean plant growing out of a stylized Planet Earth. Miso gift pack, with poly bags of rice, barley, and Hatcho miso. A Japanese pipe *kiseru*. (6) Graph of intestinal cancer vs. meat consumption among females in selected countries; the more meat consumed, the more cancer. Miso aging (from *Miso Daigaku*). (7) The varieties of miso and their characteristics (full-page table). (8) The percentage of salt in different miso varieties. (9a) Map of Japan show where the different types of miso originate. (9b) Map of Japan showing geographical miso preferences. A head of rice. (10) Famous sub-varieties of salty rice miso. Two heads of barley. Table about two types of barley miso. Two sets of soybean leaves with pods. Table about three types of soybean miso. The Japanese characters for Hatcho Miso. (11) A wooden sign in a Hatcho miso office: "Supplier to the Imperial Household." (12) Two cross-section views of a tamari miso vat. A small pottery crock of sweet simmered miso (*Nerimiso*). Packages of different types of modern miso: Peanut miso, akadashi miso, low-salt, high protein miso, Instant miso soup with dried frozen tofu, leeks, wakame. (14) Different types of miso packaging, both traditional and modern. A sample miso label. (13) Varieties of miso available in the West, plus characteristics of each. Squeezing a bean of miso out of the cut corner of a plastic bag. Three different shoyu containers. Six different types of tofu on a cutting board. (15) Oriental kitchen tools (utensils; full page). A small crock of salt with a wooden spoon in it. Suribachi and modern sesame seed grinder. Tofu preparatory techniques. Broiling tofu with chopsticks on a broiling screen. Four forms of kombu. Two stylized crossed sheaves of rice. A traditional farmhouse kamado (raised earthenware cooking area). Pottery crock. Black and white sesame seeds and plant. Yuzu. Sprig of kinome. Head of garlic. Two burdock roots. Two leeks (*negi*). Making broiled miso. Hoba miso. Kaiyaki miso. Yubeshi miso. Wakame plant. A bowl of miso soup. A woman drinking hot miso soup next to a vending machine. Vegetables cut for miso soup (*mi* or *gu*). Table of the most popular ingredients in miso soup. How to make miso sup at home (4 views). Miso-koshi (woven bamboo strainer). Mad monks grinding miso. (19) Full-page table of miso soup throughout the four seasons. Shiso / beefsteak leaves. Kabocha. Daikon. Irori and jizai kagi (sunken farmhouse fireplace and overhead hanging hook). Woman serving miso by a sunken / open hearth fireplace. Woman kneeling, grinding miso with a pestle (*suri kogi*) in a *suribachi* (serrated earthenware mortar / mixing bowl). (20) Rice patties with nori (*o-musubi*, *o-nigiri*). Bamboo noodle tongs. Homemade noodles in a pot. (21) Broiled mochi wrapped

with nori. (22) Steamed tofu. A Chinese cleaver, with its tip stuck into a chopping block. Cultivated shiitake mushrooms growing on a log. Kabocha. Daikon. (23) Miso oden. Doténabé [Dotenabe]. Konnyaku twists. Dengaku Hoshi. Tofu dengaku (2 pieces, skewered; 3 pieces skewered in a box). Japanese eggplant (*nasu*) scored and Shigiyaki. Deep-frying with a wok. Lotus root stuffed with miso. (24) Deep-fried sandwiches. (25) Gashouse eggs. (26) Layered omelets. Japanese bamboo steamer. Kashiwa mochi. Selling miso pickles. Two pickling containers. (27) Salt-pressing. Air-drying daikon and turnips (*kabu*). Miso pickles with tea and chopsticks. Amazaké at the Nakamura-ro restaurant. How to make miso at home: Utensils, ingredients, and process (7 figures). (29) Miso fermentation crocks. Corona hand-mill. Soft mat koji. (30) Proportions by weight of basic ingredients for various homemade misos; full-page table. (32) Utensils for homemade koji and koji starter. (33) Miso flow chart. (34) Composition of nutrients in 100 gm of basic miso ingredients. (35) Process for homemade rice koji (9 figures). (36) Graph of changes in koji temperatures. Woman leaning over miso vat.

Japanese farmhouse miso: Traditional country farmhouses (2 views). Raised farmhouse kitchen hearth, caldrons and earthenware dais (*kamado*). (38) Farmhouse floor plan. A kura (family treasury and storehouse). Two bamboo colanders. Pounding miso at Suwanose. Making miso in a traditional farmhouse (9 figures). Farmhouse soybean miso made with *miso-dama* (miso balls) (5 figures).

The traditional miso shop: (39) A 17th century workplace (2 figures). (40) Tsujita shop floor plan. Koji trays. (41) Insulated fermentation box. (42) The small tools (full-page). (43) Shop with 2 cauldrons. (44) Steamer and cauldron. (45) A fermentation vat. (46) Shop floor at vat's rim. Preparing traditional rice miso (31 figures). Making koji using natural mold spores. Stacked koji trays. Making miso in a semi-traditional shop (5 figures). Hatcho miso; company and vats (2 views).

The modern factory (2 figures).

A brief history of chiang, miso, and shoyu (incl. evolution of Chinese characters). Hideyoshi Toyotomi and a robber on the bridge (Hatcho miso history). Making miso-damari. Inside a Kikkoman shoyu factory around 1900. Traditional shoyu seller.

Chinese chiang in earthenware jars in a courtyard. Korean jang; selling it and making at home. (48) The interaction of basic miso components during fermentation. (49) Temperature control curves for four quick misos. Edo period shoyu production. Cutting tofu for Dengaku and Busy making dengaku, both from the book *Tofu Hyaku Chin*. Cartoon of a man pouring himself sake, thinking of miso soup. Ebisu with fishing rod and big fish under left arm. Tamari shoyu pouring out of spigot at base of miso vat. Traditional Japanese kitchen utensils. Sunken fireplace

(*irori*) with huge carved wooden overhead hook hanging from braided rice straw rope. Photo (in Nerima-ku, Tokyo) and brief biography of William Shurtleff and Akiko Aoyagi. Address: 790 Los Palos Dr., Lafayette, California 94549.

1856. Inada, Lawson Fusao. 1976. Making miso. For Noboru Muramoto (A poem). *Bridge: An Asian American perspective*. Oct. p. 16.

1857. Liener, Irvin E. 1976. Nutritional aspects of soy protein products. In: Archer Daniels Midland Co., comp. 1976. *Edible Soy Protein Seminar*. Decatur, Illinois. 220 p. See p. 13-85. Held in 1976 at Moscow, USSR and Warsaw, Poland. [265 ref]

• **Summary:** Contents: Nutritional value of the protein of individual soy products: General considerations, soybeans as a vegetable, soyflour, soybean milk, soybean curd, protein concentrates, protein isolates, fermented products. Blended soy products: Blend with wheat protein, blend with corn protein, blend with rice, vegetable-protein formulations, soy protein as meat extender. Textured meat analogs. Nutritional value of non-protein constituents: Available energy, crude fiber, vitamins (fat-soluble vitamins, water-soluble vitamins), minerals (calcium, phosphorus, zinc, other metals). Antinutritional factors: Heat-labile factors (trypsin inhibitor, hemagglutinins, other heat-labile factors), heat-stable factors (saponins, estrogens, flatulence factors, lysinoalanine). References. Tables.

Concerning lysinoalanine (p. 58-59): "Sternberg et al. (1975) have recently shown lysinoalanine to be widely distributed in cooked foods, commercial food preparations, and food ingredients, many of which had never been subjected to alkaline treatment. Many of these foods had levels of lysinoalanine which were considerably higher than those found in commercial samples of soy protein isolate. The wide distribution of lysinoalanine among commonly cooked foods would tend to indicate that" this is neither a novel protein nor a serious problem, as some humans have long been exposed to proteins containing lysinoalanine with apparent impunity. "Its presence in soy protein can hardly be considered a serious problem for man." Address: Dep. of Biochemistry, Univ. of Minnesota, St. Paul, MN 55108.

1860. Hillman, Howard. 1976. 10 of the world's great cuisines—A cook's tour. *New York Times*. Nov. 7. p. XX1, 26, 28, 30.

• **Summary:** China, like France and Italy, is a country of regional cuisines. Canton: "Over 95 percent of Chinese-American restaurants serve Cantonese-style food because most Chinese immigrants to the United States have come from Canton [Guangzhou] and its surrounding Kwantung [Guangdong] Province." Most Americanized Cantonese cooking deserves its mediocre reputation, but true Cantonese cuisine is considered China's finest. So be sure to ask your waiter for authentic Cantonese dishes that have not been adapted to American tastes. Cantonese chefs make every effort to bring out the natural flavor of ingredients rather than masking them with heavy seasonings or sauces. "Flavoring agents much employed in Cantonese cooking include oyster sauce, salted fermented black beans, light soy sauce, rice wine, ginger and chicken stock." "Famous Cantonese dishes include Steamed Fish with Black Bean Sauce,... the vegetarian Buddha's Delight,..."

Next in popularity in America, after Cantonese cooking, is Northern and "Mandarin" cuisine, which comes from the northern provinces of Hopei (which includes Peking), Shantung, and Honan. "Mandarin Cuisine," an Occidental term, correctly refers to the elaborate and delicate dishes prepared for the elite members of the now-defunct Imperial Court. Famous recipes include Peking Duck, Bird's Nest Soup, Shark's Fin Soup, etc. So we must distinguish this from the unique man-on-the-street Northern cuisine. Among its characteristic "flavoring agents are fermented soy bean paste, dark soy sauce, rice wine and members of the onion family [genus *Allium*], especially garlic, leeks, scallions and chives."

Next in stateside popularity are the cuisines of Szechuan and Hunan, both known for their use of hot chilis and oil. Finally we have Shanghai, the Central Coast, and Fukien.

1861. Gevaert, Pierre. 1976. Re: Thank you for *The Book of Miso*. Letter to William Shurtleff and Akiko Aoyagi at New-Age Foods Study Center, 790 Los Palos Manor, Lafayette, CA 94549, Nov. 22. 1 p. Typed, with signature.

• **Summary:** "Dear William and Akiko, What a beautiful surprise to get this fresh and pure book of miso. A real big step for survival for anyone wishing to play in the new world where light is visible everywhere. Thank You! Yours friendly, Pierre Gevaert." Address: P.V.B.A. Lima, Edgar Gevaertdreef 10, 9830 St.-Martens-Latem, Belgium. Phone: (091) 82.41.76.

• **Summary:** "Bill Shurtleff and Akiko Aoyagi say they're trying to do for soybeans what Johnny Appleseed did for apples—introduce them to the West." This full-page article discusses a lecture-demonstration on tofu and miso cookery that gave at the New Bedford, Massachusetts, YMCA. Contains 4 recipes and 3 large photos by Hank Seaman, including one of Shurtleff and Aoyagi serving foods to Chris Mroczek [Roczek]. Address: Standard-Times staff writer.

1864. Autumn Press. 1976. Meet two people who care... [Bill Shurtleff and Akiko Aoyagi] (Ad). *Mother Earth News* No. 42. Nov. p. 177. Also in 1977: No. 44. March/April. p. 143, and No. 45, May/June p. 77. [2 ref]

• **Summary:** This is a half-page ad for *The Book of Tofu* and *The Book of Miso*, "two revolutionary cookbooks," with a description of the work of authors Shurtleff and Aoyagi, and a photo of them (from *The Book of Miso*).

Note: *The Book of Tofu* and *Book of Miso* were subsequently carried and prominently advertised in Mother's Bookshelf, where they were sold via mail order through the magazine. See for example *Mother Earth News*. 1977. No. 45. May/June. p. 114-15. Address: P.O. Box 469-M, 3941 Glen Haven Rd., Soquel, California 95073.

1865. Ebine, Hideo. 1976. Fermented soybean foods. *INTSOY Series* No. 10. p. 126-29. R.M. Goodman, ed. Expanding the Use of Soybeans (College of Agric., Univ. of Illinois at Urbana-Champaign). [11 ref]

• **Summary:** Contents: Introduction. Miso. Shoyu. Natto. Conclusion. Literature cited. Discussion.

Production of fermented soyfoods in Japan in 1974 was as follows: Miso 587,228 tonnes (metric tons; this miso was made from 191,621 tonnes of whole soybeans, 2,200 tonnes of defatted soybean meal, 102,104 tonnes of rice, 22,280 tonnes of barley, 80,265 tonnes of salt).

Shoyu 1,213,350 tonnes (made from 14,278 tonnes of whole soybeans, 176,138 tonnes of defatted soybean meal, 176,319 tonnes of wheat, 209,674 tonnes of salt).

Natto 90,000 tonnes (made from 47,000 tonnes of whole soybeans). "In 1960 the National Food Research Institute initiated a project to develop a new type of soybean food in order to comply with a request from UNICEF to supply a nutritious protein food for children. The product thus developed is processed in the following way: soaked soybeans are first cooked in an autoclave at 121°C for 30 minutes. A starter of *B. natto* is then added to the hot,

cooked soybeans and mixed well. The inoculated soybeans are fermented at 42°C for 8 to 10 hours. The fermented soybeans are then passed through a chopper and spread over trays for vacuum dehydration. The dried material is made into a powder for use as an ingredient, mixed with wheat flour, in biscuits. In animal feeding experiments this new food had an absorption rate of 83 percent and a biological value of 63 percent, a notable improvement compared with the absorption rate and biological value of raw soybeans.”

“An ancient legend indicates that the technology for making soybean foods with the aid of microorganisms originated in China. These foods and the manufacturing process involved were introduced into Japan between 500 and 600 A.D.” Address: Applied Microbiology Div., National Food Research Inst., Ministry of Agriculture and Forestry, Tokyo, Japan.

1866. Lee, Hong Suk; Park, K.Y.; Chung, B.J.; Park, J.S.; Yohe, J.M. 1976. The status of soybean production and research in Korea. *INTSOY Series* No. 10. p. 239-42. R.M. Goodman, ed. Expanding the Use of Soybeans (College of Agric., Univ. of Illinois at Urbana-Champaign).

• **Summary:** Contents: Introduction. Major problems related to increased soybean production: Weather, varietal improvement, planting time, soil fertility and pH, cultural practices (cropping systems, planting patterns, seed treatment and inoculation), soybean pathology and entomology. Present and future research problems.

“Good quality soybeans with large grain size have been cultivated for thousands of years in the middle and northern part of the east coast of Korea. Because soybeans have been grown primarily for subsistence, they have not been regarded as a cash crop by Korean farmers... Soybean cultivation in 1974 and 286,188.4 hectares, thus making soybeans the third major crop of Korea in hectareage...

“Soybean production has gradually increased from 231,994 metric tons in 1970 up to 318,576 metric tons in 1974. Although total soybean production has increased, it has not kept up with demand as indicated by the fact that imports have increased from 36,291 metric tons in 1970 up to 66,370 metric tons in 1974...

“Home consumption is the major area for soybean use, about 122,000 metric tons being consumed in 1974. Soybeans are prepared by mix-boiling with rice or vegetables, or are eaten in the form of curd, sprouts, sauce, paste, milk, and flour. The government uses soybeans primarily for military needs. Soybean oil is used for industrial purposes.” Address: 1. College of Agriculture, Seoul National Univ.; 2. Corps Exp. Station, Office of Rural Development; 3-4. Inst. of Agricultural Science, Office of Rural Development; 5. Crop Improvement Research Center, Office of Rural Development. All: Suweon, Korea.

• **Summary:** An interview with William Shurtleff and Akiko Aoyagi at Rain House in Oregon, plus excerpts and illustrations from their writings. The two are now on a nationwide tour.

1869. Sanbuichi, Takashi; Watanabe, Iwao. 1976. Soybean production in Japan. *INTSOY Series* No. 10. p. 237-38.

R.M. Goodman, ed. Expanding the Use of Soybeans (College of Agric., Univ. of Illinois at Urbana-Champaign).

• **Summary:** “Each year Japan produces approximately 120,000 metric tons of soybeans on 90,000 hectares. About 30 percent of this yield is raised on the northern island of Hokkaido, where large-scale farming is practiced. Especially in the northeastern part of Hokkaido, soybeans are a very important crop... Throughout the country the average soybean yield is about 1.4 metric tons per hectare, but during the past four years production in the Tokachi District of Hokkaido has risen to between 1.8 and 2.0 metric tons per hectare...”

“In Japan soybeans are used principally as a source of edible oil and protein foods, such as miso (bean paste), shoyu (soy sauce), tofu (soybean curd), and natto (fermented soybeans). The soybeans produced in Japan usually have large seeds, a high protein content, and are of a quality suitable for producing high quality soy products...”

“In general, early varieties are cultivated in the high latitudes and late varieties in the low latitudes, but on the southern island of Kyushu early varieties are occasionally used. Known as summer soybeans, they are sown in the spring and harvested in the summer. Late varieties, which are called autumn soybeans, are sown in summer and harvested in the autumn...”

“Results show that large-seeded varieties produce high yields. Soybeans grown in the northern parts of Japan usually have larger seeds than those raised in southern areas. It is believed that the marked difference between day and night temperatures and the favorable soil moisture content during the early stages of plant growth account for the large size of soybean seeds grown in the north. The author observed a serious decrease in seed size when Japanese varieties were introduced into Thailand...”

“Soybeans are raised in several types of areas in Japan. Traditionally they have been planted beside the footpaths in paddy rice fields. Intercropping with wheat is another old cultural practice, although both practices are seldom used today. Because of the over-production of rice in Japan, the government has recently recommended that soybeans be cultivated in rice fields.” Address: 1. Tokachi Agric. Exp. Station, Memuro, Kasai-gun, Hokkaido; 2. National Inst. of Agricultural Science, Nishigahara, Kita-Ku, Tokyo. Both: Japan.

1870. Shurtleff, William; Aoyagi, Akiko. 1976. How to make miso: An excerpt from *The Book of Miso. East West Journal*. Nov. p. 38-39. [1 ref]

• **Summary:** Describes how to make homemade red miso (Sendai miso). With many illustrations (line drawings) by

Akiko Aoyagi. Address: 790 Los Palos Dr., Lafayette, California 94549.

1871. Somaatmadja, Sadikin; Guhardja, Edi. 1976. Current status of soybean research and utilization in Indonesia. *INTSOY Series* No. 10. p. 232-35. R.M. Goodman, ed.

Expanding the Use of Soybeans (College of Agric., Univ. of Illinois at Urbana-Champaign). [1 ref]

• **Summary:** Contents: Introduction. Production: Hectarage and yield. Production techniques: Systems of cultivation, inoculation, harvesting and processing for storage, storage. Factors affecting soybean production in Indonesia: Seed viability and seed supply, pests, diseases, cultural practices, varieties. Consumption and utilization. Marketing. Extension: Training, method used to increase soybean production (expansion of hectarage, intensification, varieties).

“At present soybeans occupy fifth place among the other food crops, after rice, cassava, maize, and sweet potatoes. Research on soybeans is conducted at the Central Research Institute for Agriculture (CRIA) at Bogor and its substations, including Sukamandi and Ujung Pandang; at several universities, such as the Institut Pertanian Bogor, Universitas Gadjah Mada, Jogyakarta, and Brawijaya Malang; and at other research institutes, including Badan Tenaga Atom Nasional, Jakarta, and Lembaga Biologi Nasional, Bogor.

“From 1970 to 1973 the annual harvested hectarage of soybeans averaged 703,878 hectares with a production of 517,199 metric tons and an average yield of 7.34 quintals [1 quintal = 100 kg] per hectare. Approximately 80 to 85 percent of the total soybean hectarage in Indonesia is in Java-Madura...”

“Per capita consumption of soybeans in Indonesia reflects the distribution of the crop. In Java the per capita consumption each year is about 5.04 kg; in Sumatra, Kalimantan, Sulawesi, and Maluku/Irian Jaya between 0.10 and 1.04 kg; and in Bali about 3.43 kg.

“Soybeans are not consumed directly, but are processed into a large number of products. Tempeh (fermented soybeans), tahu (soybean curd), tauge (soybean sprouts), kecap (soy sauce), taucu (fermented mixture [Indonesian miso]), and oncom (made from residues of soymilk and tahu) are consumed as side dishes with rice. Roasted beans, tahu chips, and boiled seeds are eaten as snacks, and boiled young pods are prepared as a green vegetable. Soymilk is consumed as a beverage.” Address: 1. Sukamandi Research Station, Central Research Inst. for Agriculture, Sukamandi; 2. Bogor Agricultural Univ., Bogor. Both: Indonesia.

1872. Maglaty, Jeanne. 1976. Use as answer to nutritional needs. Couple praises soybean uses. *Hartford Courant (Connecticut)*. Dec. 1. [2 ref]

• **Summary:** William Shurtleff and Akiko Aoyagi, authors of *The Book of Tofu* and *The Book of Miso*, on a national speaking tour, visited Hartford. “‘We’re trying to do for soybeans what Johnny Appleseed did for apples,’ said William Shurtleff of Lafayette, California.” A photo by Michael McAndrews shows the two; Shurtleff is speaking into a microphone and holding a copy of *The Book of Tofu*. Aoyagi is holding a wooden tofu kit.

1873. Earl, Johnrae. 1976. Queen: In full sail on a sea of satisfaction. *Chicago Tribune*. Dec. 5. p. C13.

• **Summary:** Tokyo Tea Garden, a true diamond in the rough, is a tiny restaurant at 5 W. Superior St. that serves authentic Japanese cuisine. “For those who want to go the whole way, there’s dried sea seed, salted fish eggs, cold soy bean cake [Hiya-yakko], and fried soft won ton. The house soup was made with soy bean paste [miso].” It was unusual but tasty.

1874. Pearce, Jean. 1976. Getting things done: Expanding dietary horizons [Miso]. *Japan Times (Tokyo)*. Dec. 19. [Eng]

• **Summary:** “... when you begin experimenting with the 400 recipes introduced in “The Book of Miso” by William Shurtleff and Akiko Aoyagi which I have been quoting, you will likely become an ardent supporter of this highly nutritious food. There are also joyful drawings by Akiko and pages of general information about healthful food and living, culture and customs, and the history of foods, that make fascinating reading. Bill is a dedicated promoter of healthful products that can help overcome the food crisis which, for many of our world’s people, is not something to be worried about in the future; the hunger is now.

“I would like to reprint the whole book for you, but instead I’ll urge you to get a copy as soon as possible and begin learning about miso. Combine it with ‘Tofu’ for a Christmas gift combination that will be gratefully received by the growing number of people who are interested in good health, conservation, ecology, efficient utilization of natural resources—in other words, all of us. You’ll find the books at most stores handling English-language publications.” A small photo shows Jean Pearce.

1875. Matsuda, Yutaka. 1976. The etymology of soy. *Kwansei [Kansai] Gakuin University Annual Studies* 25:3-4. Dec. Nishinomiya, Japan. [3 ref. Eng]

• **Summary:** “British and American dictionaries including OED (*Oxford English Dictionary*) consider the Japanese word *shōyu* to be derived from Chinese. Is this theory reliable?

“OED states that the word is derived from Chinese *shi-yu*, *shi-yau* (*shi* salted beans, *yu* oil), and *Universal English Dictionary* (1932), *American College Dictionary* (1960), *Random House Dictionary* (1966). *Oxford Dictionary of*

English Etymology (1966), *Chambers Twentieth Century Dictionary* (1972) have followed suit. This Chinese pronunciation *shi* appears to represent a character meaning fermented soybeans with salt. On the other hand, the character meaning fermented soybeans and wheat with salt is transcribed *chiang* in present-day standard Chinese [according to the *pinyin* system established in China in 1957]. *Webster’s Third New International Dictionary* (1961) [Web. III] picks out *chiang-yu* as the origin of the Japanese term, and *Klein’s Comprehensive Etymological Dictionary* (1967), *American Heritage Dictionary* (1969) [AHD], *Webster’s New World Dictionary, College Edition* (1970) also adopted the *chiang* theory.

“In Japan *shi* had been eaten before the Taiho Rei Statute (701), but *shō* rather than *shi* was to the Japanese taste, and *shōyu* squeezed from *chiang* was used instead of *shi-yu* squeezed from *shi*. It follows that the OED theory—the *shi* theory cannot be supported.

“The Web. III theory—the *chiang* theory is also doubtful. Web. III and AHD note that the Japanese term *shōyu* is derived from Pekinese, but it is hardly plausible that the compound should come from Modern Standard Chinese, because *shiyau-yu* appeared already in the latter half of the 15th century and the very word itself was entered in the Japanese dictionary published in 1597. Indeed the Chinese characters *chiang* and *you* were introduced from Ancient China but the compound word *chiang-you* [pronounced *shoyu* in Japanese] was coined in Japan, as today’s Japanese dictionaries such as *Shin Jigen* (1968) and *Shin Kanwa Jiten* (1973) label the term as Japanese-made. As a matter of fact, several other compounds coined in Japan have been reexported to China: *tetsuzuki* (procedure) and *torishimari* (control), which seem to have been exported from Japan in the earlier periods of the 20th century, are now used in China, too, pronounced *shōuoxū* and *qūdi*, respectively [as written in pinyin]. The characters pronounced *haken* in Japanese and *bàqáan* in Chinese, meaning hegemony, which is so crucial a compound related to the Shino-Japanese [sic, Sino-Japanese] peace treaty under negotiation that the treaty conclusion depends on whether or not the compound will be included in it, also was coined in Japan. Along with these, the compound word *shoyu/chiang-you* has been imported from Japan and is pronounced in the Chinese way.

“Perhaps noticing a marked difference between *chiang-yu* and *shōyu*, *Webster’s New Collegiate Dictionary* (1973) has given up the *chiang* theory and has put forward a new one [Jap. *shōyu*, fr. Chin (Cant) *shi-yaû*, lit. soybean oil]. *Shi-yaû* might be Cantonese *chi you*. Anyway the new theory is nothing but a variant of the OED theory.

“In conclusion, we may duly state that *sōyu* or *soyu* which was the dialectical form of *shōyu* in the latter half of the 17th century was borrowed through Nagasaki into Dutch as *soya* and *soja*, and then from Dutch into English as

soya and *soy*. The theory that Japanese *soi* was directly adopted into English as *soy* is unsupportable because there was no opportunity at all of direct contact between Japanese and English in those days, though there is a possibility that dialect form *sô* or *soi* might have existed in Nagasaki at that time.” Address: Nishinomiya, Japan.

Unpublished manuscript. *

1878. *Soybean Digest*. 1976. Book review: *The Book of Miso* by Shurtleff and Aoyagi. Dec. p. 28. [1 ref]

• **Summary:** The book can be ordered from *Soybean Digest*. “In this book, miso or fermented soy-bean paste, a savory, high-protein seasoning that allows the body to use this protein and other nutrients from soybeans more completely, is discussed in context to the world food crisis. It also shows miso to be varied and versatile, as well as nutritive.

“Many Americans are now preparing their own miso at home—and *The Book of Miso* tells how to prepare your own,

as Far Easterners have done for centuries. Four hundred recipes are included.”

1879. **Product Name:** Brown Rice (Genmai) Miso.

Manufacturer’s Name: Erewhon (Importer). Made in Japan by Sendai Miso Shoyu Co.

Manufacturer’s Address: 33 Farnsworth St., Boston, MA 02210.

Date of Introduction: 1976.

Ingredients: Brown rice, soybeans, water, sea salt.

Wt/Vol., Packaging, Price: 16 oz.

How Stored: Refrigerated preferably.

New Product–Documentation: Ad in East West Journal.

1977. “Erewhon: Our traditional foods are the foods of the future.” “Recently a brown rice (genmai) miso has been added to the Erewhon line of imported foods. Based on the traditional techniques and standards, this new variety was two and a half years in development before Mr. Ko Haga, brewmaster of Sendai [Miso Shoyu K.K.] produced what he considered a successful brown rice koji, or starter.” Sendai “produced a huller which merely scratches the bran along the ridges of each grain; even though only 1% of the grain is lost in the process, this is sufficient to permit spores to enter the inner starches. You will find genmai miso much sweeter than the kome [white rice] variety, due to the higher ratio of rice to soybeans in this special product. Sendai uses a regionally grown rice, called Sasanishiki, which is highly regarded in Japan, and the soybeans used are the ‘Prize’ variety grown organically in Minnesota by farmer Ed Ricke. Genmai miso is more expensive than the other varieties Erewhon offers. Besides being the first miso made with organic soybeans,” it also undergoes an 18-month fermentation.

Shurtleff & Aoyagi. 1983. *The Book of Miso*. 2nd ed. p. 236. In 1968 Erewhon started to import miso and shoyu from Japan. “A wholesale and distribution company was started that year and soon it was trucking a line of fine Japanese imported red, barley, and Hatcho misos to a growing number of natural food stores.” By 1970 sesame miso and tekka miso were added to the Erewhon line. By 1976 brown rice (genmai) miso was added.

Ad (7.5 by 13 inches, full color) in *Natural Foods Merchandiser*. 1989. Feb. p. 25. There are now 4 varieties of miso under the Erewhon brand: Hatcho (note new correct spelling), genmai, kome, and mugi. Note that all still use the esoteric Japanese names. Plastic bag packages are colorful and attractive. On each is the prominent endorsement: “Recommended by Michio Kushi. Macrobiotic quality.”

1880. **Product Name:** [Tofu, and Red Miso].

Manufacturer’s Name: Etablissements Takanami (Takanami Tofu Shop).

Manufacturer’s Address: 128 Rue des Treffles, Anderlecht, Brussels, Belgium. Phone: 025-228-192.

Date of Introduction: 1976.

New Product–Documentation: Shurtleff & Aoyagi. 1977. Jan. 28. Commercial Tofu Shops and Soy Dairies.

Shurtleff & Aoyagi. 1978, Dec. *The Book of Tofu* (Ballantine pocketbook edition). “Appendix B: Tofu Shops and Soy Dairies in the West.” p. 400. Etablissements Takanami, Rue Antoine Dansaert 107, 1000 Brussels, Belgium. Phone: 02-511-6635. Owner: Mr. Takanami; also makes miso.

Soyfoods Center. 1980. Sept. Tofu shops and soy dairies in the West (2 pages, typeset). Etablissements Takanami. Magasin [retail shop]: Rue Antoine Dansaert 107, 1000 Brussels, Belgium. Phone: 02-511-6635. Atelier [plant]: Rue de Trefles 128, 1070 Brussels, Belgium. Phone: 02-522-8192. Owner: Mr. Takanami. They also make miso.

Shurtleff & Aoyagi. 1983. *The Book of Miso*. 2nd ed. p. 255. Listed as the Takanami Miso Shop. Address same as for 1977.

1881. Ito, Hiroshi. 1976. Hamanattô [Hamanatto]. *Nippon Jozo Kyokai Zasshi (J. of the Society of Brewing, Japan)* 71(3):173-76. [Jap; eng+]

• **Summary:** Contents: Introduction. A brief history of Hamanatto. Methods of production: Yamaya and Horinji methods, Daifukuji method. The microbiology and chemistry of Hamanatto fermentation. Hamanatto’s special characteristics. Serving Hamanatto. Conclusion. Acknowledgments.

Two flowcharts show Hamanatto production methods at Horinji and Daifukuji. Tables: 1. Distribution of various microorganisms in Hamanatto (cells per gram) at Yamaya, Horinji, Daifukuji. 2. Nutritional composition of Hamanatto (from Yamaya, Horinji, and Hamana), Daitokuji natto, and regular sticky natto. 3. Composition of free amino acids (mg per 100 gm defatted, and gm per 10 gm protein) in Yamaya Hamanatto, Daitokuji natto, Yamaya Hamanatto, soybean miso (temperature controlled- and natural fermentations), and Hatcho miso. 4. Composition of Hamanatto fats. 5. Volatile acids in Hamanatto. 6. Aromatic compounds in Hamanatto.

In Japan, there are basically two types of natto: Regular natto (*itohiki-natto*) and salty natto (*shiokara-natto*). Generally the word ‘natto’ refers to the former but in Shizuoka prefecture in and around Hamamatsu city a type of salty natto called *hamanatto* is famous. Totally unrelated to regular natto except in name and the fact that both are fermented soyfoods, it is actually a close relative of soybean miso in terms of its flavor and the way it is produced. However unlike miso, the soybeans retain their original form, uncrushed, and the product has its own unique flavor and aroma. Another type of salty natto is Kyoto’s Daitokuji-natto.

A brief history of hamanatto: Hamanatto originated in ancient China and is one of the progenitors of today’s miso

and shoyu. Many old documents show that its relatives *kokusho* (‘grain chiang’) and *teranatto* (‘temple natto’) were brought to Japan from ancient China. A type of fermented, salt-preserved cooked soybeans called *tou-ch’ih kyo* was excavated together with articles buried with one *Mao-tai*, a ruler of the early Han dynasty who lived about 2200 years ago. This was the earliest form of hamanatto. According to the first scholars and envoys from Japan to T’ang dynasty China, *chiang* and *kuki*, both progenitors of miso and shoyu, were introduced to Japan from China. Records show that the great T’ang dynasty Buddhist master Ganjin, who came to Japan by boat in 753, brought with him 1428 gallons of ‘sweet kuki,’ an early type of salty natto. The first mention of salty natto in Japan appears in Fujiwara Akihara’s *Shinsaru Gakki / Shin-sarugaku-ki*, written in 1286. The first character of the word ‘natto’ means ‘to pay, supply, or dedicate;’ the second means ‘bean or soybean.’ According to the *Honcho Shokkan*, written in 1697, the first character was derived from the fact that natto were first prepared in Japanese temple kitchens which are known as *na-ssho*, the place which supplied the monk’s food. Since the propagation of salty natto throughout Japan was done primarily by temples, they also came to be known as ‘temple natto’ (*tera-natto*). They served as an important source of protein and savory seasoning in the Buddhist vegetarian diet. Kyoto’s Daitokuji-natto, Ichimeji Ikkyuji-natto, and Tenryuji-natto, each made in temples, and the Hamanatto made at Daifukuji and Horinji temples in and around Hamamatsu city are popular to this day. Hamanatto first became known when the monks of Daifukuji temple presented some to the seventh Ashikaga shogun, Ashikaga Yoshikatsuko, during the 1400s. during the Warring States Period (1467 to 1568) they also presented Hamanatto to lords of the families of Imagawa Toyotomi, and Tokugawa.

Because of its unique flavor and aroma and good keeping qualities, hamanatto became known throughout Japan. In some cases the skin of sansho seeds (Japanese pepper; *Zanthoxylum piperitum*) were mixed in and the product called *kara-natto* (‘spicy natto’). When Toyotomi Hideyoshi undertook his Korean campaigns, he took lots of hamanatto with him. When he arrived in the ancient province of Hizen in northwest Kyushu, just before his soldiers embarked in boats to Korea, he gave this food the same name, *kara-natto*, but written with characters which mean ‘beans for subjugating T’ang dynasty Korea.’ This name, he hoped, would bring him luck in his campaign. After returning to the Hamamatsu area in central Japan, he donated land to makers of hamanatto to encourage their craft.

Later, when Tokugawa Hideyasu took over Hamamatsu castle, he used hamanatto as soldiers’ provisions. Each year the local monks gave hamanatto as a gift to the shogun, who in turn used it as a New Year’s offering. Still later, produced by temple cooks and craftsmen, it was given as a New

Year's gift to parishioners; it also had a symbolic meaning since the word for soybeans (*mamé*) has also come to mean healthy and robust. In 1968 Yamaya, a producer of tamari shoyu (soy sauce) under the direction of Suzuki Yasuke, attempted to make an improved version of the product previously prepared at Daifukuji temple and first affixed the name 'hamanatto.' Thus the name of the product developed in the following order: *shio-kara-natto* ('salty natto), *kara-natto* (T'ang dynasty natto), *hamana-natto*, and *hama-natto*. To this day, Daifukuji has maintained its own special method of production, but this too has been commercialized.

Methods of production: Today hamanatto is prepared by two methods: the traditional method handed down from generation to generation since ancient times, and the modern industrialized method which made improvements on the traditional method without harming the special flavor and aroma. Yamaya company and Horinji temple use closely related methods; the former is industrialized while the latter is a handmade process using koji starter. Daifukuji uses a different traditional process without koji starter since the ancient incubation room, wooden trays, and rice-straw covering mats are each permeated with starter mold spores. The soybean koji (molded soybeans) is combined with brine and put into vats for the second fermentation in September. Since the room temperature during the koji making (first fermentation) is 20° to 25°C (68-77°F) no special incubation heat source is needed. Yet since the molds propagate naturally, without special inoculation, the koji making takes a long time, up to ten days.

There are numerous points of difference from regular miso production; when making salty natto [soy nuggets] the soybeans are not crushed; the koji is incubated with brine in a keg or vat with a heavy pressing lid; and the final product is sun-dried. At the factory, the soybeans are only partially reconstituted [by soaking in water] until they reach 1.5 to 1.6 times their dry weight; this takes 2 hours in winter and 1½ hours in summer. They are then drained and allowed to stand for 4-5 hours so the absorbed penetrates deeper. If they are drained for too long, the beans become hard. They are then steamed for 4-5 hours [at atmospheric pressure] and allowed to stand overnight in the steamer. At Daifukuji, the unsoaked beans are dropped into boiling water, parboiled for 7-8 minutes, steamed for 7-8 hours in a 2 meter deep steamer, then allowed to stand in the steamer until the next morning. Care is taken that the beans are not crushed or dehulled. Nowadays, since it is known that the process of leaving the beans overnight in the steamer lowers their net protein utilization and makes them more difficult for the enzymes to digest, this step is generally omitted. Traditionally it was always used to darken the beans; there were apparently no problems with bacterial contamination, perhaps because the reaction of sugars and amino acids under heat produces substances which reduce the

proliferation of bacteria and yeasts. In fact, the overnight period in the steamer may have been done expressly to encourage this effect. Continued.

1882. Ito, H. 1976. [The flavor of miso: A review of the literature]. *Nippon Jozo Kyokai Zasshi (J. of the Society of Brewing, Japan)* 71(7):500-04. [37 ref. Jap]*
Address: Food Research Inst., Ministry of Agriculture & Forestry, Fukugawa, Tokyo, Japan.

• **Summary:** Continued. The steamed beans are then spread on a thick rice straw mat (*mushiro*), drained well, sun dried, sprinkled with roasted barley flour, and mixed until each bean is well coated. The straw mat helps to absorb excess water. In factories, the roasted flour is premixed with koji starter (*Aspergillus oryzae* mold spores), they dried the straw mat and used it year after year. Molds such as *A. oryzae*, *A. soyae*, and *Rhizopus* species inoculated the beans during mixing with the flour. The mixture is covered for one night with rice straw mats, then the next day transferred to wooden koji trays, which are arranged in the koji incubation room to make koji. Care must be taken that excess heat does not develop during fermentation, lest alien bacteria proliferate and the product's flavor and aroma decline. To prevent this, the koji mycelium is broken up three times by hand in the trays during the incubation.

At factories, the finished koji is sun-dried for 4 to 5 hours in winter (Hamamatsu is famous for its dry fall winds) or for 2 hours in summer so that the moisture content is reduced to below 30 to 35 percent. IF this drying is insufficient, after the beans have been put into the vats they easily get crushed. The vat used is a 19-gallon wooden vat or a small wooden tub. The koji is divided among several vats, brine made by combining salt with boiled water is added, a pressing lid equal to twice the weight of the vat contents is set in place, and the mixture is allowed to ferment for 80 to 90 days in summer or 150 days in winter. (In some places (Daifukuji), unpasteurized shoyu is used in place of brine).

The use of a heavy pressing lid is preferable since it causes the fermentation to proceed slowly; a light one helps it to go faster, but the soybeans more easily lose their form. At temples they sliver the middle skin of sansho seeds and place these at the bottom of the vat, then add the finished koji and finally the brine. In factories they add a more concentrated brine and ferment the mixture for at least 2 months. The fermentation room (*kura*) should have good air circulation and ventilation, otherwise the product may develop and unpleasant moldy or musty odor.

After draining off the brine scooping the beans out of the vats, they are spread on rice straw mats (traditionally *mushiro* from the Ryukyu islands; today *tatami* matting), sun-dried, and sifted to remove small pieces, which are discarded. In a separate process, gingerroot is cut thinly, soaked in boiling water, sun dried, and soaked in moromi (shoyu mash) for about 10 days to make pickled gingerroot. Sansho seeds are also added to some types.

The microbiology and chemistry of Hamanatto fermentation: The molds found in fresh hamanatto koji and commercial hamanatto, in addition to *Aspergillus oryzae*, include *Rhizopus* species and *A. niger*. Hamanatto such as that made at Daifukuji using a low incubation temperature (20-25°C) and a long time contains a large proportion of *Rhizopus* on the surface of the soybeans. Moreover the amylase and protease enzymes in these molds are weaker and less active than those from the koji used for commercial shoyu or miso. For this reason the soybeans are not broken down, but rather remain in their whole form. If the koji is made mechanically, the enzyme strength and quality increases. The incubation proceeds more quickly in summer since the temperature is higher; the koji is ready in 3 days.

In general during the koji production, amylase, protease, and pepsidase activity reach a maximum at 50 hours, but in order to dry it, it must be left longer which causes the activity to decrease. In addition to molds, lactic acid bacteria and film yeasts, which are related to *Pediococcus*, are found in all hamanatto; they are mixed in during contact with the straw mats. If air circulation during koji production is poor, lactic acid bacteria proliferate more than usual. Unlike most lactic acid bacteria, they ferment soybean sugars creating undesirable effects, but do not ferment lactose. After the koji-brine mixture is in the fats, film yeasts proliferate among the various flavors; at 45 days they are most abundant, then later decrease. Especially on the surface of vats with poor air circulation, they are found as a white mold. These yeasts produce hamanatto's unique aroma.

Hamanatto's special characteristics: Because the fermentation time is long, the color turns a dark brown. The form of the beans is well preserved. The composition of nutrients is shown in figure 2. Compared with regular natto, hamanatto has less moisture and more salt. Free amino acids are shown in figure 3. Those abundant are glutamic acid, leucine, and proline, while cystine, tryptophan and methionine are the most scarce. Compared with soybean miso, arginine, cystine, and histidine are also relatively scarce. Since soybean miso undergoes an even longer fermentation than hamanatto the difference is the amino acids freed from the soybeans, which is particularly enhanced by protease enzymes from the koji molds. Hamanatto flavor is rich and full-bodied, somewhat like that of soybean miso, but with a special aroma, more tartness, and a unique flavor component that Japanese call *egumi*.

The latter, related to oil rancidification, imparts what some describe as a subtle harsh or unpleasant stimulation to the tongue or throat. Kiuchi et al, in 1976, in an analysis of hamanatto lipids, found that this *egumi* originates from linoleic acid. Hamanatto fats, unlike those of regular natto, are more than 70 percent of free fatty acids. The majority of fats in both natto and soybeans are triglycerides, with other fat components being relatively low. The lipase in hamanatto koji breaks down a large percentage of the fats but the composition of the resulting fatty acids is not different from those found in soybeans; in both cases, linoleic acid comprises more than 50 percent of the total.

Hamanatto's volatile acids and aromatic compounds are shown in figures 5 and 6. The aroma of Yamaya's hamanatto was superior to that of Daifukuji or Hamana. This aroma was very poor just after the koji was made but during the ripening of various flavors, isobutyl aldehyde, isobutyl alcohol, and various amines decrease together with a decrease in the poor aroma. However if the air circulation is bad while making koji or during the vat fermentation, alien microorganisms proliferate, leaving an undesirable aroma.

1884. Ito, Hiroshi. 1976. Hamanattô [Hamanatto (Continued—Document Part II. Continued)]. *Nippon Jozo Kyokai Zasshi (J. of the Society of Brewing, Japan)* 71(3):173-76. [Jap; eng+]

• **Summary:** Continued. Serving Hamanatto: Hamanatto is used both as a seasoning and as a protein source. Like Daitokuji-natto it is sprinkled as a seasoning over hot rice in a small bowl, then doused with hot green tea to make the popular Ochazuke. It may also be served as an hors d'oeuvre with sake, used in place of tea cakes with whisked green tea as Chauke, or served as a rice seasoning in box lunches like shoyu-simmered kombu. Since ancient times it has been used in Zen Temple Cookery as a source of subtle flavor, diced and mixed with grated daikon, sprinkled with vinegar, or used in the Chinese tofu dish Mabo-dofu. Its abundance of glutamic acid and nucleic acids enrich the flavor of any food with which it is served.

Conclusion: Hamanatto, a progenitor of today's miso and shoyu, has been made by traditional methods since ancient times. Long lasting, it embodies the fermentation and nutritional wisdom of our forebears. Thus its scientific study reveals new and valuable information. In its a traditional processing there are points that should be improved, yet today it is a long lasting food with its own distinctive characteristics.

Acknowledgements: I would like to thank the Yamaya and Hamana companies for supplying documents and samples, and allowing me to quote selected portions; Professor Kayo Kon of Shizuoka Women's University; and my colleagues at the National Food Research Institute, Kan Kikuchi, Teruo Ota, and Shinkuni Sasachi.

1885. **Product Name:** Kikkoman Instant Miso-Shiru Soy Bean Soup Mix [Shiro (White), or Aka (Red)].

Manufacturer's Name: Kikkoman Corporation.

Manufacturer's Address: Noda 278, Chiba-ken, Japan.

Date of Introduction: 1976.

Ingredients: Incl. miso (soybeans, rice, salt), dried green onions (negi), dried wheat gluten cakes (fu), dried seaweed, bonito extract, and MSG (monosodium glutamate).

Wt/Vol., Packaging, Price: 1.83 oz foil pouch retails for about \$1.07 (May 1980).

How Stored: Shelf stable.

New Product–Documentation: *Food Product Development*. 1980. May. p. 26. Label in both Japanese and English. Front panel shows a drawing of a miso soup cup with a happy face on it. Each pouch contains 5 individual serving packets.

1886. Lee, C-H. 1976. [The effect of Korean soysauce and soy paste making on soybean protein quality]. *Hanguk Sikip'um Kwahakhoe Chi (Korean J. of Food Science and Technology)* 8(1):12-32. [Eng; kor]*

1887. **Product Name:** Yamajirushi (Shinshu type) Miso, Kanemasa Miso, Yamaizumi Miso, Aka Miso, and Koji Miso.

Manufacturer's Name: Miyako Oriental Foods, Inc. Div. of Yamajirushi Miso Co. in Japan.

Manufacturer's Address: 404 Towne Ave., Los Angeles, CA 90013.

Date of Introduction: 1976.

New Product–Documentation: Price List. 1976. Sept. 1; Shurtleff & Aoyagi. 1983. *The Book of Miso*. 2nd ed. p. 238, 240. By 1983 Miyako was the largest miso producer in the United States, with 544 tonnes a year.

1891. **Product Name:** [Natto Miso].

Foreign Name: Nattô Miso.

Manufacturer's Name: Yoshida Shohachi Shoten K.K.

Manufacturer's Address: Takashima 1-382, Shimabara-shi, Nagasaki-ken, Japan. Phone: 0957-62-4107.

Date of Introduction: 1976.

New Product–Documentation: Shurtleff and Aoyagi. 1976. *The Book of Miso*. p. 43, 239. Shurtleff and Aoyagi. 1983. *The Book of Miso*, 2nd ed. p. 42, 258 (R.1). "Natto Miso: Prepared in the area of Nagasaki since the 1700s, natto miso contains a relatively large proportion of soybeans which gives it an appearance similar to the famous sticky fermented soybeans called *natto*, although there are no real natto in natto miso. Containing whole soybeans, barley koji, slivered kombu, gingerroot, and, in some modern varieties, *mizumamé* (a natural honeylike sweetener extracted from rice [rice syrup], millet, or barley), this miso is fermented at the natural temperature for about 30 days. One delicious and very popular variety, now widely available in the United States, is free of preservatives, artificial or refined sweeteners, and all other additives—proving that it can still be done. We would prefer to see this and all similar misos labeled as 'Finger Lickin' Miso;' we feel the general term is more appealing and less confusing." Page 258 states that the maker of this traditional, natural product is Yoshida Shohachi Shoten.

1892. Bumgarner, Marlene Anne. 1976. *The book of whole grains: The grain-by-grain guide to cooking, growing, and grinding whole cereals, nuts, peas, and beans*. New York, NY: St. Martin's Press. xiv + 334 p. See p. 261, 281-89. Illust. by Maryanna Kingman. Index. 24 cm. [20 ref]

• **Summary:** Gives recipes for: Homemade tofu (p. 281-82). Brown rice porridge with tofu and vegetables. Okara and barley flour muffins.—all reprinted with permission from *The Book of Tofu* by Shurtleff and Aoyagi. Plus original

recipes for: Miso soup. Soybean festival (using cooked whole dry soybeans).

1893. Duquette, Susan. 1976. Sunburst Farm family cookbook. Santa Barbara, California: Woodbridge Press Publishing Co. 303 p. Illust. by Donna Wright. Photographs by Mehosh Dziadzio. From the Brotherhood of the Sun. Recipe index. 23 cm.

• **Summary:** “The Brotherhood of the Sun is a family of more than 300 people, who have dedicated themselves to living in harmony with all people and all things. Our desire is to follow the simple laws of God and nature. In order to create an environment in which this is possible, we have established four communities upon thousands of acres of farm and ranch land in the coastal mountains around Santa Barbara, California... In order to help support ourselves and to share with other people our way of life, we have established a large organic foods complex in Santa Barbara called Sunburst Organic Foods.

“This organization includes a large wholesale warehouse that ships food to stores across the country, six large retail markets (with future markets projected along the coast), a community store, a restaurant called ‘The Farmer and the Fisherman,’ a whole-grain bakery and a fresh juice-bottling plant that distributes along the west coast.”

Although this natural foods cookbook is not entirely vegetarian (it includes a chapter titled “Fish,” p. 100-123, and many fish and shellfish recipes), the rest of the book is vegetarian and one long chapter (p. 64-99) is titled “Vegetarian Main Dishes.” The illustrations are beautiful.

Soy-related recipes include: Tofu-vegie soup (p. 17). Miso-onion soup (p. 17). Many recipes topped with “Baco-bits.” Bean salad (with soy beans, p. 35). Sprouts (incl. soy sprouts, p. 38-39). Tamari-onion gravy (p. 63). Enchiladas (filled with tofu or soy beans, p. 85). Corn pudding with Baco-Bits (p. 168). Soy flour cakes (pancakes, p. 268).

The chapter titled “Beans and pasta” (p. 124-39) has a section on Soybeans subtitled “Or: How to get protein without really trying.” Recipes and descriptions include: How to cook whole soybeans (with or without pressure). Soybean loaf. Soyburgers. Soy milk. Tofu (curded with lemon juice or vinegar). Tamari and miso. Cheese-soybean soup. Soy nuts. Soy grits. Soy flakes. Soybean cheese spread.

The Glossary (p. 295-97) contains descriptions of gluten, lecithin (from the soybean), miso, protein powder, tamari, seaweeds, tofu. Address: Santa Barbara, California.

1894. Hattyo Miso Kakkyu Goshikaisha. 1976. The history and general condition of Hattyo Miso Kakkyu Goshikaisha. Aza, Okan-dori 69, Hatcho-cho, Okazaki-shi, Aichi-ken, Japan. 4 p. Also published in Japanese as Hatcho Miso no O-hanashi. [Eng]

• **Summary:** This company is said to have been established in 1362 A.D. Reorganized as Hayakawa Kyuemon Shoten Co. in 1932. Name changed to Hatcho Miso Kakkyu Goshikaisha in 1963. Mr. Kyuemon Hayakawa is the 18th proprietor. Many tankas (Japanese odes of 31 syllables) on Hatcho miso were composed by famous poets. The plant is located beside the Yahagi River. They began to sell miso to the Imperial Household in December 1892. In March 1953 Prince Akihito took Hatcho miso on his European tour. Since 1959 six Antarctic expeditions have taken Hatcho with them. Address: Okazaki, Aichi, Japan.

1895. Hayashi, Minao. 1976. Kandai no bunbutsu [Han dynasty civilization and objects]. Tokyo: Tokyo Daigaku, Jimbun Kagaku Kenkyujo. 576 p. [Jap]*

• **Summary:** Bo (1982): This book contains a simple drawing of soy sauce making equipment. It shows a hole in the bottom of an earthenware chuang crock, from which liquid soy sauce can be drawn off. The Chinese also put a basket into the crock to draw off the liquid. This is the strongest known evidence that soy sauce existed at the time of the Han dynasty. But it is better to think that its production stems as far back as the Ch’in (221-206 B.C.) or Warring States (403-221) periods.

Note: Hayashi, born in 1925, is a famous Japanese archaeologist, and art- and cultural historian.

1898. Iwadare, Shoji. 1976. Miso, nattō, tōfu kenkō-hō [Miso, natto, tofu: The way to health]. Tokyo: Yomiuri Shinbun-sha. 238 p. Illust. 18 cm. [Jap]

• **Summary:** Soyfoods Center has done a 10-page typed translation of the natto section of this book. Contents: Legends of natto’s origin: Pinch hitter in times of food shortage, natto’s stringiness surprised people of the Yayoi

period (200 B.C.–A.D. 250), Hachimantaro Yoshiie–Natto’s first public relations agent (1051-1085), calling out “natto, natto” starting in the Edo period (1603), areas where natto is popular today.

The technical revolution in natto production: Pioneers of commercial natto production (Drs. Yabe, Sawamura, Hanzawa), University Natto sold by Hokkaido University, what kind of natto is most delicious?

The effectiveness of natto: The procreative power of natto bacteria promotes long life in people who eat natto, natto can cure diarrhea, natto suppresses typhus and cholera bacteria (in 1936 Dr. Matsumura, a Kyoto University bacteriologist, found on with rabbits that natto bacteria actually killed typhus bacteria), natto does the following—helps people with weak stomach and intestines, prevents intestinal gas, fights cancer (Kameda 1967), prevents radiation harm (via dipicolinic acid, which was first discovered in natto and later found in all bacterial cells; it binds heavy metals like radioactive strontium and expels them from the body), prevents infant milk allergy, contains vitamin B-2 which increases stamina, rejuvenates the cells.

Natto throughout the provinces: Hikiwari natto from Tsugaru, Hikiwari natto from Akita (the birthplace of natto is said to be Oyashin-machi in Yokote city, Akita prefecture; charred soybeans mixed with Yayoi period earthenware pottery from 2,000 years ago have been excavated from ruins at nearby Mt. Komori), Hetttsui natto from Saitama prefecture, Naisho mame from Gunma prefecture, small-bean natto from Mito, Tataki natto from Kyoto, Koru mame from Higo.

Seasonal natto recipes: Spring, summer, fall, winter, all four seasons.

Natto’s springiness surprised people of the Yayoi period (200 BC–250 AD): There are various legends regarding the origin of natto but all begin with the meeting of cooked soybeans and rice straw. No documents record this origin. Yet soybeans and rice straw are known to have existed in Japan since the Yayoi period. Perhaps a piece of rice straw fell into a portion of leftover soybeans. In pit dwellings with rice straw roofs, rice straw littered the floor and the rooms were warm. At the proper temperature (how?) the beans would develop stickiness/strings and a good flavor result. The subtle sweetness of rice straw added to the unique aroma. Some may have eaten the natto sprinkled with salt. Once you’ve tasted natto you can never forget the flavor. Some women may then have incubated natto next to their bodies overnight in bed. The Yayoi era is concealed in the transmission of Hikiwari natto since ancient times in the northeast provinces.

There is also the legend that cooked soybeans were offered at household Shinto shrines on which there was often a rope of braided rice straw (*shimenawa*). (The first character of the word natto means “to offer.”) The bacteria

from the straw may have inoculated the beans; it is generally thought that they were developed in Japan.

Hachimantaro Yoshiie was a general of the Genji clan during the wars of 1051 and 1085. One night during the war the soldiers were cooking soybeans for horse fodder when they were suddenly attacked. They quickly packed the beans into a rice-straw sack (*tawara*), tied the bag to a horse’s back and battled for several days. Finally, the battle over, they took the bundle off the warm horse’s back and opened it to find that the cooked soybeans had fermented to become natto. In the second war, Yoshiie had captured a fortress in Sankanbu Akita in northern Japan. He wanted to give cooked soybeans to the local farmers as a gift but since he was in a hurry and had no other container, he put them in a rice-straw sack and gave it to them. All were surprised when, after several days, the beans gave off a unique odor and were stringy. The farmers liked the flavor and soon adopted natto as a food. Yoshiie, having enjoyed natto, recommended it to his fellow men. The farmers soon learned of this and began producing natto. The tradition has been passed down from generation to generation.

After his conquests in Northern Japan, Yoshiie’s army returned to Kyoto and he taught people along the way how to make natto. The people of Sankanbu in Akita, far from the sea, had little fish or other animal protein in their diet and must have delighted in natto. The route taken by Yoshiie back to Kyoto has been called the ‘natto road.’

Page 141: The word “natto” first appeared in 1286 in the *Shinsaru Gakki*, by Fujiwara Myoe.... Address: Tokyo, Japan. President of Manyu Eiyō KK. Teaching at Nihon Daigaku Daigaku-in and Meiji Daigaku Nōgaku-bu. Prof. at Shobirin Joshi Tanki Daigaku.

1899. Japanese National Miso Assoc. 1976. Miso digest [Miso digest]. Tokyo: Zenkoku Miso Kogyo Kyodo Kumiai Rengokai. 48 p. 13 x 18 cm. [Jap]

• **Summary:** Full of useful and up-to-date information about miso in Japan. On the cover, printed with light purple ink on white, is a fisherman, seated on stylized waves, holding a sea bream under his left arm. Address: Japan.

1900. King, Marilyn; Scott, William. 1976. Food for thought: A fresh food cook book. New York, NY: Universe Books. 153 p. Illust. Index. 23 cm.

• **Summary:** A vegetarian cookbook. In a section titled “Some treasures from the Orient” (p. 132), the author praises and briefly describes tamari and miso.

1901. Lie, Goan-Hong; Oey, Kam-Nio; Prawiranegara, D.D.; Herlinda, J.; Sihombing, G.; Jus’at, I. 1976. Nutritive value of various legumes used in the Indonesian diet. In: M.A. Rifai, ed. 1976. ASEAN Grain Legumes. Bogor, Indonesia: Central Research Institute of Agriculture. 225 p. See p. 183-93.

• **Summary:** This general overview discusses soybeans (*Kacang kedelai*), tempeh, soy milk, “tahu or soycurd” [tofu], kecap, taoco [Indonesian-style miso], soy milk, residue of soy milk or tahu [okara] which may be fermented and sold as oncom. The average nutritional composition of the first 6 products is given. Address: Nutrition Research Inst., Jakarta, Indonesia.

1902. Lin, Florence. 1976. Florence Lin’s Chinese vegetarian cookbook. New York, NY: Hawthorn Books. xix + 236 p. Illust. by Nai Gi. 24 cm.

• **Summary:** Contains a great deal of information on and recipes using soyfoods. Chinese food expert Barbara Tropp says this book has the best glossary available, and has very creative and interesting but drab recipes.

Hoisin sauce is a ground bean sauce to which sugar, garlic, and other flavorings have been added. It is the most popular commercially prepared flavored bean sauce.

Civilized Chinese patterns of eating were established by Confucius. The second great influence was Taoism, which advocated a simple diet, natural foods, and the basic belief that proper eating leads to good health. The third great influence was Buddhism, which was opposed to killing, so advocated a vegetarian diet. The art of vegetarian cookery was initially developed mainly in Buddhist monasteries; later it spread to private homes and restaurants.

To make good meatless broths use soybeans, soy sprouts, tough or wilted vegetables, mushrooms, and / or bamboo shoots. To make soy sprouts, it is best to use new-crop soybeans, which have the highest germination rate. This book contains many recipes that call for sea vegetables. Soy sauce is widely used in Chinese vegetarian recipes.

Chapter 3, titled “Soybeans, soybean products, and other legumes” contains much useful information and recipes. A diagram titled “Chart of soybean products” (p. 53) shows the complex relationships, includes Chinese characters for each product, and shows a few soy products that are not in the Glossary: Fermented bean curd (*Fu ju*), comes in white (*pai*), red (*hung*) and spiced (*la*). The many interesting recipes, each with a Chinese name (with Chinese characters) and an English name include: *Su huo t’ui* and *su chi* (Mock ham), *Su ya* (mock pressed duck), and *Wu hsiang tou fu kan* (Seasoned pressed bean curd).

Glossary (soybeans, soybean products, and legumes, p. 208-13; Chinese characters are given): “Fresh young soybeans—*Mao tou*.” Delicious. They are in season in the early fall. “They come in dark fuzzy pods and are sold by weight. Young soybeans are like corn and should be eaten as soon as they are picked from the plant. They may be cooked with or without the pods.”

“Dried soybeans—*Huang tou*.” Yellow soybeans.

“Soybean sprouts—*Huang tou ya*.” Sold by weight. Best when made in cooler weather. “When bought fresh, they

will keep in the refrigerator for 2-3 days, or longer if kept in a brown paper bag inside a plastic bag.”

“Soybean milk—*Tou chiang*:... usually served hot as a beverage with breakfast.”

“Soybean milk skin—Called by many names [*Fu yi, fu p’i*; see p. 53]. Each region has a different name for it, as does each food processor, and the thickness shape and wrapping may be different.” Four kinds are readily available in Chinese food stores” (1) *Erh chu* is “cut into rectangles 1½ x 4 inches and 1/8 inch thick. The pieces some stacked and wrapped in paper, in half- or one-pound packages.” (2) *Yüan chu* comes in sticks. When reconstituted, its thickness is about the same as *erh chu*. (3) *San pien fu chu* is half-moon shaped. When still soft, it is folded into 6 x 10-inch rectangles then dried. It is thinner than *erh chu*. (4) *Fu yi* “is the thinnest of the bean milk skins. It is paper thin and almost transparent. When dried it is very brittle, and must be handled very gently. It is used mainly to wrap fillings. It comes in stacks of 8-10 sheets...”

“Soybean milk residue—*Tou fu cha*,” [okara]. Can be a delicious ingredient in cooking. “What is not used for food is made into a feed for animals or put into the ground as fertilizer.”

“Curdled soybean milk—*Tou fu hua*.” *Hua* means “flowers.” These very tender curds are “eaten hot with soy sauce or cold with syrup as a snack.” It is “sold only in bean curd factories by the pint.”

“Bean curd coagulant—*Shou shih kao*” [calcium sulfate]: A “white substance which comes in powdered form. It is used to coagulate soybean milk to make *tou fu* (bean curd).”

“Tender soybean curd—*Nen tou fu*: When some water is removed from the curdled bean milk, it is known as fresh tender bean curd. It is cut into squares 4 x 4 by 1½ inches.

“Firm soybean curd—*Lao tou fu*: When a coagulant is added to the boiled bean milk of a different concentration and some of the water is removed, the milk becomes firm bean curd. It is firmer than the tender bean curd and is cut into 3 x 3 x ¾-inch squares.

“Pressed bean curd sheet—*Pai yeh*: Fresh bean curd sheet looks almost like a sheet of unbleached muslin. When it is frozen, the color turns darker, to a light brown. It is made into square sheets of various sizes. It is used to wrap fillings and it is also sometimes cut into short strips and cooked in dishes along with seasoning vegetables. Pressed bean curd sheet is best eaten fresh...”

“Pressed soybean curd—*Tou fu kan*—plain: When even more water is pressed out of firm bean curd, it becomes pressed bean curd... it is almost like a firm cheese.” It may be bought either plain (*Pai tou fu kan*) or seasoned (*Wu hsiang tou fu kan*). “The seasoned curd is cooked in soy sauce and star anise [*pa chiao*], giving it a brown color.” “The white pressed bean curd should be soaked in salt water (made of 1 tablespoon salt to 4 cups water) in a covered container. The seasoned pressed bean curd should be soaked

in salt water and soy sauce. If stored in the coldest part of the refrigerator, they will keep for several weeks.”

“Fried soybean curd—*Yu tou fu*:... The bean curd is cut into 1½ inch cubes and deep fried in oil until a golden crust forms outside, which the inside... remains soft.” It “is sold by weight, usually in half- or one-pound bags.”

“Wheat gluten—*Mien ching*:” (p. 217). “Deep-fried gluten—*Yu mien ching*:” “Fresh or dried wheat gluten—*K’ao fu*:”

Glossary (condiments and seasonings, p. 219-23): “Soy sauce—*Chiang yu*:” The “most important seasoning liquid in Chinese cooking. Comes in light or dark, thick or thin. Dark or thick is *Lao ch’ou*. Light or thin is *Sheng ch’ou*. Soy sauce also comes in different “flavors, such as mushroom soy sauce and, for nonvegetarians, shrimp roe soy sauce. Flavored soy sauces are used mainly for dips and for special flavors in salads, noodles, and as a final touch to a dish.”

“Salted black beans—*Tou shih*:” These beans [fermented soybeans] are “used to flavor bland foods, such as eggplant or bean curd.” They are never eaten alone.

“Brown bean sauce—*Yüan shai shih*:” Made from “fermented soybeans and wheat flour mixed with salt and water. The beans in the sauce may be either ground (to make ground brown bean sauce—*Mo yüen shih*), or left whole. To this basic beans sauce, spice and other seasonings are added [in different proportions], creating many varieties” in “different regions of China. In Szechuan, large amounts of hot peppers and crush Szechuan peppercorns are added; in the northern provinces, garlic and scallions are used;...”

“Hoisin sauce—*Hai hsien chiang*:” A “ground bean sauce to which sugar, garlic, and other flavorings have been added. It is the most popular commercially prepared flavored bean sauce. It is used for cooking, or very often as a dip for deep-fried batter-dipped vegetables.”

“Sesame paste—*Chih ma chiang*:” “Sesame oil—*Ma yu*:”

1903. Nippon Torui Kikin Kyokai. 1976. *Daizu ni kansuru bunken mokuroku* [List of documents on soybeans and soyfoods]. Tokyo: NTKK. Vol. 2, post 1961. 93 p. [Jap] Address: Tokyo, Japan.

1904. Oiso, Toshio. 1976. History of food and diet in Japan. *Progress in Food and Nutrition Science* 2(1):35-48. Address: National Inst. of Nutrition, 1-Toyamacho, Shinjuku, Tokyo, Japan.

1905. Ortiz, Elisabeth Lambert; Endo, Mitsuko. 1976. The complete book of Japanese cooking. Philadelphia, Pennsylvania: M. Evans and Co., Inc.; Dist. by Lippincott. viii + 250 p. Illust. by Marion Krupp. Index. 24 cm.

• **Summary:** A very interesting, well researched, and accurate Japanese cookbook. Each recipe has its Japanese name in large bold letters and a translation directly below in

smaller letters. Soy-related recipes include: Asparagus with malted bean paste (moromi miso & usukuchi shoyu, p. 27). Dengaku (Bean curd with bean paste, p. 28). Stuffed lotus root (with white miso and mustard, p. 30). Noppei-jiru (with namaage or aburaage {fried bean curd}, p. 35). Kenchin-jiru (with tofu and miso, p. 36). Clear soup with okra and bean curd (p. 38). Clear soup with bean curd and wakame (p. 38). Satsuma-jiru (Miso soup with mixed vegetables, p. 45). Miso soup with tofu and shungiku (p. 46). Miso soup with wakame (incl. red and white miso, p. 46). Miso soup with oysters and bean curd (p. 47). Sekihan (pink rice with azuki beans, p. 57). Miso udon (p. 63). Kitsune udon (noodles with aburaage, p. 67). Inari-zushi (fried bean curd stuffed with vinegared rice, p. 79). Sole with bean curd and mushrooms (p. 88). Salmon steamed with bean curd (p. 90-91). Mackerel with red miso (p. 95). Fish marinated in miso (p. 102). Clams in miso, mustard, and vinegar sauce (p. 105). Oysters in vinegared miso sauce (p. 106). Satsuma-age (with mackerel and bean curd cakes, p. 116-17). Oden (with yakidofu {broiled bean curd}, p. 120-21). Kaki no dotenabe (oysters with bean paste, p. 124-25). Yudofu (simmered bean curd, p. 130). Grilled beef with bean paste (p. 146). Nikumiso (chicken and vegetables pickled in bean paste, p. 159). Eggplant with bean paste (p. 163). Green beans with bean paste (p. 168). Daikon with fried tofu (p. 171). Turnips with bean paste (p. 173). Cucumber and soy bean sprouts with sesame seeds (p. 183). Spinach salad with tofu (p. 186).

Bean curd dishes: Fried bean curd (aburaage) with hijiki (p. 187). Sole with bean curd (188-89). Deep-fried bean curd with bonito flakes (p. 190). Kôyadôfu (dried bean curd) with shiitake and vegetables (p. 191). Kûya-mushi (bean curd, chicken, and vegetable custard, p. 192-93). Simmered bean curd and chicken (p. 193). Takara bukuro (treasure bags with aburaage, p. 194). Tofu no shirô-ae (p. 195). Hiya-yakko (garnished cold bean curd, p. 196; Kinugoshi tôfu {silky bean curd} may be used). Chrysanthemum flower bean curd (p. 197). Nabeyaki Denraku [Dengaku?] (bean curd with white and red bean paste, p. 198). Pork with bean curd (p. 198-99). Ni-yakko (bean curd with dried bonito flakes, p. 199). Sokuseki misozuke (instant miso pickles, p. 210). Koshi-an (azuki bean paste, p. 213-15). New year dishes: Kuromame (black soy beans simmered in soy sauce and sugar, p. 220).

Glossary (excellent, p. 228-36)—Soy-related terms: Aburaage, azuki bean, fu (wheat gluten cake), ganmodoki, kinako, kinugoshi tôfu, kôji, koshi-an (powdered azuki paste), kôyadôfu, kôridôfu, kuzuko, miso, misozuke, momen tôfu, moromi miso, namaage, nattô, shôyu, teriyaki, tôfu, umeboshi, usukuchi shôyu, yakidôfu, yuba.

Note 1. This is the earliest English-language document seen (March 2004) that uses the term “silky bean curd” to refer to silken tofu. Address: Both: New York.

1906. Ota, Teruo. 1976. *Shokutaku no hakko shokuhin: subarashii koyo to katei de no tsukurikata* [Fermented foods on your dining table: Their wonderful effect and how to make them at home] Tokyo: Chisan Shuppan. 290 p. Illust. 18 cm. [30+ ref. Jap]*

1907. Quebral, Florendo C.; Cagampang, I.C.; Herrera, W.A.T.; Mendoza, E.R.; Mondragon, R.L.; Payumo, E.M.; Ragus, L.N. 1976. *The Philippines recommends for soybean* 1976. Los Banos, Laguna, Philippines: PCARR. vi + 68 p. Illust. 24 cm. Reissued in 1978. [50 ref]

• **Summary:** Contents. Foreword. Acknowledgment. Introduction. 1. Nutritive value. 2. Utilization. 3. Cost and return analysis of soybean production. 4. Marketing. 5. Cultural management: Selection of varieties, adaptation (soil and climate requirements), land preparation, inoculation, planting, water management, fertilization, crop protection. 6. Post-harvest handling: Threshing, drying, storage. 7. Soybeans in multiple cropping. 8. Seed production. 9. References. Appendices: A. Standardization of soybean. B. Multifarious uses and preparation of soybean and by-products. C. Climate in the Philippines. D. Available inoculants and their distributors. E. Symptoms and first aids for pesticide poisoning. F. Addresses of manufacturers and distributors of pesticides. G. Glossary. Appendix tables. Tables. Figures.

A summary of soybean area, production, and yield in the Philippines, 1959-1975 follows: The number of hectares used for planting soybeans went from 1,690 ha. in 1959 up to 2,200 ha. in 1962, and then decreased annually until it was only 1,240 ha. in 1973. However, a record high of 2,780 ha. was reached in 1974, followed by 2,018 ha. in 1975. Production of soybeans was low in 1959-60, only 571.8 and 981.3 tons, respectively. By 1962, however, production had increased to 2,066.9 tons, but decreased steadily over the years until 1974. In 1974, a maximum of 2,214.0 tons was produced. The corresponding annual yields (tons/ha.) reflect the sharp rise of soybean production in 1961-62 and the ensuing decline of the industry throughout the rest of the 1960s and early 1970s, until 1974, when production soared to new heights. Address: PCARR (Philippine Council for Agriculture and Resources Research), Los Baños, Laguna, Philippines.

1908. Shepard, Sigrid M. 1976. *The Thursday night feast and good plain meals cookbook: Natural foods of the Eastern Hemisphere: China, Japan, Indonesia, India, the Middle East.* Spokane, Washington: New Age Printing. vii + 442 p. Illust. by Margaret V. Putman. Index. 28 cm.

• **Summary:** This is a natural foods cookbook (not vegetarian), with strong influence from East Asia. The author's great aunt was a missionary in China. Pages 5-7 describe how to make a "bean curd box" for making tofu, and then how to make tofu at home. Among the many soy-

related recipes are about 55 for tofu, 7 for miso, 2 for whole soybeans, and many for soy sauce. Pages 431-34 contain a directory of natural foods provisioners and Oriental foods provisioners.

1909. Smartt, J. 1976. *Tropical pulses.* London: Longman. 348 p. Index. [275* ref]

• **Summary:** In the chapter on "Pulses in human nutrition," soya beans are mentioned (p. 92-95) under: Germinated seed. Fermented products: Soy sauce, soya bean paste, tempé, natto and Hamanatto. Extracted pulse proteins: Soya bean curd ('tofu'), soya bean 'milk.' Address: PhD, Senior lecturer in Biology, Univ. of Southampton.

1910. Solomon, Charmaine. 1976. *The complete Asian cookbook.* New York, NY: Summit Books. 511 p. Illust. Color plates. Index. 29 cm.

• **Summary:** This artistic cookbook is loaded with full-page color plates plus a good glossary. Soy-related recipes include: Bean curd omelettes (Tahu telur, from Indonesia, p. 188). Fried bean curd with peanuts (Tahu goreng kacang, from Indonesia, p. 204). Fried bean curd with soy sauce (Tahu goreng kecap, from Indonesia, p. 204). Fried fish with salted soya beans [miso] (Ikan goreng tauceo, from Malaysia, p. 224). Bean curd in salted soya bean paste [tofu in miso] (Taukwa tauceo, from Malaysia, p. 233). Bean curd and bean sprouts [probably mung bean sprouts] (Taukwa dan taueh, from Malaysia, p. 233). Stuffed soy bean cake [with fried tofu] (Tauhu sod sai, from Thailand, p. 316). Glutinous rice and soybean sauce (Nuoc leo, from Vietnam, p. 341). Soup with bean curd (Canh dau hu, from Vietnam, p. 342). Miso tomato sauce (with red misu = red miso, from the Philippines, p. 351). Bean curd in barbecue sauce (Chu hau jeung mun dau fu, from China, p. 414). Bean curd with crab sauce (Hai yook par dau fu, from China, p. 414). Ginger soy sauce (See yau ghung jeung), Chilli soy sauce (See yau laht jiu jeung), Black bean sherry sauce (Dau see sheung jing jeung, with canned salted black beans = soy nuggets), Black bean garlic sauce (Suen tau dau see, with soy nuggets) (from China, p. 431). Sesame seed sauce (Cho kanjang, from Korea, p. 451, with "4 tablespoons light soy sauce"). Dumpling soup (Mandoo, from Korea, p. 453, with "1 square fresh bean curd" and "2 tablespoons light soy sauce"). Soup of soybean sprouts (Kong namul kuk, from Korea, p. 453, with 500 gm soy bean sprouts and 1 tablespoon soy sauce). Rice with fried bean curd (Kitsune domburi, from Japan, p. 460). Steamed egg custard with tofu (Kuya mushi, from Japan, p. 471). Bean paste soup (Miso shiru, from Japan, p. 477). Sushi in fried bean curd (Inari-Zushi, from Japan, p. 480).

Soy-related glossary entries (p. 485-502) include: Aburage. Akamiso. Black beans, salted (Chinese: dow see = salted black beans). Bean curd (Chinese: dow foo; incl. yellow bean curd, dried bean curd, red bean curd). Chinese

bean sauce (ground = *mor sze jeung* or chunky = *min sze jeung* similar to Malaysian *taucheo* or *tauceo*). Dow foo pok (Chinese-style fried bean curd). Miso. Mushroom soy (Soy sauce flavored with mushrooms during the last stage of processing). Soy sauce (light or dark, shoyu, kecap manis). Yellow beans, salted (=salted yellow beans). Yellow bean paste.

Interesting glossary entries (p. 485-502): Aburage, bean curd (fresh, yellow, dried, red), black beans, salted (Chinese: *dow see*; made from soy beans, heavily salted and sold in cans and jars), Chinese bean sauce (ground or chunky, like Malaysian *taucheo* or *tauceo*), fish sauce (Vietnamese: *nuoc mam*. Burmese: *ngan-pya-ye*. Thai: *nam pla*. Tagalog: *patis*). Miso. Mushroom soy (Soy sauce flavored with mushrooms during the last stage of processing). Red misu (See miso). sesame seed (Hindi: *till*. Sinhalese: *thala*. Malay: *bijan*. Chinese: *chih mah*. Japanese: *goma*. Indonesian: *wijen*). Sesame oil (“The sesame oil used in Chinese cooking is extracted from toasted sesame seeds...”). Sesame paste (“Sesame seeds, when ground, yield a thick paste similar to peanut butter. Stores specialising in Middle Eastern foods sell a sesame paste known as *tahini*, but this is made from raw sesame seeds, is white and slightly bitter, and cannot be substituted for the Chinese version—which is made from toasted sesame seeds, and is brown and nutty”). Wakame. Wasabi or wasabe. Yellow beans, salted (Very similar to canned salted black beans, but lighter in color). Yellow bean paste (It is not really yellow, but brown. Sold in cans).

Note 1. This is the earliest English-language document seen (Feb. 2004) that uses the word “dau fu” (or “dau-fu”) to refer to Chinese-style tofu.

Note 2. This is the earliest English-language document seen (March 2009) that uses the word “tauceo” to refer to Indonesian-style miso.

An inventory of information on the utilization of unprocessed and simply processed soybeans as human food. Peoria, Illinois: USDA Northern Regional Research Center, Interdepartmental Report. AID AG/TAB-225-12-76. 197 p. AID contract report. Undated. No index. 27 cm. Spiral bound. [65 ref]

• **Summary:** Contents: Introduction. Home and village traditional soybean foods by country. 1. Soybean food uses and production in Asia. Soaking dry soybeans. In China: Tou chiang (soybean milk; preparation, ways of serving), tou fu (soybean curd; yen-lu is the Chinese name for nigari), tou fu nao (soft curd), tou fu kan (dry / firm bean curd), chien chang (pressed tofu sheets), yu tou fu (fried tou fu), tung tou fu (frozen tou fu), tou fu pi (protein-lipid film; yuba), huang tou ya (yellow bean sprout or soybean sprout), mao tou (hairy bean, green soybean, or immature soybean), dry soybeans (roasting and frying, stewing and boiling), roasted soybean flour. Fermented soybean foods. Production and consumption of soybeans (China and Taiwan).

Japan: Tofu (soybean curd), kinugoshi tofu, processed tofu products (aburage or age, nama-age and ganmo), kori tofu (dried-frozen tofu), yaki tofu (grill tofu), yuba (protein-lipid film), soybean milk, gô (ground soybean mash), daizu no moyashi (soybean sprouts), edamame (green vegetable soybeans), whole soybeans, kinako. Fermented soybean foods: Production and consumption.

Korea: Tubu (soybean curd), soybean sprouts, whole soybeans (green soybeans, parched or roasted soybeans, boiled soybeans), soybean flour, soysauce, bean paste [Korean soybean miso], natto, production and consumption of soybeans.

Indonesia: Tahu or tahoo (soybean curd), bubuk kedele (soybean powder), tempe kedele, tempe gembus [the name in Central and East Java for okara tempeh], oncom tahu [the name in West Java for okara onchom], other soybean products (soybean sprouts, green soybeans, roasted and boiled soybeans, kecap or soysauce, tauco or bean paste [miso]), food mixtures (Saridele, Tempe-fish-rice or TFR, Soy-rice baby food, soybean residue [okara]-fish-rice), production and consumption of soybeans.

Thailand. Philippines: Soybean sprouts, soybean coffee, soybean cake (made from equal amounts of soybean flour and wheat flour), soybean milk, tou fu and processed tou fu products, production and consumption. Burma. India. Malaysia. Nepal. Singapore. Sri Lanka (Ceylon). Vietnam. West Asia [Middle East; Iran and Turkey]. References—Soybean food uses in Asia.

corn-soy mixtures (soy-ogi). Tanzania. Uganda. Production. References—Soybean food uses in Africa.

3. Soybean food uses and production in Europe [both Eastern and Western]. 4. Soybean food uses and production in Latin America. Argentina. Bolivia. Brazil. Chile. Colombia. Ecuador. Guyana. Paraguay. Peru. Uruguay. Venezuela (fried arepas with textured soy). Mexico: New village process, commercial developments of soy-based food products, Gilford Harrison, Ruth Orellana, Seguras Social. Honduras. Costa Rica. Panama. Dominican Republic. Jamaica. Haiti. Trinidad. References—Soybean food uses in Latin America.

5. Soybean food uses and production in North America. United States: Oriental populations, vegetarian communes, The Farm in Tennessee. Canada. References—Soybean food uses in North America. 6. Soybean food uses in Oceania. Australia. New Zealand. 7. Summary of soybean food uses. Traditional soybean foods: Soybean milk, soybean curd and processed soybean curd products, protein-lipid film, soybean sprout, tempe (tempeh), green soybeans, boiled soybeans, roasted soybeans, soybean flour, soysauce, fermented soybean paste, fermented whole soybeans [Toushih, hamanatto], natto, fermented soybean curd. Experimental soybean foods: Whole soybean foods, soybean paste, soy flour, soy beverage. Production and consumption.

8. Recent simple soybean processes, other than traditional. Simple village process for processing whole soybeans: Equipment, process, sanitation requirements, quality of product, evaluation of product in formulas and procedures for family and institutional use in developing countries. NRRC village process. Foods from whole soybeans developed at the University of Illinois (drum dried flakes, canned and homecooked soybeans, soy beverages and beverage products, spreads, snacks).

Ways of cooking and serving soybeans in the American diet. 9. Industrial processes. Industrial production and selling prices of edible soybean protein products. 10. Barriers to acceptability and utilization of soybeans in food and research recommendations: Availability. Cultural and social factors. Texture. Flavor. Nutrition and food safety. Technology development. Technology transfer. Research recommendations [concerning each of the above barriers].

Concerning Morocco: Cereal-soy blends have been used extensively in Morocco; in fiscal year 1974 some 14.7 million lb were shipped to Morocco. Mmbaga (1975) reported that soy flour is being used in making porridge, with 1 part soy flour to 3 parts maize / corn flour.

Tables show: (1) Soybean production and imports in Taiwan, 1962-1975 (tonnes = metric tons, p. 33). Production rose from a 53,000 tonnes in 1962 to a peak of 75,200 tonnes in 1967, then fell to 61,900 tonnes in 1975. Imports skyrocketed from 62,400 tonnes in 1962 to a record 827,300 tonnes in 1975. (2) Consumption of soybean foods

in Taiwan, 1964-1974 (kg/capita/year, p. 34). Total soybean foods not including tofu rose from 1.08 kg in 1964 to a peak of 2.61 kg in 1972 then fell to 1.99 kg in 1974.

Consumption of tofu (80% water) rose from 18.75 kg in 1964 to a peak of 33.89 kg in 1972, then fell to 32.04 kg in 1974. (3) Supply and disposition of soybeans in Japan, 1971-1974 (p. 49). Total supply is beginning stocks, plus domestic production, and imports. Total disposition is crushing, plus traditional foods and feed. In 1974 imports accounted for 87.5% of the supply, and crushing accounted for 71.0% of the disposition. (4) Whole soybeans used in the production of traditional foods in Japan, 1970-74 (tonnes / metric tons, p. 50). Tofu and others rose from 508,000 in 1970 to 539,000 in 1974. Miso rose from 177,000 in 1970 to 192,000 in 1974. Shoyu rose from 13,000 in 1970 to 14,000 in 1974. (5) Defatted soybean meal used in the production of traditional foods in Japan, 1970-74 (tonnes / metric tons, p. 51). Shoyu rose from 163,000 in 1970 to 176,000 in 1974. Tofu and others was constant at 130,000 from 1971 to 1973. Miso decreased from 4,000 in 1970 to 2,000 in 1974. (6) Production of traditional soybean foods in Japan, 1970-74 (tonnes / metric tons, p. 52). Tofu and others rose from 1,867,800 in 1970 to 2,264,900 in 1973. Shoyu rose from 1,334,1000 in 1970 to 1,455,800 in 1974. Miso rose from 552,200 in 1970 to 587,200 in 1974. (7) Production and food use of beans [various types] and consumption of some soybean products in Korea, 1964-1967 (p. 56-57). In 1967 consumption (in tonnes / metric tons) was: Bean curd 290,000. Bean sprouts 270,000. Bean sauce 69,700. Bean paste 27,700. Total: 11.6 kg per capita per year. (8) Soybean production in Indonesia, 1960-1974 (p. 65). It rose from 442,862 tons in 1960 to 550,000 tons in 1974. (9) Consumption of soybeans in various parts of Indonesia in 1970 (p. 66). (10) Production of soybean foods in the province of Central Java, 1968-1972 (tons, p. 67). Kecap rose from 914,695 in 1968 to 1,524,000 in 1972. Tahu decreased from 18,570 in 1978 to 17,000 in 1972. Tempe rose from 506 in 1968 to 39,000 in 1972. (11) Area planted to soybeans and total soybean production in Thailand, 1964-1974 (p. 70). Area rose from 213,000 rais (6.25 rais = 1 ha) in 1964 to 1,016,000 rais in 1974. Production (in metric tons) rose from 31,300 in 1964 to 252,400 in 1974. (12) Utilization of soybeans by soybean-consuming countries, 1964-66 (based on FAO 1971 Food Balance Sheets, 1964-66 average, p. 150). The countries leading in per capita consumption (kg/person/year) are: China (PRC) 6.7. Japan 5.1. Korea(s) 5.0. Singapore 4.3. Indonesia 2.8. Malaysia 2.6. Taiwan (ROC) 1.1. (13) Amounts of cereal-soy blends distributed under Title II, Public Law 480 in fiscal year 1974 (p. 152-155). (14) U.S. exports of full-fat soy flour, 1974-75 (p. 156).

Note: This is the earliest English-language document seen (Feb. 2004) that uses the word “tubu” to refer to Korean-style tofu. Address: Northern Regional Research

Center, Agricultural Research Service, Department of Agriculture, Peoria, Illinois 61604.

1913. Winarno, F.G.; Hardjo, S.; Rumawas, F. 1976. The present status of soybean in Indonesia. Bogor, Indonesia: FATEMETA, Bogor Agriculture University. xxiii + 128 p. 29 cm. [7 ref]

• **Summary:** The best and most comprehensive survey up to this time on the subject, it was done as part of the 1974 Industrial Census of the Central Bureau of Statistics. Full of valuable statistics and tables. Contents. Preface. Summary. List of tables. List of figures. I. Introduction. II. Objectives and survey methods: A. Objectives. B. Survey methods. III. Cultivation, product handling and protection: A. Botany of the soybean. B. Varieties. C. Growth requirements. D. Agronomy of soybean. E. Crop Management. F. Harvesting and product handling. IV. Production: A. Harvested acreage, production and average soybean yield in Indonesia. B. Center production areas. C. Harvested acreage of soybean versus other food crops. D. Factors affecting soybean production. V. Farm management and soybean marketing in Indonesia: A. Farm management. B. Marketing of soybean. VI. Soybean utilization (p. 52): A. Soybean products: Introduction, yuba, sere (from Bali: cooked whole soybeans, mixed with onions, hot pepper, turmeric, salt, and coconut presscake; molded into patties, sun dried, then deep fried), soybean milk, tofu (coagulated with *biang* or *sioko* {calcium sulphate}), soybean sprouts (*tauge*), soybean powder (soybeans that have been cooked, dried, dehulled, and pounded), soybean mixtures, kecap (Indonesian soy sauce), oncom (fermented soybean product, red or black), tauco (Indonesian-style miso), tempe. B. Soybean utilization: Utilization by farmer (in each of 6 provinces and total), utilization by processor (tempe, tofu, kecap, miscellaneous), census conducted by Central Bureau of Statistics, conversion factor for soybean products. C. Consumption of soybean and its processed products (by province). D. Other components. Appendixes.

Tables in body of text: (1) Brief description of recommended soybean varieties. (2-3). Insecticides used against *Agromyza* and *Phaedonia inclusa*. (4) Soybean harvest seasons in Indonesia (major harvest months, by province). (5-8) Harvested acreage, production, and average soybean yield during 1950-73, 1960-74, and in Java-Madura (1967-71, 1972, 1973, and 1974). (9) Soybean acreage in Java-Madura. (10) Major production areas in Java-Madura, and average 5-year yield, 1965-69. (11) Harvested acreage of soybeans vs. other crops in Java-Madura, 1971-72. (12) Production cost and value per hectare of soybeans. (13) Major trading and harvest months. (14-15) Percentage of farmer's share and marketing cost of the trade price in various provinces. (16) Percentage of farmer's share of the trade price. (17) Soybean utilization by

farmers, 1975-76. (18-21) Production/consumption of tempeh, tofu, kecap, tauco, taugé, yuba, and sere.

(22-29) Raw material utilized by small-scale processors and by soybean home industries in Java and Jakarta. (30-31) Value of raw material and end products of small-scale industries over 3- and 12-month periods. (32) Conversion factor of soybean products to raw material. (33-36) Average daily consumption per capita of soybean and its process products at villages in Lampung, Yogyakarta, East and West Java, and in 4 other provinces. Address: FATEMETA, Bogor Agricultural Univ., Indonesia.

1914. Winarno, F.G.; Hardjo, S.; Rumawas, F. 1976. Kecap (Indonesian-style soy sauce) (Document part). Bogor, Indonesia: In: Winarno, F.G.; et al. 1976. The present status of soybean in Indonesia. FATEMETA, Bogor Agriculture University. xxiii + 128 p. 29 cm. [7 ref]

• **Summary:** The description of kecap (p. 58-59) states: Boil soybeans until tender. Drain and spread over round, shallow woven bamboo trays. Place these in a kecap fermentation room. Leave for 5-7 days until the soybeans are well covered with and bound together by a mycelium of *Aspergillus* and/or *Rhizopus* molds. Then dry the trays and soybean koji in the sun. Break up the soybean koji, place it in salt brine in deep earthenware jars, and place the jars in the sun to ferment for one week or up to one year.

When the mash is ready, boil it, adding clean water if necessary. Remove the liquid using a sieve; this is the first extraction, which is the best quality. Repeat this process 3 to 5 times, adding a brine solution the same salt concentration as the original mash. Each extraction, which will be lower in quality than the one before it, is kept separate to provide different qualities of end product.

As the final step for each different extraction, bring it to a boil and add some ingredients such as palm sugar [jaggery], caramel, or coconut sugar. Other ingredients such as fish extract or bouillon are also occasionally added. Filter the liquid through a piece of cheese cloth, bottle and store.

Page 67: Most kecap is made in small scale enterprises, employing on average 10-11 laborers and working 23.7 days/month. The average kecap maker uses 13,390 kg of soybeans annually to produce kecap with a value of 6.3 million rupiahs. A table (p. 68) gives details by province.

Page 80: Kecap is a very minor soy product in Indonesia. Only 0.2% of all soybeans used to make foods in Indonesia are used to make kecap. The largest percentage of soybeans are used to make tempeh (66%), tofu (33%), and tauco (0.3%).

Pages 93-94: Ingredients required to make kecap include palm sugar, cane sugar, molasses, salt, wheat flour, cassava flour and spices. Palm sugar is the most important sweetener. "Depending on the concentrations of sugar and salt, there are two types of kecap available in the market, sweet and salty kecap." Wheat flour and cassava flour serve

as thickening agents, but they are not used by all kecap makers. No information is given on the types or amounts or of spices and herbs used in making kecap. Address: FATEMETA, Bogor Agricultural Univ., Indonesia.

1915. Hawaiian Miso & Soy Co. 1976? Hawaiian miso (Leaflet). 1714 Mary St., Honolulu, Oahu, HI 96819. 4 panels each side. Undated. Front and back. Each panel: 24 x 10 cm.

• **Summary:** The front panel, in full color, states: "Miso, butterfish misozuke, butterfish kasuzuke [in sake lees], guava jelly & jam, omusubi kororin (with freeze dried pickled plum with kelp, or pickled vegetable). To the left a color photo shows each of these products in its package. Two more panels, in red, blue, and black on white, contain a flowchart showing the natural process (no preservatives added) used to make miso. This Maru-Hi brand miso has been made in Hawaii since 1936. The 4th panel on this side shows distributors of these products.

Contents of the back 4 panels (in black and white): What is miso? (by Shurtleff and Aoyagi). Brief history of Hawaiian Miso & Soy Co. Three basic uses for miso (recipes): Miso soup, Fish misozuke, Miso sauce for sea foods, vegetable dressing, and cooked tako (squid). Recipe for butterfish (black cod) misozuke. Address: Honolulu, Oahu, Hawaii. Phone: 841-7354.

1916. Muso Shokuhin. 1976? Distributors of Muso foods in Canada, South America, Europe, and Australia (Leaflet). Osaka, Japan. 1 p. Undated.

• **Summary:** The name, address, and phone number of each company is given. Canada: Lifestream Natural Food, Inc. (British Columbia). Manna Foods, Inc. (Ontario).

South America: Zentro Macrobiotico de Venezuela.

Europe: Societe Traplun (France). Unimave S.C.A.R.L. (Portugal). Urtekram (Denmark). V.Z.W. Voedselcollectief (Belgium). Manna (Holland). Centro Dietetico Macrobiotico Italiano (Italy). Centro Macrobiotico Italiano (Italy). Harmony Foods (England). Kameo (France). P.V.B.A. Lima (Belgium). Moder Jord & Söner (Sweden). Reformhaus Rahlstedt (West Germany). Schwarzbrot (West Germany). Dr. Naturopata SER (Spain). Eduardo Galamba De Sa Pires (Portugal).

Australia: True Health Aides Pty. Ltd. (Sydney). Address: 1-43 Otedori, Higashi-ku, Osaka, Japan. Phone: (06) 945-0511.

1917. *Sunday News (Lancaster, Pennsylvania)*. 1977. Miso. It's not only different... It's delicious. Jan. 2. p. A-12. Based on the pamphlet What is Miso? by Shurtleff & Aoyagi. [2 ref]

• **Summary:** Describes the various types of miso and contains 7 miso recipes. Photos show: (1) Akiko Aoyagi mixing a batch of peanut miso. (2) Apple slices on a plate,

each topped with a dollop of miso mixed with peanuts and honey.

1918. Ethical Society. 1977. Soybeans and the world food crisis: A lecture demonstration by Bill Shurtleff and Akiko Aoyagi (possibly the foremost authorities on the use of soybeans for food in the West) (Poster). 9001 Clayton Road, St. Louis, Missouri. 1 p. Jan. 13. 30 x 26 cm. Black on brown.

• **Summary:** The lecture will be held at 7:00 p.m. at the Sunshine Inn Restaurant, 8½ Euclid. Tickets are \$1.00 in advance, \$1.50 at the door. Learn about tofu, miso, and "why tofu is a viable alternative to help solve the world food crisis." Address: St. Louis, Missouri.

1919. *Albuquerque Tribune (New Mexico)*. 1977. Program set on preparing soybean foods. Jan. 18. p. B-2.

• **Summary:** "The secrets of preparing foods with protein-rich miso and tofu will be demonstrated from 7 to 9 p.m. Jan. 27 at First Unitarian Church, 3701 Carlisle NE," Albuquerque, [New Mexico] by Bill Shurtleff and Akiko Aoyagi. The lecture is sponsored by Jemez Bodhi Mandala Zen Center at Jemez Springs. A photo, which was sent out with a news release, shows Shurtleff and Aoyagi.

1920. DeMasters, Carol. 1977. Research to feed the world. *Milwaukee Sentinel (Wisconsin)*. Jan. 20. p. 1, 7.

• **Summary:** About the work of William Shurtleff and Akiko Aoyagi, directors of the New-Age Foods Study Center, with tofu and miso. "The world food crisis is their raison d'être." They are "ardently devoted to finding alternative protein sources to those commonly used in the world—chiefly meat, poultry, and fish." Contains 4 recipes plus a photo of the two with their Book of Tofu.

Note: This is the earliest English-language document seen (Nov. 2003) that contains the term "alternative protein" or "alternative protein sources." Address: Sentinel Food Editor.

1921. Goldman, Sherman. 1977. Charles Atlas versus the Bodhisattva: An interview with Bill Shurtleff and Akiko Aoyagi. *East West Journal*. Jan. p. 32-35.

• **Summary:** An in-depth discussion of the work of Shurtleff and Aoyagi with tofu, miso, and tempeh in the USA, Japan, and Indonesia. Photos show: Shurtleff speaking into a microphone. Akiko Aoyagi smiling. Shurtleff and Aoyagi standing next to their white 1975 Dodge Van on the side of which is written: "New-Age Foods Study Center—Tofu & Miso America Tour, 1976-77."

1922. Kagawa, Ryo. 1977. Shokuhin seibunhyō [Food composition tables for Japan]. Tokyo: Joshi Eiyo Daigaku Shuppan-bu. 145 p. Jan. 15 x 22 cm. [Jap]

• **Summary:** For tables of information on soybeans and soyfoods, see p. 21-22. Includes Kinako, soymilk, regular tofu, kinugoshi tofu, fukuro-iri tofu, yaki-dofu, abura-age, namaage, ganmodoki, kori-dofu, yuba, okara, natto, hamanatto, miso, red miso, light yellow salty miso, red salty miso, soybean miso, powdered miso. Address: Japan.

1923. Shurtleff, William. 1977. Soy foods: Protein source of the future—now. Paper presented on 1976-77 Tofu & Miso America Tour. 16 p. transcript. Unpublished manuscript. [5 ref]

• **Summary:** This is the transcript of a speech given on 15 Jan. 1977 in Kansas, but a similar speech was given by Shurtleff at 70 public programs throughout the USA. Contents: World hunger and its causes: Population growth, affluence and the feedlot system, land misuses and international food exploitation. Vegetarian diets and a solution to degenerative diseases and food problems. Soybeans in America. Soybeans and soyfoods in East Asia: Tofu, miso, tempeh, shoyu. The future of soybeans on the planet. Address: New-age Foods Study Center, 790 Los Palos Dr., Lafayette, California 94549. Phone: 415-283-3161.

1924. Sunwheel Foods Ltd. 1977. Importers and distributors (Ad). *Spiral (London, England)*. Winter. p. 24-25. Jan.

• **Summary:** Sunwheel Foods Ltd. are importers and distributors of six varieties of Sea Vegetables, Tamari Soya Sauce, and three varieties of Naturally Fermented Miso Soya Bean Paste. This is ad is part of an article titled “Vitamin B-12 and the vegetarian,” by John Jenks. Address: 12 Orpheus St., London SE5 8RR, England.

1925. *Well Being (San Diego, California)*. 1977. Don’t miss it! Tofu & Miso Tour comes to San Diego Jan. 30. No. 16. Local Pages, p. 1. Jan.

• **Summary:** William Shurtleff and Akiko Aoyagi will present a program on tofu and miso on Sunday, January 30, at 7 p.m. at the Ocean Beach Community School, 4741 Santa Monica, San Diego. Admission will be \$1.00. A list shows the places where tickets may be purchased in advance. For further details, call *Well Being Magazine* at 234-2211.

1926. Rice, William. 1977. Building a philosophy around the whole grain. *Washington Post*. Feb. 10. p. E1, E6.

1927. Oblinger, Jan. 1977. Tofu, nutty burgers served on ‘veggie line’ at UMO. *Bangor Daily News (Maine)*. Feb. 16. p. 6.

• **Summary:** “Students at the University of Maine at Orono are eating strange things these days. And they’ve never been healthier. The Office of Dining Services is making available to students a vegetarian menu in addition to the regular meat

and potatoes fare served in the campus’ dining halls.” Included on the unique menu are tofu burgers—“a small part of the college’s campaign to get more vegetables and less meat to those students who want it.” Many students who eat at the veggie line do not consider themselves vegetarians; they just like the food. The Bear’s Den, a student restaurant at the Memorial Union, now offers a tofu salad sandwich, as well as a meatless “nutty burger” based on cottage cheese.

“According to UMO’s assistant manager of dining services, Anne Johnson, tofu is purchased from Peter and Judy Beane of the No-moo Dairy in South Portland [Maine], the only source north of Boston [Massachusetts]... Some of the other hard-to-find items are bought through a Boston company named Erewhon.”

“The university learned about tofu in a book by Bill Shurtleff and Akiko Aoyagi, who demonstrated cooking with tofu and miso at the college in November. They showed how to prepare tofu or miso for less than eight-and-a-half cents a pound.”

Contains “veggie” recipes for Nuttyburger, and Maveric Chili (with 1 cup whole soybeans). Five photos show students “dining on the tofuburger,” which contains soybean curd, carrots, onions, and sunflowers. Most said the flavor “was hard to describe. Several said it tasted a lot like a fish sandwich.”

Note: This is the English-language document seen (Jan. 2007) that contains the term “tofuburger” (or “tofuburgers”). Address: Daily News Staff.

1928. Nakadai, Tadanobu; Nasuno, Seiichi. 1977. The action of acid proteinase from *Aspergillus oryzae* on soybean proteins. *Agricultural and Biological Chemistry* 41(2):409-10. Feb. [14 ref]

• **Summary:** Until recently it has long been considered that large amounts of free amino acids are liberated from proteins by the hydrolytic action of acid protease from *Aspergillus oryzae*. However recent reports indicate that the liberation of free amino acids in miso brewing is due to the action of carboxypeptidase of the mold. This investigation clearly indicates that “free amino acids are liberated from soybean protein by the hydrolytic action of both acid proteinase and acid carboxypeptidase of *A. oryzae* in the miso brewing, but not liberated by the hydrolytic action of only acid proteinase.” Address: Noda Inst. for Scientific Research, Noda, Chiba, Japan.

1929. Shurtleff, William; Aoyagi, Akiko. 1977. Excerpts from: *The Book of Miso*, and *The Book of Tofu. Macrobiotic (The) (Chico, California)* No. 117. p. 18-21. Feb. [2 ref]

Address: 790 Los Palos Dr., Lafayette, California 94549.

• **Summary:** Reprinted from *Nippon Shokuhinkogyo Gakkaishi (J. of Food Science and Technology)* 23:455-60 (1976)—as "Studies on lipids of soybean foods. II." Address: National Food Research Inst., MAFF, Koto-ku, Tokyo, Japan.

1933. Kiuchi, Kan; Ohta, Teruo; Ebine, Hideo. 1977. [Changes in lipid components of miso-dama koji]. *Shokuhin Sogo Kenkyujo Kenkyu Hokoku (Report of the National Food Research Institute)* No. 32. p. 268-73. March. [6 ref. Jap; eng]

• **Summary:** Reprinted from *Hakko Kogaku Zasshi (J. of Fermentation Technology)* 53(12):869-74 (1975). Address: National Food Research Inst., MAFF, Shiohama, Koto-ku, Tokyo, Japan.

1934. *Hartford Courant (Connecticut)*, 1977. Feminine topics, by Jacqueline (Ad). April 24. p. 12E.

• **Summary:** "Oriental cooking fans—your ingredients are waiting at the Epicure Grocery in the heart of Farmington! Szechuan peppercorns, Star anise, chili paste with garlic,

Tempura batter mix, cellophane and Chinese noodles, yellow bean paste, fish sauce, fresh ginger in rice wine and rice sticks. Also on hand—Blessings Sweet & Sour Sauce." Ask for free recipe booklet.

1935. Shurtleff, William; Aoyagi, Akiko. 1977. Koji & koji starter for miso and shoyu. Lafayette, California: New-age Foods Study Center. 6 panels. April 26. Catalog.

• **Summary:** This is a revised, expanded, typeset (by Jan Herhold), and illustrated (by Akiko Aoyagi) version of a similar leaflet first printed in June 1976. Printed with black ink on saffron colored (yellowish orange) paper, it begins by noting: "Now you can easily make your own miso or natural shoyu (soy sauce) at home using either high-quality, reasonably-priced koji or koji starters available in the United States; illustrated instructions are given in *The Book of Miso*.

Part I describes two types of koji: Firm granular koji, and soft mat koji. Part II describes nine different types of koji starter for which are sold in three textures: Spore-powder texture, whole-grain texture, and meal texture. The nine different types of koji starter are for: Red miso, barley miso, soybean miso, mellow barley miso, sweet white miso, light-colored miso, fast white miso, amazake or pickling, or shoyu. All the above are made by the prestigious Japan Brewing Company (*Nihon Jozo Kogyo*), which employs only the very finest traditional, natural methods.

Sources of ready-made koji: Miyako Oriental Foods (Los Angeles, California), Westbrae Natural Foods (Emeryville, California), Chico-San Food Co. (Chico, California), and Janus Natural Foods (Seattle, Washington). Sources of koji starter: Westbrae Natural Foods sells the 5 most widely used koji starters; all are imported from Mitoku Trading Co., Tokyo, Japan. Address: Lafayette, California.

1936. *Mother Earth News*, 1977. Plowboy interview: Bill Shurtleff and Akiko Aoyagi. No. 44. March/April. p. 8-18.

• **Summary:** A wide-ranging discussion of Shurtleff and Aoyagi's work with soyfoods in America and Japan. Contains a color photo of the two standing next to the white Dodge van in which they are doing a Tofu & Miso America Tour.

1937. Iso, James Y. 1977. Japan looks to the U.S. for more food-quality soybeans. *Foreign Agriculture*. May 16. p. 6, 16.

• **Summary:** When the People's Republic of China (PRC) cut back on its soybean exports last year because of a poor domestic harvest and disruption of marketing channels by the devastating earthquake, Japanese manufacturers of miso, tofu, and other native soy foods were among the first to feel the pinch, having traditionally bought large quantities of PRC soybeans. Their shift could lead to perhaps a 100,000-ton gain in U.S. exports of food-quality soybeans to Japan.

"In 1976, the U.S. shipped about 520,000 tons of these food-use soybeans to Japan out of total U.S. soybean sales there of 3.2 million tons and Japan's total soybean imports of 3.5 million. Japan received another 132,000 tons of food beans from the PRC and a few thousand tons from other supplying countries.

"Adding to this a domestic production of 60,000 tons puts Japan's total soybean use in traditional foods last year at about 750,000 tons.

"Each year, Japan uses about 720,000 tons of soybeans in traditional foods, including roughly 350,000 tons of tofu (bean curd), 180,000 of miso (bean paste), and 70,000 of natto (fermented beans). The remaining tonnage goes into other native products, such as kinako (processed [dry roasted] beans) and frozen tofu, and into fresh soybean consumption.

"Manchurian beans, produced in the colder regions of North China (usually north of 43° latitude), have long been considered the best tasting for fermented foods like miso and natto."

"Outside of the PRC, the varieties of beans preferred by the food manufacturers are found in colder climates, such as Canada and the northern regions of the United States."

Several "Japanese trading firms involved in importing food-type beans have come to prefer soybeans produced in Indiana, Illinois, Ohio, and Michigan. These beans, known among the trade as IOM (Indiana, Ohio, Michigan) beans, made up close to 500,000 tons of the food beans imported by Japan last year and go largely into tofu and related foods." Note: This is the earliest English-language document seen (Jan. 2008) that uses the abbreviation "IOM" in connection with soybeans.

"Around 55,000 tons of 'identity-preserved' varieties also were imported last year." Producers are looking for a large bean with a white hilum and high protein and carbohydrate content. All food beans must be #1 grade quality. Talks with miso/natto manufacturers have revealed that U.S. varieties Amsoy, Corsoy, Kanrich, and Beeson meet this general description. However, a bean with all the desired features comparable to the PRC's, particularly as related to taste, is not as yet commercially available in the U.S. Address: Foreign Market Development, Oilseeds and Products, Foreign Agricultural Service.

1938. Hayashi, Kazuya; Mizunuma, Takeji; Yokotsuka, Tamotsu. Assignor to Kikkoman Shoyu Company, Ltd. (Japan). 1977. Process for producing koji for fermented food products. *U.S. Patent* 4,028,470. June 7. 7 p. Application filed 8 June 1976. [2 ref]

• **Summary:** "Producing koji for fermented food products by modifying an unmodified koji-substrate composed of a vegetable protein material and a vegetable carbohydrate material, inoculating a koji mold in the resulting modified koji-substrate, and cultivating it, wherein said cultivation is

carried out in the presence of 0.1 to 1.2% by weight, based on the water content of the modified koji-substrate, of acetic acid added. This process is suitable for use in the manufacture of fermented foods such as soy sauce, miso, or sake." Address: 1. Kashiwa, Japan; 2. Noda, Japan; 3. Nagareyama, Japan.

1939. Erewhon, Inc. 1977. Erewhon. Summer 1977. Boston, Massachusetts. 23 p. Catalog and price list.

• **Summary:** On the front cover is a photo of a rose flower and leaves. On the first page, Jeffrey Flasher (apparently the new president) writing about this catalog, notes: "Erewhon's summer catalog of 1973 listed approximately 450 products, of which 30% were either grown, manufactured, or repackaged in the Northeast. Although last summer's catalog offered nearly 1,000 products, fully 25% were either grown, manufactured, or repackaged in the Northeast... Between July and December Erewhon will be introducing 50 to 75 new items produced in the Northeast." "No sugar or preservatives added to any food in this catalog." Address: 33 Farnsworth Street, Boston, Massachusetts 02210. Phone: 617-542-1358.

1940. Erewhon Trading Co., Inc. 1977. Erewhon: Our traditional foods are the foods of the future. *East West Journal*. June. p. 67. [3 ref]

• **Summary:** This informative advertisement is largely about miso. Erewhon imports Hacho [Hatcho] miso from Japan; the source company first made Hacho miso in 1337. "We are grateful to Muso Shokuhin Company of Japan, a macrobiotic natural foods company, for originally distributing hacho miso to the United States through Erewhon and for the work they continue to do in developing sources of high-quality organic foods for Japan and the rest of the world. Erewhon is also grateful to Mr. A. Kazama of Mitoku Company, Ltd., of Tokyo, for encouraging the development of large-scale miso production without the use of chemical additives to speed the aging process. When Mr. Michio Kushi, the founder of Erewhon first convinced Mr. Kazama of the sizable market for naturally produced miso, he initiated a search which resulted in the president of Sendai Miso Company agreeing to produce enough to keep up with the demand.

"Recently a brown rice (genmai) miso has been added to the Erewhon line of imported foods. Based on the traditional techniques and standards, this new variety was two and a half years in development before Mr. Ko Haga, brewmaster of Sendai, produced what he considered a successful brown rice koji, or starter."

"Sendai uses a regionally grown rice, called Sasanishiki, which is highly regarded in Japan, and the soybeans used are the 'Prize' variety grown organically in Minnesota by farmer Ed Ricke."

Last year 85 tons of traditionally produced miso were imported into the United States from Japan. Erewhon now has 3 locations in the USA, in addition to the headquarters and main warehouse at 33 Farnsworth St.: 342 Newbury St., Boston, Massachusetts 02115; 1731 Massachusetts Ave., Cambridge, MA 02138; 1 Civic Center Plaza, Hartford, Connecticut 06103. Address: 33 Farnsworth St., Boston, Massachusetts 02210.

1941. Kushi, Michio. 1977. *The book of macrobiotics: The universal way of health and happiness*. San Francisco, California: Japan Publications, Inc. x + 182 p. June. Illust. Index. 26 cm.

• **Summary:** Many followers of macrobiotics consider this to be the author's classic work on the subject. The preface tells briefly how Mr. Kushi got involved with macrobiotics and came to America. He began to lecture in New York in 1955. His teachings began to spread, especially after 1963. By Feb. 1977 he has conducted 5,000 lectures and seminars in America and Europe. One Appendix is titled "A Historical Review of the Macrobiotic Movement in North America" (p. 168-71).

Concerning soyfoods, the book discusses miso (p. 51-52), protein (p. 69), tamari (p. 51-52, 131-33), tekka (52, 133), and tofu plaster (130; "more effective than an ice pack to draw out fever"). Concerning smoking, the author believes that it "does not contribute to produce lung cancer" if the smoker eats a proper traditional (macrobiotic) diet (p. 115).

"In 1949, Michio Kushi, during his postgraduate studies at Tokyo University, was inspired by the teaching of George Ohsawa. He came to the United States in connection with the World Federalist movement. Besides him, Aveline Tomoko Yokoyama in 1951, Herman Aihara in 1953, Cornelia Chiko Yokota, Romain Noboru Sato and his brothers Junsei Yamazaki, Shizuko Yamamoto, Noboru Muramoto and others came to the United States during the following years. After experience with various enterprises they respectively began to teach macrobiotics, mainly in New York. George and Lima Ohsawa also visited America from Europe to conduct seminars. Macrobiotic summer camps, restaurants, and food stores began to operate on a small scale with many American people. Educational activity was organized as the Ohsawa Foundation at that time. However, on the occasion of the Berlin Crisis in 1961, the major active people related to the macrobiotic movement made an 'exodus' to Chico, California. Robert Kennedy, Lou Oles, Herman Aihara and others began Chico San, Inc., as a food manufacturing and distributing company, and established the Ohsawa Foundation in California. Later, the Foundation moved to Los Angeles, its main activity being publishing George Ohsawa's works. The San Francisco center was established. At a later date, Jacques and Yvette de Langre, Joe and Mimi Arseguel and

many others shared educational activities in California and other areas of the West Coast.

"In the meantime, after educational activity in New York, besides several seminars on Martha's Vineyard and various local colleges, Michio and Aveline Kushi moved to Boston in order to concentrate on education for the younger generations. They organized the East West Institute in Cambridge which later moved to Wellesley and then transferred to Boston. To meet the increasing demand for good food, a small basement food store, Erewhon, was opened. Erewhon was managed and developed over the years by the Kushis, Evan Root, William Tara, Roger Hillyard and Paul Hawken. Erewhon was followed by a small restaurant, Sanae, managed at different times by Evan Root, Tyler Smith, and Richard Sandler. Lectures by Michio Kushi continued for five years in Arlington Street Church, Boston, with repeated visits to many major U.S. cities. Erewhon developed into a larger store, on Newbury Street in Boston, and added its wholesale operation from a warehouse on the South Shore, Boston Wharf, distributing constantly to an increasing number of natural food stores. The warehouse facility has been managed by Paul Hawken, William Garrison, Tyler Smith, and currently Jeff Flasher and other associates as well as the Kushis. Erewhon further established a Los Angeles store which also developed into a wholesale operation—managed over the years by the Kushis, William Tara, Bruce Macdonald, and currently by John Fountain and Thomas DeSilva...

"The *East West Journal*, a monthly newspaper, established in 1970—managed over the years by Ronald Dobrin, Jack Garvey, Robert Hargrove, and currently Sherman Goldman, Lenny Jacobs and other associates—is continuing to introduce to the wider society, the new vision for the present and future world. Educational activities directly concerned with teaching and other educational projects have been administered since 1973 by the East West Foundation, a nonprofit educational organization managed by the Kushis, Edward Esko, Stephen Uprichard, and other associates." Address: Boston, Massachusetts.

1942. Shurtleff, William; Aoyagi, Akiko. 1977. *Cooking: From The Book of Miso*. *East West Journal*. June. p. 76-77. [1 ref]

Address: c/o Aoyagi, 278-28 Higashi Oizumi, Nerima-ku, Tokyo 177, Japan. Phone: (03) 925-4974.

1943. Harwood, Maureen. ed. 1977. *The Lifestream cookbook*. Richmond, BC: Lifestream Natural Foods Ltd. 52 p. Illust. by Elizabeth Scott. Index. 22 cm.

• **Summary:** Contents: Nutritional information: Protein and the vegetarian diet. Grains. Whole grain pasta. Beans. Tofu. Corn tortillas. Flakes and cereal. Whole grain flour. Seeds and sprouts (Alfalfa seeds, mung beans, lentils, sunflower seeds—hulled, chick peas, fava beans, soybeans, wheat

kernels, alfalfa seeds in Vita salad, sesame seeds in gomasio, pumpkin seeds), Nut butters and miso (incl. Miso honey dressing, Miso soup). Cashew butter & Engevita yeast. Dried fruit. Carob. Address: [Richmond, BC, Canada].

1944. Williams, Karen. 1977. Tofu, miso: Japanese keys to high protein. *Chronicle (Willimantic, Connecticut)*. Aug. 11. p. 10. [2 ref]

• **Summary:** A full-page review of *The Book of Tofu* and *The Book of Miso* by Shurtleff and Aoyagi. Contains 10 recipes. Address: Lifestyle Editor.

1945. Neurath, G.B.; Duenger, M.; Pein, F.G.; Ambrosius, D.; Schreiber, O. 1977. Primary and secondary amines in the human environment. *Food and Cosmetics Toxicology* 15(4):275-82. Aug. [17 ref]

• **Summary:** Nitrosamines are reaction products from nitrite and amines. Some salt-pickled foods contain considerable amounts of amines, and thus some nitrosamines may form during processing. But very small amounts of amines were found in rice, wheat, and soybeans used as raw materials for making shoyu and miso.

There are primary and secondary amines. The main secondary amines are dimethyl- and diethyl-amine. 80% of all N-nitroso compounds tested in animal species have been found to induce tumors. Nitrosamines can be found only in the presence of secondary and tertiary amines on the one hand, and nitrite or nitrate ions or nitrogen oxides on the other. High levels of both are found in red radishes, spinach, and green salad. Address: Microanalytical Lab., 2000 Hamburg 56, Hexentwiete 32, Federal Republic of Germany.

1946. Shurtleff, William; Aoyagi, Akiko. 1977. Miso production: The book of miso volume II. Lafayette, California: New-Age Foods Study Center. 62 leaves. Aug. 16. Illust. by Akiko Aoyagi Shurtleff. No index. 28 cm.

• **Summary:** Contents: Introduction. 1. Setting up a traditional shop—Tools and ingredients: The miso shop building, larger equipment (most vats and other wooden equipment are made of Japanese cedar, *sugi* = *Cryptomeria japonica*, which is durable in the presence of water, heat, and salt, and has a pleasant fragrance), smaller tools, ingredients. 2. Making red miso in a traditional shop. 3. Making red miso in a semi-traditional shop. 4. Making Hatcho and Mellow white miso in semi-traditional shops. 5. Making koji starter in a semi-traditional or modern shop. 6. Making light yellow miso in a modern factory. Appendixes. A. People interested in starting commercial miso shops in North America. B. Sources of miso making equipment and ingredients. C. About the New-Age Foods Study Center.

Note 1. This is the first book published by New-Age Study Center (renamed Soyfoods Center in 1980).

Note 2. This is the earliest English-language book seen (March 2009) devoted entirely to commercial miso production. Address: P.O. Box 234, 1336 Bickerstaff St./Rd., Lafayette, California 94549.

1947. Leonard, Thom. 1977. Re: My work with making miso. Letter to William Shurtleff at New-Age Foods Study Center, Sept. 20. 2 p.

• **Summary:** “I completely agree about Westbrae being the most interested in and knowledgeable in miso of any company in America. Their encouragement and interest has been of great help to me. Where am I with miso making now? Jim Hemminger sold his house and tofu shop and moved to his father’s farm in Ohio. So that’s over. The miso made this year [in Fayetteville, Arkansas] is stored in a shed until next year.

“I’m out of money and am now working on an organic vegetable farm in the Yakima Valley, Washington. Late fall or winter I will begin working at Baldwin Hill Bakery in western Massachusetts. This will be a full-time job that pays real money.”

Tom is experimenting with corn and wheat miso. In Aug. 1977 he received a complimentary copy of *Miso Production* from William Shurtleff, together with a letter.

Note: This is the 2nd earliest document seen (April 2009) concerning Thom Leonard and miso. He and Richard Kluding founded the Ohio Miso Company, which began selling their miso in March 1979. This company was later acquired by South River Miso Co. in Conway, Massachusetts. Address: 219.5 S. Beech, Toppenish, Washington 98948.

1948. East West Foundation. 1977. Food policy recommendations for the United States: Statement of Michio Kushi, September 21, 1977. 359 Boylston St., Boston, MA 02116. 32 p. 28 cm.

• **Summary:** On September 21, 1977, Michio Kushi and several associates, including Dr. Robert Mendelsohn, M.D., met in Washington with members of the White House staff. The meeting, which lasted approximately two hours, began with a 45 minute presentation of a series of recommendations by Michio Kushi, a description of the activities and goals of the East West Foundation (founded 1972), and a history of Erewhon (fiscal 1978 sales estimated at \$10 million). An outline of the East West Journal’s position on various political, social, and economic applications of the national food policy was also included in the meeting’s agenda.

Recommendations for seasoning foods and to aid digestion of grains, was traditional foods such as pickled vegetables and naturally fermented soy bean products (such as soy sauce, miso, tempeh, etc.). Note: Dr. Mendelsohn died in about May 1988. Address: Boston, Massachusetts. Phone: 617-536-3360.

1949. Erewhon, Inc. 1977. Erewhon. Harvest 1977. Boston, Massachusetts. 23 p. Catalog and price list.

• **Summary:** On the front cover is a photo of a table dispenser of Erewhon Natural Shoyu (but the neck band reads "Erewhon Tamari Soy Sauce"). On the first page, Jack Garvey (apparently the new president) writes about the meaning of the word "Erewhon," which derives from a book of that title written by Samuel Butler. Address: 33 Farnsworth Street, Boston, Massachusetts 02210. Phone: 617-542-1358.

1950. Vogt, Pat. 1977. Cook with soybeans? Why not? *Michigan Farmer (Duluth, Minnesota)*. Oct. 1. p. 32.

• **Summary:** Len and Irene Stuttman of Lansing, Michigan, run a company named INARI, Ltd., which offers two products: roasted soy nuts and raw edible soybeans for home cooking. Soy nuts are available plain, salted, or flavored (jalapeno). The Stuttmans feel that "soybeans are a healthy food, not a health food." Len Stuttman, a native of Chicago (Illinois), is a former lecturer, film maker, film producer, and agricultural advisor. He says that after testing 77 soybean varieties, he has found only a few that really tastes good.

The Stuttmans' interest in soybeans extends back to their college days at Michigan State University. After their marriage, Len became an agricultural information advisor to the Indian Council of Agricultural Research. They also traveled to other countries, studying nutritional feeding programs. While living in India and traveling abroad, they discovered that relief foods sent by the USA and United Nations were often incompatible with the local culture and eating habits. Since nuts are prized by most cultures, the Stuttmans decided to try using soy nuts, which are very nutritious and rather inexpensive.

Len Stuttman, who has been involved in several businesses, including a TV show in Chicago, has kept his interest in community development and nutrition. In 1975 he accepted a job at American Soybean Association headquarters in Hudson, Iowa, but resigned in early 1976 and returned to Lansing where he began work on starting INARI Ltd., a family operation to make soy nuts. That company is now in business.

"Tofu, a bean curd, and Miso, a bean paste, are available in some Lansing area stores." Recipes are given for: Soybean meatloaf (with a lb lean beef + 1.3 cups cooked soybeans). New fashioned soybean pie. Soybean sandwiches.

1951. Dee, Joel. 1977. Re: Interest in importing instant miso soup mix from Japan. Letter to William Shurtleff at New-age Foods Study Center, Oct. 24. 3 p.

• **Summary:** This letter follows our telephone conversation of Oct. 20. Asks Shurtleff in Japan to help set up the project.

Address: CeDe Candy, Inc., P.O. Box 271, Union, New Jersey 07083. Phone: (201) 964-0660.

1952. *Los Angeles Times*. 1977. Japan: Top market for U.S. soybeans. Oct. 27. p. H25.

• **Summary:** Japan now imports 55,000 tons of soybeans a year from the United States, which makes Japan the leading customer for U.S. soybeans in the world, according to USDA figures.

The Japanese use soybeans in a variety of traditional foods including "tofu (soybean curd of which 10 million bricks are sold daily in Japan), miso (fermented soybean paste, the basis for the soup served in most Japanese restaurants [and homes]), aburage (deep-fried tofu) or natto (fermented cooked soybeans), kinako (roasted soybean powder) and shoyu (soy sauce). The use of soy in bread, biscuits and noodles consumes 15,220 tons of soybeans each year."

Exports of soybeans and soy products (such as soybean oil and meal) have played an important positive role in the U.S. balance of trade and the U.S. farm economy.

1953. Katzen, Mollie. 1977. The Moosewood cookbook: Recipes from Moosewood Restaurant, Ithaca, New York. Berkeley, California: Ten Speed Press. 222 p. Illust. Index. 28 cm.

• **Summary:** One of the best and most popular American vegetarian cookbooks of the 1970s and 1980s, this hand-lettered work contains 7 tofu recipes, and 1 each using miso and whole dry soybeans, as follows: Shopping list (p. xiii) describes tamari and tofu ("Tofu is soybean curd. It resembles very soft cheese and has a mild flavor. It is an excellent protein food and very charming. Buy it by the pound or individual cake at oriental food shops. Also, some supermarkets are beginning to carry tofu now. It's usually in pound packages in the produce department."). Miso soup (p. 9; with chunks of tofu). Perfect protein salad (p. 49; uses whole dry soybeans and wheat). Tofu salad (p. 52). Gado-gado (p. 104; an Indonesian dish with a spicy peanut sauce and tofu chunks, either raw or sauteed in oil with sesame seeds). Ode to Chang Kung (p. 126; with tofu). Szechwan eggplant & tofu (p. 135; an entree). Sauté, Chinese style (p. 149; with tamari-ginger sauce and tofu [though tofu was accidentally omitted from the list of ingredients]).

Note: Molly writes in 1990: "I first learned about tofu in 1970 from a Chinese restaurant in San Francisco. They called it 'bean cake' soup. I was intrigued—and not disappointed. The current edition of this book has a revised index, correcting the error relating to page 221." Address: Moosewood Restaurant, Dewitt Building, Ithaca, New York.

1954. Tofu Shop (The). (Renamed Far Pavilions in late 1979). 1977. October. New soyfoods restaurant or deli. 116 N. Oak Street (Box 69), Telluride, CO 81435.

• **Summary:** Menu and promotional brochure for The Tofu Shop. 1978, Sept. 6 panels. On the front panel is a stunning circular photo of Rocky Mountains rising out of a misty valley. Around it is written: “The Tofu Shop” (above). “Juice bar–Dining–Catering–Wholesale kitchens” (below). Below that on the front panel: “116 North Oak Street. Next to the opera house. Telluride, Colorado. Call ahead for take-out: 728-9940.”

Entrees (Served with soup or salad–\$0.65 extra): Stir-fried tofu, rice & vegetables. Burgers: Soy burger, Tofu burger, Okara burger. Stuffed pitas: Grilled tofu & vegetables, Guacamole and tofu. Burritos: Spicy tofu and rice filling with guacamole. Smoothies: Carob, honey, soymilk with banana. Carrot sunny shake. Other refreshments: Miso broth, soymilk, whey from making tofu. Salads: Full plate tofu & guacamole salad, Tofu and vegetable salad, Okara salad. Fresh tofu. Grilled tofu. On the back panel is a lively, writhing dragon plus: “Uncompahgre Natural Foods. Producers and suppliers of specialty foods for Colorado’s western slope.” Talk with Matthew Schmit, founder and owner of The Tofu Shop. 2002. Sept. 19. Matthew estimates that this undated menu was first printed in about Sept. 1978.

Menu for Far Pavilions. 1979, undated. 8 panels. Green on tan paper. “International vegetarian cuisine. Welcome hospitality. Located below the opera house. For details, see separate Menu entry for Far Pavilions.

Shurtleff & Aoyagi. 1982. Report on Soyfoods Delis, Cafes & Restaurants. p. 3. Started in Oct. 1977 by Matthew Schmit. Later run by Catherine Peterson.

Note: This is America’s second “soy deli,” offering a host of highly creative and delicious recipes. Address: Telluride, Colorado. Phone: 728-4441.

1955. Chang, C.H.; Lee, S.R.; Lee, K.H.; Mheen, T.I.; Kwon, T.W.; Park, K.I. 1977. Fermented soybean foods. Paper presented at Symposium on Indigenous Fermented Foods, Bangkok, Thailand. Summarized in K.H. Steinkraus, ed. 1983. Handbook of Indigenous Fermented Foods. New York: Marcel Dekker, Inc. ix + 671 p. See p. 465-66, 482-87.

• **Summary:** Contents: Korean soy sauce: Kanjang (is made by primitive methods in the home), steps in preparation, microbiology, biochemical changes (p. 465-66). Korean doenjang and kochujang: Description (Soy sauce and miso were introduced to Japan, from Korea, during the Nara period {645-793 AD}), patterns of consumption (Daily per capita consumption of doenjang and kochujang are estimated to be about 15 gm and 10 gm, respectively), steps in preparation (utensils, substrates, essential microorganisms), control of process, biochemical changes, economics of production and distribution.

Note: This is the earliest English-language document seen (March 2009) that uses the word “kochujang” to refer

to Korean-style red pepper and soybean paste (miso).

Illustrations show: (17) Flow sheet: Production of Korean doenjang (soybean paste). Soak soybeans, boil, mash, form into balls, wrap in rice straw, and incubate under rafters until covered with mold (*meju*). Crush, mix with salt brine, and ferment for 6 months to obtain doenjang. (18) Flow sheet: Production of Korean kochujang (soybean paste). Soak soybeans, boil, mash, suspend in rice straw sacks until overgrown with mold (*meju*). Crush, sun-dry, and pulverize to obtain 10 liters of crushed *meju*. Add cooked gelatinous rice flour (2 liters), hot pepper flour (0.5 to 0.7 liters), kanjang (Korean soy sauce), dried beef, jujube flour, honey, and salt brine. Mix. Ferment for 2 months to obtain kochujang.

A table (p. 487) shows the amino acid composition of doenjang. Address: 1. Food & Nutrition Dep., Sacred Heart Women’s Univ., Bucheon, Kyungki-do, South Korea.

• **Summary:** Contents: Introduction. Meat-like flavor from vegetable proteins. Meat-like textures on vegetable substrates. Quick-cooking foods. A method for increasing the protein content of high starch substrates. Utilization of food and agricultural wastes to produce human food. References. Address: Cornell Univ.

1964. **Product Name:** Fried Rice & Tofu Sandwich (In a Chapati). Renamed Brown Rice & Tofu Sandwich in late 1978 by Chris Smith.

Manufacturer's Name: Wildwood Natural Foods.

Manufacturer's Address: Sleeping Lady Cafe, 58 Bolinas Rd., Fairfax, CA 94030.

Date of Introduction: 1977. November.

Ingredients: Brown rice, tofu, tamari, alfalfa sprouts, spread (sesame butter, barley miso, scallions), seasonal vegetables (carrot or cucumber), lettuce, whole grain chapati.

Wt/Vol., Packaging, Price: 8 oz.

How Stored: Unrefrigerated and perishable.

New Product–Documentation: Talks with Paul Duchesne between 8 Oct. 1988 and 18 Aug. 1989. His Brown Rice & Tofu Sandwich (BRTS) was developed in Fairfax in late October or early November 1977. He made 200 of them at home and sold them to participants at a macrobiotic seminar led by Michio Kushi in Marin County. Donna Gayle helped him make them.

In Jan. 1978 he started making these sandwiches at the Sleeping Lady Cafe in Fairfax (Marin County) and selling them at the Good Earth Natural Food Store in Fairfax. He bought his tofu (made by Quong Hop & Co. in South San Francisco) at Good Earth. In Feb. 1978 he began to distribute them to many natural food stores throughout Marin County. One of America's early second generation tofu products, the sandwich was made as follows: Saute brown rice with onions, sesame oil, and tamari. Boil a cake of tofu in water with a little salt, then slice it into 4 pieces each about 3 inches square and 1/8 inch thick. Onto a whole wheat chapati (not bread) spread a mixture of sesame butter, barley miso, and scallions. Over that spoon on the fried rice, then place on top one slice of tofu, a long strip of parboiled carrot, some alfalfa sprouts, and romaine lettuce leaf. Fold over two edges of the chapati, wrap it in shrink wrap, and sell it fresh (unrefrigerated) in a wicker box with a calligraphy sign (that showed how to eat it like a banana) on the front counter of natural- and health food stores. One key to the flavor was sesame-miso spread, learned from George Ohsawa's 1966 book *Zen Cookery* #203 “Miso Spread.”

While in California in 1978 Duchesne and Chris Smith gave their recipe and production techniques to Joe Nixdorff, who made the Samurai Hero in Berkeley, to Roy Steevensz, who made the BRTS in Los Angeles.

In September 1978 Paul went to Boston to study macrobiotics, so he gave his Fairfax sandwich business

(which still had no name) to Chris Smith, a local friend interested in macrobiotics. Paul had first offered his business to Ron Harris, but Ron declined since he was getting involved in seitan. The California Department of Health came in helped Smith's unlicensed food operation to get licensed. A month later, in October 1978, Chris stopped frying the brown rice and renamed the product, coining the now-famous name "Brown Rice & Tofu Sandwich." At the same time he named his business Wildwood Natural Foods.

The product's original Label (sent by Paul Duchesne. 1989. Aug. 11 and printed before Wildwood was incorporated) is 4.5 by 2 inches. The maker is Wildwood Natural Foods at 58 Bolinas Rd. The ingredients, listed above, are the same as those in the original 1977 edition, but cucumber was never used. The color is black on goldenrod yellow (THE counter-culture color of the late 1970s). Paper. The text reads: "Fresh daily. All organically grown ingredients (whenever possible). Seasonally cooked, spring water. Enjoy your meal... Unwrap one end and peel down as you eat." In Boston, Duchesne started Rice House, where he continued to make the sandwich.

In May 1979 Duchesne and Chris Smith traded places and companies. Paul took over the company he had started originally (now named Wildwood) in Fairfax. For more details see Development of the Brown Rice and Tofu Sandwich, and early history of Wildwood Natural Foods (Duchesne 1988).

Leviton. 1981. Soyfoods. Winter. p. 61. "Putting tofu in the lunch boxes of America." "Wildwood produces a line of eight packaged vegetarian sandwiches including *Brown Rice and Tofu Sandwich* (with vegetables in a whole wheat bun)..."

Note 1. This is the earliest record seen (April 2001) concerning Wildwood Natural Foods.

Note 2. This is the earliest commercial soy product seen (April 2001) with the word "Sandwich" in the product name. by Wildwood Natural Foods.

1965. Winarno, F.G.; Muchtadi, D.; Laksani, B.S.; Rahman, A.; Swastomo, W.; Zainuddin, D.; Santaso, S.N. 1977. Indonesian taoco. Paper presented at Symposium on Indigenous Fermented Foods, Bangkok, Thailand. Summarized in K.H. Steinkraus, ed. 1983. Handbook of Indigenous Fermented Foods. New York: Marcel Dekker, Inc. ix + 671 p. See p. 479-82. Address: Faculty of Agricultural Engineering and Product Development, Bogor Agricultural Univ., Jalan Gunung Gede, Bogor, West Java, Indonesia.

1966. Yamada, Koichi. 1977. Recent advances in industrial fermentation in Japan: Bioengineering report. *Biotechnology and Bioengineering* 19(11):1563-1621. Nov. [28 ref]

• **Summary:** Table 1 shows the production of miso, shoyu, and vinegar in Japan from 1968 to 1974. Production of both miso and shoyu have increased only slowly. Miso production increased from 538,156 tonnes (metric tons) in 1968 to a peak of 590,137 tonnes in 1973, then fell slightly to 587,228 tonnes in 1974.

Shoyu production increased from 1,026,643 kl (kiloliters) in 1968 to a peak of 1,274,987 kl in 1973, then fell slightly to 1,199,155 kl in 1974.

Advances in miso production: Halophilic (salt tolerant) bacteria such as *Pediococcus halophilus* and *Streptococcus faecalis*, and halophylic yeasts such as *Saccharomyces rouxii*, *Torulopsis versatilis*, and *Torulopsis etchellsii* were shown to be the more important strains. Pure cultures of these strains were used as starters for miso fermentation. Since much time, work, and skill are required to make traditional koji, commercial enzyme preparations with high polypeptidase activity and high proteinase activity are used for evoking the full flavors of miso.

Advances in shoyu production: A new type of cooker which can cook soybean meal at high temperatures for short times is now being used, and advances in koji technology have raised the enzymatic activity and lowered the level of contaminating microorganisms. As a result, nitrogen utilization has been raised to 90% from 60% in 1945 and the time required for ripening the moromi mash has decreased to 4-6 months from one year or more in the past.

Table XIX titled "Production of microbial enzymes in Japan" shows 7 major and 8 minor commercial enzyme preparations, the number of makers of each, the output per year (in tonnes and yen), and the main microorganisms used to make each. By far the most important enzyme in terms of tonnage is α -amylase (11,000 tonnes, 10 makers, *Aspergillus oryzae*), followed by protease (1,050 tonnes, 18 makers, *Aspergillus oryzae*), then glucoamylase (400 tonnes, 8 makers, *Aspergillus niger*). Address: Univ. of Tokyo and Sapporo Beverages Ltd., Tokyo 153, Japan.

1967. Robinson, R.J.; Kao, C. 1977. Tempeh and miso from chickpea, horse bean, and soybean. *Cereal Chemistry* 54(6):1192-97. Nov/Dec. [6 ref]

• **Summary:** The authors made soybean tempeh, chickpea tempeh, and horse bean tempeh from 0.2 to 0.4 cm diameter grits. The soybean tempeh had the best flavor, texture, and color.

They also made soybean miso, chickpea miso, and horse bean miso. Compared with soybean miso, chickpea miso's color was darker, while horse bean miso's is lighter. Address: Dep. of Grain Science & Industry, Kansas State Univ., Manhattan, KS 66506.

1968. Saono, S.; Brotonegoro, S.; Abdulkadir, S.; Basuki, T.; Jutono, -; Badjra, I.G.P. 1977. Microbiological studies of tempe, kecap, and taoco. II. Qualitative amyolytic and

proteolytic activities of the isolates from various products from west Java. Progress Report Subproject III.b. ASEAN Project for Soybean and Low-Cost High Protein Foods. Jan-Dec. 1977. 8 p. [5 ref]

• **Summary:** An analysis is given of the types of bacteria, yeasts, and molds found in tempeh, kecap, and taoco. Scientific names of these microorganisms are not given. For example, in tempeh, molds consistently gave the highest number of viable cultures on any of the test media employed, followed by yeasts and bacteria in that order. Address: 1-4. Treub Lab., the National Biological Inst., Bogor; 5-6. Faculty of Agriculture, Gadjah Mada Univ., Yogyakarta.

1970. Kushi, Aveline. 1977. Macrobiotic cooking with miso. *Order of the Universe (Boston, Massachusetts)* 5(11):26-31.

• **Summary:** Excerpts from Aveline's new book, including 7 recipes and her illustration of a miso keg.

"When we first came to this country about 25 years ago, there were almost no good-quality whole foods available... We lived in New York near Columbia University. We could order one keg of Hacho [Hatcho] Miso once or twice a year from Japan in order to obtain the essential nutrients necessary for those who don't eat very much animal food. I am very grateful for Kiyuemon Hayakawa's several-hundred-year tradition of strong miso in Japan.

"Today, the importation of miso from Japan to the United States must be at least 10,000 times what it was 25 years ago. We are able to enjoy high quality miso like Barley Miso, Rice Miso, Brown Rice Miso, and others...

"I began writing this book about miso seven years ago; I now think it has fermented enough. During those seven years I gained a little more confidence through experience in teaching cooking, and also miso has become more familiar to the Western public."

1978. Farthing, Bill. 1977. Odiyan country cookbook. Emeryville, California: Dharma. xii + 211 p. Illust. by Denise Anderson. Photos by Peter Ogilvie. Index. 20 cm.

• **Summary:** This lacto-ovo vegetarian cookbook is dedicated to Tarthang Tulku, Rimpoche, a Tibetan Buddhist teacher who is head of the Nyingma Institute, founded in 1969 in Berkeley, California, and of Odiyan, the Institute's country retreat center being built on a redwood forested mountain above the Pacific Ocean in northwestern Sonoma County, California. Odiyan is a transliteration of the Sanskrit name for the birthplace of Padmasambhava the great teacher who brought Buddhism to Tibet.

The Foreword notes: "Although our chickens produce many eggs, we are essentially on a correct balance of grains and beans or soy-dairy products to provide protein." A chapter titled "Home-Made Proteins" (p. 112-19) includes various soy-related recipes: Homemade soymilk. Homemade tofu. Kinugoshi. Tofu-nut butter (with ground walnuts, peanuts, almonds, or sesame seeds). Tofu and stir-fried vegetables. Sprouted soybean puree. A large photo shows community scale tofu-making equipment plus the observation: "If you enjoyed making your own bread, then you may find the soy-dairy a very rewarding aspect of cooking to explore."

Other soy-related recipes include: Soy-bean patties (p. 95). Miso and tahini spread (p. 130). Soymilk dressing (p. 131). Soy carob milk (p. 196). Soymilk lassi (p. 197). Nutmilk (made with 2 cups soymilk plus ½ cup almonds, walnuts, or cashews). Address: California.

1979. Fuji Seiyu K.K. (Fuji Oil Co.). 1977. Daizu tanpaku kogyo-ka e no michi [Road to industrialization of soy protein. Part I (Document part)]. In: Fuji Seiyu K.K. 1977. Fuji Seiyu 25 Nen-shi: Showa 21 nen 11-gatsu–Showa 51 nen 3-gatsu [Fuji Oil Company Ltd.: 25-year history, Nov. 1946 to March 1976]. Tokyo: Fuji Oil Co. 622 p. See p. 417-30. [Jap]

• **Summary:** Outline: As a major Japanese soybean crusher, processing whole soybeans into soybean oil and defatted soybean meal, Fuji Seiyu produced large amounts defatted soybean meal. In 1962-62 Fuji Seiyu began to make *Fuji Takaramame* (a by-product of tofu powder) and *Proplus* using soy protein from defatted soybean meal, even though these were not considered to be good soy protein products.

In 1967 Fuji developed isolated soy protein (containing more than 92% protein) from defatted soybean meal, and started to sell this FujiPro isolated soy protein. Since it was a completely new product and little was known about it, sales were slow in the beginning. But later it started to be sold to makers of second generation meat products (such as sausages or ham).

In 1969 Fuji started to sell Fuji Nikku ("Fuji Meat"), which is a textured protein product (*soshiki tanpaku seihin*) and this expanded their market among hamburger and hamburger ball (meatball) makers. Based on the above experience, Ralston Purina (America's leading soy protein manufacturer) got to know Fuji and invited the company to do a joint venture. Three years later, in Dec. 1973, the two companies contributed 200 million yen and founded a joint company named Fuji Purina Protein K.K. In 1974 they started to make and sell *FujiPur / FujiPua* (for "Fuji Purina"), a spun soy protein fiber. Presently, Fuji Seiyu is trying to expand into new, undeveloped markets for soy protein foods (p. 418).

For 1964 the Food Bureau (*Shokuryo-chô*) of Japan's Ministry of Agriculture, planned the following usage of soybean meal: Food 347,000 metric tons (tonnes). Feed 691,000 tonnes. All but 69,000 tonnes of the food use went for miso, shoyu, and tofu. Of this 69,000 tonnes, 40,000 tonnes went for soy protein foods (such as breads, biscuits, doughnuts, shortcake, ice cream, fish paste products, cheese, soup, etc.) and 30,000 tonnes for glutamic acid / MSG (p. 419).

Fuji decided to industrialize soy protein very early and also to make isolated soy protein their main soy protein product. Other Japanese companies that tried to enter the soy protein market failed because they produced only soy protein concentrate (p. 420).

Fuji Seiyu finished their research on isolated soy protein at the end of 1966, then started test production in their 1-tonne pilot plant. In June 1967, they started to build their full-scale plant, and finished by the end of the year; it had a capacity of 100 tonnes/month. The company named its first

product Fuji Pro; this isolated soy protein contained more than 90% protein and about 6% moisture (p. 421).

Then the company found that they could use Fuji Pro in fish paste products, so they tried to sell it to companies making such products. But these manufacturers were very conservative, so after 6 months Fuji gave up and began selling it to secondary meat producers (p. 423).

The meat industry was also very conservative, but after many visits to these companies, Fuji got to understand them better. Some of these companies were already importing soy protein from the USA and using it in their meat products. Fuji's research & development department developed a sausage containing Fuji Pro and presented samples to the meat processors; they made many repeat visits. In 1968 Fuji received an order from a large meat processor; after that they received orders from medium and small processors one after another. In Nov. 1968 Fuji's sales finally reached 100 tonnes/month. Later, after many careful investigations, the Japan Agricultural Standards (JAS) decided to make isolated soy protein a JAS product with a standard of identity for use in ham, sausages, etc. In this way, sales of Fuji Pro expanded. But there was also another reason for expansion: Exports! Actually exports started earlier and were easier than sales to the domestic Japanese market. And it was because of the demand from abroad that Fuji decided to build their first full-scale plant in 1967, even though they didn't have any clear idea about their domestic sales. Fuji's exports went Shoemaker, a Dutch food company; this relationship started in about 1964 (p. 424).

At that time the Dutch company was selling soy protein made by Central Soya in the USA. Being dissatisfied with the product's quality and prices, they looked to Japanese oil makers to produce these products. They contacted several companies, including Fuji Seiyu, which answered their inquiry and told them: "We are still study isolates, but we have a product that contains 50% protein." They sent Shoemaker a sample of Fuji Takaramame. However Shoemaker wanted a soy protein isolate, so no business was transacted. But from that time on, the two companies stayed in close communication and began to exchange information. Shoemaker asked Fuji to develop a soy protein isolate, provided important suggestions concerning the research, and sent Fuji a report of the European market for such a product. Shoemaker's cooperation played an important role in the development of Fuji's isolated soy protein.

Initially, Fuji had placed heavy emphasis on developing soy protein products for second generation fish paste products, but after considering the potential demand in Europe, Fuji started to research soy proteins for meat products such as ham and sausage. Fuji Pro was developed to be highly elastic, emulsifiable, and water soluble—characteristics desired by the European market. Fuji sent some samples. Before they started commercial production, they signed a contract with Shoemaker as a sales agent; it

named Fuji as a IPSO (International Protein Sales Organization) and exporter. Thus, it was because of the European market that Fuji could start commercial production without a domestic market, and it was this European market that enabled Fuji to sell isolates in Japan. Everything seemed backwards. For example, some Japanese from the meat industry went to Europe to study that industry. There they learned that soy protein (named IPSO) was being used in ham and sausages. Returning to Japan, they discovered to their surprise that the soy protein was made in Japan by Fuji. In 1969 Fuji's contribution to Japanese exports (oil and protein) was honored with an award (p. 425-26).

A knowledge of the overseas market for soy protein was a great help to Fuji as its soy protein products began to serve an international market. This also gave ideas for development of new products—starting with meatlike soy protein products. They received news from Bernard Hawley in England that textured soy protein products had been developed in the USA. Hawley was a nutritionist and a consultant (Hawley & Associates) and Fuji began to use his consulting services in April 1966 (p. 428). Hawley made many trips to Japan and he and Mr. Nishimura (the president of Fuji Seiyu) became great friends. In 1967 Fuji sent Hawley to the USA and asked him to study the market for textured soy proteins and the send Fuji a market report (p. 429). Meanwhile, the company president and a man from the planning department also went to the USA to study the market; they soon decided to start making textured soy protein immediately. They visited Wenger Manufacturing Co. in the USA, signed a contract in April 1968, and received a machine [extrusion cooker] that year. Actually they bought only the main body of the machine from Wenger; the other parts (including the power mill) were invented and designed by Fuji technicians (p. 430). Continued. Address: Tokyo, Japan.

1980. Ismail, Mohamad Salleh. 1977. Accelerated fermentation of fish sauce, fish-soy paste and fish-soy sauce. PhD thesis, Cornell University. 242 p. Page 3618 in volume 38/08-B of Dissertation Abstracts International. * Address: Cornell Univ.

1981. Johns, Yohanni. 1977. Dishes from Indonesia. New metricated edition. Melbourne, Australia: Thomas Nelson (Australia) Ltd. xiv + 151 p. Illust. Index. 26 cm. 1st ed. 1971.

• **Summary:** The author comes from a town in Indonesia named Padang Pajang, located in the mountains of West Sumatra in an area known as Minangkabu. The society is matrilineal, so ancestral property is passed down the female line and a new husband comes to live in his wife's family's home. She married an Englishman in about 1955 and they

lived in Jogjakarta (in Central Java) from 1956-1958, then in Australia since 1958.

This handsome book, packed with color photos, gives a good introduction to Indonesian cookery—though it contains a disproportionate number of recipes using meat. The excellent glossary of ingredients (p. 10-16) includes: Bean curd (incl. fried bean curd), black bean sauce or salted black beans (*tauco*, sic, *tauco* is Indonesian-style miso, whereas *taosi* is salted black beans), and soya sauce. Note that tempeh is not mentioned. Soy-related recipes include: Eggs in soya sauce (p. 53-54). Fried fish in black bean sauce (Taucu ikan, p. 60). Stir-fried prawns with long beans and black bean sauce (p. 71). Bean curd balls with prawns (p. 72). Braised liver in soya sauce (p. 86). Braised ox tongue in soya sauce (p. 87). Braised chicken in soya sauce (p. 90). Sambal of brown bean sauce (p. 101). Soya sauce sambal (Sambal kecap, p. 102). Fried soya bean curd with sauce (p. 125). Address: Australia.

1983. Krich, Ken. 1977. Re: New pamphlets on tofu and miso available from Westbrae Natural Foods. Letter to food distributors and manufacturers. 1 p. Undated. [2 ref]
 • **Summary:** “For several years Westbrae has felt a major commitment to popularizing Japanese foods in this country. During a time when shortages of protein have become such a problem, the knowledge of soy-based foods is greatly needed by more people. Both miso and tofu are extremely healthy and inexpensive sources of protein and other nutritional benefits... yet many consumers are still not familiar with these products.

“To fill this information gap we asked Bill Shurtleff and Akiko Aoyagi, authors of *The Book of Tofu* and *The Book of Miso*, to write readable pamphlets on these topics. The authors have lived in Japan for the past five years studying and writing about traditional Japanese foods. You are probably familiar with their book(s)... I have taken the liberty of enclosing two copies of each pamphlet...”

“You may order either or both of these pamphlets with either the Westbrae logo, your logo, or no logo.” This letter is printed on recycled paper. Address: Distributor Sales, Westbrae Natural Foods, Inc., 1224 10th St., Berkeley, California 94710. Phone: 415-524-0506.

1984. Miyako Oriental Foods Inc. 1977. Miso (Leaflet). Los Angeles, California. 6 panels. Undated.

1987. Nosan Gyoson Bunka Kyokai. 1977. Nôgyô gijutsu taikai. Sakumotsu-hen. Vol. 6 [Outline of agricultural arts and techniques. Crops. Vol. 6]. Tokyo: Nôsan Gyôson Bunka Kyokai. See p. 3-7. [Jap]

• **Summary:** Page 4 shows 2 pie charts with statistics from the year 1974. The 3,500,000 tonnes of whole soybeans consumed in Japan are used as follows: Soy oil 78% of the total, tofu and products 10.5% (except frozen tofu), miso 5.5%, natto 1.5%, frozen tofu 1.3%, kinako (roasted soy flour) 0.4%, shoyu 0.2%, and other 2.6%. The 2,20,000 tonnes of defatted soybean meal are used as follows: Livestock feed 84.6%, shoyu 7.5%, tofu 4.1%, miso 0.3%, other food uses 2.0%, other nonfood uses 1.5%.

A graph on page 7 shows soybean production in Japan and soybean imports. Imports were static from about 1895 to 1918 at about 100,000 tonnes, then they rose rapidly to about 1,000,000 in 1944. They dropped to almost zero following Japan’s defeat in World War II, then starting in about 1954, skyrocketed, reaching 1 million tonnes in about 1960, 2 million tonnes in about 1968, and 3 million tonnes in about 1970. After about 1954, soybean production in Japan dropped steadily. Address: Japan.

1989. Schafer, Edward H. 1977. T’ang. In: K.C. Chang, ed. 1977. Food in Chinese Culture. New Haven, CT, and London: Yale Univ. Press. 429 p. See p. 85-140. [34 endnotes]

• **Summary:** The T’ang dynasty lasted from +618 to 907. Contents: Introduction. Foodstuffs. Sweeteners. Condiments and spices (incl. salt). Pickles and preservatives. Cooking.

Beverages. Utensils. Visual aspects. Geographical differences. Taboos and prejudices. Food in ceremonies and special occasions (incl. feasts and festivals). Inns and taverns. Footnotes (34).

Legumes (*tou*) were an important part of the Chinese diet in T'ang times. Soybeans (*ta tou* = large beans) had a variety of uses and received considerable attention from the T'ang pharmacologists, who claimed to have discovered that the beans had different effects on the body depending on the way they were prepared. For example, when stir-roasted they were excessively heating, boiled they were too chilling [cooling], made into a relish (*shih* = soy nuggets) they were very cool, but pickled to make *chiang* (Chinese-style miso) they were balanced. However when stir-roasted and taken in wine, they were said to be curative of certain kinds of paralysis. The young shoots of a variety of soybean called "white legume" (*po tou*) were much admired for their flavor, either cooked or raw, and were said to be good for the kidneys (p. 90).

Also important in the diet were "true" millet (*chi*; *Panicum miliaceum*), foxtail millet—also called spiked or Italian millet (*su*; *Setaria italica*), *shu* was the common word for glutinous millet and *no* was that for glutinous rice, various sea vegetables such as purple-leaved laver, green laver or "sea lettuce," and the sugary sweet tangle (p. 91), Far Eastern eggplant or brinjal (p. 93), and the jujube—which resembled the Western date (p. 95). Sesame seeds were chiefly of interest as a source of oil, but they were also fried and eaten (p. 98).

Concerning animal milk, there is the widespread idea that a line divides East Asia into two cultural groups: One depends on milk products (Indians, Tibetans, and many Central Asian nomads), and the other (which includes the Chinese) rejects them with loathing. "Indeed some evidence for this classification can be found at every period of Chinese history, even though warm milk was regarded as a highly nutritious food from very ancient times (Cooper and Sivin 1973, p. 227). It seems, however, that after Han times, when the intermingling of Chinese and Altaic customs became pronounced to a new degree, the barrier of prejudice broke down, and by T'ang times milk products formed a significant part of the diet of the upper classes." Probable reasons for this change are given. "Milk was modified in many ways. It was curdled to make, for instance, (*ju fu*), analogous to bean curd [tofu]. Indeed, much more popular than unaltered milk were a number of fermented or soured derivatives." Three of these, which formed a hierarchy, were given special attention and spiritual significance corresponding to the development of the Buddha spirit: kumiss (*lo*, the lowest), kaymak or Devonshire cream (*su*), and clarified butter (*t'i-hu*, the highest) (p. 105-06).

Fresh ginger had a cooling property if used with the skin intact, but was warming if the root was peeled (p. 111).

The section titled "Pickles and preservatives" notes that the most characteristic and traditional Chinese methods of preserving involved fermentation processes which reduced "proteins into their component amino acids and amides by the action of enzymes, ferments, and molds. A very special species of pickle was called *chiang*, which has been aptly translated 'bean-pickle.' The word *chiang* appears in altered form as the first syllable of the Americanized Japanese expression for shoyu-soya. However in pre-modern times, *chiang* was not necessarily a soybean product. Indeed the word was sometimes applied to pickles based on meats and seafoods (Shih 1959, p. 84-85; *Fan Sheng-chih Shu*)... I shall use the term *bean-relish* to represent the Chinese word *shih*, the name of a popular relish of decomposed soybeans that assumes a dark color by interruption of the hydrolytic process or by drying at a high temperature (Shih 1959, p. 87). The name was given to a number of similar concoctions, some prepared with wine, some with vinegar, some with brine, and so on. The differences were frequently local. One authority mentions a variety peculiar to a region in Honan that was made from steamed soybeans, with salt and fagara added. It matured in two or three days of warm weather. It was said that this salty pickle could be kept for ten years without spoiling."

"The milky bean curd—also known to Westerners by its Japanese name, tofu (Chinese *tou-fu*)—was a ferment made from many kinds of beans and peas. It was an ancient and familiar product (S.C. Li 1965 ed. of *Pen-ts'ao kang-mu*, 25:5)." Note: The author must be referring to fermented tofu, which was usually made from soybeans.

In the discussion of fish farming (p. 102) no mention is made of soybeans being fed to the fish. Address: Prof. of Oriental Languages, Univ. of California at Berkeley.

1990. Spence, Jonathan D. 1977. Ch'ing. In: K.C. Chang, ed. 1977. *Food in Chinese Culture*. New Haven, CT, and London: Yale Univ. Press. 429 p. See p. 259-94. [38 ref]

• **Summary:** The Ch'ing dynasty (China's last dynasty) lasted from 1644 to 1911.

Concerning peanuts: Ho Ping-ti (1959, p. 183-95) has shown how maize, sweet potatoes, Irish potatoes, and peanuts all became basic crops in China during the Ch'ing, and how their story is enmeshed with the drama of China's internal colonization (p. 263). During the 1750s, Magistrate Li Hua-nan in Chekiang reported the popularity of peanuts. Table 4 (p. 269) shows the relative prices of sweet oil, peanut oil, salt, and salt turnip from 1902 to 1912. In 1928 L.K. Tao reported that peanuts were bought by 89.6% of the families in Peking (p. 270). Note: Reischauer and Fairbank in *East Asia: The Great Tradition* (1960, p. 393) agree. There was considerable growth in China's population during the 18th century, before the impact of industrialization. The leading explanation for such growth lies in the increase of the food supply made possible by (1)

the opening up of new land to cultivation, often under imperial encouragement, and (2) the consumption of new food crops. Maize (corn), sweet potatoes, peanuts, and tobacco were all introduced into China from the Americas in the 16th or 17th centuries. The sweet potato became the poor-man's food of south China.

Also discusses: Vegetarianism (p. 290). Address: Prof. of History, Yale Univ., New Haven, Connecticut. Phone: 609-452-4284.

1991. White, Beverly. 1977. Bean cuisine. A culinary guide for the ecogourmet. Boston, Massachusetts: Beacon Press. xv + 142 p. Illust. by Julie Maas. Index. 21 cm.

• **Summary:** Contents: Introduction. 1. Becoming a bean cook. 2. Bean soups. 3. Bean salads. 4. Bean sandwiches, spreads, and such. 5. Stovetop beanpots. 6. Oven beanpots. 7. Feasts for special occasions. Dried legume glossary.

Contains good information about pressure cookers and pressure cooking beans (p. 6-10, including soybeans). Soy-related recipes include: Soy sprouts (p. 13). Basic tofu (p. 14). Bean on bean soup (p. 18). Tofu mayonnaise (p. 27). Apple bean sprout salad (with tofu dressing, p. 39). Carrot salad with tofu (p. 40). Soy joy salad (p. 48). Amarillo taco (with cooked soybeans, p. 50). Soy sandwiches (p. 57-58). Soyburgers supreme (p. 58-59). USA paté (p. 60). Soybeans creole (p. 85). Hearthside baked soybeans (p. 99). Vegetable medley (with soybeans, p. 110). Miso shiru soup (p. 126). Soy cucumber salad-sunomono (with soy sauce, p. 126). Vegetable sukiyaki (with tofu and soy sauce, p. 127). Basics (p. 136).

Soybean sprouts should be ½ to 1 inch long; they need to be parboiled for 10 minutes before use in salads. Freshen old tofu by parboiling for 2-3 minutes in a pot of boiling water.

• **Summary:** History: Hishio and Kuki production techniques came to Japan from China and Korea. According to the Taiho Ritsuryo (702 A.D.), various types of Hishio and Kuki and Miso (this is the Misho character—NOT the present Miso one) were made from soybeans in the Hishio Tsukasa of the Kunaisho. It is in later times that they started to use the liquid which was separated from the above three as seasonings. In the Kamakura (1185-1333 A.D.) period in the Wakayama prefecture they collected the liquid accumulated in the bottom of Miso Oke. In the Muromachi period (1338-1573 A.D.) they added water to miso and squeezed it to extract the liquid (called Usudare or Taremisu). Shoyu (which is different from miso) was first mentioned in Ekirinbon Setsuyoshu (1597 A.D.). Address: Kikkoman Corporation, Noda, Japan.

1995. Yü, Ying-shih. 1977. Han China. In: K.C. Chang, ed. 1977. Food in Chinese Culture. New Haven, CT, and London: Yale Univ. Press. 429 p. See p. 53-83.

• **Summary:** The Han dynasty lasted from 206 B.C. to A.D. 220. In 1972 China made a spectacular archaeological discovery on the eastern outskirts of Ch'ang-sha, Hunan, uncovering what is known as "Han Tomb No. 1 at Ma-wang-tui." The discovery achieved worldwide renown since the body of its owner was so remarkably preserved that her skin, muscles, and internal organs still had a certain elasticity when the coffin was opened after some 21 centuries. She was most likely the wife of Li-tsang, the first Marquis of Tai (reigned 193-186 B.C.) and died a few years after 168 B.C. at about the age of 50. Her husband was buried nearby in Tomb No. 2. Among the rich burial remains unearthed from Tomb No. 1 are 48 bamboo cases and 51 pottery vessels of various types. Most of them contained foodstuffs (figs. 17-18, p. 183). All of these food remains have been identified (Hunan Sheng 1973, 1:35-36). Grains and beans found in the tomb included soybeans, rice, wheat, barley, two kinds of millet (*Panicum* = glutinous millet, and *Setaria*), and red lentil (*Phaseolus angularis* Wight [azuki]). Apart from food remains, there were also 312 inscribed bamboo slips which gave additional information on both food and cooking. They tell us a lot about seasonings and methods used in Han-period cooking. "The seasonings included salt, sugar, honey, soy sauce

(*chiang*), *shih* (“salted darkened beans”), and leaven (*ch’ü* [*qu*].”

“What makes the Ma-wang-tui discovery doubly interesting is the amazing degree to which the food list from Tomb No. 1 agrees with the list given in the ‘Nei tse (‘Internal [Family] Regulations’) chapter of *Li chi*. Virtually all the foodstuffs and prepared dishes listed above can be found in that chapter (*Li chi*, 8:19a-21b; Legge 1967, 1:493-63).”

Ying Shao of the 2nd century A.D. reported that *shih* (“salted darkened beans”) [soy nuggets] were used to season dried meat and fish served after the main meal.

At Shao-ku (northwestern outskirts of Lo-yang), a total of 983 earthenware grain containers were unearthed in 1953 from 145 tombs datable from middle Earlier Han to late Later Han [about 100 B.C. to 200 A.D.]. Found in many of the containers are grain remains of the following: millets of various kinds, hemp, soybean, rice, and Job’s tears (*Coix lacryma-jobi*). Moreover, most of the containers bear inscribed labels indicating the food content of each. “Based on these archaeological finds, we can now say with confidence that the major categories of grains accessible to the Chinese in Han times included millets of various kinds, rice, wheat, barley, soybeans, lesser beans, and hemp. It is particularly noteworthy that this archaeological list matches very closely the “nine grains” recorded in the agriculturist book by Fan Sheng-chih of the first century B.C... Fan was a professional agriculturist and had actually taught people in the vicinity of Ch’ang-an the art of farming (S.H. Shih 1959, p. 8-11, 42-44).”

Millet was generally more common than rice as the main food in Han China, then came wheat, barley, soybeans, and hemp. Hemp fiber provided the basic material for manufacturing cloth in traditional China. The seed also proved edible and was classified by the ancients as a “grain.”

“To the existence of the very poor, soybeans and wheat could be even more vital than millet... There was always a pressing demand for soybeans and wheat as substitutes. As Pan Ku points out, the poor had only soybeans to chew and water to drink (Swann 1950, p. 419).”

The earliest bean curd is reported to have been made in the Han, but the textual evidence is too weak to support such a claim (C.P. Li 1955, p. 200). Address: Prof. of History, Yale Univ., New Haven, Connecticut.

1996. Huang, Carol Ann. 1977? Re: Work at the soy dairy on The Farm in Wisconsin. Letter to William Shurtleff. 1 p. Undated. Handwritten with signature on letterhead.

• **Summary:** Carol Ann thanks Bill for his bag [probably for making soymilk or tofu] and information on tempeh and miso. While Bonnie and John are in La Paz, Mexico, Carol is “doing the Soy Dairy.” She wrote to Mitoku in Japan for some koji or koji starter, but they suggested she write

Westbrae. “I’d love to get it together to make several big crocks of miso in the fall.” Address: Route 2, Ettrick, Wisconsin 54627.

1997. **Product Name:** Westbrae Brown Rice Miso.

Manufacturer’s Name: Westbrae Natural Foods (Importer). Made in Japan.

Manufacturer’s Address: 1224 10th St., Berkeley, CA 94710.

Date of Introduction: 1977?

New Product–Documentation: Interview with Gordon Bennett. 1987. Aug. 28.

1998. Gibbons, Barbara. 1978. San Francisco enjoys abundant Chinese foods: The slim gourmet. *Hartford Courant (Connecticut)*. Jan. 18. p. 14.

• **Summary:** San Francisco, with the largest Chinese population outside of China, has long been intrigued with things Oriental—an especially food. The impact of the Far East can even be seen in supermarkets, “where cake mixes and soda pop compete with black bean paste and dried tree ears for shelf space.”

1999. Asunaro Eastern Studies Institute. 1978. Now offering fall classes in traditional fermented foods: Miso, tamari, tofu, nato [sic, natto], sake, tekka, etc. (Ad). *East West Journal*. Jan. p. 82.

• **Summary:** Classes “taught by Naboru [sic, Noboru] Muramoto, author of *Healing Ourselves*. Also daily cooking classes. Located on 134 acres in Sonoma, California.” For further information, send for brochure. An illustration shows the Asunaro logo. Address: 4600 Cavedale Rd., Glen Ellen, California 95442. Phone: (707) 996-9659 or 938-9846.

2000. Eden Foods. 1978. Catalog 1978. 4601 Platt Rd., Ann Arbor, MI 48104. 57 p.

• **Summary:** On the cover is a workman loading sacks from one of many large hoppers. Another man, in front of a truck, moves a pallet. Pages 17 and 18 contain detailed information about and photos of the Eden-brand tamari (natural shoyu) and miso products. Eden now sells a brown rice miso, aged naturally for 1½ years. Hacho miso is now called “Soybean miso.” Nigari and Tekka are also listed. No prices are listed in this catalog; it contains descriptions of the products and many nice illustrations. The prices are listed on separate sheets. Address: Ann Arbor, Michigan. Phone: (313) 973-9400.

2001. Fukushima, Danji. 1978. Fermented soybean protein foods in Japan. In: American Soybean Assoc., ed. 1978. International Soya Protein Food Conference, Proceedings. Hudson, Iowa: ASA. 136 p. See p. 39-42.

• **Summary:** There are three major kinds of fermented soybean foods in Japan: Shoyu, miso, and natto. “In Japan, about 439,500 tons of soybeans and defatted soybeans are used as the materials of these fermented soybean foods. Among these, 175,000 tons are used for shoyu, 195,000 tons are used for miso, and 69,000 tons are used for natto.” Table 1 shows the consumption of soybeans and defatted soybeans in Japan in 1976 for foods (1,026,000 tonnes) and feeds (1,980,000), for a total of 3,006,000 tonnes. Foods are divided into fermented (shoyu, miso, natto; 439,500 tonnes) and non-fermented (tofu and aburage, kori-tofu, and others; 586,500 tonnes). For non-fermented soyfoods 466,500 tonnes of soybean are use for tofu and aburage, 29,000 tonnes for kori-tofu, and 91,000 tonnes for other products.

“Recently, a new fermented drink using soybeans appeared on the market. This product is a drink which is made by the fermentation of soy milk by lactic acid bacteria. There are many patents related to these kinds of products, including a yogurt type, in Japan. Therefore many new fermented soybean foods may appear on the market in the future.”

Table 2 shows the typical composition of different kinds of shoyu. Table 3 shows the annual production of purely fermented, semi-fermented, and chemical shoyu in 1976. Table 4 shows the annual production of Japanese Agricultural Standard mark shoyu in 1976. Table 5 shows the chemical composition of major types of miso. Address: Noda Inst. for Scientific Research, Kikkoman Shoyu Co., Tokyo, Japan.

2002. Shurtleff, William. 1978. Household preparation of winged bean tempeh, tofu, milk, and sprouts. In: *The Winged Bean*. Los Banos, Laguna, Philippines: Philippine Council for Agriculture and Resources Research (PCARR). xvii + 478 p. See p. 335-39. Jan.

• **Summary:** This book consists of papers presented at the 1st International Symposium on Developing the Potentials of the Winged Bean. Held Jan. 1978, at Manila, Philippines. Contents: Introduction. Homemade winged bean tempeh: Recipe, directions, polyethylene (plastic) bags, baking pans or pie tins, good tempeh, immature tempeh, inedible tempeh, troubleshooting (tempeh is too wet, mold is sparse and does not bind beans tightly, tempeh contains black spots or patches, tempeh smells strongly of ammonia, mold grew abundantly in some places but sparsely in others). Homemade winged bean tofu: Recipe, directions, troubleshooting (low yield, small curds or crumbly tofu texture, coagulant was insufficient). Homemade winged bean milk: Recipe, directions, honey-vanilla, rich and creamy, carob-honey, malt, mocha, or coffee. Homemade red winged bean miso. Homemade winged bean sprouts.

Note: This is the earliest document seen on making tofu from winged beans (Kantha 1983). Address: New-Age

Foods Study Center, 278-28 Higashi Oizumi, Nerima-ku, Tokyo 177, Japan. Phone: (03) 925-4974.

2003. Shurtleff, William; Aoyagi, Akiko. 1978. Western-style recipes using salt-free miso. New-Age Foods Study Center, 278-28 Higashi Oizumi, Nerima-ku, Tokyo 177, Japan. 5 p. Jan. Unpublished manuscript. [Eng]

• **Summary:** Contains 8 meatless recipes developed for Nagano Miso Co. Address: Tokyo, Japan. Phone: 03-925-4974.

2004. Wang, Jun Ryun; Lee, Yang Hee. 1978. Traditional soybean foods in Korea. In: *American Soybean Assoc., ed. 1978. International Soya Protein Food Conference, Proceedings*. Hudson, Iowa: ASA. 136 p. See p. 43-47. [13 ref]

• **Summary:** “The origin of soy sauce and paste in Korean literature dates back to 683 A.D. (Shinmu King 3rd year of the United Silla period). Since an old Japanese literature [document], *Hwameyruitsuroku [Wamyō Ruijusho; Collections of Japanese Names, by Subject]*, of Heyan [Heian] records that ‘Maljang (Meju) is a Korean soy sauce and paste’ and a record on Maljang was also observed in the ruins of Nara, it is evident that soy sauce and paste were introduced from Korea to Japan during the Nara period (645-793 A.D.). Therefore, it is believed that the beginning of their consumption in Korea should be in the third century of Kokuryo period.”

“Soybean has been a major protein source in the Korean diet.” In 1976 some 442,803 tonnes (metric tons) of soybeans were used in Korea as follows: oil and defatted meal 28.5%, curd (*tubu*, or tofu) 24.5%, paste (*doenjang*) 18.3%, soy sauce (*kanjang*) 10.6%, soy sprouts (*kongnamul*) 9.0%, hot soy paste (*kochujang*, made from meju, hot pepper flour, and cooked glutinous rice) 6.6%, soymilk (*kongkuk*) 0.14%, and other 2.4%. Other includes roasted soy flour (*konggomul*, used for coating rice cakes [mochi]), fried tofu (*yubu*), salted natto paste (*jeonkukjang*). *Doebiji* is fresh soybean puree, made by grinding soaked soybeans. When used as a food, it is usually cooked with vegetables, kimchi, and meat. Meju is balls of soybean koji like Japan’s miso-dama. All fermented Korean soybean foods except Joenkukjang are prepared from meju. Its characteristic flavor results from *Aspergillus*, *Penicillium*, and *Mucor* species of molds on the surface of the balls and *Bacillus subtilis* on the inside. Damsuejang is a quick fermented soy paste made by crushing meju to a powder, adding a warm brine solution, then allowing it to ferment and ripen.

Note: This is the earliest English-language document seen (March 2009) that uses the word “Damsuejang” to refer to Korean-style soybean paste (miso).

The above usage is the equivalent of 12 kg/capita. The daily per capita consumption of soy sauce (*kanjang*) is 20

ml, of soybean paste (doenjang) is 15 gm, and of hot soybean paste is 10 gm. Most of the soy sauce (64%), doenjang (82%), and kochujang (76%) and all of the salted natto paste (joenkukjang) and quick fermented soy paste (damsuejang) are produced at a household level and consumed directly.

Both soybean production and imports have grown in recent years. In 1970 production was 231,994 tonnes, and imports were 36,291 tonnes for a total of 268,285 tonnes. In 1976 production was 294,949 tonnes (up 27% over 1970), and imports were 147,854 tonnes (4 times as much as in 1970) for a total of 442,803 tonnes (up 65% over 1970). Address: Korea Food Development Centre, Seoul, South Korea.

2005. Westbrae Natural Foods. 1978. Someday all of this will be as familiar as apple pie (Ad). *Whole Foods (Berkeley, California)*. Jan. Inside front cover.

• **Summary:** This full-page color ad shows Westbrae Red Miso, Barley Miso, Brown Rice Miso, Soybean Miso, Hatcho Miso, and Tamari, plus various sea vegetables (nori, hijiki, wakame, kombu, etc.). The ad also appeared in *East West Journal*, May 1978, inside front cover. Address: 4240 Hollis St., Emeryville, California 94608. Phone: 415/658-7520.

2006. Yu, Swee Yean; Ch'ng, Guan Choo. 1978. Soy bean foods in Malaysia. In: American Soybean Assoc., ed. 1978. International Soya Protein Food Conference, Proceedings. Hudson, Iowa: ASA. 136 p. See p. 48-52. [16 ref]

• **Summary:** Contents: Introduction. Fermented soya bean products: Soya sauce (manufacture of 'thin' (dilute) soya sauce, manufacture of 'thick' (viscous) soya sauce, microbiology of Malaysian soya sauce, stability of the product), tempeh, tau cheo (thick paste-like sauce), tao si (soy nuggets). Non-fermented soya bean products: Soya bean sprouts, tofu (semi-firm curd), tofu fah (soft curd), tow kwa (firm curd), tin chok (dried, flat sheets [yuba]), fu chok (dried, rope-like [bamboo yuba]), tofu pok (deep-fried curd [tofu cubes]), chak tie (vegetarian [yuba] sausage), soya bean milk (tau cheong), meat analogues (soya flour is shaped into desired forms by hand). Nutritional data. Conclusion. Address: Universiti Pertanian Malaysia, Serdang.

2007. Ferretti, Fred. 1978. Scrutinizing Chinese food. *New York Times*. Feb. 1. p. C6.

• **Summary:** This is a review of the book *The Scrutable Feast*, by Dorothy Farris Lapidus, who speaks Chinese, and who has created this book "out of her determination not to be dominated by Chinese restaurant menus."

The book discusses "Ma Po style bean curd, a dish of ground pork and bean curd, so called because Ma Po literally means pockmarked old woman."

To illustrate: "chicken, page 38, no. 27, is stir fried with bitter melon and a touch of black bean paste;..."

2008. Clough, Jean. 1978. Kitchens that dish up naturally good food. *Chicago Tribune*. Feb. 3. p. A1.

• **Summary:** The Plowshare Cafe (6155 N. Broadway) serves macrobiotic food and is also a health foods store. They use foods grown locally, in season. In addition, all meat, dairy products, tropical fruits, most sweeteners, and many spices are not served. The Macro-plate (\$2.50) includes brown rice, miso soup and sea vegetables. Miso "is a black creamy paste made of fermented soy beans." The sea vegetables included hiziki seaweed in tamari sauce. Also offered was a sandwich with seitan (made of gluten), "tofu, soy mayonnaise, sesame seeds, carrots, and natto miso, a less-aged miso that includes barley and ginger. Its a granular to be sprinkled on rice or sandwiches."

New Earth Cafe and Mama Peaches are also vegetarian restaurants. Address: Dr.

2009. New England Soy Dairy Inc. 1978. Re: Announcing opening of New England Soy Dairy, Inc. Letter to customers and friends of the business, Feb. 17. 2 p. Typed, with signature on orange letterhead. [1 ref]

• **Summary:** "Dear friends. We are pleased to announce the opening of the New England Soy Dairy, Inc... As soon as we can hook up our deep fryer and practice making agé and agé pouches, we'll add them to our list of products... We have ordered a packaging machine that is scheduled to arrive in a few weeks." The company will then start making packaged tofu (now it is all sold in bulk), and may begin producing hard tofu (doufu), tofu pudding, and bottled soymilk. "The possibilities for freshly made soybean products seem almost endless. We are experimenting with a soy ice creme, and with miso. We'd really like to start producing tempeh this autumn... Our tofu price will remain at \$0.44/lb to retailers." The company plans to pick up its first two distributors: Homestead Trading Co. and nearby Llama.

Shurtleff and Aoyagi, and their *Book of Tofu* and *Book of Tempeh* are mentioned in the letter. At the end: "Soy to the world, (Thanks to Akiko Aoyagi for the drawings)." A handwritten note at the end reads: "Bill & Akiko, We sent this around to our customers. We're still reading the B.ofT. [Book of Tofu]. Tom Timmins. P.S. Come visit us next time you're East." Address: 305 Wells St., Greenfield, Massachusetts 01301. Phone: (413) 772-0746.

2010. *Sankei Shinbun (Japan)*. 1978. Kanada de miso o tsukuritai ["I want to make miso in Canada"]. Feb.

• **Summary:** About Lulu Yoshihara, who is learning to make miso in Japan. Two photos show her working in a miso shop.

2011. Westbrae Natural Foods. 1978. Price list [Catalog]: February 1978. Emeryville, California: Westbrae. 20 p. 26 cm.

• **Summary:** On the cover are a black plum blossom logo and a large, bold double “W” in calligraphy near the bottom against a gray background.

Interesting products: Natural fruit butters and unsweetened fruit spreads. Four types of granola and two trail mixes. Panda snacks: Tamari almonds, Tamari cashews, Tamari nut roaster’s mix, Tamari sunflower seeds, White water trail mix (tamari roasted). Westbrae roasted nuts (25 lb boxes): Tamari almond, Tamari cashew pieces, Tamari valencia peanuts, Tamari nut roaster’s mix, Tamari sunflower seeds, Tamari pepitas (pumpkin seeds), Tamari filberts. Tamari nut butters (12, incl. almond, 6 peanut, and sesame tahini). Whole wheat soy pasta.

Asian foods & sea vegetables: Miso (red miso, brown rice miso, barley miso, Hatcho miso, soybean miso, light yellow miso, natto miso). Miso made in the United States: Light yellow, mellow white, red, mixed case. Sea vegetables: Agar, dulce (whole or flakes / powder), sea palm, nori, arame, hijiki, kombu, wakame. Shoyu and shoyu products: Josen shoyu, Sendai shoyu, White Tiger Tofu Sauce. Nigari. Kudzu. Umeboshi. Toasted sesame oil. Helpful tools: Wok (11 inch), vegetable brush, glass shoyu dispenser, Tofu kit, Tempeh kit, rice koji (Cold Mountain). Beans: Azuki (10 lb or 25 lb bag), soybeans (60 lb or 25 lb), soy grits raw. Publications: Includes four books and 3 pamphlets by Shurtleff and Aoyagi.

Note: The products in this catalog do not require refrigeration; they contain no refined sugar / white sugar, no meat, and no dairy products—just like the catalogs of almost all other natural food distributors during the 1970s and 1980s. Address: 4240 Hollis St., Emeryville, California 94608. Phone: (415) 658-7518 (order) or 7521 (office).

2012. *Town Crier (Greenfield, Massachusetts)*. 1978. Tofu manufacturing plant opens. 12(3):1-2. March 22.

• **Summary:** “The New England Soy Dairy, 305 Wells Street, in Greenfield, has opened the doors on its new manufacturing plant... The firm has recently completed a long-projected expansion into more spacious and efficient facilities where it utilizes special tofu-making equipment imported from Japan enabling the company to produce nearly 10,000 pounds of tofu every week. The Soy Dairy ships this out all across New England, New York City, and Pennsylvania.” The tofu, which retails for about \$0.75/lb is “made from organically grown soybeans, water, and nigari, a coagulant extracted from seawater...”

“The company uses the term ‘dairy’ to indicate its intention to provide a full range of alternative dairy-like products all derived from soybeans, including ice cream, yogurt, cream cheese, mayonnaise, whipped cream, tartar sauce, plain and flavored soymilk. In addition, other less

familiar items will be introduced, such as miso soy bean paste, deep-fried tofu, and a fermented product, called tempeh. The Dairy operates at a medium level of technology, fusing traditional hand craftsmanship with modern labor saving equipment.”

“The company is open Monday through Saturday, 8 a.m. to 6 p.m. and visitors are welcome.” A photo shows Kathy Whelan Leviton cutting a large sheet of tofu into cakes.

2015. **Product Name:** Eden Genmai (Brown Rice) Miso. **Manufacturer’s Name:** Eden Foods, Inc. (Importer). Made in Japan. **Manufacturer’s Address:** 4601 Platt Rd., Ann Arbor, MI 48104. Phone: (313) 973-9400. **Date of Introduction:** 1978. April. **Ingredients:** Soybeans, brown rice, salt.

Wt/Vol., Packaging, Price: 14 oz, 8.8 lb, 22 lb, and 44 lb. **How Stored:** Shelf stable, 6-12 month shelf life. **New Product–Documentation:** Eden Foods spring-summer pricelist 1978. Page 11 lists “Eden Brown Rice Miso (Genmai)” as a new product. It is sold in 4 sizes: 14 oz, 8.8 lb, 22 lb, and 44 lb.

Eden Foods Catalog. 1978. Page 18. “Eden Brown Rice Miso (Genmai)—the latest addition to our line is made from soybeans, brown rice and salt. Aged naturally for 1½ years. For more information about miso, we suggest you see *The Book of Miso* and the pamphlets ‘What is Miso?’ and ‘Miso and Tamari, Foods Steeped in Culture,’ all available in our literature sections.”

Ad in Soy Craft. 1979. Summer. p. 38. “Traditional Soy Products from Eden Foods.” “Eden miso is made from whole soybeans, grains, and sea salt, fermented at natural temperatures in cedar kegs. Barley miso (mugi), Soybean miso (hacho), Rice miso (kome), and Brown rice miso

(genmai) are all available in 14 oz, 8.8 lb, 22 lb, and 44 lb sizes.”

Talk with Michael Potter, Chairman of Eden Foods. 1993. Oct. 31. Genmai Miso was started to be imported from the Muso Co. about 3 or 4 years after the first shipments arrived from Japan.

2016. Eden Foods. 1978. Spring-summer pricelist 1978. 4601 Platt Rd., Ann Arbor, MI 48104. 37 p.

• **Summary:** Products are similar to the catalog published earlier in 1978. Eden now carries many East Asian (mostly Japanese) herbal products from Herb T. Company in San Francisco, incl. Kuzu Root Tea. Salt products include: Mineral Salt (Indianola Oquirrh), and Herba Mare (France). Pure & Simple now makes 3 salad dressings: Romano, Sesame Herbal, and Mayonnaise.

Page 11 lists “Eden Brown Rice Miso (Genmai)” as a new product. It is sold in 4 sizes: 14 oz, 8.8 lb, 22 lb, and 44 lb. Address: Ann Arbor, Michigan. Phone: (313) 973-9400.

2017. Goldman, Sherman; Smith, Tyler. 1978. The two worlds of a small publisher: An interview with Nahum and Beverly Stiskin. *East West Journal*. April. p. 67-69.

• **Summary:** Nahum and Beverly Stiskin traveled to Japan and founded *Autumn Press*. “Over the last two years, EWJ has excerpted several of their remarkable books, including *The Book of Tofu*, *The Book of Miso*, and *The Book of Kudzu* [by Shurtleff & Aoyagi] which bring the world of the Orient to a new generation of modern Western readers, cooks, and healers.”

The Stiskins established Autumn Press by publishing *Looking Glass God* which Nahum wrote after arriving in Japan in 1969. They borrowed money from their family and had the first edition printed by a local Japanese printer. Then they worked with Lima Ohsawa on her *Art of Just Cooking*.

For the first four years the company grew slowly, blunder by blunder. They both had to take other jobs in order to support themselves. Both their families felt they were making a great mistake by publishing books on subjects of little interest. But they were trying to contribute to a renaissance they saw happening. Their books deal with both theory and practice, from a wholistic perspective, and they try to address major issues confronting humans and society. They published feminist poetry by Ellen Bass and poems by the Korean dissident Kim Chi Ha.

The Book of Tofu has been Autumn Press’ biggest success, with 90,000 copies in print after two years. Nahum believes that introducing tofu to the United States “is going to prove truly revolutionary. I think we see that revolution going on around us.” Both are working to change the world. Four photos show Nahum Stiskin; one shows Beverly. Address: 1. Editor; 2. Contributing editor.

2018. **Product Name:** Nasoya Organic Tofu (Water Pack).

Manufacturer’s Name: Nasoya Foods.

Manufacturer’s Address: Mechanic St. Ext. (P.O. Box 841), Leominster, MA 01453. Phone: 617-537-0713.

Date of Introduction: 1978. April.

Wt/Vol., Packaging, Price: First bulk packed in water, then water packed in molded plastic trays, then vacuum packed, finally water packed in trays again.

How Stored: Refrigerated.

New Product–Documentation: Shurtleff & Aoyagi. 1978, Dec. *The Book of Tofu* (Ballantine pocketbook edition).

“Appendix B: Tofu Shops and Soy Dairies in the West.” p. 396. Owner: John Paino and Bob Bergwall.

Ad in *Order of the Universe*. 1979. No. 52. Autumn/winter. p. 21. “Tofu. Get the pick of the crop. Nasoya–Traditional firm tofu. Made with untreated, deep well water and using organically grown soy beans, stone ground just prior to cooking in large open cauldrons—a traditional firm tofu. Great for: Miso soups, salad dressings, stir-fried vegetables, baked dishes & vegetable stews.”

Letter from John Paino. 1981. Jan. Gives starting date as April 1978. The company’s main founders were John Paino and Robert Bergwall. It cost them about \$40,000 to get into business. The first tofu plant was about 1,500 square feet in size. During the first year, they made tofu and soymilk. After 1 year, they were making 18,000 lb/month of tofu, after 2 years 33,000 lb/month, and now they are making 50,000 lb/month.

Poster. 1982, undated. 9 by 12 inches. Color. Reprinted in *Soyfoods*. Soyfoods Center Computerized Mailing List. 1981. Jan. 22. Owner: John Paino & Bob Bergwall. 1983. Winter. p. 64. “Experience the variety of tofu tastes: Rich in protein, cholesterol free, low in calories.” As of Oct. 1988 Nasoya no longer vacuum packs tofu. They private label water packed tofu for Cornucopia and Stow Mills.

Talk with John Paino. 1989. Sept. 26. For the first month after Nasoya started making tofu, they packaged it in pails in bulk. Then they switched to water packing in tubs, starting with a small Monkey Packer with a foot pedal that packed once cake at a time. Under ideal conditions, this tofu had a 2-week shelf life. For the next 4 years they sold only water packed tofu. Then Tomsun, their main competitor, started pasteurizing their water packed tofu, which gave it a longer shelf life, and gave them a competitive advantage in supermarkets. Nasoya did not have enough space in their plant to install a pasteurization unit (the plant’s maximum output was 5,000 to 6,000 lb/day of tofu), nor the inclination to pasteurize. So they made a bold move, and in 1981 started vacuum packaging, using a \$55,000 Tiromat film machine. Their first tofu was vacuum packed in a clear film package, but within a month everyone told them to either change the film or take the product out of the produce case, because it looked terrible; it got beat up very badly. So they changed to a bottom film.

Nasoya Newsletter. 1990. Jan. p. 2. "Nasoya introduces new tofu labels." In January, Nasoya will introduce a colorful new tofu label to all supermarkets and natural food accounts. The new label, which matches the company's Nayonaize, Vegi-Dressing, and Vegi-Dip labels, will contain a brief description of the style of tofu, along with an easy recipe on the back. A large circle in the center of colorful vegetable drawings says "Organic. Made with well water."

This is the earliest record seen (April 2001) concerning Nasoya Foods.

2019. Shurtleff, William. 1978. Re: Proposal for establishing a Soyrafters Union or Cooperative in North America. Letter to all "Soycrafters in North America," April. 2 p. Typed, with signature on letterhead.

• **Summary:** This open letter, written on NAFSC letterhead and dated April 1978, was submitted to *Soycraft* newsletter, where it was published in June 1978 (which see). It led to the first national meeting of soyrafters in Ann Arbor, Michigan, on 28-30 July 1978 and the founding of the Soyrafters Association of North America at that meeting.

The letter begins: "Dear Soyrafters of North America: There has recently been growing interest in North America in starting a Soyrafters Union or Cooperative, perhaps along the lines of Japanese National Tofu, Miso, Shoyu, Natto, etc. Unions [Associations]. Such a development would seem to represent a great leap forward, of benefit to many in the expansion of consciousness and production of quality soyfoods in the Western world."

Note: This is the earliest document seen (Jan. 2003) in connection with the Soyrafters Association of North America (SANA). Address: Director, New-Age Foods Study Center, 278-28 Higashi Oizumi, Nerima-ku, Tokyo 177, Japan. Phone: (03) 925-4974.

2020. Wells, Patricia. 1978. What is this thing called tofu? *New York Times*. May 3. p. 19-20. Reprinted in the Boston Herald-American. June 15.

• **Summary:** "In the early 1970s the Hashizume Bean Cake Corporation came to life as a minor cottage industry tucked away in the basement of a giant red brick factory in Long Island City. Each day it churned out a few hundred pressed soybean cakes, or tofu, and supplied the handful of Japanese restaurants and Oriental specialty stores in business at the time in the New York area.

"Today, thanks to what one company representative called 'the American-natural-organic-people'... seven trucks loaded with tofu leave the steamy Hashizume factory each day."

"A combination of events awakened the West to the wonders of tofu. One was the 1975 publication of *The Book of Tofu*, an Autumn Press cookbook and resource manual that caught on quickly with natural food followers. The other is tofu's nutritional attributes.

"While traditionally Oriental tofu companies as Hashizume and Tanaka & Company, which is on Manhattan's West Side (326 Amsterdam Ave. at 75th St.), have profited from the Westernization of tofu, young, counterculture entrepreneurs throughout the country have taken advantage of the growing demand." These include the "Laughing Grasshopper New England Soy Dairy" (which now makes 5 tons of tofu a week, that's 20,000 cakes). "Other successful American-run tofu factories have mushroomed in Bethlehem, Massachusetts [actually New Hampshire; Crystal Springs], Summertown, Tennessee, and Island Springs, Washington." A description of the process for making tofu at Hashizume is given.

Page 20 is titled "The West wakes up to the wonders of tofu." "Following are recipes using tofu in both Oriental and Westernized versions. The Oriental recipes are included in *The Book of Tofu*. The others were developed by the people at Laughing Grasshopper and the Crystal Hills Tofu Shop in Bethlehem, N.H.: Tofu clam dip, Maple walnut bars, Tofu manicotti, Chilled tofu, Shoyu dipping sauce, Raspberry pudding, and Miso soup with tofu and onions."

2021. *Hartford Courant (Connecticut)*. 1978. Feminine topics, by Jacqueline (Ad). May 7. p. 12E.

• **Summary:** "Oriental cooking is easy, fun healthy—and delicious! The Epicure Grocery in the heart of Farmington is always expanding their selection of ingredients! On hand—chili paste with garlic, yellow bean paste, fermented black beans, tree eggs, 5-spice powder, Szechuan peppercorns, oyster sauce, sesame oil, star anise, etc. etc."

2022. ASEAN Sub-Committee on Protein. ed. 1978. Report on the First ASEAN Workshop on Solid Substrate Fermentation. Bandung, Indonesia. Held 8-13 May 1978 at Bandung, Indonesia. [100+ ref]*

• **Summary:** This is the 5th ASEAN Protein Workshop. Address: Malaysia.

2023. Bellicchi, Kathy. 1978. Cook it with seaweed! *East West Journal*. May. p. 68-72.

• **Summary:** Contents: Introduction. Nori. Hiziki [Hijiki]. Arame. Wakame. Kombu. Dulse. Irish moss. Agar agar kanten. Variations on the basic hiziki recipe call for tofu, whole soybeans, and tamari. Wakame is used in miso soup, and in Ojea stew with miso and aduki [azuki] beans. Kombu is used in a broth with tamari, and in Oden with natto miso and tofu.

2024. *Eubiotica (Italy)*. 1978. Il miso [Miso]. No. 13. March/May. [Ita]*
Address: Italy.

2025. Mori, H. 1978. Shōwa 52 nendo ni okeru shōyu, miso no kenkyū gyōseki [Review of annual achievements in

shoyu and miso research]. *Nippon Jozo Kyokai Zasshi (J. of the Society of Brewing, Japan)* 73(5):351-69. [532 ref. Jap]

• **Summary:** This important Japanese-language article, published each year in the May issue of this periodical, has two parts: (1) A review of the past year's major discoveries and developments in the fields of miso and soy sauce in Japan. (2) A bibliography related to those discoveries and developments. Address: Noda Sangyo Kagaku Kenkyusho.

2026. Whitaker, John R. 1978. Biochemical changes occurring during the fermentation of high-protein foods. *Food Technology* 32(5):175-80. May. [42 ref]

• **Summary:** Foods are fermented to improve the flavor, color, aroma, and texture, and to remove toxic constituents. Occidental fermentations generally use bacteria and non-filamentous fungi, whereas Oriental fermentation procedures generally use filamentous fungi. The following foods are discussed: Cheeses (particularly Roquefort and Cheddar), sufu, yoghurt, meat, fish, soy sauce, miso, tempeh, and ang-kak. Flow sheets show the production of sufu and soy sauce.

Contents: Reasons for fermenting foods. Occidental vs. oriental fermentations. Major fermented high-protein foods. References. Address: Dep. of Food Science and Technology, Univ. of California, Davis, California.

2027. Sheraton, Mimi. 1978. Restaurants: Stuffed cabbage and sushi on East Side. *New York Times*. June 9. p. C14.

• **Summary:** This is a review of Hatsuhana, a Japanese sushi restaurant at 17 East 48th St., New York City. "Advised by a Japanese friend, we ordered natto, a pungent mix of fermented [soy] beans, tuna fish and scallions; nuta, a sensual blend of raw fluke [flounder, a type of flatfish] and scallions in a satiny yellow sauce made of soy bean paste [miso], lemon and sake." Also salmon teriyaki, and "wrappings of spinach-green seaweed." All sushi and sashimi, nuta and natto are recommended.

2028. Jacobs, Leonard. 1978. Menage: Vitamin B-12 in macrobiotic or strictly vegetarian diets. *East West Journal*. June. p. 10-11. [2 ref]

• **Summary:** A reader asks: "Many critics of a macrobiotic or strictly vegetarian diet point out the lack of a source of vitamin B-12. Can this essential vitamin actually be synthesized (or transmuted) by the body if one's diet is composed entirely of whole grains?"

Jacobs discusses vegetarian sources of vitamin B-12 (sea vegetables, microalgae [*Spirulina maxima*], and fermented soy products including soy sauce and miso), and the results of a B-12 deficiency—pernicious anemia. Dr. Wolfgang Tilling, who administered a diet of only soymilk to undernourished children in Germany, is said to have "discovered the synthesis of vitamin B-12 in the intestines of these children." Address: Publisher, East West Journal.

2029. MacKinnon, Jerry; Fiering, Steve. 1978. An invitation. *Soycraft (Lawrence, Kansas)* 1(3):1. June.

• **Summary:** "The workers of the Soy Plant Soy Dairy would like to invite you to a national conference which is to be held in Ann Arbor, Michigan" on July 28-30, 1978. "We expect to have technical workshops on tofu, tempeh, soymilk and miso production as a base to begin from."

Note: The Soycrafters Association of North America (SANA) was founded at this meeting. Address: The Soy Plant, 211 East Ann St., Ann Arbor, Michigan 48104. Phone: (313) 663-0500.

2030. Shurtleff, Bill. 1978. News from New-Age Foods Study Center. *Soycraft (Lawrence, Kansas)* 1(3):3-5. June.

• **Summary:** This open letter begins: "Dear Soycrafters of North America: There has recently been growing interest in North America in starting a Soycrafters Union or Cooperative, perhaps along the lines of Japanese National Tofu, Miso, Shoyu, Natto, etc. Unions [Associations]. Such a development would seem to represent a great leap forward, of benefit to many in the expansion of consciousness and production of quality soyfoods in the Western world."

The author then summarizes five major functions of Japanese national trade associations related to soy products, and suggests how each of these be adapted to present American conditions and consciousness which are very different from those in Japan: Purchasing soybeans, maintaining a list of member shops, doing "soyfood publicity," publishing a newsletter, and establishing and running a nationwide center, information clearing house, and school for teaching production of low-technology "soyfoods" to people from both developed and developing countries.

"How might this basic model be adapted to the United States? First, since soyfoods are still quite new in the USA, we might want to form one united front cooperative or union for all soycrafters or producers of soyfoods, rather than trying to form individual unions for tofu & soymilk, miso, tempeh, shoyu, etc. Given such a joint union, it would seem that all of the functions performed by the Japanese unions would be of great potential value to producers in North America. The key point, however, is that for the Union to work it must be financially viable and sound. Thus it must be created and supported by individual members who understand clearly that its functions are in their best interest, both in the short and long run."

"Second, we must remember that the number of shops presently producing soyfoods here is still very small. We have the names of 95 tofu shops and/or soy dairies in the United States plus 6 more in Canada, 9 tempeh shops, 8 miso shops, and one shoyu factory (Kikkoman). Of these, about 41 of the tofu shops and soy dairies, 5 of the tempeh

shops, and 2 of the miso shops are 'new-age' types, newly started by Caucasian Americans. This latter group would probably form the initial nucleus of the Soycrafters Union, however after the benefits of membership could be clearly demonstrated, the more conservative Japanese producers might be eventually interested in joining."

"At the proposed First North American Soycrafters Convention to be held in Ann Arbor [Michigan] July 28-30 the above suggestions might be discussed one by one..."

At the end of the article is a form which new or existing tofu or soymilk manufacturers in the U.S. are invited to fill out and return to Shurtleff so that he can list them in the next edition of *The Book of Tofu*. It asks for the name, address, and phone number of the company, the person(s) in charge, the date tofu or soymilk production started, the approximate cost of getting started, the average quantity of soybeans used per week, the soyfoods produced (in order of importance), the main pieces of equipment purchased, and equipment the company plans to purchase in the near future.

Note the early use of the terms "soyfoods" and "soyfood" in this article. The term "soyfoods" was coined by Surata Soyfoods of Eugene, Oregon, in Dec. 1976.

Note 2. This is the earliest document seen (Oct. 2008) that contains the term "low technology" (or "low tech"). Shurtleff coined this term to refer to soyfoods that could be made, and had long been made, using simple, traditional technologies, appropriate to Third World countries or relatively poor areas. Address: Director, New-Age Foods Study Center, 278-28 Higashi Oizumi, Nerima-ku, Tokyo 177, Japan. Phone: (03) 925-4974.

2031. **Product Name:** Miso.

Manufacturer's Name: Soy Plant (The).

Manufacturer's Address: 211 East Ann St., Ann Arbor, MI 48104. Phone: 313-663-0500.

Date of Introduction: 1978. June.

New Product-Documentation: Talk with Steve Fiering, 1988. June 10. This was the company's fifth commercial product. "We did sell the batches that were good but we didn't have any consistency. Some batches came out very good but some were sour. It never became much of a product, so we dropped it. We probably sold some short-term miso before the 1978 summer conference, out of the deli. We could sell anything we put out there if it was good. I think the changing temperature in the building, and particularly the heat in the summer was the problem."

2032. Westbrae Natural Foods. 1978. Price list [Catalog]: June 1978. Emeryville, California: Westbrae. 30 p. 22 by 28 cm.

• **Summary:** On the cover are pink, red and light blue Japanese plum blossom crests against a blue background. Address: P.O. Box 8711, Emeryville, California 94662. Phone: 415/658-7518.

2033. Fiering, Steve. 1978. Re: Update #2 on plans for Soycrafters Convention at The Soy Plant in Ann Arbor, Michigan. Letter to William Shurtleff and Larry Needleman in California, July 8. 5 p. Handwritten, with signature.

• **Summary:** "Bill and Larry—I thought it's time to fill you both in on the latest conference details. Things are looking very good. Forty people have said they are planning to attend representing 23 different shops or shops to be. This does not include Michigan folks. I expect about 20 Michigan people. The Media, *New Age Journal*, *East-West*, etc. have not responded... "The basic layout will revolve between The Soy Plant and the dorm where about 2/3 of the people will stay." The latest proposed schedule is enclosed; comments are invited. The schedule begins: [Friday] "4-6 p.m.—Check in at Soy Plant. Take people to the dorm or the houses they will be staying in. 6-7—Dinner. 7:30-9—Opening session. Soy Plant introductions and short rap from each delegate. Discussion of the proposed schedule and any special points people want to work on. We have a retail shop at the front of our building which will hold 60 people comfortably, so a lot of conferring can be done easily right here. 9:30-11:00—We feel that specific slide shows would be done best after dark. So we would walk up to the dorm, about 6 blocks, and see Bill's [Shurtleff] miso slides up there (we have access to conference rooms and lounges up there). We felt that miso would be of least interest to most of the delegates so we put it on Friday night so latecomers will miss less.

"Sat. One of the frequent comments on your schedule, Bill, was that it is too academic, especially for the folks who are just starting so... We plan on having two activities at once to try and allow people to get what they need."

The Saturday and Sunday schedules are both given. Each day begins with breakfast at 8:00-9:00 a.m., followed by non-stop workshops and discussions. On Saturday evening slide shows will be from 8-11:00 p.m. On Sunday morning: "9:30-12:00—Starting a North American Soycrafters Union or Co-op."

The letter ends: "I feel that the most important ingredient is the spirit of the participants, and if correspondence is a true indication, the spirit will indeed get us all high!

"Hope to hear from you soon. Steve." Address: The Soy Plant, 211 East Ann St., Ann Arbor, Michigan 48104. Phone: (313) 663-0500.

2034. Wells, P. 1978. Macrobiotics: A principle, not a diet. *New York Times*. July 19. p. C1, C8, C9.

• **Summary:** Some critics, including Harvard nutritionist Dr. Frederick Stare, have become believers. Bill Dufty tells his story. Address: Staff.

2035. Shurtleff, William. 1978. Re: Proposal to add new categories and information about soyfoods to *Soybean Digest Blue Book*. Letter to Mr. Lynn Munyer, editor, *Soybean Digest Blue Book*, P.O. Box 158, Hudson, Iowa 50643, Aug. 21. 2 p. Typed, with signature on letterhead.

• **Summary:** Contents: Introduction to publications and work of New-age Foods Study Center. Statistics on consumption of traditional soyfoods in East Asia. Tofu. Soymilk. Miso. Shoyu. Tempeh. Natto. Conclusion: "Therefore we feel it is in the interest of the ASA [American Soybean Association] and American Soybean farmers to do more to introduce these traditional soyfoods to people around the world via your publications." Address: New-Age Foods Study Center, P.O. Box 234, Lafayette, California 94549. Phone: 415-283-2991.

2036. Kao, C.; Robinson, R.J. 1978. Nutritional aspects of fermented foods from chickpea, horsebean, and soybean. *Cereal Chemistry* 55(4):512-17. July/Aug. [9 ref]

• **Summary:** Tempeh and miso were made from chickpeas (*Cicer arietinum*), horsebeans (*Vicia faba*), and soybeans. Rats on freeze-dried tempeh diets ate more, gained more weight, and had higher PERs than did rats eating autoclaved (unfermented) grits. The PER of chickpea tempeh was slightly higher than that of soybean tempeh. The PER of horsebean tempeh was significantly lower than that of either of the other two tempehs. Misos contained about 25% salt on a dry weight basis—too much to be acceptable rat diets. Address: Dep. of Grain Science & Industry, Kansas State Univ., Manhattan, Kansas 66506.

2037. Westbrae Natural Foods. 1978. Results of miso survey, at Wholly Foods in Berkeley, California, Aug. 14-15. Berkeley, Calif. 1 p. Unpublished manuscript.

• **Summary:** 59 people were polled on their uses of and attitudes toward miso. 33 people used it in soups, 12 in sauces, 9 in spreads. 29 had a favorable attitude toward miso, 17 unfavorable, 13 neither. Of the unfavorables, 9 said miso is too salty, 5 don't know how to use it, 3 said its inconvenient to use. Of the favorable, 17 said it is a natural food, which meat is not. Address: Berkeley, California.

2038. Lachman, Gaella; Elwell, Christian. 1978. Making miso in America. *East West Journal*. Sept. p. 54-59.

• **Summary:** A colorful account of making 1,000 lb of miso in the spring of 1978 with Noboru Muramoto at Asunaro, on Mt. Veeder, at 4600 Cavedale Road, Glen Ellen, California 95442. Phone: (707) 996-5365. Christian writes in the introduction that several years ago, upon returning from India and recovering with a serious bout with jaundice, he came across Naboru [sic] Muramoto's book, *Healing Ourselves* (Avon Books, 1973), "one of the few reliable guides to preventive medicine now available." After this he began to use food as medicine for the first time. Within a

year he was attending seminars by Michio in Boston, Massachusetts, and learning about macrobiotics. He later learned that Mr. Kushi and Mr. Muramoto had both been students of George Ohsawa. While in Boston, Christian met Gaella, his wife to be. They left Boston to visit California, and from January to April 1978 they studied at Asunaro Eastern Studies Institute (established in the fall of 1976) in Glenn Ellen, California, with Mr. Muramoto. By mid-April, in addition to miso, they had also learned to make soy sauce, saké, tofu, seitan, mochi, bran pickles, sauerkraut, tekka [miso], and bread. Natto making is also taught. A large photo shows the two of them cooking soybeans for making miso.

Note: Talk with Christian Elwell. 1996. Sept. 7. While Christian and Gaella were at Asunaro, Thom Leonard visited for a few days. Thom and Christian met and talked, recognized that they had a lot in common, and stayed in touch afterward. Christian eventually purchased Thom's Ohio Miso Co. He was already making miso experimentally, and he had plans to go back to Ohio to make commercial miso.

2039. Mutual Trading Co., Inc. 1978. Price book: Miyako brand. Fancy Oriental Japanese foods—Importer & Distributor. Los Angeles, California. 60 p. Sept. Index. 22 cm. [Eng]

• **Summary:** Includes: Miso (p. 3-4). Soy sauce and other sauces (p. 4-5). Dried seaweed (p. 32-33). Vegetable (edamame, natto {Miyako brand}, inari age, konbu natto, p. 37). Salted black bean (Chinese, p. 60). Address: 431 Crocker St., Los Angeles, California 90013. Phone: 213-626-9458.

2040. Shurtleff, William. 1978. New food from old ways. *Agenda (US-AID, Washington, DC)* 1(8):18-20. Sept.

• **Summary:** This periodical is published by the U.S. Agency for International Development. Discusses: Soybeans and world hunger, the inefficient ways that soybeans are used in industrialized countries by feeding them to animals, and alternative ways of using them in foods such as tofu, soymilk, tempeh, and miso. Address: New-Age Foods Study Center, P.O. Box 234, Lafayette, California 94549.

2041. **Product Name:** Miso Cheese (Tofu Fermented in White Miso).

Manufacturer's Name: Soy Plant (The).

Manufacturer's Address: 211 East Ann St., Ann Arbor, MI 48104. Phone: 313-663-0500.

Date of Introduction: 1978. September.

Ingredients: Firm tofu, miso.

Wt/Vol., Packaging, Price: Sold fresh in slices in a deli.

How Stored: Refrigerated.

New Product–Documentation: Interview with Steve Fiering. 1988. June 10. He is at 30 Newell Rd., Palo Alto, California 94303. Phone 415-326-7123. “This product was developed in the fall of 1978 by a person name Jura (pronounced Ju-RAH) McDowell, who was a black American Rastafarian and a vegan from Alabama. He made very firm tofu, sliced it into ½-inch-thick slices, and embedded it in young, usually sweet white miso in a crock. Some of the miso they made in house, and some they bought from Westbrae, who bought it from Miyako/Cold Mountain in Los Angeles. The tofu was not wrapped in cheesecloth. After about 4-6 weeks they would remove the tofu, scrape off the miso for use later in cooking, then sell the tofu slices in the deli. The tofu was never pureed (like Simply Natural did) to give a cream-cheese consistency. By the time it had been through the fermentation it has lost the rubbery aspect of its texture. It was pretty soft, but we never processed it any further. It was sort of like the cream cheese you buy in a slab, wrapped in a piece of Saran. It was always quite tasty when we would make it. I always thought it was great, and a great original idea. It was very rich, kind of like Brie. We used to love it when we could get it. We just never sold it outside our Soy Deli and even in the Deli we usually had a very limited amount of it. People would use it as a spread. It was quite expensive for us to make, probably over \$6 a pound, mainly because of the cost of the miso. That was prohibitive, so it never really became anything. We could never make any money on it. Jura also made delicious stuffed tofu pouches (Agé) and yuba rolls that were sold in the Deli. He did a lot of experimenting.”

2042. **Product Name:** Tofu Tahini Spread.

Manufacturer’s Name: Soy Plant (The).

Manufacturer’s Address: 211 East Ann St., Ann Arbor, MI 48104. Phone: 313-663-0500.

Date of Introduction: 1978. September.

Ingredients: 1980: Tofu, tahini, sunflower seeds, miso [sweet], shoyu, corn oil, vinegar & spices.

Wt/Vol., Packaging, Price: 12 oz plastic tub.

How Stored: Refrigerated.

New Product–Documentation: Steve Fiering. 1979. Whole Foods. Jan. p. 38, 40. “A Midwestern Interest in Tofu.” This is included in a list of products presently produced by the company. Talk with Steve Fiering. 1988. June 10.

Square Label for “Tofu tahini sandwich spread” in Soy Plant scrapbook from about 1980. 3 by 3 inches. Black on white. 12 oz. Zip: 48104.

2043. Mori, Shigeru. 1978. Re: Cold Mountain Dry Koji. Letter to Lorenz A. Schaller, Natural Order Co., P.O. Box 4, Angelus Oaks, CA 92305, Oct. 24—in reply to inquiry. 1 p. Typed, with signature on letterhead. [Eng]

• **Summary:** Suggests that Mr. Schaller order Cold Mountain Dry Koji from Erewhon Natural Foods. Note: This koji is made by Miyako Oriental Foods, a subsidiary of Mutual Trading Co. Address: Mutual Trading Co., Inc., 431 Crocker St., Los Angeles, California 90013. Phone: 213-626-9458.

2044. Daniels, Stevie. 1978. I was a sucker for protein. *East West Journal*. Oct. p. 60-62.

• **Summary:** Her introduction to soyfoods came the hard way—by trying a “can of textured soy protein”—the food that could end world hunger. She tried preparing it in many different ways. “Nothing worked. It was terrible. I threw it on the compost pile and watched squirrels, rats, and chipmunks detour around it for weeks... It was easy to see why even starving people gave thumbs down to this orangish, gloppy, spoiled-tasting canned concoction.” She learned that the oil companies extract the oil from soybeans with hexane solvent then use the defatted leftovers to feed livestock and make textured soy protein.

Later she became a vegetarian, tried cooking whole soybeans, and then “fresh soybeans” in the pods—which a local organic farmer brought to her co-op. Finally one day she found a brochure stating: “The four main foods made from soybeans are tofu (soybean curd), tempeh (fermented soyburger), shoyu (soy sauce), and miso (fermented bean paste).

“I was amazed. The Eastern people, one-fourth of the world’s population, had known how to use soybeans for centuries. I learned they also sprouted the beans...” She tried these foods and liked them. Bill Shurtleff stopped by the EWJ’s office after attending the first national soyfood conference in Ann Arbor, Michigan. She describes their discussion, including the founding of the Soycrafters Association of North America. At the end is a list of resources and a bibliography of EWJ articles on soyfoods: Larry Needleman (Soycrafters Assoc. of North America, P.O. Box 76, Bodega, CA 94922. Phone: (707) 876-3341). Bill Shurtleff, The Farm (Summertown, Tennessee), Asunaro Eastern Studies Institute (Attn: Dina Drago, 4600 Cavedale Rd., Glen Ellen, California 95442. Phone: (707) 996-5365. Miso and shoyu production taught by Naboru [sic, Noboru] Muramoto).

2045. *East West Journal*. 1978. East West mail order (Ad). Oct. p. 68-69.

2046. Jacobs, Leonard. 1978. Menage: Where can I get information about traditional Japanese foods—like miso, soy sauce, umeboshi, sea vegetables—that are sold at my natural food store? L. Paulsen, Chicago, Illinois. *East West Journal*. Oct. p. 12.

• **Summary:** Answer: One of the largest exporters of these foods, Muso Co., has recently printed a series of pamphlets

describing how these products are made and the nutritional value of each. The pamphlets are available from: Stephen Earle, Muso Co., Ltd., Nishishinmachi 1-2-18, Wakae, Higashi-Osaka 578, Japan. Address: Publisher, East West Journal.

2047. Shurtleff, William. 1978. Protein source for the future. *PHP (Japan)*. Oct. p. 8-18, 79-82. Illust. 18 cm.
• Summary: Contents: Introduction. Ten reasons why soybeans will be the protein source of the future: 1. Optimum land utilization. 2. Lowest cost source of protein in almost every country of the world. 3. High nutritional value. 4. Time tested for over 2,000 years. 5. Remarkably versatile. 6. Appropriate technology ("Traditional soyfoods can be produced in cottage industries"). 7. New dairylike products. 8. Soybeans are hardy and adaptive. 9. Free nitrogen fertilizer from nodules on soybean plants. 10. Great productivity potential.

Discusses new patterns of soy protein utilization, with specific reference and descriptions of tofu, soymilk, tempeh ("Indonesia's most popular soyfood"), miso, shoyu, whole dry soybeans, roasted soybeans, fresh green soybeans, soy flour, kinako, soy sprouts, and textured soy protein (TVP), yuba, and natto. Concludes with a discussion of new developments in the Western world. Address: New-Age Foods Study Center, P.O. Box 234 (951½ Mountain View Dr.), Lafayette, California 94549. Phone: 415-283-2991.

2048. *Sunset (Menlo Park, California)*. 1978. A western role for miso. 161:202. Oct.

• Summary: This 1/3 page article gives a brief description of miso, then recipes for Miso marinated grilled mushrooms, and Miso deviled eggs.

2049. Westbrae Natural Foods. 1978. Price list [Catalog]: October 1978. Emeryville, California: Westbrae. 34 p. 22 by 28 cm.

• Summary: On the cover are orange and yellow Japanese plum blossom crests against a brown background. New products (written in all capital letters): Wholewheat soy spirals (pasta). Address: P.O. Box 8711, Emeryville, California 94662. Phone: (415) 658-7518 (orders).

2050. Paino, John. 1978. Re: Current developments at Nasoya. Letter to William Shurtleff at New-Age Foods Study Center, Nov. 20. 3 p. Typed, on letterhead.

• Summary: Written after Shurtleff and Wataru Takai paid a surprise visit to Nasoya in the summer of 1978: "I'm sure you felt my surprise when in the middle of our daily tofu making routine, I turned around and spotted the man whose *Book of Tofu* became the impetus for our shop. We were all so pleased by your visit.

"Sarah, my wife, was making a delicious tofu cream cheese, and cottage cheese for sale in and around Boston.

She is a wonderful cook and with the aid of her friend, Winnie Bourgeois, developed some recipes which are on the following page. We are happy to pass these on to you. We also hope to be marketing these products again in 1979.

"I would like to wish you great success with your new Book of Tofu. It is also our dream at Nasoya, to help improve the health and happiness of all people by making available a more natural and healthful diet. We are grateful to you for your contribution in the preparation and use of Tofu, Miso, and other foods. These are already becoming important staple foods for many people throughout America, enabling them to choose and eat in a pure and balanced way."

Note: The bottom one-third of this letter has been cut off and is missing. Address: President, Nasoya Foods, P.O. Box 841, Leominster, Massachusetts 01453. Phone: 617-537-0713.

2051. **Product Name:** Samurai Hero (Brown Rice & Tofu Sandwich in a Chapati).

Manufacturer's Name: City Samurai.

Manufacturer's Address: San Francisco (actually Berkeley), California.

Date of Introduction: 1978. November.

Ingredients: Brown rice, tofu, carrot or seasonal vegetable, sea salt, lettuce, sprouts, green onion, safflower oil, whole grain chapati, barley miso, sesame butter, spring water, tamari.

Wt/Vol., Packaging, Price: 9 oz (at least).

How Stored: Unrefrigerated and perishable.

New Product-Documentation: Talk with Paul Duchesne. 1989. July 31. Chris Smith, after discussing the matter with Duchesne (who was in Boston), showed Joe Nixdorff (who had been coming to macrobiotic potluck dinners) how to make the BRTS in about Nov. 1978. He made it every other day and sold it at multiple outlets until about March 1982, when competition from Wildwood Natural Foods put him out of business. Though the label shows San Francisco as the business location, this was not true; the business was actually in Berkeley. At one time he was making the sandwiches at Pacific Tempeh run by Travis Burgeson.

Talk with Travis Burgeson. 1989. Aug. 7. Joe Nixdorff introduced this sandwich before 1980. He started making it at Tony Plotkin's mochi plant [Grainaissance], then expanded into Travis' tempeh plant. Travis estimates that Joe made about 750 sandwiches/week. He delivered them himself in a car to natural foods stores, mostly in Berkeley and the San Francisco Bay Area. Joe was squeezed out of business by Wildwood before Travis sold his business in 1983. This sandwich was in no related to the Samurai cart that sells sandwiches in Berkeley. Label sent by Paul Duchesne. 1989. Aug. 11. Black on gold. "A complete meal for today's warrior. Organically grown ingredients used when available."

2052. **Product Name:** Natural Instant Miso-Cup (Miso Soup).

Manufacturer's Name: Edward & Sons Trading Co. (Importer). Made in Japan.

Manufacturer's Address: Box 271, Union, NJ 07083.

Date of Introduction: 1978. November.

Ingredients: Soybeans, rice, sea salt, onions, parsley.

Wt/Vol., Packaging, Price: Twelve 8-oz. servings in six flavor-tight envelopes. Each envelope weighs 18 gm.

How Stored: Shelf stable.

New Product–Documentation: Label. 1979, undated. 3.5 by 4.75 inches by 1.75 wide. Paper box. Red, blue, green and black on gold. Drawing of Japanese woman by a hearth serving miso soup (adapted, with permission, from *The Book of Miso* by Shurtleff & Aoyagi), and pictures of soup and vegetables in the foreground. "Natural/instant. Pure vegetarian soup in seconds. Original golden light." Gives directions, serving ideas, and "A short history of Miso," quoting from *The Book of Miso*.

Ad in *Whole Foods*. 1979. Jan. p. 10. "Introducing ... Soup in Seconds. Natural/Instant Miso-Cup. The Long Awaited Combination of Purity and Convenience. Two 8 oz. servings per packet. Six packets per display box. Twelve boxes per case.

Ad in *Vegetarian Times*. 1979. Sept/Oct. p. 9. "Have you ever wished..."

Ad in Tom Riker and Richard Roberts. 1979. *The Directory of Natural & Health Foods*. p. 57. "Introducing ... Soup in Seconds."

Ad in *Vegetarian Times*. 1980. No. 40. Aug. p. 12. "The Best of Both Worlds. Miso Cup. Convenience Without Compromise."

Article by Richard Leviton in *Soyfoods*. 1982. Summer. p. 34-35. Joel and Diondra Dee of Edward & Sons live in Saluda, North Carolina. Their instant Miso Cup, made of freeze-dried miso and vegetables, was launched in 1978. "They hitched their mobile home to the back of a Chevy van and toured the Northeast, reportedly for two years, handing out samples of *Miso-Cup* and collecting business cards and orders. In 1980 they added a second flavor (with seaweed) while a third is planned for late 1982."

"*Miso-Cup* is a vegetarian, natural foods version of Lipton's *Cup-A-Soup*. A photo shows Joel Dee. Spot in *Soyfoods*. 1982. Summer. p. 55. "Miso Soup in Seconds." Sold in golden light and rich savory with seaweed flavors. Label, box. Reprinted in *Soyfoods Marketing*. Lafayette, CA: Soyfoods Center. "Pure Vegetarian Soup in Seconds."

Shurtleff & Aoyagi. 1983. *The Book of Miso*. 2nd ed. p. 239. "In the fall of 1978 Edward & Sons Trading Co., under the direction of Joel Dee, introduced Miso-Cup. Miso cup soon became the most widely advertised miso product in America."

Talk with Joel Dee. 1988. June 15. He pioneered convenience natural foods in America, starting with Miso Cup. He is in the process of moving to Carpinteria, California. Ad in *East West*. 1988. Feb. p. 27. "Warm up with an 'old friend' Miso-Cup." Address is now 1115 Lousons Rd., Union, New Jersey 07083.

Talk with Joel Dee. 1994. July 4. Miso Cup is the flagship of his product line. The miso is freeze dried. Because of the falling value of the U.S. dollar against the Japanese yen, importing Miso Cup from Japan is increasingly expensive, so Joel is now looking for a way to have this "instant savory soup or seasoning" made entirely in America.

Shurtleff & Aoyagi. 1983. *The Book of Miso*. 2nd ed. p. 239. "In the fall of 1978 Edward & Sons Trading Co., under the direction of Joel Dee, introduced Miso-Cup. Miso cup soon became the most widely advertised miso product in America."

Talk with Joel Dee. 1988. June 15. He pioneered convenience natural foods in America, starting with Miso Cup. He is in the process of moving to Carpinteria, California.

2053. Fortner, Heather J. 1978. *The limu eater: A cookbook of Hawaiian seaweed*. University of Hawaii Sea Grant Program, 2540 Maile Way, Spalding Hall 253, Honolulu, HI 96822. ix + 107 p. Illust. Index. Nov. 23 cm. Sea Grant Miscellaneous Report UNIHI-SEAGRANT-MR-79-01. [39 ref] Address: Honolulu, Hawaii.

2054. Nomura, Abraham; Henderson, B.E.; Lee, J. 1978. Breast cancer and diet among the Japanese in Hawaii. *American J. of Clinical Nutrition* 31(11):2020-25. Nov. [16 ref]

• **Summary:** The authors studied the diets of 6,860 men to examine the relationship between soy consumption and breast cancer risk. Soy intake was measured twice: Once during the period 1965-1968 and again during 1971-1975. During the first period, no association was observed between soy intake and breast cancer. However for the second period an inverse association was found between intake of miso soup and risk of breast cancer; the more miso soup consumed, the lower the rate of breast cancer. And a trend was found toward an inverse association between intake of tofu and subsequent risk of breast cancer; the more tofu consumed, the lower the rate of breast cancer.

Note: This is the earliest document seen (May 2000) indicating that soy may prevent breast cancer in humans. Address: 1. Director, Japan-Hawaii Cancer Study; 2. Advisor, Japan-Hawaii Cancer Study; 3. Biostatistics consultant, Japan-Hawaii Cancer Study. All: Kuakini Medical Center, Honolulu, Hawaii 96817.

2055. Shurtleff, William; Aoyagi, Akiko. 1978. Cooking with miso. *Alternatives (Miami, Florida)*. Nov. p. 48-53.
 • **Summary:** Excerpts from *The Book of Miso*, by Shurtleff & Aoyagi. Contents: Introduction to miso, basic types, brief history. Miso as a food (nutritional value). Buying and storing miso. Using miso as a seasoning. Miso recipes (16 recipes). Contains nine illustrations from *The Book of Miso*. Address: New-Age Foods Study Center, P.O. Box 234, Lafayette, California 94549.

2056. Fleiss, Paul M.; Douglass, J.M.; Wolfe, L. 1978. Vitamin B-12 deficiency in strict vegetarians. *New England J. of Medicine* 299(23):1319. Dec. 7. [2 ref]
 • **Summary:** This letter was written in response to a letter by Higginbottom et al. in the Aug. 17 issue of JAMA. "A nutritionally adequate, strict vegetarian diet is, in fact, possible. Natural vitamin B-12 is synthesized by micro-organisms, and, accordingly, vegans may obtain vitamin B-12 from soy sauce (3 micrograms per 5 ml), miso, and tempeh, as well as certain seeds and nuts, or by colonic synthesis when adequate unheated seeds are eaten (U.D. Register, personal communication)... Our experience with hundreds of healthy, breast-fed infants indicates that omnivores, lacto-ovo-vegetarians, lacto-vegetarians, and strict vegans (some practicing lifetime avoidance of animal products) can nourish their infants adequately for the first few months of life without supplementation." Address: 1. USC School of Medicine; 2-3. Kaiser-Permanente Center, Los Angeles, California 90027.

2057. Autumn Press, Inc. 1978. Thoughtful gift-giving: Books by William Shurtleff and Akiko Aoyagi (Ad). *East West Journal*. Dec. p. 101.
 • **Summary:** This ¼-page black-and-white ad shows the cover and gives a brief description of three books: *The Book of Tofu* (\$7.95 / \$14.95). *The Book of Kudzu* (\$4.95 / \$10.00). *The Book of Miso* (\$7.95 / \$14.95). Address: Box E, 25 Dwight St., Brookline, Massachusetts 02146.

2058. *East West Journal*. 1978. Soy boom. Dec. p. 18.
 • **Summary:** "Over seventy people involved in the production of soy foods met in Ann Arbor, Michigan, this summer and established the Soycrafters Association of North America (SANA). The nonprofit organization will facilitate communication among the 140 businesses producing tofu, miso, soymilk, or tempeh. SANA reports soy foods have been received enthusiastically across the United States and Canada. Seventy new tofu shops and soy dairies have been established in thirty-one states in the last two years. For further information write SANA, Box 76, Bodega, California 94922."

2059. Kushi, Aveline Tomoko. 1978. How to cook with miso. New York, NY: Japan Publications Trading Co. 127 p.

Dec. Illust. Index. 26 cm.

• **Summary:** Contents: Foreword. Preface. Introduction. 1. How to use miso for soup. 2. Miso soup recipes. 3. Miso condiments and relishes. 4. Miso sauces and spreads. 5. Side dishes with miso. 6. Miso pickles. 7. Miso for fun. 8. Make your own miso. Glossary. Standard tables of food composition.

"Happiness is the realization of one's eternal dream." Michio Kushi says that "The cooking of food is the highest of all human arts." Page 25, under "Special suggestions for miso," notes that miso soup with mochi stops bed-wetting, and gives a mother who has just had a baby strength to recover more quickly and also help in producing milk for breastfeeding. "Miso soup is good for relieving the effects of tobacco toxication, or too much smoking. In the old days in Japan, the long tobacco pipes were often washed in miso soup. It was said that this made them very clean. The morning after drinking too much alcohol, miso soup is very effective for restoring energy and clear thinking. When you burn your skin, if at that time you don't have any tofu or green vegetables available to apply to the burn, you can use miso as a healing paste."

The section titled "What is miso? (Comment from Michio Kushi)" (p. 27) states: "According to Japanese mythology, miso was a gift to mankind from the Gods, to assure man's health, longevity, and happiness. Miso has been an important food in the Orient since the beginning of its civilization, and now is becoming a popular food in the West." Note: The source of this mythological idea is not given.

Pages 55-57 contain a "Basic Recipe for Homemade Seitan," but it is not used with miso.

2060. **Product Name:** Cold Mountain Firm Granular Rice Koji.

Manufacturer's Name: Miyako Oriental Foods, Inc.

Manufacturer's Address: 404 Towne Ave., Los Angeles, CA 90013.

Date of Introduction: 1978. December.

New Product-Documentation: Label. 1978. Shurtleff & Aoyagi. In 1978 Mr. Noritoshi Kanai of Mutual Trading Co. / Miyako Oriental Foods asked William Shurtleff and Akiko Aoyagi of Soyfoods Center to develop for him a trademark and package designs for him miso and koji. They recommended "Cold Mountain" as a brand name and also developed brochures and recipes explaining how to use the koji to make miso and amazake. 1983. *The Book of Miso*. 2nd ed. p. 238.

Economic World. 1987. June. p. 46. This article says that Miyako makes Amazake Drink in Almond, Chocolate, and Strawberry flavors. Bill Schiering reports that they do not; but they do supply several amazake manufacturers with koji.

2061. Swan Food Corp. 1978. Collected papers (Archival collection). Miami, Florida. 5 file folders, 1½ linear inches.

• **Summary:** Swan Foods was the first soyfoods company in the United States to make a wide variety of innovative soyfoods products. The company's papers are located at Soyfoods Center in Lafayette, California. In December 1978, when the company declared bankruptcy after about two intense years in business, Danny Paolucci cleaned out the office, keeping all documents that he believed might be of future importance. He kept them for 19 years, then sent them to Bill Shurtleff at Soyfoods Center at Shurtleff's request. Most of the papers relate to recipes. There are no commercial papers (invoices, ledgers, etc.).

Folder 1: Bulk soyfoods recipes, typed. Each recipe is typed on a sheet of 8½ by 11 inch lined paper. Recipes made in a Hobart mixer are marked with an asterisk (*) after the recipe name. The recipes (listed alphabetically) are: Baked tofu (with tamari sauce for marinade, bake at 350°F for 30-35 minutes). Caraway tofu (add 5 ingredients to curdling tofu; stir and let curds form). Carob cream cake* with topping (incl. 2 gallons soymilk). Cashew carob swirl cake* (incl. 3 gallons soymilk). Devils food cream cake* (incl. 2 gallons soymilk and tofu topping). Eggless egg salad* (incl. 10 lb boiled and cooled Swan Tofu). Marinade for tofu (incl. 1 gallon tamari; mix all ingredients in a 5 gallon bucket, add sliced tofu, and seal). Soy burgers* (incl. 2 gallons each cooked rice and fresh okara, and 2½ cups tamari). Tofu chip dip* (large and small; the small incl. 6 lb tofu boiled and cooled, ¼ cup tamari, and ¼ cup umeboshi plum paste; the large incl. 42 lb tofu).

Folder 2: Lists of ingredients for various soyfoods products typed on Swan Foods' blue-on-white letterhead: The products (listed alphabetically) are: Carob swirl marble cake (non-dairy) (incl. soy milk). Okara granola. Roasted cashew tofu pie (incl. tofu and organic soy milk). Soyogurt (non-dairy): Note: These ingredients are handwritten below a sample label design on the back of the bottom half of a Swan Foods order form.

Folder 3: Legal-sized yellow lined note pad with 17 pages of notes written in blue ink—probably by Mary Pung. Subjects: *Nutrition Almanac* (soybeans and soy milk, p. 71; malt, p. 76). One page of 6 bibliographic references for publications related to soy, with a large note: "Sell *Book of Tofu*, etc. in shop." *The Health Food Dictionary & recipes* (mu tea, p. 102; soybean, p. 159; tofu, p. 174). *Diet for a Small Planet* (Lappé, 1975 ed.) (protein table III—Legumes; notes on tofu, p. 102, soy yogurt vs. milk yogurt, p. 128-29; tofu, p. 132). *Recipes for a Small Planet* (Ewald, 1973) (table showing no. of calories you have to consume in order to get one gram of usable protein, p. 16; notes on Net Protein Utilization). *Soybean Diet* (Herman Aihara, 1974) (table of nutrients in various foods; cow's milk, p. 44; soybeans can help with environmental problems, p. 4; soybeans vs. meat, p. 6, 8-9; tofu preparation, p. 115; nigari,

p. 116; nutrient value of tofu, p. 125). *The Book of Tofu* (Shurtleff & Aoyagi, 1975) (moral and emotional appeal, health, religion, ecology, economic, p. 19; complementary proteins, p. 24, 26; easy to digest and diet food, p. 26; low in saturated fats and cholesterol, linoleic acid, rich in minerals and vitamins, p. 27; nigari, free of chemical toxins, p. 28; quick and easy to use, p. 29; ecological, nitrogen from the air, p. 55; okara, p. 77-78; uses of agé, deep-fried tofu, p. 154-55; soymilk, p. 200). Six interesting teas.

Folder 4: Handwritten recipes (some very rough) and notes, in pen and pencil, mostly on individual sheets of paper. Soy-related recipe names (listed alphabetically): Basic tofu cheesecake. Basic tofu pie. Carob marble cake. Carob on blonde with tofu topping (also called Blonde on carob; baked, with soy milk). Carob tofu pie. Dips in tofu containers: Chive tofu dip, pimento tofu dip, sea tofu dip, Italian herb tofu dip, pimento olive dip (ideas only). Dressings: Miso, avocado, green goddess, creamy garlic, red Russian, spinach Russian (ideas only). Eggless egg salad. Eggless tofu salad. Frozen tofu cutlets. Mary's deluxe pizza (with tofu, from "Swan Food Corp."). Milk shake. Nori rolls. Okara products: burgers, burritos, felafels (ideas only). Pumpkin pie. Quiche with tofu. Sweetened carob shake. Tofu lemon pie. Tofu mayonnaise. Tofu pie filling. Tofu pudding, vanilla. Tofu quiche lorraine [Note: According to the *Joy of Cooking* (1975, p. 254-55), early recipes for quiche called for bacon and cream, but later cheese was added. When sautéed onions were included, the dish was called Quiche Alsacienne. Quiche Lorraine now typically contains egg white, bacon, milk or cream, and Swiss cheese]. Tofu rice salad. Tofu tarts. Tofu turkey (Barbara's, with stuffing). Yogurt dressing. The names of some people are included: Diane Kellar. Sherry (nori rolls).

Folder 5: Other. Tear-off recipes published by Natural Recipes, 94 Bourne St., Boston, Massachusetts 02130. Carob brownies (copyright 1974). Carob cake (copyright 1975). Note: Neither of these recipes contains any soy. Address: 5758½ Bird Road, Miami, Florida 33155. Phone: (305) 667-7141.

2062. Nihei, Takao. 1978. Hawai ni okeru Nihon-shu, miso, shōyu no rekishi [A history of Japanese sake, miso, and shoyu in Hawaii]. *Nippon Jozo Kyokai Zasshi (J. of the Society of Brewing, Japan)* 73(5):346-50. [Jap]

• **Summary:** In 1868, the first year of the Meiji Period, the first 153 Japanese immigrants arrived in Hawaii on board the three-masted sailing ship Scioto (Saioto-go). They brought with them miso and shoyu. This article otherwise contains no mention of soyfoods.

Note: This document contains the earliest date seen for soybean products in Hawaii (1868); soybeans as such had not yet been reported by that date. Address: Honolulu Shuzo Seihyo Gaisha.

2063. Nihei, Takao. 1978. Hawai ni okeru Nihon-shu, miso, shōyu no rekishi. Miso, shōyu. Fu: Nenpyō oyobi raberu nado [A history of Japanese sake, miso, and shoyu in Hawaii: Miso and shoyu. With a chronology, copies of sake and shoyu labels, and a directory]. *Nippon Jozo Kyokai Zasshi (J. of the Society of Brewing, Japan)* 73(7):542-49. [14 ref. Jap]

• **Summary:** By far the best history of miso and shoyu in Hawaii, this work is a treasure. Address: Honolulu Shuzo Seihyo Gaisha.

2064. **Product Name:** Soy Sannies. Miso Tahini (Sandwiches with Miso-Tahini Spread).

Manufacturer's Name: White Wave.

Manufacturer's Address: 1738 Pearl St., Boulder, CO 80302.

Date of Introduction: 1978.

Ingredients: Miso (fermented soybean paste), tahini (sesame butter), walnuts, honey on sunflower seed whole wheat bread with alfalfa sprouts, avocado, tomato and missing egg mayonnaise (soycream, safflower oil, vinegar, honey, lemon, soy sauce).

Wt/Vol., Packaging, Price: 7.5 oz.

How Stored: Unrefrigerated and perishable.

New Product–Documentation: Label. 1978, dated. 3.5 by 4 inches. Paper. Black on white, photocopy. Interview with Steve Demos. 1987. Oct. Sold commercially at a few nearby retail outlets.

2065. A Chinese-English dictionary. 1978. Beijing, China: Shang wu yin shu guan. 976 p. 27 cm. [Eng; Chi]

• **Summary:** This dictionary uses pinyin transliteration, with accents; Chinese characters are given and definitions are in English. Soy-related terms include: Doubanjiang (thick broad-bean sauce), doubing (defatted soya bean cake; bean cake), douchi (fermented soya beans, salted or otherwise [soy nuggets]), doufu (bean curd [tofu]), doufufang (tofu shop), doufugan (pressed tofu), doufunaor (jellied bean curd), doufuru (fermented bean curd), doufupi (skin of soya bean milk [yuba]), doujiang (soya-bean milk), douqi (bean stalk), douyou (soya-bean oil), douzha (residue from beans after making soya-bean milk; bean dregs [okara]), douzhipin (bean products).

Note 1. This is the earliest English-language document seen (Feb. 2004) that uses the word “doufugan” to refer to Chinese-style tofu.

Note 2. This is the earliest English-language document seen (Oct. 2008) that uses the term “doufupi” (regardless of hyphenation or spacing) to refer to yuba. Address: Peking, China.

2066. Beuchat, Larry R. 1978. Food and beverage mycology. Westport, Connecticut. AVI Publishing Co. x + 527 p. See p. 224-42. Illust. Index. 23 cm. [300+* ref]

• **Summary:** Chapter 9, “Traditional fermented food products (p. 224-53), by Larry R. Beuchat, is cited separately.

In Chapter 13, “Metabolites of Fungi Used in Food Processing” (p. 368-96), by R.J. Bothast and K.L. Smiley, the section on enzymes (p. 378) begins: “Fungal enzymes have been used for hundreds of years, especially in the Orient. However, modern industrial enzyme technology probably started with Takamine (1894) [Note: In Sept. 1894 he was issued two U.S. Patents for “Process of making diastatic enzyme,” Nos. 525,820 and 525,823] and his work with *Aspergillus oryzae*. Today many industrial enzymes are of fungal origin.” These include α -amylase (from *Aspergillus oryzae* and *A. niger*), glucoamylase, pectic enzymes or pectinases, naringinase, invertase (sucrase), α -galactosidase, lactase (β -D-galactosidase), protease (from *Aspergillus oryzae*), rennet (called rennin, if pure; from *Mucor pusillus*, *Mucor miehei*, or *Endothia parasitica*; used in many types of cheeses), and glucose oxidase, cellulase, lipase, catalase.

There are also chapters on: 14. “Mycotoxins,” by N.D. Davis and U.L. Diener. 15. “Methods for detecting mycotoxins in foods and beverages,” by L.B. Bullerman. 16. “Methods for detecting fungi in foods and beverages,” by B. Jarvis. Address: Assoc. Prof., Dep. of Food Science, Agric. Exp. Station, Univ. of Georgia, Experiment, GA.

2067. Beuchat, Larry R. 1978. Traditional fermented food products. In: L.R. Beuchat, ed. 1978. Food and Beverage Mycology. Westport, Connecticut. AVI Publishing Co. xi + 527 p. See p. 224-53. Chap. 9. [69* ref]

• **Summary:** Contents: Introduction, Koji. Soybeans: Shoyu, miso, natto (incl. itohiki-natto, yukiwari-natto, and hama-natto / hamanatto), sufu, meitauza, témpé. Peanuts: Oncom. Rice: Lao-chao, ang-kak, idli. Maize: Ogi, kaanga-kopuwai, injera. Cassava: Tapé, gari. Taro (*Colocasia esculenta*): Poi. Cacao beans: Cocoa, chocolate, and chocolate liquor are products derived from cacao fruits (*Theobroma cacao*).

Tables show: (1) Some fermented foods of fungal origin. For each food is given: Product name, geography, substrate, microorganisms, nature of product, and product use. Soy-related products include: Chee fan, Chinese yeast, Hamanatto, ketjap, meitauza, meju, miso, shoyu, sufu, tao-si, taotjo, and témpé.

“Yukiwari-natto is made by mixing itohiki natto with rice koji and salt, and aging at 25 to 30°C for about two weeks.” Note 1. Yukiwari natto is natto resembling miso, featuring the stickiness (*nebari*) of natto and the sweetness of koji. It is made by a two-step fermentation. Another process: (1) Make the natto and the koji, separately. (2) Mince natto finely and mix it with koji, shoyu, and dashi made from kombu. Ferment at 30-33°C for 30-40 days.

Note 2. This is the earliest English-language document seen (Aug. 2006) that mentions the term yukiwari-natto (or

yuki-wari natto). Address: Dep. of Food Science, Agric. Exp. Station, Univ. of Georgia, Experiment, GA.

2068. Calella, John R. 1978. *Cooking naturally: An evolutionary gourmet cuisine of natural foods*. Berkeley, California: And/Or Press. ix + 112 + 5 p. Illust. by Pedro J. Gonzalez. Index. [81 ref]

• **Summary:** The author of this vegetarian cookbook, of Italian ancestry, is popularly known as “Organic John.” He likes to use fresh foods, and he has a call-in radio show in San Francisco. In chapter 4, Ingredients (p. 16-), he discusses soya butter [margarine], miso, tamari, instant protein powder (incl. Shaklee’s Instant Protein), lecithin granules, Soyamel powder (powdered soymilk made by Worthington Foods), Balanced protein seasoning (powdered HVP made from soybeans).

Chapter 10 (p. 79-83) contains a long section on soya beans, with recipes: Homemade soya bean curd (tofu). Things you can do with tofu. Soya patties (with dry soya beans). Soya bean loaf. Green soya bean mix (with dry green soya beans). Soya beans in a beet stew. Soya bean spread.

In the section on Fruit Sherbets, many of the recipes contain 2 tablespoons Soyamel (powdered soymilk) and lecithin granules. Address: Berkeley, California.

2069. Calkins, Peter H.; Huang, Kuang-Rong. 1978. *Soybean production in Taiwan: A farm survey*. AVRDC *Technical Bulletin* No. 11 (78-89). 27 p. (Shanhua, Taiwan). [15 ref. Eng]

• **Summary:** Describes profitability and yield from soybean, the motivations and problems of farmers, and the reaction of farmers in the past to measures such as the extension of improved varieties. Since 1973 scientists at the Asian Vegetable Research and Development Center (AVRDC) have been working to improve soybean’s contribution to consumer diets and farmer incomes in Asia. In Taiwan soybean is used as a source of cooking oil, “milk, beancurd, sprouts, fresh seed, dried seed, flour and a green vegetable (the stems and leaves are fried).” It is also used to make textured vegetable protein products such as artificial chicken and fish; when cooked with miso, soysauce, and various spices, these “are practically indistinguishable from the real versions. Entire banquets of rice and little else but soybean are routinely served in the vegetarian restaurants and Buddhist monasteries of Taiwan.”

“In 1976, the government of Taiwan started guaranteeing a price of US\$277/tonne to encourage farmers to plant more soybeans. The response has been modest, largely because soybeans have not been as profitable as competing winter crops, such as adzuki beans.” Table 1 (p. 2) shows that between 1967 and 1976, the area planted to soybeans in Taiwan decreased from 52,000 ha to 36,000 ha, the farm price increased from US\$188/tonne to \$256/tonne,

production decreased from 75,000 tonnes to 53,000 tonnes, but imports increased dramatically from 347,000 to 780,000 tonnes (more than doubling). Thus the total supply/consumption of soybeans in Taiwan (domestic production + imports) increased from 422,000 tonnes to 833,000 tonnes, while domestic production as a percentage of total consumption decreased from 18% to 6%.

“Before 1945 most soybean cultivars in Taiwan were of local origin, with an average yield of only 500-600 kg/ha. However, the government introduced Japanese cultivars such as ‘Shih-shih’ and Palmetto’ in 1952. Since the early 1960s, scientists in Taiwan have also worked to develop improved cultivars by crossing cultivars introduced from abroad (in this report, the former will be termed ‘improved’ and the latter ‘introduced’ cultivars). As a result, the percentage of farmers planting introduced and improved cultivars has increased steadily, from about 53% in 1963 to 92% in 1976 and yield has risen to 1.5 tonnes/ha.” Address: 1. Assoc. Agricultural Economist; 2. Research Assistant. Both: AVRDC, Shanhua, Taiwan.

2070. Duff, Gail. 1978. *Gail Duff’s vegetarian cookbook*. London: Macmillan. 374 p. Index. 23 cm.

• **Summary:** Pages 14-15 note that: “Products made from soya beans are very important in meatless diets...” She uses tamari, miso, whole dry soybeans, and soya flour, but has an intense dislike of TVP (textured vegetable protein). Soy-related recipes include: Soya mayonnaise (made with soya flour, p. 81-82). Barbecued soya bean and tomato spread (p. 246). Crunchy soya bean sandwich spread (p. 247). Miso, onion and parsley sauce (p. 319). Basic soya bechamel (p. 319).

The section titled “Soya beans” (p. 190-97) has a nice introduction followed by recipes for: Salted soya beans. Basic method for soya beans. Soya bean hot pot. Soya bean blanquette. Soya bean goulash. Soya bean and tomato casserole. Spiced lemon soya beans. Barbecued soya beans. Soya beans with cucumber–Chinese style.

2071. Duquette, Susan. 1978. *Sunburst Farm family cookbook: Good home cookin’ the natural way*. 2nd ed. Santa Barbara, California: Woodbridge Press Publishing Co. 303 p. Illust. by Donna Wright. Photographs by Mehosh Dziadzio. From the Sunburst Farms Communities. Recipe index. 23 cm.

• **Summary:** This book is identical to the 1976 edition except that it comes from Sunburst Farms Communities instead of The Brotherhood of the Sun. The title and first paragraph of the introduction have been changed to read: “Sunburst Farms Communities is a family of more than 300 people, who have dedicated themselves to living in harmony with all people and all things.” Address: Santa Barbara, California.

2072. Ford, Barbara. 1978. *Future food: Alternate protein for the year 2000*. New York, NY: William Morrow and Company, Inc. 300 p. Index. 22 cm. [40+ ref]

• **Summary:** The author concludes that soybeans are most likely to be the protein source of the future. Chapter 2, “The Cinderella Bean” (p. 32-53) and Chapter 3, “Soybeans, Oriental Style” (p. 54-71) both discuss the benefits of soybeans. Pages 37-38 note that soybeans were once called “haybeans” and their hay was called “haybean hay.” Note: This is the earliest English-language document seen that which uses the term “haybean” or “haybeans.”

The work of the USDA Northern Regional Research Lab. with soyfoods is described at length. Chapter 6, “It Ain’t (Just) Hay,” is about alfalfa leaf protein and leaf protein concentrate. Research on leaf protein “really started during World War II, when British scientist N.W. Pirie suggested the use of leaves to augment dwindling meat supplies... Pirie’s proposal never got underway during the war because of the costs involved, but after the war he was given a laboratory where he carried out most of the pioneering work on leaf protein.”

Chapter 9, “SCP: Promises, Promises,” is about single-cell proteins such as the bacteria *Cellulomonas* and *Pseudomonas* (the champion, which can double its weight in 9 minutes). A probable culprit in SCPs is “nucleic acids, which have been shown to cause elevated uric acids in humans if used over an extended period of time. Raised uric acid levels lead to gout, kidney stones, and gallstones. Some bacteria contain from 15 to 16 percent nucleic acids, a fairly high level. Yeasts and fungi contain from 6 to 11 percent, still a high level. Algae have less.” It is recommended that humans not consume more than 2 grams (0.7 ounces) or nucleic acids per day. Address: USA.

2073. Frazier, W.C.; Westhoff, D.C. 1978. *Food microbiology*. 3d ed. New York, NY: McGraw-Hill Book Co. xvi + 540 p. Index. 24 cm. [400+* ref]

• **Summary:** Contents: 1. Food and microorganisms. 2. Principles of food preservation. 3. Contamination, preservation, and spoilage of different kinds of foods. 4. Foods and enzymes produced by microorganisms. 5. Foods in relation to disease. 6. Food sanitation, control, and inspection.

In the section on “Oriental fermented foods” (p. 387-91), the following soy-related foods are mentioned: Koji (*chou* in Chinese), soy sauce, tamari sauce, miso, tempeh, natto, soybean cheese or *tou-fu-ru*. Address: 1. Univ. of Wisconsin 2. Univ. of Maryland.

2074. Hagler, Louise. ed. 1978. *The Farm vegetarian cookbook*. Revised ed. Summertown, Tennessee: The Book Publishing Co. 223 p. Illust. Index. 22 cm.

• **Summary:** An expanded and extensively revised version of its pioneering and very creative and influential

predecessor. There are excellent expanded sections on gluten (p. 76-81), tempeh and tempeh starter (p. 82-93), miso (p. 93), soymilk (p. 95-101), Ice Bean (soy ice cream, including recipes for 5 flavors), Frogurt (soymilk frozen yogurt, p. 107), soy yogurt (p. 108-13 including a non-fermented cheese made by draining soy yogurt curds in a cotton bag; from this “yogurt cheese” are made soy-based cottage cheese, sour cream, cream cheese, and cheesecake), tofu (p. 114-41), yuba (142-43), soy coffee, soy nuts, granola, and Soysage (p. 144-47), soy flour (p. 148-53), sprouts (incl. alfalfa, mung beans, and soybeans, p. 154-57). Address: Summertown, Tennessee.

2075. Kawamura, Wataru. 1978. *Miso shōyu* [Miso and shoyu]. Tokyo: Tokyo Shobo-sha. 376 p. 22 cm. Series: *Nihon no Aji Meicho Senshū* (Selected Great Books on Japanese Taste). Reprinted in 1983 as *Miso shoyu no hyakka* [Encyclopedia of miso and shoyu]. [Jap]

• **Summary:** Contents: Topography of miso in Japan (*Miso fudoki*, p. 7). Miso in festivals, rituals, customs, and sacred rites (*Miso saijiki*, p. 92). History of miso (p. 120). Classical miso cookery (short recipes, p. 139). Collection of beautiful words about miso in proverbs, poems, and songs (p. 169). A short history of shoyu (p. 187). Documents: History of miso and shoyu (p. 195). Kojiruien–Inshoku-bu (Food & drink section, on shoyu, p. 354). Chronology of miso (p. 366-72). Address: 2-4-7 Kugenuma, Tachibana, Fujisawa-shi, Kanagawa-ken 251, Japan.

2076. Kawamura, Wataru. 1978. *Miso shōyu no hyakka* [Encyclopedia of miso and shoyu]. Tokyo: Tokyo Shobo-sha. 376 p. 22 cm. Series: *Nihon no Shokubunka Taikei* (Japanese Food Culture Collections), no. 10. [Jap]

• **Summary:** This is a reprint of the author’s 1978 book *Miso shōyu* [Miso and shoyu]. Address: 2-4-7 Kugenuma, Tachibana, Fujisawa-shi, Kanagawa-ken 251, Japan.

2077. Marukome Miso K.K. 1978. *Go annai* [Introduction (Brochure)]. Nagano, Japan. 10 p. 30 cm. [Jap]

• **Summary:** Contents: Introduction. About the company: Aerial color photo, statistics (factory is 39,000 square meters, annual production of miso is 30,000 tons/year), chronology of company (started in 1854). The miso production process, with 10 color photos including one of an automated koji room. The company’s products (9 color photos, incl. Maru-chan). Film strips / Clips from color TV commercials. Map showing location of regional plants and sales offices. Marukome soybean farm in New South Wales, Australia. Address: Nagano City, Japan. Phone: (0262) 26-0255.

2078. Miller, Lindsay. 1978. *The apartment vegetarian cookbook*. Culver City, California: Peace Press. 312 p. Index. 22 cm. [30 ref]

• **Summary:** Soy-related recipes include: Soybean bulgar casserole (p. 148). Soybean stuffed eggplant (p. 157). Soybean creole (with brown rice and tomato paste, p. 175). Soybean patties (p. 182). Whole wheat soy bread (with soy flour). Cornmeal-soy grits bread (p. 211). Wheat germ-soy grits bread (p. 212). Quick wheat-soy bread (p. 219).

The glossary contains substantial entries for miso, peanut butter, soy beans, soy flour, soy grits, tamari soy sauce, tisanes or herb teas, and tofu. Address: Culver City, California.

2079. Muljokusumo, E. Sudigdo. 1978. Hasil proses fermentasi, kedelai dijadikan lebih bergizi [As a result of the fermentation process, the soybean is made more nutritious]. Bandung: Tarate. 79 p. [Ind]*

2080. Needleman, Larry. 1978. The Tofu Kit story. In: *The Briarpatch Book: Experiences in Right Livelihood and Simple Living from the Briarpatch community*. San Francisco: New Glide / Reed Book. xiii + 313 p. See p. 237-40. 24 cm.

• **Summary:** In the spring of 1976 (about April or May) Larry decided it was time to create a situation that utilized his food karma and experience, “but that wasn’t a quick burnout like a restaurant, and was healthy and made sense world economically—one that would provide unlimited personal and spiritual growth and was a service.” He committed himself to positive thinking and positive action. He began fasting a lot, meditating, praying and concentrating regularly, taking his jogging seriously and generally just putting out good energy. “About a month into this I remember saying, ‘O.K., Lord, I’m ready, lay it on me.’ And that week the Tofu Kit was born.

“Inspiration: I had just received test results from a physical exam, saying I was in fine shape but my cholesterol was too high. That day, as I remember, I saw a copy of *The Book of Tofu*, by Bill Shurtleff and Akiko Aoyagi. It blew me wide open. I used tofu like any other good, miso-soup loving hippie, but hadn’t connected heaving with the bland, unappealing white cake. But the book gave marvelous ways to use this new-found ‘friendly’ food and pointed out how shifting from meat to tofu could have a direct effect, helping feed people elsewhere. Some 300 pages and 500 pages recipes later I came to the book’s last page, ‘Sending Tofu to the Four Directions,’ an inspirational page that said, ‘Do it!’ So I did.

“Three of us were sitting around a wood stove in Sonoma County talking about tofu and tofu making, when the word ‘kit’ popped up. It rang the bell. I immediately began researching and developing the kit the very next day and have continued to work on it daily since then. This is my first venture into the manufacturing world.

“Connection: When the kit was about 3/4 of the way to market, Bill and Akiko arrived from Japan and Bill called

me to say he’d heard from Westbrae Natural Foods that I was working on a tofu kit. I was really excited. He invited me to share food, films, and tales of tofu with him and asked me to bring the kit. What a connection! That meeting, one of several, tuned up and accelerated the kit. We talked of and planned many projects together, and then around midnight on the first of October [1976], I bid Bill and Akiko good-bye as they began a four-month speaking tour. Bill left me with instructions to meet with The Farm Food Co. people in San Rafael, California, and to begin organizing a school to share the technology and equipment of small-shop tofu making with hundreds of people in this country who were waiting for it; I left him with 200 Tofu Kits and a sales rep. agreement. Orders started pouring in for Tofu Kits, but production wasn’t pouring out.”

Larry moved from Occidental, California, to Corte Madera (P.O. Box 829), which was much closer to San Francisco. Describes expansion of production and designing a school, The Learning Tree, at the Farm Food Co. The term will be about 3 weeks long and enrollment limited to about 10 students per term. The kit retails for \$11.95. A photo shows Larry holding his Tofu Kit. Address: The Learning Tree, P.O. Box 829, Corte Madera, California 94925.

2081. Null, Gary; Null, Steve. 1978. *The new vegetarian: Building your health through natural eating*. New York, NY: William Morrow and Company, Inc. 350 p. Index. 22 cm. [63 ref]

• **Summary:** In the chapter titled “Incomplete Protein Foods,” soybeans are discussed on pages 183-86. A brief introduction is given to soy protein concentrates, isolates, spun protein fibers, and textured vegetable proteins. Full-fat soy flour, soy granules, soy flakes, and defatted soy flour and grits are available in natural-food stores.

“In striking contrast to these highly refined products of the West are the traditional East Asian products, tamari soy sauce, miso (fermented paste), and tofu... Tofu (soy curd or soy cheese) is a truly remarkable food. It is very inexpensive when purchased at Oriental markets or natural food shops and even more so if made at home.” A description of how to make tofu and a summary of its nutritional benefits are given.

The soybean is “delicious when served a fresh green summer vegetable, simmered or steamed in the pod.” Or as roasted soybeans [soynuts, dry-roasted or oil-roasted], cooked whole dry soybeans, tempeh, or soy sprouts. The same chapter also discusses miso and tamari in detail (p. 197-99), wheat gluten (p. 178-79), and azuki beans (p. 180). Address: Director, Nutrition Inst. of America, New York. Host of the daily radio program “Natural Living.”

2082. Perkins, David W. ed. 1978. *Hong Kong and China Gas Chinese cookbook*. Hong Kong: Published for the Hong Kong & China Gas Co. by Pat Printer Associates Ltd.

(Hong Kong). 319 p. Illust. (mainly color). Index to recipes. 31 cm.

• **Summary:** A treasure for anyone who admires Chinese cookery, this large, oversized, visually spectacular and beautifully designed book is also rich in culture and history. Comprehensive, with many insights, it contains numerous two-page color spreads. One of the best books seen to date (1978) on Chinese cookery, except for its poor index.

Hong Kong is located on the Pearl River Delta in China, bordering the province of Guangdong to the north and facing the South China Sea to the east, west and south. Its cuisine resembles that of Canton.

A full-page color map of China shows (with different colors) China's four main regional cuisines: Northern (incl. Beijing), Eastern (incl. Shanghai and Nanking), Southern (incl. Canton, Kwantung and Kwangsi), and Western (incl. Hupei, Hunan, Szechwan, Kweichow, and Yunnan).

Peking is only 40 miles away from the nearest point of the Great Wall of China, which started to be built during the Ch'in / Qin Dynasty (225 BC to 207 BC) as protection against invasion by Tartar Hordes. Genghis Khan (1162-1227) is said to have been the first to penetrate it (p. 21).

The last period of Imperial rule in China was the long-lasting Ch'ing / Qing Dynasty (1644-1911) (p. 22).

Since ancient times, when the feet become swollen, the Chinese have eaten peanuts and soya beans (p. 38).

Buddhist vegetarian cookery has existed in China since the 10th century AD (p. 60).

The section titled "Soya beans" (p. 62-63) mentions bean curd or tou fu ("the most versatile of foods in the hands of any cook with any degree of imagination"), soy sauce, soya bean 'milk,' dried bean curd, frozen bean curd, and mao tou [green vegetable soybeans] (which "make a delicious hors d'oeuvre when prepared Shanghainese-style").

The "mysterious MSG (Monosodium glutamate) is a ubiquitous 'instant flavouring'; but more dishes have been spoiled by the addition of too much MSG rather than by the addition of too little" (p. 76).

A large colored photo and accompanying numbered outlined diagram (p. 77-78) shows many different seasonings, incl. Hoisin sauce, hot bean paste, dark soy sauce, light soy sauce, and Worcestershire sauce. "Soy sauce rules the kitchen as undisputed emperor. Basically a fermented extract of the soya bean with salt added, it is available in three main types: heavy or 'black'; dark, containing caramel as colouring and light (both in colour and flavour)." The finest, most expensive, and most concentrated is the first extraction. Specialty soy sauces flavoured with mushrooms or shrimp roe are also available.

"Black bean sauce is a near relative of soy sauce, being made from salted, fermented black soya beans. Again, mention must be made of the three main types of soya bean pastes: hot (with chillies), sweet (with flour, sugar and

spices [t'ien mien chiang]) and yellow, which is very salty indeed... *Hai Hsien* [Hoisin] sauce combines garlic, chilli, beans and ginger with other elements."

A color photo shows most recipes. Soy related recipes include: Shredded pork with dry beancurd saute (p. 112). Chopped soya bean sprouts with pork (p. 113). Stewed lamb with dried beancurd (p. 127). Stir fried chicken with [soya] bean paste (p. 135). Roast Peking duck (with 4 tablespoons "sweet bean paste," p. 153). Braised duck with lo han vegetables (and 60 gm "fried beancurd cubes," p. 156). 'Lu Shui' goose (p. 157; the Lu Shui sauce is made with 250 gm sugar, 250 gm salt, 2 five-spice bouquets, 250 ml light soy sauce, 10 slices ginger). Braised fish with beancurd and vegetables (p. 161). Eight treasure beancurd soup (with "4 squares soft beancurd," p. 193). Vermicelli and fried beancurd soup (p. 199). Beancurd with shredded pork in soup (p. 201). Fried beancurd (p. 204-05). Spicy beancurd with ground pork (Ma P'o tou fu, p. 208). Braised beancurd with mushrooms (p. 212). Beancurd stuffed with shrimp paste (p. 215). Steamed fish and beancurd cake (p. 221). Vegetarian goose (Su ngo, with "20 dried beancurd skins [yuba], about 41 cm = 16 inches in diameter," p. 227). A full-page photo shows a quern = hand turned stone mill (p. 243). Sweet bean paste dip (*tien tou chiang*, with "4 tablespoons sweet bean paste," p. 278).

Also: Sweet red bean paste (*hung tou sha hsien*, with small red beans [azuki], p. 278).

Glossary (p. 302-11, with Chinese words romanized in pinyin) incl.: Beancurd (*doufu*). Beancurd, dry (*toufu gan*). Bean curd cubes, fried (*zha doufu*). Beancurd cubes, preserved (*la furu*, spicy fermented tofu); also known as preserved beancurd and Chinese cheese. Beancurd skins, dried (*fupi*) [doufu pi, yuba]. Beancurd sticks, dried (*fuzhu*); used frequently in vegetarian cooking. Bean pastes (*gan shi jiang*). Sauces produced from soya beans and other ingredients: Hot bean paste (*xiang shi la jiang*), soya bean paste (*mo shi jiang*), "sweet bean paste (*tian shi jiang*; produced from fermented black soya beans, flour, sugar and spices. Substitute: Hoisin sauce." Note: This is the earliest document seen (Feb. 2009) that uses the term "sweet bean paste" to refer to a Chinese paste made with soybeans. Yellow bean paste (*dou ban jiang*). Bean sprouts: Shoots of the mung bean or the soya bean (*da dou ya cai*), the latter being much larger and stronger flavoured. "Black beans (*dou shi*): Salted, fermented black soya beans, Lightly salty in flavour. Used as seasoning. Will keep indefinitely in dry conditions. Chinese cheese (see beancurd cubes, preserved). Dry beancurd (see beancurd, dry). Flour—"High gluten flour (*gao jin fen*): A special kind of 'strong' flour, which gives extreme elasticity, making it possible to roll out the dough to very fine layers. Used for wonton wrappers." Fried beancurd cubes (see beancurd cubes, fried). "Hoisin sauce (*hai xian jiang*): A seasoning sauce or condiment made from red beans (*hong dou*) [azuki], soya beans, sugar and spices.

Sweet-spicy and tangy in flavour. Sold in cans or jars... Also known as Seafood Sauce and Barbecue Sauce.” Hot bean paste (see bean paste). ‘Lu Shui’ sauce (*lu shui zhi*, in Cantonese ‘Lu Soy’). A ‘master sauce’ or more accurately, a stock made with soy sauce, sugar, five spices and ginger. Used for simmering foods, particularly poultry. It gives a rich flavour and deep brown colour. For recipe see p. 157. Note: Widely used in Shanghai, and in Jiangsu and Zhejiang provinces). “Mao tou green peas (*mao dou*): Small beans, grown in the north, with dark-green, slightly hairy pods, which should be removed. Substitute: lima beans.” Monosodium glutamate. Oyster sauce (*hou you*): A viscous dark-brown sauce made from oysters and soy sauce through a process of fermentation. Used as a flavouring and/or colouring agent and as a condiment. Sold in bottles.” Preserved beancurd (see beancurd cubes, preserved). Red beans (*hong dou*), [azuki]. Soya bean paste (see bean paste). Sweet bean paste (see bean paste). Yellow bean paste (see bean paste).

Talk with Cecilia Chiang, founder of The Mandarin restaurant in San Francisco. 2009. Feb. 16. She has this book. The authors of this book are not well known in China; they are mostly amateurs. The best Chinese cookbooks are written by Fu Peimei, a lady who was a real authority on all the different styles of Chinese cooking; she is no longer living. Many of her cookbooks are in both English and Chinese. Concerning “Bean paste,” some of these are no longer available in the USA. Cecilia says Sweet bean paste may be something like *t’ien mien chiang*. Hoisin sauce is not used in Beijing, Shanghai, or anywhere in northern China; it is used mainly in Canton and south China. Cecilia thinks “Sweet bean paste” (*t’ien shih chiang*, p. 303) may be used only in Hong Kong. Most Chinese have never heard of this kind of sweet bean paste. True Cantonese food is quite different from that of Hong Kong. Cecilia knows Cantonese cooking very well; she goes there several times every year. Cantonese make the best soups, the best steamed fish and steamed chicken, and also their famous pork sausage (*la chong?*). Beijing cookery uses hard tofu, but most soft and silky tofu is imported from Japan.

2083. Rhoads, Sharon Ann; Zunic, Patricia. 1978. *Cooking with sea vegetables: 150 natural-style recipes*. Autumn Press, 25 Dwight St., Brookline, MA 02146. 136 p. Illust. by the author. Recipe index. 18 x 26 cm. [99* ref]

• **Summary:** Contents. Preface. Acknowledgements. I. Sea vegetables: Past and present. The bounty of the sea. Plants of a thousand uses. Preparing sea vegetables. II. Cooking with sea vegetables: Kombu and the kelps. Arame. Wakame. Nori. Hijiki. Agar. Irish moss. Dulse. Appendixes: Sources of sea vegetables. Nutritional value of sea vegetables. Bibliography. Address: New York City.

2084. Smith, Allan K.; Circle, S.J. eds. 1978. *Soybeans: Chemistry and technology*. Vol. 1. Proteins. Revised. Westport, Connecticut: AVI Publishing Co. xiii + 470 p. Illust. Index. 24 cm. [500+ ref]

• **Summary:** This revised edition contains relatively few, unimportant changes from the original, classic 1972 edition. The following changes have been made: Addition of a 7-line preface to the “revised second printing” dated 4 Oct. 1977, updating of a graph of U.S. soybean production (p. 1). Updating (to 1976) of a table on U.S. and world production of important oilseeds (soybeans, cottonseeds, peanuts, sunflower, rape, sesame) (p. 2). Minor textual changes on pages 18-19. Addition of a table showing distribution of the 3 leading soybean varieties in 14 major states and the percentage of acreage harvested for each variety in 1976 (e.g., in Illinois, Williams accounted for 25.1% of harvested acreage, Amsoy 17.3%, and Wayne 12.8%). And updating of a table on U.S. soybean production by state showing acreage harvested, yield per acre, and production for 1974, 1975, and 1976 (p. 32).

The foreword, chapter titles, and index have not been changed at all. Note: Vol. 2 was never published. Address: 1. Oilseeds protein consultant, Hot Springs, Arkansas; 2. Oilseed protein consultant, Protein Technology, Richardson, Texas.

2085. Sussman, Vic S. 1978. *The vegetarian alternative: A guide to a healthful and humane diet*. Emmaus, Pennsylvania: Rodale Press. xvii + 286 p. Index. 22 cm. [39 ref]

• **Summary:** Explains the fundamentals of a vegetarian diet. Covers nutrition, protein requirements, health, world food crisis, recipes, and kitchen techniques. Paul Obis, editor of *Vegetarian Times*, has called this “the most complete, concise, and nondogmatic book we have come across.” Keith Akers says that this is one of his four favorite books on vegetarianism.

This book contains extensive information on soyfoods (p. 248-50) including soymilk, tofu, tempeh, miso, and soy flour. The author’s greatest praise is for tofu. Of *The Book of Tofu*, by Shurtleff and Aoyagi, he says (p. 274): “The most important book on food ever published for vegetarians—if not all the world. Clear prose and beautiful illustrations... Five hundred recipes for preparing this versatile and nutritious food. Buy this book...” Address: Trivilah, Maryland.

2086. Takahashi, Takeshi. 1978. *Miso no kôyô* [The virtues of miso]. Tokyo: Arrow Shuppansha. 215 p. [Jap]*

2087. Yanwar, Afrida Nazir; Saparsih, Sri Budhi. comps. 1978. *Selected abstracts of traditional fermented food*. Jakarta, Indonesia: National Scientific Documentation

Center, Indonesian Institute of Sciences (PDIN-LIPI). iv + 470 p. Author index. 29 cm. [506 soy ref]

• **Summary:** These are abstracts of documents published from 1910 to 1976 on traditional fermented food, particularly of food prepared and consumed in Southeast Asia and the Far East. Each chapter is divided into 6 sections: Method of preparation, microorganisms, fermentation studies, nutritive values, other influence in the foodstuff, storage. Within each section, the references are listed alphabetically by author. The source of most of the references is *Chemical Abstracts*, to which an exact citation is usually given.

Contents: Preface. Introduction. 1. Fermented rice (incl. tape ketan [tapeh], sake, awamori). 2. Fermented soy beans: Soysauce (p. 173-294; 350 references), tempe (p. 294-307; 43 refs), natto (p. 307-312; 13 refs), miso (p. 312-343; 100 refs). 3. Fermented coconut press cake (bongkrek; p. 345-47). 4. Sauerkraut. 5. Fermented fish. 6. Vinegar. 7. Fermented cassava (tape / tapeh). Author index (p. 459-70).

Financial assistance was received from the National Institute of Chemistry, the Indonesian Institute of Sciences, the Indonesian Protein Project in the framework of ASEAN-Australian Economic Co-operation. Address: Indonesia.

2088. Zurbel, Runa; Zurbel, Victor. 1978. The vegetarian family: With recipes for a healthier life. Englewood Cliffs, New Jersey: Prentice-Hall, Inc. 185 p. Edited by Lester Alexander. Illust. Index. 23 cm. [44 ref]

• **Summary:** The section on soybeans (p. 62-67) discusses soybeans and soyfoods, then gives recipes for: Basic soybeans. Mediterranean soybean casserole Soybean casserole. Soybean salad. Soy milk. Sesame soy milk. Roasted soybeans (baked). Other soy-related recipes include: Soyburgers (p. 80). Ginger tamari sauce (p. 118). Miso yogurt dip (p. 127).

The section titled "Basic Macrobiotic Cooking" discusses shoyu tamari, and miso, and gives recipes for: Miso soup. Miso spread. Nerimiso (Sweet simmered miso).

Chapter 7 (p. 88-101) is titled "Tofu: The food of the future—Discovered over two thousand years ago." A full-page photo opposite the title page shows a wooden forming box, with cakes of tofu and soybeans nearby. *The Book of Tofu*, by Shurtleff and Aoyagi, is praised and credited as the source of much of the information on tofu in this book. Recipes include: Quick tofu. Homemade traditional tofu. Tofu sandwich. Tofu salad. Tofu and peas. Tofu and snow peas. Tofu and Chinese vegetables. Tofu and [mung] bean sprouts. Tofu and sesame. Kinugoshi and how to make custard style kinugoshi. The chapter ends with 2 pages on tempeh, but no recipes.

2089. Kyoto Prefecture, Norinbu, Nosan Fukyuka. 1978? Kyôto-fu ka ni okeru tezukuri miso no jittai: 52 nendo

seikatsu kaizen fukyû kadai shushu jigyô hôkoku [The present status of homemade miso in Kyoto prefecture: 1977 report of the enterprise to collect and popularize subjects that will improve the quality of daily life]. Kyoto. 65 p. Undated. Illust. 26 cm. [Jap]*

2090. **Product Name:** Marukome Country-style Miso Soup [With Wakame].

Foreign Name: Marukome Inaka Miso-shiru (Wakame Iri).

Manufacturer's Name: Marukome Miso K.K.

Manufacturer's Address: Nagano, Japan.

Date of Introduction: 1978?

Ingredients: Country-style (*inaka*) miso, dried wheat gluten (*fu*), wakame, negi onion, bonito powder, kombu, monosodium glutamate (*kagaku chômiryô*)

Wt/Vol., Packaging, Price: 4 packets, each 36 gm.

How Stored: Shelf stable.

New Product-Documentation: Package with Label sent by Dr. Walter Wolf of Peoria, Illinois. 2000. Aug. 5. The colorful package has a use-by date of 1978 Jan. 25. Size: 5¼ by 6½ inches. Foil pouch. Color photo of a reddish-brown bowl of miso soup. In the lower left is Maru-chan, the company logo.

Note: Below the list of ingredients we read that the company also makes Shinshu Miso and Akadashi Miso.

2091. Shurtleff, Willam. 1978? La soja, esperanza mundial: Nuevos alimentos con modalidades muy antiguas [The soybean, hope for the world: New foods with ancient roots]. *Chacra y Campo Moderno (Buenos Aires, Argentina)*. [8 ref. Spa]

• **Summary:** Discusses soy protein and world hunger, tofu, tempeh, and miso. Growth of the soybean industry worldwide. Address: P.O. Box 234, Lafayette, California 94549. Phone: 415-283-2991.

2092. Belleme, John. 1979. Re: Starting a new miso company with Sandy Pukel and Michio Kushi. Letter to William Shurtleff at New-Age Foods Study Center, Jan. 1 p. Undated. Handwritten, with signature on letterhead.

• **Summary:** "Dear Bill—Last weekend Sandy, Michio and I got together in Boston to discuss the miso factory. We agreed on a few points. I know you are interested in the project so would like to keep you posted. Also, we need your opinion on a few points.

"First, thanks for sending your miso book, I have read it and found it very informative. We are now going full steam ahead. I am learning Japanese. Michio is going to Japan in May to set up an apprenticeship program for me. Sandy and I have started looking for the land..."

"Bill, If you were going to make miso in the U.S., based on climate, what state would you choose? Thanks, John Belleme."

Talk with John Belleme. 1999. Nov. 8. This letter was probably written in late December 1978 or very early January 1979. John dictated the letter to his wife, Jan, who actually wrote it. He can tell that because the handwriting is legible and there are no spelling mistakes. This idea later became Oak Feed Miso, Inc., then American Miso Co.

Note: This is the earliest document seen (April 2009) connected with American Miso Co., which started making miso in Aug. 1981 in Rutherfordton, North Carolina. John and Jan Belleme were the head miso makers. They learned how to make miso with the Onozaki family in Japan. Address: Oak Feed, 3030 Grand Ave., Coconut Grove, Florida 31333. Phone: 448-0076 (restaurant); 448-7595 (store).

2093. Edward & Sons Trading Co. 1979. Introducing... Soup in seconds. Natural/instant Miso Cup: The long awaited combination of purity and convenience! (Ad). *Whole Foods (Berkeley, California)* 2(1):10. Jan.

• **Summary:** This half-page black-and-white ad shows a case of Miso-Cup instant miso soup. Address: Union, New Jersey 07083.

2094. Fiering, Steve. 1979. A Midwestern interest in tofu [The Soy Plant in Ann Arbor, Michigan]. *Whole Foods (Berkeley, California)* 2(1):38, 40. Jan.

• **Summary:** This is basically a history of The Soy Plant and some of its creative financing schemes. The Soy Plant began operation in August 1977. New products include soymilk, tempeh, spiced tofu, two spreads (one with eggless soy mayo and turmeric; one with tofu, sweet miso and tahini), ice bean [soy ice cream], tofu pies, okara peanut butter balls, and soy sausage. Address: The Soy Plant, Ann Arbor, Michigan.

2095. Fillip, Janice. 1979. The fermentation transformation. *Whole Foods (Berkeley, California)* 2(1):31-33. Jan. [2 ref]

• **Summary:** Contents: Introduction. Shoyu, tamari and soysauce. Tempeh. Address: California.

2096. Ishima, Toshio. 1979. [Correlation between sensory evaluation of miso and its chemical analysis]. *Shokuhin Sogo Kenkyujo Kenkyu Hokoku (Report of the National Food Research Institute)* No. 34. p. 252-57. Jan. [4 ref. Jap; eng]

• **Summary:** Reprinted from *Miso no Kagaku to Gijutsu (Miso Science and Technology)*. No. 286. p. 26-31 (1977). Address: National Food Research Inst., MAFF, Tokyo, Japan.

2097. Manabe, Masaru; Matsuura, Shinji. 1979. [Studies on the fluorescent compounds in fermented foods. V. The behavior of fungi during miso and shoyu fermentation and aflatoxin inspection]. *Shokuhin Sogo Kenkyujo Kenkyu*

Hokoku (Report of the National Food Research Institute) No. 34. p. 79-83. Jan. [9 ref. Jap; eng]
Address: National Food Research Inst., MAFF, Tokyo, Japan.

2098. Monroe, Linda. 1979. The many faces of tofu. *Alch Mist of Ann Arbor (Michigan)*. Jan.

• **Summary:** The Soy Plant, located at 211 East Ann St., is a tofu shop—but they also make soysage, missing egg salad, tempeh, spiced tofu (various spices are added when curdling the soy milk), soy milk (regular or flavored with honey and vanilla), missing egg salad, tofu-tahini spread, tofu tarts (a tasty dessert). Coming soon: Soy Scream (soy milk ice cream), and Boston brown bread (steamed). Tofu is made four days a week. “Soy products can be and indeed are the staple of many vegetarian diets.”

“The Soy Plant sells one pound cubes of tofu for 70 cents (if you bring your own container), 72 cents with their plastic bag, or 85 cents in their container [plastic tub]. They encourage people to bring their own containers so as to cut down the use of plastic.” “The collective has been very creative with the versatile little soy bean. Their ideas seem to be endless. They have developed many tasty foods by experimenting with different combinations of ingredients.”

“The Soy Plant is a cheerful, pleasant place to visit. You’ll usually find samples of their different spreads and beverages. Any questions about soy products are gladly answered either by collective members or by just looking in any of the various books available there on tofu, miso and other soy products. You can be sure the collective will always be coming up with new items to surprise and satisfy your taste buds.

“The Soy Plant is open Mondays–Fridays, 10-6, and Saturday, 9-5.”

In the middle of the article is The Soy Plant Logo, two soybean plants growing (to left and right) out of Planet Earth. Around the bottom is written “The Soy Plant.”

Talk with Steve Fiering, a founder of The Soy Plant in Ann Arbor. 2000. Dec. 3. The title of this periodical derives from the word “Alchemist.” The logo was Steve’s idea, developed by Marge Bruchac, Susanna Middaugh, and Dan Ecclestone.

2099. Sakaguchi, Kinichiro. 1979. Shôyu no ruutsu o saguru [Searching for the roots of shoyu]. *Sekai (The World)* No. 398. p. 252-66. Jan. [Jap; eng+]

• **Summary:** A fascinating enquiry into the early history of fermented soyfoods by one of Japan’s most eminent microbiology professors. For details, see *The Book of Miso*, and *History of Soybeans and Soyfoods*, both by Shurtleff and Aoyagi.

Yokotsuka (1986, p. 325) cites this as Sakaguchi. 1981. “Searching for the route of shoyu.” *SEKAI* 398:252-266. This magazine is published by Iwanami Shoten in Tokyo.

“The *Chou-li* states that this jiang was made by mixing the meat of animals, birds, and fish with millet koji and salt, then pickling it in wine in a crock for a hundred days. It is quite remarkable that even at this early date the Chinese were consciously using the enzymes produced by the koji molds (whose airborne spores fell on the substrate naturally, rather than by deliberate inoculation), to make fermented foods such as jiang and fermented grain-based alcoholic beverages. It is also clear from the context that jiang was regarded as a highly prestigious food and a delicacy.”

“Today’s shoyu traces its ancestry back through early shoyu, then through the four fermented soyfoods tamari-shoyu, tamari miso, Hacho miso, and savory soy nuggets (*Hamanatto*), and ultimately back to Chinese soy nuggets (*chi*). Miso, he asserts, traces its ancestry back through early Japanese misos and hishio to jiang. In the shoyu lineage, the koji is always made with either soybeans alone or a mixture of soybeans and cracked or ground wheat, whereas in the miso lineage the koji is usually (except for soybean misos) made from grain. Sakaguchi believes that the fundamental biochemical consequences of this difference in koji substrates are of much greater importance than the more superficial differences of consistency or form that have led researchers up until now to group solid or semisolid fermented soyfoods in the miso lineage and liquid products in the shoyu lineage. Thus it is not obvious that liquid shoyu stems from mushy jiang. In shoyu, the *Aspergillus oryzae* molds grow directly on the soybeans (and wheat) during the koji fermentation and their enzymes begin to digest the koji substrates, then continue to digest the soybeans (and wheat) during the subsequent brine fermentation. This *in vivo* and *in vitro* extended hydrolysis leads to the formation of complex metabolic compounds, a higher degree of protein hydrolysis and liquefaction, and the production of a richer and stronger flavor in shoyu than in miso. Sakaguchi argues that miso has a 3,000 year history dating from the development of jiang during the Chou dynasty in China, whereas shoyu has a 2,000-year history dating from the development of soy nuggets (*shih*) during the Han dynasty.

“It is important to note here that the ancient Chinese language seems to indicate that soy sauce derives from jiang and not from *shih*, as evidenced by the Chinese word for soy sauce, *jiangyou*, meaning ‘the liquid extracted from jiang.’ Moreover, most Chinese jiang and soy nuggets have both always been made with a soy-based koji. Sakaguchi’s analysis is helpful, but lacking on a few points. The jiang has not, as Sakaguchi argues, been made with a grain-based koji. Even in the earliest description of Chinese soybean jiang in the *Ch’i-min yao-shu* (described in detail in the Miso chapter) the koji is made primarily from soybeans. Thus while retaining the essence of Sakaguchi’s argument, we would suggest that it be modified slightly to say that *both* shoyu and miso trace their ancestry back to *both* soy

nuggets (*shih*, which existed prior to 206 BC) and to soybean jiang (which existed prior to AD 500).

“Dr. Sakaguchi considers there to be three main reasons that shoyu and miso were not developed in the West: (1) very few Westerners ever learned how to make koji using molds; (2) they had virtually no soybeans until the 20th century; and (3) the basic flavoring components of shoyu and miso, especially natural L-glutamic acid and inosinic acid, were traditionally unknown in the West.”

“In 1944 Kinichiro Sakaguchi and Koichi Yamada discovered a new species of *Aspergillus* mold, which appeared widely in shoyu koji; they named it *Aspergillus sojae*.”

Photos show: (1) Three ancient earthenware jars, from about the 1770s (Thunberg’s time), in which shoyu was pasteurized and shipped to Europe. Address: Professor of fermentation science, Tokyo Univ.

2100. Shurtleff, William; Aoyagi, Akiko. 1979. The book of tofu. Extensively revised and updated. Condensed. New York, NY: Ballantine Books. 434 p. Illust. by Akiko Aoyagi Shurtleff. Index. Jan. 18 cm. [60 ref]

• **Summary:** Contents: Preface. Acknowledgements. 1. Protein East and West. 2. Tofu as a food. 3. Getting started: Favorite tofu recipes. 4. Soybeans. 5. Fresh soy puree. 6. Okara (Soy pulp). 7. Curds and whey. 8. Tofu & firm tofu. 9. Deep-fried tofu: Tofu cutlets, burgers, treasure balls, and pouches. 10. Soymilk. 11. Silken tofu. 12. Grilled tofu. 13. Frozen & dried-frozen tofu. 14. Fermented tofu. 15. Yuba. Appendices: A. Tofu restaurants in Japan. B. Tofu shops and soy dairies in the West. C. Varieties of tofu in East Asia. D. Table of equivalents. Bibliography. Glossary. Contains 250 recipes and 100 illustrations. Price: \$2.95.

This new edition features: (1) New recipes: Over fifty new American-style tofu recipes including Creamy Tofu Dressings, Tofu Teriyaki, Tofu Burgers, Tofu Eggless Egg Salad, and the like. The key to the book is an updated list of favorite tofu recipes plus suggestions for incorporating them into a weekly menu (p. 56). (2) New sections: An extensive new introduction to Soy Protein Foods (p. 66), dairylike products made from tofu (p. 150), dairylike products made from soymilk (p. 302) including soymilk yogurt (fermented), ice cream, kefir, mayonnaise, whipped cream, popsicles, buttermilk, and soy shakes. (3) New chapters: Wine Fermented Tofu and Varieties of Tofu in East Asia. (4) New basic methodologies: The key recipes for homemade tofu and homemade soymilk have been simplified and improved. (5) Updates: A complete listing of the 120 tofu shops and soy dairies now operating in the West; over 60 Caucasian-run shops have opened in the past two years. (6) New Americanized tofu names: Including tofu burgers, tofu cutlets, silken tofu, wine fermented tofu, and fresh soy puree. (7) No sugar.

Note 1. This is the earliest English-language document seen (March 2004) that uses the term “silken tofu.”

Note 2. This is the earliest English-language document seen (Feb. 2007) that contains the term “Wine-fermented tofu.”

In Jan. 1988 a new printing (but not a new edition) of this book (the 13th), slightly revised, appeared. It had a new cover and many new small illustrations. The subtitle was “Protein Source of the Future–Now!” The heading: “The World’s Bestselling Book on Tofu.” Address: New-Age Foods Study Center, P.O. Box 234, Lafayette, California 94549.

2101. Shurtleff, William. 1979. Protein source for the future. *Cosmos (NSW, Australia)* 6(6):1, 4-5. Jan.

• **Summary:** Gives ten reasons why soybeans soy will be the protein source of the future: 1. Optimum land utilization. 2. Lowest cost protein. 3. High nutritional value. 4. Time tested. 5. Remarkably versatile. 6. Appropriate technology. 7. New dairylike products. 8. Hardy and adaptive. 9. Free nitrogen fertilizer. 10. Energy and resource efficient. “All of these ten factors work together synergistically, reinforcing one another, to give added weight to the prediction that soybeans will be a key protein source for the future on plant earth.”

Note: This information was published in July 1979 in *The Book of Tempeh* (p. 21-24). Address: Lafayette, California.

2102. Wang, H.L.; Mustakas, G.C.; Wolf, W.J.; Wang, L.C.; Hesseltine, C.W.; Bagley, E.B. 1979. Soybeans as human food: Unprocessed and simply processed. *USDA Utilization Research Report No. 5*. iv + 54 p. Jan. Slightly revised, July 1979. Jan. No index. 28 cm. Compiled for USAID. [50+ ref]

• **Summary:** Contents: Introduction. 1. Soybean food uses in Asia. China: Soaking dry soybeans, tou chiang (soybean milk), tou fu (soybean curd), processed tou fu products, tou fu pi (protein-lipid films), huang tou ya (soybean sprouts), whole soybeans, fermented soybean foods, production and consumption. Japan: Tofu (soybean curd), kinugoshi tofu, processed tofu products, yuba (protein-lipid film), soybean milk, gô (ground soybean mash), daizu no moyashi (soybean sprouts), whole soybeans, fermented soybean food, production and consumption. Korea: Tubu (soybean curd), processed tubu product, soybean sprouts, whole soybeans, soybean flour, fermented soybean food, production and consumption. Indonesia: Tahu or tahoo (soybean curd), bubuk kedele (soybean powder), tempe kedele, tempe gembus [the name in Central and East Java for okara tempeh], oncom tahu [the name in West Java for okara onchom], other soybean products (soybean sprouts, green soybeans, roasted and boiled soybeans, kecap {soy sauce}, tauco {soybean paste}), food mixtures, production

and consumption. Thailand: Tofu (*tauhu*), soy sauce, green soybeans in the pods (*tourae*). Philippines: Soybean sprouts, soybean coffee, soybean cake, soybean milk, tou fu and processed tou fu products, production and consumption. Burma. India. Malaysia. Nepal. Singapore. Sri Lanka (Ceylon). Vietnam. Middle East. References–Soybean food uses in Asia. 2. Soybean food uses in Africa. Ethiopia: Injera, wots and allichas, kitta, dabbo, dabokolo, porridge. Kenya. Morocco. Nigeria: Whole soybeans, soybean paste, corn-soy mixtures (soy-ogi). Tanzania. Uganda. Production. References–Soybean food uses in Africa. 3. Soybean food uses in Europe and U.S.S.R. 4. Soybean food uses in Latin America. Argentina. Bolivia. Brazil. Chile. Colombia. Ecuador. Guyana. Paraguay. Peru. Uruguay. Venezuela. Mexico: New village process, commercial developments. Honduras. Costa Rica. Panama. Dominican Republic. Jamaica. Haiti. Trinidad. References–Soybean food uses in Latin America. 5. Soybean food uses in North America. United States. Canada. References–Soybean food uses in North America. 6. Soybean food uses in Australia. 7. Summary of soybean food uses. Traditional soybean foods: Soybean milk, soybean curd and processed soybean curd products, protein-lipid film, soybean sprouts, tempe (tempeh), green soybeans, boiled soybeans, roasted soybeans, soybean flour, soy sauce, fermented soybean paste, fermented whole soybeans, natto, fermented soybean curd. Experimental soybean foods: Whole soybean foods, soybean paste, soy flour, soy beverage. Production and consumption. 8. Simple village process for processing whole soybeans: Equipment, process, sanitation requirements, quality of product, evaluation of product in formulas and procedures for family and institutional use in developing countries. NRRC village process. 9. Industrial production and selling prices of edible soybean protein products. 10. Barriers to accepting and using soybeans in food: Availability. Cultural and social factors. Texture. Flavor. Nutrition and food safety. Technology development. Technology transfer. Address: NRRC, Peoria, Illinois.

2103. *Whole Foods (Berkeley, California)*. 1979. The food of the future. 2(1):22-24. Jan.

• **Summary:** The article begins: “Why devote an entire issue of *Whole Foods* to the subject of soyfoods? Soyfoods are a rapidly growing part of the natural foods industry...”

“The bringing of the ‘Soyfoods Revolution’ to the natural foods industry is the work of individuals, toying and playing with new recipes in their own kitchens and shops. No person deserves more credit for this revolution than William Shurtleff who, along with Akiko Aoyagi, wrote *The Book of Tofu*, and told us all how to do it. (An updated pocket-size version of *The Book of Tofu* is just off the presses of Ballantine Press.) Shurtleff travels the globe, sharing his expertise on soyfoods, covering topics as specific as chip-dip recipes and as broad as the role of

soybean production in future patterns of world protein hunger.

“Other individuals, most of them with small soyfoods shops of their own, met recently to form the Soycrafters Association of North America (SANA), which is likely to serve as the backbone of the Soyfoods Revolution in the natural foods industry. [Note: This historic first meeting was held on 28-30 July 1978 at The Soy Plant in Ann Arbor, Michigan.] SANA selected Larry Needleman as its first president. Needleman, whose Bean Machines, Inc. imports the prime line of Takai tofu and soymilk equipment from Japan, has been a major source of information about soyfoods equipment for our industry.

“Needleman wrote about the spirit of the new organization at its first gathering in Ann Arbor.

“Imagine a group of seventy people representing enthusiastic dedication (almost to the point of craziness) to the production and distribution of tofu and other soyfoods, gathered in an informal setting in a university town in the Midwest, with meetings scheduled from nine in the morning till eleven at night—and you’ve got a good idea of what went on... ‘Sharing began immediately. Groups of people gathered here and there and began asking each other about their shop or organization. Those passing by would hear a familiar word such as ‘yield’ of ‘pressure-cooker’ and just stopped to join the conversation. It was apparent that here was a gathering destined to be stimulating and mutually beneficial...

“The first evening, Bill Shurtleff set up a slide show about tofu and miso production in Japan. The presentation ran the gamut from small, traditional shops built over their own well, to large, fully-automated factories turning out tens of thousand of pounds per day. Bill answered questions and added a personal touch to the showing because he had shot the photos himself over a period of years, and was familiar with the language, traditions and production of the Japanese...

“On Saturday morning, The Soy Plant showed us their method of producing tofu and soymilk. Those with less experience absorbed information and asked questions, and those with more experience volunteered information, clarified points and offered suggestions. Then Wataru Takai, the overseas manager for Takai Tofu and Soymilk Equipment Co., Japan’s largest manufacturer of this equipment, explained principles behind each step of production, and the uses of the equipment...

“At a later session, it was remarked that many soyfoods producers are operating on an inefficient and labor-intensive basis. Some felt this was a good way to begin, first becoming intimate with the steps of production and developing a market ‘track record,’ and then using that base to upgrade production by purchasing more sophisticated equipment. Others felt that the time and energy involved in putting together a makeshift shop which was outgrown in

about six months would be better spent in the capital to start at higher technological level...

“In one of the most popular and exciting discussions of the conference, the consensus of the group was that tofu and soymilk were the foods that Americans have been waiting for. A list of related products that have been marketed with incredible success included tofu burgers, no-egg salad, honey soymilk ice cream, tofu chip-dips and dressings, flavored soymilk, tofu ‘mayonnaise,’ and pressed, marinated tofu. There was unanimous agreement that it was these new soyfoods that would capture the interest and palate of middle America, people who had turned up their noses at that tasteless white cake of tofu floating in water...

“Later we discussed the problems of proper storage and display of our products. In US food markets, tofu has usually been sold with Oriental foods in the vegetable section. Getting it moved to a cooler, more appropriate cheese display case, where it will stay fresh longer and compete favorably with dairy products, has met with resistance...

“In the evening, another slide show by Bill Shurtleff showed us how tempeh, a key protein source for millions of people in Indonesia, is quickly and simply produced as a cottage industry in their homes. Having sampled this unusual food at lunch, we were eager to learn about it because it was delectable. Somewhere between a deep-fried fish cake and Kentucky fried chicken in flavor and texture, it lent itself to use in a seemingly endless variety of ways...

“Toward the end of the conference, discussion turned to marketing and finance. It was found that some firms lacked capital for growth, while others had enough capital but needed greater management skills to keep up with the growing demand for soyfoods. That demand is not uniform nationwide. Different regions show various levels of consumer awareness, interest in, and acceptance of soyfoods. Printed hand-out sheets and cooking classes were suggested as promotional efforts were an important part of the creation of a desirable image for soyfoods.

“Before leaving Ann Arbor, the participants formed the Soycrafters Association of North America as a trade association to promote soyfoods and exchange information among the members. With the founding of SANA, the Soyfoods Revolution took its longest recent stride. Soycrafters were no longer isolated persons, groups and shops, but had become a nationwide network devoted to the same purposes, sharing their experiences for mutual benefit and the ultimate benefit of the American consumer.”

Note: The word “soyfoods” is used throughout this article.

2104. [Shurtleff, William; Aoyagi, Akiko]. 1979. Soyfoods buyer’s guide [Tofu, tempeh and miso shops in the USA and Canada]. *Whole Foods (Berkeley, California)* 2(1):42-44. Jan.

• **Summary:** A listing of all companies in the USA and Canada, by food type, by state.

Note: This is also the earliest English-language publication (one of two in this issue) seen that uses the term "Soyfoods" in the title. Shurtleff and Aoyagi compiled this list and gave *Whole Foods* permission to use it free of charge. Address: P.O. Box 234, Lafayette, California 94549.

2105. Pukel, Sanford J. 1979. Articles of Incorporation of Oak Feed Miso, Inc. Coconut Grove, Florida. 4 p. Feb. 28. Unpublished typescript.

• **Summary:** The maximum number of shares of capital stock authorized is 5,000, each having a par value of \$10.00. There will be two classes of common stock: 3,000 authorized shares of class A and 2,000 authorized shares of Class B. Only holders of class A shares shall have the right to vote. Initial capital: \$5,000. "The initial address of the principal and registered office of this corporation is to be 3030 Grand Avenue, Coconut Grove, Florida. Sanford J. Pukel shall be the initial registered agent at such address." The two initial directors are: Sanford J. Pukel (President, 3030 Grand Ave., Coconut Grove, Florida 33133) and John Belleme (Secretary-Treasurer, 5490 W. 1 Ct., Hialeah, Florida 33012). Note: It is not clear who owns how much stock at this time.

Filed on 28 Feb. 1979. Signed by Sanford J. Pukel. Address: Coconut Grove, Florida.

2106. Morning Star Laboratories, Inc. 1979. Nutritional analysis of Hacho miso, and "Promiso #2." Vernon, California. 3 p. 28 cm.

• **Summary:** This analysis was conducted for Proteus Corporation, 1242 Glen Ave., Berkeley, California 94708. Hacho miso was found to contain: Moisture 43.9%. Protein 21.06%. Fat 8.46%. Fiber 6.9%. Ash 12.91%. Carbohydrates 6.77%. Calories per 100 grams 187. Vitamin B-12 0.1 micrograms per 100 gm. Signed James A. Laubscher.

A similar but more detailed analysis (dated 9 March 1979) is given for "Promiso #2," which is probably a mixture of spirulina and Hacho miso. This analysis includes the content of all amino acids (aminogram), bacterial counts, the salt content (7.57%), and the fatty acid profile. Address: 2800 Jewel Ave., Vernon, California 90058. Phone: (213) 582-0981.

2107. Westbrae Natural Foods. 1979. Price list [Catalog]: February 1979. Emeryville, California: Westbrae. 35 p. 22 by 28 cm.

• **Summary:** On the cover are yellow and light green Japanese plum blossom crests against a green background. New products (written in all capital letters): Kelp (powder and granules). Traditional (true) tamari—wheat free. Mu tea.

Address: P.O. Box 8711, Emeryville, California 94662. Phone: (415) 658-7518 (orders).

2108. Fukushima, D. 1979. Fermented vegetable (soybean) protein and related foods of Japan and China. *J. of the American Oil Chemists' Soc.* 56(3):357-62. March. [10 ref]

• **Summary:** Contents: Abstract. Introduction. Soy Sauce: Fermented soy sauce: Japanese and Chinese styles of soy sauce and their characteristics. Manufacturing process. Comparison of fermented soy sauce with chemical soy sauce. Fermented soy paste. Chinese soybean cheese (sufu). Fermented whole soybean (natto). New fermented soybean products. A photo shows Fukushima. Fig. 3 shows two chromatograms comparing the organic acids of fermented and chemical (HVP) soy sauce. Fermented soy sauce has an abundance of lactic acid, whereas HVP soy sauce has an abundance of formic acid. Address: Kikkoman Foods, Inc., P.O. Box 69, Walworth, Wisconsin.

2109. Hesseltine, C.W. 1979. Some important fermented foods of Mid-Asia, the Middle East, and Africa. *J. of the American Oil Chemists' Soc.* 56(3):367-74. March. [34 ref]

• **Summary:** Contents: Abstract ("These fermentations, unlike those of the Orient, use bacteria and yeasts instead of filamentous fungi"). Introduction. Eight reasons for using a fermentation process in the production of acid foods. Idli. Kishk. Ogi (The Yoruba {western Nigeria} for a fermented sour maize product found throughout Black Africa). Mahewu (Magou). Kaffir beer (Bantu beer, sorghum beer, mqombothi).

"When we think of food fermentations, aside from those we encounter daily such as cheese and bread, we think of those strange and exotic products like soy sauce, soybean paste [miso], and tempeh made in China, Japan, and the East Indies."

A photo shows Hesseltine. See also p. 380-81 of this March issue. Address: NRRC, Peoria, Illinois.

2110. Leon, Sonia V. de. 1979. Tropical foods in the Far East. In: G.E. Inglett and G. Charalambous, eds. 1979. *Tropical Foods: Chemistry and Nutrition*. Vol. 1. New York: Academic Press. x + 701 p. See p. 351-63. [15 ref]

• **Summary:** The section titled "Fermented Cereals and Grains" gives basic information about the following fermented soybean foods: Tempeh, soy sauce, miso, and sufu or Chinese cheese. Address: Dep. of Food Science and Nutrition, Univ. of the Philippines, Diliman, Quezon City, Philippines.

2111. **Product Name:** Miso [Brown Rice, Barley, Mellow Brown Rice, Mellow Red, or Black Soybean].

Manufacturer's Name: Ohio Miso Co.

Manufacturer's Address: Route 2, Monroeville, OH 44847.

Date of Introduction: 1979. March.

Ingredients: Soybeans, rice or barley, salt, water.

New Product–Documentation: D.B. 1979. *Whole Foods*. Oct. p. 62; Carr. 1980. *East West Journal*. Jan. p. 68-69; Leviton. 1980. *Soycraft*. Summer. p. 26-31, 63-68; Ad in *East West Journal*. 1980 Jan. p. 69. Ad in *Soyfoods*. 1980. Summer. p. 24. “Transforming organically grown and beans into quality natural miso since 1979. Ohio Miso is moving Oct. 1980 to South River Farms, Box 4, Conway, Massachusetts 01341.” Shurtleff & Aoyagi. 1983. *The Book of Miso*. 2nd ed. p. 238.

Note: Thom Leonard was one of the first Caucasian Americans to make koji in America for use in a commercial product.

2112. Sakaguchi, Y. 1979. Opening remarks–Vegetable proteins in fermented foods and other products. *J. of the American Oil Chemists’ Soc.* 56(3):356. March.

• **Summary:** “Miso, or soybean paste, one of the most important fermented soybean foods, was originally made in China. A missionary who was sent [from Japan] to China learned its production and modified it into a product suited to the Japanese taste in the 7th century. About 185,000 tons of soybeans are used for miso production annually.

“Another major fermented soybean food is soy sauce which was originally developed by the Zen Monk Kakushin in 1234. He also visited China and discovered that the liquid portion from Miso was very delicious. This liquid became the base for soy sauce, an essential ingredient in the Japanese diet. Soy sauce required the annual use of nearly 175,000 tons of soybean meal, the equivalent of 222,000 tons of soybeans.

“Natto, the third major fermented soybean product of Japan, originated in our country. In 1087, a ruler in the northern part of Japan discovered natto to be part of local farmers’ diets. Today, nearly 60,000 tons of soybeans are consumed in its production.

“As Japan continues to draw from its historic past for a source of soy-based foods, we also are full participants in the new era of sophisticated vegetable protein foods. To promote utilization and production of this product, the Japan Vegetable Protein Food Association was organized in 1975.”

A photo shows Sakaguchi. Address: Japan Vegetable Protein Food Assoc., 9th Floor, Rainbow Building, 2-15-17 Nishi-Shinbashi, Minato-ku, Tokyo, Japan.

2113. *Telluride Times*. 1979. The Tofu Shop: Traditional vegetarian cuisine (Ad). March.

• **Summary:** Features a large illustration of a dragon and “Traditional vegetarian cuisine” as part of the company logo. States: “Menus from different nationalities every night. Whatever you’re in the mood for, we can probably help you out. Thurs. 3/15 [Thursday, March 15]. Tofu

Turkey, Vegetable stuffing, baked potatoes, fruit salad. Note: The Tofu Shop in Telluride is now selling “Tofu Turkey” commercially, with all the trimmings—even though it was out of season.

Fri. 3/16. Pizza, Minestrone soup, Tossed green salad.

Sat. 3/17. Ganmo (Mock Goose), Stir-fried vegetables, miso soup, etc.

“Dine in or phone ahead for takeout (728-9940). Open Mon.–Sat. 11 a.m. to 9:30 p.m. Closed Sundays.”

Note: Unfortunately the exact date and page of this ad are unknown, but it was shortly before March 15. Address: 116 N. Oak—on the Sheridan Mall—Telluride, Colorado.

2114. Winarno, F.G. 1979. Fermented vegetable protein and related foods of Southeast Asia with special reference to Indonesia. *J. of the American Oil Chemists’ Soc.* 56(3):363-66. March. [22 ref]

• **Summary:** Contents: Abstract. Introduction. Fermented foods and food needs. Tempeh and oncom. Bongkrek (and its toxic-producing bacteria) and tauco. Wholesomeness of fermented foods. Development of food supplement using fermented food as a basic ingredient.

Table I shows the population, population growth rate, and average national income per capita in ten Southeast Asian countries. Indonesia has by far the largest population (136.9 million), followed by Vietnam (47.3). Khmer republic (Cambodia) has the highest population growth rate (2.8%), followed by the Philippines (2.7%); Singapore has the lowest (1.3%). Singapore has by far the highest average national income per capita (US\$2,510), followed by Malaysia (\$720), then Maungthai (Thailand—\$350); Khmer Republic and Laos have the two lowest per capita incomes (\$70). Table II shows the nutritional composition of tempeh, oncom, bongkrek, and tauco per 100 gm. Table III shows 7 fermented vegetable protein foods in Southeast Asia: Tempeh, bongkrek, oncom, tauco kecap (shoyu), ang-kak, and sofu (sufu); for each is given the microorganism used, substrate, nature of product (solid, liquid), and area where article is sold commercially. Table IV shows the composition and nutritional value of TFR (Tempeh-Fish-Rice), as developed at the National Research Institute, Bogor, Indonesia. A photo shows F.G. Winarno. Address: Bogor Agricultural Univ., Fatemeta, IPB, Jalan Gunung Gede, Bogor, Indonesia.

2115. Duienga, Suzanne; Duienga, William. 1979. The Soy Plant. *Beansprout Flyer and Pocket Reader: Grand Rapids Food Co-op Newsletter* 2(3): April.

• **Summary:** “A current personal interest in soybeans combined with a concern about the high price of tofu at the coop led us to visit the Soy Plant in Ann Arbor. What we found was not a ‘plant’ or a factory at all, but a downhome group of people with a genuine interest in their work.

“Steve Fiering, the man who first envisioned the Soy Plant, stopped his work to show us around the shop and talk with us about his experiences and his soybean philosophy.

“When asked why Soy Plant tofu costs so much, Steve gave us some pretty impressive reasons. First of all the soybeans that the Plant uses are organic. Secondly, Steve values the people with whom he works and so wages (\$4.00 per hour) reflect this. Lastly and most importantly, the Soy Plant is the first of its kind in this area. As with all first, ‘We make mistakes and they cost money.’” Steve made much of the machinery in the shop himself.

“The Soy Plant already has a large line of delicious soy products (all personally sampled and ‘wholestomachally’ approved of), including soysage, tempeh, soymilk, brown bread, sweet white miso, spiced tofu, spreads, tofu pies, and okara peanut butter balls. Free samples of the delectable spreads are available on the counter.

“During the visit our basic curiosity evolved into true inspiration. The Plant is a living, breathing, organically growing example of how a cooperative group of people can come together and make something happen. The place truly is a center of learning, staffed by people eager to share their newly found knowledge about the creating of this very old food.

“Do you often wonder what to make with this nutritious but strange stuff called tofu? Here are some delightful recipes:” The recipes, from *The Book of Tofu* by Shurtleff and Aoyagi, are for Tofu-nut butter spread or topping, and Banana-tofu milkshake. Address: Michigan.

2116. Jack, Alex. 1979. The taste of America: Our changing diet. *East West Journal* 10(4):46-61. April. [24 ref]

• **Summary:** This is a macrobiotic view of the changing American diet. Contents: Modern dietary trends. The rise of the standard diet. Food origins: Meat-centered, traditional, vegetarian. Food changes: 1910-1976 (percentage change). The effects of meat and dairy. Effects of sugar and spice. The limits of modern nutrition. The rise of vegetarianism: Adolf Hitler [in Germany], Mohandas Gandhi [in India]. You are what your grandparents ate. Popular health foods: Honey, yogurt, herb teas. The traditional diet of humans. Seven levels of eating. The future diet of humanity.

“Underlying nearly all modern dietary trends is a shift from meals centered around animal products toward ones derived from plant sources. According to a 1978 Roper Poll, 7 million Americans over age 18 do not eat any meat and 37 million more are cautious about how much meat they consume. Another 44% regard a reduction of meat consumption as healthy.” In all, nearly 50% of Americans are concerned about meat and the standard American diet. Then lists 12 signs of a major shift in our attitudes toward meat and dairy products; No. 10 incl. “the rising popularity of soy products such as miso, tofu, and tempeh as

alternative protein sources to meat.” Address: [Boston, Massachusetts].

2117. **Product Name:** Kome Miso.

Manufacturer’s Name: Shin-Mei-Do Miso Co.

Manufacturer’s Address: 5 Wren Road, Denman Island, BC, Canada V0R 1T0. Phone: 604-335-0253.

Date of Introduction: 1979. April.

Ingredients: White rice koji, soybeans, salt, water.

New Product–Documentation: Letter/Order from Lulu Yoshihara. 1976. Nov. She orders a copy of *The Book of Miso, Vol. II*.

Letter from Lulu Yoshihara. 1981. Sept. 9; Martin. 1982. Comox District Free Press. Sept. 17; Leviton. 1983. Soyfoods. Winter. p. 36-37; Shurtleff & Aoyagi. 1983. Book of Miso. 2nd ed. p. 238. The company was started in April 1979 by Lulu Yoshihara. Leviton. 1982. In a Small Bright Building. Yasuo (nickname “Yoshi”) grew up on a farm in Japan and already knew how to make miso. The shop can make about 10,000 lb of miso in a typical year. Yasuo & Lulu Yoshihara run the business.

Talk with Yasuo Yoshihara. 1996. March 22. Their first miso was a white rice miso named “Kome Miso.” It was sold only to natural- and health food stores. His business is active and growing. They make brown rice miso and barley miso, each sold in 450 gm and 4.5 kg plastic tubs. Lulu does the bookkeeping.

2118. Flinders, Carol. 1979. Soybean key to world food plight? Notes from Laurel’s Kitchen. *Rocky Mountain News (Denver, Colorado)*. May 16. p. 24A.

• **Summary:** Twelve years ago (i.e., in late 1968) Carol spent a memorable week at the Tassajara Zen Mountain Center near Big Sur, California. “Among the many good people I met, one I’ve always remembered was Bill Shurtleff, who helped run the kitchen out of which was issued the well known Tassajara bread.

“Spare of words, lean and thoughtful, he had a kind of banked fire in his eyes that told you he was a man in search of a vocation. Last week Bill and his wife, Akiko, came to our home to visit and exchange ideas. It’s clear that he has found the vocation he’s been looking for, and that, in a sense, all of us stand to gain from the passion with which he’s answered it.

“The cause Bill has taken up is that of the more than one billion people of the world for whom hunger is *the* central fact of life. To be as continually mindful of their plight as he is would probably be unbearable if he didn’t believe he holds a significant key to relieving it. The key? ‘Glycine max’—soybeans to you and me.

“Western exploitation of the soybean has been absurdly slight until recent years. Mostly we’ve fattened our livestock with it. That soy is ‘king of beans’ we’ve long recognized.” But they have entered the American food

supply well disguised in such forms as textured vegetable protein. “The soybean foods Bill is promoting are of a much more sophisticated nature. Their names fall oddly on the Western ear:” tofu, shoyu, tempeh, miso.

Bill and Akiko met in Japan. She “was a fashion designer in Tokyo before they were married. The image of big city haute couture doesn’t attach easily to the simply dressed and unpretentious Akiko, and everything makes a little more sense when you find out the fashions she designed were actually for handicapped children.

“Akiko’s skill as a graphic artist and fine cook are the perfect complement to Bill’s, as writer and investigator. Her warmth and gentleness are the perfect balance to his single-minded intensity. (Akiko doesn’t just invite you for dinner. She seizes your arm as you’re walking along together, wraps it close in her own and holds on tight, convincing you life will be pure misery for them until you come to their house).

“Tofu was the soyfood that first captured Bill’s interest.” Discusses its virtues. “But what really wins him over, I think, is the sheer romance of tofu. What you know of tofu, and what I’ve told you about Bill, might make that seem unlikely. But read his book and see for yourself—beneath that samurai exterior beats the heart of a Shelley or a Keats. Listen:

“Like water that flows through the worlds, serving as it moves along, tofu joyfully surrenders itself to the endless play of transformation. Pierced with a skewer, it sizzles and broils above a bed of live coals... deep-fried in crackling oil, it emerges crisp and handsome in robes of golden brown, frozen all night in snow under vast mountain skies, it emerges glistening with frost and utterly changed. All as if it knew there was no death to die, no fixed or separate self to cling to, no other home than here.”

Contains a favorite Flinders’ recipe for tofu patties.

2119. Hoang, Van Chi. 1979. Report to the Bureau of Industrial Guidance, FDA: Vietnamese soysauce. Its particularities and our manufacturing process. Bowie, Maryland: Vietnam Food & Drink Co. 4 p. May 25. Unpublished typescript on letterhead. 28 cm.

• **Summary:** Contents: Names of company director, plant manager, and technical board (in left margin). Bibliography: Translation into English of article on Vietnamese soysauce production found in *Khoa Hoc Thuong Thuc*, a scientific magazine published in Hanoi. The translation follows: General process (for making soysauce). Some differences between Chinese and Vietnamese soysauces.

Our manufacturing process: Ingredients to obtain 8 gallons of soysauce (Soybeans 10 lb. Rice 5 lb. Salt 5 lb. Sugar 5 lb. Water 5 gallons). Rice fermentation or “koji” preparation. Soybean fermentation or preparation of the brine. Preparation of soysauce. Packaging. The pH problem.

The problem of oxydation [sic, oxidation]. Our request with FDA.

Vietnamese always prefer their own soysauce to the Chinese brand. After fermentation is over, the Chinese filter the product, taking only the filtrate to make their sauce, while discarding all the solid particles that remain. The Vietnamese, on the other hand, grind the whole product to obtain a sauce which is much thicker. The Chinese add *Lactobacillus* to the cooked soybeans to stimulate their fermentation. The Vietnamese roast their soybeans before cooking. Chinese like black soy sauce. To get that black color, they keep their soysauce in an open jar, exposed to the air for as long as three months; auto-oxydation turns the sauce black. Vietnamese prefer brown-colored soysauce. Vietnamese soybeans do not have a great tendency toward oxydation. Roasted soybeans and rice inoculated with *Aspergillus oryzae* are fermented separately. The finished koji has a pH of 4.0 (sample A1). During the soybean fermentation, if the temperature is maintained at 35-38°C, the fermentation is complete in 9 days, with a pH of 5.0 to 5.2 (sample A2). “Fermented rice [koji] and fermented soybeans are mixed together, and salt and sugar are added. The whole mixture is then ground in an industrial blender and reduced to a thick paste” (sample A3). The pH of the final mixture is important since “Vietnamese customers have a traditional for a sweet and only slightly sour sauce.” The addition of a few grams of vitamin C to each 8-gallon batch of soysauce helps to fight oxidation and prevent unwanted darkening of the sauce. The finished soysauce is poured into glass bottles (8 oz or 16 oz) and sealed with a cap. The company requests that the FDA consider this soysauce as a fermented food rather than an acidified food, and authorizes the company to keep its pH around 4.8—the same as some Chinese-style sauce made in the USA (sample A4).

Note 1. This is the earliest document seen (March 2001) concerning the work of Vietnamese with soyfoods or soybeans overseas (one of two documents). By June 1979 Hoang Van Chi was making Vietnamese soy sauce in Bowie, Maryland.

Note 2. The address of the company’s factory is handwritten in red at the top left of page 1: 3824 Ironwood Place, Landover, Maryland 20785. Phone: (301) 322-7948. The company director, Hoang Phan, is the writer’s wife. Address: Technical Director, Vietnam Food & Drink Co., Inc., 12653 Heming Lane, Bowie, Maryland 20716. Phone: (301) 262-3735.

2120. Midwest Natural Foods Distributors, Inc. 1979. Catalog 13. Spring, 1979. Ann Arbor, Michigan. iv + 290 p. Index by product category. Index of manufacturers. Index of advertisers. Illust. 28 cm.

• **Summary:** One the cover are two kites (colored orange and red) flying in the sky. This catalog, largely printed by a

computer, contains many ads on numbered pages. Contents: Policies and terms. Catalog information. Packaged. Books. Refrigerated and frozen. Bulk. Literature and flyers. Indexes (3).

“One stop shopping... We are now a Full Line distributor.” List of new lines. List of new products within existing lines. Symbols and abbreviations.

Suppliers are listed alphabetically: Arrowhead Mills, Balanced Brand [Balanced Foods, New Jersey], Bragg’s (Liquid Aminos), Dr. Bronner’s (with full page ad showing the doctor), Carmé (lecithin), Cedar Lakes, Cellu (Soy bean flour), Chico-San, A.A. Debole (Spaghetti sauce–soy conc), Dragon’s Milk (Arica), Elam’s (soy flour), El Molino, Ener-G–Jolly Joan, Erewhon (with Erewhon West full-page ad), Family Orchards (Tamari mixes, Trail mix), Fantastic Foods, Fantastic Falafel [Felafel], Fearn Soya Foods, Flavor Tree, Hain Pure Foods (“Cold pressed” vegetable oils, mayonnaise, nut butters), Hansen’s juices, Health Valley (incl. Vegetarian Chili), Hi-Energy Foods (food bars), Hoffman’s (protein powders, snack bars), Lact-Aid (p. 109, ad p. 118), Jack La Lanne, Lange’s, R.G. Lecithin, Lifestream (p. 113, 251, ads p. 249-50), Malt-O-Meal, Maya Grainburgers (p. 119, ad p. 126–mix with tofu), Midland Lecithin, Miso Cup, Modern Products (Gayelord Hauser), Mus-L-On (MLO), NF Factors, Niblack (“Tamari toasted sunflower seeds,” Tamari pumpkin seeds,” raw or toasted wheat germ, unprocessed miller’s bran), Old Stone Mill (soy), Orjene, Parkelp, Plus Produces (incl. Tiger’s Milk), Richter Bros., Soken, Sovex, Viobin, Waring (blender, juicer), Westbrae.

Books, Talking Foods, Meats (nitrate and nitrite free), Poultry (no hormones or antibiotics), Soy Products (Health Valley soy milk, tofu), Soy Plant Tofu (nigari, and tofu sausage, p. 259-60), Tumaros, Willow Run (Soybean spread [margarine]). Bulk–Beans, dry roasted soybeans, fruit & nut mixes (trail mix), nut butters, condiments, vegetable oils, pasta (with nomenclature), granola, teas & herbs. Literature & flyers. Indexes. Note: Many companies have a large selection of herbs. Address: 170 Aprill Dr., Ann Arbor, Michigan 48103. Phone: 313-769-8444 or in Area 313 1-800-552-6297.

2121. Hesseltine, Clifford W.; Wang, Hwa L. 1979. Fermented foods. *Chemistry and Industry (London)* No. 12. p. 393-99. June 16. [4 ref]

• **Summary:** Contents: Fermentation: Advantages of fermented foods. Need for more research. Need for a worldwide fermented foods catalogue. Investigating the process. Characteristics and microorganisms. Fermentation: 12 aspects that merit attention. Improvement: Example of tempeh spores and plastic bags. New foods (such as wheat and cereal tempehs). Future of traditional fermented foods (it looks bright). Mahewu. Kaffir/Bantu beer.

“Finally we would like to suggest several fermented foods that might be possible candidates for future development outside the Orient. These are miso, natto, hamanatto, and sufu.” Address: NRRC, Peoria, Illinois.

2122. Liebman, Bonnie. 1979. Sea salt: No great shakes. *Nutrition Action* 6(6):13, 16. June. Address: CSPI Nutritionist.

2123. Shurtleff, William. 1979. Sources of vegetarian vitamin B-12. *Vegetarian Times* No. 31. May/June. p. 36-37, 39-40. Reprinted, revised and updated, in *Vegetarian Times*, Feb. 1983, p. 61-63. [11 ref]

• **Summary:** This review of the literature shows that the major vegetarian sources of vitamin B-12 are fermented soyfoods (tempeh, natto, miso), single-cell-proteins (spirulina, chlorella, scenedesmus, unfortified yeasts), sea vegetables (kombu, wakame, and others). The richest known animal source is beef liver. Address: New-Age Foods Study Center, P.O. Box 234, Lafayette, California 94549.

2124. *Spiral News (The) (Jamestown, Missouri)*. 1979. Time to celebrate. Everyone is invited! No. 6. Summer. p. 4.

• **Summary:** “We are happy to announce that we have secured a very suitable 405 acre property for the Midwest Macrobiotic Homestead Community and a ready to start selling homestead size acreages. The location is excellent,” 30 minutes from Columbia, Missouri and 20 minutes from Jefferson City, Missouri. Nearby is the Spiral Inn East/West Center located at Route 3 Box 114, Bowling Green, Missouri 63334. After 1 July 1979 the Spiral Inn East/West Center will be located several miles to the north at Route 1 Box 9, Moniteau Farm, Jamestown, Missouri 65046. Phone: (816) 849-2157. A map shows the area.

“Moniteau’ is derived from the Native American Indian word meaning ‘Great Spirit.’” At the Third Annual Midwest Summer Festival and Solstice Celebration, topics to be discussed will include miso, tofu, sake, pickle and condiment production.

“The Spiral Inn East/West Center offers macrobiotic food, lodging and information to east/west travelers and interested visitors... Rates are \$3.00 per day for those who want to help around the place, or \$6.00 per day for those who just want to take it easy.” People who have visited since the last issue of the newsletter was published include: Paul Duchesne (Fairfax, California), and Les Karplus (Champaign, Illinois).

Note: This is the earliest document seen (Dec. 2003) related to the company that later became Imagine Foods, pioneers of Rice Dream. However Imagine Foods’ first commercial product was not introduced until April 1982. It was made at Moniteau Farm, Jamestown, Missouri. The company’s first rice-based product, Amasake, was launched

in March 1983. Address: Rural Route 1, Box 9, Jamestown, Missouri 65046. Phone: 816-849-2157.

2125. **Product Name:** Bodhi Sauce and Tuong Cu-Da (Vietnamese Soy Sauces).

Manufacturer's Name: Vietnam Food and Drink Co.

Manufacturer's Address: 12653 Heming Lane, Bowie, Maryland 20716. Phone: (301) 322-7948, 262-3735.

Date of Introduction: 1979. June.

Ingredients: Soy-beans, rice, salt, water.

Wt/Vol., Packaging, Price: 10 oz.

How Stored: Shelf stable.

New Product–Documentation: Hoang, Van Chi. 1979.

“Report to the Bureau of Industrial Guidance, FDA: Vietnamese soysauce. Its particularities and our manufacturing process.” Bowie, Maryland: Vietnam Food & Drink Co. 4 p. May 25.

Label. 1980. 7.25 by 3 inches. Paper. Black on white. “A wholegrain soybean sauce used for centuries by Buddhist monks in S.E. Asia. Wholegrain soysauce like this one has many virtues among which: It helps the skin remain fresh and young. There probably lies the secret of Oriental women’s skin beauty. It eliminates from the body toxic substances produced by tobacco, alcohol and atomic radiation. The yeast that remains alive in the sauce prevents the development of harmful germs. It is a food for good health and longevity. Reference *The Chinese Journal*, New York. Used to dip To-Fu (bean curd), boiled vegetables or just plain rice. Non-vegetarians can use this sauce to dip: chicken, duck, pork, beef boiled or roasted.”

Leviton. 1982. Soyfoods. Winter. p. 68-69. “Tuong Cu-Da is identical to Bodhi Sauce but contains added sugar for the extra sweetness the Vietnamese prefer.” Both are made with glutinous rice (sweet rice). Soya Bluebook. 1987. p. 92. Address is now 3824 Ironwood Place, Landover, Maryland 20785.

Spot in *Whole Foods* magazine. 1982. Feb. p. 50. A photo shows Hoang Van Chi and many bottles of his Bodhi Sauce.

2129. *East West Journal*. 1979. Cooking for health: *How to Cook with Miso*, by Aveline Tomoko Kushi (Ad). July. Inside rear cover.

• **Summary:** This full-page ad (black, white, and red) has a form for ordering the book for \$6.95 plus \$1.50 postage and handling from the *East West Journal* in Brookline, Massachusetts. This ad (black and white) also appeared in the Nov. 1979 (p. 3) issue of this magazine.

2130. Leviton, Richard. 1979. The soy delicatessen. *Soycraft (Greenfield, Massachusetts)* 1(1):12-18. Summer.

• **Summary:** Describes The Tofu Shop (Rochester, New York), The Soy Plant (Ann Arbor, Michigan), The Cow of China (Boulder, Colorado), and The Tofu Shop (Telluride, Colorado).

Photos taken at The Tofu Shop in Rochester show: Greg Weaver at the counter serving a woman (cover photo). The inside of the restaurant, including two women seated at a wooden table and the large menu on the wall in the back. A woman employee cutting vegetables in the kitchen. Another woman working in the kitchen. A close-up of the wooden menu on the back wall (with prices; * = organically grown), which offers: Deli: Tofu*, tempeh*, soy mayo, soysage, soy milk*. Salads: Deviled tofu, tempeh, tossed. Dips (with tofu): Onion, dill. Hot sandwiches: Tofu burger, tofelafel, sloppy joe tempeh, tempeh Reuben, temptation! Cold sandwiches: Deviled tofu, tempeh salad. Casseroles: Tofu-spinach pie, tofu Italiano. Soups: Miso, soup of the day. Sampler plate. Special of the week: Ginger garlic sauce over tofu, rice and sauteed vegetables. Desserts: Lemon cream pie, tofu carob-mint pie, chocolate-mint pie, gingerbread, peanut butter cookies. Drinks: Soymilk, herb tea*, vegetable juice*, apple cider, Bambu (a roasted grain coffee), banana shake (with frozen bananas and soymilk), carobanana. The deli case at White Wave. The outside of The Cow of China.

Note 1. This is the earliest document seen (Feb. 2007) that mentions the use of frozen bananas to add thickness to a smoothie—a breakthrough idea.

“Matthew Schmit—proprietor of The Tofu Shop, in Telluride, Colorado, Juice Bar, Dining, Catering, Wholesale Kitchens, ‘producers and suppliers of specialty foods for the

western slope—operates a soy-based restaurant that seats about thirty people and has waiters and waitresses. The Restaurant, which opened in October 1977, and had gross sales last year of twenty thousand dollars, is open six days a week from 11:00 A.M. to 9:30 P.M. Matthew astonished me with the figure of one thousand dollars as the initial capital investment for this business, which now produces 250 pounds of tofu for weekly wholesale distribution in addition to the flourishing restaurant.

“The menu, which features a stunning photograph of Rocky Mountains rising out of a misty valley, and which they use as a promotional brochure, delineates the fare: Entrees (Stir-fried tofu, Rice & vegetables; Soy burgers, Tofu burgers, Okara burgers, Grilled tofu & vegetables in pita bread, Guacamole & tofu, Spicy tofu & rice filling with guacamole for burritos); Smoothies (Carob-honey soymilk with banana, Carrot sunny shake); Beverages (Miso broth, soymilk, [soy] whey); and Salads (Tofu & guacamole salad, okara salad, tofu & vegetable salad).” Matthew explains the okara salad and whey.

“Matthew and his associates regard the tofu and soyfoods as an entrance into an expanded food processing line for their local market, a move that will lessen their dependence on only one or two products. Believing that every community should have its own fresh tofu, Matthew adds that ‘everyone develops their own business according to the nature of their community.’” During the holiday season, Matthew’s community created an exotic recipe for “tofu turkey.” “Chunks of tofu are seasoned and basted, often carved in the shape of turkeys, and baked for an entire day”—after which “they taste exactly like turkey.”

Note 2. This is the English-language document seen (Jan. 2007) that contains the term “Okara burgers” (or “Okara burger”). Address: Sunrise Farm, 100 Heath Rd., Colrain, Massachusetts 01340.

2131. **Product Name:** New World Rice & Tofu Sandwich. **Manufacturer’s Name:** New World Enterprises. Renamed New World Natural Foods in 1985.

Manufacturer’s Address: 226 Cypress St., Brookline, MA 02146. Phone: 617-232-5973.

Date of Introduction: 1979. July.

Ingredients: Organic short grain brown rice, tofu, carrot, lettuce, scallions, peanut butter, miso, safflower oil, tamari, ginger root, and sea salt, wrapped in chapati bread.

Wt/Vol., Packaging, Price: 8 oz.

How Stored: Refrigerated.

New Product–Documentation: Talk with Paul Duchesne. 1989. Aug. This company was started in about 1980-81 by a woman in Brookline. He does not know from whom she learned to make the sandwich. The product was called Rice and Tofu Sandwich. Label sent by Paul Duchesne. 1989. Aug. 11. 3 inch diameter. Dark blue lettering on a light blue and orange background illustration of the world. This label

is currently in use by Emily Merghart in Brookline. Phone: 617-232-5973.

Talk with Emily Morse Merghart. 1989. Aug. 18. Emily started this company on 5 July 1979 at 226 Cypress St. in Brookline. Before that she was a ballet dancer. Her husband was a dancer. She developed the product herself and did not learn the process from anyone else. She never met Paul Duchesne. This was her first sandwich. She is positive that there were no other rice and tofu sandwiches on the market at the time; she never saw any in the many stores to which she distributed hers. In mid-1988 she moved to her present address, 157 Sutherland Rd., Brookline, Massachusetts 02146. Phone: See above. She now has a line of ten sandwiches, and makes 1,000 a day.

2132. **Product Name:** Nori Rolls (With Tofu Filling).

Manufacturer’s Name: Real Food Co.

Manufacturer’s Address: Boulder, Colorado. Phone: 449-7790.

Date of Introduction: 1979. July.

Ingredients: Rice, nori, tofu, zucchini, green pepper, carrots, turnips, onions, sesame oil, miso, umeboshi salt plums, shoyu, garlic, spices.

Wt/Vol., Packaging, Price: 8 oz.

New Product–Documentation: Label. 1981. 6.25 by 2.5 inches. Paper. Black on tan. Shurtleff & Aoyagi. 1979. Tofu & Soymilk Production. p. 167.

2133. Shurtleff, William; Aoyagi, Akiko. 1979. The book of tempeh: A super soyfood from Indonesia. New York, NY: Harper & Row. 160 p. Illust. by Akiko Aoyagi Shurtleff. Index. July. 28 cm. [24 ref]

• **Summary:** Contents: Acknowledgments. What is tempeh? Preface. 1. Soybeans—Protein source of the future: Introduction, the causes of hunger and starvation—two analyses (*The Twenty-Ninth Day*, by Lester Brown—population, affluence; *Food First: Beyond the Myth of Scarcity*, by Lappé and Collins—population, narrow focus on increasing food productivity, international food exploitation, land monopolization and misuse, cash crop system of export agriculture). Ten reasons soy will be the protein source of the future: 1. Optimum land utilization. 2. Lowest cost protein. 3. High nutritional value. 4. Time tested. 5. Remarkably versatile. 6. Appropriate technology. 7. New dairylike products. 8. Hardy and adaptive. 9. Free nitrogen fertilizer. 10. Energy and resource efficient. “All of these ten factors work together synergistically, reinforcing one another, to give added weight to the prediction that soybeans will be a key protein source for the future on plant earth.” Present patterns of soy protein utilization. New developments. An idea whose time has come.

2. Tempeh as a food. 3. Getting started (incl. basic preparatory techniques and 18 recipes). Favorite tempeh recipes (13 Western favorites, 6 non-fried favorites, and 12

Indonesian favorites; also Suggestions for serving tempeh throughout the day). 4. Western-style and Oriental tempeh recipes (68 recipes). 5. Indonesian tempeh recipes (70 recipes). 6. Making tempeh at home or in a community. 7. Making tempeh starter. 8. The Indonesian tempeh shop. Appendix A: A brief history of tempeh East and West. Appendix B: Tempeh shops in the West. Weights, Measures, and Equivalents. Glossary. Bibliography.

The first book in the world devoted entirely to tempeh. It contained the first sizeable collection of American-style and Indonesian tempeh recipes (130 in all), the first illustrated descriptions of making tempeh, tempeh starter, and onchom on various scales in Indonesian tempeh shops, the first history of tempeh, detailed discussion of tempeh in Indonesian culture and of the many varieties of Indonesian tempeh, and the first recommendations for commercial names for the more than 30 types of tempeh that could easily be made in the West. It also contained chapters and reviews of the literature on tempeh nutrition and the microbiology and biochemistry of tempeh fermentation, plus the largest bibliography on tempeh to date (including many new Indonesian references), an annotated listing of 61 people and organizations around the world connected with tempeh, and the first list of tempeh companies in the West.

Chapter 5 notes that Indonesia's 7 most popular tempeh recipes, in descending order of popularity, are: Tempeh goreng, tempeh bachem, keripik tempeh, sayur lodeh, sambal goreng tempeh, terik tempeh, sambal goreng kering tempeh. Recipes for each are given. Address: New-Age Foods Study Center, P.O. Box 234, Lafayette, California 94549.

2134. Shurtleff, William; Aoyagi, Akiko. 1979. The book of tempeh: A super soyfood from Indonesia. Professional hardcover edition. New York, NY: Harper & Row. 248 p. Illust. by Akiko Aoyagi Shurtleff. Index. July. 28 cm. [190 ref]

• **Summary:** A special cloth-bound professional edition of *The Book of Tempeh* prepared for libraries, commercial tempeh producers, microbiologists, students of Indonesian foods, and those who love fine books. In addition to the full contents of the paperback edition, it contains the following lengthy appendixes: The Microbiology & Chemistry of Tempeh Fermentation. Tempeh in Indonesia (an overview of the tempeh industry and market, including the number of shops by province, per capita consumption, etc.). The Varieties of Tempeh. Soybean Production and Traditional Soyfoods in Indonesia. Onchom or Ontjom. A Glossary of Indonesian Foods (the most extensive one available in English). Bibliography on Tempeh containing over 190 entries. Expanded Index. A great deal of original research is contained in the extra 88 pages and 54 illustrations.

Appendix C, "The varieties of tempeh, states: "The many varieties of tempeh may be grouped into five basic

types, according to the primary ingredient used: legumes, grains & soy, grains, presscake residues, and nonlegume seeds. Legume tempehs: Soy tempeh (*témpé kedelé* or *kedelai*, made from the seeds of *Glycine max*). Velvet-bean tempeh (*tempe benguk* or *tempe koro benguk*, made from the seeds of *Mucuna pruriens*, which are called *kara benguk* in Indonesian). Winged-bean tempeh (*tempe kecipir*, made from the seeds of *Psophocarpus tetragonolobus*). Leucaena tempeh (*tempe lamtoro* or *tempe mlandingan*, made from the seeds of *Leucena leucocephala*). Mung bean tempeh (*tempe kacang hijau*, made from the seeds of *Vigna radiata*, which are called *kacang hijau* in Indonesian). Broad-bean or fava-bean tempeh (*tempe kacang babi*, made from the seeds of *Vicia faba*, also called horse beans). Sesban-bean tempeh (*tempe turi*, made from the seeds of *Sesbania grandiflora*). Pigeon-pea tempeh (*tempe kacang iris*, made from the seeds of *Cajanus cajan*). Green-bean tempeh (*tempe kacang merah*, made from the seeds of *Phaseolus vulgaris*, which are called *kacang buncis* in Indonesian). Lima-bean tempeh (*tempe kara* or *tempe kara kratok*, made from the seeds of *Phaseolus lunatus*). Lablab-bean tempeh (*tempe kara-kara* or *tempe koro wedus*, made from the seeds of *Lablab purpureus*, which is called hyacinth bean in the USA). Jack-bean tempeh (*tempe kara bedong* or *tempe kara pedang*, made from the seeds of some strains of *Canavalia ensiformis*). Lupin tempeh (developed in Australia, made from the seeds of the narrow-leafed sweet lupin (*Lupinus angustifolius*) or the Andean lupin (*Lupinus mutabilis*)). Cowpea or black-eyed pea tempeh (developed in West Africa and Thailand, made from the seeds of *Vigna unguiculata*). Note: Chickpeas (garbanzo beans), baby limas, and great northern beans have also been used to make tempeh.

Grain & soy tempehs: Wheat & soy tempeh, barley & soy tempeh, rice & soy tempeh, bulgur & soy tempeh. Grain tempehs: Barley, rice, wheat, oats, and rye have been used with good results.

Presscake tempehs: Okara tempeh (called *tempe gembus* in Central and East Java where it is most popular, and called *oncom hitam* in West Java where it is not widely used). Peanut presscake tempeh (called black onchom (*oncom hitam*) in the Bogor region of West Java where it is most widely consumed, or white onchom (*oncom putih*) in the Tasikmalaya region, or "tempeh from peanut presscake" (*tempe bungkil kacang*) in East Java). Coconut presscake tempeh (*tempe bongkreng*, *tempe bungkil kelapa*, or *tempe kapuk*) comes in several varieties and can be can be poisonous if the pathogenic aerobic bacterium *Pseudomonas cocovenenans* grows on it and produces either yellow-colored toxoflavin or the more toxic colorless bongkreng acid. Peanut- & coconut-presscake tempeh (*tempe menjes*). Mung-bean-presscake tempeh (*oncom hitam* or *oncom ampas kacang hijau*). Soy- & peanut-presscake tempeh. Defatted soy-meal tempeh.

Seed tempehs (nonleguminous): Rubberseed tempeh (*tempe kaloko*) is made from the seeds of the rubber tree (*Hevea brasiliensis*). Okra tempeh. Sesame & soy tempeh. Tempeh extenders and adulterants: Okara, cassava, mung-bean presscake, soybean hulls, sweet potato, coconut- or peanut presscake, papaya. The stages of tempeh fermentation (underripe to overripe): Premature tempeh (*tempe koro*), mature tempeh, slightly overripe tempeh (*tempe semangit* or *tempe lanas*), overripe tempeh (*tempe busuk* or *tempe bosok*), rotten tempeh. Tempeh wrappers.

Appendix D: "Soybean production and traditional soyfoods in Indonesia" discusses: Soybean production in Indonesia, traditional Indonesian soyfoods: Kechap (*kecap* / *ketjap*), taucho (*tauco* or *taoco*), okara onchom, sereh (*sere*), taokoan or takoa, tofu (*tahu*). Other nonfermented soyfoods: Soy sprouts (*taugé kedele*), yuba (*bungah tahu*), soymilk, roasted soybeans (*dele sangan, kedele sangrai*), roasted soy grits or full-fat flour (*bubuk kedele*), fresh green soybeans (*kedelai rebus*).

Note: This is the earliest English-language document seen (March, 2009) uses the word "taucho" (spelled in that way) to refer to Indonesian-style miso.

Appendix E: "The microbiology and chemistry of tempeh fermentation" discusses: What are fungi?, general characteristics of *Rhizopus* molds, *Rhizopus* species used to make tempeh, pure cultures versus mixed cultures, preparing soybeans for fermentation, requirements for mold growth, general changes during tempeh fermentation, changes in nutrients and digestibility, the finished tempeh, the advantages and disadvantages of tempeh fermentation, suggestions for further research.

Appendix H: "Onchom or ontjom" discusses: Introduction. The varieties of onchom (*onchom merah* or *onchom beureum*): Peanut-presscake onchom, okara onchom, soy onchom, coconut-presscake onchom. Making peanut-presscake onchom in a commercial shop. Making okara onchom in a commercial shop. The microbiology of onchom. Laboratory studies of onchom. Aflatoxins. Works on onchom and neurospora. People connected with onchom and neurospora. Address: New-Age Foods Study Center, P.O. Box 234, Lafayette, California 94549.

2135. *Soycraft (Greenfield, Massachusetts)*. 1979. Monroeville, Ohio: Ohio Miso Company. 1(1):8. Summer. • **Summary:** "Thom Leonard and Richard Kluding ladled their first batch of miso into their one-ton wooden vats on March 15 this year. They began construction of their miso shop, one of the first in the United States, in late October [1978], on Richard's rural farm assembling a frame structure of forty feet by thirty with slab floors. As *koji*-making requires constant monitoring, they chose to locate the shop—partitioned into a storage and fermentation area, production space, a small *koji* room, and office cubicle—close to where they live.

"Their weekly miso volume is in excess of one thousand pounds, spread over four working days, and recently, they began selling Mellow Barley Miso, which takes only five weeks to mature but requires refrigeration to extend its comparatively short shelf-life. The bulk of their miso production is Barley Miso which requires up to eighteen months to ferment. To supplement their business, Richard and Thom produce between twenty and fifty pounds of tofu every week.

"Thom learned miso-making through a blend of Bill Shurtleff's writings, a two-week intensive course with Muramoto sensei at Asunaro, actual production of two thousand pounds of miso in Arkansas, and work at Island Spring in Vashon, Washington."

Note: This miso was never sold by Ohio Miso Co. Before the miso had finished aging, the company was put up for sale and purchased by Christian and Gaella Elwell, who started South River Miso (SRM) Co. The vats of aging miso were transported to Conway, Massachusetts, where the finished miso was sold by the Elwells in late 1980.

2136. *Soycraft (Greenfield, Massachusetts)*. 1979. Successful soyfoods booth at Detroit Symposium. 1(1):6. Summer.

• **Summary:** The Soy Plant of Ann Arbor, Michigan, dispensed a lavish array of soyfoods at the Detroit Symposium on Humanity, held at the University of Detroit, from March 30 to April 1. The Soy Plant's theme was "Soybeans Can Feed the World."

The Soy Plant prepared tahini-tofu spread sandwiches, missing-egg salad sandwiches, and Sloppy Barney's (half soysage and half tofu) served in pita bread with sprouts. They also had four flavors of tofu pies (banana, strawberry, peanut, and cheesecake), and peanut butter balls (made with okara, sweet white miso, and tofu). According to Dan Ecclestone, who helped man the Soy Plant booth, the purpose was to demonstrate the wide flexibility of tofu. "It was fantastic, the acceptance was very good. We were surely the most talked about booth at the exhibition." In total, they sold 450 sandwiches and 200 tofu pies.

2137. Oak Feed Miso, Inc. 1979. Land deed (Rutherford County, North Carolina). Deed of trust. Promissory note. North Carolina. 3 p. Aug. 7. Unpublished typescript. 36 cm.

• **Summary:** Land deed: With this deed Oak Feed Miso buys two parcels of land, 48.3 acres and 44.08 acres totaling 92.38 acres, in Rutherfordton, North Carolina.

This is "the same property as described in deed from Robert Warren Deakin and wife to Lawrence L. Bridges and E. Milton Singletary dated January 26, 1979 and recorded in Deed Book 401 on page 146, Rutherford Country Registry, the property hereby conveyed being described as follows:..."

“Subject to Deed of Trust to Tryon Federal Savings and Loan Association of Tryon, North Carolina, which Oak Feed Miso, Inc. agrees to assume and pay the balance due. Said Deed of Trust is recorded in Deed of Trust Book 223, Page 411, Rutherford County Registry.”

Deed of trust: This indenture, made on 7 Aug. 1979, is by and between Oak Feed Miso, Inc., a Florida corporation... Oak Feed Miso agrees to pay \$23,000 for two parcels on Maple Creek or Maple Creek Road in Green Hill Township, Rutherford County, North Carolina. Half of the total is payable to Lawrence L. Bridges and half to E. Milton Singletary. Terms: \$200 by 1 Sept. 1979 and \$200 by the first day of each successive month until the full amount of principal and interest has been paid. Interest 9%.

The 1-page promissory note (a separate document) is to Lawrence L. Bridges for \$11,500. Terms: \$100 by 1 Sept. 1979 and \$100 by the first day of each successive month. Interest 9%.

Both documents are signed by Sanford J. Pukel, president, Oak Feed Miso, and Janet Belleme, President. The land deed is recorded in book 405, p. 727. The deed of trust is in book 268, p. 460.

Note 1. See interview (March 2000) with Mae McMahan of the Rutherford County records room (Phone: 828-287-6195). Note 2. Talk with Barry Evans, owner of American Miso Co. (AMC) 2000. June 29. Barry is quite sure American Miso Co. had a second mortgage on this property. Those were the days when interest rates were around 17%. Lawrence L. Bridges and E. Milton Singletary probably provided some of the financing at lower interest rates as a help and incentive for AMC to buy the land. That way, not all the financing had to be provided by the bank at high interest rates. He estimates the total cost of the land to be about \$110,000 to \$120,000. The \$23,000 paid to Bridges and Singletary was the difference between what AMC made as a down-payment and what they were assuming as the mortgage. Address: North Carolina.

2138. *Valley News & Valley Green Sheet (Van Nuys, California)*. 1979. From the makers of tofu and miso, a new tempeh-tation—The Joy of Soy: Treat your body like a temple with tempeh. Aug. 16. *

2139. New-age Foods Study Center. 1979. Catalog of publications & materials by William Shurtleff & Akiko Aoyagi [mail order]. P.O. Box 234, Lafayette, CA 94549. 2 p. Aug. 24.

• **Summary:** This single page leaflet, 8½ by 14 inches, is printed on both sides with brown and teal blue ink on white Classic Laid paper. The Japanese-style logo is waves and a moon in a circle. The following items are available: The Book of Tofu (Ballantine \$2.95). Tofu & Soymilk Production (\$17.95). The Book of Tofu: Food for Mankind (Autumn Press \$7.95). The Book of Tempeh (paperback and

professional hardcover editions). Tempeh Production (\$13.95). The Book of Miso (Autumn Press). Miso Production. Pamphlets (5). Tofu kit. Color slide sets. Soykraft magazine (and information about Soycrafters Assoc.). Catalogs of tofu & soymilk equipment (Bean Machines). Natural nigari. Tempeh starter (contact Farm Foods). Koji & koji starter. Pressing sacks & straining bags. The Book of Kudzu. A large sidebar is titled “New-Age Foods Study Center.” Address: Lafayette, California. Phone: 415-283-3161.

2140. New-age Foods Study Center. 1979. Soyfoods tour of the Pacific Northwest (Itinerary, Aug. 27–Sept. 6). P.O. Box 234, Lafayette, CA 94549. 1 p. Aug. Unpublished manuscript.

• **Summary:** On this tour Shurtleff and Aoyagi conducted a number of public programs on soyfoods (tofu, tempeh, miso, etc.), showing color slides and sampling foods. They also did research for their forthcoming book *Tempeh Production* and held numerous media interviews. In California they visited Bean Machines, Ramagiri (home of Laurel’s Kitchen), Farallones Inst. (Donna Calvaud). In Oregon, Surata Soyfoods (Benjamin Hills), Blair Island (Toby Alves), Sunbow Farm (Mia Posner), and *Rain* magazine. In Washington, Island Spring (Luke Lukoskie). Address: Lafayette, California.

2141. Oak Feed Miso, Inc. 1979. “Subscribers consent” agreement. Miami, Florida. 2 p. Aug. 16. Unpublished typescript. *

• **Summary:** This agreement was signed at a meeting in Miami. The following people, all or most of whom were present, subscribe to buy shares in Oak Feed Miso, Inc. Sandy Pukel, John Belleme (he invested sweat equity, not money; Sandy put up John’s share of the money), Barry Evans, Yozo Masuda (chef in the Oak Feed Restaurant), Edmund Benson (a friend of Sandy’s involved in macrobiotics), and Jim Kenney (manager of the Oak Feed Store). Note: All these people knew each other, and all but Barry lived near Coconut Grove. Address: Miami, Florida.

2142. Simonds, Nina. 1979. Chinese cuisine: Soybeans. *Gourmet* 39:28-29, 74-77. Aug.

• **Summary:** After a brief history of soya in China, gives recipes for: Fried soybeans [soynuts]. Sweet soybean milk. Stir-fried soybean sprouts red-in-snow (incl. how to sprout soybeans). Braised soybeans and meatballs. Sparerib and soybean sprout soup. Stuffed wheat gluten balls with soybean sprouts (*Mien Chin Jou Yüan*). Braised bean sticks [*fu tsu*; yuba] with black mushrooms. Buddha’s delight (*Lo Han Su Ts’ai*). Stuffed bean curd rolls. Sweet-and-sour fish in bean milk skin [yuba]. Bean milk skin (*fu p’i*) and eggplant rolls.

2143. *Vashon-Maury Island Beachcomber*. 1979. Tofu gurus to talk here. Late Aug.

• **Summary:** “The people who wrote the Book of Tofu and the Book of Miso are to show Islanders Sept. 4 (at Ober Park, 7:30 to 9:30 p.m.) how to prepare tofu and miso at home.” The talk will be hosted by Luke Lukoskie of Island Spring Inc. Address: Washington.

2144. Krieger, Verena. 1979. Re: Thoughts on returning to Switzerland. Letter to William Shurtleff at Soyfoods Center, Sept. 17. 1 p. Typed, with signature.

• **Summary:** “Dear Bill, It has finally become possible for me to return to my native Switzerland (just as you told me two years ago at the first national ‘soyfoods conference’ [Held July 28-30, 1978, in Ann Arbor, Michigan]). I am determined to continue my work as a natural foods cook, teacher and possibly writer... What would be new here is the contribution from the Far East, especially soyfoods and seaweeds. It may take a long time for these products to spread in Europe, and especially in Switzerland, since many popular-traditional and cultural values are so much connected with cattle raising. Also, soybeans grow poorly here... Anyway, these were considerations I did not have to face, while I was using pounds and pounds of tofu, tempeh, miso, etc. in our restaurant in Chicago, and I feel I have a lot to learn and rethink at this point.”

Note: In 1978-79 Verena worked at the vegetarian, natural-foods restaurant “It’s Natural,” owned by Brian Schaefer, at 502 & 514 Main St., Evanston, Illinois 60202 (a suburb of Chicago). Address: Frauenfeld, Switzerland. Phone: 041-22 50 34.

2145. Yamamoto, Toyo. 1979. The soybean: Potential to feed the world. *Oregon Herald*. Sept. 17. p. 5, 8. [3 ref]

• **Summary:** An interview with William Shurtleff about soyfoods. “On Saturday night of the Labor Day weekend about 70 people cozily seated themselves at the First Methodist Church in downtown Salem [Oregon] to hear a lecture/slide show by author William Shurtleff. He discussed soybean foods, such as tempeh, tofu and miso—most of which are now available at natural foods stores in the mid-valley.” The program was sponsored by Heliotrope Natural Foods in Salem. Address: Salem, Oregon.

2146. Esko, Wendy. 1979. *Introducing macrobiotic cooking*. Tokyo: Japan Publications. 144 p. Foreword by Aveline Kushi. Preface by Edward Esko (both written June 1978). Illust. by Bonnie Harris. Index. 26 cm.

• **Summary:** The author was introduced to macrobiotics in upstate New York in about 1971. This is her first book on macrobiotics. It was originally published under the title of *An Introduction to Macrobiotic Cooking* by the East West Foundation, 17 Station Street, Brookline, Massachusetts

20146. Though copyrighted in 1978, the first edition appeared in Sept. 1979. The fourth printing was May 1981.

The chapter titled “Beans including tofu and natto” gives descriptions of and recipes for making: Japanese black beans (black soybeans, p. 54; “These beans are therapeutic for the sexual organs and will relieve an overly yang condition caused by too much animal food or fish.”) Soybeans (p. 54. “These beans are the most yin of the bean family... It is recommended that soybeans be eaten only occasionally as a separate side dish. Because they are very yin, they should be cooked with yang vegetables such as lotus root or burdock, for balance. The best way to eat soybeans is in the form of *tofu*, *okara*, *natto*, *tempeh*, and, of course, miso and tamari.”) Tofu, and Homemade tofu (curded with nigari, p. 54-55). Okara (p. 55-56). Tofu and corn. Tofu, onions and water cress. Dried tofu (dried-frozen, p. 57). Yuba (dried soy milk; how to make at home). Vegetables and dried soy milk (p. 57). Ganmodoki (Tofu and jinenjo patties, p. 57-58). Natto (description and how to make at home, p. 58-59).

Other soy-related recipes include: Tofu soup (p. 68). Miso soup (p. 69-70, basic, or quick). Watercress miso soup (p. 71). Daikon and sweet rice dumpling soup (with miso). Chinese cabbage and tofu miso soup (p. 71). Aveline Kushi’s miso stuffed lotus root (p. 86). Tofu dressing (p. 91). Miso-tahini spread (p. 92). Miso-sesame spread (p. 92). Miso-lemon sauce (p. 93). Tofu dip (p. 93). Miso with scallions (p. 95). Tamari (description, p. 95). Tekka (made with Hatcho miso, p. 96). Miso pickles (p. 100-01). Tamari pickles (p. 101). Tofu plaster (p. 130). Ume-Sho-Kuzu drink (with umeboshi, tamari and kuzu, p. 131). Ume-sho-bancha (with tamari, p. 131). Use of tamari, miso, and tekka (p. 132).

Also includes instructions for making amasake at home (p. 116; it is a natural sweetener made from fermented sweet rice), and a recipe for Amasake bread (p. 107), instructions for making seitan at home (p. 46-47, using 3½ lb of hard spring or hard winter whole wheat flour; spring wheat flour produces a much softer texture of seitan than the winter variety), and recipes for seitan stew, seitan-barley soup, sauteed vegetables and seitan, stuffed cabbage with seitan, and seitan croquettes (p. 47-49), plus recipes for leftover seitan (p. 125). Address: East West Foundation, near Boston/Cambridge, Massachusetts.

2147. Abiose, Sumbo Henrietta. 1979. *Studies on miso fermentation*. PhD thesis, University of Strathclyde, Glasgow, Scotland. Oct. *

• **Summary:** Letter from Dr. Brian J.B. Wood. 1983. March 16. “Sumbo Henrietta Abiose is a beautiful and charming Nigerian lady. She came to do a PhD here on some aspect of food microbiology and was assigned to me. I chose the topic, she accepted it, and Mr. Mark Allen and I supervised it. She is now lecturing in: Dep. of Food Science &

Technology, University of Ife, Ile-Ife, Nigeria. She worked with us while her husband qualified for his fellowship at the Royal College of Dental Surgeons.”

2148. Barton, David. 1979. Foods from the Far East. *Whole Foods (Berkeley, California)*. Oct. p. 28-34, 54.

• **Summary:** Mutual Trading Co. is making 500 tons of miso a year, and this is expected to increase by 10-15% in 1980. Their miso sales are up 300% in 5 years. Erewhon wholesale sales by product for the year ended June 1979 were: Miso \$100,000, shoyu \$200,000, tofu \$110,000. Japanese trade commission figures for 1978 natural food imports are: Miso \$625,528, and shoyu \$1,466,909.

2149. D.B. 1979. Down-home miso [from Ohio Miso Co.]. *Whole Foods (Berkeley, California)*. Oct. p. 62.

• **Summary:** About Ohio Miso Co. started in Monroeville, Ohio by Thom Leonard and Richard Kluding. “Although the Japanese have started manufacturing [miso] here, there only appears to be one Caucasian American operation [Ohio Miso Co.] going at this point, with another one on the way.

“The start of the Ohio Miso Co. in Monroeville, Ohio, was one of those inexplicable coincidences which are usually dismissed as chance in the West, but which our Oriental counterparts may call ‘karma.’ Thom Leonard, a man of considerable experience in natural foods even though still in his 20s, was passing through Ohio visiting friends when he was introduced to Richard Kluding, the owner of a natural food store in Norwalk, Ohio. It so happens that Kluding, in his mid-30s, also had a small 26-acre farm nearby, with good quality well water. And as Thom explained his dream of producing high-quality miso, and gave him some two-year-old miso he’d already produced to try, Richard let it drop that he also had some capital.

“Within a month [in Oct. 1978], they’d started building a 1200-square-foot shed to house the 60,000 pounds of miso that are now sitting there to mature. What’s so special about this miso, and why are some Americans walking where others fear to tread?

“It’s the ingredients, plus the fact that Thom had the expertise to know how to grow koji, which is the heart of the operation, explains Richard Kluding. ‘The miso is made with all organic products—whole grain brown rice, the short-grained variety from Lundberg Farm in California, and a variety of soybeans which are higher in protein and lower in oil.’”

“‘We have a very deep well, with very clean, pure-tasting water,’ he added. ‘And the miso is being stored in 300-gallon wooden vats specially made in Buffalo, New York, as opposed to the plastic types of materials often used now.’” Then discusses some of Leonard’s experiences making “the mysterious koji.”

Notes in closing that Oakseed Co. [sic, Oak Feed Store] from Miami, Florida, is planning to start up a miso facility in North Carolina.

2151. Kluding, Richard; Leonard, Thom. 1979. Ohio Miso Company, Inc (Leaflet). Monroeville, Ohio. 1 p. Single sided. 28 cm.

• **Summary:** This untitled leaflet, printed with brown ink on beige paper, begins: “Thank you for your inquiry about the Ohio Miso Company. We are glad to have this opportunity to tell you about ourselves and our miso. Our shop is small, the equipment simple, the process traditional and labor intensive. Because we choose to be a relatively small shop, we are able to make miso as craftsmen, continuing a tradition of centuries, always mindful that we do not, in fact, make miso, but merely do our best to provide the ideal conditions for the miso to mature and ripen.”

“We leave our miso in its unpureed state, giving it a traditional whole koji texture. It is not pasteurized, or heat-treated to increase its shelf life; neither are any preservatives used. It is a live food containing myriad yeasts, enzymes, and bacteria.

“We offer the following varieties: Mellow Brown Rice Miso, Mellow Barley Miso, 8 Month Barley Miso.

“Beginning in the spring of 1980 we will have: 1 Year Barley Miso, 1 Year Brown Rice Miso.”

At the bottom is the company name, address, and logo, a handsome illustration of a wooden miso vat with stones on top. Address: Route 2, Monroeville, Ohio 44827. Phone: 419/668-9512.

2152. Taira, Harue; Taira, Hirokadzu; Mori, Y.; Ushirogi, T.; Fujimori, I. 1979. Daizu shushi no kansô shori hôhō to sono hinshitsu ni tsuite. IV. [Influence of dry treatment after harvest on quality of soybean seeds. IV. Suitability for food processing of stored seeds]. *Shokuhin Sogo Kenkyujo Kenkyu Hokoku (Report of the National Food Research Institute)* No. 35. p. 160-71. Oct. [11 ref. Jap; eng]

• **Summary:** The effects of dry treatment (drying) after harvest on the physical properties, chemical composition, and suitability for food processing of soybean seeds were investigated. The heat treatments were natural drying and

air drying using heated and non-heated air at 20, 30, and 40°C.

The seeds were then stored at 15°C with RH (Relative Humidity) of 65% and 75%, at 30°C with RH of 65% and 75%, and at room temperature and humidity in a paper bag for 30, 60, 120, 180, 270, and 360 days, respectively. These various storage conditions were further investigated for their effects on suitability for food processing.

At a given RH, the seed moisture rose as the temperature rose; many figures are given. Seed quality degenerated as storage time increased. The following decreased: absorbability of water in seeds, rate of germination, extractability of protein from soaked seeds by hot water, pH of soybean milk, and ratio of weight of steamed seeds to raw seeds. And the following increased: soluble matter and protein in soak water, moisture content, hardness and darkness of color of steamed seeds.

Conclusion: Soybeans should be stored in a cool, dry place, ideally at a temperature of 15°C (50°F) or below and an RN of 75% or below. Remarkable deterioration was observed at 30°C with RH of 75%. Seeds heat dried at 40°C showed a significant decrease in suitability for making miso, natto, or cooked soybeans. Tofu making was less affected by drying the seeds with heated air.

2154. Kushi, Aveline. 1979. Cooking with miso. *East West Journal*. Nov. p. 56-57, 59-61.

• **Summary:** Excerpts from the book *How to Cook with Miso*, by Aveline Kushi. "Putting miso in soup is the ideal way to use it every day. It is advisable for any condition, for any kind of person." Generally, people with a yin, or passive type of condition, should prepare a more yang (strong) type of miso soup, and people with a yang, or active type of condition, should make a more yin (light-tasting) type.

2155. **Product Name:** Mugi Miso. Renamed Barley Miso in about 1981.

Manufacturer's Name: Shin-Mei-Do Miso Co.

Manufacturer's Address: 5 Wren Road, Denman Island, BC, Canada V0R 1T0. Phone: 604-335-0253.

Date of Introduction: 1979. November.

Ingredients: Barley koji, soybeans, salt, water.

New Product-Documentation: Talk with Yasuo Yoshihara. 1996. March 22. Their second miso, introduced in November 1979, was a barley miso named "Mugi Miso." Sold only to natural- and health food stores, it was renamed "Barley Miso" in about 1981.

2156. Edward & Sons Trading Co. 1979. Have you ever wished someone would create a truly wholesome satisfying snack, with the traveler and working person in mind? Someone has! Miso-Cup. Delicious vegetarian soup in seconds (Ad). *Vegetarian Times*. Sept/Oct. p. 9.

• **Summary:** This ¼-page black-and-white ad shows a photo of a box of Miso-Cup next to mug of the prepared soup and an open lunch box containing one foil packed of the instant soup. The text reads: "Convenience without compromise. Available wherever fine natural foods are sold. Ingredients: soybeans, rice, sea salt, onions, parsley.

This ad also appeared in 1979 in *East West Journal* (Dec. p. 15). Address: P.O. Box 271, Union, New Jersey 07083.

2157. Hansen, Sandra; Randall, Chris; Dallam, Bette; Friedman, Ruth. eds. 1979. Sunyata's whole foods cookery for big & little folks: A vegetarian cookbook. Eau Claire, Wisconsin: Sunyata Whole Food Co-op. 332 p. Dec. 3. Illust. Index. 22 cm. [9 ref]

• **Summary:** A glossary titled "Odds and Ends" (p. 32-33) contains entries for tamari, miso soybean paste, and tofu. Soy-related recipes include: Rye oatmeal soy bread (p. 69). Soybean casserole (p. 142). Soy flour and grits are discussed under "Complementary protein proportions" (p. 113). Page 117 notes that soybeans should be cooked for 3 hours or more, soy grits for 15 minutes. Address: Eau Claire, Wisconsin.

2158. Soy Plant (The). 1979. Tofu gratuity (Leaflet). Ann Arbor, Michigan. 1 p. Undated. 11 x 9 cm.

• **Summary:** This tiny, hand-lettered "take one" reads: "Gift certificates may be purchased at a 10% discount through January 31st 1981. Visit our retail store, 211 E. Ann, Ann Arbor, Michigan. 663-0500." An illustration shows a wheel with spokes; on each spoke is written: Tempeh, soysage, tofu, soymilk, miso. Across the diameter: "Soy foods for body & planet." In large letters across the bottom: "The Soy Plant." Address: 211 East Ann St., Ann Arbor, Michigan. Phone: (313) 663-0500.

2159. White Wave Soy and Natural Foods. 1979. Product price list: Winter. 3869 Walnut St., Boulder, CO 80301. 6 panels. Catalog. Dec.

• **Summary:** Soyfoods: Nigari tofu (bulk, packaged, doufu [extra firm Chinese style]). Salad dressings (mellow miso salad dressing, hearty miso salad dressing). Tempeh. Soysage. Tofu Mayo. Savory baked tofu. Polar bean (banana-carob soy ice cream).

The company also sells sesame products (raw tahini, roasted tahini, sesame butter, sesame salt), peanut butters (salted or unsalted; crunchy natural, creamy natural, Valencia {crunchy or creamy}), more nut and seed butters (roasted almond butter, raw cashew butter, roasted cashew butter, roasted sunflower butter), and tamaried nuts and seeds (tamaried almonds, tamaried cashews, tamaried Spanish peanuts, tamaried sunflower seeds, and tamaried nut mix [a blend of peanuts, sunflower seeds, cashews, and almonds]). Note: This is the earliest English-language document seen (July 2005) that uses the word “tamaried” to refer to nuts and seeds that have been seasoned with tamari soy sauce and then baked.

“White Wave was founded in 1977 upon the principle of supplying the Rocky Mountain region with high quality protein foods. As these foods are an extension of our own lifestyles, we offer only products we personally feel are wholesome and nutritious. It is our pleasure to guarantee the quality of all our products. All foods carrying a White Wave label are made solely by us. We thank you for supporting our business. The Folks at White Wave.” Address: White Wave, 3869 Walnut St., Boulder, Colorado. Phone: 303-443-3470.

2160. **Product Name:** Miso Salad Dressing [Mellow, Hearty, or Yellow].

Manufacturer’s Name: White Wave.

Manufacturer’s Address: 3869 Walnut Street, Boulder, CO 80301.

Date of Introduction: 1979. December.

New Product–Documentation: Product Price List. 1979, winter. 8 oz. jar for \$1.12. Shurtleff & Aoyagi. 1983. *The Book of Miso*. 2nd ed. p. 239. Sold in an 8 oz. jar.

and Industry) 37(3):202-11. [75* ref. Jap]

• **Summary:** Shoyu and varieties of miso: 1. Historical background: The major foods used in Korea that contain soy are soy sauce (kan jang), soybean miso (doen jang), and red-pepper miso (kochu jang). Also there are jonkutsu jang, tamusu jang (makujang) and jupu jang. The suffix jang is the same as the Chinese chiang and the Japanese hishio, meaning mash. The origins of the varieties of shoyu and miso are not clear. But there was a character, tojang, in “Ronko” which was written by Oju? of the Gokan period. Also, there are some references to jang in the *Analects of Confucius* (Lun yu; Jap. Rongo). They indicate that jang existed years before Christ. In the “Kaitoyakushi?” there is a quotation from “Shintosho?” (618-907) that “shi” (soy nuggets or misodama) was a well known product of Bokkai (north of the Yellow Sea) in those days (Sakueki). It is thought that jang first appeared in Manchuria (Manshu was called Kokuri in those days) where soybeans were originally grown. Soybeans later spread to China and Japan.

In Korea the oldest record of any variety of jang was found in *Sangokushiki* (683) as “shōshi?”. This indicates that people were already making shoyu and miso quite early on. In the *Ch’i-min yao-shu* (AD 530-550) a method of shi (or kaki) making was recorded. We guess that shi was the predecessor to today’s meju (= misodama). The classic book *Kyukosetsuyo?* that was compiled in 1554 (Richo? period–Meisoo 9) is the oldest book that contains the techniques for making the Korean varieties of jang. About 8 different methods of production were recorded, amongst them the sink gan (chinjangho) and zojangho methods. In those days, meju (= misodama) was called misho. It is written that they steamed the soybeans, roasted and ground the wheat, then mixed the soy and the wheat in a 2:1 ratio. From this they made koji and dried it in the sun. That method was very similar to the koji-making method used in Japan. In Japan it was called kokori, hishio, or misho. Later, shoyu became known as jang? Miso became massho? and then returned to being called misho. Address: Presently: Tokyo Daigaku Biseibutsu Kenkyusho #3 Kenkyubu. Formerly: Seoul, South Korea. Tokoku Daigaku Shokuhin Kogakubu.

• **Summary:** About the work of William Shurtleff, age 38, with soybeans, tofu, and miso. A photo shows Shurtleff.

2165. **Product Name:** Cold Mountain Miso [Red, Mellow White, or Light Yellow].

Manufacturer’s Name: Miyako Oriental Foods, Inc.

Manufacturer’s Address: 404 Towne Ave., Los Angeles, CA 90013.

Date of Introduction: 1979.

Ingredients: Soybeans, rice, miso culture, salt.

Wt/Vol., Packaging, Price: 14 oz plastic tubs, with lids.

How Stored: Refrigerated preferably.

New Product–Documentation: Shurtleff & Aoyagi. 1983. *The Book of Miso*. 2nd ed. p. 238. Food Technology. 1986. Jan.; Economic World. 1987. June. p. 46. The brand name and package design were developed by Shurtleff & Aoyagi of Soyfoods Center.

2166. **Product Name:** New Mexico Natural Sweet White Miso.

Manufacturer's Name: Natural Cafe (The).

Manufacturer's Address: 1494 Cerrillos Rd., Santa Fe, NM 87501.

Date of Introduction: 1979.

Wt/Vol., Packaging, Price: Tub.

New Product–Documentation: Talk with Martin Roth. 1989. Aug. 17. He learned to make this miso from *The Book of Miso* by Shurtleff & Aoyagi. He and his wife, Barbara, made it in their apartment in Santa Fe. For a short time they were packaging it and distributing it as far away as Albuquerque. They sold the miso over the counter out of tubs at the restaurant as a commercial product. Then they started making salad dressings using the miso. They were planning to launch the dressing as a commercial product in bottles and even had the labels printed, but then the restaurant kind of overwhelmed them with its demands, so they dropped the idea of wholesaling food and instead served the miso salad dressing in the restaurant. "We were very soy based at the time."

2167. **Product Name:** The Original Fried Rice Sandwich (With Tofu).

Manufacturer's Name: Natural Cafe.

Manufacturer's Address: 1494 Cerrillos Rd., Santa Fe, NM 87501.

Date of Introduction: 1979.

Ingredients: Organic brown rice fried with scallions and soy sauce, wrapped in a whole wheat tortilla with steamed organic carrots, alfalfa sprouts, miso tahini sauce, tofu, green leaf lettuce.

Wt/Vol., Packaging, Price: 10 oz. Retail for \$2.95 (1988).

New Product–Documentation: Label sent by Paul Duchesne. 1989. Aug. 11. Handwritten "Naturally delicious. Made fresh today. To eat; peel back wrapper from one end." When Paul went to Boston, he taught Barbara and Marty Roth how to make the Brown Rice & Tofu Sandwich. (Barbara's maiden name was Svenning; she married Jack Garvey then lived for years with Marty Roth.) After he left, they made it for a while. Then they began as a restaurant in Santa Fe, New Mexico based on a this sandwich. At one point they were making their own tofu, sprouts, and chapatis. When Barbara separated from Marty (they were never officially married), she moved to Black Mountain

(near Asheville), North Carolina, where she continued to make a line of tofu sandwiches.

Talk with Martin Roth. 1989. Aug. 17. He learned how to make The Original Fried Rice Sandwich (With Tofu) from Paul Duchesne at the macrobiotic study house on Boylston St. in Brookline, Massachusetts. In about 1979 Martin (unable to convert his macrobiotic house to a Zen center) moved to the Bodhi Mandala Zen Center in Jimenez, New Mexico. He was the head cook (Tenzo) for a while. Then, forsaking Zen for tofu, he and Barbara Svenning Garvey moved to Santa Fe into the Linda Motel on Cerrillos Rd. They got a room with a stove, and then persuaded the Santa Fe Health Inspector to certify the room as a facility for tofu sandwich production. They fried the rice and made the chapati-wrapped sandwiches early each morning, wrapped them in plastic, and delivered them to the local co-ops and health food stores. The sandwiches soon became very popular (they were selling 30-50 a day, six days a week), so they expanded into an apartment and decided to start a natural foods manufacturing and distribution company named New Mexico Natural. In the apartment they made the sandwiches, and started to make tofu, mochi, sweet white miso, sauerkraut, pickles, amasake, etc. In late 1979 or early 1980, as the sandwich grew even more popular they bought an old Mexican restaurant in Santa Fe named El Charro and converted it into a natural foods and macrobiotic restaurant called the Natural Cafe, based on the brown rice and tofu sandwich which evolved into the Fried Rice Plate (with tofu) and remained their most popular item. They were purists and self sufficient. All ingredients were organically grown and they used only spring water, even in their ice cubes. They made their own tofu from soybeans, their own miso, and their own chapatis from wheat. They grew their own sprouts and ground their own sesame seeds for the sauce. They made seitan and sold seitan burgers. As the restaurant business demanded more and more of their time, they decided to discontinue the distribution company.

At one point Martin considered starting a tofu shop, but a rebuff from a local Japanese restaurant, the fact that they were too busy with other things, and the availability of good tofu from Kathryn Peterson Bennett of Southwest Soyfoods (which she had started by June 1978) led him to drop the idea. But they sold miso out of the restaurant as a commercial product. At the restaurant they also made and sold amasake, amasake shakes (which the Mexican men loved, and called "chakes"), and amasake ice cream. Martin believes this was America's first amasake ice cream.

In 1981 Martin and Barbara sold the restaurant to one of their employees; it still exists under the same name. Then they went to Boulder for several months, then to Miami for several months, then to North Carolina, where they stayed for several years while Martin helped to start Great Eastern Sun. In about 1985 they separated and Barbara moved back to North Carolina.

2168. **Product Name:** Miso.

Manufacturer's Name: Pillar of Dawn (Amud Ha Shachar).

Manufacturer's Address: Moshav Me'or Modi'im, Doar Na Hamercaz, Israel.

Date of Introduction: 1979.

New Product–Documentation: Talk with Avraham Sand. 1981. This was Israel's first tofu shop; they also made soymilk, tempeh, and miso, but only the tofu and miso were sold commercially, off the moshav, in Jerusalem. Ben Zion Solomon pioneered the miso development.

Shurtleff & Aoyagi. 1982. *Soyfoods Industry: Directory & Databook*. Owner is now Ben Zion Soloman.

Talk with Avraham Sand. 1990. Sept. 9. Gives a detailed history of this company and its work with miso.

2169. **Product Name:** Powdered Soybean Miso.

Manufacturer's Name: San-J International, Inc.

Manufacturer's Address: 3236 Boulevard, Colonial Heights, VA 23834. Phone: 804 / 520-1513.

Date of Introduction: 1979.

Ingredients: Soybeans, water salt (No wheat).

Wt/Vol., Packaging, Price: 44 lb (22 kg) metal cans.

How Stored: Shelf stable.

Nutrition: Moisture 5%, protein 33%, carbohydrates 25%, vegetable fat 14%, salt 20%. 332 calories per 100 gm. 6.08 gm glutamic acid per 100 gm.

New Product–Documentation: Product Data Sheet. 1982. Contents: Description. Ingredients. Composition. Amino acids per 100 gm. Characteristics. Application. Specific suggested uses. Packaging. Shurtleff & Aoyagi. 1983. *The Book of Miso*. 2nd ed. p. 239.

Letter (fax) from Norio Kushi. 1995. May 1. Steve Zoller says that San-J sells a miso powder, which they import from Japan. It has always been an imported product.

2170. So, Enshi. 1979. Taiwan no hakkô shokuhin [Fermented foods of Taiwan]. *Hakko to Kogyo (Fermentation and Industry)* 37(2):102-12. [Jap; eng+]

• **Summary:** Includes a good map of Taiwan and its prefectures. In 1976 there were 433 soy sauce manufacturers in Taiwan. Taiwanese divisions of grading soy sauce plants numbered as follows: A (Ko) class, 39; B (Otsu) class, 12; C (Hei) class, 223; others 159. They produced the equivalent of 1,681,870 dozen bottles/month. Each bottle contains 540 ml of soy sauce, so 12 bottles contain 6,480 ml or 6.48 liters or 1.712 gallons. Thus Taiwan produces 10.89 million liters a month or 130.71 million liters/year of soy sauce. This is equivalent to 2.878 million gallons a month or 34.53 million gallons a year. Taipei prefecture produced 46.8% of this total, followed by Changhwa prefecture with 10.7%.

Soy sauce was initially made by monks. Because they didn't eat meat, it gave them important protein and fat. Gradually, it became more popular and spread to all parts of China. Monks also transmitted the method of soy sauce production to Japan and all over East Asia. It is said that around 1230 A.D., the Zen monk, Kakushin of Kofukuji, Kishu Yura, went abroad to southern Sung in China and brought back to Japan fermentation methods of Miso and Kinzanji Miso.

There are 3 types of soy sauce produced and sold in Taiwan today: (1) Tou-yu, soy sauce (*daizu shoyu*) which originated in China, (2) Inyu, black bean sauce which is the traditional Taiwanese soy sauce, and (3) Chemically prepared soy sauce (*kagaku shoyu*) which was invented in Japan. Processing techniques for making Koji and pressure-straining methods have made great progress in recent years. Address: Kokuritsu Taiwan Daigaku Kyoju, Ken Nogyo Kagaku Kenkyu-jo sho-cho, Nôgaku Hakase.

2171. **Product Name:** Spinach Tofu Pie.

Manufacturer's Name: Soy Plant (The).

Manufacturer's Address: 211 East Ann St., Ann Arbor, MI 48104. Phone: 313-663-0500.

Date of Introduction: 1979.

Ingredients: Filling: Tofu, spinach, onion, miso, cider vinegar and spices. Crust: Whole wheat flour, sunflower seeds, oats, corn oil, water.

Wt/Vol., Packaging, Price: 6 oz.

How Stored: Refrigerated.

New Product–Documentation: Oval Label in Soy Plant scrapbook from 1979 or 1980. 3 by 3 inches. Green on beige. 6 oz.

Talk with Steve Fiering, a founder of The Soy Plant in Ann Arbor. 2000. Dec. 3. This was like a quiche (savory, not sweet) probably developed by an African-American guy named Jura (pronounced ju-RAH) McDowell. "He was a very creative cook, definitely interested in what we were doing, and became a real part of the whole group."

2172. Watanabe, Tokuji. 1979. Developments in the processing of traditional soybean foods in Japan. In: *Proceedings of the Fifth International Congress of Food Science and Technology*. Tokyo: Kodansha. See p. 66-73. [9 ref]

Address: Kyoritsu Women's Univ., Tokyo, Japan.

2173. Aihara, Cornelia. 1979. *The calendar cookbook*. George Ohsawa Macrobiotic Foundation, 1544 Oak St., Oroville, CA 95965. 253 p. [unnumbered]. Illust. by Nan Schleiger. Index. 17 x 24 cm.

• **Summary:** This macrobiotic cookbook is designed for cooking with the seasons. Breakfast and dinner menus are given for every day of the year. A glossary gives brief descriptions of the Japanese foods listed in the recipes. For

example: “Tamari: traditional soy sauce (*shoyu*) made without chemicals. Tofu: curdled soy milk. Tekka: condiment of miso and vegetables cooked a long time.” All recipes are numbered.

Soy-related recipes include: 2d. Baked mochi with kinako. 4. Kombu, age, albi nishime. 5. Black bean nishime [these are almost certainly black soybeans]. 8. Amasake. 8a. Amasake kanten. 13. Natto with pickled daikon leaves. 18. Vegetable miso soup. 20. Mackerel with ginger miso. 28. Wakame miso soup. 32. Kidney beans with miso. 35. Onion miso. 46. Burdock, carrot and lotus root with oily miso. 60. Vegetable oden (with stuffed age). 63. Collard greens with age nitsuke. 64. Home-made age (deep-fried tofu). 73. Home made natto I and II. 75. Northern white beans with miso. 80. Home made tofu and nigari. 80a. Clear soup with tofu and shingiku [sic, *shungiku* = chrysanthemum leaves]. 80b. Tofu-scallion miso soup. 82. Amasake cake with cream cheese frosting (3-layer, using 1 lb of dairy cream cheese). 87. Wheat gluten (made from 10 cups whole wheat flour and 4 cups unbleached white flour). 87a. Seitan (with wheat gluten and tamari soy sauce). 87b. Fresh wheat fu (with wheat gluten). 87c. Boiled fu. 87d. Fried fu (Gluten cutlet). 87e. Cutlet kabobs (with cooked wheat gluten). 97. Scallion miso. 100. Okara nitsuke (okara is “soybeans which are leftover after making tofu”). 132. Amasake cake. 135. Amasake yeasted doughnuts. 138. Vegetable kabobs with lemon miso sauce. 159. Koi-koku (carp soup with barley miso). 161. Amasake cake with fruit and nuts. 177. Buckwheat dumpling miso soup. 183. Cooked vegetable salad miso ai (miso dressing). 191b. Tomato sauce with miso. Amasake cookies. 197. Onion cream miso soup. 199. Soybean soup. 220. Tofu, snow peas and white rice miso soup. 229. Cucumber with miso. 233. Fresh corn tortillas with scallion and oily miso. 236. Toasted rice balls with soy sauce or miso. 244. Barley miso soup. 245. Tekka [miso]. 251. Pan-fried eggplant with lemon-miso sauce. 257. Green pepper with sauteed miso. 259. Tofu with mustard sauce. 261. Goma tofu (made from sesame butter and a little tamari soy sauce). 263a. Parsley miso pickles. 263b. Miso pickles. 266. Amasake wedding cake. 274. Shingiku miso soup. 290. Tofu with kuzu sauce. 294. Soybean nitsuke. 304. Kombu, dried tofu, age nitsuke. 305a. Millet and soybean soup. 329. Amasake crescent cookies. 333. Tofu-egg clear soup with watercress.

The Acknowledgments section begins: “After the French Meadows Summer Camp sponsored by the George Ohsawa Macrobiotic Foundation in 1972, I looked over the menus of the meals I served at camp. In revising them, I had the idea to keep a one-year record of menus. I thought this would be a practical, everyday help for those people beginning to cook...

“Since then, seven years passed.” Address: Oroville, California.

2174. Aoki, Hiroshi; Ito, Kiyoe. 1979. *Chôri to daizu* [Cooking and soybeans]. Gakken Shoin K.K., Tokyo. 173 p. Illust. Index. 22 cm. [151 ref. Jap]

• **Summary:** Contents. I. Cooking and soybeans. II. Soybean molecules and soybean protein. III. Cooking and traditional soy protein foods. 1. Cooked whole soybeans (nimame), green vegetable soybeans (yude-mame, edamame), soy sprouts. 2. Roasted soy flour (kinako). 3. Tofu. 4. Deep-fried tofu pouches and tofu burgers (aburaage and ganmodoki). 5. Dried frozen tofu (kori-dofu). 6. Yuba. 7. Natto. 8. Tempeh. 9. Soymilk. 10. Miso (Miso soup, miso-ni, ae-mono). 11. Shoyu. IV. Cooking and new soy protein products. Address: 1. Prof., Otsuma Joshi Daigaku; 2. Prof., Tokyo Gaku Gei Dai.

2175. Barer-Stein, Thelma. 1979. *You eat what you are: A study of ethnic food traditions*. Canada: McClelland & Stewart, Ltd. xii + 13-624 p. Index. 23 cm. [550+* ref]

• **Summary:** This is largely a compilation of information from many other books and articles. On the cover is a color painting of *The Gardener* (or *Vertumnus*), from his series, *The Four Seasons*, c. 1590, by Giuseppe Arcimboldo (or Arcimboldi) of Milano.

In Chapter 12, on China, the section titled “Meats and alternates” (p. 110-13) notes that the soybean is called the “Chinese Cow” [sic, “Cow of China”] because of its versatility. Soybeans are used as whole dry beans and as sprouts, or they can be made into a firm white curd called “Chinese cheese” [sic], which can be used in many different ways. Soybean milk may be used in much the same way that westerners use cow’s milk. They are fermented to make the favourite condiment, soy sauce, or “fermented bean curd that is packed in jars and sold as red bean sauce or white bean sauce,…” Cantonese names from soy products are: Mien chiang: A syrup-like sweet bean paste. Dow-foo (tofu). Foo yu (fermented tofu). Tiem jook (dried yuba, broken into pieces). Wow doo [Wu dou]. Black soybeans. Dow see [doushi, soy nuggets]: Salted, fermented black soybeans.

In Chapter 30, on Japan, the section titled “Meats and alternates” (p. 336-37) notes that products made from soybeans include: (1) “Shoyu, a sweetish soy sauce made from wheat and barley [sic], soybeans, salt, and water.” (2) Miso, or “fermented soybean paste,” used mostly for flavouring soups [miso soup]. (3) Tofu, or soybean curd, is a staple in Japanese cookery. “Its smooth, custard-like texture and bland flavour make it an ideal ingredient. It is extremely versatile and readily absorbs other flavours. Many “restaurants in Japan take great pride in their tofu dishes.”

In Chapter 31, on Korea, the section titled “Fruits and vegetables” (p. 350-51) discusses soybeans and their products at length. Soy sauce is used to season *kim* (nori) and other edible seaweeds. Soy sauce is an ingredient in

“hot pepper mash” [*kochu jang*]. Soybeans are used to make “soybean mash” [*doen jang*]. Dry soybeans are roasted in an iron pot, then ground, and the roasted soy flour is used as a garnish over rice cakes or plain cooked rice; children enjoy eating the coarser roasted bits that are sifted out of roasted flour or meal. Soybeans sprouts are eaten lightly cooked as a vegetable. Soybeans are also made into tofu (*tu bu*); a brief description of the process is given, in which the drained curds are left in their hemp bag to form a firm cake, which may be cut, dipped into soy sauce, or fried in sesame oil. “Oil can also be made from the soybeans, but it is not commonly used or prepared.”

Although commercial soy sauce, made in factories, is now widely available, many Korean households still prepare their own soy sauce each fall. Boiled soybeans are pounded, molded into a cone shape, and set to dry until hard. They are then wrapped with rice straw, hung from eaves, rafters or ceilings, and allowed to ferment for several weeks [until they become *meju*]. During the winter, these fermented cones may be stored in huge rice-straw bags kept in a cool place.

In the spring, break the cone into small pieces and place in a large earthenware jar, nearly filled with water. Add salt, spices, red peppers, and a few charcoal lumps. Leave this in the sun for a few days [sic, 30-60 days] until the molded soybean chunks float to the top and the resulting liquid turns black. Ladle out and filter the black liquid, then boil it to make soy sauce. The solids remaining in the jar are used as soybean mash [after the charcoal is removed].

A portrait photo of the author, with a brief biography, appear on the rear cover and in the Introduction. Address: Ph.D. student, Ontario Inst. for Studies in Education, Toronto, Ontario, Canada.

2176. Colbin, Annemarie. 1979. *The book of whole meals: A seasonal guide to assembling balanced vegetarian breakfasts, lunches and dinners.* Brookline, Massachusetts: Autumn Press. Distributed by Random House. 232 p. Illust. Index. 28 cm. Reissued in Feb. 1983 by Ballantine Books, NY. 28 cm. [88 ref]

• **Summary:** In this macrobiotic cookbook, note (despite the subtitle) that fish are used in some recipes, so it is not actually a vegetarian cookbook. The term “shoyu (natural soy sauce)” is used throughout. Contents: Part I: Theory: A kitchen philosophy. Where we are now. Choosing our food. Balance. Menu planning: General guidelines, food categories. In the kitchen: Cooking: why and how, setting up the kitchen, buying, storing, and preserving food, cutting vegetables. Special situations: Eating away from home, if you live alone, entertaining, the art of eating.

Part II: The practice. Using this book. Fall meals. Winter meals. Spring meals. Summer meals. Basic beverage recipes. Homemade bread. Appendix. Bibliography (24 cookbooks, 65 reference books and others).

Soy-related recipes include: Miso soup (with tofu, p. 69), Hiziki [Hijiki] with mushrooms and tofu (p. 74), Tofu-ginger dressing (p. 93), Miso-tahini spread I (p. 94), Oden stew (with fried tofu, p. 112), Fried tofu (p. 113), Miso-tahini spread II (p. 118), Tofu-miso spread (p. 127), Daikon with miso (p. 139), Cold tofu with garnish (p. 144), Tofu-sprout spread on toast (with alfalfa sprouts, p. 146), Tofu cream pie (p. 156), Scrambled tofu (p. 158), Noodles with tofu and bean sprouts (p. 165; the type of “bean sprouts” is not specified), Miso-dill dressing (p. 172), Tofu mayonnaise (p. 182-83), Lemon-miso soup (p. 185), Peanut-apple-miso spread (p. 190), Tofu pickle spread (p. 191), Miso-dill dressing with tahini (p. 195), Miso-vinegar dressing (p. 204), Baked tomatoes with miso (p. 207), Tofu dip (p. 208), Miso dip (p. 209), Tahini-tofu dressing (p. 209), Tofu-mustard dressing (p. 213). Address: 365 West End Ave., New York City, NY 10024. Phone: 212-580-7121.

2177. Doyle, Rodger P. 1979. *The vegetarian handbook: A guide to vegetarian nutrition and foods.* New York, NY: Crown Publishers. x + 182 p. Illust. Index. 24 cm. [20+ ref]

• **Summary:** Table 3, “Daily food guide for vegan adults” (p. 30) recommends soy milk and tofu. The section titled “Weaning infants on vegan diets” (p. 40-44) also discusses soy milk and The Farm in Tennessee. Soy milk is also recommended for pregnant and lactating women (p. 54-55).

Chapter 9, titled “A pair of unusual diets,” discusses macrobiotic diets and fruitarian diets. The author is quite critical of a number of macrobiotic practices and teachings: Studies have shown nutritional deficiencies. Restricted intake of liquids may lead to kidney stones and kidney failure. “The greatest danger of a macrobiotic diet is not to adults but to newly weaned infants... Don’t wean infants on Kokoh... Wean them instead on either milk or fortified soy milk.”

Page 93 states: “Soybeans are among the most valuable of vegetarian foods, not only because of their high-quality protein but because they can be made into soy milk and tofu (soybean curd)... Two other soy products that are widely used in the United States are soy sauce and miso.” Pages 96-97 discuss soy milk and textured vegetable protein (TVP).

• **Summary:** Describes how to prepare homemade soymilk cheese (p. 139-42), soymilk yogurt (p. 155), tempeh, and miso (16-39, 84-91). Address: Tokyo, Japan.

2182. National Academy of Sciences, National Research Council, Board of Science and Technology for International Development, Commission on International Relations, Advisory Committee on Technology Innovation. 1979. *Microbial processes: Promising technologies for developing countries*. Washington, DC. xii + 198 p. Illust. No index. 23 cm.

• **Summary:** Soy-related chapters include: 1. Raw materials for microbial processes. In 1977 an estimated 13,842,000 metric tons of soybeans were grown in developing countries. Soybeans were number 15 on a list of 22 major food crops grown in developing countries, and accounted for 1.59% of the total production. The largest crops produced were paddy/rice (21.36% of total), cassava (11.87%), wheat (10.90%), maize/corn (8.41%), and banana/plantain (6.33%). 2. Food and animal feed. Discusses production of meatlike flavors using miso and shoyu, the koji method of producing enzymes, and Indonesian tempeh.

3. Soil microbes in plant health and nutrition. "Mycorrhizal fungi: Most plants, both wild and cultivated, have roots infected with fungi that increase nutrient and water uptake and may also protect the root from certain diseases. These infected roots are called mycorrhizae.

Although the mycorrhizal fungi probably increase uptake of all the essential elements, they are usually most important in improving phosphorus nutrition. Phosphate is generally present in the soil in low concentrations and it is also highly immobile. Strands of fungal hyphae grow out from mycorrhizae and greatly increase the volume of soil from which phosphorus is obtained. So mycorrhizal plants, in general, can grow and thrive in soils much lower in phosphate and other essential nutrients than a comparable nonmycorrhizal plant. Many plants are so dependent on mycorrhizal fungi for nutrient uptake that they may starve if these fungi are absent. There are a number of types of mycorrhizae. The two that occur on the most economically important crops, the endomycorrhizae and the ectomycorrhizae, are discussed."

4. Nitrogen fixation. "Air is four-fifths nitrogen, yet it is the absence of this particular element that most commonly limits food production. Neither man, animals, nor higher plants can use elemental nitrogen; it must first be 'fixed,' that is, combined with other elements such as hydrogen, carbon, or oxygen before it can be assimilated.

"Certain bacteria and algae have the ability to utilize (fix) gaseous nitrogen from the air. Some microorganisms work symbiotically in nodules on the roots of plants, with the plant providing food and energy for the bacteria, which, in turn, fix nitrogen from the air for their host..."

"Bacteria that fix nitrogen in nodules on the roots of leguminous plants are called rhizobia..."

"Leguminous plants have been known for centuries to enrich soils, but the reason was not understood until 1886 when two German scientists, Hellriegel and Wilfarth, found that the bacteria in the nodules on the leguminous root brought about nitrogen fixation. Nitrogen-fixing microorganisms fix an estimated 175 million metric tons of nitrogen annually, or about 70% of our total supply. The remainder is produced in chemical fertilizer factories." The nitrogen fixed by the soybean-rhizobium association is about 60-80 kg/ha/year. 5. Microbial insect control agents. Green cloverworm on soybeans can be controlled by *Bacillus thuringiensis*. 10. Pure cultures for microbial processes. Discusses world culture collections. Address: Washington, DC; Peoria, Illinois.

2183. Padilla, Jean. 1979. *Les recettes végétariennes de l'Auberge "in" [The vegetarian recipes of the Auberge "Inn"]*. Paris: Editions Robert Laffont. 142 p. Illust. No index. 22 cm. [Fre]

• **Summary:** The Auberge "Inn" is apparently a restaurant in France. In French, the word *Auberge* refers to an inn, public house, hostel, or tavern. Soy-related recipes include: Macao salad (with soy sprouts, p. 113). Tropical salad (with soy sprouts, p. 116). Macrobiotic pâté (with soy flour, sesame butter, etc., p. 125). Miso pâté (with miso [soja fermenté em pâté], chickpea flour, Chinese-style tofu [pâte de soja =

fromage de soja], and soy sprouts, p. 126). Shallot sauce (with tamari, p. 127). Clafoutis Auberge "In" (with soy flour, p. 137). Address: Paris, France.

2184. Peppler, Henry J.; Perlman, D. eds. 1979. Microbial technology. 2nd ed. Vol. 1. Microbial processes. Vol. 2. Fermentation technology. New York, NY: Academic Press. Vol. 1, 544 p. Vol. 2, 536 p. Subject index.

• **Summary:** Contents of Vol. 1: 1. Beer brewing. 2. Cheese. 3. Distilled beverages. 4. Mold modified foods, by Hwa L. Wang and C.W. Hesseltine (p. 95-129, cited separately; incl. soy sauce, miso, hamanatto, sufu, tempeh). 5. Wine. 6. Vinegar. 7. Ketogenic fermentation processes. 8. Mushroom fermentation. 9. Inocula for blue-veined cheese and blue cheese flavor. 10. Microorganisms for waste treatment. 11. Elementary principles of microbial reaction engineering. 12. Microbial culture selection. 13. Methods for laboratory fermentations. 14. Instrumentation of fermentation systems. 15. Computer applications in fermentation technology. 16. General procedures for isolation of fermentation products. 17. Use of immobilized cell systems to prepare fine chemicals. 18. Economics of fermentation processes. 19. Fermentation processes and products: Problems in patenting. Address: 1. Universal Foods Corp., Milwaukee, Wisconsin; 2. School of Pharmacy, Univ. of Wisconsin, Madison.

2185. Rattazzi, Ilaria; Rivetti, Franz. 1979. La soia. Semi e germogli: come coltivarli, prepararli e cuocerli. Gli abbinamenti con carne e verdure. Come preparare il go, il latte di soia e il tofu [Soybeans. Seeds and sprouts: how to grow, prepare, and cook them. Combining with meat and vegetables. How to prepare fresh soy puree (gô), soymilk, and tofu]. Milano, Italy: Sonzogno. 127 p. [73 ref. Ita]

• **Summary:** Contains many recipes. Address: Italy.

2186. Riker, Tom; Roberts, Richard. 1979. Directory of natural and health foods: A sourcebook for dietary revolution. New York, NY: Putnam (A Paragon Book). 320 p. Index. 37 cm.

• **Summary:** The first part of this book (p. 7-49) consists of essays on natural foods and nutrition (some reprinted). Part two is a commercial catalog/directory of natural foods available in 1979; it lists and describes (with many photos and labels) products from most of the major U.S. natural foods manufacturers. An Index (p. 293-308) lists participating companies alphabetically.

Soy-related products include: Hain Super-E Soy Oil and Crude [unrefined] Soy Oil (Los Angeles, California, p. 55). Health Valley Soy Moo (Montebello, California, p. 56). Edward & Sons Miso-Cup (Union, New Jersey, p. 57). Family Orchards Fruit & Nut mixes, incl. Back Packer+*, Hi-Fiber Mix+, Hi-Iron Mix+, Hi-Protein Mix+*, Hiker's Helper, Mixed Nuts*, Mountain Munchies*, Tamari Mixed

Nuts* (+ = contains Soy Nuts; * = contains Tamari Peanuts) (Berkeley, California, p. 60-61). Niblack Tamari Pumpkin Seeds (Pepitas), Tamari Roasted Sunflower Seeds, Liquid Lecithin, Granular Lecithin (Rochester, New York, p. 72-73). Arrowhead Mills Unrefined Soybean Oil (Hereford, Texas, p. 75). Good Morning New England Granola incl. Cashew-Raisin Bran-ola (with okara soy fiber), Happy Trails Mix (with roasted soynuts) (Amherst, Massachusetts, p. 79). Elam's Soy Flour (Broadview, Illinois, p. 81).

A long section on Erewhon and its products (p. 84-108) is probably the reproduction of an Erewhon catalog. Erewhon is now located at 3 East Street, Cambridge, MA 02141. Following several pages about the company and its philosophy and standards, each of its major products is discussed in detail, often with nutritional analyses. A label for Soy Flour (organically-grown stone-ground, 24 oz.) is shown; the main recommended use is for making soy milk! A major part of the presentation is titled "Japanese food guide." Products described include: Umeboshi (2 pages): Plums pickled in brine (umeboshi). Umeboshi paste. Plum concentrate (*bainiku ekisu*). Miso (2 pages): Hatcho, waka-Hatcho, soybean, barley, brown rice, rice, and natto miso varieties. Tekka (made with Hatcho miso). Sweets made from mizu ame [rice syrup]. Nigari. Gomashio. Koji starters for various types of miso or shoyu. Goma-muso (60% barley miso and 40% whole sesame seed butter). *Gomamiso furikake* (with barley miso, whole roasted sesame seeds, and shredded nori seaweed). Kombu candy. Kokkoh. Dried tofu (*Kohya-dofu*). Brown rice sake. Mirin. Gluten cakes (*Kuruma-fu*). Seitan (Gluten cooked in shoyu). Rice crackers seasoned with tamari soy sauce. Kuzu (3 pages). Tamari and shoyu (4 pages; Johsen Shoyu is made in Sendai and tamari is made by San-jirushi Co.). Seaweeds (4 pages): Kanten, arame, hijiki, kombu, ne-kombu, nori, seasoned nori, kanten, kanten flakes, wakame, and mekabu.

Good Food brand Soy-Millet Bread (Austin, Texas, p. 120). Arrowhead Mills Bulgur-Soy Grits (p. 121). Erewhon Morning Cereal, and Infant Cereal (each containing soy beans). Chico-San Black Soybeans (imported), and Azuki Beans (Dainagon imported small red), and Lima Soy Sauce (Chico, California, p. 126-27). Arrowhead Mills 7 Grain Cereal, and Deaf Smith Crunch (granola-type cold cereal) (each contains soybeans, p. 130).

The section on pages 188-197 is titled "Soy." It lists Farm Foods Tempeh Kit, Tempeh Starter, Natural Nigari for Curding Tofu, Soyflour, Whole Cleaned Soybeans, Good for Ya Textured Vegetable Protein (Summertown, Tennessee, p. 189). New England Soy Dairy Tofu (with many tofu recipes, Greenfield, Massachusetts, p. 192-96).

The Redwood Sprouter Co. sprouter containing Soy Sprouts (1976, Austin, Texas, p. 202-04). Worthington Foods (a photo shows their line of 38 products). Millstone Burger-Like (with soy flour and TVP), Wheat Fries (with wheat gluten), Tender Cuts (with wheat protein and soy flour) (Penryn, California, p. 222-23). Sunrise Health Products Lecithin Granules (p. 274-75).

2187. Smith, Elizabeth Bernice. 1979. Vegetarian meal-planing guide: A lacto-ovo-vegetarian diet. Winnipeg,

Manitoba, Canada: Hyperion Press Ltd. 104 p. Illust. (some color). 21 x 22 cm. [57+ ref]

• **Summary:** At head of title: “Dr. Elizabeth Smith’s New World of Eating.” Table 5e (p. 25) lists calories for meat alternates group. Soybean sprouts, miso, soybean curd (tofu), soybean milk, and TVP are moderate calorie, while soybeans and soy grits are high calorie.

Page 47 notes: “Generally speaking, legumes are moderately deficient in methionine. Soybeans are an exception, as are their by-products, tempeh (fermented), tofu (the curd formed for soya), and soybean milk. All these are roughly equivalent in quality to cow’s milk.

Page 49 notes that when breast feeding is not possible, soyamilk may be formulated as a very satisfactory substitute; vitamin B-12 must supplement it in pill form. “An infant who cannot tolerate cow’s milk because of allergy and cannot be breast fed may accept a soybean formula until 3 to 4 months of age. At weaning, according to Fomon, the child should continue to receive by cup either soybean formula or soybean milk fortified with vitamin B-12.

Pages 54-56 describe in detail how to sprout soybeans at home, and how to prepare homemade soymilk and tofu (soybean curd). It is advised that fermented soybean products such as miso and tempeh not be produced at home “as the control of the fermentation process by specific micro-organisms is too difficult to achieve without specialized training and equipment.”

Soy-related recipes include: American soybean loaf (with soaked, ground soybeans, p. 76). Soybeans printanier (with cooked soybeans). Soya sesame loaf. Soya cheese balls (with cooked, seasoned soybeans). Soybean casserole (p. 77). Sprouted soybean Creole. Sprouted soybeans au gratin. Bean sprout chop suey (with tofu, p. 77). Skillet soya sprouts and beans (p. 78). Soybean stroganov (p. 78). Address: Winnipeg, Manitoba, Canada.

2188. Wang, Hwa L.; Hesseltine, C.W. 1979. Mold-modified foods. In: H.J. Pepler and D. Perlman, eds. 1979. Microbial Technology. 2nd ed. Vol. 2. Fermentation Technology. New York: Academic Press. See Vol. 1, p. 95-129. [90 ref]

• **Summary:** Volume 1. Microbial processes. Volume 2. Fermentation technology. Contents: 1. Introduction. 2. Soy sauce. 3. Miso. 4. Hamanatto. 5. Sufu [fermented tofu]. 6. Tempeh. 7. Ang-kak (red rice, used as a color agent). 8. Absence of mycotoxins in fermented foods. 9. Conclusions.

For each food is given: General description, method of preparation, composition [chemical / nutritional]. In addition for tempeh is given: Tempeh-like products, biochemistry and physiology of *Rhizopus oligosporus*, changes occurring during fermentation, nutritional value.

“Soy sauce “is known as chiang-yu on China, shoyu in Japan, kecap in Indonesia, kanjang in Korea, toyo in the

Philippines, and see-iew in Thailand. In the Western World the product is often referred to as soy sauce.” Japan is the leader worldwide in sauce production; it has the largest fermentation plant and uses the most advanced technology.

Hamanatto: Products similar to Japan’s hamanatto are known as tou-shih in China, tao-si in the Philippines, and tao-tjo [sic] in the East Indies [Indonesia]. A typical process for making hamanatto in Japan, based on information supplied by Dr. T. Kaneko of Nagoya Univ., Japan, is as follows: Wash soybeans, then soak, steam until soft, drain, and cool. Mix with parched wheat flour in the ratio of 2 parts soybeans to 1 part flour. Inoculate the soybeans with a short- or medium-stalked strain of *Aspergillus oryzae*. Incubate for 1-2 days until the beans are covered with a fragrant mycelium and have become soybean koji. Pack the soybeans in a container [wooden keg] with (for example) 2.5 kg soybean koji, 650 gm salt, 3.6 liters water and some freshly sliced gingerroot. Cover the container tightly and age under pressure for 6-12 months. Remove beans from liquid and dry them in the sun to give hamanatto. The composition of the brine may differ among manufacturers.; thus the finished hamanatto differs somewhat in taste and appearance. “Japanese hamanatto is rather soft, having a high moisture content. Chinese tou-shih has a much lower moisture content... and therefore is not so soft. Tao-tjo tends to have a sweet taste because sugar is often added to the brine.”

Shoyu in Japan: Although there are more than 4,000 shoyu makers in Japan, the largest 4-5 companies produce about 50% of the total. Address: NRRC, Peoria, Illinois.

2189. Wedhastri, Sri. 1979. Perubahan kimia pada beberapa komponen selama fermentasi miso [Chemical changes on several components during miso fermentation]. BSc Thesis (Skripsi Sarjana Muda), Fakultas Pertanian Universitas Gadjah Mada, Yogyakarta, Indonesia. 13 p. [Ind]* Address: Yogyakarta, Indonesia.

2190. *Manna Bulletin*. 1979—. Serial/periodical. Meeuwenlaan 70, 1012 JK Amsterdam, Netherlands. Editor: Sjon Welters. Illust. 21 cm. [Dut]

• **Summary:** This is a magazine about natural foods, macrobiotics, and alternative lifestyles. Soyfoods Center owns Vol. 3, No. 2 (June 1979), and Vol. 4, No. 3 (autumn 1982). In the former issue, the advisors are Adelbert Nelissen and Willem de Ridder. The editors are Hans den Hoed, Wieke Nelissen, etc. The latter issue contains one article titled “Macrobiotic Economics and the Practice of Manna” (a photo shows Adelbert Nelissen, Manna director), and another titled “Fermented products, an essential supplement to a vegetarian (*plantaardig*) diet.” Page 12 shows an ad for Witte Wonder Products (2 Riemerstraat 186, 2513 EZ Den Haag), producers of tofu and seitan. Talk with Sjon Welters. 1994. April 4. He was once the editor of

this publication. He thinks it stopped being published in about 1984-1985. Address: Amsterdam, Netherlands.

SOYINFO CENTER

2191. Leonard, Thom. 1980. Re: Thom and Dick Kluding are parting ways at Ohio Miso Co. Letter to Christian Elwell at South River Farm, Conway, Massachusetts, Jan. 6. 2 p. Typed, with signature.

• **Summary:** This letter, typewritten with almost no capital letters, begins: “Elwell friends: i want you to [be] among the first to know that dick and i are parting ways; not sure what that will mean for ohio miso, though neither want to see good miso cease to be made.” Dick may decide to make miso himself but Thom doubts it. Or Thom may rent the building from him and continue, making about 30,000 lbs/year. “OR perhaps the elwell family of south river farm, conway, massachusetts will make dick an offer he can’t refuse.” The equipment is probably worth about \$10,000. Thom will continue production this season, either until the vats are full or “you allow dick to bow out. the unassembled vats will be much easier to transport.” Address: Ohio Miso Co., Route 2, Monroeville, Ohio 44827.

2192. Earle, Stephen J. 1980. Re: Starting a new plant to manufacture real tamari in Virginia, and looking for apprentices. Letter to Richard Leviton, editor of Soykraft magazine, 158 Main St. No. 3, Greenfield, MA 01301, Jan. 7. 2 p. Typed, with signature on letterhead.

• **Summary:** Sanjirushi is a well reputed manufacturer of genuine tamari soy sauce and soybean miso. “We have a subsidiary company called San-Jirushi International located in Virginia and plan to establish a manufacturing facility for tamari in the U.S. within one or two years time.”

The company is looking for American personnel to assist in the eventual operation of the U.S. plant. “We would ask for an apprenticeship of about two years with a commitment of at least two more years to our employ after returning to the U.S. San-Jirushi would provide room, board, and a basic salary, plus return transportation to the U.S. upon completion of the training.”

Note: This is the earliest English-language document seen (July 2006) that contains the term “genuine tamari” or “genuine tamari soy sauce.” Address: Sanjirushi Jyozou Co. Ltd., 1 chome Meiseidouri, Kuwana-city, Mie-pref., Japan. Phone: (0594) 22-3333.

2193. Carr, Bob, Jr. 1980. Miso (Made in the U.S.A.). *East West Journal*. Jan. p. 68-69.

• **Summary:** The Ohio Miso Company, run by Thom Leonard and Dick Kluding, supplies over 40,000 pounds of miso a year from their 26 acre farm. Thom explained that one of the benefits of including miso in one’s diet came from the microflora it contained. He discovered that much of the natural foods miso available in this country has been heat-treated to prevent excessive fermentation and package swelling. “This pasteurization process destroys most, if not all, of the lactic acid bacteria, yeast, and enzymes present in

the unheated miso. Making our own miso, we could be sure it is not subjected to damaging processes.”

The key to making good miso lies in using good koji as the starter. The koji is usually made by soaking over 100 pounds of grain, which is then steamed in a stainless steel kettle for 1.5-2 hours in a room that smells like a heavenly bakery. Through past experience, Thom has learned to trust in the koji’s ability to communicate its needs in times of danger.

The Ohio miso is aged at room temperatures. The rhythmic changes from hot to cold give the miso a living, adaptive pulse. The 300-gallon cypress fermentation vats are made to Ohio Miso’s specifications in Buffalo, New York, shipped to the shop broken down, and assembled on site.

A large photo shows Thom Leonard ladling koji from a deep koji box into koji trays. Many koji trays are stagger-stacked behind him.

2194. **Product Name:** Natural Instant Miso-Cup (Miso Soup) [Rich Red with Seaweed].

Manufacturer’s Name: Edward & Sons Trading Co. (Importer). Made in Japan.

Manufacturer’s Address: Box 271, Union, NJ 07083.

Date of Introduction: 1980. January.

Ingredients: Soybeans, rice, sea salt, seaweed, onions, parsley.

Wt/Vol., Packaging, Price: Twelve 8-oz. servings in six flavor-tight envelopes. Each envelope weighs 18 gm.

How Stored: Shelf stable.

New Product–Documentation: Spot in Whole Foods.

1980. Jan. “Soup’s on. Rich Red Miso-Cup with Seaweed has been added to the Miso-Cup line of instant soups by Edward & Sons.” Note: The flavor of the company’s original pioneering product, launched in the fall of 1978, is now called “Original Golden Light.”

Article by Richard Leviton in *Soyfoods*. 1982. Summer. p. 34-35. Joel and Diondra Dee of Edward & Sons live in Saluda, North Carolina. Their instant Miso Cup, made of freeze-dried miso and vegetables, was launched in 1978. “They hitched their mobile home to the back of a Chevy van and toured the Northeast, reportedly for two years, handing out samples of *Miso-Cup* and collecting business cards and orders. In 1980 they added a second flavor (with seaweed) while a third is planned for late 1982.”

“*Miso-Cup* is a vegetarian, natural foods version of Lipton’s *Cup-A-Soup*. A photo shows Joel Dee. Spot in *Soyfoods*. 1982. Summer. p. 55. “Miso Soup in Seconds.” Sold in golden light and rich savory with seaweed flavors. Label, box. Reprinted in *Soyfoods Marketing*. Lafayette, CA: Soyfoods Center. “Pure Vegetarian Soup in Seconds.”

Ad in *East West*. 1988. Feb. p. 27. “Warm up with an ‘old friend’ Miso-Cup.” Address is now 1115 Lousons Rd., Union, New Jersey 07083.

Talk with Joel Dee. 1994. July 4. Miso Cup is the flagship of his product line. The miso is freeze dried. Because of the falling value of the U.S. dollar against the Japanese yen, importing Miso Cup from Japan is increasingly expensive, so Joel is now looking for a way to have this “instant savory soup or seasoning” made entirely in America.

2195. Ohio Miso Co. 1980. Brown Rice & Barley Miso (Ad). *East West Journal*. Jan. p. 69.

• **Summary:** This one-sixth page ad states: “Transforming organically grown grain and beans into quality miso since 1979. Distributor inquiries welcome.” At the bottom is the company name, address, and logo, a handsome illustration of a wooden miso vat with stones on top. Address: Route 2, Monroeville, Ohio 44847.

2196. Shurtleff, William; Aoyagi, Akiko. 1980. Miso production: The book of miso volume II. Rev. 2nd ed. Lafayette, California: New-Age Foods Study Center (Renamed Soyfoods Center in Sept. 1980). 80 p. Jan. Illust. by Akiko Aoyagi Shurtleff. Index. 28 cm. [82 ref]

• **Summary:** This book describes how to start and run a commercial shop making miso on any of three scales. Contents: Introduction. 1. Setting up a traditional shop: Tools and ingredients. 2. Making red miso in a traditional shop. 3. Making red miso in a semi-traditional shop. 4. Making Hacho and Mellow white miso in semi-traditional shops. 5. Making koji starter in a semi-traditional or modern shop. 6. Making light yellow miso in a modern factory. Appendix A: Resources; People and institutions connected with miso production. Bibliography. Measures, weights & equivalents. The Soyfoods Center. Address: New-Age Foods Study Center, P.O. Box 234, Lafayette, California 94549.

2197. Ebine, Hideo. 1980. Re: Answers to questions about miso, especially spray dried and freeze-dried miso. Letter to William Shurtleff at Soyfoods Center, Feb. 19—in reply to inquiry. 2 p.

• **Summary:** Discusses: How to spray dry and to freeze dry miso; advantages and disadvantages of each. Of the roughly 200,000 tons of fresh miso made in Japan, less than 3-4% of the total is dehydrated. Thus, about 10,000 tons. Of this, an estimated 80% is freeze-fried and 20% spray dried. Dehydrated miso is used mainly in instant miso soups. The biggest maker of freeze-dried miso in Japan is Yamajirushi Miso in Nagano prefecture.

New developments with miso in Japan: Stricter sanitary codes for manufacturers. Less use of food additives. Sorbic acid-K (*Sorubin-san K*) is mostly phased out. Sulphite used to bleach soybeans is no longer used. Miso consumption in Japan is no longer increasing. More Japan-grown soybeans and rice are used in miso, which greatly improves the

quality. Address: Applied Microbiology Div., National Food Research Inst., Ministry of Agriculture, Forestry and Fisheries, Yatabe, Ibaraki-ken, Japan.

2198. Leviton, Richard; Shurtleff, William. 1980. Estimates of production and sales of tofu and other soyfoods in the USA and Canada (News release). Soycrafters Assoc. of North America, 305 Wells St., Greenfield, Massachusetts 01301. 1 p. Feb.

• **Summary:** Early statistics compiled on the U.S. soyfoods industry: 188 tofu companies, employing 680 people, used 13,500,000 lb of soybeans to produce 33,750,000 pounds of tofu that retailed for \$33,750,000.

Other soyfood manufacturers (including 27 tempeh companies and 5 miso companies), employing 225 people, used 4,500,000 lb of soybeans to produce 11,250,000 pounds of other soyfoods that retailed for \$11,250,000. The figures were compiled largely by Shurtleff, who gave Soycrafters Assoc. permission to use them. On 8 Feb. 1980 Leviton also sent a letter to Linda Madl, Soybean Bluebook, American Soybean Assoc. with a request to publish these statistics; she never did. Address: 1. Sunrise Farm, Heath Rd., Colrain, Massachusetts 01340; 2. New-Age Foods Study Center, P.O. Box 234, Lafayette, California 94549.

2199. **Product Name:** Marusan’s Instant Miso Soup [Red, or White].

Manufacturer’s Name: Marusan, Inc. (Importer). Made in Japan.

Manufacturer’s Address: 297 Galvan Place, Box 507, Bergenfield, NJ 07621. Or 8780 E. Valley Blvd., Rosemead, CA 91770.

Date of Introduction: 1980. February.

New Product–Documentation: Ad in *Whole Foods*. 1980. Feb. p. 5. “Instant Energy in a Bowl. Marusan introduces naturally delicious Instant Miso Soups.” Ad in *Macroscope*. 1980. May. p. 2. “Marusan makes quality a natural.” Shurtleff & Aoyagi. 1983. *The Book of Miso*. 2nd ed. p. 239, 259. The product was advertised with full-page color ads in trade magazines.

2200. Marusan, Inc. 1980. Instant energy in a bowl. Marusan introduces naturally delicious instant miso soups (Ad). *Whole Foods (Berkeley, California)*. Feb. p. 5.

• **Summary:** The top half of this full-page color ad is a photo showing yellow boxes and foil packets of this instant miso soup, and two bowls of the miso soup. The text begins: “Marusan Instant Miso Soup is an ideal pick-me-up for those who want a quick and convenient meal supplement at home, on the job, or when travelling.” The products are imported by offices in New Jersey and Rosemead, California. Address: P.O. Box 507, Bergenfield, New Jersey 07621. Phone: (201) 385-5367.

2201. McGregor, Otis. 1980. Report from Ontario [Soya-Bean Growers' Marketing Board]. *Soycraft (Colrain, Massachusetts)* 1(2):10-11. Winter.

• **Summary:** "The Ontario Soya-Bean Grower's Marketing Board is a growers' board. In 1949, soybean growers in Ontario petitioned the Agriculture Department to establish a marketing plan and soybeans were declared as a regulatory commodity under the Ontario Farm Products Act. Soybean production in Ontario started in tests plots at the Ontario Agricultural College, Guelph, in 1893. By 1927, O.A.C. evaluated over 100 varieties. The Harrow Research Station began soybean plots in 1923 and later produced such varieties as Harman, Hardome, Harasoy, Harlan, Harcor, Harwood.

"Soybean acreage in Ontario competes with field corn."

Soybean production in Canada is 98% of Ontario origin. Ontario is deficient in production to meet the needs of the three crushing plants which now possess a daily production capacity of 3,550 tons. To be self-sufficient, production would require 1.2 million acres. Last crop year, the Ontario crushers purchased 13 million bushels from the U.S. which enter Canada tariff-free.

"In 1954, the Board, endeavoring to achieve greater competition in the marketplace, exported soybeans to Europe. In 1974, with the variety Harwood, the Board entered the human consumption market in Japan. Harwood, having a greater water-soluble protein, soon became distinguished in that market for tofu and miso.

"The Board negotiates on behalf of its 16,000 growers, the terms and condition of sales from the farm-gate to dealers and processors."

"Editor's Note: Soybeans that the Board markets, suitable for tofu-making, include Hodgson, Wells, Harasoy 63, Harcor, Amsoy 71, Maple Arrow, and Evans." Address: Secretary-Manager OSBGMB, Box 1199, Chatham, ONT Canada N7M 5L8, Canada.

2202. Belleme, Jan. 1980. Re: Studying miso-making with the Onozaki family in Yaita, Japan (Letter to the editor). In: Edward Esko and Wendy Esko. 1980. *Macrobiotic Cooking for Everyone*. Tokyo: Japan Publications, Inc. 272 p. See p. 138-39. Nov.

• **Summary:** "John and I arrived in Tokyo late in October. After a few days there, we visited the Sendai Miso-Shoyu (Soy Sauce) Company and then went to Yaita (about halfway between Tokyo and Sendai) to meet our miso teacher. This experience has surpassed our wildest dreams. We are living with this family in their 300-year old grass-roofed house in a very traditional part of rural Japan. This family has been on this land for over 500 years.

"The miso shop is perfect for our study. It's fairly small and very traditional—most of the work is done by hand, with the aid of just a few simple machines. The Onozakis make no compromises in terms of quality. They make a 1½ year

come [rice] miso aged in huge cedar vats held together with braided bamboo. This miso, very mellow, delicious, and unpasteurized, can be eaten every day without becoming tired of it. We work alongside the Onozakis 6½ days a week, so we have gotten a great deal of experience. For the whole month of March, Mr. Onozaki has put John in charge of making the *koji*, which is the most important and difficult part of making miso. He is to make all the decisions regarding temperature, seeding, and ventilation, so by the time we leave we should feel confident enough to do it on our own.

"The family consists of a 78-year-old grandmother, her son and his wife, and three daughters. They are a very hard-working, thoughtful, and humble family of samurai descent. The women in the area, and Mrs. Onozaki in particular, are just unbelievable. Mrs. Onozaki does the work of three people and doesn't even know it. She (and most women around here) know everything they need to know, from childcare to gardening, cooking, pickling, natural remedies (both foods and herbs), sewing, flower-arranging, and keeping their husbands happy. I have so much to learn from her. I have never seen her angry, in fact she is usually smiling and has a great sense of humor.

"Our schedule is intense. Before breakfast, I must wash our clothes in ice-cold mountain water (they have no hot running water), clean our room, and steam the rice. After a simply breakfast we begin work at 8:00. The work is hard and long and the conditions over the past 2½ months have been either extreme cold or extreme hot (cold in the shop, hot in the *koji* room). After work we have dinner, wash up, and retire to our room for a few hours of studying, writing, taking notes on what we learned during the day, etc.

"For the past 2 months the average morning temperature in the house has been 0°C (35°F.). The only heat is provided by the *kotatsu*, or the small table with a built-in heating unit."

"The old people are our favorites—we love to listen to their stories. They're incredibly strong and hard-working; many working well into their 70's and even 80's. For just one of several examples, there's a 79-year old man working here now. He's doing the plaster work on the Onozaki's new storage building. Every morning he's up at 6, eats breakfast, packs a light lunch and takes off on his 10-speed for the bitter-cold 5-mile ride to work. He works out there by himself all day, every day. I could go on and on about the old folks—there's the 70 year-old barrel-maker who came to repair 3 of Mr. Onozaki's miso vats; the 69 year-old 'traveling saleslady' who walks from house to house with a huge pack of wares on her back; the 85 year-old man who came bicycling up on his day off to buy some miso; the 78 year old grandmother we live with, etc., etc. They are such an inspiration to us.

"We are the only foreigners living for miles around and the only Americans most of these people have ever talked

to, so of course we attract a great deal of attention. Recently we have attracted the attention of the media. It all started when a local newspaper came to interview us and take our picture. This was followed by a magazine story, then Japan's leading national newspaper, the *Asahi*, came. This resulted in one live radio interview, another magazine story and two fifteen minute TV stories on 2 national networks. All of this interest took us very much by surprise. They are mostly interested in our views on American foods as opposed to traditional foods, our ideas on Japanese tradition, and the relationship between food, health, and tradition. So, as you can see, this has been a most rewarding experience..." Address: Yaita, Japan.

2203. Daizu Kyokyu Antei Kyokai. 1980. Gaiyo [About the Japan Soybean Supply Stabilization Association]. Tokyo: DKAK. 12 p. March 31. 26 cm. [Jap]

• **Summary:** Name of organization with diacritics is: Daizu Kyôkyû Antei Kyôkai. This association was founded on 26 Dec. 1974, following the U.S. soybean embargo in 1973. It has 8 member associations, including the Japanese national tofu, dried-frozen tofu, natto, miso, shoyu, oil, oil importer, and coarse grain associations. The name and address of each is given. • **Summary:** Chinese stores stock most of the flavourings [and seasonings] used in restaurants and for home cooking, such as "satay, five spices powder, sesame paste, yellow bean paste, black bean paste," or hoisin sauce.

2208. Belleme, John. 1980. Making miso in Japan. *GOMF News (Oroville, California)*. April. p. 2.

• **Summary:** This is a letter sent by John Belleme, the last manager of the Oak Feed Store (a macrobiotic food shop at 3030 Grand Avenue, Coconut Grove, Florida), to Jim Kenney, current manager at Oak Feed. John and his wife, Jan, are presently in rural northern Japan studying miso making from a "traditional clan called the Onozaki." John starts: "This is our 11th day at the Onozaki koji-ten. We've settled into a daily pattern now. Our schedule is very, very intense. However, like the Onozakis, we never seem to get tired. It is obvious to us already that the energy in this fine miso originates in our garden, is transformed in the kitchen and transmuted in our bodies. We then work this energy into the miso with our hands." John then describes in detail how the miso is made by hand there. It is aged for about 18 months. After 6 months, and again after 12 months the entire contents of the vat is turned upside down, by shoveling. "Mr. Onozaki gets up at 4 a.m. after sleeping no more than five hours and I've never seen him a bit tired..." Address: Northern Japan [10 miles north of Yaita city, Tochigi prefecture].

2209. **Product Name:** Brown Rice Miso.

Manufacturer's Name: Shin-Mei-Do Miso Co.

Manufacturer's Address: 5 Wren Road, Denman Island, BC, Canada V0R 1T0. Phone: 604-335-0253.

Date of Introduction: 1980. April.

Ingredients: Brown rice koji (only a little bran removed), soybeans, sea salt, water.

Wt/Vol., Packaging, Price: 450 gm plastic tub.

New Product-Documentation: Talk with Yasuo Yoshihara. 1996. March 22. Their third miso, introduced in April 1980, was Brown Rice Miso. They put the brown rice through a rice polisher to remove a just little bit of the bran; this is necessary so the koji culture can grow. This miso is sold only to natural- and health food stores.

2210. **Product Name:** Yuba Rolls, and Stuffed Agé Pouches.

Manufacturer's Name: Soy Plant (The).

Manufacturer's Address: 211 East Ann St., Ann Arbor, MI 48104. Phone: 313-663-0500.

Date of Introduction: 1980. April.

New Product-Documentation: Talk with Steve Fiering. 1988. June 10. These were developed by Jura McDowell, who was a good cook. The yuba rolls were about 5 inches long and a little less than 1 inch in diameter. He made the yuba (but it was never sold as such) then use it as an outer

wrapping around a filling with ground tempeh and soyusage. The Agé Pouches were made by deep-frying tofu to make pouches, then opening and stuffing them with a delicious mixture of ground tempeh, and perhaps soyusage, nuts, and sweet white miso. They were sold fresh in the deli, and they sold very well.

2211. Yoneda, Soei. 1980. Shōjin ryōri, osōzai: Take-no-Gosho fū [Zen vegetarian cookery, side dishes: Kyoto Take-no-Gosho style]. *Kurashi no Sekkei (Designs for Living)* No. 131. 196 p. April. Illust. 30 cm. (Tokyo: Chuo Koronsha). [Jap]

• **Summary:** Filled with hundreds of lovely color photos of prepared dishes, steps in preparation, Zen temples and their art treasures, gardens, and buildings. Many of the recipes include soyfoods, especially tofu, miso, shoyu, and okara. Includes a color portrait of Soei Yoneda (p. 5) and the story of her life and work (p. 165-67). Address: Abbess, Sanko-in Zen temple, Honcho 3-1-36, Koganei-shi, West Tokyo (Musashi Koganei Station).

2212. Anderson, Gene. 1980. Re: Thanks for and comments on *The Book of Miso*. Letter to William Shurtleff at Soyfoods Center, May 7. 2 p. Typed, with signature on letterhead. [1 ref]

• **Summary:** “A million thanks and blessings for *The Book of Miso*. It is the most impressive single book on food that I have ever seen in a lifetime of rooting around in this literature... I am getting more and more willing to attribute near-miraculous powers to ferments. This is partly because of one recent discovery you haven’t picked up: soybeans are about the riches common source of phytic acid, or phytate (ion), which picks up mineral nutrients (specifically active metals: iron, zinc, calcium, copper...) and renders them unavailable in the diet, and also niacin. (Hence the pellagra in corn-eating areas, since corn also has a lot, though nothing like soybeans.) Well, as you would expect, fermentation organisms handle the phytate, metabolizing it away. So soybeans by themselves are dangerous, but all the fermentation products are perfectly fine. Tofu is also OK, since the phytate goes off in the whey.” Address: Dep. of Anthropology, Univ. of California, Riverside, CA 92521.

2213. *Boston Globe*. 1980. Ask the Globe. May 7.

• **Summary:** “Q. What is Tassajara Cooking?—S.C., Haverhill.”

“A. The first Zen Buddhist Mountain Center in the United States was set up in a mountain valley in Monterey County, Calif. by the Zen Center of California [sic, San Francisco] in 1966. It has been a resort and healthy center for many years... The center welcomed visitors, and its diet, based on traditional Buddhist vegetarianism, consisted of grains, vegetables, fruits and brown rice. For guests, milk,

cheese, eggs and occasionally meat [sic], were added—miso soup and brown rice not being staples of the American diet.

“Recipes grew out of this life style and diet, and eventually a book” titled *Tassajara Cooking*, by Ed Brown, was published in Oct. 1973. Address: Massachusetts.

2214. *Food Product Development*. 1980. Oriental specialty miso expands market horizons. 14(5):26. May.

• **Summary:** About Kikkoman Instant Miso-Shiru Soy Bean Soup Mix, available in red (aka) and white (shiro).

“Following the lead of its soybean cousin tofu, miso is beginning to break away from its limited market in gourmet, ethnic, and health food stores and filter into select supermarkets.” A photo shows the front of the two packages, written in both Japanese and English.

2215. **Product Name:** Miso Pastes (Mame Miso, Mugi Miso, Kome Miso).

Manufacturer’s Name: Marusan, Inc. (Importer). The Mame Miso is Made in Japan by Marusan.

Manufacturer’s Address: 297 Galvan Place, Box 507, Bergenfield, NJ 07621. Or 8780 E. Valley Blvd., Rosemead, CA 91770. Phone: 201-385-5367.

Date of Introduction: 1980. May.

New Product—Documentation: Ad in *Macroscope* (New York, NY). 1980. May. p. 2. “Marusan makes quality a natural. Miso pastes—Prize winners in Japan, nutrition boosters for you—they’re more than soups, they’re all-purpose high-protein seasonings that are the pride of the Sanshu region where Miso production was born!” Company logo reads: “Health food all over the world.”

2216. Mori, H. 1980. Shōwa 54 nendo ni okeru shōyu, miso no kenkyū gyōseki [Review of annual achievements in shoyu and miso research]. *Nippon Jozo Kyokai Zasshi (J. of the Society of Brewing, Japan)* 75:384-410. [625 ref. Jap]

• **Summary:** This important Japanese-language article, published each year in the May issue of this periodical, has two parts: (1) A review of the past year’s major discoveries and developments in the fields of miso and soy sauce in Japan. (2) A bibliography related to those discoveries and developments. Address: Noda Sangyo Kagaku Kenkyusho.

2217. Stuttman, Leonard; Stuttman, Irene. 1980. Mid-Michigan Soy to the World Day (Leaflet). East Lansing, Michigan. 1 p. Single sided. 14 x 22 cm.

• **Summary:** “Save money and eat well. Free! Everyone is welcome. Free! Featuring William Shurtleff and Akiko Aoyagi, authors of: *Book of Tofu*, *Book of Tempeh*, *Book of Miso*. * slides * good nutrition * recipes * excellent cuisine for pennies! Taste and enjoy delicious soy food samples! June 2, 1980, 7:30 p.m. at U.M.H.E. [United Ministries in Higher Education], 1118 S. Harrison Ave., W. Lansing,

Michigan (right behind the Trowbridge Spartan shopping center * park in the rear of the Church).”

Printed with black ink on pink paper. Illustrations show a soybean plant growing (upper right) and a wok on a wok stand with a spatula in it (lower left). This huge and very successful dinner was organized by Leonard and Irene Stuttmann of INARI Ltd.

Note: This is the earliest document seen (Sept. 1998) that contains the phrase “Soy to the World,” which was coined by Len and Irene Stuttmann. Talk with Len and Irene Stuttmann. 1998. Sept. 5. Documents show that Len and Irene coined this phrase for this event and later that year used it for marketing his company’s gift packs of soynuts. Address: East Lansing, Michigan.

2218. **Product Name:** [Tofu, and Miso].

Foreign Name: Tofu, Miso.

Manufacturer’s Name: Weg Der Natur.

Manufacturer’s Address: A-2380 Perchtoldsdorf, Merzger 34, Austria.

Date of Introduction: 1980. May.

New Product–Documentation: Letter from Lawrence Dreyer of Weg der Natur. 1982. April 27. “The Way of Nature (Weg der Natur), a foundation, was established in Austria with the express purpose of disseminating information about macrobiotics, food, and their relationship to our health... The foundation has, for the past two years been linked to a Natural Food Shop and has been, for this period, producing tofu and miso.

Shurtleff & Aoyagi. 1983. *The Book of Miso*. 2nd ed. p. 255. Lawrence Dreyer, proprietor. Note: This city is just southwest of Vienna.

Soyfoods Center Computerized Mailing List. 1983. Jan. 17. Owner: Lawrence Dreyer. Soyfoods Center Computerized Mailing List. 1983. June 20. The address has now changed to Helmgasse 75/2, A-8070 Graz, Austria.

Talk with Guenter Ebner of Sojarei Ebner-Prosl. 1990. May 28. This company is now the same as SoyVita and they get their tofu from SoyVita.

2219. Westbrae Natural Foods. 1980. Wholesale food catalog: Spring 1980. Emeryville, California: Westbrae. 23 p. 22 by 28 cm.

• **Summary:** On the cover, the lettering is in dark blue and dark red on a tan background. Contents: Westbrae juices. Honey butters. Unsweetened spreads. Preserves. Applesauce. Nut butters (Almond butter roasted, cashew butter roasted, cashew butter raw, cashew-peanut-date butter, raw sesame tahini, toasted sesame tahini, peanut butter crunchy, peanut butter smooth, peanut butter crunchy salted, organically grown Valencia peanut butter crunchy). Cereals (mostly granola, incl. cashew granola, maple almond granola).

Trail mixes: Bay to Breakers trail mix (with sunflower seeds and Valencia peanuts, both roasted and coated with shoyu), Chisholm trail mix (with sunflower seeds, cashew pieces, and almonds, each roasted and coated with shoyu).

Roasted nuts (bulk, 12-25 lb; * = 9 oz package also available): Tamari almonds*, Tamari cashews*, Tamari Chisholm mix*, Tamari Valencia peanuts, Tamari pepitas (pumpkin seeds), Tamari sunflower seeds*, Tamari nutroaster’s mix*, Deluxe tamari nut mix, roasted Spanish [peanuts] splits for butter stock, roasted Valencia peanuts. Packaged nuts.

Wholegrain pasta (incl. Soy linguini). Westbrae miso (imported from Japan): Red miso, brown rice miso, barley miso, Hatcho miso, soybean miso, natto miso. Cold Mountain miso (made in Los Angeles): Light yellow, mellow white, red. Sea vegetables: Kombu, hijiki, arame, wakame, nori. Atlantic Mariculture dulse.

Westbrae tamari and other Asian foods: Johsen shoyu-tamari, Traditional (true) tamari–wheat free, White tiger tofu sauce, natural nigari, agar flakes and sticks, umeboshi salt plums, rice wine vinegar, brown rice wine vinegar, ramen with soup stock.

Helpful tools (incl. Learning Tree tofu kit, wok, vegetable steamers, vegetable brush, utility knife).

Informational pamphlets: What is miso? What is tofu?

Miscellaneous (incl. falafel mix, tabouleh mix, Ak Mak crackers, sea salt, mayonnaise, black spiced olives, kosher dill pickles). Oils. Sweeteners. Bakery products. Dried fruit. Beans (incl. azuki beans, soybeans). Grains. Nuts and seeds. Non edible (drums, jars, and bottles). Glossary of manufactured products showing ingredients. Address: 4240 Hollis St., Emeryville, California 94608; 4841 Eastern Ave., City of Bell, CA 90201 (10 miles southeast of Los Angeles). Phone: (415) 658-7518 (orders).

2220. Gevaert, Pierre. 1980. Re: Early work with tamari and miso in Europe. Letter to William Shurtleff at Soyfoods Center, June 11–in reply to inquiry. 1 p.

• **Summary:** “Your note about the misuse of the term ‘tamari’ is correct.” Lima started producing tamari in 1968. It first appeared on the market in 1961, under the name “tamari.” Production continued until 1966. “Our shoyu, called and registered as ‘tamari’ at George Ohsawa’s request, was a dark, rather thick liquid very similar to real tamari even though our product was made from 5% soybeans and 50% wheat. I think this was because we aged the product for at least 3 years, and some of it was even older because we could sell only a small part of the production. In 1967 we had such large stocks of miso and tamari that we stopped their production and cured our weak financial situation by selling off these stocks. We still remember the good Lima Tamari, and when we started to import from Japan, we always mixed at least 1/3 of Japanese tamari to approach our own quality.

“This month we will produce a good quality of miso in our French artisanal factory running on water energy.”
Address: P.V.B.A. Lima, Edgar Gevaertdreef 10, 9830 Sint-Martens-Latem, Belgium. Phone: (09) 82.41.76.

2221. *Consumer Reports*. 1980. Soybeans—the “meat” that grows on vines. 45(6):360. June.

• **Summary:** This sidebar to the article “Vegetarianism: Can you get by without meat?” gives a brief description of the soybean and its food uses. “Roasted soybeans [soynuts] can be a delicious snack food.” A small amount of soy flour added to bread or pasta dough appreciably increases those foods’ protein content. Sprouted soybeans can be eaten cooked or as a salad vegetable and are a good source of vitamin C.

“Soybeans can be made into a milk that, when fortified, can supply nutrients usually obtained from cow’s milk. That’s important for total vegetarians or those allergic to milk protein. Soy milk can be made into a cheese: soybean curd, or tofu, familiar to many as the little white cubes floating in the soup at a Chinese restaurant.” Also mentions soy sauce, miso, tempeh, and meat extenders or meat analogs.

2222. Darby, William J. 1980. Why salt? How much? *Contemporary Nutrition (General Mills, Minneapolis, Minnesota)* 5(6):1-2. June. Reprinted in *Sourcebook on Food and Nutrition*, 3rd ed. 1982. p. 132-34. [11 ref]

• **Summary:** Contents: Salt and its history. Physiological salt requirements. Appetite for salt. Estimates of salt intake. Acute salt depletion. Toxicity of excessive salt. Dietary salt and hypertension. Controversy on salt intake limitation. Summary. Address: President, The Nutrition Foundation, 489 Fifth Ave., New York, NY 10017.

2223. **Product Name:** Living Tempeh Starter [Kit Size 15 x 60 mm Petri dish, or Professional Size 15 x 100 mm Petri dish], Koji Starter for Miso (40 gm) [Light Rice, Red Rice, Barley, or Soybean Koji], Shoyu Koji Starter (60 gm), Natural Nigari (Tofu Coagulant).

Manufacturer’s Name: GEM Cultures.

Manufacturer’s Address: 30301 Sherwood Rd., Fort Bragg, CA 95437. Phone: 707-964-2922.

Date of Introduction: 1980. June.

New Product–Documentation: Spot and ad in *Soyfoods*. 1980. Summer. p. 4-5. “New Source of Tempeh Starter.” “Gordon McBride, PhD, former manager of the Living Culture Department at Ann Arbor Biological Center [Inc. in Michigan], and his wife, Betty Stechmeyer, B.S., announced the formation of GEM Cultures, which will provide high-quality tempeh starter cultures at reasonable prices.”

Letter and catalog from GEM Cultures to Tempeh producers. 1980. July. Offers a free sample of professional

size Living Tempeh Starter (a pure culture of *Rhizopus oligosporus*).

Shurtleff & Aoyagi. 1985. *History of Tempeh*. p. 55. This starter, sold live, was grown on agar in petri dishes.

Letter from Betty L. Stechmeyer of GEM Cultures. 1991. Oct. 18. These four basic products were introduced in June 1980. For a while, they tried to import commercial shoyu and miso cultures from Nihon Jozo Kogyo but it never worked, so they ended up ordering via Mitoku.

2224. Hesseltine, C.W.; Wang, H.L. 1980. The importance of traditional fermented foods. *BioScience* 30(6):402-04. June. [12 ref]

• **Summary:** Table 1 gives, for each food, the name, area or country, microorganism used, substrate, nature and uses. The following soy-related foods are included: Soy sauce (chiang-yu, shoyu, toyo, kanjang, kecap, see-ieu), miso (chiang, doenjang, soybean paste, tauco), Hamanatto (toushih, tao-si, tao-tjo [sic, tao-tjo = tauco is Indonesian-style miso]), sufu (fu-ru, fu-ju, tou-fu-ju, bean cake, Chinese cheese), tempeh, bongkrek, ontjom (oncom), natto. Address: NRRC, Peoria, Illinois.

2225. Soycrafters Assoc. of North America. 1980. Estimated soyfoods industry statistics (News release). Sunrise Farm, Heath Rd., Colrain, MA 01340. 1 p. June.

• **Summary:** Raw soybean usage, number of companies, employees, food production, wholesale value, and retail value are given for tofu, other soyfoods (mainly tempeh and miso), and total. Based in part on statistics gathered by Soyfoods Center. Address: Colrain, Massachusetts.

2226. Steinkraus, Keith H. 1980. Introduction: Food from microbes. *BioScience* 30(6):384-86. June. [12 ref]

• **Summary:** Contents: Meat analogs. The role of plants. Microbe production. Fermented foods: Tempeh, miso, soy sauce. Address: New York State Agric. Exp. Station, Geneva, NY 14456.

2227. Higa, Wm. 1980. Re: History of miso companies in Hawaii. Letter to William Shurtleff at Soyfoods Center, July 9. 1 p.

• **Summary:** An outline history, packed with interesting historical information. Kaneda Miso Factory. Honolulu. Founded 1920 by Mr. Takejiro Kanda. Presently dissolved.

Takei Miso Factory. Maui. Founded 1921 by Mr. Shuji Takei. Presently dissolved.

Ueno Miso Factory. Honolulu. Founded ?? by Mr. Yuichi Ueno. Presently dissolved.

Fukuda Miso Factory. Honolulu. Founded ?? by Mr. Fukuda. Presently dissolved.

Yamaju Miso Factory. Honolulu. Founded 1936 by Mr. George Higa. Presently dissolved. Purchased from Mr. Fukuda.

American Hawaiian Soy Co., Ltd. Honolulu. Founded 1941 by Mr. George Higa, Seiyu Inamine, Kiko Yogi, Moshu Morita—using saké brand name Maru Fuku. Presently dissolved.

Fuji Miso Factory. Honolulu. Founded about 1941. Dissolved in 1954.

Honolulu Miso Factory. Honolulu. Founded about 1942 by Mr. Shigeo Yamada. Dissolved in 1950.

Kokusui Miso Factory. Hilo, Hawaii. Founded (?); Presently dissolved.

American Hawaiian Soy Co., Ltd. Honolulu. Run by Mr. Kiko Yogi and Mr. Morita. Business active.

Hawaiian Miso & Soy Co., Ltd. Honolulu. Founded 1947. George Higa (deceased), Wm. Higa, George Higa's brother, Hisako Higa (wife), Alvin Higa. Business active. Address: Hawaiian Miso & Soy Co., Honolulu, Hawaii.

2228. American Dietetic Association. 1980. Position paper on the vegetarian approach to eating. *J. of the American Dietetic Assoc.* 77(1):61-70. July. [54 ref]

• **Summary:** This position paper is surprisingly supportive of a lacto-ovo vegetarian diet, although the ADA continues to feel that combining proteins is important. It states that “a growing body of scientific evidence supports a positive relationship between the consumption of a plant-based diet and the prevention of certain diseases,” including coronary heart disease, osteoporosis, and gastrointestinal and reproductive cancers.

Contents: Introduction. Definition of terms: Vegetarian, vegetarianism, traditional vegetarians, total vegetarians or vegans, lacto-vegetarians, semi-vegetarians or partial vegetarians, new vegetarians (since 1960, incl. yogic vegetarians, Hare Krishnas or Krishnas, Sufis, Sikhs, Macrobiotics), fruitarians, raw food eaters, individualistic vegetarians, alternative life style diet. Other terms which relate to vegetarianism: Natural foods, organic foods, unrefined foods, unprocessed foods, health foods, meat analogs (look and taste like meat), nutritional or food yeast, milk substitute (alternate) (usually based on soy. “Calcium, zinc, vitamins A, B-12, D, and K, and thiamin are all substantially lower (or missing) in these home-made products than in breast milk or other proprietary formulas”), fermented foods (incl. soy sauce, miso, tempeh—may contain some vitamin B-12), seaweeds and algae.

Vegetarianism past and present: Historical perspectives (omnivorous diets), vegetarianism in the U.S. today (it is more popular than at any time in the nation's history). Nutrition issues: Proteins, energy, carbohydrates and fats, vitamins and minerals (vitamins B-12 and D, calcium and riboflavin, iron and phytic acid, zinc and phytates). Groups with special physiologic risks: Pregnant and lactating women, infants and children (lacto-ovo- and lacto-vegetarian diets, vegan diets—the use of properly fortified soy milk is strongly recommended, vitamins and minerals),

adults with special health problems (lactose intolerance, diabetes mellitus). Implications of vegetarian diets for health promotion and prevention and treatment of disease: Coronary heart disease, cancer, obesity, dental caries, osteoporosis. Menu planning guidelines for vegetarians. Meat analogs. Summary. The President's page: Esther A. Winterfeldt, PhD, RD, on “Position papers.”

“Macrobiotics—persons who consume vegan or vegetarian diets which involve extensive non-animal food avoidances, use of unprocessed, unrefined, ‘natural’, and ‘organic’ foods; and also, in some forms, fluid restriction. Tamari, miso, and various seaweeds are used extensively and are believed to be endowed with special properties.

“Vegetarianism—past and present: The American Dietetic Association recognizes that most of mankind for much of human history has subsisted on near-vegetarian diets. The vast majority of the population of the world today continues to eat vegetarian or semi-vegetarian diets for economic, philosophical, religious, cultural, or other reasons. The matter of motivation is crucial, because it affects the diet adopted, adherence to it, and other characteristics of life style.”

“Nutrition issues: The American Dietetic Association affirms that a well planned diet, consisting of a variety of largely unrefined plant foods supplemented with some milk and eggs (lacto-ovo vegetarian diet) meets all known nutrient needs. Furthermore, a total plant dietary can be made adequate by careful planning, giving proper attention to specific nutrients which may be in a less available form or in lower concentration or absent in plant foods.”

Note: This is the earliest English-language document seen (June 2002) that uses the term “plant-based diet” to refer to one that contains no animal products.

2229. Leviton, Richard. 1980. Nurturing the craft of miso making: The Ohio Miso Company. The discipline of miso making takes root in America in the country's first Caucasian shop. *Soyfoods* 1(3):26-31, 63-68. Summer. [6 ref]

• **Summary:** The best article seen to date on this new miso company, which opened on 13 March 1979. Leviton gives a detailed, step by step, description of their process for making koji and miso by hand. Photos show: (1) A wooden paddle. (2) Thom Leonard examining steamed short-grain brown rice in the stainless steel steamer. (3) After the koji trays are scrubbed, the koji crib is lined with thick cloth. (4) After the cooked rice is inoculated and sifted, Thom ladles it into the crib. (5) After the rice koji has incubated for a day, Thom stirs it with a wooden paddle in its crib. (6) Thom ladles the half-finished koji into koji trays. (7) Thom stacks the filled koji trays in the koji incubation room, where the koji will finish. (8) Thom, wearing a mouth mask, inspects the finished koji. (9) Cooked soybeans are ground by a Hobart meat grinder into spaghetti-like strands, which are

run into plastic buckets. (10) Thom mixes koji, salt, and liquid in a mixing trough. (11) He empties the mixed miso ingredients into 350 gallon wooden vats to ferment and age for a year or two. Thom buys the unassembled 300-gallon cedar vats, which are designed and cut to order, from the Arrow Tank Company (16 Barret Street, Buffalo, New York, 14125) for approximately \$500 each. Thom has already made over 30,000 lb of miso, but he is unable to enjoy it. "I have such a *yang* constitution," he says, "that I can't handle much salt."

Dick Kluding operates the Good Earth Natural Foods store in nearby Norwalk, Ohio. He and Thom met for the first time early in September 1978, and by the last week in October they were building the miso shop on Dick's land.

Editor's note at end of article: "Since this article was written, Thom Leonard left Monroeville for Conway, Massachusetts. He and Christian Elwell will re-establish the Ohio Miso Company on Mr. Elwell's farm in Conway. Richard Kluding, who assumed full-time miso-making responsibilities following Thom's departure, will complete the miso season and then turn the business over—literally... everything except the building, to Mr. Elwell, new principal owner, and Thom Leonard, miso maker and consultant. Elwell and Leonard expect to have their new miso shop completed by autumn [1980] and begin miso production again in early winter." Address: Colrain, Massachusetts.

Illust. by Akiko Aoyagi Shurtleff. Index. 23 cm. A co-production of Ost-West Bund e.V. and Ahorn Verlag. Translated from English by Rainer Bosch and Gudrun Klein. [43 ref. Ger]

• **Summary:** Contents: What is miso? Foreword. Acknowledgments. Part I. Miso: Nutritional value and varieties. 1. Soybeans, protein and the world food crisis. 2. Miso as a food. 3. The miracle of fermentation. 4. The varieties of miso.

Part II. Cooking with Miso (400 recipes). 5. Getting started—principles, kitchen utensils, preparation. 6. Recipes from East and West. Part III. The Preparation of Miso.

Part III. The production of miso. 7. Making miso at home and in communities. 8. Japanese farmhouse miso. 9.

The traditional miso shop. 10. The modern miso factory. Appendixes: A. The history of chiang, miso, and shoyu, and their historical significance. B. The chemistry and microbiology of miso fermentation. C. Miso additives. D. Miso with seafoods, chicken, and meat. E. When you want to study miso in Japan. F. People and institutions worldwide connected with miso. G. Natural food stores in German-speaking countries. Bibliography. Glossary. About the authors and their work (autobiographical).

Published in both hardcover and paperback editions. Address: New-Age Foods Study Center, P.O. Box 234, Lafayette, California 94549.

2233. *Soyfoods*. 1980. Soyfoods to the American taste: An interview with Drs. Clifford Hesseltine and Hwa L. Wang. 1(3):58-62. Summer. [1 ref] Address: NRRC, Peoria, Illinois.

2234. **Product Name:** Miso-Garlic Dressing. **Manufacturer's Name:** Soyplant Co-op Inc. (The). **Manufacturer's Address:** 711 Airport Blvd., Suite 1, Ann Arbor, MI 48104. Phone: 313-663-8638.

Date of Introduction: 1980. July.

Ingredients: A rich, smooth blend of miso (fermented soybeans and rice), safflower, shoyu sauce, garlic, onion, cider vinegar, water, lemon oil.

Wt/Vol., Packaging, Price: 16 oz.

How Stored: Refrigerated.

New Product—Documentation: Label in Soy Plant scrapbook from about 1980. 2½ by 2½ inches. Black on white. 16 oz. Sold in a plastic tub.

2235. Switzer, Larry. 1980. Spirulina: The whole food revolution. Proteus Corp., 2000 Center St., Suite 1221, Berkeley, CA 94704. 94 p. Illust. by Akiko Aoyagi Shurtleff. 22 cm. [78* ref]

• **Summary:** Contents: Acknowledgements. Preface. Earthrise 1969. 1. Introduction to microalgae. 2. History of spirulina. 3. Cultivating around the world. 4. Farming and processing. 5. Nutritional value. 6. How to use spirulina. 7. Recipes. 8. Spirulina as a world food. 9. Global impact of microalgae. New earthrise 2001. References.

Soy-related recipes include: Aquamole dip or dressing (with tofu and tamari soy sauce, p. 64). Pro-miso soup (p. 65). Pro-miso canape (p. 69).

The Preface notes that Larry Switzer, who used to be a filmmaker, first learned about spirulina in the winter of 1974 from a small article in *Solar Energy Digest*. Earlier that year he had formed a partnership with Dr. William J. Oswald, a University of California prof. of public health and engineering, and a recognized world expert on the mass cultivation of microalgae. Proteus is being financed by a far-sighted philanthropist, David Donneley, a wonderful guy. Proteus was incorporated in California in late 1975. In

1975-76 extensive laboratory and pilot scale experiments were conducted in Concord, California. Robert Henrickson and Dr. Alan Jassby joined Proteus in 1976. Small ponds were constructed in the Imperial Valley of Southern California, and by 1979 larger farms were in operation there. In 1978 Proteus began importing spirulina from Sosa Texcoco, S.A., of Mexico, the major world producer. Address: Founder and President, Proteus Corp.

2236. Yoshihara, Lulu. 1980. Shinmei-do Miso Company. *Soyfoods* 1(3):10. Summer.

• **Summary:** In this letter, the author tells of the founding, activities, products, and production process of this small miso company. Her husband and co-worker, Yoshi, is Japanese. They have the capacity to make 80 gallons/week of miso but are operating below capacity for lack of space and firewood. Their main miso variety is rice (kome) miso. Barley miso will be ready in early 1981 and brown rice miso will be ready in the fall of 1981. "Our markets are the Japanese food coops and natural food stores. We started in spring 1979 and have just sold our first miso. Our first experimental batch was made in February 1977." Address: Shinmei-do Miso Co., Wren Rd., Denman Island, BC, Canada, V0R 1T0.

2237. *Journal Star (Peoria, Illinois)*. 1980. Tempeh, tofu, miso may replace hot dog. Aug. 11.

• **Summary:** At a recent national conference held at the University of Illinois, William Shurtleff discussed the potential and possible future of these three foods. His remarks were supported by those of Dr. Clifford Hesseltine, a microbiologist at the USDA's research laboratory in Peoria, Illinois. Hesseltine added that the use of tempeh is growing "at a phenomenal rate."

2241. Sass, Lorna J. 1980. A couple on a tofu mission in the West. *New York Times*. Sept. 24. p. C3. Reprinted in the San Francisco Chronicle. Nov. 12. p. 22.

• **Summary:** About William Shurtleff and Akiko Aoyagi, authors of *The Book of Tofu*, with a photo of each person. In 1975 they founded the New-Age Foods Study Center, with offices in Tokyo and Lafayette. Their center has published three volumes: *Tofu and Soymilk Production* (\$17.95), *Tempeh Production* (\$15.95), and *Miso Production* (\$17.95). These books are directed at people interested in manufacturing "soy foods." In 1978 they helped to found the Soy Crafters Association of North America. Last July the association held its third annual conference. Lorna Sass is also the "general editor of the forthcoming reprint series of significant historical cook books." Address: Culinary historian, New York.

2242. Belleme, John. 1980. Re: Building a miso factory in North Carolina. Pasteurizing miso and selling dry koji. Letter to William Shurtleff at Soyfoods Center, Sept. 29. 2 p. Typed, without signature or letterhead.

• **Summary:** "Our miso project is going quite well. This summer I located the remaining equipment in New Jersey and ordered our vats from Arrow Tank Co. in Buffalo [New York]. The owner is stone deaf; it was an interesting afternoon.

"We are now leveling the site for the miso factory. It's going to be one of those metal Butler buildings, about 4,000-sq-feet. Besides the miso project, we are working on other projects such as building a structure for summer camps, shiitake mushroom farming, and preparing our land for growing soybeans. There's just Jan. and I, so our hands are full."

While in Japan, John noticed that Mr. Onozaki's wife and most older traditional people never boil their miso soup. "People go out of their way to buy Mr. Onozaki's unpasteurized miso. These people believe that there is a very beneficial bacteria in miso which is killed by heat. More specifically, old people in rural Japan strongly feel that if you smoke, it is best to drink unpasteurized miso every day.

"On the other hand, the people at Sendai [Miso Shoyu Co.] and Michio [Kushi] believe this is nonsense. I have great faith in the wisdom of tradition. People that live close to the earth do not waste their time if not for good reason. Also, the people at Sendai pasteurize all exported miso, much of which is sold by Erewhon." John asks Shurtleff's opinion on these matters.

John would like to sell some of the koji he makes as dry koji. He asks how to dry it and the effect of drying on the enzyme activity of the koji. "Finally, do you know anything about the nutritional benefits of koji in making amasake or pickles?"

Talk with John Belleme. 1980. Oct. 3. The rebuilt cypress vats are 7 feet tall and 5 feet in diameter. Each costs \$1,000 with stainless steel hoops. John is deeply interested

in macrobiotics. Address: Route 3, Box 541, Rutherfordton, North Carolina. Phone: (704) 287-2940.

2243. Aihara, Cornelia. 1980. Cornelian's corner: Tamari. *GOMF News (Oroville, California)*. Sept. p. 3-4.

• **Summary:** George Ohsawa called his soy sauce 'Ohsawa Soy Sauce,' when he started teaching macrobiotics in Europe around 1957. He made a Frenchman the sole distributing agent for macrobiotic foods imported from Japan. This agent later began to import cheap, poor quality soy sauce from Japan under the name 'Ohsawa Soy Sauce.' As a result, Ohsawa had to import traditional natural soy sauce from Japan once again. He could no longer use the name 'Ohsawa Soy Sauce' because the other importer had copyrighted the name. Ohsawa therefore called the traditional natural soy sauce imported from Japan 'tamari'—even though, in the strict sense of the word, it was not tamari.

"Tamari sauce was a historical precursor to soy sauce and is available today in very limited quantities. It is a by-product of a particular type of miso that is made with only salt and soybeans (with a bit of koji enzyme). Its flavor and taste-enhancing qualities are not as distinctive as natural traditional soy sauce.

"*The Calendar Cookbook* was published last year but was written in 1972 when I was using natural soy sauce; in this as well as in *Macrobiotic Child Care* (1979) I called it 'tamari.' This was a mistake. I meant natural soy sauce, not tamari. Really, tamari means the liquid that comes to the bottom of the barrel under stone pressure when making miso... Making 100 pounds of miso, only one or two cups of tamari come. But I don't like to take this tamari off—I mix it up with the miso. If you remove it, the miso is less sweet... I never used tamari in my cooking.

"Last summer in Japan, Mr. Murata of Ohsawa Japan introduced us to the Yamaki factory. They are using good quality salt, not commercial government salt." Address: GOMF, 1544 Oak St., Oroville, California 95965.

2244. Hesseltine, C.W.; Wang, Hwa L. 1980. Fermented foods. *Food Trade Review* 50(9):473-79. Sept.; 50(10):543-45. Oct. [4 ref]

• **Summary:** Discusses shoyu, tempeh, wheat soya tempeh, sufu, natto, koji, miso, ragi, and soy yogurt. Address: USDA NRRC, Peoria, Illinois.

2245. Stechmeyer, Betty. 1980. Re: Detailed comments on and suggestions for corrections in *The Book of Miso*, by Shurtleff and Aoyagi. Letter to William Shurtleff at Soyfoods Center, Oct. 6. 2 p. Typed, with signature. [2 ref]

• **Summary:** Betty is a trained microbiologist. Almost all of her excellent suggestions were followed in the revised edition of *The Book of Miso*. Address: GEM Cultures,

30301 Sherwood Rd., Fort Bragg, California 95437. Phone: 707-964-2922.

2246. Hodgson, Moira. 1980. Restaurants: Sushi and more and new Italian. *New York Times*. Oct. 10. p. C22.

• **Summary:** A review of Sushiko, a small Japanese restaurant in New York City between Broadway and Eighth Avenue, which has a "sushi bar." Inexpensive side orders include: "Natto, mustard-colored fermented soybeans, gooey and unusual, were seasoned with mustard, chopped scallions and soy sauce, and had an extraordinary and subtle flavor, tasting slightly smoky, resembling food that has been cooked over charcoal. Bean curd came in large moist squares in a bowl of water, accompanied by a sauce of dried tuna [sic, bonito] flakes and scallions mixed with soy."

Paper-thin yakinori (toasted nori) could be used as a wrap for natto. Spectacular nasu shigiyaki was an eggplant sliced in half, covered with miso sauce, and grilled. Misoshiru [miso soup] is a rich brown soybean soup. Tofu is added to a tossed American-style salad.

2247. Ostmann, Barbara Gibbs. 1980. Shurtleff's sermon: Soy to the world. *Post-Dispatch (St. Louis, Missouri)*. Oct. 22. p. 1B. Food section.

• **Summary:** "The guru of tofu made a brief stop in St. Louis recently, to address a full house—composed of soybean farmers, vegetarians, Oriental food enthusiasts and just plain curious cooks—about the wonders of the soybean and its many forms, in particular tofu or soybean curd." A color photo shows Shurtleff and Aoyagi holding tofu and miso dishes that they served to the audience. Address: Post-Dispatch Food Editor.

• **Summary:** Section 12 (p. 85-113) of this study is titled "Soyfoods & Other Soy Products." It consists largely of statistics compiled by the Soyfoods Center and Soycrafters Association of North America. On pages 95-110 is published, without permission, complete lists of all U.S. tofu shops, tempeh shops, and miso and koji manufacturers from books copyrighted by Shurtleff and Aoyagi. Acknowledgement of the source of all this information is given only at the bottom of tables, on the last page of the plagiarized list of manufacturers, and in Appendix 6, page 234. No permission was obtained from the Soyfoods Center to use any of this material.

On page 113 is a table on U.S. lecithin production from 1976 to 1979, based partly on U.S. Census figures. Production averaged about 60 million lb/year, worth \$19 to \$23 million. The estimated percentage consumed for health purposes rose from a estimated 2.5% worth \$500,000 in 1976 to an estimated 5.5% worth \$1.3 million in 1979.

Page 232 lists the largest health food wholesalers in the USA: Balanced Foods Inc. (Ridgefield, New Jersey), Landstrom Distributing (San Francisco, California), Erewhon, Inc. (Cambridge, Massachusetts), Health Foods Inc. (Des Plaines, Illinois), Kahan & Lessin Co. (Compton, California), Nature's Best (Torrance, California), and Tree of Life Inc. (St. Augustine, Florida). Address: Dix Hills, New York.

2252. *Kushi Institute Newsletter (Brookline, Massachusetts)*. 1980. Foods of the ancient world: Miso. 2(1):1-3. Oct.

• **Summary:** States that hacho miso is generally considered the top quality. The Kushi Institute was established in 1978 to provide the education necessary to achieve the common goal of a healthy and peaceful world.

2253. Mochizuki, Tsutomu. 1980. Re: Bacteria found in the greatest numbers in traditional Japanese miso. Letter to William Shurtleff at Soyfoods Center, Oct.—in reply to inquiry. 1 p.

• **Summary:** The most abundant bacterium in traditional Japanese miso is *Pediococcus halophilus*, a lactic acid bacterium. No other prevalent species are found. Note: Dr.

Mochizuki, an expert on miso, retired in 1982. Address: Shinshu-Miso Research Inst., Nagano city, Japan.

2254. *Nutrition News (Pomona, California)*. 1980. Soyfoods from the magic bean. 3(10):1-4.

• **Summary:** Discusses the nutritional value of soybeans, meat analogs, tofu, tempeh, miso, soy sauce, and TVP.

2255. Wang, H.L.; Swain, E.W.; Hesseltine, C.W. 1980. Phytase of molds used in Oriental food fermentation. *J. of Food Science* 45(5):1262-66. Sept/Oct. [26 ref]

• **Summary:** "Except for *Mucor dispersus* NRRL 3103 and *Actinomyces elegans* NRRL 3104, all the other molds tested produced both extra- and intracellular phytase." Molds were tested that make the following fermented foods: Sufu, tempeh, Lao-chao, soy sauce, and miso. Address: NRRC, Peoria, Illinois.

2256. Oka, H.; Itoga, K.; Mochizuki, T. Assignors to Nagano Miso Company. 1980. Muen kôtanpaku shokuhin genryô no seizô-hô [Salt-free miso]. *Japanese Patent* 55-44587. Nov. 13. 12 p. [12 ref. Jap]

• **Summary:** The patent for the world's first salt-free miso. Note: A similar patent was granted on 28 May 1981. Japanese Patent 1,048,853. Address: Chuo 5-6-2, Ueda-shi, Japan.

2257. Andoh, Elizabeth. 1980. At home with Japanese cooking. New York, NY: Alfred A. Knopf. 254 p. Illust. by Michiko Fujiwara. Index. 25 x 22 cm.

• **Summary:** A beautiful, intimate and very useful book, approachable and suffused with a unique tranquility and charm. The illustrations (line drawings) are exquisite.

Contents: Acknowledgments. Introduction. A note about the romanization of the Japanese language (Hepburn system). In the Japanese kitchen: Techniques and equipment—Grilling, broiling, steaming, braising and simmering, frying, dry roasting, grinding, crushing and mixing, using knives (four types, and how to hold and use them), skewering, straining and mashing, grating, pots and pans, miscellaneous equipment (chopsticks, rice paddle, rice tub, flat fan, bamboo mats, bamboo trays, metal mold, etc.). Meals and menu planning. The recipes: Soups, rice, noodles, braised and simmered foods, grilled and skillet-grilled foods, deep-fried foods, steamed foods, mixed, sauced and tossed foods, pickles, sweet things and beverages. In the Japanese kitchen: Foodstuffs. Suggestions for ordering Japanese foodstuffs, A glossary of Japanese terms.

The very helpful glossary includes (soy related): Abura agé: fried bean curd [tofu]. Aka miso: dark bean paste [miso]. Daizu: dried soybeans. Eda mamé: fresh soybeans. Kikkoman: brand name of soy sauce. Kinako: soy flour [roasted]. Marukomé miso: brand name of medium

fermented bean paste. Miso: fermented bean paste. Miso shiru: soup thickened with fermented bean paste. Natto: fermented sticky soy beans. Okara: by-product of fresh tofu-making. Saikyô miso: light bean paste, a brand and regional name. Sendai miso: dark bean paste, a brand and a regional name. Shinshû Ichi miso: medium bean paste, a brand and regional name. Shiro miso: white (or light) bean paste. Shôyu: soy sauce. Teri yaki: glaze grilling. Tôfu: bean curd. Usu kuchi shôyu: thin or light soy sauce. Yuba: thin brittle sheets of soy milk (by-product of tôfu-making).

Also includes: Each of the basic sea vegetables / sea greens used for food in Japan (ao nori, hijiki, konbu, nori, wakamé, etc.). Umé-boshi: pickled plums.

The book contains excellent recipes and descriptions (see the index) using bean curd [tofu] (7 recipes), eda mamé (1), fried bean curd (*abura agé*) (5), grilled bean curd (*yaki-dôfu*) (3), miso (17), and soybeans, dried (1); natto is not mentioned.

Elizabeth concludes the Introduction by explaining: "What I've tried to write here is the very book I wish I'd had with me when I started out fourteen years ago."

About the author (last page and with portrait photo on inside rear dust jacket): Elizabeth, who was raised in New York and graduated from the University of Michigan, traveled to Japan in 1966 to study Japanese, lived with the Andoh family on the island of Shikoku, and married into that family two years later. Shortly after her marriage, she enrolled in a class at the Yanagihara School of Classical Japanese Cooking, where she studied for six years. She has a daughter, Rena, to whom this book is dedicated.

The copyright page states: "Many of the recipes which appear here were originally printed in slightly different form in *Gourmet* magazine, 1975, as part of a 6-part series entitled 'The Seasonal Japanese Kitchen,' by Elizabeth Andoh." Address: Tokyo, Japan.

2258. ASEAN Sub-Committee on Protein. ed. 1980. Report on the Second ASEAN Workshop on Solid Substrate Fermentation. Kuala Lumpur, Malaysia. 415 p. Held 27-29 Nov. 1980 at Kuala Lumpur, Malaysia. 29 cm. [100+ ref]

• **Summary:** This the 10th workshop organized by the ASEAN Sub-Committee on Protein and the second workshop in the series on solid substrate fermentation. The first was held in May 1978 at Bandung, Indonesia. The protein project, which has a newsletter and is directed toward the development of small industries, has been active since 1974. Members of the Main Organising Committee include Prof. Ho Coy Choke (Chairman), Dr. Ahmad Zaharudin Idrus, and Ms. Yeoh Quee Lan. At the back is a directory of participants (p. 411-15). Address: Malaysia.

2259. Esko, Edward; Esko, Wendy. 1980. Macrobiotic cooking for everyone. Tokyo: Japan Publications, Inc. 272

p. Nov. Foreword by William Tara, Director, Community Health Foundation, London, England. 26 cm. [50 ref]

• **Summary:** The authors studied in Japan (mostly Kyoto), from Sept. 1978 to May 1979, at which time they returned to Boston. In the summer of 1979 "more than 100 delegates from various regional centers throughout the United States and Canada met in Boston for the first North American Congress of Macrobiotics." Part I of this book discusses the theory of macrobiotics and Part II gives recipes. Unfortunately, the book has no index, and the bibliography gives no years of publication. There are chapters on: Seitan, fu, and noodles (incl. soba), and Sea vegetables.

Soy-related recipes include: Brown rice and soybeans (p. 90). Miso soft rice (p. 96). Somen with deep-fried tofu (p. 118). Kenchin soup (with deep-fried tofu cubes and tamari, p. 130). Okara soup (p. 132). Miso soups (p. 137-143; 12 recipes are given plus a long letter from Jan Belleme, about how she and her husband, John, who arrived in Japan in late October 1979, are now living with the Onozaki family and studying miso-making there—p. 138-39). Sauteed cucumbers and miso (p. 154). Boiled cabbage, sweet corn, and tofu (p. 155). Udon-vegetable bane (with deep-fried tofu, p. 159). Steamed kale and tofu (p. 161). How to make sprouts (incl. soybean sprouts, p. 177).

Chapter 5 is titled "Bean dishes, including tofu and natto." It states (p. 178-79, without citing the source) that "In China and Japan there is a proverb, 'A man who eats too many beans becomes a fool.' ... Lima beans and soybeans are both very yin, and require thorough chewing. They should be eaten only on occasion and in small quantities... Kombu can be placed on the bottom of the pot when cooking chickpeas, soybeans, lima beans or kidney, pinto and navy beans. I have found that kombu definitely improves their flavor, and because of its high mineral content, creates a very balanced dish." To pressure cook soybeans so that they do not clog the steam escape valve, first boil them for 30 minutes. Skim the foam off the top as it rises, and when no more foam rises to the surface you may place them in a pressure cooker and continue cooking until done. Recipes include: Japanese black beans (black soybeans). Soybeans with kombu and burdock. Soybeans with lotus root and salmon. Following a long discussion of tofu, Homemade tofu. Tofu with scallions. Tofu with bonito flake broth. Baked tofu with miso/lemon sauce. Broiled tofu. Tofu loaf. Steamed tofu rolls. Deep-fried tofu cakes. Aburage (Age or deep-fried tofu). Stuffed age pouches. Okara. Okara croquettes. Sautéed natto. Natto rice or noodles. Natto tempura. Dried natto.

Hijiki with soybeans (p. 193). Hijiki and deep-fried tofu (p. 194). Tempuraed tofu-nori rolls (p. 198). Koi-koku (Carp miso soup, p. 220). Daikon and tamari. Scallion miso. Green peppers and miso (p. 224). Miso condiments (p. 226). Tamari. Moromi (p. 227). Rutabaga-tamari pickles (p. 233). Quick miso pickles (p. 234). Tofu tamari dressing (p. 236).

Tofu-sesame dressing. Shiro-miso-tofu dressing. Miso dressing (p. 237). Tamari-lemon dressing. Tamari-rice vinegar dressing. Miso-tahini dressing (p. 238). Miso-rice vinegar dressing. Miso walnut dressing. Miso-tahini spread. Sesame miso spread. Miso-nut spread (p. 239). Lentil-miso spread. Lima bean miso spread (p. 240). Tofu dip (p. 243). Amazake (p. 247-48). Clear broth soup with tofu & scallions (p. 253). The glossary lists many soy products plus azuki beans, sea vegetables (many types), gluten, koji, kuzu, mochi, natto, nigari, okara, seitan, tekka, tempeh, umeboshi, unohana (okara), and yuba.

Macrobiotic periodicals include: *East West Journal* (Brookline, Massachusetts). *Kushi Institute Study Guide and Kushi Inst. Newsletter* (Brookline, MA). *The Order of the Universe* (East West Foundation, Brookline, MA). *The Macrobiotic Review* (East West Foundation, Baltimore, Maryland). *Spiral* (Community Health Foundation, London). *Le Compas* (Paris). Note: The date each periodical began publication is not given.

The lengthy section on seitan (p. 110-13) gives a detailed recipe for making seitan at home using the short method and 3½ lb hard spring wheat flour or hard red winter wheat flour. The broth is made with kombu and tamari. Seitan recipes include: Seitan stew. Seitan fried rice. Stuffed mushrooms (with sauce). Stuffed squash or Hokkaido pumpkin. Address: Boston, Massachusetts.

2260. Flegel, T.W.; Bhumiratana, A. 1980. Studies on *Aspergillus flavus* var. *columnaris* in soy sauce koji. In: ASEAN Sub-Committee on Protein, ed. 1980. Report on the Second ASEAN Workshop on Solid Substrate Fermentation. Kuala Lumpur, Malaysia. 415 p. See p. 106-20. [6 ref]

• **Summary:** Reviews attempts to improve the quality of soy sauce and tao chieo [miso] in Thailand by the introduction of *Aspergillus flavus* var. *columnaris* inoculum (found to produce the most protease) for the koji stage of production. Two major proteases were isolated and characterized. A low-cost, easy, and reliable method is described for the production of koji inoculum by factory personnel using plastic bag incubators.

Good quality soy sauce should have a high soluble nitrogen and a high reducing sugar content in the final product. To obtain this, one must optimize production of protease and amylase during the koji stage. Factory owners all prefer green koji (made in cool weather, dominated by *Aspergillus* species) to black koji (resulting from hot weather and dominated by Zygomycetous molds such as *Rhizopus*, *Syncephal*, *Mucor*, *Absidia*, etc.). In the moromi stage, factory owners say that the total salt content of the moromi and final soy sauce should not fall below 18% (w/v = weight to volume) lest the soy sauce spoil, nor exceed 22% (w/v) lest it be too salty. Koji usually takes 5-7 days to make. The optimum growth temperature for the koji mold, determined by radial growth on agar, was found to be 30°C.

When tao chieo was made by the new method, white crystals of pure tyrosine appeared' since they were not harmful, they were accepted by factory owners. An increase in soluble nitrogen leads to a darkening of color caused by the complexing of glucose with amino acids such as lysine. Address: Microbiology Dep., Faculty of Science, Mahidol Univ., Rama VI Road, Bangkok, Thailand.

2261. Karim, Mohamad Ismail Abdul. 1980. The role of microorganisms in food fermentation with special reference to Malaysian fermented foods. In: ASEAN Sub-Committee on Protein, ed. 1980. Report on the Second ASEAN Workshop on Solid Substrate Fermentation. Kuala Lumpur, Malaysia. 415 p. See p. 31-64. [27 ref. Eng]

• **Summary:** Traditional Malaysian fermented soyfoods include kicap (soy sauce), tempeh, and taucu (Malaysian miso). Fermentation is considered by most small-scale processors as more of an art than a science. The secrets of the processes have been passed down in the family from one generation to another. Much of the flavor of fermented soy products comes from fatty acids (glutamic acid, propionic acid, butyric acid, etc.), ammonia, and amines.

In Malaysia, the manufacture of soy sauce is normally done by small establishments using traditional methods. Boiled soybeans are cooled then mixed with 40-50% by weight of wheat flour. The mixture is spread onto large shallow bamboo trays (90 cm diameter and 5 cm deep) to a depth of 5 cm. The trays, which are used repeatedly, harbor many useful microorganisms. The trays are then stacked in tiers 15-30 cm apart on wooden racks for 7-10 days. The mixture is broken up and turned every 2 days to allow aeration. At the end of the fermentation, the white mycelium-impregnated mass, with its spores turning yellow and greenish yellow, is filled into earthenware jars (190 liters capacity) and covered with brine solution of 15-20% concentration. The jars are exposed to the sun and covered with lids at night or whenever it rains. The brine mixture is allowed to ferment for 2 to 24 months depending on the quality of the sauce needed. At the end of the fermentation period, the resulting dark liquid (soy sauce) is removed by siphoning or straining through a cheese cloth or suitable strainer. The sauce is then bottled. Sometimes sugar or benzoic acid (a preservative) is added to the sauce before bottling. A sauce could also be cooked and thickened with caramel (up to 80%) and bottled as thick sauce for sale. The production of thin sauce requires a short fermentation (1½-6 months) whereas thick sauce requires a longer fermentation (6-24 months). The extraction process could be repeated 4 to 6 times by topping the remaining mash with brine solution (10-14%) after each extraction.

Soybean paste or taucu is made in essentially the same way as soy sauce except that broken soybeans are used and the liquid is not removed. The final product is reddish brown. Most Malaysian taucu is not sun-dried, but is packed

into wide-mouth jars in its moist paste form. Address: Jakatan Sains dan Teknologi Makanan, Universiti Pertanian Malaysia, Serdang, Selangor, Malaysia.

2263. Soriano, M.R.; Navarro, N.S.; Parel, S.O. 1980. Solid substrate food fermentation technology in the Philippines. In: ASEAN Sub-Committee on Protein, ed. 1980. Report on the Second ASEAN Workshop on Solid Substrate Fermentation. Kuala Lumpur, Malaysia. 415 p. See p. 198-223. 29 cm. [45 ref]

• **Summary:** This paper gives a brief history of the development of food fermentation technology in the Philippines, including fermented soy products such as toyo (soy sauce), tausi (or tao-si [soy nuggets], called “taousih” by the Chinese and “tao tjo” [sic] by the East Indians), tahuri (fermented tofu, sufu, or Chinese cheese. Cubes of tofu are inoculated with an *Actinomucor* mold; angkak is often used to impart a red color), and miso (called chiang in China). A related product is angkak, or “red rice,” made by fermenting rice with the red mold *Monascus purpureus* Went for coloring and flavoring. The science of fermentation can be said to have dawned in the mid-1800s when Louis Pasteur discovered that every fermentation process was associated with a corresponding organism. Before World War II the use of microorganisms for the processing of foods was an unexplained field of study in the Philippines. The four pioneering studies from 1934 to 1937 included one by Yenko and Baens in 1940 the use of rice as a source of carbohydrate in the production of soy sauce. The first scientific investigation (1934, with nata) was done in the University of the Philippines, College of Agriculture in Los Baños, Laguna, and the last three studies were pursued in the former Bureau of Science, now the National Institute of Science & Technology (NIST).

There are no local written reports or scientific investigations of tausi, tahuri, or miso. Their manufacture is dominated by Chinese in the Philippines. Much attention, however, has been given to the production of soy sauce (toyo). Reviews of studies conducted in the Philippines have been given by Soriano (1975) and Soriano and Pardo (1977). Work is presently being done at NIST on the replacement of soy beans with local beans, and wheat with rice, cassava or banana flour in the production of soy sauce. Address: National Inst. of Science and Nutrition, Manila.

2264. Tang, Charles Chang Chiu. 1980. Studies of solid substrate fermentation in Singapore. In: ASEAN Sub-Committee on Protein, ed. 1980. Report on the Second ASEAN Workshop on Solid Substrate Fermentation. Kuala Lumpur, Malaysia. 415 p. See p. 225-233. [5 ref] Address: Dep. of Scientific, Outram Road, Singapore 0316.

2265. Anderson, Eugene N. 1980. Re: Soybeans, tofu, and tempeh. Letter to William Shurtleff at Soyfoods Center, Dec. 12—in reply to inquiry. 2 p. Typed, with signature on letterhead. [4 ref]

• **Summary:** A sinophile, he is collaborating with Dr. Paul Buell (an historian at Western Washington University, Bellingham, WA) on various books on Chinese agriculture, including an economic botany. “We are currently working on the soybean article for this and drawing heavily on your books. He is an inveterate tofu maker who lives by your books.”

The spices in real curry are fascinating and much different from those in the “nauseating and disgusting ‘curry powder’ of commerce.”

He is aware of some spectacularly fine Chinese books on vegetarian soyfoods cookery, written by Buddhist religious groups. “Most of the Chinese cookbooks in English are obscene and should be banned as pornography.”

It is now known that the old Shen Nung Herbal is from ca. 100 A.D.

“Tempe I assume to be an application to soybeans of earlier technology used on coconut. Incidentally the soybean was introduced to the Malay world by people from the Fujian-Guangdong border between Xinmen (Amoy) and Swatow (Shandou), as shown by the distinctive dialect words borrowed into Malay (*bahasa Indonesia, bahasa Malaysia*)—*taohu, taugé, taucho, tausi*, etc. These are also in Indonesian and Filipino—though tausi could be from Cantonese. These are direct borrowings of precisely the dialect forms of the border area, the southern dialects of the Southern Min or Hokkien language. Tauhu, for instance, is their pronunciation of tofu (doufu in standard Chinese). One word I can’t explain is *kecap* (formerly spelled *ketjap* and so pronounced), the Malay word for soy sauce. It seems to have referred earlier to quite a different, local brew. It has nothing whatever to do with ketchup.

“The latest soy news is yet another proof that peasant techniques have their reasons. It now appears that soybeans have a huge amount of phytate, amounting to up to several percent of the bean. Phytate (the distinctive ion of phytic acid) takes up calcium, zinc magnesium, niacin and other chemically active items in food and makes chemical compounds that humans can’t digest effectively. Thus the calcium, niacin, etc., of food is lost. This leads to calcium deficiency, zinc deficiency (as with whole-grain wheat bread eaters in the Near East), or worst of all, pellagra (corn is classically associated with pellagra because it’s high in phytate and low in niacin). But of course if you add calcium or magnesium or the like to your food, it takes up the phytate and you’re OK. Heat also destroys some of it. Micro-organisms such as yeasts and *Aspergillus* can also destroy it, having appropriate enzymes. Thus processing soybeans with gypsum, nigari or fungal fermentation wipes

out this danger.” Address: Dep. of Anthropology, Univ. of California, Riverside, CA 92521.

2266. Sheraton, Mimi. 1980. Restaurants: Sushi and East Side Italian. *New York Times*. Dec. 26. p. C26.

• **Summary:** This is a review of Takezushi, a Japanese sushi restaurant with two branches in New York City: 11 East 48th St. and 101 West 45th St, at the Avenue of the Americas. Three basic types of sushi are offered: nigiri sushi, nori sushi, and chirashi sushi. Takezushi offers an earthy miso soup. “The 45th Street branch offers a few additional specialties that must be requested—natto, a mix of fermented soy beans, egg yolk and scallions;...”

• **Summary:** Describes the use of brown rice and miso in saving victims of the atomic bomb blast.

2268. Bau, H.M.; Debry, G. 1980. L’art de l’utilisation du soja: Habitudes et traditions [The art of soya utilization: Customs and traditions]. *Cahiers de Nutrition et de Dietetique* 15(4):277-84. Oct/Dec. [40 ref. Fre; eng]

• **Summary:** “For many centuries, soybeans have meant meat, milk, cheese, bread, and oil to the people of Asia. Because of their great food value, they not only have long had a definite place in the oriental diet but now belong in the diet of America and of the entire world. In Europe, the use of soybean products in the quotidian diet is still limited, however it is sure that they will be an important factor in the balanced diet of the future.”

Note 1. Soyfoods Center has a 16-page English-language translation of this article.

Note 2. *Webster’s Dictionary* defines quotidian (derived from the French *quot* = as many as + *dies* = day) as “occurring every day.” Address: University of Nancy, France.

• **Summary:** Phytic acid limits the bioavailability of the minerals present in many plant-derived foods, including soybeans. Address: Dep. of Food Science, Univ. of Illinois.

2270. Elwell, Christian. 1980. Re: Ohio Miso Co. has become South River Miso Co. One year barley miso available. Letter to customers of Ohio Miso Co., Dec. 1980. 1 p. Handwritten form letter, with signature.

• **Summary:** “Dear Friends, old and new,
“The Ohio Miso Company has changed ownership. As of November, 1980, the Elwell family has purchased and moved the equipment and present stock of miso to South River Farm in Conway, Massachusetts. Conway is nestled in

the eastern slopes of the Berkshire Mountains on the banks of the South River. With our new location, we have a new name: the South River Miso Company.

“We are dedicated to continuing the fine craftsmanship begun in Ohio, using only organically grown ingredients, unrefined sea salt, and pure mountain spring water. Eventually we want to follow a full cycle by growing the grains and beans on our own farmland.

“We plan to have our new shop ready for the fall season of 1981. Production methods will continue along the lines of a traditional family cottage industry. Cooking will be done in cauldrons over a wood fire.

“At present we have available a one year Barley Miso in both 5 gallon (45 pound) and 2 gallon (18 pound) buckets. A price schedule with shipping information is enclosed.

“We are excited with the adventure of bringing the fine tradition of miso making to American soil; and, as always, we welcome your comments, criticism, suggestions and support.

“With best wishes, Christian Elwell.” Address: South River Miso Co., South River Farm, Conway, Massachusetts 01341.

2271. Lowe, Marion. 1980. Miso—Another soy food. *Chimo (Canada)*. Dec. p. 46-47.

• **Summary:** An introduction to miso, with two recipes (Mushroom Miso Sautee, and Miso Stew), based on *The Book of Miso* by Shurtleff & Aoyagi. A photo shows a 500 gm jar of Macro-Bio Soya Bean Puree / Puree de Feve de Soja (Miso), sold by Nu-Life Nutrition Ltd. in Vancouver, British Columbia, Canada.

2272. **Product Name:** [Macro-Bio Soya Bean Puree (Miso)].

Foreign Name: Macro-Bio Puree de Feve de Soja (Miso).

Manufacturer’s Name: Nu-Life Nutrition, Ltd.

(Importer). Made in Japan.

Manufacturer’s Address: Vancouver, BC, Canada.

Date of Introduction: 1980. December.

Wt/Vol., Packaging, Price: 500 gm jar.

New Product—Documentation: Photo of jar and label in Chimo. 1980. Dec. p. 47. “Miso—Another soy food.” At top of label: “Authentic Japanese Foods.”

2273. Miyako Oriental Foods, Inc. 1980. Information [Company founding and sales by brand]. 404 Towne Ave., Los Angeles, CA 90013. 1 p. Unpublished manuscript.

• **Summary:** The company was founded on 21 Jan. 1976 and started actual business on June 1. Brands and their share of total company sales are Yamajirushi 60%, Kanemasa 20%, Yamaizumi 10%, Cold Mountain 10%, Private 3%. Markets: Western 85% (California 80%), Eastern 13%, Other 2%. Address: Los Angeles, California.

2274. Muramoto, Noboru. 1980. Miso, and making koji. *Asunaro News* (Glen Ellen, California)

• **Summary:** On the unnumbered pages of this undated newsletter, section we read: "V. Miso—This month's feature article is taken from Mr. Muramoto's lecture-demonstration of the miso-making process. This is made available to the members who could not attend the Institute with the hope that they can be helped to make the foods covered in the lectures by themselves." Describes the benefits of miso and lists the ingredients for making 80 lb of rice miso, using 18 lb dry soybeans and 18 lb dry koji.

"VI. Making koji," gives detailed instructions, starting with 18 lb dry rice. Address: Asunaro Inst., 4600 Cavedale Rd., Glen Ellen, California. Phone: (707) 938-9846.

2275. **Product Name:** [Shree Akita Miso, Akadashi Miso, Soya Sauce (Koikuchi Shoyu)].

Manufacturer's Name: Nepal Soya Industries.

Manufacturer's Address: 9/374 Bhedashing, Jamguthi, Kathmandu, Nepal. Phone: 229130.

Date of Introduction: 1980.

Ingredients: Akita miso: Soybean, rice, koji starter, water, salt.

Wt/Vol., Packaging, Price: Miso: 1 kg.

New Product—Documentation: Letter from Mr. Achutananda Vaidya of Nepal Soya Industries. 1992. Dec. 26. He started making tofu in Kathmandu in 1974. "In 1979-80 I was invited to Japan for 9 months training at the Akita Prefecture Brewing Laboratory. During that time I also learned in detail the processes for making soy sauce, miso, and soyamilk. During that period I also got a chance to read *The Book of Tofu*, *The Book of Miso*, *Miso Production*, and *The Book of Tempeh* all of which helped me very much. I still have all those books. In 1985 I was invited by the Rotarians of Akita-Aomori to return to Japan for 1 month to receive further technical training in making tofu, miso, soy sauce, soyamilk, moyashi (sprouts), koji, fruit fermentations for wine, etc. Today I produce tofu, soy sauce, and miso in my small factory in Kathmandu." His business card notes: "Food Technology in Brewing from Japan. Products & Suppliers: Tofu (Vita), Soyamilk (Vitabean milk), Soya Curd, Soya Sauce, & Miso."

2277. **Product Name:** Tofu Salad.

Manufacturer's Name: Solar Winds.

Manufacturer's Address: Ojai, California.

Date of Introduction: 1980.

Ingredients: Tofu, fresh mixed vegetables, miso, safflower oil, vinegar, natural herbs & spices.

Wt/Vol., Packaging, Price: 6 oz.

How Stored: Refrigerated.

New Product—Documentation: Label. 1982. 3 by 2 inch oval. Self adhesive. Yellow, brown on orange. Shurtleff & Aoyagi. 1980. List of soyfoods products.

2278. Aihara, Herman. 1980. Learning from salmon. Oroville, California: George Ohsawa Macrobiotic Foundation. xiii + 156 p. Illust. No index. 22 cm.

• **Summary:** This is a collection of Herman Aihara's writings, over the past 20 years, compiled by Sandy Rothman, editor of GOMF. Each article or essay is dated. Contains a good early history of macrobiotics in the USA, and of Chico-San (p. 26-35).

Herman was born Nobuo Nishiyama in 1920 in Arita, Kyushu, Japan. George Ohsawa's teaching was about how to understand and acquire infinite freedom, absolute justice, and eternal love. He inspired his students greatly, and told them it was their own fault if they were not happy. The food you eat is one of the most important factors that influences a person's health and happiness.

Herman landed in San Francisco in 1952 at age 32 to start a new life. His wife was sick, and two of their babies died.

Before March of 1961 Ohsawa visited Europe and saw many beautiful macrobiotic restaurants and clinics in Belgium, France, Italy, Germany, Switzerland, and England. The Lima factory in Belgium produces macrobiotic foods. Macrobiotic restaurants include Au Riz Dore, and Longue Vie.

Like the salmon, Ohsawa took his most adventurous trip late in his life. He held his first American macrobiotic lectures in 1960 on Long Island, New York. They lasted for 2 months. At that time Herman was manager of the first macrobiotic food store in the USA, in New York City [Named Ginza, it had been started by Herman in 1960.] In 1960 Herman went to Europe to solve visa problems, then in about late 1960 he returned to New York and started publication of *Macrobiotic News*, a magazine that contained mostly Ohsawa's lectures. In 1961 Ohsawa returned to New York for a summer camp in the Catskill Mountains. After the camp he said that followers of macrobiotics should leave New York because nuclear war was immanent. 36 people, including 15 families, decided to move to Chico, California, which they had calculated was the safest place from nuclear fallout. Arriving in Sept. 1961, they soon founded Chico-San, which was the first macrobiotic food production and distribution company in the USA. The first store was in the basement of a small shop. Herman began to import miso, tamari, and other traditional, natural foods from Japan.

Some followers of macrobiotics stayed in New York to keep up the Ohsawa Foundation and food store. One

customer got sick and died [Beth Ann Simon died in Nov. 1965]. The FDA came in and closed the store. Bob Kennedy became president of Chico-San and soon began America's first successful production of Rice Cakes.

Herman moved to San Francisco in 1971. At the end of 1970, John Deming Jr. had given him some land in Mendocino. In Sept. 1972 a fire, started by a rice-cake machine, burned down the Chico-San factory and most of its inventories of food. Chico-San started making money in about 1978.

Western medicine is interested only in treating symptoms. Medical professionals are largely ignorant of the influence of diet on health, and even block the development of the dietary approach to healing. Address: Oroville, California.

2279. Akizuki, Tatsuichiro (Shinichiro). 1980. *Taishitsu to shokumotsu: Kenkô e no michi* [Physical constitution and food: The way to health]. Tokyo: Kuriei Shuppan-bu. 61 p. [Jap]

• **Summary:** Author's first name is given as Tatsuichiro. Kawamura says this is mistaken.

2280. Bhumiratana, Amaret. 1980. *Traditional fermented foods in Thailand*. In: *Proceedings of the Oriental Fermented Foods*. Food Industry Research and Development Institute, P.O. Box 246, Hsinchu, (300) Taiwan. iv + 229 p. See p. 58-70. [19 ref]

• **Summary:** Tao-jeow is Thai miso. Sufu is fermented tofu. The author uses the terms tao-nou and thuo-nao instead of thua-nao throughout; he even misspells it when citing Sundhagul 1970. It is sold as a paste or chips. Soy sauce (the Chinese type), soy paste and fermented soybean curd are commonly available throughout the country although they are more common in the Chinese community. Tao-nou, however, is the product which is popular in the northern part of the country. Flowcharts show the processes for producing soy sauce and tao jeow, tofu and sufu, and thuo-nao. Address: Dep. of Microbiology, Faculty of Science, Mahidol Univ., Rama VI Rd., Bangkok 4, Thailand.

2281. Binding, G.J. 1980. *About soya beans: Wonder source of protein and energy*. Wellingborough, Northamptonshire, England: Thorsons Publishers Ltd. and New York: Pyramid Books. 64 p. 18 cm. 1st ed. 1970. About series, no. 35.

• **Summary:** Contents: 1. Beans in general. 2. History of the soya bean. 3. Content of soya beans. 4. About lecithin—vital for retaining youth. 5. The soya bean in the Far East. 6. American influence on the soya bean. 7. Industrial uses in America. 8. The soya bean and world food shortage. 9. Soya bean recipes.

A section titled "Wonder food—God's gift to man" (p. 10) states: "For over 5,000 years this tiny seed has been the staple food of certain parts of the East, including North

China, Japan, Korea, and some areas of India. The ancient Yogis, who were among the world's first vegetarians, placed great faith in the soya bean as a supplement to their meatless diet." On the cover is a color photo showing TVP, lecithin, soymilk, soy sauce, miso, soya bean oil, soya flour, and soya sprouts.

Note 1. The copyright page states: "First published 1970. Second impression 1971. Third impression 1977. Second Edition, revised and reset 1980." Note 2. This book has no preface by Carlson Wade. Address: F.R.H.S., England.

2282. Bloodroot Collective; Beaven, Betsey; Giordano, Noel; Miriam, Selma; Shea, Pat. eds. 1980. *The political palate: A feminist vegetarian cookbook*. Sanguinaria Publishing, 85 Ferris St., Bridgeport, CT 06605. xxiii + 325 p. Illust. Index. 23 cm. [39 ref]

• **Summary:** This feminist collective and restaurant is named Bloodroot for an eastern woodland wildflower, *Sanguinaria canadensis*. They "found something symbolic in its slow spreading rhizomatous root system and the way each piece of root throws up its own grey-green leaf furled protectively around the eight-petaled white flower. Any part of the root, stem, or leaf 'bleeds' a red juice." The cookbook is largely vegetarian (though 8 recipes which use fish are included), seasonal, and ethnic/regional. The introduction praises the books on tofu, tempeh, and miso written by Shurtleff and Aoyagi as "truly political books." Their favorite vegetarian cookbook is Julie Jordan's *Wings of Life* (Crossing Press). The book is interspersed with feminist quotations and has a separate lengthy feminist bibliography.

Soy-related recipes include: Harvest vegetable platter with miso gravy (p. 17-19). Winter miso soup (with soybeans, p. 80-81). Kasha platter (with miso gravy, p. 91-92). Indonesian tempeh dinner (p. 96-97). Uراب: Indonesian steamed vegetable salad (with tofu, p. 98). Sea vegetable salad (with tofu dressing and wakame, p. 134-35). Grilled Ma-Po tofu and rice (p. 169-70). Hot and sour soup with wild daylily buds (and tofu, p. 188-89). Snow pea salad with tofu sauce (p. 196). Omelet grandmere (with miso gravy, p. 280-82). Address: Bridgeport, Connecticut.

2283. Brotonegoro, Soetarjo; Sudjana, M.; Saono, S. 1980. *Preservation of economically important cultures by freeze drying*. Paper presented at the Second ASEAN Workshop on Solid Substrate Fermentation. Held 27-29 Nov. 1980 at Kuala Lumpur, Malaysia. *

• **Summary:** The author isolated, identified, and preserved the microorganisms in some traditional Indonesian foods such as tempe, tauco (Indonesian miso), and kecap (soya sauce). Address: Malang Research Inst. for Food Crops (MARIF).

• **Summary:** Discusses the use of salt-tolerant yeasts in making fermented soy sauce and miso or chiang. Address: Dep. of Food Science, Provincial Ping-tung Inst. of Agriculture, Pingtung, Taiwan.

2285. Doi, Tadao; Takeshi, Morita; Chonan, Minoru. 1980. Hôyaku Nippo jisho [Vocabulary of the language of Japan]. Tokyo: Iwanami Shoten. xxxiv + 862 p. 27 cm. [Jap; Por]

• **Summary:** This is a Japanese-language translation of the original 1603 edition, *Vocabulario da Lingua de Iapam*, the second earliest dictionary of the Japanese language compiled by Europeans. Soy-related terms in this dictionary, which are translated from the original hard-to-read Portuguese into modern Japanese, are described in detail at the reference for the original 1603 dictionary, which see.

In the Forward, the author notes that this is the entire translation of the Nagasaki edition of the Japanese Portuguese Dictionary. The original title is *Vocabulario da Lingoa de Iapam com a declacaração em Portugues* (Japanese dictionary with explanation in Portuguese), published in 1603 by the Japanese Society of Jesus (Nihon Iezuzu-kai). In 1604 a second dictionary was published, titled *Arte da Lingoa de Iapam Composta Pello Padre Iaa Rodriguez* (1604-1608).

Christian priests traveled by boat to Japan to teach the Japanese Christianity. As a result, they left many historical documents. Francis Xavier first arrived in Japan in 1549 and only 54 years later his group published this remarkable Japanese dictionary. The year 1603 was also the year that Tokugawa Ieyasu became the shogun (Seiitaishogun, or highest ranking samurai), founding the Tokugawa Shogunate or Edo period. In Japanese history it was the turning point at which the country changed from the medieval period to the modern one. This dictionary is a very unique mirror which reflects this period and is regarded as an important document that raises many questions in Japanese cultural history. The dictionary is indispensable in Japanese linguistic history since it contains many Japanese words of the period with explanations in Portuguese. In those days the Japanese had dictionaries that focused on Chinese characters (kanji) and simple dictionaries for waka and renka poems. This dictionary picked up a wide range of words from daily conversation, organizing and defining them in modern dictionary form. The original edition was stored in a secret place in Europe, inaccessible to Japanese, who therefore had to largely depend on a 19th century French translation by Leon Pajes. A rotogravure edition of the book stored at Oxford University entered Japan during

the Taisho period (1912-1926) and was studied. Only recently was a facsimile copy of the original edition published, and it is being used increasingly.

This dictionary was produced by the Japanese Society of Jesus [Jesuits] to further their goal of spreading Christianity. The 1603 dictionary was developed to help the priests understand dialects, lower-class speech, and the confessions of the local common people. The 1604 dictionary focused on the speech of the upper classes and more educated people. Thus the 1603 dictionary collected words the priests needed to understand, while the 1604 dictionary collected those that they wanted to use.

2286. Easterday, Kate Cusick. 1980. The peaceable kitchen cookbook: Recipes for personal and global well-being. New York, NY, Toronto, Canada: Paulist Press. 313 p. Illust. by Ragna Tischler Goddard. 21 cm. [28 ref]

• **Summary:** A vegetarian cookbook. Page 45 describes how to sprout various seeds and beans, including soybeans. The section titled "Soybeans Simplified" (p. 66-75) begins by asking "Why are soybeans so highly praised?" then gives recipes for: Basic cook soybeans. Soyburgers (from cooked, mashed soybeans). How to make soy milk (12 cups, using soy flour or soybeans). Soy "coffee." Tofu (soybean curd). Tofu sandwich spread. How to roast soybeans (dry). The last page of the section, titled "Soybean Terminology" gives 1-2 line descriptions of: Soy grits, soy meal, soy granules, soy flour, soy powder (extra fine soy flour, used to make soy milk), soya (implies that the product has been toasted), roasted soybeans, tofu, miso, tamari.

Other soy-related recipes include: Wheat-soy pancakes (with soy flour, p. 169). Soy fritters (with mashed soybeans, p. 222). Simple soy bean loaf (p. 228). Vegetarian sukiyaki (with tofu and soy sauce, p. 231). Soy cheesecake (with tofu, p. 291). Address: Illinois.

2287. Fessler, Stella Lau. 1980. Chinese meatless cooking. New York, NY and Scarborough, Ontario, Canada: New American Library. 298 p. Illust. by Janet Nelson. Index. 20 cm.

• **Summary:** This vegetarian cookbook, which contains more than 180 recipes, demonstrates vividly how much Chinese vegetarian cookery depends on soyfoods—especially tofu (bean curd). The glossary includes excellent descriptions of bean curd—fermented red (*nan-ru*), bean curd—fermented white (*tofu-ru*), bean curd—pressed threads or noodles, bean curd sheets (*tofu-pi [yuba]*), bean curd sheets (*er-ju*), bean curd sheets—pressed or hundred-leaf (*bai-yeh*), bean curd sticks (folded bean curd sheets), brown bean paste or brown bean sauce, bean paste—Szechuan hot bean or spicy soy, bean sprouts—soy or yellow, fermented or salted black beans, Hoisin sauce, Oyster sauce (with soy), soy sauce, soy sauce—light or thin.

The chapter on soups stocks notes that soybeans or soybean sprouts have a delicate flavor and are most suitable for making stock. Soy sprouts, which are much larger than mung bean sprouts, have a more chewy texture and a very sweet, delicate taste; they are often used to strengthen the flavor of a dish (see recipe p. 90).

Soy-related recipes (each with the name written in Chinese characters) include: Mixed pressed bean curd threads (p. 68). Spinach and deep-fried bean curd puff salad (p. 70). Soybean sprout salad (p. 73). Pressed bean curd salad (p. 76). Monks in a storm of wind and snow (Asparagus and bean curd salad, p. 82). Soybean sprout stock (p. 90). Deep-fried bean curd and mung bean noodle soup (p. 93). Spinach and bean curd soup (p. 98). Seaweed and bean curd soup (p. 99). Soybean soup (p. 100). Soybean with fried gluten soup (p. 101). Asparagus and bean curd soup (p. 106). Goddess of Mercy (Kuan-yin) soup (With bean curd and tiger lily bulbs, p. 112-13).

One long chapter (p. 118-160) is titled "Bean curd dishes, mock meat dishes, and mock fish dishes." It gives good definitions of and home-scale recipes for: Bean curd. Deep-fried bean curd puffs. Plain pressed bean curd cakes. Five-spice pressed bean curd cakes. Braised deep-fried bean curd puffs. Bean curd with oyster sauce (not vegetarian). Braised bean curd. Spicy bean curd. Steamed bean curd with spicy bean paste sauce. Bean curd with tomatoes. Bean curd with fresh mushrooms. Cold bean curd. Stubborn stones' obeisance (Fried bean curd with vegetables). Braised frozen bean curd with chives. Braised Fukien [Fujian] bean curd. Stir-fried Chinese chives with pressed bean curd. Stir-fried pressed bean curd with carrots and bamboo shoots. Mock lion's head (with five-spice pressed bean curd). Stir-fried green peppers with mock meat (pressed bean curd). Mock moo goo gai pan (Stir-fried pressed bean curd with vegetables). Mock roast duck (with dried bean curd sheets and soy sauce). Mock soy sauce chicken (with fresh or frozen hundred-leaf bean curd sheets). Mock velvet chicken (fried bean curd with egg whites). Spicy mock chicken (with mock soy sauce chicken). Mock ham (with dried bean curd sheets). Bock abalone (braised gluten balls). Mock mu-shu pork (with five-spice pressed bean curd, shredded). Fried mock squab (with chopped pressed bean curd). Mock twice-cooked pork (with five spice pressed bean curd). Bean curd with thousand-year eggs.

Other interesting recipes include: Wheat gluten (homemade mein jin or vegetable steak, p. 165-66; At Chinese grocery stores, wheat gluten is sold in various forms—fried, dried, steamed, boiled, canned, and frozen). Fried gluten balls. Boiled gluten. Lo Han vegetable dish (with fried wheat gluten balls, p. 169-70). Chinese mustard greens in black bean sauce (p. 173-74). Stir-fried leeks with bean curd (p. 186). Fresh soybeans stir-fried with fresh mushrooms (p. 187). Boiled fresh soybeans in their pods (p. 188). Bean sprouts stir fried with wheat gluten (p. 190).

Stir-fried soybean sprouts with bean curd puffs (p. 191). Cauliflower and bean curd sticks (p. 192). Winter melon with red fermented bean curd sauce (p. 195). Stir-fried asparagus with fermented bean curd (p. 197). Stir-fried lettuce with white fermented bean curd sauce (p. 198). Sweet and sour fried gluten and cabbage (p. 208). Two immortals in the apricot garden (fried gluten with vegetables and almonds, p. 209). Braised eggs with bean curd sticks (p. 213-14). Scrambled eggs with fermented bean curd (p. 214). Bean curd with salted eggs (p. 216-17). Wonton soup (with fresh bean curd, p. 233-34). Fried wontons (filled with five-spice pressed bean curd, coarsely chopped). Soybean milk, sweet soybean milk, and salty soybean milk (p. 247-48). Deep-fried crullers (*yu chiao*; sometimes served in hot soymilk, p. 249-50). Noodles with spicy bean paste sauce (and five-spice pressed bean curd, p. 258-59). Address: Cornell Univ., Ithaca, New York.

2288. Fukushima, Danji; Hashimoto, Hikotaka. 1980. Oriental soybean foods. In: F.T. Corbin, ed. 1980. World Soybean Research Conference II: Proceedings. Boulder, Colorado: Westview Press. xv + 897 p. See p. 729-743. [7 ref]

• **Summary:** Contents: Fermented soybean foods. Non-fermented soybean food. Conclusion. References.

The following statistics show the amount (tons) of whole soybeans/ defatted soybean grits/ total of whole and grits consumed for various soybean foods and feeds in Japan in 1976.

Fermented soyfoods: Shoyu (soy sauce) 10,000/ 165,000/ 175,000, miso 190,500/ 5,000/ 195,500. Natto 69,000/ 0/ 69,000.

Non-fermented soyfoods: tofu and aburage (fried tofu pouches) 411,500, 55,000/ 466,500. Kori-tofu (dried-frozen tofu) 29,000/ 0/ 29,000. Others 16,000/ 75,000/ 91,000.

Animal feeds: 30,000/ 1,950,000/ 1,980,000. Thus total use for foods and feeds is whole soybeans 756,000. Defatted soybean grits 2,250,000, total of both 3,006,000. By type of use, animal feeds account for 65.9% of total Japanese usage of whole soybeans and defatted grits, non-fermented soyfoods account for 19.5%, and fermented soyfoods account for 14.6%. The top three food users are tofu (466,500 tons, 45.5% of all food uses), miso (195,500), and shoyu (175,000). There are 35,000 tofu plants in Japan.

Fermented soybean foods described are shoyu (soy sauce; 5 types), miso (3 basic types, 6 varieties), sufu (Chinese soybean cheese), tempeh (fermented soybean cake), natto (fermented whole soybeans; itohiki-natto and hama-natto), and fermented soymilk (recently a new fermented soybean product appeared on the market in Japan. It is a soy milk drink fermented by lactic acid bacteria).

Non-fermented soybean foods described are tofu (soy milk curd), aburage (fried tofu pouches), kori-tofu (dried-

frozen tofu), yuba (coagulant film of soy milk), kinako (roasted soybean powder), moyashi (soybean sprouts), and soybeans. Production, chemical composition, and use of each of these foods is discussed. Address: Kikkoman Foods Inc., P.O. Box 69, Walworth, Wisconsin 53184.

2289. Gay, Martin; Gay, Kathlyn. 1980. Eating what grows naturally. South Bend, Indiana: And Books. 137 p. Illust. by Brian "Woodie" Byrn. 21 cm. [75 ref]

• **Summary:** A book about natural foods, with some vegetarian recipes. Martin was born in 1950. Pages 79-80 give ten menus based on Shelton's food-combining principles, including (5) Stir-fried vegetables and tofu cubes, and (9) Tofu-vegetable casserole with green salad. Page 106 gives definitions of miso, tamari, tempeh, and tofu. Soy-related recipes include: Soy burgers (with ground, cooked soybeans, p. 108), and tofu casserole (p. 109).

2290. Hanssen, Maurice. 1980. Country kitchen recipes with soya beans. Wellingborough, Northamptonshire, England: Thorsons Publishers Ltd. 32 p. Illust. 14 cm. * Address: Northamptonshire, England.

2291. Himalayan International Institute. 1980. The Yoga way cookbook: Natural vegetarian recipes. 4th ed. Honesdale, Pennsylvania: Himalayan International Institute of Yoga Science and Philosophy. 249 p. Illust. Index. 22 cm. 1st ed. as 1974.

• **Summary:** A vegetarian and natural foods cookbook. Pages 8-9 describe in detail how to make tofu at home. A list of special ingredients includes soybeans, soy granules, grits, and flour, miso, tamari, and tofu. Soy-related recipes include: Tofu spinach pie (p. 18). Soybean tacos (p. 32). Soy burgers (p. 36). Tofu burgers (p. 40). Tofu rice with vegetables (p. 47). Soybean rice (p. 49). Soy-potato soup (with soy granules, p. 105). Miso soup (p. 116). Tamari soup (p. 117). Tofu salad dressing (p. 127). Scrambled tofu (p. 228). Tofu-avocado supersandwich (p. 233). "Short order" tofu luncheon.

Bunting, eds. 1980. Advances in Legume Science. Royal Botanic Gardens, Kew, Richmond, Surrey, England. xvi + 668 p. See p. 251-64. [91 ref]

• **Summary:** Contents: Abstract. Taxonomy of *Glycine*. *Glycine* species [*G. soja*, *canescens*, *clandestina*, *falcata*, *latrobeana*, *tabacina*, *tomentella*]. Domestication and dissemination of the soybean. Germplasm resources. Variation. Address: Univ. of Illinois at Urbana-Champaign, Champaign, USA.

2294. Iwamoto, H. 1980. General aspects of Japanese fermented foods. In: Proceedings of the Oriental Fermented Foods. Food Industry Research and Development Institute, P.O. Box 246, Hsinchu, (300) Taiwan. iv + 229 p. See p. 31-45. Held 10-14 Dec. 1979 in Taipei, Taiwan. 15 tables. 2 figs.

• **Summary:** The fermented foods indigenous to Japan which are made from protein-rich materials can be grouped into two types: the soybean group and the fish group. The former, which includes miso, shoyu, and natto, is the more

popular and production is very large. The author presents an early history and genealogy of miso, shoyu, and natto based on the Japanese-language writings of Prof. K. Sakaguchi and Prof. M. Nakano. Shi [soy nuggets] were recently found in an ancient Chinese tomb of the 2nd century B.C. “The word *shoyu* or *chiang-yu* never appeared in any old Chinese manuscripts. Nevertheless I wonder if the origin of Japanese shoyu might be the Chinese *chiang* in the Ming dynasty or an earlier period. Anyhow, the question is still: When did the Chinese start making koji from a mixture of soybean and wheat? And when and where was filtration of soybean *chiang* successfully commenced. As for the later, it is quite possible that the filtration was started in Japan.”

In 1977 the following amounts of fermented soyfoods were produced in Japan: miso 620,902 tonnes (using 190,000 tonnes of whole soybeans and 1,579 tonnes of defatted soybean meal), shoyu 1,228,244 tonnes (using 11,788 tonnes of whole soybeans and 180,000 tonnes of defatted soybean meal), and natto 120,000 (using 71,000 tonnes of whole soybeans).

Table 2 shows soybean production in Japan and the USA every 5 years from 1930 to 1978. Production in Japan was 388,600 tonnes in 1930, reaching a peak of 507,100 in 1955, falling to a low of 109,500 in 1976, then rising slightly to 187,900 in 1978. The first year for which imports are shown is 1970, when 3,243,790 tonnes were imported, 91% of which from the USA. In 1978 4,260,041 tonnes were imported, 97% from the USA.

Table 6 shows miso production in Japan from 1967 to 1976. Factory production grew from 535,000 tonnes in 1967 to a peak of 650,000 tonnes in 1973, down slightly to 630,000 tonnes in 1976. Farmer (household) production decreased steadily from 207,000 tonnes in 1967 (39% of factory production and 26% of total production) to 67,000 tonnes in 1976 (11% of factory production and 10% of total production). Total production and annual per capita consumption decreased from a peak of 789,000 tonnes in 1967 (7.8 kg/capita) to a low of 697,000 tonnes in 1976 (6.5 kg/capita).

Table 7 shows the number and capacity of miso factories in Japan and their production in 1959, 1968, and 1977. The number of factories decreased dramatically during this 18-year period (to from 2,987 to 1,996), but the total amount of miso produced increased 503,000 tonnes to 621,000 tonnes, and the percentage of all miso made by large factories (those making 3,751 tonnes/year or more) rose from 15% to 52%, while the percentage of all miso made by small factories (those making 1-375 tonnes/year) decreased from 29% to 14%.

Table 8 shows the materials used in making shoyu in Japan from 1968 to 1977. The amount of whole soybeans decreased from 15,000 tonnes to 9,000 tonnes, the amount of defatted soybean meal increased from 147,000 tonnes to 176,000 tonnes, the amount of wheat increased from

127,000 to 178,000 tonnes, and the amount of salt from 170,000 tonnes to 204,000 tonnes. The amount of amino liquor (HVP) decreased from 140,000 tonnes to 89,000 tonnes.

Table 9 shows shoyu production in Japan from 1967 to 1976. Factory production grew from 1,201 kiloliters (kl) in 1967 to a peak of 1,403 kl in 1973, down slightly to 1,349 kl in 1976. Farmer (household) production decreased steadily from 20 kl in 1967 (1.67% of factory production 1.63% of total production) to 9 kl 1976 (0.66% of factory production and 0.66% of total production). Total production and annual per capita consumption increased from 1,221 kl 1967 (12.0 liters/year) to a high of 1,411 kl in 1973 (12.6 liters/year), then down slightly to 1,355 kl in 1976 (11.9 liters/year). Table 10 shows that in 1977 there were 3,135 shoyu factories in Japan. Of these, 2,654 (85% of the total) were in the smallest scale, having 10 or fewer employees, while 5 had 201-300 employees, and 8 had 301 or more employees.

Fig. 2 shows the percentage of shoyu that is distributed through various channels as it moves from the factory to large or small consumers. Address: College of Agriculture, Meiji Univ., Ikuta, Tama-ku, Kawasaki-shi, Japan.

2295. Lu, Gwei-Djen; Needham, Joseph. 1980. *Celestial lancets: A history and rationale of acupuncture and moxa*. Cambridge, London, New York, New Rochelle, Melbourne, Sydney: Cambridge University Press. xxi + 427 p. Illust. Index. 26 cm. [300+* ref]

• **Summary:** Contents: List of illustrations. List of tables. List of abbreviations. Authors' foreword. 1. Introduction. 2. The *ching-lo* system and its classical theory. 3. Historical growth of the system. 4. Moxibustion. 5. Therapy and analgesia; physiological interpretations. 6. Influences on other cultures. 7. The lore of vital spots. 9. Conclusions. Bibliographies.

This is a wonderful, scholarly study of two of the most ancient therapeutic techniques of Chinese medicine. “Acupuncture is the implantation of very thin needles into subcutaneous connective tissue and muscle at a great number of different points on the body's surface: moxibustion is the burning of *Artemisia tinder* (moxa) either directly on the skin or just above it. For 2500 years the Chinese have used both techniques to relieve pain and to heal a wide variety of illnesses and malfunctions.

“Dr. Lu and Dr. Needham, in this preview of an important section of *Science and Civilisation in China*, give a full historical account of acupuncture and moxibustion in the theoretical structure of Chinese medicine, and combine this with a rationale of the two techniques in the light of modern scientific knowledge. The book is in no sense a clinical manual: rather is it a contribution, judicious and enlightened, to that oecumenical medicine which will

eventually combine all the true powers discovered in China and Europe.”

Authors' Foreword: “Many conclusions which had formerly to based on philological arguments about the dating of texts, have now received dazzling confirmation from archaeological discoveries, as for example the four manuscripts on silk which contain descriptions of the acupuncts and were recovered only very recently from the Han tombs of the -2nd century at Ma-wang-tui. These scrolls reveal a development of acupuncture a good deal earlier than the *Nei Ching*. And from that same -2nd century there are the acupuncture needles found among the grave-goods of the Prince of Chung-shan, Liu Shêng. Or one could instance the acupuncture texts intended to accompany those life-size bronze figures demonstrating acu-points which were introduced first in the +11th century, texts which were later discovered inscribed on stone tablets that had been buried in the gate bastions of a city wall. It is to be expected that future archaeological finds will throw much further light on the development of Chinese medicine as a whole.”

“The *Huang Ti Nei Ching* (Yellow Emperor's Manual of Corporeal Medicine) is the oldest and most famous of the Chinese medical classics... We date the *Su Wên* part of it (Questions (and Answers) about Living Matter) in the -2nd century, and the *Ling Shu* (Vital Axis) in the -1st.” Acupuncture is first discussed in this remarkable book.

Concerning moxa, page 171 states that it was often desired to apply the stimulus of a heat treatment only, without actual cautery. This was called *wên chiu* (warming moxibustion) or “moxa that left no scar on the skin. The classical way of doing this was to use a layer of some vegetable substance between the skin and the burning incense-like cone. One technique was to have it burn down on a layer of soya-bean paste (*tou chiang chiu*); or else a slice of garlic, or a slice of ginger could be interposed.”

Note: This is the earliest English-language document seen (March 2009) that uses the term “soya-bean paste” to refer to miso—in this case *tou chiang / doujiang* (Chinese-style miso).

Pages 268-69 state: “It was throughout the second half of the +17th century that information about acupuncture began to attract the attention of Europeans. The very first writer, so far as we can see, who spoke about acupuncture was the Dane Jacob de Bondt (1598-1631) who in his capacity as surgeon-general for the Dutch East Indian Company at Batavia had come into contact with Chinese and Japanese physicians.” The first illustrations (four) of the acu-points in the Western world appeared in Willem ten Rhijne's book of +1683. Andreas Cleyer in his *Specimen Medicinae Sinicae* (1682) gave detailed illustrations of acupuncture (p. 276-83). The German naturalist Englebert Kaempfer (1651-1716) gave the clearest account to date of acupuncture which he observed among the Japanese (p.

287-92). Address: 1. Assoc. Director; 2. Director. Both: East Asian History of Science Library, Cambridge, England.

2296. McConnaughey, Evelyn. 1980. Sea vegetable recipes from the Oregon coast. Oregon Inst. of Marine Biology, Charleston, OR 97420. 32 p. Illust. by Lynn Rudy. No index. 22 cm. [8 ref]
Address: Oregon.

2297. McConnaughey, Evelyn. 1980. More sea vegetable recipes from the Oregon coast. Plus seaweeds from the Orient. 1653 Fairmount Blvd., Eugene, OR 97403. 41 p. Illust. by Catherine Vignaux. No index. 22 cm. [8 ref]
Address: Oregon.

2298. Nagahori, Takashi; Motai, H.; Okuhara, A. 1980. Shôyu no N-nitroso amin seisei yokusei busshitsu [On the substances in shoyu to suppress the nitrosation of dimethylamine]. *Eiyo to Shokuryo (J. of Japanese Society of Food and Nutrition)* 33(3):151-60. [39 ref. Jap]

• **Summary:** Amino acids in shoyu competitively inhibit formation of nitrosamines from nitrite and amines. Shoyu, miso, and protein hydrolysates suppress nitrosation by 60-70%, by means of Van Slyke reactions between amino acids in the soyfoods and nitrites. Rates of suppression are: regular (*koikuchi*) shoyu 62-65%, tamari shoyu 69-79%, and rice miso 71-77%. Address: Central Research Labs., Kikkoman Shoyu Co. Ltd., Noda, Japan.

2299. Null, Gary. 1980. The new vegetarian cookbook. New York, NY: Macmillan Publishing Co., Inc.; London: Collier Macmillan Publishers. x + 310 p. Recipe index. 24 cm.

• **Summary:** One chapter (p. 52-60) titled “Soybeans and Soybean Products” discusses: “Whole, raw soybeans” [green vegetable soybeans], dried soybeans, soybean milk soy flour, soy grits, soy flakes, tempeh, tamari, miso, and tofu. The long section on tofu begins: “As a high-quality source of complete protein, tofu (soybean curd, usually called bean curd) is hard to beat, not to mention inexpensive, low in calories and versatile.” It ends: “As you become more familiar with tofu, you'll come up with many of your own innovations. But no matter how you choose to serve this natural, high-protein food, serve it often and savor its benefits!”

Page 78, under “Bean Sprouts,” states that “Soybeans make the most delicious sprouts, but are a little more difficult to grow” than mung bean sprouts. Page 88 notes that tamari and miso are good alternatives to salt.

Soy-related recipes include: Miso tofu soup (p. 132-33). The section titled “Tofu Dishes” (p. 199-208) includes: Butternut tofu. Tofu cauliflower casserole. Herby tofu croquettes. Mushroom and tofu sautéed in miso. Tofu Orleans. Red and green peppers with tofu. Soba tofu dinner. Tofu eggplant Parmesan. Yogurt tofu casserole [with cow's

milk yogurt]. Tomato tofu and kidney beans. Bulghur, lentil and tofu casserole. Tofu à la king. Sesame tofu (Tofu plus sesame seeds). Hot breakfast for two (tofu with oatmeal, raisins, and walnuts).

Soy-enriched wheat berry bread (p. 242). Page 304 contains a list of food suppliers, including Chico San, East West Journal Mail Order, and Walnut Acres (Penns Creek, Pennsylvania). Address: New York City, NY.

2300. Pennington, Jean A.T.; Church, Helen Nichols. eds. 1980. *Bowes and Church's food values of portions commonly used*. 13th ed. Philadelphia, Pennsylvania: J.B. Lippincott Co. xvii + 186 p. Index. 28 cm. 1st ed. was 1937. 2nd ed. was 1939. 10th ed. was 1966. [62 ref]

• **Summary:** The index contains entries for: Beans (but no soy). Cheese and cheese food (but alternatives). Cheez-its, Chili-vegetarian. Float, Dairy Queen. Flour. French fried potatoes (Arthur Treachers, Burger Chef, Burger King, Dairy Queen, Long John Silver's, McDonald's, Wendys). Ice cream bars. Infant formulas (Isomil-Ross Labs, L-Soyalac-Loma Linda, Neomullsoy-Syntex, Nursoy, ProSobee-Mead Johnson, Soyalac-Loma Linda). Irishmoss [Irish moss]. Milk (goat, human, Indian buffalo, reindeer, sheep, soybean, whole). Miso. Natto. Oils. Soyamaise dressing (p. 122). Soyamel. Soybeans, fermented. Soybean curd. Soybean flour. Soybean milk. Soybean nuts. Soybean oil. Soybean protein. Soysauce. Teriyaki sauce. Tigers Milk Bar. Tofu. Tom Collins. Veg Skalops. Veja-Links. Vegeburger. Vegetarian products made mostly by Worthington Foods and Loma Linda (p. 22-23): Beef style roll, Chicken style, Chic-Ketts, Chili, Corned beef style, Croquettes, Dinner cuts, Fry Sticks, Gran Burger, Meatloaf mix, Nuteena, Prosage, Proteena, Rediburger, Smoked beef style, Stakelets, Stripples, Tasteecuts, Turkey Style-Smoked, Vega-links, Vegeburger, Veg Skalops, Vegetarian Burger, Vitaburger, Wham. Yogurt.

Aluminum is not among the lists of trace minerals in foods in the back. The book *does* list the following as trace minerals: chromium, cobalt, fluoride, iodine, molybdenum, nickel, selenium, and tin. Address: 1. Formerly Instructor of Nutrition, City College of San Francisco, San Francisco, California [Now with U.S. Food and Drug Administration, Washington, DC]. Phone: 202-245-1064.

2301. *Quadernos de Natura (Editorial Posada, Mexico)*. 1980. La alimentacion macrobiotica [The macrobiotic diet]. No. 10. 88 p. [10 ref. Spa]

• **Summary:** Includes information on miso, natto, tamari, tekka miso, and sea vegetables.

2302. Redfield, Linda. 1980. *Vegetarian cooking with tofu*. Davis, California: Printed by the author. 9 p. 21 cm.

• **Summary:** This typewritten booklet of vegetarian tofu recipes has the Chinese characters for "tofu" written on the

brown cover. It was reproduced by photocopying and bound with four staples (saddle stitched). Contents: Nutritional information. A simplified method of preparing tofu from soybeans. Sauces (incl. Miso spread, Dipping sauce with tamari, Tofu marinade with tamari, Teriyaki marinade with tamari). Tofu salads. Chinese recipes. Mexican recipes. Recipes using sliced tofu. Italian recipes. Tofu desserts and fruit whips.

Talk with Linda Redfield. 2002. Sept. 23. She developed this booklet in about 1980 in Davis—before she went to Arcata, where she now lives. Her business is now named Holistic Self Healing. She does nutritional and wellness counseling, whole foods meal service, cooking and nutrition classes, and energy therapies. After her name are the following title abbreviations: D.C. (Diet Counselor), N.E. (Nutrition Educator), W.C. (Wellness Consultant). She is like a wholistic dietitian. Address: Davis, California.

2303. Shandler, Nina; Shandler, Michael. 1980. *How to make all the "meat" you eat out of wheat: International gluten wheat "meat" cookbook*. New York, NY: Rawson, Wade Publishers, Inc. xiv + 241 p. Index. 24 cm. [10 ref]

• **Summary:** How to make and use wheat gluten in a vegetarian diet, with 250 American and international recipes. Contents: Acknowledgements. Author's note. Part I. Introducing wheat "meat": 1. The cost of the meat-centered diet: How meat consumption affects ecology, economy and health, food economy, fuel conservation, water reserves and pollution, heart disease, cancer and meat eating, premature aging, chemical residues in meat, medical costs. 2. Introducing wheat "meat": a low-cost, homemade alternative to meat (gluten meats cost about \$0.15 per serving). 3. How to make "meat" from wheat: Preparing raw gluten (from 7 cups whole wheat flour), seven varieties of wheat "meat," cutlets (a veal substitute), steak (a mock beef steak), ground gluten (a hamburger taste-alike), spiced links (an alternative to sausage), roast with a beef flavor, seawheat (a clam alternative), poultry pieces (chicken-flavored wheat "meat), using the reserved starch, bran and germ: Gluten-free crackers, and cold crunchy cereal.

Part II. Hundreds of international ways to serve wheat "meat": 4. All-American wheat meat recipes. 5. Mexican wheat "meat" food. 6. Latin American. 7. British. 8. French. 9. Spanish. 10. Italian. 11. Austrian. 12. Greek. 13. African. 14. Indian (from India). 15. Chinese. 16. Japanese wheat "meat" cooking.

Note 1. Tamari soy sauce and miso are used to flavor a number of recipes in this book. Other soy-related recipes include: Spiced bean curd and cutlet (with tofu, p. 212). Spares with black beans (mock spare ribs with Chinese soy nuggets, p. 216). Family-style bean curd (with tofu, p. 219). Poultry with orange-flavored soy sauce (p. 228-29). Seawheat in soy and ginger sauce (p. 229). Seawheat with bean curd and vegetables in casseroles (p. 230). Seawheat

with vinegared miso (p. 231). Note 2. This book does not mention “seitan,” but a Japanese recipe titled “Seawheat in Soy and Ginger Sauce” is quite similar; It uses tamari soy sauce and grated gingerroot, and kombu is used in making Seawheat, a clam alternative. A photo on the inside back dust jacket shows Nina and Michael Shandler.

Talk with Michael Shandler in Amherst, Massachusetts. 1992. Jan. 14. He and Nina became vegetarians in 1969. They were first introduced to wheat gluten in about 1970; at that time they were served gluten steaks by a friend, Jayanti Peterson, in Santa Cruz, California. At the time their book was published, they were probably not aware of “seitan.” They did not know of any other books on gluten when they were writing their book—which is why no gluten books are listed in their bibliography. The book sold about 2,000 copies in hardcover and 5,000 to 6,000 in quality paperback; it went out of print 6-7 years ago. They have had many requests for the book since it went out of print. He is an organization development consultant and Nina is a child psychologist. Food is their hobby. Their best-selling book is *The Complete Guide and Cookbook for Raising your Child as a Vegetarian* which has sold over 50,000 copies (Shocken & Ballantine). Address: Amherst, Massachusetts. Phone: 413-549-1671.

2304. Su, Yuan-Chi. 1980. Traditional fermented foods in Taiwan. In: Proceedings of the Oriental Fermented Foods. Food Industry Research and Development Institute, P.O. Box 246, Hsinchu, (300) Taiwan. iv + 229 p. See p. 15-30. Held 10-14 Dec. 1979 in Taipei, Taiwan. 8 tables. 9 figs.
 • **Summary:** Contents: Introduction. Bean sauce: Soy sauce, black bean sauce (in-yu [inyu]), in-si or tou-si (made from the dried mash of black bean sauce). Fermented jam: Tou-chiang (Taiwanese miso), tou-pan-chiang (made from sprouted broad beans; soy is not used), tien-mien-chiang (made with wheat flour; no soy). Fermented tou-fu: Tou-fu-ju (also named sufu, soybean cheese, or Chinese cheese), chou-tou-fu (also named fetid bean curd). Anka (also called ang-kak or red koji, made by growing a *Monascus* mold on rice). Discussion. Color photos are given of *in-si* (*tou-si*) and the pehtze of fermented tofu overgrown with *Mucor* mold species. A flowchart is given describing the production of most of these foods.

In 1978 there were 433 soy sauce plants in Taiwan (39 produced a class-A product, and 12 produced class B; most were unclassified) with an annual production capacity of 160,000 kiloliters. This is equivalent to an annual consumption of 9 liters per capita. The 8 largest manufacturers control 45% of the Taiwanese market. 25% of the soy sauce is 100% fermented, 5% is HVP chemical soy sauce, and 70% is a blend of the two. “Originally, whole soybean was used as the protein source. Now it is replaced by defatted soybean [meal], and the whole soybean is used only when high quality soy sauce is desired. The Chinese

National Standards (CNS) for soy sauce were established in 1954 and have since been revised several times. On 24 Oct. 1971 the CNS 423 was established. Grade A soy sauce must have the following composition in gm/100 ml: Pure solid matter excluding NaCl > 12, total nitrogen > 1.3, formol nitrogen > 0.56, and pH from 4.5 to 5.3. The corresponding figures for grade B are: Pure solid matter excluding NaCl > 9, total nitrogen > 0.9, formol nitrogen > 0.40, and pH from 4.5 to 5.3.

In-yu or black bean sauce is undoubtedly Taiwan’s the oldest prepared condiment. In-yu is different from soy sauce in that it is produced from black [soy] beans and its flavor becomes stronger as it is cooked. Therefore it is used by many families in frying and cooking meat. Currently, in south Taiwan, the market for in-yu is about 30% that of soy sauce.

Production of Taiwanese miso (tou-chiang) is currently 11,000 tons. Per capita consumption is decreasing.

Fermented tofu (Tofu-fu-ju) is produced both commercially and domestically. The annual production is about 10,000 tons while weekly consumption is about 12 gm per capita. Address: Dep. of Agricultural Chemistry, National Taiwan Univ., Taipei, Taiwan.

2305. Sung, Ying-sing. 1980. *T’ien Kung K’ai Wu*: Exploitation of the work of nature: Chinese agriculture and technology in the XVII century. Taipei, Taiwan: China Academy. xii + 488 p. Illust. Index. 22 cm. [Eng]
 • **Summary:** The *T’ien Kung K’ai Wu*, by Sung Ying-hsing (pinyin: *Tiangong Kaiwu*, by Song Yingxing) was published in 1637. This English-language translation of the 17th century work on Chinese technology contains 18 chapters, 166 superb illustrations, and extensive information on soybeans. Each chapter was translated by a person specializing in that subject matter.

2306. Tsai, Wei-Chong; Wong, C.M. 1980. Proceedings of the Oriental fermented foods. Food Industry Research and Development Institute, P.O. Box 246, Hsinchu, (300) Taiwan. iv + 229 p. Held 10-14 Dec. 1979 in Taipei, Taiwan. Illust. No index. 26 cm.

• **Summary:** “The symposium was jointly sponsored by ASPAC Food and Fertilizer Technology Center (FFTC), President Enterprises Corporation, and Food Industry Research and Development Institute (FIRDI). The information contained in this book is a blend of theoretical considerations and practical applications on the Oriental food fermentations. In addition to the above, it includes some studies of microbiology and biochemistry relevant to the discipline, which have hardly caught due attention before.

The welcoming address is by Paul C. Ma, director of FIRDI. Opening remarks are given by Carson K.C. Wu (director of the Food and Fertilizer Technology Center), and

by Chin-yuan Kao (president of President Enterprises Corporation, who generously paid for the printing of the proceedings, and who notes that Taiwanese consume 9.3 liters of soy sauce per capita). Address: 1. FIRDI; 2. FFTC.

2307. Tsuji, Shizuo; Sutherland, Mary. 1980. Japanese cooking: A simple art. New York and Tokyo: Kodansha International. 518 p. Introduction by M.F.K. Fisher. Illust. (510 line drawings by Yoshito Suzuki. 16 color pages, mostly photos). Index. 27 cm.

• **Summary:** This is a beautiful and informative book by a great Japanese chef, though the awkward English terminology often sounds like “Japlish.” The illustrations are very nicely done, but the artist’s name does not appear in the book. Tsuji is the author of 29 books on gastronomy, travel, and music. His basic thesis is that “like Japanese and poetry, cooking is simply the result of an acute awareness of the seasons, Freshness and naturalness are the *sine qua non* of Japanese cuisine.”

This definitive treatise on Japanese cooking, the most complete and well-thought-out to date, is written by the head of the *Ecole Technique Hoteliere Tsuji*, the technical hotel school in Osaka, Japan. This is the “largest school training professional chefs in Japan,” according to the publisher.

The excellent “Ingredients” section gives detailed descriptions of: Azuki beans (p. 55). including red rice (*sekihan*) and “sweet red-bean paste” (*an*). Bean curd or tofu (p. 56-61) incl. momen tofu (regular; “The type described here as ‘regular’ is known in Japan as *momen*—‘cotton’ tofu... ‘Cotton’ bean curd is the type most commonly used in Japan”), kinu-goshi (silk tofu), yakidôfu (lightly broiled or grilled), atsu-age (thick cakes), aburage (thin deep-fried), ganmodoki (mixed tofu), yuba (soybean milk skin), okara (bean curd pulp or lees). Miso (p. 76-77) incl. shiro-miso, Shinshû-miso, inaka-miso, Hatchô miso, akadashi miso. Soybeans and edamame. Soy sauce (shôyu, p. 90-93) incl. Natural Japanese soy sauce, synthetic soy sauce, Kikkoman, light soy sauce (*usukuchi shôyu*), tamari (“In Japanese cooking tamari is generally used as a dipping sauce or a base for basting sauce such as Yakitori Sauce”). “Dutch traders in Nagasaki in the seventeenth century exported soy sauce to Europe, and it was the secret seasoning served at the court banquets of Louis XIV of France” (sic). Kuzu (p. 93-94). Wheat gluten (p. 98, 60).

Soy-related recipes include: Making soups (p. 151-56). Miso soup (*Miso-shiru*, p. 156-57). Ginger soy sauce (*Shôga-jôyu*, p. 172). Ponzu sauce (p. 172, with soy sauce and tamari). Mustard-vinegar miso sauce (*Karashi-su-miso*, p. 172-73). Dengaku, dengaku miso toppings, and bean curd dengaku (*Tôfu dengaku*) (p. 190-93). Teriyaki (p. 199-202, 370; the meaning in the United States is now different from the original meaning in Japan. Definition and history, homemade teriyaki sauce, teriyaki yellowtail, chicken

teriyaki, steak teriyaki). Egg “tofu” (*Tamago-dôfu*, p. 216). Dressings for aemono (salads, p. 246, incl. white tofu dressing, white miso dressing, red miso dressing). Rice with miso soup and pickles (p. 270-71). Nori-roll sushi (*Nori-maki*, p. 300, with freeze-dried bean curd). Fox noodles (*Kitsune udon*, p. 312). Pickling vegetables (*Tsukemono*, p. 315, 318, with miso). Pureed corn soup (*Tômorokoshi surinagashi-jiru*, p. 347, with miso). Thunder soup (*Kaminari-jiru*, p. 349, with deep-fried tofu). Potatoes simmered in miso (*Jaga-imo miso-ni*, p. 393). Radish with white miso sauce (*Furofuki daikon*, p. 394). Chinese cabbage and deep-fried tofu (*Age-dôfu hakusai-ni*, p. 398). Tortoiseshell tofu (*Tôfu bekkô-ni*, p. 398-99). Fried and simmered freeze-dried tofu (*Kôri-dôfu age-ni*, p. 399-400). Gold purses (*Fukuro*, p. 400, with thin deep-fried bean curd). Deep-fried tofu (*Agedashi-dôfu*, p. 412-13). Green beans with sesame-miso dressing (*Sandomame goma-miso ae*, p. 420). Savory okra (cold) (*Okura wasabi-joyu*, p. 420-21). Tangy white salad (*Shirazu-ae*, p. 421-22). “River Bank” oyster stew (*Kaki dote-nabe*, p. 433-34, with miso). Simmering tofu (*yudôfu*, p. 436-37). Soybeans in the pod (*Edamame*, p. 471-72).

Murasaki (p. 287): Japanese love *sushi* so much that they have developed a special aficionado’s vocabulary. “At a *sushi* restaurant, you do not ask for soy sauce as *shôyu*, but, rather, as ‘purple,’ or *murasaki*. Every shop has its own house sauce, made by reducing soy sauce or thicker *tamari* sauce over heat with *saké*, *mirin*, bonito flakes and so on.” Since the resulting sauce is darker than regular soy sauce, the name *murasaki* seems appropriate.

Concerning azuki beans (red beans; characters small + bean) (p. 55): “This small, red bean is the legume you will most frequently encounter in Japanese cooking besides soybeans (*daizu*). It is used in the cooking of many countries, so it is stocked in most supermarkets throughout the United States. For some historical reason this bean is commonly spelled *adzuki*. This spelling is a Victorian romanization; phonetically, *azuki* is correct.

“These beans are steamed with glutinous rice on special occasions to make the festive red rice (*sekihan*; p. 280). They are more commonly boiled with sugar to make sweet red-bean paste (*an*), which forms the base of a large percentage of Japanese sweet confections (see p. 327). *An* is made in two textures: smooth puree (*koshi-an*) and ‘chunky,’ with beans partially crushed (*tsubushi-an*). If there is no time to make *an* from scratch, ready-made *an* is available canned and stocked in most Japanese food stores.”

Note: This is the earliest English-language document seen (March 2006) that uses the term “sweet red-bean paste” to refer to sweet azuki bean paste [*azuki-an*], or the term “smooth puree” to refer to *koshi-an*, or the term “chunky” to refer to *tsubushi-an*. Address: Tsuji Professional Culinary Inst., Osaka, Japan.

2308. Wang, H.L. 1980. Research on Oriental fermented foods at the Northern Regional Research Center. In: Proceedings of the Oriental Fermented Foods. Food Industry Research and Development Institute, P.O. Box 246, Hsinchu, (300) Taiwan. iv + 229 p. See p. 1-14. Held 10-14 Dec. 1979 in Taipei, Taiwan. 6 tables. [21 ref]

• **Summary:** Contents: Introduction. Objectives and approaches. Introduction of pure culture strains. Enzymes produced by the molds. New compounds formed by the molds. Nutritional value of fermented foods. Conclusion.

“Not until the late 1950s were studies on Oriental food fermentation begun in the United States at the Northern Regional Research Center in Illinois and the Agricultural Experiment Station in Geneva, New York. The United States Department of Agriculture under Public Law 480, has also provided grants to foreign countries for research on fermented soybean foods. These arrangements have broadened our knowledge of the size and scope of Oriental food fermentations.

“The original objective of our Center’s research with respect to Oriental food fermentations was to solve the problems involved in the use of U.S. soybeans by the Japanese *miso* industry. The results of that research project stimulated our interest in Oriental food fermentations, especially those based on soybeans.” Address: NRRC, Peoria, Illinois.

2309. Yu, Ju-Hyun; Pyun, Yu Ryang. 1980. Korean fermented foods. In: Proceedings of the Oriental Fermented Foods. Food Industry Research and Development Institute, P.O. Box 246, Hsinchu, (300) Taiwan. iv + 229 p. See p. 46-57. Held 10-14 Dec. 1979 in Taipei, Taiwan. 7 tables. 4 figs.

• **Summary:** Fermented foods in Korea can be classified into alcoholic beverages, seasonings, kimchies (fermented vegetables), fermented milk (liquid type), and cakes and bread. Traditional Korean fermented foods made with soybeans are all seasonings: Ganjang is soy sauce, doenjang is soybean paste, and gochoojang is a red pepper paste containing rice and/or barley and soybeans. Sikcho (vinegar) is the only traditional Korean seasoning that contains no soybeans.

In Korea, production of soy sauce (ganjang) has increased from 93,355 kiloliters (kl) in 1975 to 97,830 kl in 1978. Production of soybean paste (doenjang, Korean miso) has decreased from 67,227 tonnes (metric tons) in 1975 to 51,237 tonnes in 1978. Production of red pepper paste (gochoojang) has increased from 29,000 tonnes in 1975 to 33,525 tonnes in 1978. A detailed description is given of the production process, and nutritional composition of gochoojang. The production of monosodium glutamate by fermentation was begun in 1963 by Miwon Co. and Chiel Sugar Co. Address: Dep. of Food Engineering, Yonsei Univ., Seoul, Korea.

2310. **Product Name:** [Soy sauce, and miso].

Manufacturer’s Name: Chinese-run company.

Manufacturer’s Address: Quevedo, Ecuador.

Date of Introduction: 1980?

How Stored: Shelf stable.

New Product–Documentation: Letters from Richard Jennings in Ecuador. 1981. Feb. 14 and March 8. There is a Chinese-run soy sauce and miso factory in Quevedo, in the lowlands of Ecuador, where there is a constant warm climate for fermentation. They make a kind of miso, but with some sugar and spices.

2311. Root, Waverley. 1981. A cordial bow to the byproducts of the soybean. *Los Angeles Times*. Jan. 15. p. J42.

• **Summary:** This article is indebted to: Simonds, Nina. 1979. “Chinese cuisine: Bean curd.” *Gourmet*. Sept. p. 28-29, 84-91.

The soybean, which offers extraordinary versatility as a human food, can be transformed into soybean milk, “the soybean milk skin [yuba] derived from the milk, the bean sticks [bamboo yuba] made from the milk skin, the also edible sediment given off by the milk [okara], untreated bean curd [regular tofu and perhaps silken tofu], pressed bean curd which produces bean curd noodles [pressed tofu noodles], more tightly compressed bean curd cakes, and frozen-and-thawed bean curd [dried frozen tofu].”

In the process of making “pressed bean curd, another soybean food is created—bean curd skin [*pai yeh*, pressed tofu sheets], which should not be confused with soybean milk skin [yuba]. Dried bean curd skin,” which needs no refrigeration and is often stuffed, for example with chopped meat, is sold by weight by Chinese specialty shops throughout the world; five or six sheets weigh one ounce.

“There is a whole family of foods made from fermented bean curd” [fermented tofu]. Bean curd can be fermented in various ways. Bean curd loaves, for example, can be stored for the winter in a cool dark place; micro-organisms from the air cause fermentation. “The loaves acquire a fungoid coating, which has to be scraped off, and as far as I know is not used for food,…” Fermented bean curd, which has been called “soybean cheese,” is easier to digest than unfermented bean curd. Bean curd can also be marinated in rice wine, flavored with spices, and then allowed to ferment. A most unusual type of fermented tofu is stinky bean curd (*sh’ou tou fu*), a favorite Chinese snack. In Taipei, there are many street vendors who ply the streets with their portable deep fryers. This fermented tofu is usually deep-fried and usually eaten with one’s choice of soy sauce, vinegar, mashed garlic, and chili paste.

Other fermented foods include miso, natto, hamanatto (which is of Korean origin), tempeh (of Indonesian origin), and shoyu (Soybean sauce, soy sauce).

“It is said that the best grades of soy sauce can take as much as six to seven years of aging to reach perfection, and that the making of a superb soy sauce requires ‘as much art in its preparation as good French wines.’”

Flavorings are added to some Chinese soy sauce “various herbs, especially citronella; spices (ginger); aromatic vegetables (onions); and not only fermented fish, but even fermented chicken meat. To produce three liters (3.1 quarts) of sauce requires one kilogram (2.2 pounds) of beans.

“Fukien has the reputation of producing the best soy bean sauce in China and consequently stews many foods in it, giving them a color which has caused the culinary techniques of this region to be called ‘red cooking.’”

Soybean sauce is “often an important ingredient in many more complicated sauces—for instance Hoisin sauce in China and Worcestershire sauce in England.”

2312. Hoang, Van Chi. 1981. Re: Vietnamese soy sauce. Questions answered on Soyfoods Center letterhead (dated 18 Jan. 1981) and returned to SC. 1 p.

• **Summary:** His family name is Hoang and his given names are Van Chi (he writes in the three characters).

An early Vietnamese writer about soyfoods was Bui Quang Chieu. He was a man; his family name was Bui and his given names were Quang Chieu. He was a French educated politician and journalist. He wrote in French because he could not write in Vietnamese. “His writing about Tuong is certainly not interesting, although I do not have his article. He certainly repeated something previously written by some French scientist.

“There are two types of tuong. (1) The Tuong Ban, produced in Ban village, is like the Chinese Chiang (pronounced “jiang”) in texture. (2) The Tuong Cu Da, made in Cu Da village, is ground smooth [but not filtered]. That is why I call my product “Tuong Cu Da.” Note: Tuong Cu Da. is a uniquely Vietnamese product is that it is not filtered, but ground. Chinese jiang is not filtered and not ground, so it has a soft, chunky consistency like applesauce.

Ruou dau nanh is called “soy alcohol.” Most liquor in Vietnam is made from sweet [glutinous] rice; it is like Japanese sake. But the Vietnamese Ruou is distilled and, as such, is very strong, up to 100 proof. Some people in Central Vietnam make it from a mixture of soybeans and rice.

The jars or containers used to make Tuong in Vietnam have no fixed capacity, but they are usually are 15 to 20 gallons in capacity. They come in two shapes: One is shaped like a vertical cylinder, and the other bulges at the top with a smaller mouth, as used by the Chinese to make jiang. These jars are kept in the courtyard and covered with a conical woven bamboo cap, to keep out the rain while permitting aeration. Address: Bowie, Maryland.

2313. Belleme, John. 1981. The master of hoops. *East West Journal*. Jan. p. 60-65.

• **Summary:** Mr. Arai (*Arai-san*) of Japan is a master cooper or maker of barrels and vats (*oke-ya-san*). Standing only 4 feet 8 inches tall, he is also a local legend, herbal doctor, and, folk singer, and the best talker in the community. “In the seven months my wife Jan and I spent studying fermented foods in the village of Shimo Isano, north of Tokyo, we met many of these hardy oldsters. However Arai-san is exceptional; his skill, strength, and wittiness are rare at any age.” The Bellemes’ miso teacher was Mr. Onozaki. Tells how Mr. Arai makes traditional wooden Japanese barrels, and gives a personality sketch. “He does not experience his life as a fleeting moment in time but rather as part of an ancestral stream flowing out of ancient history.

Large photos show: 1. Jan Belleme and Mr. Arai (full page). 2. Mr. Arai collecting and splitting large pieces of bamboo, then braiding them into the large hoops that hold together a wooden vat. 3. Mr. Arai making a small pickle barrel. 4. Then drinking saké after work.

2314. **Product Name:** Lima Barley Koji.

Manufacturer’s Name: Chico-San, Inc. (Importer). Made in Japan.

Manufacturer’s Address: P.O. Box 1004, Chico, CA 95927.

Date of Introduction: 1981. January.

Ingredients: Dried fermented barley with koji (*Aspergillus oryzae*).

Wt/Vol., Packaging, Price: 17.6 oz (500 gm) plastic bag.

How Stored: Shelf stable; refrigerate after opening.

New Product–Documentation: Chico-San Products. 1981. Jan. p. 13. “The koji used to make miso.” Label for Barley Rice Koji for Making Miso. 1984. Collected by Lorenz Schaller of California. 4 by 5 inches. Orange and brown on beige. “Imported from Ohsawa Japan by Chico-San.”

2315. Chico-San, Inc. 1981. Chico-San products: A catalog of unique natural foods. P.O. Box 1004, Chico, CA 95927. 28 p. Revised Jan. 1981.

• **Summary:** Contents: A message from the president, J. Robert Kennedy. Chico-San rice products: Rice Cakes (6 varieties; plain, millet, or buckwheat, each salted or unsalted), Carob Crunch (carob-coated rice cakes in plain or mint flavors), Golden Rice Nuggets, Yinnies candies (Taffy made from rice and barley; Caramel made from rice, barley, oat powder, raisins, almonds, sesame oil, coconut, rice bran, lecithin, natural vanilla, and agar agar).

Yinnies brand Rice Syrup (“A pure, natural sweetener made from rice, water, and barley malt...”). “How Yinnies brand Rice Syrup is made: Chico-San’s process involves the conversion of the natural starches in the rice into complex sugars. Extended low temperature cooking allows the enzymes from the malted grains to create a fermentation

which occurs in a liquid mash. After an optimum period of fermentation, the process is halted and liquid squeezed from the mash. This liquid is then vacuum cooked at low temperature, bringing the syrup to the proper consistency.” Yinnies brand rice syrup and refined sugar comparison. This rice syrup is high in maltose.

How Chico-San guarantees Oriental-type organically-grown brown rice (describes in detail how the rice is grown in California). Chico-San whole grains, seeds and beans (Incl. organically-grown brown rice, sweet brown rice, sesame seeds, black soybeans, and azuki beans). Chico-San condiments: Lima soy sauce, soybean puree (miso, in 3 types, mugi, kome, or hacho), barley koji, kuzu, malt vinegar malt vinegar, salt plums, nigari (for tofu making), sesame oil (light or dark), tekka. Chico-San imported seaweeds: Hijiki, kombu, wakame, nori, sea vegetable gelatin (kanten). Herb teas and other products. Chico-San cookbooks. Chico-San special recipes—including recipes for Sesame miso spread, Black soy beans, Azuki beans, and Wakame miso soup. Address: Chico, California.

2316. Eden Foods. 1981. Catalog 1981. 701 Tecumseh Rd., Clinton, MI 49236. 69 p.

• **Summary:** On the cover is a stylized 2-story house (Cliff and Fran Adler’s home) in the snow. This is the earliest catalog seen after the major Eden fire in Nov. 1979. The cover design is by Fran Adler. Prices are given in the catalog. Address: Ann Arbor, Michigan.

2317. Phillip, Janice. 1981. Stockpiling for a foodless future: The serious business of putting food by. *East West Journal*. Jan. p. 39-41. [1 ref]

• **Summary:** Concerned with the nuclear arms race, a California commune recently ordered two tons of Hatcho miso from Westbrae Natural Foods in Berkeley. “When the salesperson expressed astonishment at the size of the order, the customer explained that the commune decided to lay in a supply after reading in *The Book of Miso* (by Shurtleff & Aoyagi) that miso may protect against radiation poisoning.”

A portrait photo shows Frank Ford, of Deaf Smith County, Texas; he leads Arrowhead Mills’ production of 200,000 pounds of storage food weekly. Address: California.

2318. Nakano, Masahiro. 1981. Shio to miso [Salt and miso. I-IV.]. *Miso no Kagaku to Gijutsu (Miso Science and Technology)* No. 323. p. 4-8. Jan.; No. 324. p. 2-8. Feb.; No. 325. p. 2-9. March; No. 326. p. 2-11. April. [Jap] Address: Zenkoku Miso Gijutsukai Rijicho.

2319. Shurtleff, William; Aoyagi, Akiko. 1981. Que es el miso? Traducido por Corina Gutman [What is miso? Translated into Spanish by Corina Gutman]. Soyfoods

Center, P.O. Box 234, Lafayette, CA 94549 USA. 4 p. Jan. [3 ref. Spa]

• **Summary:** Contents: Introduction. Delightfully varied; highly versatile. A nutritional treasure trove. The varieties of miso (including a table). The preparation of miso. Traditional natural miso and quick modern miso. A brief history of miso. Buying, storing, and using miso. Miso in Japan. Traditional Japanese miso shops and modern factories. Making miso at home. Favorite miso recipes. Address: Authors: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

2320. Soy Plant Co-op Inc. (The). 1981. Price list effective 1/28/81 [28 Jan. 1981]. Ann Arbor, Michigan. 1 p. 28 cm.

• **Summary:** This hand-lettered sheet contains four columns: Manufacturer, product, unit price, and case price. The Soy Plant is manufacturer of: Tofu, plain soy milk, flavored soy milk, tempeh, miso garlic dressing, and Soyanaise (soy mayo). Other manufacturers are Sunshower (fruit juices and butters), Hills Brothers (apple cider), Toper (pickles), Westbrae (miso—3 types), and Canadian Soya (Soya Lecithin Spread, non-hydrogenated). Address: 711 Airport Blvd., Suite #1, Ann Arbor, Michigan 48104. Phone: 313-663-TOFU (663-8638).

2321. Wang, H.L.; Hesselstine, C.W. 1981. Use of microbial cultures: Legume and cereal products. *Food Technology* 35(1):79-83. Jan. [38 ref]

• **Summary:** Contents: Introduction. Use of nontoxin-producing cultures. Safety of fermented foods: Several factors contribute to their safety: Soaking and cooking, salting, acid formation, antibiotic production, alcohol production, low surface moisture, decrease of aflatoxin by *Rhizopus* and *Neurospora*. Shelf life of fermented foods. Nutritive value of fermented foods: Complementary effect of mixed proteins, protein efficiency ratio and digestibility, vitamins. Future of fermented legume-cereal foods.

The following fermented soy-related foods are described briefly, including names, area of origin, organisms used, substrate, and nature and use: Soy sauce (chiang-yu, shoyu, toyo, kanjang, kecap, see-ieu). Miso (chiang, doenjang, soybean paste, tauco). Fermented bean (hamanatto, tou-shih, tao-si). Sufu (fu-ru, fu-ju, tou-fu-ju, bean cake, Chinese cheese). Tempeh (tempe kedelee). Natto. Ontjom (onchom). Address: NRRRC, Peoria, Illinois.

2322. Elwell, Christian. 1981. Re: Ohio Miso Company, now owned by the Elwell family, has been renamed South River Miso Co. Letter to William Shurtleff at Soyfoods Center, Feb. 12. 1 p. Handwritten, with signature on letterhead.

• **Summary:** “Dear Bill,

“Please find enclosed a copy of two fliers we have sent out to our customers. The dated inventory notice I have just

sent to our wholesale customers. The other sheet, announcing our move to Conway, Massachusetts, as the South River Miso Co., has been sent out to old customers of Ohio Miso in December, 1980, and to answer enquiries as they come in.

"I am making design plans for our building at present. We plan to be in production here in the fall of 1981.

"I am particularly pleased with the two year barley miso this year, which Thom made in Ohio in spring, 1979. Upon sampling this miso, Michio Kushi said it was of a quality that he would recommend it to patients and for people using miso in healing through macrobiotics. One of our aims is to be able to provide a steady supply of this and 3 year barley miso of consistent quality. I am sending along a sample to you under separate cover.

"With best wishes, Christian Elwell."

One leaflet/flier, handwritten on tan paper and titled "Dear friends, old and new," begins: The Ohio Miso Company has changed ownership. As of November, 1980, the Elwell family has purchased... The other lists miso varieties, prices, and inventory. Address: South River Miso Co., South River Farm, Conway, Massachusetts 01341. Phone: (413) 369-4057.

2323. Sripathomswat, Nongnuch; Thasnakorn, Prayad. 1981. Survey of aflatoxin-producing fungi in certain fermented foods and beverages in Thailand. *Mycopathologia* 73(2):83-88. Feb. 13. [25 ref]

• **Summary:** Aflatoxin-producing fungi (four strains of the genus *Aspergillus*) were found in seven Thai foods and beverages, including soybean sauce [sic, miso] (*taotjo*), soy sauce (shoyu), peanut butter, and fermented rice (*kaomak*). Large amounts of aflatoxin were found on only the latter two products—both of which contain no soy. Address: Dep. of Microbiology, Faculty of Medicine, Siriraj Hospital, Bangkok 7, Thailand.

2324. Jennings, Richard. 1981. Re: Use of soybeans in Ecuador. Letter to William Shurtleff at Soyfoods Center, Feb. 14. 1 p. Typed, with signature on letterhead. [Eng]

• **Summary:** "The most popular use for soya in Ecuador is solvent extracted oil, with the presscake being fed to chickens. As to machica (máchica), this is made with frijol tumbre (black-eyed peas = cowpeas) which are grown in the coastal areas and are somewhat similar in shape and size to soya. Mehica (Méhica) is made in the Sierra, and while the black-eyed peas are used, it is usually made with maize/corn or barley (cebada).

"The other use for soya is at the Chinese-run soy sauce and miso factory in Quevedo, in the lowlands where there is a constant warm climate for fermentation. They make a kind of miso but with some sugar and spices. When I visited the factory, I was not enough in the owner's confidence to ask about specifics, but I saw tangerine peels being dried, and

also tasted anise and maybe cinnamon. The recipe on the jar recommends using their product for cooking pig and turkey. The people there also make an edible soy sauce. Ecuadorian soy sauce is for the most part horrible, consisting of a lot of burnt sugar and very little soy. I would with some confidence rank it as the worst in the world. It is used for *chaulafan*, which is the name here for a fried rice dish, and is preferred because it is thick and dark, and turns the rice a brown color. Anyway the Chinese in Quevedo make this petroleum-like glop, but also make an edible normal soy sauce which I am distributing along with the miso until I can get it together to make a better product.

"There are few Chinese and Japanese making tofu at home, and there is one restaurant that claims to sell about 40 lbs daily, so a friend tells me. No soymilk that I know of." Address: Casilla 252A, Quito, Ecuador. Phone: 529-679.

2325. Hesseltine, C.W. 1981. Aflatoxins in soyfoods (Interview). *SoyaScan Notes*. Feb. 18. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Concerning the 1969 *Time* magazine article on aflatoxins in homemade miso and soy sauce in Korea—There is a lot of incorrect information in the literature based on a problem with determining aflatoxins, since not all things that fluoresce are aflatoxins. A test for fluorescence needs to be followed by a chemical test. He found that one-third to one-half of all oats sampled in the USA contained fluorescent material that looked like aflatoxin—but was not. The oats were fed to animals and no problems resulted.

A study in Japan showed that when homemade miso was properly inoculated, it contained no aflatoxins, but when inoculated with natural spores, it did contain some aflatoxins. He has never seen any figures on the aflatoxin content of the latter miso. He has seen no evidence to indicate that there are problems with aflatoxins in naturally inoculated homemade misos. Good studies conducted in Japan have found aflatoxins in homemade miso but they were found only in a few samples and the levels were so low that there was no problem. No aflatoxins have ever been found in commercial misos as far as he knows. In short, he feels there is no risk in consuming any type of miso.

Dr. Hesseltine is now on a low-sodium diet and has therefore started eating a lot of tofu. In addition, he and Dr. Wang are conducting an interesting study on microbial spoilage of tofu. Address: NRRC, Peoria, Illinois.

2326. Chu, Yung-shung. 1981. Soybean protein food in China. *J. of the American Oil Chemists' Soc.* 58(2):96A, 98A, 100A. Feb. Reprinted in APCC Quarterly, 30 June 1981, p. 23-27.

• **Summary:** Contents: Abstract. Methods of preparation: Bean curd (tu fu), bean curd derivatives (tough bean curd, smoked tough bean curd, dried soybean sheets, fried bean

curd, vegetable chicken), fermented bean curd (fu ru), dried bean milk cream (fu tsu [bamboo yuba]).

For 4,000 years soybean have been one of the main crops cultivated in China. The history of extracting protein to prepare tofu is about 1,000 years old. The soybean was important not only as a food but also as a seasoning. The earliest fermented soybean products were dou-jiang (soybean ch'iang) and dou-chi [soy nuggets]. The preparation of these two products was recorded briefly in *On Medical Emergency Treatment* written by Si Yu during the Western Han Dynasty (100 B.C.). [Note: This is the *Chi chiu p'ien* by Shih Yu.] Later, these procedures were described in detail in the *People's Agricultural Calendar* written by Cui-Zi during the Han Dynasty (200 A.D.). Illustrations of techniques appeared in 600 A.D. in special chapters of *The Principal Methodology of Economics*, by Jia Si-Yi.

According to historical literature of the Min [Ming] and Qing [Ch'ing] Dynasties, the preparation of bean curd [tofu] was first recorded in Han Zi, written by Liu An, King of Huai Nan (179-122 B.C.) In the book of Qin-Yi, Tao Gu (907-960 A.D.) said that bean curd was a common food in the market of the south Huai district.

Fu ru is the fermented form of bean curd. The earliest record of this is in the book called *Night Dialogue Under the Shade*, written by Li Ri-huo (1636-1661). He said that fu ru was prepared between summer and autumn in the Qi Men district and briefly described the procedure. In a famous book on Chinese herbal medicine, *Compendium of Materia Medica*, the author, Li Shizen (1518-1593), describes the preparation technique in detail.

Later, these procedures were described in detail in the *People's Agricultural Calendar* written by Cui-Zi during the Han Dynasty (200 A.D.). Illustrations of techniques appeared in 600 A.D. in special chapters of *The Principal Methodology of Economics*, by Jia Si-Yi. Address: Oil and Fat Research Inst., Shaanxi, China.

2327. Product Name: Honey-Carob Soy Dream Frozen Dessert.

Manufacturer's Name: Joy of Soy.

Manufacturer's Address: 510 Kasota Ave., Minneapolis, MN 55414.

Date of Introduction: 1981. February.

Ingredients: Filtered water, honey, carob, tahini, organic soybeans, unrefined sesame oil, miso.

Wt/Vol., Packaging, Price: Quarts.

How Stored: Frozen.

New Product-Documentation: Leviton. 1981. Soyfoods. Winter. p. 63.

2328. *Soyfoods*. 1981. Soyfoods showcase 1980 [Third Annual Soycrafters Association conference at the University of Illinois is a big success]. 1(4):6. Winter.

• **Summary:** The conference, titled *Soyfoods Showcase* under the direction of Richard Leviton, was convened at the University of Illinois at Urbana on 9-13 July 1980. Over 270 people attended, including representatives for 10 other nations, in addition to 15 Third World students already on campus for the INTSOY summer training program. Representatives of a number of large American food companies also attended, including Kraft, Beatrice Foods, General Foods, and General Nutrition.

"In addition to its rigorous intellectual format, *Soyfoods Showcase* featured 12 vegetarian-soyfoods meals prepared by Small Planet Catering of Chicago and Catering Plus of Champaign. Buffet meals included tofu lasagna, tofu spread in pita bread, tofu enchiladas, tofu 'egg salad' sandwiches, tempeh 'sloppy joes,' barbecued tofu in Chinese stir fry, miso paté, Indonesian gado-gado with tempeh, spinach tofu quiche, and tofu cheesecake." A photo shows Akiko Aoyagi teaching a cooking class.

2329. Stunkard, Jamie. 1981. Soymilk ice cream: The vegetarian's dream. *Soyfoods* 1(4):64. Winter.

• **Summary:** Describes the key components of the "soymilk ice cream" developed by Joy of Soy. The company has "just started marketing an orange soy ice using orange concentrate and orange oil." Gives a commercial scale recipe for Carob-Honey Soy Dream (soymilk ice cream): 5 gallons soymilk (7-8% solids), 10 cups honey, 1.5 lbs. carob powder, 1.5 cups tahini, 1.5 cup sesame oil, 2 tablespoons miso, 2 tablespoons cinnamon. Address: Co-proprietor, Joy of Soy, Minneapolis, Minnesota.

2330. **Product Name:** VFP Miso.

Manufacturer's Name: Victor Food Products, Ltd.

Manufacturer's Address: 102 Hymus Rd., Scarborough, ONT, MIL 2C9, Canada. Phone: 416-752-0161.

Date of Introduction: 1981. February.

New Product-Documentation: Ad in Chimo. 1981. Feb. p. 15.

2331. O'Connell, Jean. 1981. First cousins in Greenfield [Massachusetts]: Tempeh follows tofu to market. *Morning Union (The) (Springfield, Massachusetts)*. March 18. p. 25-26.

• **Summary:** A few nights ago the New England Soy Dairy organized a dinner meeting in Greenfield for the members of the Northeast Chapter of the Institute of Food Technologists. The meal included cottage cheese made without milk and lasagna made without meat. "Fairly tasty, but hardly exciting." But the dinner menu wasn't the point. Rather the "event served to point out that soy is coming of age here in the Connecticut Valley." More people are including tofu in their cooking, and tofu is now available in the lunch program of the Springfield public schools. "Soy is a good, cheap source of protein and it's receiving more

attention as people scramble to beat, or at least meet inflation.”

A little tofu shop named Laughing Grasshopper opened in 1976 in Greenfield. It was the forerunner of the New England Soy Dairy which is now the third or fourth largest tofu maker in the USA. Eighteen months ago Michael Cohen, one of the four partners, left the Soy Dairy to establish his own soy business, the Tempeh Works, which is also located in Greenfield. Cohen's shop now produces an average of 4,000 lb/week of tempeh. Photos show: (1) Michael Cohen putting soybeans into a centrifugal extractor for removal of the water before adding tempeh culture. (2) Skat McPherson examining finished cakes of tempeh on a rack at the Tempeh Works.

“Another chapter in the soy story in the Connecticut Valley is expected to begin in the fall of this year with the opening of the South River Miso Company in Conway [Massachusetts]. Christian Elwell and his family are moving the company here from Ohio.

“Miso, even less known than tempeh, is a fermented soybean puree made with water and barley or rice. It has a long fermentation period and is used for such things as soup stock, according to Elwell who attended the Soy Dairy dinner in Greenfield.

“There are only three miso companies in the United States, one on the West Coast, one in North Carolina [American Miso Co.] and the one which is coming to Conway, it was noted by Richard Leviton at the Greenfield meeting.” Leviton added that he and others in the soy industry are heartened that a few farmers in the Connecticut Valley are trying to grow soybeans, since the nearest source is now about 1,000 miles away. Contains a recipe for “Peanutty Soy,” peanut butter extended with tofu, from Madeline Fox, marketing director and recipe developer at the New England Soy Dairy.

Note: This is the earliest document seen (Nov. 1999) that mentions the South River Miso Company—which began selling miso under its name in Oct. 1982. Address: Union Food and Fashion Editor.

2332. Hesseltine, C.W. 1981. Work with soyfoods, Dr. Charles Thom, the NRRC culture collection, and the NRRC's main contributions related to fermented foods (Interview). Conducted by William Shurtleff of Soyfoods Center, March 20. 1 p. transcript.

• **Summary:** Contributions: (1) The development of solid-substrate fermentation, an indirect spinoff of work with foods, is now widely used in the West. Originally it was used for the production of enzymes, and later for experimental production of aflatoxins from *Aspergillus species*. (2) The introduction of pure culture yeasts in the miso fermentation process in place of the addition of lots of old miso. This is now completely accepted and widely used;

(3) The use of perforated plastic bags to make tempeh. Address: Chief, Fermentation Lab., NRRC, Peoria, Illinois.

2333. **Product Name:** Instant Miso Soup (Miso-Cup) [Regular, or With Seaweed].

Manufacturer's Name: Eden Foods, Inc. (Marketer-Distributor: Imported from Japan by Edward & Sons Trading Co.).

Manufacturer's Address: Eden Foods Inc., 701 Tecumseh Rd., Clinton, MI 49236. Phone: (313) 973-9400.

Date of Introduction: 1981. March.

Wt/Vol., Packaging, Price: 4 packets/box.

How Stored: Shelf stable.

New Product–Documentation: Eden Foods Catalog. 1981. Page 18. Eden Foods 1981 Catalog II. “Instant Miso-Cup is a convenient miso soup and seasoning. It is made from Japanese miso dried under low temperatures to retain nutritional content. It is available in two flavors, original golden light and red with seaweed. Contains soybeans, rice, sea salt, onions, parsley. Each box contains 4 packets—order twelve boxes in an attractive display box.” Note: This product was developed and imported by Edward & Sons Trading Co.

2334. Fukushima, D. 1981. Soy proteins for foods centering around soy sauce and tofu. *J. of the American Oil Chemists' Soc.* 58(3):346-54. March. [41 ref]

• **Summary:** Contents: Abstract. Introduction. Soy sauce varieties: Koikuchi, usukuchi, tamari, saishikomi, and shiro shoyu. Soy sauce manufacturing process (for each of the 5 types). Miso. Other fermented products: Tempeh and natto. Tofu and related products: Regular and silken tofu, dried-frozen tofu, deep-fried tofu. Fermented tofu (Sufu). Other soy products: Soy milk, fermented soy milk beverages, yuba.

This paper discusses traditional Oriental soy protein foods which are growing rapidly in popularity in the USA among non-Asian-Americans.

“Generally speaking, soy sauce is divided into two groups: fermented soy sauce and chemical soy sauce. Fermented soy sauce has a long history as a human food, whereas chemical soy sauce has a history of only several decades. In fermented soy sauce, the proteins and carbohydrates contained in the materials are hydrolyzed very slowly under mild conditions below 30°C for over six months, whereas in chemical soy sauce they are hydrolyzed quickly by hydrochloric acid at 80°C for 8-10 hours. Chemical hydrolysis is a cheap and rapid process, but during the hydrolysis, various secondary reactions occur and produce undesirable compounds, e.g. dark humins, furfural, dimethyl sulfide, hydrogen sulfide, levulinic acid and formic acid, which are not present in fermented soy sauce. Furfural, dimethyl sulfide and hydrogen sulfide, which have strong, bad odors in themselves, are derived

from pentose, methionine, and sulfur-containing amino acids respectively. Furthermore, tryptophane, one of the nutritionally important amino acids, is destroyed almost completely. As shown in Figure 1 [two chromatograms], the main organic acid of fermented soy sauce is lactic acid, whereas the main organic acid of chemical soy sauce is formic acid. Levulinic acid, present in chemical soy sauce, does not exist naturally.

“To improve the odors of chemical soy sauce, semichemical soy sauce was devised. It is made by hydrolyzing raw soybeans with a lower concentration of hydrochloric acid (7-8%) as the first step, followed by fermenting the hydrolysate with osmophilic yeasts in the presence of wheat koji.” In Japan, chemical soy sauce is not used as a soy sauce in itself, but as an extender for fermented soy sauce.

Table 1 gives the typical chemical composition (per 100 ml) of the five varieties of traditional soy sauce in Japan, including Bé [Baumé; a measure of the relative density of liquids], sodium (koikuchi is lowest at 17.6%, usukuchi is highest at 19.2%), total nitrogen (koikuchi has 1.55 gm, tamari has 2.55 gm or 65% more), formol nitrogen, reducing sugar, alcohol (koikuchi is 2.2%, by far the highest), pH (ranges from 4.6 to 4.8), and color.

A brief description of each of the five traditional varieties: (1) Koikuchi: This “dark-colored” shoyu is by far the most popular of the five types of fermented soy sauce in Japan, comprising 85% of the total. It is an all-purpose seasoning with a strong aroma, complex flavor, and deep, reddish-brown color. These characteristics are mainly derived from the use of equal amounts of wheat and soybeans in the koji; (2) Usukuchi [light-colored] shoyu is characterized by a lighter, red-brownish color and a milder flavor and aroma. It is used mainly for cooking when one wishes to preserve the original flavor and color of the food itself. As in koikuchi, equal amounts of soybeans and wheat are used in the koji, but the fermentation is done under conditions which prevent the development of a dark color. (3) Tamari shoyu has a higher amino acid content, but it lacks aroma. The koji is made primarily from soybeans with little or no wheat. (4) Saishikomi (twice-fermented) shoyu is made using equal amounts of wheat and soybeans in the koji, but using raw (unpasteurized) soy sauce instead of salt solution, which is mixed with the harvested koji. Saishikomi is characterized by aroma and full-bodied taste. (5) Shiro (clear, or “white”) shoyu is made by using a very high ratio of wheat to soybeans in the koji, and further by fermentation under conditions which prevent dark color development. It is characterized by a very light yellow to tan color, though the amino acid content is very low because of the low soybean content in the koji. Flow sheets show the process for manufacturing koikuchi, usukuchi, and tamari shoyu. Each has three basic parts: Koji making process, brine fermentation process, and refining process.

Concerning soy sauce production and consumption: The total annual production of soy sauce in Japan in 1979 reported by the Japanese Agricultural Standard (JAS) was 1,252,431 kiloliters (kl). In 1979 in Japan, about 70% of the soy sauce products in Japan were purely fermented, 25% contained some semichemical soy sauce, and the remaining 5% contained chemical (HVP) soy sauce. The most recent estimates of annual consumption of soy sauce in the USA are as follows: Fermented soy sauce 17,850 kl; Chemical (HVP) soy sauce 25,500 kl. Within fermented soy sauce, production of koikuchi soy sauce is estimated to be 16,500 kl/year.

In Japan an “instant tofu powder” is actually a spray-dried soy milk. This product was made and introduced by *Nihon Tanpaku Kogyo* (Japan Protein Industry) about 15 years ago (ca. 1966) and was used mainly as a raw material for making regular or silken tofu in order to save time. “Recently, however [1973], the product was placed on the market as an instant powdered tofu [named *Hausu Hontôfu*] by Hausu [House] Foods Co.”

A photo shows D. Fukushima. Address: Kikkoman Foods, Inc., Walworth, Wisconsin 53184.

• **Summary:** Contents: What is miso? Preface. Acknowledgments. Part I. Miso: Savory, High Protein Seasoning. 1. Soybeans, protein and the world food crisis. 2. Miso as a food. 3. The miracle of fermentation. 4. The varieties of miso: Regular Miso: Rice miso (red / aka, light-yellow / shinshu, mellow red / amakuchi akamiso, mellow beige / amakuchi tanshoku, mellow white / shiro koji, sweet red / edo or edo ama-miso, sweet white / Kyoto shiro miso), barley miso (karakuchi mugi, mellow barley / amakuchi mugi), soybean miso / mame miso (miso-dama, Hacho miso, soybean miso / mame miso, tamari miso). Special Miso: Finger lickin’ miso / Namemiso (Kinzanji miso, moromi miso, hishio, namémiso, natto miso, goto miso), sweet simmered miso / nerimiso. Modern Miso: Akadashi miso, dehydrated or freeze-dried miso, low-salt / high-protein miso.

Part II. Cooking with Miso (400 recipes). 5. Getting started. 6. Recipes from East and West. Part III. The Preparation of Miso. 7. Making miso at home and in communities. 8. Japanese farmhouse miso. 9. Traditional and modern miso production. Appendixes: A. A history of chiang, soy nuggets, miso, tamari, and shoyu. B. Other East Asian misos: Chiang, jang, taicho, and tausi. C. The microbiology and chemistry of miso fermentation. D. People and institutions connected with miso. E. Miso additives. F. Miso with seafoods, chicken, and meat. G. Measures, weights, and equivalents. H. So you want to study miso in Japan? Bibliography. Glossary.

Note: This is the earliest English-language document seen (Nov. 2008) that uses the term “soy nuggets” to refer to salted fermented soybeans. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

2338. Soycrafters Assoc. of North America; Soyfoods Center. 1981. Estimated soyfoods industry statistics (News release). Sunrise Farm, Heath Rd., Colrain, MA 01340. 1 p. March. Updated in Aug. 1981.

• **Summary:** 1. Number of companies manufacturing tofu, tempeh, miso, soynuts, soy sprouts, soy sauce, secondary soyfoods, soy delis & restaurants, in the USA, Canada, and Latin America. 2. Production statistics for USA and Canada: Raw soybean usage, food production, employees, and retail sales value are given for 4 types of tofu makers (caldrion, steam kettle, pressure cooker, factory), tempeh, soynuts, and soy delis and restaurants. With totals. Actual gathering of statistics was done largely by Soyfoods Center. Address: 1. Richard Leviton, Colrain, Massachusetts; 2. W. Shurtleff, Lafayette, California.

2339. Suzuki, Yasuhira; Tsuchiya, Kunio. 1981. Minami no tōfu, kita no tōfu: Hikyo-Gokanoshō ni tsutawaru “miso-zuke” tōfu o tazunete [Southern tofu, northern tofu: Unexplored regions—A visit to “miso-pickled tofu” that has been handed down for generations in Gokanoshō]. *Daizu Geppo (Soybean Monthly News)*. March. p. 34-45. [Jap]

• **Summary:** Gokanoshō is a village in Kumamoto prefecture. South of it are two smaller villages named Gokimura and Izumimura, as shown on a map. There they make tofu that is pickled in miso.

2340. Hansen, Barbara. 1981. A treasury of Chinese cookery: Culture and history. *Los Angeles Times*. April 9. p. J1.

• **Summary:** This is a review of the Hong Kong and China Gas Company's *Chinese Cookbook*, a treasure for anyone who admires Chinese cookery. This large, beautifully designed book is also rich in culture and history.

A recipe for Braised shin of beef with cloud ears and golden noodles calls for “1 tablespoon light soy sauce... 2 teaspoons yellow bean paste.”

2341. Belleme, John. 1981. The miso-master's apprentice. *East West Journal*. April. p. 51-54.

• **Summary:** Describes how John and Jan Belleme learned to make miso at the Onozaki household in Japan. They were located in an old Japanese farming village 10 miles north of Yaita city [Tochigi prefecture]. They plan to set up a miso-making operation in Rutherfordton, North Carolina. The Onozaki family started making fermented foods on a large scale 200 years ago, at first saké, and later koji (fermented rice). Now the family makes about 120 tons of natural miso each year. Mr. Takamichi Onozaki is the miso master. The process for making the miso is described in detail. Based on a 6½-day weekly cycle, it begins when 1,500 pounds of rice is milled, washed, and soaked overnight. All of the koji is handmade. Onozaki miso is now sold in America at natural food stores or can be purchased in 11-pound boxes from Oak Feed Stores (3030 Grand Avenue, Coconut Grove, Florida 33133).

Photos show: (1) A wedding portrait of the Onozakis in traditional Shinto robes taken 25 years ago. (2) Mrs. Itsuko Onozaki, the miso master's wife, today. (3) The Onozaki's thatch-roofed home, seen from the back hillside. (4) Traditional living room with *kotatsus* (heated tables). (5) Jan chats with Onozaki grandmother, age 78. (6) Mrs. Onozaki and a neighbor wash rice for miso. (7) Koji is transferred from a huge wooden fermentation crib into wooden trays. (8) Jan, Mrs. Onozaki, and a cousin pour hot soybeans into a grinder; they will be extruded to a paste, then blended with koji. (9) John Belleme washes soybeans in a huge pressure cooker. (10) In front of gigantic cedar vats, Mr. Onozaki and John scrape mature koji from koji trays in preparation for making miso. (11) Seated around the *kotatsu*, Onozaki grandmother reads from the family scroll while John listens. John and Jan Belleme. The miso-making process in Japan.

2342. **Product Name:** Wizard Baldour's Hot Stuff [Regular, or Blazing].

Manufacturer's Name: Elf Works, Ltd. Later, American Natural Foods.

Manufacturer's Address: P.O., Box 2321, Chapel Hill, NC 27514.

Date of Introduction: 1981. April.

Ingredients: Apple cider vinegar, deep well water, organic red miso, unfiltered honey, African bird peppers, cayenne peppers, umeboshi plums, natural herbs & spices, arrowroot powder, natural seaweed extract, tarragon.

Wt/Vol., Packaging, Price: 5 fluid oz (147 ml), 10 oz, and 32 oz glass bottle.

How Stored: Shelf stable.

Nutrition: Per 1 tsp.: Calories 4, carbohydrate 1 gm, sodium 43 mg.

New Product–Documentation: Shurtleff & Aoyagi. 1983. *The Book of Miso*. 2nd ed. p. 239. Label. 1983, dated. 5.5 by 2.5 inches. Red, blue, and yellow on bright orange background. Picture of wizard and “Blazing” dragon. “Hot Stuff is an all purpose, all natural hot sauce that’s really good for ya! Hot Stuff adds sure fire magic to your favorite flavor. Great on chicken, seafood, Mexican food or as a natural barbeque baste use your imagination. Shake well to wake up the dragon!” Reprinted in *Soyfoods Marketing*. Lafayette, CA: Soyfoods Center. Spot in *Natural Foods Merchandiser*. 1984. Feb. p. 113. Ad (full page, color) in *Natural Foods Merchandiser*. 1984. July. Interview with John Troy. 1984. Sept. 26.

Note: This is the earliest record seen (April 2009) concerning the work of John Troy or Elf Works with miso.

2343. Kotsch, Ronald Ernst. 1981. *Georges Ohsawa and the Japanese religious tradition*. PhD thesis, History of Religions, Harvard University, Cambridge, Massachusetts. 360 p. April 1. 28 cm. [75 ref]

• **Summary:** The best history of macrobiotics written up to this time. Full of original, interesting, and often humorous material. Contents: 1. An overview of Japanese religious life. 2. Ishitsuka Sagen and the origins of Macrobiotics. 3. Georges Ohsawa, the early years: 1893-1929. 4. First sojourn in the West: 1929-1935. 5. Return to Japan in Crisis: 1936-1939. 6. The war years: 1940-1945. 7. The post-war years: 1945-1953. 8. The world journey of the penniless samurai: 1953-1966. 9. Ohsawa as a religious thinker. 10. Ohsawa as the Japanese religious tradition. 11. The prophet in his own land and elsewhere. Conclusion. Footnotes. Bibliography. Address: Harvard Univ., Cambridge, Massachusetts.

2344. Soyfoods Center; Soycrafters Assoc. of North America. 1981. *Soyfoods Production in America and the West* (News release). Lafayette, California: New-Age Foods Study Center. 1 p. April. Updated in Sept. 1981 in a neater format.

• **Summary:** A table shows production statistics for 25 types of soyfoods. Number of manufacturers in the USA, Canada, Other West, Total; Tons of raw soybeans/year used by each food. Yield of food from 1 unit weight of soybeans. Wholesale value. Retail value. Number of people employed. Address: P.O. Box 234, Lafayette, California 94549.

2345. **Product Name:** BRT: Brown Rice & Tofu Sandwich (In a Chapati) [Regular, Curry, or Mustard].

Manufacturer’s Name: Wildwood Natural Foods.

Manufacturer’s Address: 135 Bolinas Rd., Fairfax, CA 94930. Phone: 415-459-3919.

Date of Introduction: 1981. April.

Ingredients: Regular 1983: Brown rice, UFO Tofu by Wildwood, alfalfa sprouts, tahini, barley miso, seasonal

vegetables (celery, carrots, zucchini, chard, or parsley), whole grain chapati, lettuce, scallions, tamari, sea salt.

Wt/Vol., Packaging, Price: 11.5 oz.

How Stored: Refrigerated.

New Product–Documentation: Leviton. 1981. *Soyfoods*. Winter. p. 61. “Putting tofu in the lunch boxes of America.”

Leviton 1983. *Soyfoods*. Summer. p. 42-43.

“Wildwood’s sandwich power.” “Dated for 1 day although they stay fresh for 2. Their Brown Rice & Tofu Sandwich accounts for 30% of sandwich sales.” Labels set by Wildwood on their letterhead. 1983, undated. 3 by 2 inches. Self adhesive. Mustard: Black and green on orange-yellow. Curry: Orange and green on white. Regular: Black and green on white. Silhouette of woods with birds. “Fresh Daily. Ready to Eat Foods. Naturally. Perishable. Keep refrigerated.”

Labels for all 3 flavors. Sent by Paul Duchesne. 1989. Aug. 11. This set of labels is slightly different from those described above; each has the slogan “Ready to eat foods, naturally.” In the ingredients, the tofu is listed as “Wildwood Tofu” rather than “UFO Tofu by Wildwood.” Talk with Paul Duchesne. 1989. Aug. 17. The term “BRT” probably started to be used in late 1981 or early 1982, while Paul was still with Wildwood. The term “UFO Tofu” was used for all tofu made by Wildwood. It is a palindrome, which reads the same backward or forward.

2346. Lesem, Jeanne. 1981. Will Americans swallow soybeans? *Morning Union (The) (Springfield, Massachusetts)*. May 13. p. 29. [1 ref]

• **Summary:** According to this summary of an article by Judy Brown in the *National Food Review*, a USDA quarterly, tofu, tempeh, and miso are becoming increasingly popular.

2347. Lesem, Jeanne. 1981. Will soybeans now follow margarine on road to success? *Hartford Courant*. May 13. p. E12.

• **Summary:** This article is a telephone interview with Judy Brown, based on her article in the *National Food Review*, a USDA quarterly. “Tofu (toe-foo) is as much a part of Japanese culture and cookery as bread is in the United States,” says Brown. Also discusses tempeh, miso, soy flour and grits, and “textured vegetable products.”

Note: Syndicated by United Press International, this article appeared in several other newspapers.

2348. *Compas (Le) (France)*. 1981. Le soja et ses dérivés: Miso, tamari, tofou [The soybean and its derivatives: Miso, tamari and tofu]. No. 17. p. 37-54. Spring. Illust. 27 cm. [Fre]

• **Summary:** An in-depth look at each of these three soyfoods, with illustrations from books by Shurtleff & Aoyagi. The section titled “Tofu and its craftsmen” (p. 42-

44) profiles Le Bol en Bois, Les 7 Marches, and Jonathan. Photos show Jos van de Ponsele and his wife, plus Lima tofu and seitan in a retail cooler. The section titled “Make tofu—An occupation for the future” (p. 45-49) contains excerpts from the book *Tofu and Soy milk Production*, by Shurtleff & Aoyagi. The section, titled “Making tofu at home” (p. 50-53) contains the basic method, with many illustrations, from *The Book of Tofu*, by Shurtleff and Aoyagi. The last section, titled “Tofu—Is it yin or yang?” (p. 54) is by Louis Thévenon.

• **Summary:** Contains recipes for natto, miso, tofu, and tamari. With illustrations from books by Shurtleff & Aoyagi.

2350. Erewhon Mail Order. 1981. Erewhon. Natural foods mail order catalog. Brookline, Massachusetts. 16 p. May. Catalog and price list.

• **Summary:** This is a new mail order catalog, whose prices become effective on 1 May 1981. On the front cover is a woodblock print of a man with a sickle cutting sheaves of grain in a field. He is wearing a hat, and behind him on the ground is a wooden barrel. Erewhon is now located at 26 Washington St. in Brookline Village—also the home of Erewhon Mail Order. There are retail stores at 342 Newbury St. in Boston and 1731 Massachusetts Ave. in Cambridge. Address: 236 Washington Street, Brookline, Massachusetts 02146. Phone: 617-738-4516.

2351. Hesseltine, C.W. 1981. Future of fermented foods. *Process Biochemistry* 16(3):2-6, 13. April/May. [11 ref]

• **Summary:** Discusses shoyu, miso, natto, and tempeh in Korea, the USA, and Japan. There are nine factors that favor the increased use of fermented foods. Address: NRRC, Peoria, Illinois.

2352. Mori, H. 1981. Shôwa 55 nendo ni okeru shôyu, miso no kenkyû gyôseki [Review of annual achievements in shoyu and miso research]. *Nippon Jozo Kyokai Zasshi (J. of the Society of Brewing, Japan)* 76(5):300-28. [683 ref. Jap]

• **Summary:** This important Japanese-language article, published each year in the May issue of this periodical, has two parts: (1) A review of the past year’s major discoveries and developments in the fields of miso and soy sauce in Japan. (2) A bibliography related to those discoveries and developments. Address: Noda Sangyo Kagaku Kenkyusho.

2353. Wang, Hwa L. 1981. Oriental soybean foods: Simple techniques produce many varieties. *Food Development* 15(5):29-34. May.

• **Summary:** Methods of preparation are given for the following soyfoods: Tofu, soy sauce, miso, hamanatto, sufu, tempeh, natto. A table gives local names, descriptions, and uses for traditional East-Asian non-fermented soyfoods: “Fresh green soybeans (mao-tou, edamame),” soybean sprouts (huang-tou-ya, daizu no moyashi), soybean milk (tou-chiang), protein-lipid film (tou-fu-pi, yuba), soybean curd (tofu, tou-fu, tubu, tahoo, touhu, taufoo, dou-fu, dan-fu), and soybean flour (tou-fen, kinako). Local names, organisms used, substrate, and description of the product are given for traditional East-Asian fermented soyfoods: soy sauce, miso, hamanatto, sufu, tempeh, and natto.

Note: This is the earliest English-language document seen (Feb. 2004) that uses the word “taufoo” to refer to Chinese-style tofu. Address: NRRC, Peoria, Illinois.

2354. Chu, Yung-shung. 1981. Soybean protein food in China. *APCC Quarterly Supplement*. June 30. p. 23-27. [Eng]

• **Summary:** This article was first published in the *Journal of the American Oil Chemists’ Society* (1981, Feb. p. 96A). Address: Oil and Fat Research Inst., Shaanxi, China.

2355. Earle, Steve. 1981. Pillars of sea salt. *East West Journal*. June. p. 52-58.

Address: San-Jirushi Corp., Japan.

2356. Eden Foods. 1981. Catalog II, 1981. 701 Tecumseh Rd., Clinton, MI 49236. 71 p.

• **Summary:** On the cover is a stylized 2-story house on a farm. Address: Ann Arbor, Michigan.

2357. Belleme, John. 1981. The miso master with a big heart: Making miso in a Japanese village. *Soyfoods* No. 5. p. 64-66. Summer.

• **Summary:** Describes how John and Jan Belleme learned to make traditional Japanese miso from the Onozaki family in a small farming village 10 miles north of Yaita, in Tochigi prefecture. Contains 5 photos of the miso-making process and a detailed description of that process.

2358. Needleman, Larry. 1981. Tofu plant profiles: Sunshine Soy, Miami. *Soyfoods* No. 5. p. 29-30. Summer.

• **Summary:** Sunshine Soy is owned and operated by Danny Paolucci in Coral Gables, a suburb of Miami. “Starting in 1970 when he became acquainted with the vegetarian diet and the food uses of soybeans, Mr. Paolucci has been ‘screaming soybeans,’ as he remarks. In the mid-1970s he was cook at the Mt. Baldy Zen Center in California where he experimented with soybean dishes and made community scale miso. In 1974 he wanted to open a soy plant but there was no technology or information available; existing Oriental plants were unwilling to help him. In December 1977 he linked up as manager with the meteoric Swan

Foods of Miami, an early multiproducts soy company that in its one intense year of business lost some \$140,000. Mr. Paolucci emerged from the experience with considerable insight and some manufacturing equipment so that in June 1980 he was able to launch his own soy venture"—Sunshine Soy.

The company now makes 500-750 lb of tofu a day, plus tempeh, baked tofu, soymilk, miso salad dressing, and soysage. Photos show: Danny Paolucci. A hydraulic forming box press. A clamshell sealer. A Chisholm-Ryder screw extractor; unfortunately it is no longer manufactured. Address: Bean Machines Inc., Bodega, California.

2359. **Product Name:** Miso Salad Dressing.

Manufacturer's Name: Sunshine Soy Co. Inc.

Manufacturer's Address: 4015 Laguna St., Suite "H," Coral Gables, FL 33146. Phone: 305-447-1277.

Date of Introduction: 1981. July.

New Product—Documentation: Needleman. 1981. Soyfoods. Summer. p. 29-30. "Tofu plant profiles: Swan Gardens and Sunshine Soy (Miami)." "A miso salad dressing is currently produced."

2360. Krieger, Verena. 1981. Gestern Steak, Morgen Tofu: Oder was man mit einer Bohne so alles machen kann [Yesterday steak, tomorrow tofu: Or all the things that can be made with one bean]. *Tages Anzeiger Magazin* No. 34. p. 6-12. Aug. 22. Also translated in English, French, and Italian. [4 ref. Ger; Eng; Ita; Fre]

• **Summary:** A lengthy, pioneering account of the virtues of tofu, and its development in the USA and Switzerland by the Sunday supplement to Switzerland's biggest daily newspaper. Contains numerous color photos of soyfoods from around the world. Also defines and discusses soymilk, miso, tamari, shoyu, and soy sauce, tempeh, and soy sprouts. Discusses the work of Edgar W. Schweizer (underway by 1977) in attempting to grow soybean varieties suited to Switzerland.

The Geneva restaurant "La Moisson" has had tofu on the menu for 5 years. In Bern, in the beginning of July, the restaurant "Sesam" was acquired by the first Swiss organic food store (*Bioladen*), the "Lotusbluemli" (Little Lotus Blossom). Since Sesam opened, the people of Bern have been able to get to know a rich treasure of dishes from tofu made at Sesam, as well as many applications of miso and shoyu or tamari. The vegetarian restaurant "Bristol" in Lucerne is launching tofu as its summer hit this year, in the form tofu Tofu Schnitzels and Burgers... In organic food shops, Reform Houses and Oriental specialty shops, miso and soy sauce are available. The following places in Switzerland sell fresh tofu, which they make on the spot: (1) Centre macrobiotique de Lausanne, ruelle de Bourg 7, 1003 Lausanne. (2) S. Gänterli, Vommatstr. 50, 6003 Lucerne. (3) Le Grain d'Or, rue Voltair 27, 1201 Geneva. (4) De Lade,

Oberaltstadt 8, 6300 Zug. (5) S. Lotusbluemli, Gerechtigkeitsgasse 17, 3011 Bern. (6) Madal Bal, Kreuzplatz 10, 8032 Zurich. On the last page of the article is an ad for Soyana in Zurich.

Note: The Italian-language edition of this article is titled "Teri bistecca, domani il tofu." It is the earliest Italian-language document seen that mentions tempeh, which it calls "tempeh." Address: Lucerne, Switzerland.

2361. McNees, Pat. 1981. Questions? Read on [A list of books about healthy foods]. *Washington Post*. Aug. 27. p. E1, E26. [30 ref]

• **Summary:** The books listed here are a good introduction to the subject of healthy and natural foods. Includes books on whole foods, whole grains, macrobiotics, vegetarianism, and soybean products. "Serious vegetarians and lovers of Oriental cuisine will want to take a look at, if not own, three thoroughly fascinating and informative books about how to prepare and make the best use of three important soybean products: 'The Book of Miso' (Autumn Press), 'The Book of Tempeh' (Harper & Row), and 'The Book of Tofu' (Autumn Press), all by William Shurtleff and Akiko Aoyagi. Aoyagi creates the recipes, which work better than those we've tried in some other recipe books mainly because she doesn't try to make the principal ingredients taste too much like something they're not (although even she fails to make tofu palatable as a dessert, in the recipes we tried). What makes these books seductive for cookbook buffs is the research, which is Shurtleff's bailiwick; he tells you more than you could ever want to know about a subject, but he sure keeps you reading..."

2362. Spencer, Colin. 1981. Mean bean. *Guardian (England)*. Aug. 28. p. 7.

• **Summary:** Ironically, the protein-rich soy bean is the dullest of all the dried peas and beans. Few of the soy-bean recipes in cookbooks sound even vaguely appetising. Soy beans were first grown in England at Kew in the late 1700s. Most soy beans stocked in wholefood shops are round and beige, but some are small and black; they both taste about the same. Describes how to soak, then cook whole soybeans so as to inactivate the "'trypsin inhibitor,' which blocks an trypsin enzyme essential for the digestion of protein." They should be cooked for 4-5 hours or pressure cooked for 25 minutes. After cooking, the whole soy beans can be crushed (with a potato masher) or pulped in a blender to yield a thick grainy puree. Describes various ways of preparing the cooked pulp. "Served with a miso sauce, these soy bean croquettes can be far more delicious than they sound."

In the USA, small "packets of dry roasted soy beans, salted like peanuts," are sold in plain, salted, garlic, and barbecue flavors. Describes how to roast your own at home, using an oiled baking tray. "Toss the roasted beans in a flavoured salt." Or you can grind the unsalted roasted beans

to make kinako. "In Japan they sweeten kinako and use it to coat confectionery. It must be the only example of chewy treats which could be good for you."

Gives recipes for: Sesame dry soybeans. Soybean Russian salad. Soy bean fritters. Black soy bean casserole.

2363. **Product Name:** Fried Rice Sandwich (With Tofu).

Manufacturer's Name: Community Kitchens.

Manufacturer's Address: Maplewood St., Boulder, Colorado.

Date of Introduction: 1981. August.

Ingredients: Organic brown rice fried with scallions and soy sauce, wrapped in a whole wheat tortilla with steamed organic carrots, alfalfa sprouts, miso tahini sauce, tofu, green leaf lettuce.

New Product–Documentation: Talk with Marty Roth. 1989. Aug. 16. Barbara started her own sandwich business in Boulder making a brown rice sandwich with tofu. Talk with Barbara Svenning. 1989. Aug. 21. She went to Boulder by herself in mid-Aug. 1981 and started a business to support herself. Her only product was the Fried Rice Sandwich. She called it Community Kitchens. It was a cover to keep her away from the health inspector. She was pregnant with her son, Ricky, who was born later on 28 April 1982. For the first 3 weeks she made the sandwiches out of Rebecca Woods' kitchen, then she moved right across the street on Maplewood St. She made and distributed 30-40 sandwiches a day to 3-4 natural food stores in Boulder. She continued until the health inspector shut her down. She bought her tofu in the form of fresh scraps from White Wave. She continued until the health inspector shut her down, then she sold the business to Gloria Gilbert.

2364. Lenetsky, Mark. 1981. Short course on soyfoods: What they are, how they are used. *Health Foods Business*. Aug. p. 46, 49-50, 52, 53. [2 ref]

• **Summary:** Contents: Introduction. Tofu or "soy cheese." The many uses of tofu. Makings of miso. Tamari—by any name. Tempting tempeh. 'High tech' approach (TVP). Its a joy to cook with soy: Selected recipes from suppliers. Address: Nutritional consultant, Applegate Natural Foods, Tigard, Oregon.

2365. Nakano, Masahiro. 1981. Seimin yōjutsu no shō. Koten e no kaiki. II. [Chiang in the Ch'i-min Yao-shu: A new look at ancient classic documents]. *Miso no Kagaku to Gijutsu (Miso Science and Technology)* No. 330. p. 2-8. Aug. [Jap]
Address: Tokyo, Japan.

2366. Leviton, Richard; Shurtleff, William. 1981. U.S. per capita consumption of soyfoods grows to nearly 9 pounds per year (News release). Soyfoods Assoc., Sunrise Farm, Heath Rd., Colrain, MA 01340; and Soyfoods Center, P.O.

Box 234, Lafayette, CA 94549. 4 p. Sept. 4. Published in Soyfoods, winter 1982, p. 6. [2 ref]

• **Summary:** Compiled largely by Shurtleff, circulated by Leviton. "In 1981 Americans spent \$4.57 per capita on soyfoods [not including soy oil] while consuming 4.9% of the U.S. soybean crop—possibly an all-time high." Address: I. Colrain, Massachusetts; Lafayette, California.

2367. Yoshihara, Lulu. 1981. Re: History of and update on Shin-Mei-Do Miso Company. Letter to William Shurtleff at Soyfoods Center, Sept. 9. 3 p. Handwritten, with signature.

• **Summary:** "Shin-Mei-Do Miso started commercial production in April 1979. I studied miso making with the traditional masters at Maruman Miso Company in Iida City, Nagano Prefecture, Japan. Maruman still operates a *tezukuri* [hand crafted] shop as well as a huge factory and I was able to compare both processes and the resulting kinds of misos. Last spring my husband, Yoshi, visited them and received many compliments about our miso, as well as constructive criticism.

"We make two types of miso: *Kome* (organic soybeans, Kokuho Rose rice, sea salt, well water) age 1-1½ years, and *Mugi* (organic soybeans, Canadian barley, sea salt, well water) aged 22 months (2 summers).

"We also have 2 experimental batches of *genmai* [brown rice] miso made with whole organic brown rice (Lone Pine). This fall we will start making moromi miso, a type of naturally sweet finger-lickin' miso from a recipe we received from our teacher in Japan.

"This summer Yoshi and two local carpenters built a new addition to our miso workshop..." Address: Shin-Mei-Do Miso Co., Wren Rd., Denman Island, BC, Canada, V0R 1T0.

2368. *Asahi Shinbun (Asahi Daily News, Tokyo)*. 1981. Misoshiru igai na kōyō [Miso soup's unexpected good effects: It lowers the death rate from stomach cancer, heart disease, and cirrhosis of the liver]. Sept. 27. [1 ref. Jap; eng+]

• **Summary:** "People who drink miso soup daily are not likely to die from stomach cancer." This was the result of research by Dr. Takeshi Hirayama and his group. He is head of the Epidemiology Division, at the National Cancer Center Research Institute. Miso soup was also found to lower the death rate from stomach ulcers, heart disease, and cirrhosis of the liver (*kankōhen*). This research will be reported next month in Sapporo at a meeting of a Japanese epidemiology society. Note: A long summary of this article appeared in the Oct. 1 issue of *Toyo Shimpo* (p. 1).

2369. Oak Feed Miso, Inc. 1981. Minutes of Annual Stockholders Meeting of Oak Feed Miso, Inc. Rutherfordton, North Carolina. 3 p. Sept. 27. Unpublished manuscript.

• **Summary:** The meeting was held on 27 Sept. 1981 at the corporation offices in Rutherfordton, North Carolina. It was called to order by Barry Evans, who was appointed acting chairman. This annual meeting had been postponed from 1 April 1981 (5 months). "The following shareholders were present in person or by proxy: Barry Evans, 1400 shares; John Belleme, 900 shares; Sandy Pukel, 1400 shares; Madelene Kenny [sic, Kenney], acting as representative of her deceased son, James Kenny, 50 shares; Yoso Masudo [sic, Yozo Masuda], 100 shares (proxy held by Sandy Pukel); Edmund Benson, 100 shares [sic, 250 shares] (proxy held by Sandy Pukel). The total number of shares represented at the meeting was 4100 shares, all of the outstanding stock of the Corporation, which constituted a quorum for the transaction of business."

Several important changes were made: The capitalization of the corporation was increased to 10,000 shares of Class A stock. Class B non-voting shares were eliminated. The "subscribers consent" agreement executed on 16 August 1979 was altered and amended so that all shares subscribed for became Class A common stock. All of the above allowed Barry Evans to vote—for the first time. Address: Rutherfordton, North Carolina.

2370. Corn Country Whole Foods, Inc. 1981. Market Street: Natural foods with a difference (Catalog). 132 South Market St., Champaign, IL 61820. 24 p. Index. 28 cm.

• **Summary:** This natural foods, vegetarian catalog is printed on beige paper with black ink. Corn Country is now distributing products made by many other companies. Interesting products: (1) Stoneground flours: Soy flour-full fat (OG = Organically Grown). Chickpea (garbanzo) flour. Our "old fashioned granite stone mills keep the flour at the lowest grind temperature..." Soybeans and chick peas are preheated before grinding. (2) Beans: Soybeans OG. Azuki beans. Chickpeas (Garbanzos). Lentils (green or red). Mung beans (for sprouting). (3) Peanut butter. Almond butter. Sesame tahini. (4) Sea vegetables (10 types). Westbrae miso (7 types). (5) Light Foods: Tofu. Marinated tofu. "Soyproducts are becoming an increasingly attractive source of protein throughout the world... We offer a small variety of soy products." (6) Condiments. Nigari (bulk or 5 lb). Umeboshi plums. Shoyu (pints to 4.75 gal tin). Miso (red or white). Tamari (with dispenser to quarts). (7) Market Street meals (vegetarian): Nutburger. Soyburger. Chick 'n sea burger. (8) Nutritional (brewer's) yeast (20 lb to 125 lb): "These yeasts are primary yeasts cultured on molasses for human consumption. They are not a byproduct of petroleum, or paper industries." Sold in powder or flakes. (9) Natural oils: Sesame oil. Safflower oil. (10) Seeds. Alfalfa seed for sprouting. Sesame seeds whole brown. Sesame seeds hulled white. Sunflower seeds. (11) Market Street shoyu almonds, suns (sunflower), cashew pieces. (12) Soy & corn "nuts": Soy nuts salted. Soy nuts plain. (13)

Market street mixes (unsulfured fruits and natural nuts): Sweet & shoyu mix. (14) Literature: 26 Talking Foods pads. (15) Dr. Bronner's soap (14 types). (16) Kitchen help: Tofu kit. Sprouter lids. Wok set. Address: Champaign, Illinois. Phone: 217-359-8843.

2371. Inkson, Ms.; Mann, E.J. comp. 1981. Thesaurus: Food Science and Technology Abstracts. 2nd ed. Shinfield, Reading, England: IFIS (International Food Information Service). 238 p. No index. 30 cm. First edition, 1977. [Eng]

• **Summary:** The Introduction states: "The original IFIS word list, issued in 1970, did not attempt to give more than the barest outline of the relations between the terms encountered. In 1977, therefore, an FSTA Thesaurus was published, in which the basic structuring of the material found in FSTA was set out. The Thesaurus was designed to give maximum compatibility with the EEC Multilingual (English / French / German / Italian) Food Thesaurus, published in 1979 (and itself based largely on the FSTA system for the English version), and to take into account the needs of on-line users."

The terms are divided into headings (main terms or descriptors), which are printed in capital letters, and lead-in terms (non-descriptors) printed in lower case. Additional information is included in square brackets. The following abbreviations show the types of relationship between terms: BT = broader terms. NT = narrower terms. RT = related terms. UF = used for. lead-in term followed by "see" heading (e.g. bean curd see TOFU).

Soy-related terms: Beverages: UF soy milk. Lecithins: BT Emulsifiers, Phospholipids. UF phosphatidylcholine. Legumes: NT Soybeans. Miso: BT Soy Products. natto: see Soy Products. Sauces: NT Soy Sauces. soy flour: see Soy Products. soy milk: see Beverages; Soy Products.

Soy Products: BT Soybeans, Vegetable Products, Fermented Products. NT Miso, Soy Proteins, Soy Sauces, Soybean Oils. UF natto, nyufu, soy flour, soy milk, sufu, tempeh, tofu, tsukudani, vital.

Soy Proteins: BT Protein Products, Soy Products, Proteins Vegetable. RT Textured Vegetable Proteins. UF okara protein, Promine [Central Soya Co.], Supro 620, yuba.

Soy Sauces: BT Fermented Products, Sauces, Soy Products. UF moromi, shoyu.

Soybean Oils: BT Oils Vegetable, Soy Products. Soybeans (*Glycine max*): BT Legumes, Oilseeds. NT Soy Products.

Note 1. This is the earliest document seen (Sept. 2003) that is a thesaurus containing terms related to soybeans and soy products.

Note 2. This is the earliest English-language document seen (Feb. 2007) that uses the word "nyufu" to refer to fermented tofu. Address: IFIS (International Food

Information Service), Lane End House, Shinfield, Reading RG2 9BB, England.

• **Summary:** Ninety percent or more of the miso in Japan is used as an ingredient in soups. Address: Akita Daigaku Igaku-bu, Eiseigaku Kyoshitsu.

2374. Shurtleff, William; Aoyagi, Akiko. 1981. Miso production. 2nd ed. Lafayette, California: Soyfoods Center. 80 p. Illust. by Akiko Aoyagi Shurtleff. Index. Sept. 28 cm. [82 ref]
• **Summary:** With this printing only the name of the publisher has been changed to Soyfoods Center from New-Age Foods Study Center.

Print history: Pre-publication: 100 photocopy copies. 1977 Aug. 16: 300 paperback copies. 1979 Oct.: 405 paperback. 1981 Sept.: 876 paperback. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

2375. Shurtleff, William; Aoyagi, Akiko. 1981. History of major U.S. soya research centers. Soyfoods Center, P.O. Box 234, Lafayette, CA 94549. 24 p. Oct. 12. Unpublished typescript.

• **Summary:** A comprehensive history of the subject. Contents: Introduction. University of Illinois and INTSOY: Home Economics Department's work (in the 1930's, 1940-1961, and 1974-1981), Food Science Department (1955-1981), International Soybean Program (INTSOY) founded July 1973, large number of talented faculty made the Univ. of Illinois one of the world's top soy research centers. Iowa State University. Cornell University: First work with soy 1883, first soyfoods work in 1927 (soymilk thesis by Y.T. Chiu), one of leading centers of U.S. soyfoods research during World War II (see chapter on Clive and Jeanette McCay), rebirth of interest in soyfoods in late 1950's, 1960 paper on tempeh, soymilk work 1963-1980, other soyfoods studied, arrival of Dr. Van Veen in 1962 (had studied tempeh since 1932, had lived in Indonesia, and had a lifelong interest in tempeh), renewed program of soybean development and production initiated in New York state in 1964. USDA Northern Regional Research Center (NRRC):

Originated with 1929 USDA soybean lab in Ohio, 1936 soybean lab in Urbana, IL, transferred to Peoria, IL, 1942, expanded research on food uses of soybeans and soy oil, fermentation division headed by Langlykke, work on soy sauce, life of Dr. A.K. Smith, at NRRC from 1942-1964, arrival of Drs. Watanabe and Shibasaki, Smith one of first American researchers to realize the potential of tofu, work with miso, 1960 arrival of respected Indonesian microbiologist Ko Swan Djien, work on tempeh, NRRC hosted 2 of first major conferences on soy protein foods in 1961 and 1966, sponsorship of overseas contract work, expansion of research in 1960's, soy flour extrusion, Rackis' work with oligosaccharides (flatulence-causing factor in soybeans), life of Dr. C.W. Hesseltine, 1962 arrival of Dr. H.L. Wang at fermentation lab, Mustakas' studies on soymilk, NRRC's interest in soyfoods steadily growing, legitimizes soyfoods to people in U.S. and around the world. INTSOY: Founding, 5 basic objectives, main accomplishments with soybeans, main accomplishments with soyfoods. Address: Lafayette, California. Phone: 415-283-2991.

2376. *Chicago Tribune*. 1981. 'Tofu' and other soy books: Reader's guide to good eating. Oct. 29. p. W_A21, or N_B19.
